The time has now come for a vigorous and vital effort, led by the President of the United States, to begin to roll back the dangers of atomic warfare.

The President cannot exert this leadership by occasionally authorizing his press secretary, Mr. Jim Hagerty, no matter how competent, to respond to pronouncements by Bulganin or Khrushchev. Neither can Mr. Dulles counter the propaganda moves of the Soviet Union by authorizing his press secretary, Mr. Lincoln White, to answer Mr. Gromyko. The voices of our leaders must be heard, not the voices of their press secretaries.

Moreover, leadership can never be exerted by waiting for the other side to make a statement to which this Nation can then respond.

An essential element of leadership on the part of a man or a nation is willingness to take the initiative, to move out ahead. Leadership requires imagination and boldness and coolly calculated assessment of alternatives in any course of action.

Leadership is not based on big talk, big size, or big emotion. I am sure that you have had experience enough to know that some men are assumed to be leaders, just because they are big, strong, and have a powerful voice. But you also know that real leadership among men or nations is not based on appearance, but rather is based on performance. Acts speak louder than words, as the saying goes.

There has been a tendency in the past few years for this Nation to rely on words instead of deeds. This situation is illustrated by recent hearings which were held in the Senate on the annual appropriation for the United States Information Agency, one operating part of which is the Voice of America. After sitting through some days of hearings when witnesses testified to the need for additional funds to carry the story of America abroad, I had the impression that much of this Agency operates under the philosophy that if we can just manage to shout louder than anyone else that we are good and they are bad, we will establish freedom and democracy throughout the world and communism will be defeated.

Leadership depends not only upon what we say, but upon what we do. Reverting to my opening remarks, the pyramid of your life—the pyramid of your Nation—cannot rest on words alone. It must rest on solid ideas and acts.

One of the reasons I have commented on what has seemed to me to be a deterioration in our leadership in the world in the past few years is the fact that our future as a Nation is molded by the present and past, just as your futures as citizens are molded by the present and the past. Your world of the past 4 years has been Clarke College in the heart of the American Midwest. You will carry the impressions of these years, of your devoted teachers, of this campus, of your fellow students throughout your life.

The same is true of our Nation. It's future is being molded by the acts of today. Our acts of today are establishing the United States as a great leader, or as a great failure. Nations rise and fall. The past is studded with the relics of empires which were unable to adapt themselves to the new. It is studded with the relics of nations that lived in the glory of past victories and were never able to face and to deal with the problems of the present.

Can we look at our Nation today and know that we are willing to face the issues? Are we able to look a fact in the face and recognize it as a fact? Or do we look at facts and

call them fancies because we aren't willing to face them? Do we see the Russians as they are, or as we would like to think them to be? Do we recognize the threat of hydrogen weapons, or do we hide from it? Do you read the comic section of your newspaper because you are unwilling to face the hard issues of the editorial page? Do you say, "Let those in Washington worry about that one—they're the experts"?

In asking these questions, I have intentionally mixed together those we should ask as a Nation with those we should ask as individuals, because what we are, as a group of individuals, we are as a Nation. If we as individuals adopt an attitude of "let George do it," if we as individuals are unwilling to face facts, be honest, and do the best we can with what we've got, then we as a Nation cannot expect to exercise the leadership essential to the creation and maintenance of a world in which freedom shall not perish.

That brings me to the final thought I wish to leave with you tonight. As you graduates, not only here in Clarke College but throughout the world, work out your futures in accordance with your personal desires and the setting in which you find yourselves, there is one problem which all of you must face. That is the problem of maintaining peace in the 20th-century world. That is a problem for which no single country can find the solution. There are no simple, no cheap, no quick, no easy answers to this problem, yet all of us must do what we can to contribute to a solution. We cannot pass it off as futile and sit down to wait for our fate. If we can conquer this problem, a world—a universe—of undreamed-of possibilities will open before us. Your creative contributions, your abilities and capabilities, together with all those who have gone before, will provide the key. If we fail, then all mankind in this nuclear age stands on the brink of unspeakable disaster. We cannot fail. We must not fail.

Floods and Tornadoes in the Southwest

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared concerning damage caused by floods and tornadoes in Oklahoma, Texas, Arkansas, and other parts of the Southwest.

I ask unanimous consent also to have printed following my statement, the text of a letter, dated May 31, 1957, I have received from Welcome W. Wilson, regional administrator of civil defense, containing a summary of the damage as of May 22, 1957.

I ask unanimous consent also to have printed in the Appendix of the RECORD an article entitled "Loss in Floods Is $32 Million," written by Allan Cromley, and published in the Oklahoma City Times of June 1, 1957, and an article entitled "Congressmen See Bulging State Dams, Flood Havoc," written by Joseph E. Howell, and published in the Tulsa Tribune of May 31, 1957. These articles give estimates of the flood damage and describe the terrible devastation which has been created by the unprecedented floods, the worst in Oklahoma history.

Mr. Howell's article details the devastation which was revealed on the trips made by Members of the House Subcommittee on Public Works, as they surveyed the flood damage from the air on a recent trip to Oklahoma.

There being no objection, the statement, letter, and articles were ordered to be printed in the RECORD, as follows:

FLOODS IN OKLAHOMA

Mr. President, on Friday, our distinguished majority leader told the Senate something of the tragedy that has hit the Southwest in the form of floods and tornadoes. He related some of the experiences of the House Public Works Subcommittee as its members visited Texas.

Today's and Sunday's newpapers brought news of new furies lashing at Oklahoma and Texas, with new warnings of additional flooding on our already swollen rivers. The Oklahoma City Times carried a dispatch by Allen Cromley describing the testimony of Army engineers at a hearing, in Tulsa, Okla., that dams and levees already built had reduced the flood's damage in Oklahoma and adjoining strips of Texas, Kansas, and Arkansas nearly $12 million, but estimating the overall disaster cost thus far at $32 million.

Congressional inquiries to the Denton, Tex., regional office of the Federal Civilian Defense Administration, which has been coordinating State and Federal activities in this disaster, brought a reply a few minutes ago, which includes an estimate for the overall damage in Oklahoma alone at $40 million, a larger figure. That is the figure given by Mr. Tom Brett, Oklahoma State civil defense director, who has included agricultural damages over the States. He lists 61 of our 77 counties with damages severe enough to make them eligible as disaster counties, and 28 cities, including the three biggest cities in the State, as disaster cities under Public Law 875, the 1950 Disaster Act.

Five persons were killed, according to Red Cross preliminary estimates, although news stories have now listed 9 deaths, and 88 were injured, while families suffering loss were listed as 1,877 with nearly 2,000 homes or buildings damaged. Continued rainfall and flooding has made it impossible to survey damage adequately, but between 60 and 75 percent of the counties in my State have damaged roads. I have a map with 110 crosses on it indicating damage to the State highway system.

A newspaper report in the Tulsa Tribune of Friday describing a visit of the House subcommittee in Tulsa, with reports of the first part of its trip through Oklahoma, describes the spectacular but tragedy-packed scenes observed by the congressional party more vividly than I can picture it.

DENTON, TEX., *May 31, 1957.*

Hon. MIKE MONRONEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MONRONEY: Thank you for your letter of May 22 with regard to the Oklahoma flood situation.

Tom Brett, Oklahoma State civil defense director, has estimated the overall damage at $40 million. Included in this estimate are agricultural damages over most of the State, particularly along the main streams and their tributaries.

Mr. Brett indicated the following counties and cities have sustained damage that will be eligible under Public Law 875, commonly known as the Disaster Act of 1950: Counties: Adair, Alfalfa, Atoka, Beckham, Blaine, Bryan, Caddo, Canadian, Carter, Cherokee, Choctaw, Cleveland, Comanche, Craig, Creek, Custer, Dewey, Ellis, Garfield, Garvin, Grady, Grant, Greer, Harper, Haskell, Hughes, Jefferson, Johnston, Kay, Kingfisher, Kiowa, Leflore, Lincoln, Logan, McClain, McIntosh, Major, Marshall, Mayes, Murray, Muskogee, Noble, Nowata, Oklahoma, Okmulgee, Osage, Pawnee, Payne, Pittsburg, Pontotoc, Pottawatomie, Pushmataha, Roger Mills, Rogers, Seminole, Sequoyah, Stephens, Tulsa, Wagoner, Woods, Woodward.

Cities: Alva, Bixby, Canton, Coyle, Dover, Elk City, Enid, Fort Gibson, Guthrie, Haskell, Hennessey, Jenks, Kingfisher, Lawton, Lexington, Lindsay, Moffett, Muskogee, Nowata, Oklahoma City, Owasso, Pauls Valley, Sayre, Shawnee, Stillwater, Tulsa, Wanette, and Waurika.

Mr. Brett estimates that between 60 and 75 percent of the counties have damaged roads. Some of the major highways are still blocked and damage to the Federal-aid road systems is estimated at between $4 million and $5 million. Approximately 110 locations on Oklahoma highways have bridge and other flood damages affecting traffic. These are located on the Federal-aid systems, for the most part, however, and do not include any rural and county roads. A newspaper article and drawing showing the damaged facilities is enclosed.

Preliminary reports of the American Red Cross indicate the following statistics up to May 22:

(NOTE.—Much more damage to persons and property, especially homes has occurred since.)

Persons killed, 5; persons suffering minor injuries, 88; dwellings destroyed, 18; dwellings with major damage, 217; dwellings with minor damage, 1,355; other buildings destroyed, 12; other buildings with major damage, 50; other buildings with minor damage, 178; the total number of families suffering loss, 1,877.

Requests for surveys for specific damages have been made by Alva, Canton, Elk City, Lawton, and Stillwater, for damages to sewerage disposal plants; Guthrie, damage to water mains; Stillwater, damage to school; Fort Gibson, damage to water plant; Sayre, damage to water lines.

One Federal team composed of 2 engineers from the Corps of Engineers, 1 health and sanitation representative from the Department of Health, Education, and Welfare, and a Federal Civil Defense Administration representative is now in the field and other teams are being formed and sent to the cities as rapidly as possible.

At the present time, it is somewhat difficult to estimate the total amount of Federal funds that will be needed for Oklahoma. As you undoubtedly know, civil-defense survey teams go into each damaged area and make every precise inspection. In many instances, the surveys have not been possible yet because of continued rainfall and flooding. The most severe damages have apparently been to roads and bridges. Federal funds will be provided for the temporary repair of those not on the Federal-aid system. Some funds will also be necessary for the control of mosquitoes, flies, rodents, and for the purification of wells and other health measures. When we have been able to make a fairly accurate estimate of the total amount needed, we will be happy to advise you.

Sincerely,

WELCOME W. WILSON,
Regional Administrator.

[From the Oklahoma City Times of June 1, 1957]

STATE TALLIES UP: LOSS IN FLOODS IS $32 MILLION

(By Allan Cromley)

TULSA.—The United States Army Engineers Saturday estimated flood damage totals $32 million in 8 river basins of Oklahoma.

Col. John D. Bristor told a visiting congressional flood inspection team and approximately 200 persons at a public hearing that the damage would have been $43,800,000 if existing flood control projects had not been in place.

He said the total would have been $21,900,000 if all authorized large flood control projects had been completed.

TEXOMA CRITICAL

He said there is a critical problem at Lake Texoma, where too much rain above the dam and too much water below the dam are combining to threaten further widespread damage.

He said there was a 6-inch rain Friday night on the lake itself and that water is 1.6 feet over the spillway. The levee was 4 feet Friday when the congressional investigators flew over the lake on a 1,600-mile aerial survey of flood damage in Texas, Oklahoma, eastern Arkansas, and southern Kansas.

Brig. Gen. L. E. Seeman, division engineer, Fort Worth, told the group Saturday morning, "this flood season is still not over." He urged the lawmakers to approach the flood control problem on a broad river basin basis.

STORM TOLL SET

A regional civil defense official estimated that floods and tornadoes have caused $40 million damage in the State. Gaines P. West director of educational services, civil defense regional headquarters, Denton, Tex., said this is a very conservative figure.

United States Army engineers at Fort Worth Thursday told the committee damage in Texas was almost $70 million. This brings the official estimate of the region total to more than $100 million.

Ironically, rain was pouring down outside the building here where the hearing was held, and a number of would-be witnesses telephoned that they would be unable to attend because of the weather.

MAYORS ON HAND

Some 20 mayors of cities in the Oklahoma flood region were prepared to detail devastation in their areas.

Bristor broke his official flood damage estimate into 8 river basins which either flow into, through, or out of Oklahoma.

He listed the damage as follows: Red River, $6,250,000; Arkansas and minor tributaries in Kansas and Oklahoma, $15,700,000; Cimarron River, $5,900,000; Verdigris River, $1,420,000; Grand River, $870,000; Illinois River, $75,000; Poteau River, $235,000; and Canadian River, $1,885,000.

ONE MILLION DOLLARS MINOR

Bristor estimated Red River flood damage would have been $9,300,000 without the protection afforded by Lake Texoma and Altus Reservoir.

He said the $1 million already advanced by the Federal Government to the State for storm disaster relief "seems a very minor sum."

He said civil defense officials probably will advise Governor Gary to request another million.

West estimated 11,500 persons in Oklahoma have been evacuated from flood areas, some of them more than once.

ELEVEN LOSE LIVES

He said 11 persons have lost their lives in floods, 4 in tornadoes, and 150 have been injured. He said 1,400 homes have been partially or completely destroyed by mother nature.

He said a total of 152 bridges have been damaged by floods, and estimated a $5 million to $6 million loss on highways and for which the State receives Federal aid funds.

West estimated agriculture losses from floods at about $20 million.

Bristor said his flood damage estimates do not include losses in headwater areas.

FIGURE NOT COMPLETE

Bristor said his estimates do not include secondary losses such as those sustained by merchants who suffered business reverses through decreased income of persons flooded.

He said loss of income and manpower hours are not included. He explained that the estimates are based on figures gathered in previous floods, and an actual determination of loss cannot be made until a year or two.

Representative ED EDMONDSON, Muskogee, 1 of 3 visiting members of the House Public Works Committee, said, "Knowing acreage destroyed, and municipal damage, I have a feeling the estimate is very conservative and that damage exceeds $50 million in the State."

[From the Tulsa Tribune of May 31, 1957]

TULSA HEARING SATURDAY—CONGRESSMEN SEE BULGING STATE DAMS, FLOOD HAVOC

(By Joseph E. Howell)

Scenes which in theory at least will not be reenacted for 100 years, spread out today before a congressional subcommittee inspecting flood damage and flood control work in the Southwest.

The committee flew over giant Lake Texoma, which recently has filled for the first time since it was completed 13 years ago.

"This is a sight we may never see again in our lifetime," said Joe Brennan, engineer consultant for the House Committee on Public Works.

He explained the Denison Dam was built to exactly hold a flood of the size which has filled it this month and that the studies which the engineers made in designing the dam based on the flood history of the Red and Washita Rivers, indicated this flood would occur but once in a century.

Brennan said, however, the fact the flood had occurred this year is no guarantee it will not occur again next year or every year for 10 years.

He said that when the experience this year goes into the record books and a new analysis made, it may develop that it will be considered an 80-year flood instead of a 100-year flood.

The subcommittee members flew 600 miles over flooded river valleys between Fort Smith and Tulsa this morning.

After leaving Forth Worth, where they saw streets filled from curb to curb when 2.22 inches of rain fell Thursday night, the party flew north to Ardmore and then down the Washita arm of Lake Texoma to the Denison Dam.

There, they saw about 5,000 cubic feet of water per second going through the 2,000-foot uncontrolled spillway and more than 30,000 cubic feet per second being discharged through the penstocks.

Below the mouths of these giant tubes, the water roared out in a great mass of foam, filling the river below the dam bank to bank.

Down the river for more than 200 miles, the Congressmen flew before they again found the Red River in flood near Idabel and on down to Index and Fulton, Ark.

Roy Penix, chief of technical liaison for the southwestern division of the Army engineers, said the water being discharged from Texoma will flow down the valley of the Red behind the flood which is spreading out today at Fulton.

The congressional party saw the proposed sites of a series of dams in the Kiamichi Mountains, designed to hold back the mountain streams which have been causing the flooding on the lower Red River.

The Millwood site where a controversial dam has been proposed on Little River just before it joins the Arkansas, came in particularly for attention. Thousands of acres of timberland spread out below the Army plane carrying the party, and the water standing on the ground around the trees was plainly visible from the air.

From Millwood, the tour went up Little River and Mountain Fork across the mountains and over Lake Wister.

Wister, like Texoma, is full to the brim and discharging water over an uncontrolled spillway, but the Poteau River below the dam appeared to be back within its banks.

There still were patches of water in the low places in the Moffet Bottoms at Fort Smith where the Arkansas has been nearly 7 miles wide, but the Arkansas itself appeared to be back within banks today.

The flight continued up the Arkansas River, past the Short Mountain Dam site to the point where the junction of the South Canadian and the Arkansas was visible on one side of the Army plane and the lake behind Tenkiller Ferry, at the highest level in its history, was visible on the other side.

There was some water being discharged at Tenkiller.

A more spectacular sight was provided by the Fort Gibson Reservoir which had nearly all of its gates open and was creating some flooding in the Grand Valley.

The Arkansas, Verdigris, and Grand Rivers were clearly defined as they met at a common junction northeast of Muskogee.

Congressman ED EDMONDSON, of Oklahoma, and JIM WRIGHT, of Texas, spent a busy morning checking the Red and Arkansas Rivers flood problems with the help of Brig. Gen. E. L. Seeman, the division engineer for the Army from Dallas.

The third Congressman, Representative EMMETT BYRNE, Republican, of Chicago, took a much less active interest in the southwestern flood scene.

Seeman said the trip "stresses again the extremes of nature and of the vast amount of water that flows unused out of Texas and Oklahoma."

He said it calls attention of taking advantage of the occasion when nature is bountiful.

"You go from many years of drought to a flood very suddenly," Seeman related.

"The reverse is not true of drought. Drought creeps up on you."

The general said the trip has given "the Congressmen a real bird's-eye view of the problems we face.

"We couldn't have done it from the ground."

From the airship the flooded streams below seemed more like a giant model on which the engineers can work out flood control measures.

The congressional party by noon today had flown areas which have suffered $118 million in damages since arriving in Texas Wednesday night, Representative WRIGHT said.

It was estimated that by the time the committee had completed its 2-day tour it would have seen a million acres of flooded land.

Wright said his first reaction as he looks at the flood scene is to think of the problems of the people whose property has been inundated. He said it gives you a weird feeling to step from a motorboat to the roof of a house as he has done in the last few days, and to see the stunned expressions on the faces of people who have been evacuated or have refused to leave their homes.

Wright lived in Seminole as a boy and delivered the Tulsa Tribune there.

The congressional party was scheduled to fly over the Cimarron Valley and upper Arkansas in the afternoon. Its itinerary included Enid, the Great Salt Plains Reservoir, the Toronto and Oologah dam sites on the Verdigris River, Hulah Reservoir on Caney River and Grand Lake.

A public hearing will be held beginning at 9 a. m. Saturday in the Tulsa Chamber of Commerce Building.

In addition to the Congressmen, Brennan, Keeman, and Penix, the touring party includes Richard J. Sullivan, chief counsel for the House committee on public works, and Lt. Col. Robert W. Dairymple, Assistant Chief of Civil Works for the Army engineers.

Danger of Inflation

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Danger: Inflation Fog Ahead," written by Nate White, and published in the Christian Science Monitor of June 1, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TREND OF THE ECONOMY—DANGER: INFLATION FOG AHEAD

(By Nate White, business and financial editor of the Christian Science Monitor)

BOSTON.—The United States needs a bold, imaginative idea setting forth rallying points and specific ways to control inflation.

It is not enough to say:

We must increase savings;

We must show restraint in borrowing;

We must live within our Federal, State, and municipal income;

We must balance the budget;

We must restrain labor's demands for wages which cannot be justified by evident increases in productivity;

We must hold prices in line; and

We must resist price advances at all levels.

These are not the kind of things businesses, governments, labor unions, and consumers do when they know they can find money to spend.

National indifference is all that is needed to keep inflation growing. Either inflation must be controlled or individuals, businesses, trusts, and institutions must find their own ways of coping with it. And opportunism is an ally of inflation. The current mood of drift and alibi is dangerous. It is dangerous because it creates a foggy attitude about a critical problem.

Pointing fingers is not the answer. Everyone knows that the big elements of the current inflationary twist are a very large gain in wages (up $12.1 billion since May a year ago); exceptionally large Federal, State, and municipal expenditures; exceptionally large business expenditure for plant and equipment; a near-capacity economy; large consumer borrowing (up $11.5 billion since May 1956); and an almost fully employed labor force.

This is a cost inflation. Costs of running business are increasing. Profits are squeezed (up $1.6 billion, after taxes, over a year ago). Prices must be raised. The costs of running the country are going up. Cities, States, and the Federal Government are scrambling for money in every corner.

Costs of running private homes are going up. Costs of running schools and colleges are up. The squeeze on institutions is very tight. A great deal is heard that there are not sufficient incentives to encourage investment.

The solution is not a simple one. It is not the answer to say, "This is a big country. Inflation is our price for growing. We can afford it."

It is not the answer to say, "We must hold everything strictly in line. We must find a shell and conform ourselves to it. We must restrict, restrict, restrict."

It is not the answer to say, "Stop raising wages." Nor is it the answer to say, "Profits are too big. Make business absorb the costs."

What is needed is a goal of progressive stabilization for all—growth with evenness, a willingness on the part of some segments to hold back where excessive advantages have been won over other sections of the community, a speedup and catchup in slower segments where it is long overdue, and a national objective of price stabilization.

It would certainly seem to be in order and in accord with the United States' way of doing things for President Eisenhower to name a commission of citizens whose personal statesmanship would lift them above political considerations, to study the problem and recommend a national policy.

If there were large unemployment, hunger marches on Washington would compel policy formation as they did a New Deal.

Perhaps it's old-fashioned to worry about losses due to inflation. But if we accept the estimate that every time the cost-of-living index goes up 1 point, $2.5 billion goes down the drain, then we as a people have poured nearly $12 billion down the drain since April last year, enough to give President Eisenhower what he needs for foreign aid and then some, enough to put over the school-aid bill, and then some. There might even have been some room for bigger debt reduction and a willingness to bring about some fundamental tax reforms.

Some $12 billion down the drain is a loss no nation can afford. Think of the loss to institutions, churches, insurance companies, pensioners, States, cities, the Federal Government itself, due to this silent, subtle waste.

Lacking a national campaign for inflation control, each individual, business, institution, and citizen is left to his own devices, such as: fight every price rise, do without, drive the old car a little longer, wear the old clothes a little longer; defer painting the house or church this year, go to the credit agency once again for a time loan.

The facts indicate this is what is going on. Even so Americans spent $9 billion the past 2 years on alcoholic beverages and $5.7 billion on tobacco last year. Essentials, such as clothing, have been taking a loss, meanwhile. Biggest consumer expenditures are on automobiles, gasoline, and food.

If the United States cannot reach a national policy of effective price stabilization—another phrase for inflation control—this means, of course, that, as a people, Americans are adopting shifting values in their money as national policy (and without a vote on it). This can go on without panic, as it has gone on for 17 years, for an indefinite period. To those who see them, the visible losses will be astounding and the invisible losses and suffering cannot be imagined.

Inflation seems unreal to those whose dollar income preserves an illusion of gain. It is very real to those whose dollar income does not.

Stassen Undercut on Arms Control

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. THYE. Mr. President, on Sunday, June 2, there appeared in the Washington Post an article entitled "Stassen Undercut on Arms Control," written by Chalmers M. Roberts. The article is a thought-provoking one, and I desire to call it to the attention of my colleagues.

I would say that Mr. Stassen possesses much ability, and I am confident that he is doing a very constructive job in negotiating with the Soviets some plan for disarmament and an aerial inspection of some areas of the world.

It is highly necessary that such disarmament programs be developed throughout the world. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STASSEN UNDERCUT ON ARMS CONTROL

(By Chalmers M. Roberts)

Those who report the day's news for the daily press suffer from the lack of time for the reflection which permits the historian to achieve perspective on world events. At the risk of premature judgment, however, this reporter has the feeling that America and Russia have reached a critical point in their relationship.

The issue is called disarmament. The primary and immediate point is whether the two great powers have the will to find an agreement first, to slow down the nuclear arms race, then to halt it and finally to reverse the road to Armageddon.

What goes on in the Kremlin is the world's best kept secret. One may put bits and pieces of evidence together, one may theorize. But one never knows until the chips are down and a Kremlin decision is made known by action to carry it out.

American policy, on the other hand, is more easily discovered though this is not to say that our policies are simple, clear, or even lived up to when formally adopted by the President at the National Security Council table.

Before Harold Stassen took over the disarmament task, the official American policy line was that the United States should accept no disarmament agreement with the Soviet Union which was not to the net security advantage of this Nation. Such phrases appeared in the NSC documents.

Stassen, as stubborn a Swede as one can find, recognized that thesis for the nonsense that it is. Slowly, surely, he swung the administration around to the idea of seeking an agreement mutually beneficial to both great powers.

But after the new principle was enshrined in administration thinking, a battle began to turn the generalization into specific proposals. Time and again Stassen fought the Pentagon and the Atomic Energy Commission for approval of specific ideas to carry it out. Last December Secretary Dulles went to the President to obtain a decision blocked by Admiral Radford and AEC Chairman Strauss.

And so Stassen, at the current London arms talks which began in January, was able to put forward a batch of proposals, all based on the thesis of mutual Soviet-American interest. The Soviet counterproposal of April 30 represents the Kremlin's acceptance of that mutuality thesis, in the view of those in Washington who back Stassen's search for a breakthrough in the decade of fruitless East-West arms talks.

Stassen came home in late May to find out how far the President would let him go in meeting the Soviets. He was convinced that this was a moment of supreme opportunity and one which the United States must fully utilize.

The result was the most violent internal administration battle yet over the disarmament talks. Radford's public statement about not trusting the Soviets on this or anything else was carried over into the

secret discussions fourfold. Strauss was his ready and able ally.

The outcome was an Eisenhower decision which was widely painted as a victory for Stassen but which, in fact, restricted his area of maneuver. The President preserved his public position that the United States must not be picayunish and must meet the Soviets halfway. But, in the eyes of Stassen and his supporters, Radford and Strauss were worse than picayunish and the restrictions on Stassen will make it exceeding difficult, if in fact even possible, to meet the Soviets halfway.

Yet what evidence there is of American public opinion on disarmament is that the Nation has been swinging over to the halfway idea, that Americans are fully aware of the possible alternative to no agreement. For example, Senator BRICKER, the Ohio Republican stalwart, is now saying there is hope enough to keep working at it. Senator CAPEHART, from reputedly isolationist Indiana, is saying "we've got to continue."

President Eisenhower, while helping to create a climate of American opinion in which negotiation is possible, has yet to give Stassen the kind of backing necessary in the crucial weeks ahead. The President can do that only by making it clear to Radford, Strauss and company that they cannot cut the guts from American proposals while pledging fealty to the principle of agreement itself.

City of Pendleton, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. NEUBERGER. Mr. President, a column by Harlan Trott, entitled "Pendleton—a Reporter's Roundup" and subtitled, "Intimate Message From the Northwest" appeared in the May 28, 1957, issue of the Christian Science Monitor. Mr. Trott, judging this very progressive Northwest city on the pattern established by New England towns, observes some interesting comparisons and yet also notes certain striking contrasts. It is nothing unusual to find writers characterizing Oregon towns in terms of reference to historic New England. Mr. Trott has a keen eye, a good nose for news, and a style which reflects the vividness and individuality of the people he meets.

I ask unanimous consent, Mr. President, that this fine column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENDLETON—A REPORTER'S ROUNDUP—INTIMATE MESSAGE FROM THE NORTHWEST

(By Harlan Trott)

PENDLETON, OREG.—Pendleton is a horseman's town. Here lilacs grow up into trees that lavish their white and purple shade on little white houses with lush green dooryards kept cropped by the vogue in palominos.

In America, often as not, you may stroll into an old-fashioned railroad depot, and if you would find the formula to the town's fame, observe the walls.

In the railroad depot at Concord, N. H., for example, hangs an outsized old Currier & Ives lithograph showing a train of Boston & Maine flatcars loaded with 100 of the leather-slung stage coaches that made Concord famous, consigned to the Wells Fargo Company of San Francisco.

Concord is east and Pendleton is west, but the two towns are not too remote in time or meaning when you compare Concord's Currier & Ives with the 8-foot panoramic photograph of the 1913 Pendleton Roundup in the Union Pacific depot here in the Oregon town where the horse has long outlived the cart.

Cupped in a tree-covered valley of the Umatilla, Pendleton is a New England town. Certainly Pendleton is a Down East name. yet it's a frontier town, too, where from the surrounding rim the West unfolds all at once into a vast, rolling world of cattle ranges and farms now green with new wheat, and where the horizon is a day's canter away.

North by east, for fifty miles to Walla Walla in the neighboring State of Washington, you can pile up statistics until they spill out the ears of towering grain elevators that advertise eastern Oregon's bounty. These grain elevators are as unabashedly ubiquitous as oil derricks on Oklahoma's statehouse lawn. They are the best kind of outdoor advertising here in a State that is just as particular about this as is Vermont.

Pendleton has one of these tall, concrete cylindrical "billboards" looking down on the roof of the Temple Hotel in the heart of town. Long after Pendletonians and their palominos are bedded down, the lights stay on in the big mill that is making white swan's-down out of last year's harvest as the trademark on the mill implies.

"Walla Walla" in Indian lingo means "many waters." It must also mean "waving wheat." The early Indians couldn't have known much about that. The Umatillas were nomads and hunters. Some of them still are. Pendleton's Fred Hall picked up an Indian hitchhiker the other day who asked to be let off at a prosperous big spread a few miles out on the Walla Walla highway. "Oh," said Fred, "do you work here?"

"No," replied the dungareed hitchhiker in a cloud of Umatilla loquaciousness, "I own it."

Once this eastern Oregon empire belonged to all the Umatillas, and some of them, still holding Indian title to vast chunks of it, ride around in dilapidated old pickup trucks and collect their rents. Being nomads and hunters by instinct, tracking down tenants beats working.

Fred Hall is a cowman of sorts, too. Beef, that is. He combs Pendleton's Angus and Hereford feedlots that supply his tables at the Fraternity Club restaurant upstairs over the Western Union office here. "The best steakhouse in town," a clerk at Hamley's told me.

Hamley's is like Maine's L. L. Bean for the frontier. Out back in the saddle shop, a white-mustached craftsman smiled up through his thin gold spectacles and went on rubbing neat's-foot oil into the square skirt of a $400 saddle.

This was a special job, the artisan explained, for a quarter-horse man from out of State. When you say quarter-horse to a Hamley's, they know exactly how to fit a horse that is pretty wide through the withers. Each year at the famous Pendleton Roundup, the J. J. Hamley trophy saddle is presented to the world's champion steer roper. Last year, cowboy Carl Sawyer of Torrington, Wyo., rode off with this $750 tooled-leather masterpiece.

Not all Hamley saddles cost more than the horse. They'll sell you a bangup Northwest roper with a full Cheyenne cattle binding for as little as $225. That's exactly what it once cost an Oregon traveler to hold down a horsehair seat in one of Ben Holliday's Concord coaches for 18 days from St. Joseph to Pendleton in the time of the old Overland Trail.

Here the horse is no luxury. It's a way of western living—one to a man and his neighbor. Every autumn the panorama on the UP depot wall here comes alive with plunging broncs and whooping cowboys in the annual frontier festival they call the Pendleton Roundup.

Right now it is foaling time and in some of Pendleton's dooryards the newcomers are trying their wobbly stilts in ecstatic gallops across the springy carpet and stopping short to sniff the lilacs in the wind.

Perpetual Foreign Aid

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column by Henry Hazlitt entitled, "Perpetual Foreign Aid," which appeared in the June 3, 1957, issue of Newsweek magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERPETUAL FOREIGN AID

(By Henry Hazlitt)

The President's decision to throw the weight of his great military prestige behind his military budget might have been more effective had he not chosen to defend nearly every other segment of his budget with equal ardor. "No great reductions in it are possible," he declares, "unless Congress eliminates or curtails existing programs." If this merely refers to some programs, it is self-evident. But it seems to assume that any program, once started, must continue without reexamination forever.

And this assumption appears to be the chief reason for the continuance of the foreign-aid program. If we had not previously embarked on that program, and got everybody inured to it, and some public figure came along now and suddenly proposed that we give $4 billion away next year to some 60 different countries, he would be thought to have taken leave of his senses. But as we have already handed out some $62 billion on foreign aid since the end of the Second World War, the burden of proof is assumed to be on those who would "desert our friends" now.

Let us begin, for example, with the arguments that attempt to belittle the size of the foreign-aid program. Its cost, declares the President, "amounts to only 5 percent of the budget." But the more extravagant the total budget, the smaller a percentage of it is any given sum. The $3.8 billion proposed for 1958 for foreign aid alone is greater than the entire Federal budget in any fiscal year from 1922 to 1932.

WHAT IT COSTS US

The most realistic way of measuring the present fiscal burden of foreign aid is to ask how much taxes could be reduced if foreign-aid spending did not exist. On the basis of estimates compiled by the Tax Foundation, I find that if no one were taxed at anything higher than a combined normal and surtax rate of 30 percent (which now applies to the income-tax bracket between $6,000 and 8,000 a year), the loss in revenue

would be no more than $3.5 billion. Anybody paying any higher personal income-tax rate than this, therefore, can figure that the addition is what the foreign-aid program costs him personally.

An elementary point constantly forgotten is that it is impossible in practice to tell the difference in net effect between foreign "military" aid and foreign "economic" aid. When we pay for part of a country's defense, we free that much of its own funds to enable it to buy other things. When we give a country "economic" aid, it has that much more to spend on its military establishment. This means that the constant distinction made between "military" and "economic" aid is of dubious practical importance.

UNPROVED ASSUMPTION

Our military aid (which in 1958 would be some $3 billion, or three-fourths of total foreign aid) rests on the unproved assumption that none of the aided countries can fully pay for its own defense. This assumption is implausible on its face. The President tells us: "Around the world we have provided our allies, over the past 7 years, some $17 billion in direct military assistance. Over the same period, the defense budgets of our allies have totaled some $107 billion." The question naturally arises why these allies could not have increased their military budgets an average of 16 percent to pay for the whole of their own defense? A year ago (April 16, 1956) I pointed out in this place that whereas the United States was spending some 62 percent of its total budget on defense, 13 of our principal allies spent an average of only 26 percent of their total central government budget on defense.

To claim that we are getting our own defense cheaper by paying also for part of 38 other countries' defense begs an enormous question. Generally speaking, countries that think they need us for allies continue to want common defense treaties with us whether we help to support them financially or not. Countries that think they do not need us for allies, but only that we need them, may of course consent to take our money. But we merely delude ourselves about what we are buying with it.

The case for foreign economic aid is far weaker than the case for military aid. But that is another column.

The Problem of Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. SMITH of New Jersey. Mr. President, in a recent issue of the New York Herald Tribune there was published a letter entitled "A Letter to a Son in Jail." This letter was written by a man by the name of David J. Willig, of Niskayuna, N. Y., the owner of a motel as Rensselaer, N. Y.

In light of the problems of juvenile delinquency that we are constantly noting in the papers, and the studies that are being made of that difficult and baffling subject, I think Mr. Willig's letter is a real contribution and should be read by all those who are trying to solve this serious national problem.

I ask unanimous consent to have printed in the Appendix of the RECORD this inspiring letter to which I have referred.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A LETTER TO A SON IN JAIL—FATHER ASKS GOD "WHY" FINDS PRAYER ANSWERED

(The following is a letter written by David J. Willig, of Niskayuna, N. Y., owner of a motel in Rensselaer, N. Y., to his 18-year-old son, Jon, who is in the Chemung County Jail, in Elmira, N. Y., awaiting grand-jury action. Jon was arrested with another youth in Hartsdale, N. Y., on May 8 after police found a rifle, 500 rounds of ammunition, a pistol, 2 revolvers, and 48 bullets in a car in which they had been speeding. On May 10 Jon was transferred to Elmira, where he is being held on suspicion of burglarizing the Thompson Gun Shop on March 29.)

DEAR JON: It's your 10th day in jail today and I sit here at home wondering what thoughts are going through your mind. It will be 14 more days until your hearing before the grand jury comes up and I'll be wondering every day until then how this life in prison is affecting you.

Don't feel bitter about it, Jon. There are doctors' sons, ministers' sons, newsmen's sons, rich men's and poor men's sons sitting in other jails all around this great country of ours at this very moment. You're not alone in your misery and neither are Mom and I alone in ours. You could be sitting at home with us right now if we had decided to put up the bail money to get you out. However, getting you out of jail right now wouldn't solve anything, Jon. The big problem is to discover how you got there. It won't do you a bit of harm to sit there and think about it for a few weeks. You can hardly be suffering any more than Mom and I are at home. I've been going around day after day with my head in a whirl and feeling as if I'd been kicked in the stomach by a mule and I know Mom feels the same way.

It's a deep emotional shock to all of us, Jon, but sometimes, during periods like this, if we quietly and sincerely seek the truth and get down on our knees and ask God to show us the light, He answers our prayers. Suddenly we find the solutions to what we thought were deep, unsolvable problems. I think God has answered my prayers, Jon, and I'm going to try and put down in writing for you the information which I believe came directly from Him.

It takes a mature mind to understand God. It takes a mature mind to understand that God's laws are absolute, that they act automatically, that whatever we ask for in His name has already been provided for, that the sins for which we ask forgiveness have already been forgiven. Comparatively few people ever reach maturity, Jon. In all their physical aspects many of them may appear to be men and women but their minds are still immature. It's the men and women with the minds of children who cause all the trouble and heartaches in the world. Many men gain positions of great importance in the world but some of them eventually do more harm than good because they have immature minds.

It took your daddy more than 50 years to grow up, Jon, and that's the main reason why you are sitting in jail right now. Crimes are committed by people who have never grown up and by the sons and daughters of people who have never fully grown up.

There is only one man who ever reached the zenith of mental maturity. He lived on earth two thousand years ago. If all men could understand His teachings, we would have no further use for jails, or even locks and keys. There could be no such thing as wars and animosity between men.

What Christ taught was as easy as simple arithmetic, yet, like simple arithmetic, some people just can't understand it. All of His teachings, everything in the Sermon on the Mount was based on the premise that, if we are to have the wonderful, satisfying life here on earth which God intended we should have, we must live and love and understand each other. "Love thy neighbor." "Do unto others as you would have others do unto you." What Christ taught was that we should banish all hate and replace it with understanding, that we should banish selfishness and its place put love and consideration for others. That is God's whole formula for peace of mind and happiness and to do otherwise, to disobey His laws, is just as foolish as a fish trying to live out of water. Too many of us are wrapped up in a small, selfish world of our own making and we consequently miss the best things of life.

There is not much I could add to the above, Jon. If you can understand it and take it into your heart, you need never again worry about your future. God will take care of it for you and your life on this earth will be wonderful and rewarding.

When this is all over Jon, when you have paid whatever penalty the authorities mete out to you for having committed a crime against society, you and I are going off fishing. We're going to spend a week or so in the woods together and do a lot of soul-searching. When we come home, we're going to be a lot closer to God than we ever were before and, from there on, we're going to grow up together.

God bless you, Jon.

DAD.

Annual Questionnaire to Sixth District

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ROGERS of Florida. Mr. Speaker, each year it has been my custom to submit a questionnaire to the people of my district setting forth various questions which will be considered by the Congress of the United States in its deliberations. This year through the cooperation of the fine newspapers of my district, the questionnaire was published, and to supplement the publication in the paper, I also mailed out a number of questionnaires to broaden the base of the coverage. I am pleased to be able to say that over 23,000 people have answered this questionnaire, which I think is one of the highest participations of any like questionnaire.

The Sixth District of Florida is comprised of 11 counties. The district extends from the east coast to the west coast and has many interests, including not only the tourist business, but many small businesses, industries, fishing, and agriculture. This district in 1950 had a population of about 284,000; presently, the population of the district is over 500,000. It is populated by residents who have settled there from all over the United States, therefore, I think the response to the questionnaire reflects not only the thinking of the people of the sixth district but in good measure reflects the thinking all over the United States.

I greatly appreciate the fine response we have had and I am gratified to say that the people of the Sixth District of Florida are intensely interested in their

Government and are willing to take time to participate in it because they know that government is everybody's business.

The following is the questionnaire and the results, first in the actual figures and second in percentages:

1. The President's budget for fiscal 1958 proposes that the Federal Government spend $71,800,000,000. Do you favor the reduction of this budget by congressional action? Yes, 19,489 (89.9 percent); no, 2,177 (10.1 percent).

2. The President's budget requests the Congress to appropriate an additional $4,400,000,000 for foreign aid (military and technical). Do you—

(a) Favor this amount? Yes, 2,494 (12.5 percent); no, 17,532 (87.5 percent).

(b) Favor no additional money for foreign aid when there are unspent appropriations still on hand? Yes, 13,930 (70.2 percent); no, 5,904 (29.8 percent).

(c) Favor discontinuing all foreign aid? Yes, 8,170 (41.9 percent); no, 11,306 (58.1 percent).

3. Do you favor Federal aid to education? Yes, 12,155 (58.8 percent); no, 8,529 (41.2 percent).

(a) If Federal control is included? Yes, 4,533 (23.3 percent); no, 14,923 (76.7 percent).

4. Do you favor extending minimum wage law coverage to include retail, chain store, hotel and other employees not now affected? Yes, 14,655 (71.6 percent); no, 5,725 (28.4 percent).

5. Should postal rates be increased on:

(a) First-class mail? Yes, 7,323 (36.6 percent); no, 12,657 (63.4 percent).

(b) Second-class mail? Yes, 12,822 (64.2 percent); no, 6,920 (35.8 percent).

(c) Third-class mail? Yes, 13,314 (69.8 percent); no, 5,758 (30.2 percent).

6. Should present excise taxes be extended for one more year? Yes; 10,410 (52.2 percent); no, 9,502 (47.8 percent).

7. Do you favor enactment of my bill, H. R. 2494, to extend the Kennedy-Rogers Act to place the Federal budget on a yearly basis (recommendation of bipartisan Hoover Commission)—estimated to save $4 billion annually? Yes, 21,366 (98.4 percent); no, 349 (1.6 percent).

Segregation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, June 3, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial entitled "Federal Interference," from the Augusta (Ga.) Chronicle of April 24, 1957. The Chronicle is a most excellent newspaper. The editorial has to do with the matter of segregation and the decision of the Supreme Court in the segregation case.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL INTERFERENCE

The United States Supreme Court has not only assumed legislative functions in some of its recent enactments but has decided, evidently, to take on the duties of law enforcement also.

In denying an appeal brought by the Wichita Falls, Tex., school board in connection with the board's appeal from a United States district court order instructing a district court to keep on its docket a suit by Negro children for admission to public schools nearest their homes, the Supreme Court again emphasized that it expects Federal district courts to keep tab on steps taken to eliminate racial segregation in the schools.

The contention of the school board was that the request of the Negro children had been granted under the policy of desegregation adopted by the board. The district court for northern Texas had agreed with the board and dismissed the Negroes' complaint.

Subsequently, the United States court of appeals in New Orleans directed the district court to retain jurisdiction in the case. Despite the fact that the court admitted that Negro children had been admitted to the public school nearest their homes, the court commented that "it is by no means certain that they had the same free privilege of transfer to or attendance at any school of their choice as was accorded the white children."

The school board appealed the case to the United States Supreme Court, with emphasis on the point that the ruling of the appellate court would compel the district court to act as a super school board in overseeing day-to-day administrative action of the duly elected board in the conduct of the public-school system.

The Supreme Court ignored all such arguments, ignored the provisions of the United States Constitution—which limit the Court's function to one of interpretation of existing laws in relation to the Constitution itself—and sustained the order of the appellate court requiring the district court to keep tab on school administration.

This is an example of Federal interference with the administration of public education that might well serve as a warning as to what will happen if the currently proposed Federal aid to schools bill should pass. If the Supreme Court will go as far as it has in the Texas case, without any right or justification under constitutional law, how far would it and the Federal Government go in assuming administrative powers over the schools after the Government has bought its way into public-school administration by vast grants of money?

Christian in Politics: That's Brooks Hays, Man Baptists Elected

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I have the privilege of including an editorial which appeared in the Memphis (Tenn.) Commercial Appeal, which pays tribute to our colleague, BROOKS HAYS, upon his election as president of the Southern Bapist Convention.

I also include a personal tribute paid him by Mr. Edward J. Meeman, editor of the Memphis (Tenn.) Press-Scimitar. Mr. Meeman learned to know our colleague back in the thirties.

Mr. Meeman's tribute is so intimate and so true, that I am sure all who read it will be inspired.

The editorial and personal tribute by Editor Meeman follow:

CHRISTIAN IN POLITICS: THAT'S BROOKS HAYS, MAN BAPTISTS ELECTED

(By Edward J. Meeman)

I rejoice in the election of my friend, Representative BROOKS HAYS, as president of the Southern Baptist Convention. Not because of the recognition it gives him, for recognition he does not want or need, but because it means that in this position the inspiration of his character will reach hundreds of thousands of people as it has come to me.

We met in the thirties when we were both members—BROOKS was vice chairman—of the National Policy Committee. Among other members were Charles P. Taft; Herbert Agar; Sherman Adams and Marion Folsom, who are now in Ike's Cabinet; Christian Herter, now assistant Secretary of State; Col. Francis P. Miller and Helen Hill Miller; James B. Carey, the CIO leader. The committee was conceived in this thought: Policy in our democracy is actually made by the compromises of pressure groups. There should be a better way. Let persons from different walks of life meet on a weekend somewhere, sit down around a table, talk about some problem of the day, not from the standpoint of their interests, but to find out what's good for the country as a whole. It worked fine. People gave others the benefit of what they knew, but nobody ground any axes.

No one exemplified the spirit of this committee better than BROOKS HAYS.

GROWS ON ACQUAINTANCE

Out of our association on that committee grew a friendship that has grown stronger during the years, though the committee itself no longer exists. The better I become acquainted with BROOKS HAYS' mind and heart, the more I think of him.

Impossible to be a Christian in politics? Impossible to be a Christian amid the swirling ambitions, passions, schemes, and rancors of the National Capital? The life of BROOKS HAYS will always be the answer to that. For he has been a consistent Christian in the midst of it all. BROOKS has never disappointed those of us who believe in him; he has never let us down. He remained modest always; he walked with kings yet kept the common touch.

Some professed Christians bring religion into disrepute among the worldly by being long-faced, irritable, overcritical—killjoys. Christians should be happier than other people, pleasanter than other people, radiate good humor and fun. Here BROOKS qualifies.

He writes a weekly letter to his constituents. He always closes it with a chuckle. You have often seen the chuckles reproduced in the Press-Scimitar—some of the best jokes I ever heard.

If a pagan should ask a Southern Baptist "What is a Christian?" he need only point to the man whom his church has elected as their leader and say "There is one."

BROOKS HAYS, BAPTIST

The Congressional Directory merely says BROOKS HAYS, Democratic Member of the House from Little Rock, is a Baptist. But the next revision will show him to be president of the Southern Baptist Convention.

Mr. HAYS has been often in the news as a Member of Congress since 1942. While his position at the head of this large and growing denomination will give him new stature among readers at a distance, there is nothing surprising in it for Baptists or Arkansans. He has frequently been in Baptist publications for other denominational offices, and the move to name him to the high office originated in a Sunday School class Mr. HAYS once taught.

Baptists have once more shown the democracy of their methods by choosing a layman for this office of high honor and extensive responsibilities.

It Is Later Than You Think

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which I made on June 1, 1957, at the Catholic War Veterans' convention in Baltimore, Md.

Included is the statement of T. S. Bruchalski, commander of the Christopher Post of the Catholic War Veterans' 1957 Americanism trophy presented to Congressman WALTER by Commander Bruchalski:

IT IS LATER THAN YOU THINK

(Address by Hon. FRANCIS E. WALTER before Catholic War Veterans of the United States of America, Baltimore, Md., June 1, 1957)

On the letterhead of your organization appear these words: "The only thing necessary for the triumph of evil is that good men do nothing." This might well be the text upon which to base my remarks before this organization, the roots of which stem from spiritual sources, belief in God, the dignity of the human soul, and the direction of which is toward patriotic service.

These intangibles are the priceless heritage of the free West, to which approximately one-third the population of this globe adheres. The way of life which these intangibles sustain has been 2,000 years and more in development.

Just 100 years ago a German scholar, Karl Marx, under the influence of Hegel's philosophy of contradictions, and Ludwig Fuerbach's philosophy of the primacy of material things, developed a philosophy which, in essence, denies the existence of God and of the human soul. As a corollary, it denies the existence of morality stemming from a code of spiritual values. It asserts that man, his institutions, and society are determined exclusively by materialistic considerations. It conceives of a world class struggle as inevitable because of presumed clash of interest between those who produce and those who own; it proclaims that upon the elimination of the ownership class, the bourgeoisie, and a merging of production and ownership in a dictatorship of the proletariat, the working class, each will give according to his ability and will receive according to his needs, the state will wither away, evil will disappear, the millenium will have arrived.

Just 50 years ago the philosophy of Karl Marx gained impetus as an organized force at a conference of the Russian Social Democratic Party, held in London, where Nicolai Lenin formed a Bolshevik faction, later known as the Communists, to be the catalytic agent of this inevitable class warfare. Here are the words from the Communist manifesto:

"The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions."

Here are the words of Nicolai Lenin:

"The existence of the Soviet Republic side by side with imperialist states for a long time is unthinkable. One or the other must triumph in the end, and before that end supervenes a series of frightful collisions between the Soviet Republic and the bourgeois states will be inevitable.

"We must be able to withstand all this, to agree to all and every sacrifice, and even—if need be—to resort to various strategems, artifices, illegal methods, to evasions and subterfuges."

You and I may agree that this Communist force is unsound and unworkable, and we, like the overwhelming majority which it enslaves, do abhor it, but nevertheless today, just 50-odd years from its inception by Lenin, this force, called communism, controls one-third of the population of the world. In other words, today one-third of the population of the world are adherents to the basic philosophy to which you and I adhere, grounded in faith in God and spiritual value. One-third of the population of the world is enmeshed within the grip of international communism, and the remaining one-third—the so-called neutral bloc, the Middle East and the Far East, consisting of 800 million people, appear to be gravitating within the orbit of the international Communist conspiracy.

Now, let us face up to two elemental cold, hard facts:

First, today, of the 86 nations of the world, there is only 1 principal deterrent to world domination by the Communist conspiracy, and that is the United States of America.

Second, the Soviet Union, its satellites, and all within its influence are at war with the United States of America. It is a war which has already cost billions of our Treasury and the blood of our youth. It is a total war—political, economic, psychological, diplomatic—and it is a global war. Finally, it is a war which they, and not we, are winning.

In the course of the last year the Committee on Un-American Activities has assembled and released factual material on the international Communist conspiracy. We released some several months ago a report prepared for us by the Research Institute of America, which is one of the outstanding research organizations of the Nation. This report, after an appraisal of each of the many facets of the world Communist conspiracy, has this conclusion:

"These are the hard facts: Economic and military strength of the Moscow-directed one-third of the globe is rising steadily. The new Soviet leadership's domestic and foreign policies are far more subtle and shrewd than those of Stalin. Most important, the new Soviet policies have been astonishingly successful. It adds up to this: Right now we and our allies are losing the battle against world communism."

Several months ago, our committee brought to the United States for consultation, Ernest Tillich, who is head of one of the strongest anti-Communist groups in Europe. This group is the fighting group against inhumanity. In the course of his testimony, we asked him how late it is on the timetable of international communism. His response was "it is 5 minutes until midnight and the clock is moving fast."

We likewise received the testimony of experts on the Hungarian revolt. We were impressed with two conclusions on which the experts agreed. The first is that the Hungarian revolt demonstrated to the neutral bloc nations the impotency of the West, and second, that the result was a clear warning that there can be no successful deflection from the grip of the Red octopus.

We likewise received testimony from experts respecting the Communist penetration in the Middle East where the recent Suez crisis has been exploited by Communist propagandists, and where the minds of hundreds of millions are being swayed toward Moscow. May I mention in passing that the testimony before our committee by experts on world Communist propaganda is to the effect that over $3 billion annually are spent by the Communist bloc on its ideological offensive, with hundreds of millions being spent in the Middle East alone.

Our committee received testimony from authoritative sources respecting the Communist penetration and now virtual control of vast areas of Asia. We heard of the narcotics offensive stemming from Red China, in which there is a deliberate highly financed campaign piercing principal capitals of the non-Communist countries of Asia for the purpose of demoralizing these pockets of resistance and to obtain hard currency with which to run the war machine of Red China.

I have given you just a few highlights of this international world conspiracy which is controlled through a network of 25 million Communist agents encircling the globe. My purpose in alluding to these few facets of the world conspiracy is so that my discussion of the Communist Party in the United States may be in proper perspective, because we must never overlook the fact that the Communist Party in the United States is a fifth column of foreign agents on American soil—foreign agents who are working zealously night and day as part of a world conspiracy for which the principal target is this Nation.

Here are the words of William Z. Foster, who is now the leader of the Communist Party of the United States: "When a Communist heads the Government of the United States—and that day will come just as surely as the sun rises—the Government will not be a capitalist government, but a Soviet government, and behind this government will stand the Red army to enforce the dictatorship of the proletariat."

In the United States today, there are an estimated 17,000 trained hard-core agents of the Kremlin, who are the nerve centers of our society. These are the so-called members, and I emphasize the word "members," of the Communist Party. Under date of June 4, 1951, the national committee of the Communist Party issued an order that "only those members whose membership is approved by the appropriate committees of the Communist Party on or before August 8, 1951, will be, and remain, party members."

At that time the Internal Security Act of 1950, which was developed by the House Committee on Un-American Activities, was just beginning to take effect and so the Communist Party burrowed deeper underground. How many comrades relinquished formal membership but remained in the apparatus, I do not know. We do know, however, that for every 1 of the 17,000 members of the Communist Party, there are an estimated 10 who are under Communist Party discipline. This apparatus of 170,000 people operates in this country through over 600 front organizations, and through thousands of fronts which they have created in front of the fronts. Compare this army, if you please, with the FBI, which is a magnificent organization, but which has roughly five to six thousand agents who are committed for all kinds of enforcement work, of which internal security matters are only a small part.

As chairman of the Committee on Un-American Activities, I say to you now, as the witness Clifford Miller, who had served as an undercover agent for the FBI in the Communist Party, testified at our recent hearings held here in Baltimore, that the Communist Party today in the United States is a greater menace than ever before.

How does this conspiracy operate? What are its objectives? What is it accomplishing for the world conspiracy here, now?

Let me pause to quote one of the top world figures of the Communist Party, George Dimitrov, who was a leading instructor in the Lenin School in Moscow:

"As Soviet power grows, there will be a greater aversion to Communist parties everywhere. So we must practice the techniques of withdrawal. Never appear in the foreground; let our friends do the work. We must always remember that one sympathizer is generally worth more than a dozen mili-

tant Communists. A university professor who, without being a party member, lends himself to interests of the Soviet Union, is worth more than a hundred men with party cards. A writer of reputation, or a retired general, are worth more than 500 poor devils who don't know any better than to get themselves beaten up by the police. Every man has his value, his merit. The writer who, without being a party member, defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members.

"Those who are not party members or marked as Communists enjoy greater freedom of action. This dissimulated activity which awakens no resistance is much more effective than a frontal attack by the Communists. Our friends must confuse the adversary for us, carry out our main directives, mobilize in favor of our campaigns people who do not think as we do, and whom we could never reach. In this tactic we must use everyone who comes near us; and the number grows every day."

Let me say here, that one of the principal objectives which the Communist Party has attained in the United States, is to develop a spirit of apathy, an attitude that those who fight the Communists are the real menace and not the Communists themselves. Let me give you a few illustrations of what I have in mind. Some few months ago, a man who was a professor in a college in my State was identified as a hard core Communist by a witness of unimpeachable integrity under oath before our committee. In accordance with the practice of our committee, this professor was subpenaed and interrogated respecting the identification of himself as a hard core member of the Communist conspiracy. This professor invoked the fifth amendment as he had a right to do. A copy of the transcript of the entire proceedings was requested by the college and after the proceedings were carefully studied, this professor was called before the governing body of the college for examination. He was thereafter discharged. Within the course of just a week or two, the American Association of University Professors issued a censor condemnation of this college for firing this Communist. The censure condemnation was on the ground that the action taken by the college constituted an interference with academic freedom.

I could spend literally hours reciting to you similar incidents of the growing strength of the anti-anti-Communist movement in the United States, including the work of the $15 million tax-exempt Fund for the Republic which spent $120,000 on a dishonest report to the effect that there is a wave of hysterical discrimination in employment against people because of political belief. We investigated the background of this report and revealed that in every instance used as a basis for the report, the individual involved was an identified Communist, and that the actual discrimination or so-called blacklist has been and is against those who are dedicated, patriotic, anti-Communists, rather than against the Communists whom the report characterizes as merely persons of a particular political belief.

May I say in passing that it was this same fund for the republic that made an award of $5,000 to a church group in my State on the erroneous theory that this church group employed an identified Communist as a librarian. The facts are, of course, that the church group, the Plymouth Quaker meeting, was opposed to the employment of the Communist librarian; that the members of the Quaker faith who served in the library board that did engage the Communist librarian, resigned in protest, and that the $5,000 award has not been accepted.

A subcommittee of the Committee on Un-American Activities, some several months ago, was in the process of developing factual material on what we termed "Communist political subversion," namely the efforts of the Communists to bring pressure on governmental agencies through grassroots organizations controlled by the conspiracy. In the course of the hearings which were then being conducted in Los Angeles, certain lawyers who are representing identified Communists, and who themselves had been identified by witnesses under oath as members of the Communist Party, so disrupted the proceedings by every conceivable type of disorderly conduct that the subcommittee had no alternative but to cause the Communist lawyers to be ejected from the hearing room. Thereafter, the Bar Association of California issued a scathing indictment of the Committee on Un-American Activities on the theory that by evicting disorderly Communist lawyers from our proceedings we were in some way depriving their clients of a free selection of the attorneys who should represent them.

I think I should mention that congressional committees do not have contempt power such as the courts have for punishing those who disrupt the proceedings. The only contempt power that a congressional committee has is to refer, via the Congress, to the courts for trial, anyone who fails to furnish information which the law provides that the committee is entitled to receive, or who commits perjury. Beyond that, committee of Congress are powerless, and of course the Communists know this and take every advantage of it.

I have often thought that the effectiveness of the Committee on Un-American Activities is in direct proportion to the amount of attack and criticism which we receive. I was therefore a little surprised to find that we did not receive more criticism than was actually leveled at us as a result of the hearings which were held recently here in Baltimore. I was glad that the hearings were telecast, so that the average Mr. and Mrs. American here in this great area could see for themselves not only the facts which were developed in the course of the hearings, but the procedures and practices of the committee itself. May I say that with a few notable exceptions, the communications we have received from this area respecting the hearings are most heartening. We knew that our hearings in Baltimore produced only a fair sampling of Communist activity in this vital area. Our responsibility as a congressional committee is so broad and our facilities are too limited for us to attempt to run down all possible leads in any given area. We have a staff of only 35 persons, with just 8 investigators for the entire Nation. We did, however, I believe, develop information here of significance and value in the discharge of our duty.

Some several months ago, the Communist Party created an organization with the innocent name Citizens Committee To Preserve American Fredoms whose purpose is to coordinate the activities of all Communist fronts and the fronts in front of the fronts, for the avowed objective of abolishing the Committee on Un-American Activities. Before the Baltimore hearings, we knew that the Communist Party had sent instructions to comrades here as to how they were to proceed and the manner of their attack against our committee.

Recently my attention was directed to an article in a Baltimore paper carrying a severe criticism of our Baltimore hearings by a member of the clergy, who, among other things, is alleged to have said that the real reason for the public inquiry was that it was necessary in some people's minds to cultivate fear of Russia. I would not for a moment suggest, because I do not know, that the author of the attack is under Communist Party discipline. I do know that in April of 1943 he was listed as one of the signers of a letter asking the then President to set aside deportation orders against international Communist agent Harry Bridges. I do know that in January of 1953, he was listed as one of those from Baltimore who urged the President to extend clemency to atom spies Ethel and Julius Rosenberg. I do know that he has lent his name and prestige to the Communist-front American Council on Soviet Relations.

Let me quote J. Edgar Hoover, in his testimony before our committee in 1947: "I confess to a real apprehension so long as Communists are able to secure ministers of the gospel to promote their evil work and espouse a cause that is alien to the religion of Christ and Judaism."

I know too, that the force which we fight is dedicated to the destruction of religion; that in its ascendency to power it crushed within Soviet Russia alone, 20 million human beings and it destroyed an estimated 40 million human lives in Red China. I am more than a little puzzled that a minister of the gospel would be so blind that he would rely upon the integrity and good faith of the cynical atheistic conspirators instead of the integrity and good faith of the elected representatives of the people of the United States.

How serious is the Communist conspiratorial operation to our national defense? Glance, if you will, at just two typical items of information before our committee. Right now the International Union of Mine, Mill, and Smelter Workers having an estimated 85,000 employees in mines vital to the defense of this country, is controlled lock, stock, and barrel by the Communist Party. Right now, employees of the American Communications Association, the top leaders of which have all been identified as members of the Communist conspiracy, man the tie-lines and lease-lines emanating from the Pentagon itself, and service the North Atlantic cable.

What is the political objective of the Communist Party now in the United States? The No. 1 objective, as announced to the comrades assembled at the National Communist Convention in February, is the destruction of the Immigration and Nationality Act. In the course of the last 2 or 3 years, the Communist Party has created in the United States 180 organizations in 15 key States all for the purpose of bringing pressure on the Senators and Congressmen to repeal the Immigration and Nationality Act. Most of the people who are in this apparatus do not have any idea that they are being used by the Communist Party.

Now I would not say, although I suspect, the leftwing press will misinterpret my statements, that everyone who advocates changes in the Immigration and Nationality Act is a Communist or under Communist Party discipline. The fact is that the Communists have found ready allies in the professional immigrationists, the do-gooders, and in the politicians who seek to woo the so-called nationality bloc vote, promising more and more visas at a time when we have the highest immigration since 1926.

Masquerading behind a facade of humanitarian appeals, this drive which is now in process, if successful, would destroy the principal safeguards of our immigration system. It would triple immigration to this country and abolish the only nonpolitical formula, the national origin quota system, which has ever been devised for apportioning visas among the clamoring millions of the world. As coauthor of the Immigration and Nationality Act, and as one who has spent literally years in careful study and investigation of our immigration system, I say to you that weakening amendments to the Walter-McCarran Act which are currently pending in the Congress, will undermine the security structure of this Nation. I shall fight those weakening amendments with every fiber of

my being, because in my studied judgment, I will be fighting the cause of preserving this Nation.

How late is it?

Here are excerpts from an article by Msgr. William McGrath, as it apepared in the Brooklyn Tablet of July 1955:

"No war. No hydrogen bombs. No mass slaughter—till after the victory has been won.

"The coup d'etat, in course of accomplishment even while you are reading these lines, will be engineered to final success by the entrenched and untouchable traitors in high places, aided and abetted by their strategically placed cohorts in the nerve centers of the Nation.

* * * * *

"It will be the fulfillment of the prophecy made by Lenin in 1923: 'First we will take Eastern Europe, then the masses of Asia, then we will encircle the United States, which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands.'

* * * * *

"Condone. Appease. Pretend. But above all forever surrender. Peace in our time, wherever we've heard that before. Bury your head in the sand while Russia enslaves the rest of the world and hope—that it cannot happen here.

* * * * *

"Thank Heaven not all people have given up. A few brave souls in America are trying to arouse the country from its sleep of death."

Yes, my friends, it is later—much, much later than you think. It is happening, and it is happening here, now.

PRESENTATION OF CHRISTOPHER POST, NO. 841, CATHOLIC WAR VETERANS, 1957 AMERICANISM TROPHY, JUNE 1, 1957

(By T. S. Bruchalski)

Mr. Toastmaster, our honored and most distinguished guest, Congressman WALTER, distinguished guests at the dais, reverend members of the clergy, officers and members of the Catholic War Veterans, ladies and gentlemen, a few weeks ago we in the Baltimore area were privileged—if it can be called a privilege—to partake in a drama—really a tragedy—at which the very soul of our beloved Republic was being torn asunder by those whose hate should have been a love, whose calculated betrayal should have been a dedicated devotion.

However, that which we witnessed, either in person or in our homes, was actually an epilogue. For it was, in reality, a sorrowful summation of a series of traitorous events by those who would destroy, yes, by those who would destroy within the very shadows of that lady whose majestic mantle was so richly woven with the faith and devotion of dedicated men, dedicated to the principle that we posses inalienable rights, rights whose origins of their very essence come from God—not from men.

Tonight, however, we have with us some of those who were a part of that drama, but those who have supped and drank freely of these truths, those in whose minds the memorable words of Lincoln, that "to sin by silence when they should protest, makes cowards of men," must have been indelibly enshrined.

Out of a tremendous love for their country, they gave freely of themselves, out of that same dedicated devotion so characteristic of our fathers of yore for their beloved Republic so richly blessed.

They must have known what it would mean to play the role of a traitor—knowing all the while—that others surrounding them were actually and consciously dedicated to this horrendous crime.

Tonight, we of the Christopher Post have asked them to share the joys of this evening with our honored guest. We felt proud that they should have sacrificed their sterling individuality—at least for a while—to have immersed it into one so deathly alien to them.

It was a difficult thing. Even the best of us would have desisted from this bitter task.

Our unit has already formally extended to them our gratitude, and tonight, all of us here assembled to honor the driving force—as it were—of that courageous Americanism as exemplified in our honored guest, have an opportunity to express our sincerest wishes to Miss Irene Barkaga and Mr. Charles Craig, present here this evening as guests of our post. (Because of his unexpected work schedule, Mr. Clifford Miller could not attend but verbally sends his personal wishes to his other two compatriots and to our honored guest of the evening.)

Congressman WALTER, we of the Christopher Post feel that this presentation of our 1957 Americanism award is really a token of boundless appreciation from all of us here assembled.

Let it be an emblem of our united faith in you and the tremendous task to which you are so completely dedicated.

Let this humble award—but a human symbol of our dedication to your noble cause—be ever a spiritual reminder of our hope in you and in those like you, yet remaining in the ranks of the valiant, against this unholy breed.

We cannot help but feel that they who would destroy are dissipating our ranks. And yet by silence, we cannot and shall not sin. For that is a coward's lot.

Nor are we afraid. For, as has been so ably said, that even one with God, is a majority.

To Him, therefore, we send up our prayer when we in the simple words of this inspiring Irish wish would want to say:

"God be good to you in all your days
God be kind to you in all your ways
God give strength to you when crosses lean
God send light to you the clouds between
God give peace to you in times of strife
God bless everything that fills your life
God send joy to you when grief is o'er
God make way for you at heaven's door."

Farm Income

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, June 3, 1957

Mr. THYE. Mr. President, Mr. Lauren Soth has written several articles which have appeared in the Minneapolis Morning Tribune. I hold one in my hand, under date of May 30, 1957, and wish to read one paragraph from the article, as follows:

Americans need only look to the outside world to see what an inefficient agriculture can do to an economy. High productivity per man in farming is a priceless asset that permits America to devote relatively little manpower to supplying basic food and fiber needs.

I have read that paragraph because we constantly hear remarks to the effect that there are too many inefficiently run farms in the United States, that the operation of the inefficient farms should be stopped and that larger farms should be established in their places.

Mr. President, if this Nation should ever be so unfortunate as to lose the family farms and become solely dependent on corporate types of farming, I think we would see disappear the blessing of abundant supplies of food and fiber which American consumers have always had.

For the reasons stated, I ask unanimous consent that the two articles written by Mr. Soth, one appearing in the May 30 issue and the other in the May 31 issue of the Minneapolis Morning Tribune, be printed in the Appendix of the RECORD.

I hope some writers will devote some of their thoughts and writing efforts to instructing the American people, first, concerning the splendid job American farmers have done, and, secondly, instructing the American people to appreciate the fact that every time a better service is provided the consumer it is usually at the expense of the producer. The consumer has not derived any great benefit from the initial low cost of the product as it leaves the farm and goes into channels of processing or into channels of manufacturing.

I ask unanimous consent that the two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Morning Tribune of May 30, 1957]

WHY NOT SUBSIDIZE FARMERS' MOVE FROM FARMS TO CITIES?

(EDITOR'S NOTE.—This is the fourth of six articles condensed from a new book, Farm Trouble, by Lauren Soth, editor of the Des Moines (Iowa) Register and Tribune editorial pages. Soth won the Pulitzer prize for his editorial invitation which led to the visit of a Russian farm delegation to the United States in 1955.)

(By Lauren Soth)

What can be done to reduce the pressure of excess supplies on prices of farm products—to balance demand and supply at a level which will give farmers' income on a parity with nonfarm incomes?

One answer, of course, is to do nothing, let nature take its course. This appeals to many who have a philosophical distaste for government intervention in private business. But it has no chance of being adopted as a national policy.

A "do nothing" policy would be feasible if the community were willing to see the basic agricultural adjustment between demand and supply take place by means of bankruptcy, liquidation, and abandonment of farms.

This would mean that the best brains, the most capable young people would leave farming even faster than they now are leaving. It might mean that twenty-odd years hence agriculture would fall far behind the rest of the economy in technical efficiency.

Meanwhile, with a growing population, it is possible that real food shortages would overtake us.

Americans need only look to the outside world to see what an inefficient agriculture can do to an economy. High productivity per man in farming is a priceless asset that permits America to devote relatively little manpower to supplying basic food and fiber needs.

A sharp contrast may be seen in the Soviet Union, which I visited in the summer of 1955 as a member of the American farm delegation.

The Soviets have neglected agriculture until recently, putting their major emphasis on industrialization. Farm living standards have been kept low by deliberate policy of the state. The state has used farming as a source of capital for manufacturing development.

The result has been a stagnation in agricultural production. The U. S. S. R. even now has 40 to 45 percent of its people in agriculture. It has no surpluses; it runs on the borderline of hunger all the time. Diets are not as rich in protein foods as they were before World War I.

It was in 1861 that two fundamental policies were laid down which have been the backbone of our economic development. These were expressed in the Homestead Act, which stimulated private development of land resources, and the Morrill Act, which set the stage for the land-grant-college system of agricultural experiment stations and extension services.

Here was direct Government action, subsidy, if you please, for stepping up farm production.

Thus, in the last half of the 19th century we had a great subsidized injection of land resources into the farm economy. In the first half of this century we have had an even more powerful injection of new scientific technology into agriculture.

In the light of this historical background, it should not be surprising that supply of and demand for farm products have got out of balance in the last 35 years.

If there were no other reason for community responsibility to the farm population, the fact that public policies created the present surplus situation would be reason enough.

The built-in tendency for farm production to expand faster than demand for food is a consequence also of the enormous stimulation to production during the last 15 years by wartime and postwar public policy.

Understanding the causes of the surplus situation in farming leads to some logical solutions. Why not a homestead policy in reverse, for example?

Theodore W. Schultz, of the University of Chicago, has suggested the Federal Government offer farm families a cash payment to help them get started in city life and nonfarm work. Such a payment, say, $5,000, would be given only for bona fide transfers out of agriculture.

Speeding up the movement of some farmers out of agriculture would permit those who remain to increase the size of their operations and raise their incomes. The national farm income would be divided among fewer people.

The movement of farmers into other occupations would also tend to reduce farm production and thus ease the surplus problem.

If such a homesteads-in-reverse program were in effect, it would prevent a great deal of hardship. Farm folks would not stay on the farm until they had lost everything.

Those with little liking for and ability in agriculture would get a chance to better themselves. Many such families now are tied down to farms they cannot afford to leave.

It cannot be emphasized too much that the fundamental adjustment needed to take care of the surplus situation in American agriculture is a reduction in the number of farm families.

The question is whether this adjustment should be allowed to take place "by itself," without any help from the State, or should be smoothed and speeded up by a subsidy.

Many of our public policies and programs in agriculture conflict directly with the policy of reducing surpluses, in fact, practically all Government intervention in agriculture is on the side of increasing output—with the exception of the acreage-allotment programs, and they have not been effective in limiting output.

Almost the entire Federal and State bureaucracy in agriculture is mobilized to get farmers to produce more—at the same time that acreage allotments and the "soil bank" are being tightened down to limit production.

What agriculture needs instead is more research in economics and the other social sciences to provide answers to the complex human adjustments required.

Of course it is true that advances in science are beneficial to society as a whole, and one should not take a short-run view of these matters.

There are strong reasons, compelling reasons, for continuing or even increasing funds for research in basic science. What is questionable policy, however, is the pumping of more money into the development of new technology.

New technology can be considered as a resource of production, like land, machinery, or fertilizer. Why not slow down expansion in this field in the same way that we hold land out of use until it is needed?

[From the Minneapolis Morning Tribune of May 31, 1957]

FARM PROGRAMS SHOULD BOOST INCOME, NOT PRICE

(EDITOR'S NOTE.—This is the fifth of six articles condensed from a new book, Farm Trouble, by Lauren Soth, editor of the Des Moines (Iowa) Register and Tribune editorial pages. Soth won the Pulitzer prize for his editorial invitation of a Russian farm delegation to the United States in 1955.)

(By Lauren Soth)

If the incomes of farm people are to be brought up more nearly on a par with the incomes of the rest of us, something beside price stabilization will have to be done.

Several things have been done in the past with this goal in mind, and several things are being done today.

In fact, the aim of the price-support programs has been to increase income, rather than merely to stabilize prices. But added all together, these efforts have done very little to redress the balance between farm and nonfarm incomes.

After more than two decades of Government programs designed to raise farm income, the ratio between farm and nonfarm income per person remains about what it was at the start.

The simplest and most direct way of bringing farm incomes into line with nonfarm incomes would be for the Government to pay farm people an outright subsidy.

Open subsidies would be easier to administer, would be plainly visible to the general public and would not interfere with the normal functioning of the competitive market system in agriculture.

Such direct subsidies are used to keep American shipping firms afloat in competition with the maritime services of other countries.

Although farmers complain about their disadvantageous position in a modern, administered economy, they would turn down overwhelmingly direct handout of this nanature from the Government.

They may accept soil conservation payments and even payments on price guaranties for livestock but they would hate to be in a position of taking relief grants.

Direct subsidies to farmers can be made more acceptable both to the taxpaying public and to farm people themselves if the payments are made in return for some kind of performance by farmers.

Payments to farmers for performing certain agricultural conservation pactices have been popular with both farmers and nonfarmers. The logic behind this acceptance is that farmers are performing a service in the public interest by preserving national soil resources.

Congress would be doing far more to help agriculture if it tripled or guadrupled the present conservation-payments program than it would by keeping price supports at a high level.

Moreover, if these payments were for true conservation, they would not create surpluses.

This line of reasoning is behind the so-called soil-bank plan which was passed by Congress in 1956. The only action necessary to make this program a real income-support program would be to increase the amounts of the Federal contributions.

A Federal-payment program of this character ought to be coupled with a corresponding payment program to farm families who want to leave agriculture and get established in urban occupations.

In the long run, the most effective action the Government can take in behalf of agriculture is to expedite the transfer of farm people to other occupations by means of education, employment services and grants and aids to encourage people to leave farming.

Another way to protect farm income without detailed controls over production, and without Government fixing of prices above the market, would be to subsidize consumption of food.

The most far-reaching plan of food subsidy yet proposed in the United States is the food allotment plan which Senator GEORGE D. AIKEN, Republican, Vermont, has introduced into Congress a number of times, without success.

Under this plan the food-purchasing power of low-income families would be increased by issuing them coupons. These coupons would be spent in grocery stores like money. The grocery stores would turn the coupons in to the Government and get full cash value. In this respect the plan is like the old food-stamp program.

But unlike the food stamp program, this plan would make coupons available to anyone who wanted to buy them. The stamps would be issued in units designed to provide a good diet for one person. To get them, a family would have to turn over 40 percent of its income.

The good diet would be determined by food scientists and would embrace as many foods as possible to allow for differences in tastes. Suppose this diet came to $5 a week. For a family of 4, coupons would cost $20 a week. A family with income of less than $50 a week would benefit by buying the coupons—providing it wanted to spend as much as 40 percent of its income for food.

The 40-percent figure was suggested in the Aiken bill because several surveys have shown that low-income families with fairly good diets spend about that proportion of their incomes for food.

How much would such a program cost the Government? That would depend, of course, on the state of prosperity and the amount of unemployment. During a severe depression the Government would be paying out large amounts of money—probably on the order of two billion to four billion dollars a year.

If that were looked upon as farm subsidy alone, it probably would freighten Congress away. However, if it were considered as part of a general antidepression program and as a national nutrition measure, it might be acceptable.

In times of prosperity, expenditures for a food allotment program would be much smaller. One estimate of the effects in 1955, a year of high national income, places cost to the Federal Government at around $700 million.

How much of this extra spending for food would come back to farmers? Farmers get about 40 to 50 percent of the consumer's

food dollar, so it is reasonable to assume they would get at least that proportion of the new spending. They might get considerably more.

The subsidy programs would permit prices to move freely and to guide consumers in their decisions. They would permit a greater degree of freedom in individual farm decisions on productoin and marketing than present farm programs.

Subcommittee on Mines and Mining Adopts Resolution Supporting Funds for Mineral Program

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ENGLE. Mr. Speaker, the Subcommittee on Mines and Mining of the House Committee on Interior and Insular Affairs, chairmaned by our colleague WALTER ROGERS of Texas, on May 24, 1957, adopted a resolution urging the House to approve the $30 million provided for tungsten, asbestos, fluorspar, and columbium-tantalum by the Senate in the third supplemental bill, H. R. 7221.

The mining subcommittee spent many days of hearing when this program was authorized under Public Law 733 in August 1956, and received further testimony on the subject on May 24 of this year.

The resolution adopted by the mining subcommittee supports a similar position taken by the Senate Committee on Interior and Insular Affairs, the Senate Appropriations Committee, the Senate itself twice by overwhelming votes, and by the executive agencies—the Department of the Interior, the Office of Defense Mobilization, and the Bureau of the Budget.

So far as I know, the House Committee on Appropriations is the only committee or agency that has had anything to do with the problem that has recommended against this appropriation.

A copy of the resolution is as follows:

RESOLUTION OF THE SUBCOMMITTEE ON MINES AND MINING OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS, HOUSE OF REPRESENTATIVES

Whereas during World War II and at the beginning of war in Korea in 1950 the United States was almost wholly dependent upon supplies of foreign produced tungsten; and

Whereas by Public Law 733, 84th Congress, approved July 19, 1956, the domestic tungsten, asbestos, acid-grade fluorspar, and columbium-tantalum miners were encouraged to believe by the highest authorities in the land—namely, a law passed by both Houses of the Congress and approved by the President—that general purchase programs (as distinct from individual negotiated contracts) to be in effect through December 31, 1958, were to be carried out; and

Whereas the General Services Administration, to which was delegated responsibility for administration of this program, indicated to the domestic miners that the necessary funds to carry out the programs were expected to be forthcoming and that the miners should conduct their operations on this basis (as detailed in letters from GSA in November and December, 1956); and

Whereas one of the surest ways to encourage all the citizens of the land to respect the laws of the land is for the Congress itself to carefully respect the very laws that it itself causes to be enacted into law; and

Whereas any present official statements as to defense requirements for high temperature metals, such as tungsten, columbium, and tantalum, are completely obsolete (as noted in the letter of December 13, 1956, from the Deputy Secretary of Defense to the Office of Defense Mobilization); and

Whereas future defense requirements for high-temperature metals such as tungsten, columbium, and tantalum can only be expected to increase significantly in view of the fact that tungsten is the metallic element with the highest melting point known to man—about 6,152° F. (indeed of all the elements, the melting point of tungsten is exceeded only by that of carbon)—while columbium and tantalum are also high-temperature metals, iron-free asbestos is necessary for electric-cable coverings, and fluorine is a constituent of high-temperature fuels—and our entire technological civilization requires the utilization of ever higher temperatures (as acknowledged by the Director of the Office of Defense Mobilization in the February 26, 1957, hearings by the Senate Committee on Interior and Insular Affairs on the Necessity for Implementing Public Law 733); and

Whereas it would be the utmost folly and it could be disastrous to let our present domestic mining mobilization base collapse, as it will surely do in the face of the competition of cheap foreign-mined material coming largely from sources of extreme vulnerability in time of emergency; and

Whereas there is as yet no other program to maintain the domestic mining mobilization base, although the Congress has been promised on several occasions that a long range minerals program would be recommended to it; and

Whereas the real cost of the material acquired under this program is substantially less than the base price set forth in the law when Federal, State and local taxes paid by the mining companies and their employees and suppliers are taken into consideration; and

Whereas the costs of any future Government procurement programs for metals and minerals that may be found to be necessary in the uncertain years ahead in this age of peril will of necessity be much higher if the operators have before them the example of breach of faith in the execution of prior programs such as failure to carry out that set forth in Public Law 733; and

Whereas while it may well be that the present spot price of foreign material is lower than that for domestically mined material, history in the case of many strategic materials shows clearly that the price of foreign material can rise many times over once the domestic source of production has been scuttled, and consumers are then put through a real price wringer when it is too late to reactivate domestic mining properties that are flooded and caved: Now, therefore, be it

Resolved by the Subcommittee on Mines and Mining of the Committee on Interior and Insular Affairs of the House of Representatives, That the House of Representatives is hereby urged to forthwith take the necessary action to implement fully the provisions of Public Law 733, 84th Congress, the Domestic Tungsten, Asbestos, Fluorspar, and Columbium-Tantalum Production and Purchase Act of 1956, and in particular to agree to make available the sum of $30 million which is provided therefor by the Senate amendment to H. R. 7221, 85th Congress, 1st session, the 3d supplemental bill, 1957.

Adopted May 24, 1957.

WALTER ROGERS,
Chairman, Subcommittee on Mines and Mining.

NANCY J. ARNOLD,
Clerk.

Fremont, the Town That Refuses To Die

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an article from the May 30, 1957, issue of the Current Local, Van Buren, Mo. The article praises the spirit of the residents of the little Missouri Ozark town of Fremont. Mrs. Carnahan and I each taught in the public school in Fremont for several years. We know just about all the people there and visited the area shortly after the recent disastrous tornado. We join in the sincere tribute to these fine substantial people. Of course they will rebuild and they will not just rebuild their shattered homes, churches, schools, and businesses. They will build a better and even more friendly and cooperative community than they had before the disaster.

Mrs. Carnahan and I also express our appreciation to the Red Cross for the most commendable job being done in assisting in the rebuilding of this little community.

The article follows:

FREMONT, THE TOWN THAT REFUSES TO DIE

Today, amid the ruin and rubble where the little town of Fremont, Mo., had lived and grown for nearly 70 years, the American people through the American Red Cross are bringing hope and help in its fullest measure to the 200 citizens of this tornado-torn community. Today, less than a week since a roaring funnel dipped down out of an afternoon sky to leave its terrible toll of 6 dead, 16 injured, and a path of nearly total destruction, the people of Fremont—secure in the knowledge that Red Cross has opened its heart and hands to help solve their problems—are beginning to rebuild their shattered lives.

Fremont's Methodist Church, one of the few building to survive the great winds of last Tuesday, has become the center of Red Cross disaster relief operations in this crippled Ozark community; and today, as people of all faiths attended the Sunday morning services in what is now Fremont's only church, their courage and determination in spite of the week's hardships gave testimony to their abiding trust in God and their gratitude to all who have come to their aid.

No flowers decorated the minister's pulpit; instead, the small wooden platform was surrounded by rows of coffee urns, and fruit baskets, and portable milk refrigerators from the Red Cross mobile canteen in front of the church. Racks of Red Cross clothing, and supplies of blankets and bedding formed a unique kind of canopy over the crowded pews; and the entire church service was accompanied by the musical ringing of the

Red Cross emergency telephone which continues to serve as the community's only source of communication.

Exactly 12 hours before, these same people had attended a Saturday night gathering in this same white church where they met with the Red Cross disaster workers who have come from various parts of the country to help Fremont come back to life—people who have brought food, and clothing, medical care, and welfare assistance; Red Cross workers who are here to meet their immediate needs, and others who will stay to help them in the tremendous job of reestablishing their homes and businesses. It was a weary and somewhat apprehensive group of 86 people that filled the little church to capacity; but as the meeting progresses and each of the Red Cross workers repeated the encouraging words, "we're here to help you—all that we give you and all that we do is a gift to you from the American people," 86 faces relaxed and even smiled as they realized that here was a force still mightier than a tornado—the indestructible force of man's humanity to man. The Saturday night meeting reached a high point of enthusiasm when L. D. Smith, one of Fremont's leading citizens, addressed his stricken neighbors in the following words: "Fremont is going to rebuild * * *. Let's stamp out completely any idea that we can't do the job. Our friends and former citizens have come back to see us and they expect us to go on. The outside world is depending on us to come back and we must not disappoint them. If we use our own resources together with the help which Red Cross has come to give us, we can get back on our feet; and with God's blessings, we will." Following Smith's inspiring message, the entire audience echoed their enthusiastic approval with a stirring round of applause.

And so, with the lifeline of help reaching out from Red Cross and hundreds of others who are not content to want what would seem most comfortable and easy for themselves, Fremont, the town that refuses to die, is lifting its head from the ruins and looking toward the future. Once again, tragedy, the great leveler, has become a great bond.

The National Debt

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator BYRD Sounds Off," from the Camden (S. C.) Chronicle of May 24, 1957.

This weekly newspaper is edited by Mr. William Calk, who was formerly connected with the Augusta Chronicle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR BYRD SOUNDS OFF

Most of us know that the Federal debt is about $275 billion. But few have any concept of what that means—it's just a figure, almost beyond human comprehension.

Senator BYRD, writing in National Review, gives a vivid picture of the debt. That $275 billion, he says, "is the equivalent of the assessed value of all the land, buildings, mines, machinery, factories, livestock—everything of tangible value in the United States."

Then he goes on to say something that must be far better understand than it is now if this country, as we know it, is to survive: "Public debt is not like private debt. If private debt is not paid off, it can be ended by bankruptcy proceedings, and maybe not many people are hurt. If public debt is not paid off—paid off with taxes—the result is disastrous inflation or repudiation. Either would destroy our form of government."

The proposed new budget is the largest in our peacetime history. According to the estimates, there will be a small surplus if this budget is approved. But it is evident that even a very moderate decline in the business boom, with the effect that would have on tax revenues, would eliminate such a surplus and put a deficit in its place.

Senator BYRD believes the budget can be cut by more than $6 billion without harm to an essential Federal function. If we cannot do that now, with the economy running at peak speed, when can we?

Federal Financing

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Offers Plan," from the Augusta (Ga.) Chronicle of April 24, 1957. The editorial deals with an address delivered by the junior Senator from Georgia [Mr. TALMADGE] before the Atlanta Rotary Club in which he dealt with Government financing.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OFFERS PLAN

Senator HERMAN TALMADGE, of Georgia, has advanced a five-point program by which inflation and high taxes can be stopped. In an address delivered before the Atlanta Rotary Club, the junior Senator from Georgia warned that the people will "reap another whirlwind of taxation and inflation" unless Congress acts now to reduce the Federal budget and establish proper controls on Federal spending.

The five steps to be taken as enumerated by Senator TALMADGE are as follows:

1. Eliminate nonessential Federal spending;

2. Press for a systematic beginning on debt reduction and outlaw deficit spending;

3. Adopt new legislation guaranteeing better budgetary control;

4. Institute a reduction in Federal income taxes of at least 10 percent to restore incentive and to stimulate new job opportunities; and

5. Halt encroachment of the Federal Government on the revenue sources of the States.

This offers a sound and constructive approach to the problems that now confront the Nation in the field of finance and taxation.

Unless something is done to put the Government on a stable basis, the economy of the country will not be able to withstand the drain now being made upon its people and its resources.

"If this country is to survive as we have known it," Senator TALMADGE warned, "Congress must set itself to the task of eliminating waste and extravagance."

Perhaps the one valuable thing achieved by the proposed Federal budget for next year, with its incredibly large totals, is the fact that the very size of it is so staggering that it has at last awakened the people to the realization of approaching financial disaster.

If that be true, some good may come yet out of the present situation, if Congress has the courage to take the necessary steps to protect the Nation.

Progress Report on Saline Water Research Program

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ENGLE. Mr. Speaker, in 1952, legislation which I authored, was enacted initiating the saline water research program under the direction of the Secretary of the Interior. The objective of this program was to find ways and means of economically converting saline or salt water to fresh water. The progress made under this program during the 5 years since it was initiated has been disappointing; however, eventual success is foreseen if the program is put in high gear with the view of producing concrete results at an early date. This is the conclusion of the House Interior and Insular Affairs Committee as the result of recent hearings held for the purpose of reviewing the program.

The objective of the committee's hearings was to determine, first, just where we stand at the present time with respect to finding economic means of converting salt water to fresh water; second, whether the Department of Interior is in agreement with the expressed views of Congress with respect to the degree of urgency warranted in this research program; third, what measures the Department has taken to speed up the program; and fourth, if additional legislation is needed or would be of assistance in meeting the objectives of the program at an earlier date. In 2 days of hearings the committee heard and questioned officials of the Department, contractors, and consultants.

The committee's report on the hearing is critical of the Department of the Interior, both for its handling of the program, and for misrepresentation to the American people of the progress made under the program. The hearings indicated that the Department has not attached to this program the degree of urgency directed by Congress in the 1955 legislation amending the 1952 basic act, and has allowed it to drift along without concrete results while numerous optimistic statements by high officials of the Department have left the impression that large-scale use of converted saline or salt water is just around the corner. My concern and that of the committee is that such misrepresentation of progress may lull the Nation into a false sense of security with respect to water

and that the immediate need for conserving and making better use of the water available from natural sources will be overlooked and not properly emphasized.

No concrete evidence was presented to the committee as to measures to accomplish a speed-up in meeting the objective of the program, nor did the Department indicate any immediate need for additional legislation. While it was made clear that pilot plants or demonstration plants of appreciable magnitude to test the more promising processes would require specific congressional authorization no positive program was presented for getting the demonstration plant phase of the program underway.

With respect to the nature of the research work the Department seemed to be placing emphasis on small and special purpose conversion units, whereas the committee believes that the immediate need is for processes capable of producing large quantities of water for municipal and industrial use near populous or potentially populous areas.

It is not the purpose of the committee's report to present a pessimistic view with respect to the possibility of economical saline and salt water conversion at an early date; however it is the committee's purpose to apprise the American people of the true situation with respect to sea water conversion in order that those charged with responsibility of providing water supplies do not expect too much from this program too soon and do not reduce efforts to fully conserve and make maximum use of the water available from natural sources.

The committee believes that, eventually, converted saline or salt water will be used extensively for municipal, industrial, and perhaps even agricultural uses. The problem has become one of economics or cost.

The Ax Came a Little Too Close

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call attention to an editorial from the Charlotte (N. C.) Observer under the caption, "The Ax Came a Little Too Close."

In addition to the points raised in the editorial as to the position of the United States Chamber of Commerce, the action over the weekend of Secretary Wilson in canceling a half billion dollars in defense contracts should bring home to the chamber the old axiom "it depends on whose ox is being gored."

The editorial follows:

THE AX CAME A LITTLE TOO CLOSE

The United States Chamber of Commerce has been in the forefront of the campaign against President Eisenhower's budget.

It has been pressing the attack against foreign aid, against Federal aid to education, and against many of the President's domestic programs.

Now the chamber is backing water a bit. The economy ax has come a little too close for comfort.

The House of Representatives, in cutting away $3,500,000 from the Commerce Department budget, knocked the props out from under the Business and Defense Services Administration.

It would be tragic to lose that agency, protests the chamber's president, John S. Coleman. Its task of passing information and opinion between Government and industry is vital. It handles much of the Government-industry planning for a war emergency.

In running up his red flag, Mr. Coleman was forced to say that the chamber is not "against everything" in its crusade for Government economy.

What he is really saying is that budget cuts are tragic when they hit too close to home; they are healthy when they strike elsewhere.

Thus the chamber is against Federal aid to education, although it raised no objections to huge Federal expenditures for a highway program.

It is the old, old story of governmental economy. Swing that ax hard but be sure it is hitting the other fellow's house.

An Honor Well Deserved

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. BAILEY. Mr. Speaker, today in my home State in the city of Morgantown, the University of West Virginia will confer an honorary degree of doctor of laws upon a most distinguished American, John L. Lewis. Mr. Lewis has been president of the United Mine Workers of America since 1919. During his presidency of that proud organization America's union coal miners have become the highest paid industrial workers in the world.

West Virginia has been for some years the largest coal-producing State in the Union. It is fitting that Mr. Lewis' first honorary doctorate should come from our State university. He has led West Virginia's coal miners from the depths of economic depression and personal indignity to the place they now enjoy in our State as well paid, free mountain men.

In commenting on the degrees to be awarded this year by the University of West Virginia, one of the largest daily papers in our State, the Charleston Gazette, said:

One name stands out as distinctive and that is John L. Lewis, head of the United Mine Workers of America. In coming up from the coal pits to eminent status in the American labor movement, and giving dignity to the coal miners in this largest of coal-producing States, we think his is a degree long overdue.

This editorial states only the truth. Mr. Lewis is a great man and an erudite man. It is fitting that he be formally recognized as such.

Petroleum Marketing on Highways of the Future

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including a copy of an address by C. Z. Hardwick, executive vice president of the Ohio Oil Co., Findlay, Ohio.

In my opinion Mr. Hardwick has given us a true statement of the facts as are seemingly existing relative to our Federal highway program. I fear that some of our highway officials, State and Federal, are forgetting the rights of the property owners, forgetting that all pay taxes regardless of whether they are on an interstate, or intrastate road, the primary system, the system of city streets, or the system of the farm-to-market roads. Some of these officials, Mr. Speaker, are putting into effect rules and regulations that are certainly detrimental to the economy of our country and not in accordance with the freedoms that many of us have fought for.

I am hoping, Mr. Speaker, that all of the Members of Congress will read the address of Mr. Hardwick and I personally would appreciate having any comments from the membership of the House because I know we are all interested in our highway program and want fair and equitable treatment for all, regardless of where we live.

The address follows:

PETROLEUM MARKETING ON HIGHWAYS OF THE FUTURE

(Address given by C. Z. Hardwick, executive vice president, the Ohio Oil Co., Findlay, Ohio)

On June 29 of last year President Eisenhower placed his signature on the 1956 Federal-Aid Highway Act, giving the green light to what has been accurately called the biggest public works undertaking in history. As everyone knows by now, this new act calls for a Federal-aid highway construction program scheduled to last 13 years and to cost about $50 billion—more than 1½ times the total amount spent for all State highway construction over the last 40 years, including toll roads.

As the industry which supplies asphalt to build highways, collects the taxes to pay for them, and provides the gasoline and oil which keep the vehicles running, the petroleum industry has an important stake in this program.

We in the oil business want good highways because our living depends upon them, because we're responsible citizens who realize the vital importance of a modern highway transportation system and because we also happen to be motorists, and do as much driving as anyone else.

Oilmen are not exactly enthusiastic, however, about one feature of the new program—the imposition of an additional Federal tax on gasoline. As industry spokesmen pointed out to Congress while the program was being considered, gasoline already had the distinction of being the most heavily taxed basic commodity in America.

As you know, these arguments were to no avail. The Federal gasoline tax was increased by a full cent a gallon, so that today the national average State and Federal tax on a gallon of gasoline is equivalent to more than 70 percent of the refinery price, over 50 percent of the wholesale tank wagon price and nearly 40 percent of the price paid by the customer at the pump.

In all, special taxes on gasoline and other motor fuels are slated to carry more than 75 percent of the Federal portion of the new highway program's cost. What's more, many of the States now seeking added revenue to hold up their end of the program are considering increases in their own gasoline taxes as a likely source of funds.

It is not my purpose today, however, to dwell at any length on what is past history. The new program is now getting underway. At its heart, of course, is the plan to create a 41,000-mile network of interstate highways built to standards adequate for 1975 traffic. Approximately 1,300 miles of these expressways will be built within the borders of Ohio.

For people in oil marketing, the most significant single fact about these highways of the future is not that they will be multilane, divided routes—not that they will be free of stop lights and intersections at grade—not that they will be designed throughout for speeds of 50 to 70 miles an hour. For oilmen, the most significant single fact about these highways is that access is going to be strictly limited from start to finish. No one will be permitted to enter or leave one of these highways except at points predetermined by the State.

This fact has brought everyone in the oil business face to face with a series of difficult problems. To begin with—in plain language—it is going to create a revolution in petroleum marketing operations. Since the first filling station opened its doors in St. Louis in 1907 we have been selling gasoline to the American motorist for the most part on locations of our own choosing right by the side of the road. So far as our major highways are concerned, that pattern is about to be drastically changed.

With conversion of the interstate system to limited access standards, the day when you could pick a spot, hang out your flag, and start to pump gasoline is over—at least so far as the important roads are concerned.

Moreover, use of the limited access principle will shortly extend beyond the interstate system to our other main roads as well. An estimated 6,000 additional miles are already being planned here in Ohio. As Sam Bohlen pointed out recently in an address at Cleveland, the time is not far off when as much as 75 percent of highway travel in Ohio may be over limited access roads.

Now, I don't want to give the impression that I look upon limited access design as some kind of 20th century monstrosity. In the first place, there's nothing new about it. Access was controlled along the royal road through Nineveh in biblical times. In this country the first truly limited access highway was built in 1886 through Central Park in New York City and is still operating.

In the second place, control of access contributes greatly to the safety, efficiency, and carrying capacity of a highway, and—like every other oil man—I want to see the best roads in this country that we can afford to build.

Our quarrel was not with the limited access idea, but with what we consider to be some extremely serious results of its misuse in the past—and I think you know what I'm talking about.

Our first taste came the day the State authority called for bids on service facilities along the original section of the Pennsylvania Turnpike, a process which culminated in the award of an exclusive franchise to a single company to provide gasoline and oil along that highway for a period of 50 years.

This established a pattern for toll road marketing which has persisted—with variations—to this date, and which amounts to a denial of the basic economic principles under which this country has operated since the Founding Fathers. It denies the right to compete to the business community, it denies a choice of product to the consumer, it bars the independent and the small- or medium-size operator from getting his product up for sale, and it results in price inflation.

In recent years, it is true, this exclusive marketing pattern on the toll roads has been broadened somewhat, to allow for what is frequently termed "reasonable" competition. This so-called reasonable variety however, is as different from real competitive enterprize as a modern turnpike is from a back alley.

Take our own Ohio Turnpike, for example. By comparison with some other roads of this type, the marketing arrangement can be called enlightened, since it permits five different companies to participate.

The presence of 5 competing marketers operating a total of 16 stations along a 241-mile stretch of highway might strike some people as a pretty reasonable arrangement. You and I know better.

To begin with, these companies represent less than a quarter of the 21 principal suppliers marketing petroleum products in the State of Ohio.

Secondly, the market involved is no ordinary market. On the basis of the rentals reported for the first year of operation, gasoline sales on the turnpike added up to a staggering total of more than 23 million gallons. Average sales per station were clocked at just under 1½ million gallons a year.

Thirdly—and most significant in its implications—the financing commitments involved, including royalties ranging up to 7 cents a gallon, mean that all but the larger marketers are out of the picture. The jobber, the independent, and the small operator are shut out as effectively as if they were legally barred from submitting a bid.

This is a pretty far cry from competition and free enterprise as we've always understood those terms in this country.

These are some of the reasons why oilmen have tended to look with some suspicion on the limited-access concept. As I have pointed out, however, their dissatisfaction has stemmed not from the concept itself—but from the manner in which limitation of access has been carried out on our toll facilities so as to substitute State-dominated marketing for freedom of enterprise.

When the creation of a 41,000-mile nationwide network of new limited-access highways was proposed, the petroleum industry was justifiably apprehensive lest this monopoly or quasi-monopoly concept might be clamped over this vital system too.

Fortunately, Congress recognized the danger also, and, in that respect, I might say that Ohio's Congressman HARRY MCGREGOR played a key role in getting an amendment into the law safeguarding freedom of enterprise. This, as you know, is the amendment barring all commercial enterprise from the State-controlled rights of way of any highway on the interstate system. In my opinion, Congressman MCGREGOR has earned the thanks not only of oilmen but of everyone in Ohio who believes in our economic system for his efforts to see that this guaranty was written into the law.

By categorically excluding business from the right of way, this provision puts commercial enterprises on private property, where they belong. It is an important step toward keeping them out of the reach of State control. By this means, the door is held open to businesses of every size to compete for a share of the market. The independent, the jobber, the individual operator are given the chance to buy or lease a site on the approaches to the interstate system just as they do today. Some choice locations are inevitably going to command high prices under this system, of course, and I'm aware that a number of jobbers and others are skeptical of their ability to secure such spots. One solution in this case is supplier assistance to the jobber in financing new outlets—an arrangement which is being given increasing consideration within the industry.

To get back to the main subject, however, some of you may wonder why I am dwelling so long on this point. If protection of the right to compete is written into the law, what is there to be concerned about, in other words. Let me give you a few of the reasons:

In the first place, a provision one Congress can write into a law can be written out by another—and there have already been demands for repeal of the free enterprise amendment. Most of you are undoubtedly aware of a recent attack on this provision in which barring commercial facilities from the right of way was characterized as a "ridiculous prohibition", and in which it was argued that publicly controlled service facilities were the only sensible solution.

Behind this kind of argument lies a failure to understand the basic difference between toll and free roads. In thinking about these new interstate highways, many people make the mistake of picturing them in toll road terms—with long unbroken stretches up to 30 miles or more without an intersection. This isn't going to be the case.

Despite the fact that our interstate highways are going to bear a strong resemblance to toll facilities in general design, we have to remember that these are free roads, and linked with the entire State highway system. All important cross highways along the route are going to be feeder roads, and so are a lot of minor State and county roads where traffic patterns require an access point. One of the places where service facilities will be located is in this interchange area. Generally speaking, the motorist using an interstate highway is going to find service as frequent and adequate as on a conventional road.

Nevertheless, advocates of State-controlled service facilities cry with alarm that the fact that stations aren't located smack in the middle of the right-of-way will mean a breakdown of service. Everybody's going to be running out of gas and the highway will be a mess.

I think the answer to that is, of course, people are going to run out of gas. Short of police inspection of gas tanks, there isn't any way you can stop them. Some of them run out of gas right now on roads which have stations every couple of hundred yards. They'll even go dry right in front of a station—but the vast majority of motorists will only make that mistake once. Very shortly they'll get into the habit of checking their tanks before they pull onto any limited-access highway.

I think we in the oil marketing business know as much about the motorist's needs as anyone else around. We've been meeting those needs ever since it was discovered that an internal combustion engine will propel a four-wheeled vehicle. In the process, incidentally, we have handed out more free and "human" services than any other business in the country. If we're left free to compete, those needs will continue to be met, wherever they are found.

Despite all this, as I said, some people would like to see the free-enterprise provision repealed so that the State can take over marketing arrangements. It should be one of our primary concerns to resist any such attempts.

There's another reason for keeping our attention focused on this problem. Protection of the right to compete on the interstate

system does not automatically mean similar protection on the rest of our highways. Here in Ohio, for example, it appears likely that the greatest mileage of limited-access roads will be located off the interstate system, and there is no guarantee in the law that competition will be preserved on this important mileage.

Let me say that in Ohio we are more fortunate in dealing with this problem than is the case in a number of other States. Over recent years a pattern of mutual understanding and cooperation has developed between the petroleum industry and the highway department. We have worked together on common problems and come to understand and respect each other's viewpoints, which have turned out to be a good deal more similar than we thought at one time. After all, we're both working for the same boss—the man who pays the bill and uses the roads. We want to give him the best possible service and they want to give him the best possible highways.

Because of this excellent relationship with our highway people here, I am confident that we can continue to arrive at reasonable solutions to the problems which face us, including that of preserving competition on all of our State highways.

In this particular case, I think the solution is to follow the lead given by the Federal Government and to provide by State law that no commercial facilities will be permitted on the right-of-way of any State highway whatsoever. Until this is done we'll be living with the constant danger that a lot of station operators will wake up some morning and find themselves out of business because the State has cut off access and made its own arrangements for supplying service.

I don't think there is anyone in the highway department who would want to see this happen any more than we would want to see it happen, but the only way to be sure it won't come about is to write a guaranty into the law.

This by itself isn't going to be the end of the problem by a long shot. Deciding that stations are not going to be located on the right-of-way doesn't answer the question of where they are going to be placed. Together with our highway officials, we've given a good deal of thought to this problem and have worked out a series of possible solutions which are familiar to all of you who read the Ohio Petroleum Marketer.

These include linking the new road with existing service facilities nearby, establishing facilities on approaching feeder roads, building new parallel service roads, and setting up commercial facilities at the interchanges. While these plans have been worked out with the interstate system in mind, the same arrangements could readily apply to any other limited access highway which may be built.

At the present time, we don't know just what solution is going to be approved by the American Association of State Highway Officials and the Bureau of Public Roads. It is our hope, and that of the Ohio Highway Department, that whatever standards are adopted will be sufficiently flexible to permit a commonsense solution to each of the differing situations which will arise.

Regardless of what type of arrangement for service facilities may be employed, there is another aspect of limited access design which we're going to have to face—and that's the problem of letting our customers know where we are.

Obviously, these highways are going to have to be signed in order to let the motorist know where gasoline, food, and other services are available. The simplest type of sign, of course, is one which says merely "service facilities," or carries a symbol of a gas pump or something of that sort and tells the motorist where to turn off to the service area.

While the merits of this approach are obvious, it isn't a method guaranteed to let any oil man sleep easily—whether he's a station operator, a jobber, or a supplier. This is a tough and competitive business and none of us likes the idea of trusting to luck that customers are going to wander up to our own pump rather than to someone else's. Moreover, countrywide surveys have demonstrated that motorists on trips decide where to stop primarily on the basis of two criteria: brand name and station appearance.

No matter how much we spend to improve our product, and to advertise it, and to step up service, and keep spic-and-span restrooms and all the rest, none of these things are going to be visible to a potential customer wheeling along a limited access highway at 60 miles an hour.

Unless he can see at a glance that a particular brand—and all he knows that brand represents in terms of quality, service, and other assistance—is available, we're mighty apt to lose our best customers.

This is a problem which reaches right down to the level of the individual station and can have a considerable effect on whether or not that particular dealer makes a living or not. For example, a substantial number of the motorists in the United States have a favorite brand and usually buy it. Likewise, a substantial number not only have a favorite, but buy it exclusively.

Then there is the credit-card customer. On a nationwide basis upwards of 12 percent of all motorists hold a credit card, and in some areas the percentage runs to nearly 30 percent. These people—more than 1 out of every 10 on the road—are looking for their own station. Moreover, they represent more business than mere numbers indicate. They're by far the biggest gasoline buyers. They purchase 10 gallons on the average, as against 7 gallons per cash customer. On an individual sale basis, they spend nearly 50 percent more than the motorist who pays cash. None of us wants to lose them.

On this question, I don't know what the answer is going to be. We realize perfectly well that you can't have a jungle of banjo signs at every turnoff. Perhaps a method could be worked out to use a simple brand trademark in some manner. I think it is clear that we should be giving some serious thought to the problem if we expect to continue to provide high-quality competitive service to the motorist.

In trying to arrive at some solution, it is important to keep in mind the group of motorists we're primarily talking about. The Bureau of Public Roads has preliminary data from studies conducted in 12 States indicating that about 60 percent of all passenger car trips were for distances of less than 5 miles. Nearly 80 percent of passenger car trips covered less than 10 miles. Ninety-eight percent were for less than fifty miles. Even in terms of vehicle mileage, over 70 percent was accumulated on trips of less than 50 miles.

These figures cover statewide travel, and I would presume that the average trip length on the interstate system would be longer. Even if it turned out to be considerably higher, however, it would still appear that the bulk of the traffic would be more or less local in character and composed of people who would be less likely to have to get off the limited access highway for gasoline and service.

If this should be the case, perhaps some of our concern about the effects on the gasoline business might prove to be somewhat exaggerated. Regardless of that, the hard fact remains that relatively long-distance traffic is certainly going to make up a big portion of the vehicle miles run up on the interstate system and other limited access highways. We will have to continue to reach this business, and, to do so, we will have to find some way to let them know where we are located.

These, then, are a few of the difficulties which will have to be ironed out in the course of providing the necessary service facilities for any limited-access highway:

We'll have to resist attempts to scuttle the free-enterprise amendment in the Federal highway law. For the jobber and the independent, this is the first line of defense, insuring their right to compete;

We'll have to secure similar protection in our State law to keep commercial enterprises off the State-controlled right-of-way on all of our State highways;

We'll have to continue to work for flexible arrangements for service locations along limited-access highways;

And, finally, some plan will have to be evolved which will permit us to notify the motorist of our station location.

The petroleum industry stands ready to do everything it can to cooperate with highway officials toward the solution of the problems involved. We are convinced that plans can be worked out which will meet all service needs without interfering with any of the design characteristics of these new highways.

But no sound solution is going to come about unless informed people are willing to fight for it. We have before us the possibility of serious damage to the competitive structure of one of the State's most important industries.

If competition in supplying petroleum products is permitted to be gradually extinguished along our important highways, we—and the people of Ohio—will have lost a very significant battle, the results of which will be felt far beyond the petroleum industry. We have an obligation, not just to ourselves, but to everyone who believes in a man's right to try to make a living in the business of his choice, where he chooses, which we cannot afford to disregard.

If we remain alert, and are not afraid to speak out, this obligation can be met.

Hysteria About Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call attention to an editorial in the Madison (Wis.) Capital Times under date of May 8, under the caption "Hysteria About Federal Aid to Education."

The editorial is quite critical of both the Republican Party and the United States Chamber of Commerce. It points out the inconsistency of the position of the chamber in favoring the $33 billion road program but opposing a $300 million grant for school classroom construction over a 5-year period for a total of one and a half billion dollars.

The editorial follows:

HYSTERIA ABOUT FEDERAL AID TO EDUCATION

There is probably no educational proposal today that is opposed with greater hysteria than Federal aid to education, a subject on which the assembly education committee holds hearings today.

The specific measure is a Democratic resolution favoring Federal aid.

Hysteria seems to be the only explanation for the violence of the opposition to Federal

aid. The most frequently heard argument is that Federal aid would give the Federal Government control over our schools.

The people who argue this seem to think that the Federal Government is foreign government. They seem to forget that Government in Washington is just as much their government as the government in the State capital, county seat, or city hall. If they don't like it they can change it.

The chamber of commerce and the Republican Party seem oblivious to the inconsistency of their enthusiastic support of Federal highway aid and their opposition to Federal school aid. Why don't they fear that the Federal Government would dominate the highway program?

And the people at the local levels of government will argue that aid means domination of the local school system by the Government granting the aid. They overlook the fact that the State of Wisconsin has been sending back educational aids for years. The same people who are arguing against Federal aids are supporting legislation in the current session of the legislature to increase State aids.

The objection to Federal aid could hardly be the expense involved. The educational aid program calls for an expenditure of a piddling $1.3 billion. Compare that to the staggering $30 billion provided in the highway aid program.

Or consider the $3.6 billion which big industry is asking for in tax-amortization applications. We don't hear of any objections to such Federal aid for private business. So it can't be the expense.

Perhaps there is this difference between highway aids and educational aids: Highway aids are supported by one of the most powerful and free-spending lobbies in the world. The cement interests, the automobile interests, the road-machinery interests, and many more spend millions to lobby for highway aid. And in return they get billions.

But who is there to lobby for education?

A Long Strike's Human Damage

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which appeared in Life magazine May 20, 1957, dealing with the issues and history of the 3-year-old Kohler strike.

This is probably the bitterest industrial dispute pending in the Nation. I am sure that the people of goodwill throughout Wisconsin and the entire country continue to hope and pray that it may be settled at an early date in justice and fairness to all.

The article follows:

A LONG STRIKE'S HUMAN DAMAGE

(By Robert Wallace)

An enormous mess, not just an everyday, run-of-the-mine botch, requires good, strong men to produce. Weak men lack the courage and tenacity of purpose, the dignity, and, above all, the individualism to produce a well-nigh hopeless shambles. Consequently, what is happening in Sheboygan County, Wis., and radiating outward from there to all corners of the Nation, is a rare thing. Let there be no doubt about it: these men are the salt of the earth, the backbone of America, and the mess is a large one.

The mess is a labor dispute involving the wealthy, family-owned Kohler Co., second largest manufacturer of plumbing ware in the United States, and the United Automobile Workers, the second largest union. The UAW's Local 833 has been on strike against Kohler for more than 3 years, having begun the fourth year on April 5. This is by far the longest and bitterest major strike in the Nation, and there is still no indication as to how, when, or whether it may ever end.

What makes the strike so prolonged and so difficult to settle is the fact that it is not about wages or hours or pensions or hospitalization plans or any other issue that lends itself to arithmetical compromise. It is about principles. And they are not the tepid, flaccid principles so frequently encountered today but good old-fashioned ones involving no less than human rights and dignity.

There is nothing old-fashioned about the way the strike is being fought. The principal weapon, still not perfected and still fairly ineffective, may be the industrial hydrogen bomb of the future, a fearful device that had always been possible but only became really practical when the CIO and the AFL merged into one superunion in 1955. The device is a boycott, not local or regional but nationwide, which the striking union, with the help of organized labor throughout the United States, dropped on the Kohler Co. a little over a year ago.

The potential power of such a weapon is enormous: when and if it is fully developed it will be capable of destroying any corporation in the country, even the largest and wealthiest. It will also be capable of destroying any union, since the ruin of an employer is also the ruin of his employees.

In point of fact the boycott is not destroying the company, yet, although it is doubtless causing some trouble and loss of profit. However, if the boycott is pressed into the indefinite future, and if the UAW pumps more money and manpower into it, it may indeed wreck the company. It is a matter of determination, and the leaders of the UAW are exceedingly determined men.

Beyond the issue of the strike and the boycott lies the human damage the strike has caused. In the city of Sheboygan, where most of the Kohler strikers and strikebreakers live, thousands of old friendships have turned into hatreds. During the long strike there have been more than 800 separate acts of violence and vandalism, many of them of the most cruel and disgusting nature, and these are merely the acts that have got onto the police blotter. The private, unrecorded indignities and miseries are numberless.

What sort of people are capable of creating such a large mess?

A NAME THAT RINGS A BELL

Sheboygan has a population of about 45,000 and stands on the shore of Lake Michigan about 60 miles north of Milwaukee. The name Sheboygan rings a bell with most people, who feel they have heard of the place in some connection but cannot remember what. Perhaps the connection is to be found in a popular song of some years ago, which went: "Mention my name in Sheboygan, it's the greatest little town in the world."

The people of Sheboygan are largely of German ancestry with infusions of Dutch and Russian. Their grandparents came to the United States to escape political and economic oppression in Europe, the floodtide of immigration having occurred around 1880. They were stolid, long-suffering people, accustomed to hard labor, slow to be provoked, but once provoked, slow to be reconciled. A partial explanation of the bitterness of the Kohler strike lies in this heritage.

The churches are strong in Sheboygan, the strongest being the Lutheran and Catholic. There is very little organized sin in town, or disorganized sin for that matter. In the evening the average citizen has a couple of beers in a tavern and goes early to bed. There are 155 taverns in town, so no man is hard up for a place to put his elbow. One night a week, usually on Wednesday, Sheboygan husbands stay home and watch the kids, of whom there are larger numbers, while their wives go bowling, to the taverns, or both. Germany food, especially bratwurst grilled on charcoal, is popular.

There are no Communists in Sheboygan, although the accusation is sometimes laid on the strikers by people who have no sympathy for them. Take the case of Mrs. Ethel Fesing. Mrs. Fesing was having a beer not long ago in Christ & Elly's Oui Oui Bar, one of the 155 taverns, and talking casually about the strike. Her husband is a striker. As it happened a nonstriker came into the tavern and made what both Mrs. Fesing and her husband, who was present, considered an untoward remark.

"I'll beat his brains out," said Mr. Fesing.

"Oh, no, you won't," said Mrs. Fesing. "I will."

And with that Mrs. Fesing, a lady of considerable muscle, picked up the nonstriker, to whom she referred in loud tones as an indelicate scab, and threw him through a screen door. This was done with such violence that although the nonstriker landed outside the tavern, his shoes remained inside. Mrs. Fesing is not a Communist. She was just sore.

Stubborn independence, perhaps a little slow to be asserted but asserted with emphasis when at last it is, is a prime ingredient in the Sheboygan personality—which is to say, in the personalities of the Kohler strikers. But the identical ingredient is also prominent in the personality of the strikers' archopponent, Herbert V. Kohler, president and board chairman of the company. He too stems from the rugged Teutonic stock and he too, even at the age of 65, is as tough as an oak post. There may be minor differences in education and other matters, but the principal difference between Herbert V. Kohler and the strikers is that Herbert V. Kohler has all the money. Exactly how much money he has is no one's business, but his personal wealth runs well into the millions and the tangible net worth of his company is about $40 million.

The Kohler family has been prominent in Wisconsin politics, 2 Kohlers having held the governorship—Walter J. Kohler, Herbert's half-brother, in 1929–30, and Walter J. Kohler Jr., Herbert's half-nephew, in 1951–56. The Kohler Co. has also done its part in philanthropies, having given large sums to Sheboygan churches over the years and having donated so much to the local hospital that a new wing was named Kohler Pavilion. "Nobody says Herb is a bad-hearted man," one of the strikers observes. "He's not mean. He just tromps on us out of habit."

For many years the Kohlers, in running their family business, have been sedulous practitioners of old-fashioned paternalism, or father-knows-bestism. The union sometimes refers to this as benevolent dictatorship, but more often omits the benevolent. In reply, Herbert V. Kohler stoutly maintains that it is the union which practices dictatorship, the union which tries to tell him how to operate, and that this is a damnable outrage.

The Kohler Co. was founded by Herbert's father, John M. Kohler, in 1873. Herbert V. Kohler has been working full time in the company ever since 1914, and much of its growth and success is attributable to his hard work. Is there, he asks, something wrong with success and the accumulation of wealth? Is there some good reason why

some outsider should move into his plant and tell him what to do—particularly those leftwingers from Detroit, who run the international union, and who ought to stay home and keep their noses out of the little family quarrel in Sheboygan?

The little family quarrel has been simmering for many years. When the grandfathers of Sheboygan came to America they brought with them the memory of the landlord-peasant relationship they had known in Germany. They had rebelled against this relationship in its harshest form, but were not unwilling to accept it in a watered-down version. At the Kohler Co. they slipped into it easily, and a long time passed before they began to think there was anything uncomfortable or undignified about it. There were, in the old days, no summer vacations for shopworkers, but the company did see that every married man got a goose for Christmas, and every single man a wallet or a pocketknife. Hours were long, wages were low, but if a man died, the company saw that his family got $100.

As long ago as 1913 the then president of the company, Walter J. Kohler, began to build a model community in which Kohler employees might live. This was an advanced, indeed a radical thing for management to do. Moreover the model community was no drab "company town." It was and still is a handsome, landscaped village of 500 homes, close beside the plant. It is shown on Wisconsin maps as the village of Kohler and accounts for the company's trade name, Kohler of Kohler.

"Sure it's a fine place," says a striker. "But there was a catch to it. Today there are 10 supervisors for every production worker living there. But even in the old days there was a catch. If you didn't behave the way the boss wanted, they'd throw you out of your home. That's a strong grip to have on a man—not only his job but his home too."

The Kohler Co. introduced a pension plan somewhat in advance, at least chronologically, of the rest of United States industry. In this instance too there were signs of a breakaway from old-world conditions. But today the pension plan is one of the union's talking points when it sets out to attack Kohler. In a UAW strike publication, for example, there is a picture of an elderly Kohler worker with the following caption: "Sixty-eight-year-old John Razal has been working for the Kohler Co. 27 years. When he retires, the company will give him a gold watch—and a pension of $5.93 a month. That's why he's kept on working. He and his wife, they've figured, just wouldn't be able to live on $5.93 a month."

The one old-world condition that the Kohler workers at last found intolerable was the Prussian variety of discipline maintained in the factory. It was discipline based on fear, demanding a sacrifice of personal dignity that finally became too great. There are no Patrick Henrys or Tom Paines in Sheboygan. To the question, "Why are you striking?" man after man shrugs, reddens and says, "Well, I got sick of kissing the foreman's elbow," or, "Well, I wanted them to treat me decent, like a man," or, "It was—well, I don't know how you put it, but it got so I couldn't breathe."

"THEY KEEP BOOKS ON US"

None of the strikers questions the necessity for discipline of the right of the management to enforce it; it is only the manner of enforcement that rankles. "They keep books on us like FBI files," a striker says. "I'm not kidding, I mean real books. John Smith spent 6 minutes in the washroom. Bill Green made a dirty crack about the second supervisor in the pottery. Everything you do or say goes down in the books, even loud talking or laughing too much. The way the company punishes you is by transferring you.

"Suppose you've got a nice clean daytime job at high pay. I mean high for Kohler, maybe $2.30 an hour. You tell a joke the foreman doesn't think is funny, and all of a sudden you're on the night shift, and you've got a black mark on you, they're gunning for you. Next thing you know you're working in the foundry at a worse job, maybe $2 an hour. It's hotter than hell in the foundry, but not hot enough, so they put you in the pottery. Did you ever work around a kiln at 2,400 degrees, Buster? For maybe $1.85 an hour? Then they pull you off that and make you a sweeper, $1.30 an hour—you can't do a thing about it, except quit. A young guy, he can quit, but I've seen men way past 60, guys who used to have good jobs, pushing brooms on the night shift. They can't quit because nobody else will hire them."

In almost all of United States industry today, grievances arising from disciplinary transfers and the downgrading of elderly men are submitted to arbitration. There are clauses providing for arbitration, not only of transfer cases but of various other grievances, in approximately 93 percent of the labor contracts now in force. The Kohler Co., however, will not agree to arbitration. Herbert V. Kohler takes the view that arbitration is a surrender of management's function.

The Kohler workers have been trying for more than 25 years to force some sort of satisfactory grievance-arbitration mechanism on the management. In the early 1930's many of them joined an AFL union which recruited in the plant, hoping to achieve a position of strength from which to negotiate. The management opposed the union; a strike and a bloody battle ensued. In July 1934 there was a riot outside the gates of the plant which was quelled with tear gas and gunfire, resulting in the death of 2 men and the wounding of 28 others, all strikers or spectators. The AFL union was broken.

In the middle 1930's a company union, the Kohler Workers Association, was formed with the encouragement of the management. The KWA had no affiliation with any outside group. It also had no strength.

In 1952 the UAW began to organize the plant, and after several months of furtive work succeeded in enlisting a majority of the production workers.

The motivation of the Kohler workers in joining the UAW cannot be overstressed. It was not because they were interested in advanced politico-economic theories; the phrase "class struggle" to them was something that might be applied to a high-school ball game. It was not because they were greedy for more money; their pay was not high by the standards of Detroit or Gary, but it was good for the Sheboygan area and they were reasonably content with it. All they wanted to do was to get the foremen off their backs. This required that they go out and get a big, husky friend to help them. If the big, husky friend had some advanced ideas, the workers were not concerned. They just wanted muscles.

The first contract negotiated between the Kohler Co. and UAW Local 833, as the new union was numbered, ran for a period of 1 year and expired early in 1954. It did not have an arbitration clause that satisfied the union members, having been negotiated rather gingerly. Neither side was anxious, at the outset, to provoke a fight. But before the contract expired both sides served notice that they would not renew it, and the lines of battle began to form.

The executives of the Kohler Co., including Herbert V. Kohler and his chief attorney and negotiator, Lyman Conger, have a great deal in common with the executives of the international UAW including President Walter Reuther and Secretary-Treasurer Emil Mazey. The remark may cause them to choke on their cigars but it is nonetheless true. Politically and in economic theory, needless to say, they have basic differences. But they are all good citizens of the Republic, honorable men, and they are nearly identical in matters of courage, stubbornness and the willingness to fight for a cause. It is a pity that the four men, as a team, cannot go and negotiate something with the Russians, as they would doubtless come back with Bulganin's goatee. And it is a pity that the 4 men, as 2 teams, had to square off against each other.

Herbert V. Kohler approached the battle determined not only to hold his ground but, if he could, to smash the union. He made no bones about it. In reference to the fact that the Taft-Hartley law requires employers, as well as employees, to bargain, he agreed that he did have to bargain with them but was heard to say, "You don't have to give them anything to bargain."

The executives of the international UAW—they, rather than the local's executives, are the ones who call the shots—approached the battle determined to make Kohler yield or to leave him dead in the market place as an example to any other employers who might try to go back to 1928. And so the ultraconservative employer and the ultraliberal union took each other by the throat.

A FINAL, ODD CIRCUMSTANCE

Before the demands of the union and the replies of the management are brought up, there is a final bit of circumstance that should be pointed out. It is one of those minuscule, silly things that have, all too often, ponderous influence on the affairs of men, like the fact that Adler did not popularize elevator shoes until far too late to save the world from Napoleon. As it happens, Emil Mazey, of the UAW, is a veteran of many a battle on the picket line, a rugged, aggressive citizen who would never under any circumstances be called pretty. Emil Mazey no doubt has a heart of pure gold, believes in home, the flag, and mother, and loves children and dogs. But he does look as though, words having failed, he might settle an argument with a two-by-four. Lyman Conger, the Kohler negotiator, is no doubt at heart the living embodiment of the Boy Scout oath, a kindly and gentle fellow altogether. But he does look as though, as a traffic judge, he might jail his mother for double parking.

That Conger and Mazey should have come face to face at a negotiating table was a most unhappy coincidence, but it happened. Mazey set the tone of things at an early session when he walked into the room, skewered Conger with a gimlet stare and said, "Well, here I am. Let's stop fooling around, and sign a contract." Conger replied with a rasping noise, and they were off.

The opening demands of the UAW might have made even old Sam Gompers' hair stand on end. Some of them were "straw men," set up for the company negotiators to demolish so that they might more readily accept other demands. However, a partial list of them, as Herbert Kohler bitterly recites them in his public speeches, makes gloomy reading for any employer anywhere. "The union shop—the outrage of compulsory unionism—was one of the demands we refused," Kohler says. "Others included: No shop rules without the union's agreement; no increase or reduction of hours without the union's agreement; no subcontracting of work without the union's permission; automatic wage progressions with no merit increases; promotions on a strict seniority basis."

As anyone who has tried to run even a lemonade stand knows, these are rugged demands, and Kohler's description of them as a collective outrage may make a great deal of sense. Mingled with them were other, more reasonable demands concerning wages and pensions, and the eminently reasonable demand concerning arbitration. However, the company's reply, in sum, was a firm "No," now and forever, to everything.

When the strike began some 2,600 of the plant's 4,200 workers walked out. (The remaining 1,600 included supervisory personnel, executives, clerical workers, and nonunion members.) A mass picket line was thrown around the plant, in violation of both State and Federal law, and the company was completely out of production for 54 days. When the picket line was reduced to legal size, some nonunion men went back to work, and soon a large force of strikebreakers was taken on, mostly from nearby rural areas. Within a few months the plant was again producing at nearly full capacity. Three years later the plant is still producing, with perhaps 2,000 strikebreakers inside, and the pickets still outside.

SUPPORTING THE STRIKERS

After the strikebreakers moved in, the UAW undertook one of the most expensive financial ventures in United States labor history. Drawing on its large strike fund (currently $22 million), which is constantly maintained by contributions from the 1.3 million members of the international union, the UAW began to support all of the strikers and their families. A system of allowances was established in which each striker was paid $15 a week for food for himself and his wife, with an additional $3 for each child. All or part of the striker's rent, or the interest on his mortgage, was paid by the union. In addition, each striker received $25 per week to cover routine living expenses.

The UAW supported the strikers for 2 years, pumping about $10 million into Cheboygan (local merchants, who might have been ruined by the strike, have never felt its full impact). Last April, the Kohler Co. having shown no signs of surrender, the union terminated the support plan and began to find jobs for the strikers. Today only about 300 strikers are carried on the union's support rolls, enough to maintain the picket line and perform other work connected with the strike. All others are now supporting themselves. Many commute to work in Milwaukee, others have quit the union and gone back to work at Kohler, and some have moved out of Sheboygan forever. In all, nearly 200 families have taken the latter course, a lonesome road for people whose roots lay deep in the community.

The end of the support plan merely marked a change in union strategy; the rapid expansion of the boycott.

The boycott functions like a sales organization in reverse. The union has divided the Nation into 12 unsales territories, in each of which hardworking, full-time unsalesmen constantly call on potential Kohler customers, trying to unsell them on the Kohler line. The union's unsalesmen are instructed not to threaten anyone, although there are those who see an implied threat in their very appearance on the scene. The unsalesmen merely say, "Don't buy Kohler," never, "Don't buy Kohler—or else." Of course, there are building contractors who have jumped to conclusions. Recently in Los Angeles, for example, a contractor canceled an order for $100,000 worth of Kohler plumbing fixtures, on the ground that it might take his plumbers too long to install them. "They have to install them," he says, "because that's the law. But you take a union plumber who can set 7 or 8 toilets a day. If he's—well—unfamiliar with Kohler ware, maybe he can only set 3 or 4 a day. I can go broke that way."

The union's unsalesmen have an unsales talk directed at consumers as well. "These bathtubs, lady," they say, "are made by what you might call scabs, who don't know their ears from their elbows. Just ignorant farmers, mostly. Now, you've seen a ring around a bathtub, lady—but wait'll you see the ring that can form around this bathtub. You can grow mushrooms in it."

Direct mail also plays an important part in the boycott. The UAW maintains a large clerical staff in Sheboygan, which in the past year has sent out more than one million pieces of mail to contractors, architects and consumers. Moreover, almost every union publication in the country has received, and printed, news releases about the boycott.

"The boycott?" says the Kohler Co.'s Lyman Conger. "Why, it's not hurting us a bit. It's helping us. It helps us for the obvious reason that it makes people angry. Nobody wants to be told what to buy and what not to. That turns people against the union, and they get so they insist on Kohler products."

In reply to the unsalesmen's claim that strikebreaker-made Kohler products are somehow inferior, Conger points to the rate of complaints lodged with the company concerning faulty goods. Today, he says, the percentage of complaints is lower than it was before the strike.

Without an acetylene torch it is impossible to obtain the company's financial figures. However, the company files annual tax returns with the state of Wisconsin, and on the basis of these it would seem that the boycott has not yet had any wrecking effect. For 1956, during the last 8 months of which the boycott was in full swing, the company paid $336,856 in State income tax. For 1953, the last full year before the strike began, it paid $390,508. The difference of $53,652 may indicate some loss because of the boycott, or it may merely reflect a normal increase in the company's production costs. In any case it scarcely reveals a staggering drop in gross income. Today the union contends that the boycott is just beginning to operate effectively, and that the 1957 figures will show that Kohler's gross sales are more than 50 percent below the prestrike level. In the past few months, the union says, carload shipments from the plant have fallen from a prestrike monthly average of 264 to a current 130, and the production man-hours per week have dropped from 155,161 to 78,225. This the company firmly denies. When the 1957 tax return is finally available—and if the company does not later apply for a rebate—someone's contention will look rather feeble.

"PEOPLE," A RUSTY WORD

At the bottom of all the figures, buried under the claims and counterclaims, demands and refusals, speeches, broadcasts and written reports, there are some people. "People" is a rusty word in this business, so little used that it almost requires definition. However, with a little effort the principals in the dispute may recall what people are: the ones with the holes in their shoes, the higher vetebrates who bleed when they cut themselves shaving, and upon occasion are capable of thought and tears.

Frederick Kuehlmann fits the definition. He is 52 years old, has lived in Sheboygan all his life and worked for Kohler for 30 years. He is still working for Kohler, which makes his a scab, as the strikers say. He is not a big man, but wiry and well made. For the past 15 years he has been severely afflicted with arthritis. He works in the Kohler shipping department at a clerical job that requires little physical effort.

Kuehlmann did not join the U. A. W. when it unionized the plant. "I had nothing against it," he says. "I just never joined it. Quite a few guys never joined it." Primarily Kuehlmann wanted to say out of trouble: "At my age, and with arthritis, do you think I could get a job anywhere if I got fired or went on strike?" Kuehlmann must support his wife, his youngest son and a teen-aged daughter. He has two older sons, but they now support themselves.

As soon as Kuehlman returned to work at Kohler, which he did in 1954 shortly after the mass picket line was removed, he began to have trouble. Some of his old friends stopped speaking to him. One morning as he drove to work he noticed what the thought was rainwater on the hood and fenders of his car, which he had left outdoors all night. It turned out to be sulphuric acid. "A little while after that," he says, "they slashed all my tires. I got some new tires and they slashed them too. They did it four times."

For the first 2 years of the strike Kuehlmann's phone rang constantly at night. "I mean late at night, like about 2 o'clock. They must have called me at least 150 times. I'd pick up the phone and there'd be a voice, 'You dirty, rotten, lousy, yellow scab.' They'd never say who they were.

"We used to live in an apartment above a store." Kuehlmann says. "But I saved my money and I bought this old house. A real wreck. But my older boys and I worked on it for half a year and we fixed it up good. We just had it finished, pine paneling and a wall-to-wall carpet and everything my wife and I always wanted. I was sitting in the living room, smoking a cigarette and admiring the place about 11 o'clock at night. My wife was in bed already. I was sitting there, and then Bang! Bang! Three quart jars full of red paint busted through the windows and smashed all over the place. I don't want to hurt anybody. I just want to make a living."

Kuehlmann's case is typical of many in Sheboygan. Today the violence and vandalism have largely disappeared, there having been no serious cases since late in 1956, but the memory and the expectancy of them are always present.

AN OLD SHEBOYGAN RESIDENT

Leo Breirather is 42. He lives with his wife, Beulah, and their three children in a small house on the outskirts of Sheboygan. He built the house, which is of brick, with his own hands, having a great deal of energy and desire to get on in the world. Breirather's family has been established in the Sheboygan area for a long time. His father worked for Kohler for many years, and Breirather himself had been employed there for 20 years prior to 1954. He sometimes makes a point of this in conversation, because it amuses him that Kohler executives should say, as they sometimes do, that the trouble in Sheboygan is caused by outsiders.

Breirather is one of the strikers who are still supported by the union. He is chief steward of local 833 and has an important job in the boycott. The supervisor of the entire operation is Donald Rand, an international representative of the UAW whose office is in Detroit. Rand comes to Sheboygan only once a week, and in his absence Breirather is in charge.

Before the strike Breirather worked about 45 hours a week at Kohler and made about $80. Today he works fully 70 hours a week and can barely exist on the money the union pays him. He lives mainly on boiled dinners and tenacity, and it pains him to see his children deprived of the things he might have given them. After 3 years of strike he does not enjoy thinking about the future; sometimes he can see the trouble in Sheboygan stretching beyond the horizon. "Last Christmas," he says, "we had a little party here for the strikers and their kids. After it was over, some of the strikers got to talking about mistakes we'd made in planning the party, and I heard one of them say, 'Next Christmas we'll do it differently.' And I thought to myself, my God."

Breirather is at heart a constructive, solid citizen—the brick house perhaps is a token of this. He wants to build something, not to destroy anything. He knows that if his work in the boycott eventually succeeds he will ruin the company, and thus remove the principal source of employment in the area for men like himself. He knows that as he tries to strangle Kohler he strangles Breirather, but he will not and cannot quit. A student of Greek tragedy would feel at home in Sheboygan.

Breirather is willing to talk in detail about the strike and to be quoted publicly. Other strikers are not. There is good reason for this. Whenever Breirather or any other striker makes a remark which receives public attention, researchers employed by the Kohler Co. transcribe it and swear an affidavit concerning it. On the basis of hundreds of such affidavits—enough, quite literally, to fill 4 large volumes—the company has compiled a blacklist of 89 individuals who are never under any circumstances to be reemployed if and when the strike ends. Breirather is one of the 89, and has nothing more to lose.

"I'm on that list," says Breirather, "because I'm chief steward of the union. Kohler says he isn't trying to smash the union, but by some coincidence the 89 names on that list include the president, the vice president, and all the other officers of the union, along with the committee heads and everyone else who's held an important union job."

The problem of reemployment for the strikers has become, after arbitration, the second real issue of the strike. Herbert Kohler, in hiring strikebreakers for his plant, gave them a promise that they would never be replaced by returning strikers when the dispute is at last settled. Today there are perhaps 1,500 strikers, working at temporary or permanent jobs elsewhere, who would return to Kohler after an honorable settlement. However, the company maintains that it cannot rehire them, and will not rehire the 89 blacklisted men.

In negotiations the union has indicated that this is not an insoluble problem. There is a fairly brisk labor turnover at Kohler, and if the returning strikers are placed on a preferential hiring list and given jobs as soon as jobs become available, this might take care of the situation, so long as Kohler acts in good faith and does not unreasonably delay the rehiring. As for the 89 special cases, the union again mentions the dreadful word "arbitration." Not all are union officers. Some no doubt have been guilty of violence and should not be rehired. The arbitrators can settle that.

There have been countless negotiating sessions since the strike began, and there were many beforehand. All manner of men have tried to mediate—various political wheels, members of the National Labor Relations Board, and Herbert's half-nephew Walter, who was Governor of Wisconsin when he made the attempt. (Uncle Herbert replied to nephew Walter in a public letter of some 1,000 well-chosen words, the substance of which was, "Don't bother me, boy.") The most recent attempt at conciliation was made by three nationally prominent clergymen—Father John F. Cronin, Rabbi Eugene Lipman and Rev. Dr. Cameron P. Hall—who managed to get union and company representatives to attend exploratory talks in Chicago, New York, and Sheboygan early this year. But last April 26, when the talks began to take a specific turn, the mediation attempt collapsed in an outburst of recrimination from both sides. No further talks are scheduled.

The big union brass from Detroit has long since receded from the remarkably tough position that so outraged Herbert Kohler at the outset. Today the strike could be settled on these terms: insert a standard arbitration clause in the contract; set up a mechanism for rehiring the strikers within a reasonable time; and arbitrate the 89 special cases. Thus it seems that Herbert Kohler has gained an edge over big labor, which in recent years has not been in the habit of losing arguments. Today big labor is in a defensive posture because of the changing currents of public opinion and the operations of that singularly sad apple, Dave Beck of the teamsters. Walter Reuther and Emil Mazey may not in the immediate future find it wise or convenient to throw enough men and money into the boycott to make it a real buster.

Herbert Kohler, therefore, is in a position of strength and, in some quarters, honor. His conservative colleagues are delighted to see any union lose any argument and a great many middle-of-the-road Americans are not displeased to see big labor receive an occasional belt in the chops. Keep things from getting monotonous.

But some settlement remains to be made between Herbert Kohler and little labor, the decent, courageous men who worked in his plumbing factory and struck because their sense of personal dignity demanded it. Such a settlement cannot be made unless Kohler himself accepts a measure of defeat. And there they stand—a partial winner who must take some loss, and a loser who must be given some gain. Neither side can win the strike in any clear-cut fashion. At the moment the company is ahead, but times change. If the strikers cannot be given peace with honor, then the dispute will drag on bitterly, interminably, fruitlessly.

Leadership, Work, Money Win Victory for Ohio G. O. P.

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. BENTLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from Detroit News of May 27, 1957:

LEADERSHIP, WORK, MONEY WIN VICTORY FOR OHIO G. O. P.

(By Will Muller)

COLUMBUS, OHIO, May 27.—Three successive comeback victories have put the Ohio Republican organization in fine form today for a double test in 1958.

Under a 1956 constitutional amendment, Republican Gov. C. William O'Neill and his elective cabinet will be running for 4-year instead of 2-year terms.

So, too, will be Ohio's 34 State senators, of whom 22 are Republicans. The State's 139 house members, of whom 97 are Republicans, will continue to run for 2-year terms.

MOSTLY INCUMBENTS

Between now and February 1958, the filing deadline, Republican United States Senator JOHN W. BRICKER must decide whether to run again or retire.

If BRICKER runs, it will be the first time since 1928 that Ohio Republicans were able to set a complete array of incumbents in the field in a statewide partisan election.

It is this recovery of the Ohio Republican Party from 1950 desperation that has State Republican chairmen from both coasts writing party headquarters here.

They are sure that Ohio's Republican Chairman Ray C. Bliss has discovered some magic formula that will grow winning Republican candidates in Democratic soil.

WINNING FORMULA

And so Bliss has. His formula consists of leadership, organization, money, candidates—and unselfish hard work.

In contract to Ohio, Michigan in 1958 will see a buffeted Republican Party struggling mightily to save United States Senator CHARLES E. POTTER and put a full ticket of State candidates in the field.

If BRICKER doesn't run in Ohio, there's a line of replacements waiting that stretches from the Mahoning Valley to the cornfields.

"We've got candidates running out of our ears," says Bliss happily. "It wasn't this way a few years ago."

LEARNED TO WORK

Eight years ago, businessmen didn't find Republican activity an asset. They preferred buying a ticket to a $100-a-plate fundraising dinner to punching doorbells for the party—like many Michigan Republicans today.

But, almost overnight, contributing to the party and being seen at its rallies became "the thing to do." Under the new regime in Ohio, party workers are learning that work is as important as money. Politics has joined the country club.

"The Republican Party is lucky to have Henry Ford II as a contributor," says Bliss. "But think of what the effect would be if he also did a little canvassing in his precinct.

"Everybody in the Ford organization suddenly would decide a little political participation would help his own chances of getting ahead."

HAVE GOOD FACILITIES

A look at the party organization, built on the ruins of 1948, which will go into battle here in 1958, would tempt a Michigan Republican to move southward.

Party headquarters occupies a full floor. It has everything from a photographic laboratory to a newspaper clipping file and research facilities equal to that of many daily newspapers.

Among his 15-member staff, the $18,000-a-year chairman has top-notch assistants. They're veterans, and they all say they'll stick—but only as long as Bliss does.

There's Robert M. Krier, immediate assistant to Bliss, a Columbus attorney; Joseph John Flanagan, sharp in mind as he is rotund of figure, publicity consultant, former newsman, former aid to BRICKER.

NO STRINGS ON AVREN

And there's Frank E. Avren, who says Bliss, has one trouble. He may have "8,000 ideas and only 1,000 of them will be good." His field is publicity.

A block away is the office of the Ohio Republican Finance Committee, charged with raising the budget Chairman Bliss sets—and turning it over with "no strings attached and no favors asked."

The finance committee, every election year, hires a professional soliciting firm to direct a united foundation type money raising drive for the party in Ohio. It hits the eight big cities, only the richest of the counties.

EIGHTY-EIGHT ACTIVE CHAIRMEN

The Republican State Central and Executive Committee, of which Bliss is chairman, gets only the money for the statewide campaign.

Every 1 of Ohio's 88 counties has an active chairman. If he isn't active, he can retire. Few do as long as they can deliver, for in Ohio the county chairman is a king.

All State partonage is settled between county chairmen and the Governor. All post office appointments are agreed upon between county chairmen and Republican Congressmen.

Bliss, National Committeewoman Katharine Kennedy Brown, and National Committeeman Clarence J. Brown sit with Senator Bricker to decide Federal appointees.

CAN BE REACHED

Permanent county headquarters are maintained the year around in most big cities. In the smaller counties, the chairmen have businesses or political quarters of their own where they can be reached by party workers any day.

The State headquarters publishes a paper—the Republican News—weekly. In election years, special editions may be printed for every county. Rarely does it quote Chairman Bliss—always the candidates.

There's no room for cliques and factions in Ohio. The Republican Party is owned locally. A committeeman is elected in each precinct. The committeemen—not the party nominees, as in Michigan—choose the county chairmen.

PACKAGE LITERATURE

Ohio has no party convention system, such as picks Michgan's State chairman. Here, the members of the party's State central committee run for election by congressional districts in the primary elections.

The elected State committeemen pick their own chairman. Everybody in the organization owns a piece of the party, a portion of its platform, a share in its winnings.

Bliss insists on "package" campaign literature. That means that literature printed at party expense carries the entire list of Republican candidates who will appear on the ticket where the literature is distributed—from President to sheriff.

The party headquarters here is in strange contrast to that bare building at 400 North Capital, Lansing, owend by the Lincoln Land Co. and used as a State center by Michigan Republicans.

UNOFFICIAL GOVERNOR

From February 9, 1949, until January 1 of this year, Bliss was the unofficial "Republican governor" of Ohio, with Democratic Governor FRANK J. LAUSCHE sitting in the capitol less than a block away.

Every Monday night, legislators trooped to party headquarters. There, policy was written, legislation discussed, the general direction of the Republican lawmakers determined.

Bliss never went to the capitol. The lawmakers came to headquarters. They shaped up and hammered through most of each years' party platform, even in the lean time when Republican legislators were in the minority.

VICTORY ONLY GOAL

Governor O'Neill holds those party legislative conferences now. His is the responsibility. Bliss says he's glad to "get out from under the responsibility."

Through Ohio, now, there's talk that jealousy over power may alienate Bliss and O'Neil. Bliss belittles that report.

"There's nothing I want but victory for for the party," says Bliss. "I've got an insurance business needing me in Akron."

Today, though, Bliss may not know it, there's one more world for him to conquer. Betty, the girl who runs the creaky elevator up to the chairman's office, is still a Democrat.

Address of Robert E. Merriam, Assistant Director, Bureau of the Budget, Before the Seventh Annual Conference National Society for Business Budgeting, Palmer House, Chicago, Ill.

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the RECORD a very informative address delivered by Assistant Director of the Budget Robert E. Merriam, at the seventh annual conference of the National Society for Business Budgeting, held in Chicago on May 23. The address follows:

ADDRESS OF ROBERT E. MERRIAM, ASSISTANT DIRECTOR, BUREAU OF THE BUDGET, BEFORE THE SEVENTH ANNUAL CONFERENCE, NATIONAL SOCIETY FOR BUSINESS BUDGETING, PALMER HOUSE, CHICAGO, ILL.

Thanks to certain events in Washington in the past several months, the art of budgeteering is now very much on everybody's minds. For this I honestly believe we should all be most thankful. Far too many people think of a budget as an extremely dry, technical, painful, and perhaps useless document. Budgetmakers, from family head to Federal Budget Director, are at best thought of as necessary evils and at worst as the chosen instruments of the devil. If my children are any sample of the reaction of those subjected to budget limitations, one doesn't ever win any popularity contests in his budgetmaking activities. I would suspect that you may have had some of the same reactions in your own jobs. Perhaps the main point of departure between us, you and me, is that we in government must consider not only the operators who resent the limitations we place on their spending—but we also must take into account, and rightly, the billpayers who seem to be somewhat upset because we haven't placed enough limitations on this spending.

I am glad to note from your program that you are looking at budgetmaking from every direction—inside out, upside down, right side up, and from the human angle. While it would take many hours, or even days, to look at the Federal budget from all these angles, I would at least like to clear away a little of the debris and oratory and discuss with you some of the myths circulating about the 1958 Federal budget.

1. What is the Federal budget?

The budget is a plan that can be looked at in at least 3 ways—

The consolidated cash budget, represents a summation of the cash intake and outgo of the Federal Government, including transactions of trust funds. Many economists agree that this representation of the flow of money into and out of the Treasury is the best indication of inflationary or deflationary effects of Government transactions. Very few people even look at these figures.

The appropriation budget represents the new spending authority to be enacted by the Congress for any one year. These are the proposals with which the Congress is now wrestling. Actually, the recommended appropriation budget is $73.8 billion.

The expenditure budget represents the President's estimate of what will actually be spent in a fiscal year by the various agencies of Government as a result of new spending authority granted both by the current Congress and from spending authority already available from previous congressional authorizations. The estimate for fiscal 1958 is $71.8 billion. Two-thirds of these dollars will be spent as a result of spending authority granted by this Congress, but one-third of the dollars actually expended in 1958 will come from previously granted spending authority (some of it made as long as 5 years ago). It is the expenditures that determine how much tax revenue we must have to pay our bills each year—and therefore this budget is the significant one in determining tax rates. Also, it is the comparison between the expenditure budget and the actual receipts to the Treasury that gives us our estimate of budget deficit or surplus. The real budget, then—as all of us usually think of it—and the surplus (which we like to talk about) or deficit (which we like to forget), is the expenditure budget.

2. Which of these budgets is the Congress considering?

The proposals for new spending authority—the appropriation budget—is what the Congress now has before it. As has already been indicated, some of these proposals do not necessarily have a direct effect on actual expenditures for the next year.

But there are other complications. The box scores which many papers are now running on cuts made by the Congress in presidential requests for new spending authority in the annual appropriation bills usually fails to consider the fact that specific dollar authorization for new spending authority often is embodied in substantive legislation which does not go through the Appropriations Committees. In the last session of Congress, for example, over $4 billion of new spending authority was authorized by the Congress without reference to the Appropriations Committees. And already this year, one pending bill which was not referred to the Appropriations Committees—the housing legislation—adds as much new spending authority to the President's proposals as has been eliminated by all the House actions to date on appropriations bills.

In addition, many of the cuts in new spending authority which have been voted by the House may not reduce actual expenditures in the next year. For example, veterans' compensation and pensions and related benefits are based on a formula which is written into law. The payments by the Federal Government to eligible veterans are mandatory. The House cut $193 million from the President's estimate of what would be needed to meet these mandatory payments next year, on the ground that the estimate might be 5 percent too high. But the estimate is based on long experience in computing the requirements, and has usually proved accurate. If one followed the House reasoning, he could just as easily say that the estimate is 5 percent too low. If the judgment of the House is wrong, this money will have to be appropriated before the end of the fiscal year.

To illustrate further, in the fiscal year 1956 nearly a billion dollars was added to the new spending authority for the departments by supplemental appropriations which were made after the regular appropriation bills were enacted. In some instances, appropriations committee reports specifically state that if the new spending authority which is granted is not enough, the department should come back for more.

The long and short of it is summed up in this week's report of the Joint Committee on Internal Revenue Taxation. They indicate that 1958 budget expenditures will be higher than originally estimated, regardless of what the Congress does on pending appropriation bills. As has already been revealed, defense expenditures are running considerably higher than expected.

3. Are there a lot of new programs in the budget?

Undoubtedly, you have read statements that there are many new programs in this budget. The implication has been that the administration was entering countless fields of new endeavor in a blind spending of the people's money.

Fact 1: We identify 13 so-called new Federal-aid programs in the President's 1958 budget request. They involve estimated expenditures in 1958 of $248 million, of which $185 million is for Federal aid to school construction. Of the remaining $63 million in expenditures, one-half is for: Disaster loans for small-business enterprises, such as those wiped out in the New England floods of 1955; a nuclear indemnity program which will make it possible, we hope, for private enterprise to build and develop nuclear power facilities rather than the Federal Govern-

ment; and a stepped-up program of assisting States to organize themselves in the civil defense field. Most of the remainder is for a program (already enacted by the Congress) to assist farmers and ranchers in the drought areas to reseed their grazing lands.

Fact 2: The Congress is now considering many pieces of legislation, not supported by the administration, as, for example, bills to provide a general pay raise, cost $1,750 million; raise rates of compensation for veterans, cost $170 million; authorize a federally constructed dam at Hells Canyon, cost probably not less than $500 million; liberalize public assistance grants, cost $43 million; liberalize benefits payable under the War Claims Act, cost $100 million; liberalize Spanish-American War pensions, cost $20 million, etc.

4. Is the administration budget for 1958 exorbitantly above the low point in 1955?

It is true that expenditures projected for 1958 are $7 billion higher than 1955, but the implication that the increased spending estimates are the result of vast new-fangled programs isn't true. The fact is that $4.5 billion of this increased expenditure is associated directly with past wars and security against future ones—$2.7 billion of the increase is in major national security items (the military, Atomic Energy Commission, and military assistance). This is caused by the fact that we are shifting to new guided missiles as our major deterrent weapon, but we dare not abandon our older, conventional defenses. We have just entered into an era of overlapping, double costs; research and development of missiles, at a fantastic price, on top of a complete, strong conventional weapons arsenal. Who is to say that at this critical moment in the world's history we should abandon either? Other parts of the increase since 1955 associated with past wars or present security include $263 million in the international field; $922 million interest on the national debt (largely war-derived); and $570 million for increased veterans benefits.

All other increases in the budget of 1958 over 1955 total $2.8 billion. In this figure are included salary increases for the Federal employees, substantial increases in public-assistance grants to the States (which the Congress authorized), increased retirement payments by the Government, a greatly enlarged health research program searching for the cause of the modern killers—cancer, heart, etc.—improvement of our parks and other natural resources, and all of the other things which the Government does for 170 million people. Some or all of these increases are caused by price rises.

5. Is this the highest peacetime budget?

Thankfully, not a single American today is fighting in the hills and valleys of Korea or any other faraway place. Yes, this is, in that sense, a "peacetime" budget. But the world is far from tranquil, and for the first time in our lives we are readying ourselves in advance of possible trouble in the fervent and prayerful hope that this state of readiness will prevent war.

But the cost is high. Just compare, if you will, our military and other security spending in this budget—$43 billion—with the last pre-Korean "peacetime" military and security outlay which was $13 billion. Perhaps this difference represents the determining margin which has prevented another armed aggression somewhere in the world.

Actually the 1958 expenditures projected in the President's budget are $32 billion higher than that 1950 peacetime budget. Of this total, $30 billion is in this national security item. What can we show for this enormous jump? An Army and Navy 50 percent larger. An Air Force doubled in size. In total, 2,800,000 men in uniform, their payroll being $10 billion; a military establishment scattered over the world, with 1,000 warships, 41,000 airplanes, and 6,200 installations of all types in 33 countries. The airplanes of 1958 go higher and faster and farther than their 1950 counterpart—and they cost over twice as much for a bomber and five times as much for a fighter. The submarines (nuclear now) cost twice as much, but they can stay under water almost indefinitely and they cruise under water at surface speed, 1950 style.

These are gruesome and awful facts, but they are the price of freedom in an uncertain world. And we are able to hold the military expenditures to this rate only because of a relatively small investment in assistance to our allies, through our mutual assistance program, which allows them to maintain 10 times the number of our troops, and an equal number of ships and planes.

Can these enormous outlays of money be cut down? Yes; but in the judgment of our best strategists only at the risk of encouraging an unpredictable and ambitious despotism to strike again somewhere in the world, as he did in Korea in 1950. It's a high price that we pay, but it isn't blood.

With all this, in the past 4 years as a percentage of the gross national product the Federal budget has been reduced from 20 percent to 16 percent, per capita expenditures have dropped from $469 to $416, civilian personnel is down 10 percent.

Yes; a budget is merely a plan designed to guide us toward some goal. For you in industry that goal is a salable product offered attractively to meet some need of our people, and to garner a profit. For those of us in Government that plan involves not only the healthy growth and development of our Nation and our people, but our national security and even existence as well. President Eisenhower's plan for 1958 is a sound one, a well thought out one, a sensible one, and a safe one.

Congress Should Enact H. R. 7574 to Change the Methods of Computing the Basic Pay for Members of the Armed Forces

---

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. VAN ZANDT. Mr. Speaker, I speak for economy. Not for the kind of economy which whittles and slices at this or that appropriation bill with hoping and longing to save a few million dollars. No. I speak for long-term continuing, self-perpetuating economy which will save many billions of dollars while at the same time paying a bonus of increased national defense.

On several occasions I have introduced legislation aimed at rectifying the compensation of the personnel of our Armed Forces. I say with determination that I intend to go on introducing such bills until we have achieved a state of equity in the realm of military pay; until we reward the members of the uniformed services with pay comparable to that received by their nonmilitary counterparts. I do not say commensurate with their value to national defense for I nor any other man can make an appraisal of the security of the United States.

Recently I introduced H. R. 7574 to change the method of computing basic pay for members of the uniformed services. Founded on the recommendations of the Defense Advisory Committee on Professional and Technical Compensation—the Cordiner Committee—the bill is aimed at instituting a modern concept of military pay and concurrently achieving the greater combat effectiveness of our defense forces.

I do not claim this as the bill to end all military pay bills or that it is the panacea for all the manpower problems of our Armed Forces. It is also not a patchwork and piecemeal approach to a problem which canont be solved in small parts but which must be treated as one inseparable whole. My bill is a beginning and a basis for us, the Members of Congress, to take the greatest step toward real economy. As the Committee Chairman, Mr. Ralph J. Cordiner, said, "We must begin somewhere to halt and reverse the inflationary trend toward ever higher costs of Government, and here, for a small initial investment, is a very promising place to start."

On May 14, 1957, President Eisenhower addressed the Nation on the size of the budget. He emphasized the gamble involved in reducing that portion which contributed to national security, and specifically to that part allotted to the Department of Defense. Relief from world tension, he said, is about the only way to reduce military spending. The statement is absolutely true when applied to the quantity and quality of arms and equipment we must have to maintain our edge of strength over the Soviet Union and international communism. But the statement is partially misleading when applied to the personnel who use those arms and equipment. Let me explain this paradox.

Today, 2,800,000 men and women make up our Armed Forces, Not all of these are engaged in supplying direct military defense for the country. Roughly 500,000 members are involved in formal training activities, while other hundreds of thousands are undergoing on-the-job training in operational units. This trainee force is a corps of amateurs in an otherwise professional organiaztion. If the time should come when our Army, Navy, Air Force, and Marine Corps were thrown into combat—and let me say that there will be little warning—those trainees would be of little or no help to the effort.

It is taking 500,000 trainees just to maintain an effective combat force and to support the services of 2.3 million. In other words, 22 percent of our personnel strength is noneffective, not combat-ready. Why is this so? Because of the high turnover rates in professional and technical skills. Because these skilled people leave the services and obtain employment with higher wages in companies working in fields related to technical military specialties. The Armed Forces are creating and maintaining an expensive training ground for industry. Not only this, but the turnover is costing the country not less than $2 billion a year.

The implications are obvious. This is a poor business practice, inefficiency. Any good businessman will tell you that a 22-percent personal loss is poor em-

ployee utilization; it is nonproductivity and waste.

One of the country's outstanding businessmen, Ralph J. Cordiner, president of General Electric, has pointed out the guidelines for not only eliminating this waste but of improving the combat effectiveness of the services as well. Our objectives, he says, are first, to offer genuine incentives in order to retain the high quality officers and enlisted men in the services and thereby second, to build a professional force.

Ours is a country of free enterprise. Here the individual citizen is our prime concern. In this democratic atmosphere our people have the opportunity to develop their talents and are free, even encouraged, to go to those jobs or positions which offer them higher pay and greater benefits.

Human motivations must be recognized. Among them patriotism is a strong force. Fortunate for the Nation, patriotism has held many of the dedicated and devoted in the Armed Forces during peacetime and given us their great leadership in time of war. Patriotism is, however, a nebulous thing, manifesting itself most frequently in times of cirsis. Cold wars do not have the impelling force of a crisis, and patriotism is pitted then against compensation.

The compensation practices in the services today are contrary to human motivations. They were adopted from the British Navy in 1812, and are as outmoded now as the 1812 navy itself. Without a doubt, those practices are the major impediment to national security.

The more of the 2.3 million trained people we can induce to remain in the services, the fewer trainees we will need to build a professional force. In fact, this professional force can be achieved only by increasing the retention rate. Expensive as it is to build and maintain, the professional force is by far the cheapest and most effective in the long run. Rather than composed of members forced by law to serve, it will be made up of career-professional members wanting to serve.

The problem in its basic form is manpower. Manpower is mindpower, brainpower. The human brain still remains the inventing and guiding force behind the machine. And never can the machine substitute for man. As one of our Air Force leaders said, "You can't build creative ability into a machine. You can't design a circuit to take the place of courage. Above all, you can't enclose dedication to freedom in a magic black box." Plainly then, our most precious national resource is our men and women.

The manpower problem, and the coordination of manpower and machines, is our most compelling concern. It is more important than providing increasing amounts of money for complex equipment because that equipment becomes only a metallic heap when trained hands are not available to use it.

This bill will provide a long-term solution to the basic manpower problems of the Armed Forces.

It will result in about a 15-percent improvement in the combat capability of the Armed Forces.

It will bring about sharp reductions in training accidents now, and in military and civilian losses in the event of war.

It will reduce the number of military personnel required to produce a given level of national security.

Finally, and significantly, it will result in savings up to $5 billion annually by 1962, in the cost of producing our present levels of combat capability.

Let me pronounce again, the purpose of the bill is to change the method of computing basic pay. Those who believe that this is nothing more than a general pay raise for military personnel have been misled by misinformation. If they see the bill as inflationary, they are incorrectly reading the label. This is a bill for readjustment pay computation. It is a bill for increased management efficiency and for savings. It is a bill for reducing the cost of defense, the largest single item in the Federal budget.

The Cordiner report upon which my proposal is based has received the approval of the Secretary of Defense, the Secretaries of the three military services, and the Joint Chiefs of Staff. The Department of Defense has even agreed to absorb the entire cost of the program for the first year without an increase of its budget.

Failure of the Congress to act on this manpower and defense problem will have dire consequences. Those members of the armed services who have been waiting for this pay adjustment, and who have remained in service expecting it, will find no further cause to remain. Enlistments will drop sharply. Officers in large numbers will ask for release. Combat efficiency will decline with the shrinking of what we now have to a professional force.

I urge immediate action on this proposal. I ask that we not be penny wise and pound foolish, but that we recognize the long-term investment in annual savings of billions and in increased combat effectiveness. I ask that we think big and act boldly. This proposal is not limited, idealistic, or unsound. It is broad in scope, realistic, and purely economical.

The Nation's security is at stake.

An Act of Memory

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thoughtful editorial which appeared in the Chelsea Record, Chelsea, Mass., on May 29, 1957:

AN ACT OF MEMORY

As events recede into the past, they become increasingly dim. After weeks or years or decades, depending on their apparent significance, experiences that once had the freshness and color of life are hidden in the gray chambers of memory.

Down through recorded history, men have sought to halt this process of receding and dimming; they have defied the shadowy figure of time that at length engulfs all human memory. In certain bright instances, this defiance has successfully withstood the encroachment of time.

In our country, a notable example of this defiance, this refusal to let memory grow dim, is to be found in the annual celebration of Memorial Day. On this day we honor those who have died in defense of the Nation and of the principles which undergird our American way of life.

Memorial Day is a time for ceremony and for rededication. The ceremony is important because it signifies our desire to honor those who have fallen. But without rededication, in our hearts, to those principles and values for which the fallen sacrificed their lives, the ceremony becomes but an empty form.

An act of memory is demanded, a straining to remember the issues and events that dominated the life of the Nation in times of crisis. It is not enough to recall vaguely that at such a time there was a war in which men fought and suffered and died. Even at cost of inner pain, we must seek to remember what the fighting and suffering and dying were all about. Such an act of remembrance will infuse the day's ceremony with profound meaning. For all genuine commemoration of the dead must take place in the hearts of the living.

Ohio's Republican Chairman Converts Gimmicks Into Votes

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Detroit News, May 28, 1957:

OHIO'S REPUBLICAN CHAIRMAN CONVERTS GIMMICKS INTO VOTES

(By Will Muller)

(EDITOR'S NOTE.—Republican State Chairman Raymond C. Bliss has become a political legend after turning a disintegrating Republican Party in Ohio into a winning organization. His story is the last of three by the Detroit News political analyst, showing what was done in Ohio when the two-party system of government there was threatened with total collapse.)

COLUMBUS, OHIO, May 28.—Among the storied miracle men of American politics Republican Chairman Raymond Charles Bliss, of Ohio, stands oddly alone.

As far as the record goes, he is the only politican to manage the campaigns of both a queen of the May and a United States Senator. Both won.

The Senator was the late Robert A. Taft. The name of the May queen has gracefully been left out of the record.

Her crowning caused inquisitive faculty members to question the campaign methods of a political combination at Akron University, headed by Bliss. He left school, at

the time, with instructions to send his diploma after him. The university obliged.

The incident is mentioned only to prove the best of politicians are born, being only slightly improved by a college education and later experiences.

In 1931 Bliss was a handy man at Summit County Republican headquarters. Three months later he was assistant county chairman. The university's diploma didn't reach him until 1935.

The slim, modishly dressed political leader with his snap brim hat and rimless glasses has replaced the "long cigar" conception of what an American politician looks like. Both friends and foes today credit him with recapturing Ohio from the Democrats.

When defeat-ridden party contributors literally drafted Bliss for State chairman in 1949, they knew what they hoped to get.

In 1932, Bliss had campaigned in Summit County, seat of Akron, for Dave Ingalls, running for Governor. Ingalls lost, but he carried Summit County.

YOUNGEST MEMBER

Four years later, Bliss, at 27, became the youngest member ever to serve on the Summit County Board of Elections. It was a part-time job, with a small salary, but it enabled Bliss to support a widowed mother and still stay in politics.

He was the protege of Summit County Chairman Jim Corey, known about the State as a wizard at politics. Corey died in 1941. Bliss was Summit County chairman from 1942 until he took the State job.

At only one time did Bliss falter in his loyalty to politics as a way of life. In 1948, he dropped politics for a general insurance business.

He organized Tower Agencies, Inc., at Akron, stopped talking politics and started talking insurance.

"My friends refused to believe it when I said I was through," Bliss recalls. "But I got just as immersed in the insurance business as I had been in politics. I was ready to resign as county chairman. I started going back to those clubs I belonged to and the social contacts I once had."

SWEEP IN 1948

Then came the fall election of 1948. Democrats swept every office in the State, carried Ohio for President Harry S. Truman.

Ohio Republicans turned to Bliss. He dictated his own terms. The Ohio Republican Finance Committee was to raise the money, Bliss was to spend it without obligations other than to the best interests of the party.

Bliss, a bachelor, left his mother in Akron, moved into a Columbus hotel room. He started his present political hours, 10:30 a. m. to 2:30 a. m. daily, sometimes Sunday, too.

He organized a headquarters staff. He set up a $600,000 budget for the State campaign. He established liaison with his old Ohio friend, Senator Taft, who had wanted Bliss for his own manager in 1950.

PROVIDED IDEAS

The national party had raised money for Taft outside the State. What Taft needed was ideas, and Bliss provided them.

He directed a poll of the agricultural counties, traditionally as Republican in Ohio as in Michigan. He found 150,000 unregistered voters there.

One afternoon, he was discussing the results of the poll with Joe Neuger, publisher of Here in Ohio magazine. Bliss needed a gimmick for the dragging campaign.

"Joe wondered what would happen if we polled some of the upper-crust organizations for their voting record," Bliss recalls.

"After we had a second beer, the idea sounded even better. I went home and got things underway."

FIGURES TALK

That poll showed 34.3 percent of the local medical association hadn't voted in 1948, that 31.1 percent of the local grocers and 44.5 percent of their wives weren't even registered.

"The ones who did the most beefing about how the country was run didn't seem to participate," Bliss recalls

He polled the local chamber of commerce, learned 24 percent of the members didn't vote, 17.3 percent were not even registered.

"Suddenly, the luncheon clubs, the chambers of commerce, the auto dealers, the grocers, and the medical association were in the midst of a competitive registration drive," Bliss said.

WENT IN DROVES

"Our work was being done for us. We set up a report card in triplicate, one copy to party headquarters, another to the unregistered voter, a third to his club or association. The pressure got so great that folks went to registration clerks in droves."

Bliss' gimmick qualified more Ohio voters than at any time in history.

Bliss designed a poll book, gave it to precinct workers, told them to question every resident and learn his politics. On election day, the party concentrated its efforts on getting all Republicans to the polls.

Television was relatively new. The Madison Avenue Boys—advertising experts—warned Bliss away from it as not having enough viewers.

Bliss drove his car around at night, counting aerials, and discovered neighborhood viewing groups, big audiences in bars and night clubs. Those were the people candidate Taft wanted to reach.

TAFT TAKES TO AIR

His headquarters drew up a TV program. Finance headquarters raised the money. Taft went on the air.

Bliss still has a book published by one of the Madison Avenue Boys. It credits Ohio with the most effective use of TV of any political organization in the country.

"The same pattern won't work every year," says Bliss. "This is a Barnum & Bailey business. You've got to steam up the voters with new gimmicks."

It's an old trick with Bliss. He once drew 60,000 to a Summit County Republican picnic.

They are wondering in Ohio now if Bliss will ever quit. He hasn't had a 2-week vacation since leaving college. His mother died recently, and the new home he built for her and himself is rarely seen by Ohio's chairman.

NOT INTERESTED

Bliss says he has no personal interest in elective or appointive office. He dropped all his insurance business with the State when he went back into politics.

His one recreation, if he can find a half hour of an afternoon, is to drop into a local bar for a beer and a chat with the bartender.

"If politicians ever learn about bartenders," says Bliss, "Mr. Gallup will go out of business."

To a wealthy Republican friend who took him to task for shunning the country club for the corner bar, "Ohio's best listener" offered a bit of human philosophy:

"It's there that you can hear the sidewalk vote of America talking."

Michigan Republicans, hunting a comeback trail from the political disaster that came to the party with the arrival of one G. Mennen Williams on the State scene, might wander in, too, to listen.

The Consumers Study Subcommittee Points the Need of Our Postal Employees

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mrs. KEE. Mr. Speaker, retail food prices have increased 16 percent in the past 10 years, according to the preliminary findings of the Consumers Study Subcommittee of the House Committee on Agriculture, and which were recently made public.

The subcommittee, and the purposes for which it was created, represent something of a departure from the scope of the Agriculture Committee's previous activities which have, pretty generally, been confined to dealing with the Nation's farm problems as such. This year, however, the constantly rising cost of living prompted the committee for the first time in its history, to take a look at the high prices of food from the consumer's angle.

The Consumers Study Subcommittee was created on March 14, 1957, to study and investigate, among other things, the reasons for the continuing spread between the retail prices city dwellers pay for what goes into their market baskets and the prices farmers receive for the foodstuffs they produce for market. And in another precedent-breaking move, let me add, also for the first time in the Agriculture Committee's history, the chairman appointed to head the new subcommittee is himself a representative of urban consumer groups. He is the Honorable VICTOR ANFUSO, Congressman from New York City's teeming Eighth District—one of the first, I believe, if not the first Member of Congress from a big city to serve on the House Agriculture Committee.

In the preliminary report of its work to date, Mr. ANFUSO's subcommittee has produced a great many thought-provoking facts, and I am confident that before its work is completed, it will have rendered an outstanding service to the Nation.

Returning to the opening statement in this column, that retail food prices have risen 16 percent in the past 10 years—a figure which I have no doubt the subcommittee will be adjusting upward with the latest statement from the Labor Department's Bureau of Labor Statistics, reporting the 14th month straight rise in consumer prices—it is, I feel, significant to note that during this same 10-year period, the average city family increased its expenditures for food by $500, or 50 percent, while farm prices were declining 14 percent.

"Of this additional family outlay," the subcommittee reports, "$400, or 80 percent, went to food processing, transportation, and distribution agencies, and

only $45 to farmers. The remainder was expended on imported foods."

Breaking this data down into specifics, the subcommittee states that—again over the 10-year period—the farm price of wheat dropped 7 percent, while retail prices of cereals and bakery products rose a staggering 34 percent.

In other words, most of what we pay for today is in the processing, packaging, and distributing of the product and not its content. For example, there is less than 3 cents' worth of farm-produced corn in a 22-cent package of corn flakes; only 4 cents' worth of wheat in a 28-cent package of soda crackers; and only 2.6 cents of wheat—at farm value—in the pound loaf of bread we purchased in 1956 at an average price of 18 cents.

Here are some other price facts culled from the report that should be of great interest to city and country housewives, alike. In 1956 the contents of the can of sweet corn or peas for which they paid a retail price of between 18 and 22 cents brought the farmer only 2 to 3 cents. A can of tomatoes—staple commodity on most housewives' shelves, as it is on mine—which retailed for 15 cents, had only 2.3 cents' worth of tomatoes in it.

I am greatly concerned with these facts and figures because of legislation which is presently pending in the Congress to grant cost-of-living pay increases to postal employees and other Federal classified employees. Bills have also been introduced, although no action has been scheduled on them, to increase the minimum social-security retirement benefits of older citizens who now average between $30 and $40 a month.

The average city family spent about $1,500 for food in 1956 compared with $1,100 in 1950 when, according to a Bureau of Labor Statistics survey taken at that time, the income before taxes of the average city wage and clerical worker's family was $4,332. Most of the families interviewed in this 1950 survey spent more than their incomes in that year.

Today in West Virginia, the average take-home pay of a top-grade regular clerk in the post office is about $3,800, after deduction for taxes, retirement and life insurance. With the slightly more than $1,500—because of rising prices—that this worker would spend, on the average, for food for his family in 1957, this would leave him approximately $2,300 to take care of all other living expenses—rent and repairs, clothing, medical and dental care, group hospitalization, transportation, recreation and something put aside for the future education of his children. Obviously, this worker cannot get by economically without going heavily into debt, taking a part-time outside job or having his wife work to help eke out the family income.

As for our older citizens living on retirement pittances of $30 to $40 per month, it is clear that they cannot hope to maintain even the most substandard existences without outside aid—either from grown children, hard-pressed and with families of their own to support—or through public assistance.

Both of these groups stand in dire need of economic help—in the form of pay raises for our postal employees and of an increase in the minimum benefits paid to our older citizens covered by the old-age and survivors insurance program. It is my intention to remind the Congress of this inescapable fact at every possible opportunity—until something is done about it.

Large Importation of Woolen Textiles Harmful to the United States

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement of mine at the hearing conducted by the Office of Defense Mobilization on the effect of the importation of woolen textiles upon the American woolen industry and the threat to national security:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 29, 1957.

Mr. CHARLES H. KENDALL,
General Counsel,
Office of Defense Mobilization,
Executive Office Building,
Washington, D. C.

DEAR MR. KENDALL: I have the honor to submit my views for the record of the hearing being held on June 3 by the Office of Defense Mobilization concerning the effect of woolen textile importations on the woolen industry in the United States and the threat of these importations to our national security needs.

The woolen textile industry in the United States of America has been one of our national basic industries. It is an industry not only of importance within the general national economy, but also of tremendous importance in the Nation's national defense. Since World War II the contraction of the woolen textile industry in the United States has been so great it has presently reached a point of strategic seriousness in regard to just how long the industry might continue to survive and how long and how adequately it can be of service to our military forces in the requirements of national defense.

I am particularly interested in this alarming situation because almost 50 percent of the woolen and worsted spindles in the United States are located in the New England States. Although there are woolen textile plants in over 30 States of the Union, the industry is largely concentrated in the New England area. For many years it has been one of the backbone industries of the New England economy.

In the decade 1946–56, production in the woolen textile industry in New England has declined over 40 percent. Employment has declined approximately 50 percent. In Massachusetts, and particularly in the Fifth Congressional District which I have the honor to represent in Congress, the constant, continuing liquidation of woolen textile industries has been taking place at a tragic and serious pace. In the daily newspapers of Boston, Lawrence, Andover, and Lowell advertisements of auction sales, of woolen machinery and equipment and mill liquidations are constantly appearing. I need only mention the great Shawsheen Mills in Andover, Mass., one of the finest woolen textile plants in the world, which was liquidated at public auction. There are the Wood and Ayer Mills of Lawrence, Mass., and many others. Hardly a week passes but there is an advertisement in the Boston papers advertising the sale of modern textile machinery and equipment. At the present rapidity of liquidation, the woolen textile industry in the New England area certainly cannot long endure.

This is an appalling and shocking situation, and it deserves the most careful examination. The causes of this situation must be found and pinpointed, and eliminated. In my view it is the duty of the Government of the United States to protect completely our national economy, and this cannot be accomplished unless the basic industries of America receive the support of their own Government.

According to my information, the principal cause threatening the woolen textile industry of the United States, and particularly in New England, is the overwhelming increase in the importation of woolen yarns and woolen woven fabrics. Within the last 10 years, the importation of woolen fabrics has increased over 700 percent and the same is approximately true of the importation of woolen yarns. The principal countries from which these importations take place are Great Britain, Japan, Italy, France, and Belgium. It is very easy to understand that these nations having a vastly lower wage pay schedule in their mills than the wage scale paid in the mills of the United States, and particularly New England, have a tremendous advantage over the industry in the United States in the American market. This advantage is due to the fact that the present tariff schedule does not offer sufficient protection to close the wage gap existing between these foreign industries and those here in America. This difference in the cost of production, which is not made up and leveled off by the present United States tariffs, I say is the major cause for the failure of the American woolen industry to compete in their own national market.

Now here in America we are proud of the American standard of living. We are proud of the fact that people in America enjoy much that makes life easier in this land of freedom. Our officials and leaders are constantly saying to the American people that the best ways and means should be constantly devised and developed not only to maintain this marvelous standard of living but to constantly increase and constantly better it and constantly make it available to more and more and more of the American people. I ask you how this can be done and at the same time subject a great basic industry such as the American woolen industry to the underpaid, yes, and underfed and ill-housed populations of foreign countries. How can this American standard of living be preserved and increased with unprotected competition of this kind. It is impossible to do it without adequate protection and every high-school student is sufficiently mature to understand this simple principle of economics.

You can't have your cake and eat it, too. I realize that is a rather trite phrase, but it certainly is completely true in this case. You cannot hold up America to the world as the land of freedom and opportunity, possessing the highest standard of living, and at the same time be undercutting this standard of living with procedures and methods the eventual effect of which would be to make life in America the same as it is in those foreign lands where life means only existence. In all of those countries constituting the principal competitors threatening the American woolen textile industry, the workers and the people are striving to immigrate to America, the land of opportunity. How long can this take place?

The answer to this question depends entirely upon the protection of American econ-

omy. In the practical operation of the Trade Agreements Act sufficient precaution must be taken to see to it that the American economy is protected to the extent at least that the American standard of living can be maintained. If the American standard cannot be maintained on a solid basis under the Trade Agreements Act, then certainly there is no other choice for the Congress of the United States but repeal of the Trade Agreements Act. As a nation, the United States of America and its people cannot be expected to give and give and give its billions and substance for the welfare of foreign nations and at the same time have the national economy threatened and thousands and thousands of jobs liquidated for the American people whose tax money is financing the giving. This is inconsistency of a serious nature. This is subjecting the American people to an impossible situation which cannot long continue.

In these times the United States of America is the bulwark of freedom in the world. This freedom is constantly being attacked by the Communist nations with all of their power and forces. The nations of the free world depend upon the United States for protection and for their survival. To fulfill this great and grave responsibility, the national economy of the United States must first of all be completely and adequately protected. The military forces of the United States must possess every requirement and every need to do their job. The military forces of the United States, just as much as they are dependent upon airplane industries, important as they are, are dependent upon the woolen textile industry. Soldiers, airmen, and seamen must be protected against all kinds of climatic conditions. Their requirement is woolen textiles, woolen fabrics of every description, and even woolen textiles in certain types of defense mechanisms. The military forces of the United States are just as dependent upon the woolen textile industry of this country as they are upon those industries which provide the ammunition and mechanics for victory.

It is to be remembered and to be noted that it is presently the strength of the military forces of the United States which makes peace possible. So, both in peace and in war, American responsibilities as the bulwark of freedom are very gravely dependent upon the American woolen textile industry.

In view of the significance of this problem, and in view of the rapid decline of the woolen industry in the United States, I plead and urge the leaders in the Office of Defense Mobilization to take whatever steps that are open to them to provide adequate protection for the woolen textile industry of America. I urge you to consider that your first duty is to the welfare of our own country. It is perfectly obvious to anyone that when a great industry such as the American woolen textile industry is being forced to liquidate as rapidly as it is, that something very vital and serious is wrong. These wrongs must be discovered. These wrongs must be made right. The strength and power of your country and mine must come first if freedom is to continue, if life as we know it is to survive. This great bulwark of freedom, devised by man for the benefit of man, must prevail. To do so, its sinews of industry, of quality of living, and spirit cannot be weakened.

Protective action for the woolen textile industry of America is needed immediately. I urge you with all the force at my command not to postpone this action until it is too late.

EDITH NOURSE ROGERS,
Member of Congress.

Protect Our Workers Against Further Intrusion by Foreign Fuel

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mrs. KEE. Mr. Speaker, the coal industry has been bludgeoned by unfair competition from international oil companies for the past 10 years. Since 1947 more than a billion barrels of foreign residual oil—the equivalent of 275 million tons of bituminous coal—have entered America's fuel markets.

To communities of West Virginia and other coal-producing States, this deluge has brought needless destitution and despair. More than 250 million manhours of work have been lost—never to be regained—for coal miners alone. Consequent unemployment in the railroad industry has also been staggering. American families have been forced to survive without many of the necessities of life. In this period of aggression on the part of international oil shippers, many children have grown to adolescence without proper nourishment—a deficiency that in many cases can never be remedied. Young men and women have been deprived of an opportunity for higher education because their fathers had to suffer the ignominy of idleness in order that rich international oil companies might get richer.

We in Congress who are familiar with this situation have pleaded in vain that the prayers of our people may be heard by responsible officials in the executive department. We were given some hope 2 years ago when a Presidenial Advisory Committee took cognizance of the danger inherent in excessive oil imports. Unfortunately, there has been no enforcement of the recommendations thus submitted by the committee and later included as the national defense amendment to the Extension of the Trade Agreements Act. Residual oil continues to sweep onto our shores in whatever volumes the shipping companies choose to send.

The President recently ordered the Director of the Office of Defense Mobilization to take action toward reducing import levels, yet we have no actual assurance that a cutback in imports will be insisted upon. Furthermore, the White House directive did not specify that residual oil should receive specific consideration in the import matter. Unless this product is categorized apart from crude and imports in general, it would be possible for the shippers to make up a preponderant portion of their import allowables with residual oil; for that matter, if a total of a million barrels per day of crude and products were permitted to come in, there would be nothing to stop the shippers—unless the ODM rules otherwise—from increasing their residual oil import schedules to 366 million barrels per year.

While the coal industry is forced to operate in an atmosphere of insecurity that will prevail so long as the extension of the violation of its markets is to be determined by the whims of international oil executives, still another threat is forming from outside our borders. A group of international financiers is now striving to encroach anew upon the coal industry and the people who depend upon it for a living.

Mr. Speaker, I refer to the applications now before the Federal Power Commission for bringing natural gas from Canada into Midwest markets being served by coal from West Virginia and other Appalachian areas. Our people do not understand why the United States Government should permit world fuel merchants to flimflam them out of their means of livelihood. In the past several weeks I have spoken with coal producers and mine union representatives about the problems confronting us. I have told them frankly that I feel Congress has been negligent in not making it clear to the Federal Power Commission that it is obligatory upon the Commission to reject applications for bringing natural gas across our borders when such imports would be inimical to the general welfare. While to me it is inconceivable that the Commission would approve applications which would inevitably result in layoffs for a great number of American workers, it is nevertheless our duty as Members of Congress to make certain that the Commission understands its duty in this respect.

Earlier I mentioned that many sons and daughters of coal miners have been deprived of college educations because their fathers' paychecks stopped coming in when residual oil imports began to flood American markets. Can this Government permit a repetition of this situation by approving this promotional scheme which will benefit most those few people who expect to make a financial killing through the Canada-United States pipeline? I have been to many high school graduations. I think that most of us adults share similar emotions as our young men and women consummate more than a decade of scholastic training by participating in the traditional ceremonies that mark the termination of a high school career. We recognize that the ceremonies are a tribute to a meritorious achievement of those young people, but at the same time we—better than they—are mindful of the responsibilities that lie ahead. For those children who aspire to additional learning but realize that the roads to colleges and universities are closed to them because their parents are unable to pay the way, graduation day's joys are tempered with dismay and frustration. This outlook is in prospect for many boys and girls who will be graduating in West Virginia and other coal-producing States in the days immediately ahead. For the FPC to allow further destruction of the labor market in those States would be to

add immeasurably to the woes of those young people and their families.

Now let us consider the situation of some of the promoters of the plan to bring natural gas across our border and at the same time debilitate the employment capacity of the coal industry and of the railroads which are accustomed to carrying this fuel to market. Let me quote a portion of a news dispatch from Timmins, Ontario, that appeared in the Toronto Daily News of May 11, 1957, in its reference to an address by a member of the Conservative Commonwealth Federation:

M. J. Coldwell, CCF leader, last night kicked off a national campaign in this gold-mining city with a charge that United States promoters of the Trans-Canada pipeline have already harvested more than $26 million in profits.

"And this before a single cubic foot of natural gas has been moved through the pipeline; indeed, before the pipeline has ever been completed," he remarked.

Two Canadian officials of Trans-Canada alone * * * would make more than $1 million each, as a result of Trans-Canada stock options, the CCF leader charged.

Mr. Speaker, I of course cannot vouch for the authenticity of this statement. There has been, however, so much criticism about the financing of the pipeline project that I question whether it would be either moral or practical for the FPC to agree to allow this proposed invasion of United States markets. On March 27, 1957, the Stratford, Ontario, Beacon Herald printed an editorial which began this way:

Who says there are no more success stories?

Consider the case of Mr. Nathan Tanner, of Alberta, and of Mr. Charles Coates, of Texas.

Mr. Tanner, president of Trans-Canada Pipe Lines, Ltd., took up an option on 55,000 shares of Trans-Canada at $8 a share, and Mr. Coates, vice president of Trans-Canada, an option on 50,000 shares.

On a recent Friday Mr. Tanner's and Mr. Coates' Trans-Canada shares were selling at $24.

Nice work, if you can get it.

I ask whether it would be moral to approve of a United States connection with the Trans-Canada pipeline because it seems to me that there is too greatly a disparity between the financial and economic positions of our coal miners and the pipeline promoters to permit further enrichment of the latter at the expense of the former. I ask whether it would be reasonable and practical to allow this pipeline to oust coal and oil from the Midwest markets that they have established and have come to depend upon. If there is already so much debate in Canada about the financing of this project, who is to say that—once it were established and our markets were to depend upon it—there would not be a tendency to raise drastically the price of the gas or even to put an enormous tax upon it as a means of replenishing what reportedly has already been lost to the Canadian public because of the manner in which it has been promoted?

Mr. Speaker, I do hope that the FPC will reject the applications for bringing Canadian gas into these markets if the evidence in the case indicates that American interests may be adversely affected by the Canadian gas proposals. An indication of the serious public questions involved in this case is indicated by the fact that the applications for Canadian gas are being protested by the following:

National Coal Association.
United Mine Workers of America.
Fuels Research Council, Inc.
Anthracite Institute.
Chesapeake & Ohio Railway Co.
Maher Coal Bureau.
Midwest Coal Producers Institute, Inc.
Truax-Traer Coal Co.
Baukol-Noonan, Inc.
Dakota Collieries Co.

Meanwhile I believe it would be judicious and humane on our part to make whatever revisions are necessary in the Natural Gas Act to be sure that our men, women and children in coal-mining communities will not be exposed additionally to a predatory foreign fuel.

The Cold War: Are We Losing the Battle for Men's Minds?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Honorable Salvador de Madariaga, one of the truly great democrats and scholars of this age. An outstanding historian, Mr. de Madariaga has been very critical of American policy for being too "soft" on Soviet aggression. He was the first voice in Europe to come out openly against the so-called spirit of Geneva. I earnestly commend his statement to the attention of my colleagues:

The chief features of the world situation today seem to me to be the internal weakness and external advance of the Soviet Union, and the internal strength and external receding of the United States. This has been illustrated by recent events both in Egypt and in Hungary.

Since the days of the Marshall plan, when the prestige and moral force of the United States were at their peak, these two great assets of the free world have been steadily declining.

The future of the free world and therefore that of civilization require that the United States should maintain and even increase its moral force, its prestige and the friendship and good will of all free nations as well as of the peoples of the nations that are not free.

This in its turn requires that the peoples of the world, whether living in free societies or under totalitarian or dictatorial rules, should believe in the word of the United States.

For all these reasons it is essential to remove the doubts harbored in the world about the attitude of the United States toward pacts and alliances with dictators and police states, whether of the so-called right or of the so-called left.

Too many dictators and military rulers appear to be able to boast of enjoying the friendship and backing of the Government of the United States.

The requirements of defense are sometimes mentioned in this connection. But the invention of the H-bomb and the access of the masses of the world to a say and a share in the shaping of world affairs make it more imperative for the side who would win to count and rely on the heartfelt backing of world public opinion. In other words, the cold war is a fact while the hot war is but a possibility. Therefore, nothing should be done which, in order to make more likely a victory in a possible future hot war, would imply a defeat in the present and actual cold war. The West may be winning hot-war bases at the expense of its own very moral basis for the cold war.

Wool-Textile Imports Weaken a Basic American Industry

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement at the hearings which began today at the General Services auditorium, under the auspices of the Office of Defense Mobilization, on petition by the National Association of Wool Manufacturers on alleged "threat to national security presented by wool-textile imports."

The statement follows:

WOOL TEXTILE IMPORTS WEAKEN A BASIC AMERICAN INDUSTRY

(Statement of Congressman THOMAS J. LANE, Democrat, of Massachusetts, at the hearings beginning June 3, 1957, General Services auditorium, under auspices of the Office of Defense Mobilization, on petition by the National Association of Wool Manufacturers on alleged threat to national security presented by wool textile imports)

Mr. Chairman, the textile industry as a whole, has been suffering from many complications since the end of World War II. The woolen-worsted section of that industry is actually fighting for its very existence, due to the added danger of foreign imports.

It is an astonishing and disturbing fact that the Federal Government, under international trade agreements, is making it more difficult for this industry to survive.

Repeatedly we must hammer home the following official statistics, in order to awaken responsible agencies of the Government, so that effective steps will be taken to protect this vital industry.

In New England alone, from 1949 through 1957, 145 woolen and worsted mills have liquidated, displacing over 65,000 skilled operatives.

As most of these workers have had to establish themselves in other industries, their special skill in textiles have been lost to the industry and to the Nation, in the event of an emergency.

Of the various factors, regional competition within the United States was once thought to be the principal one that forced many older woolen and worsted textile mills in New England to go out of business.

Unnoticed for some time, was the growing volume of foreign competition.

In 1951, imports of wool yarn from Japan were none. By 1956, they had reached a total of 1 million pounds for that year.

Since 1948, when cloth tariffs were slashed, imports of woven woolen cloth from Britain, Japan, Italy, France, and other sources, in-

creased by over 25 million yards. From 1946 to 1956, these imports jumped 738 percent.

Corporate net income after taxes, of the wool textile industry in the United States, dropped from $82 million in 1946, to a loss of $7 million in 1952.

On the basis of the three-fourths of a man-hour per yard needed to produce 16 ounces of Army serge, British manufacturers can produce it for 82 cents per yard less, and the Japanese for $1.10 per yard less. This startling wage gap receives no protection from our export-import policies. Without such protection, our manufacturers and workers cannot possibly compete with imports, even right here in our own home market.

This unfair competition is forcing more and more of our mills out of business, and is preventing the remainder from expanding or even modernizing the plant and equipment that would be called upon for extra duty if a military emergency should arise.

In 1942, output for the military alone was three-fourths of the total production in 1956. The reserve capacity of the industry is lower than it ever has been, in relation to our growing population.

Official indifference to the problems of the industry has resulted in the present dangerous situation where the mobilization needs for essential wool textiles would probably exceed our capacity to produce. Technological progress along other lines has not replaced the Nation's dependence upon a woolen and worsted industry located within the United States, to provide an adequate supply of clothing for its civilian population and its defense forces.

The embattled wool textile industry is not looking for any handouts. It only seeks protection to insure fair competition.

Is this too much to ask, when its very existence depends upon action by the Government to halt the flood of imports?

The threat is present, and it is serious. It materially affects our national security.

We therefore ask the Office of Defense Mobilization to advise the President of the danger, and recommend adjustments by him to reduce wool textile imports, to protect a basic and strategic American industry.

Twenty-sixth Annual Americanization Day Celebration at Pershing Field, Jersey City, N. J., on April 28, 1957

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. SIEMINSKI. Mr. Speaker, it is always a pleasure to hear from our beloved friend and former colleague, the Honorable Edward J. Hart of the 14th District of New Jersey and to abide by his request. Ed is now president of the department of public utilities of the State of New Jersey.

In his recent letter to me on the celebration of Americanization Day in Pershing Field on April 28, 1957, Mr. Hart writes:

I have never missed the celebration throughout the many years it has been conducted, and when in the House, made it a practice to insert in the CONGRESSIONAL RECORD an account of the celebration at the field and a mention of the great parade which is held in connection with it.

Therefore, Mr. Speaker, under leave to extend my remarks, included herein is an account of the Americanization Day celebration at Pershing Field this year. The account is in five parts: the letter from Congressman Hart; an address by the commander of the New Jersey National Guard, Maj. Gen. James F. Cantwell; an address by Mr. Harlan W. Barnes, national commander, Veterans of World War I; an address by Mr. Dominic L. Strada, national commander, Amvets; and a program of the proceedings by the Captain C. E. Fisk Post, No. 132, with its theme, "Loyalty Means Liberty":

STATE OF NEW JERSEY,
DEPARTMENT OF PUBLIC UTILITIES,
May 20, 1957.

Hon. ALFRED D. SIEMINSKI,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR AL: You will remember that the annual Americanization Day celebration took place this year at Pershing Field in Jersey City on April 28. I have never missed this celebration throughout the many years it has been conducted and when in the House, made it a practice to insert in the CONGRESSIONAL RECORD an account of the celebration at the field and a mention of the great parade which is held in connection with it. Invariably the national commander of the Veterans of Foreign Wars was the chief speaker on this occasion and I managed to obtain from him a manuscript of the speech which he delivered and included it in the insertion of my remarks.

This year both you and Congressman DELLAY were on the program to deliver addresses at Pershing Field. You did not appear nor did Congressman DELLAY and in your absence I volunteered to endeavor to have a description of the parade and ceremonies inserted in the RECORD and also some of the addresses that were delivered. I think it would be a helpful thing from more than one angle if you were to undertake this insertion.

I would have written you sooner except for the fact that for the first time in the history of the celebration to my recollection, it was not possible this year for the national commander of the Veterans of Foreign Wars to appear. In his place, however, the vice commander and chief of that organization, Mr. John W. Mahan, of Colorado, appeared, but since he did not have a manuscript with him I asked him to send me one which he promised to do. Waiting for this manuscript has been the cause of the delay in writing you concerning this great event. I have not received any from him as yet but have concluded that it is not practicable to wait on him any longer. I do, however, have a set of manuscripts of addresses delivered by Maj. Gen. James F. Cantwell of the New Jersey National Guard, Mr. Harlan W. Barnes, National Commander Veterans of World War I, and Dominick L. Strada, national commander Amvets, who lives in west New York. The parade itself was a huge demonstration of loyalty to American principles and consisted of four divisions. The grand marshal was Lt. Col. John P. Carbin, Jr., antiaircraft artillery coordinator, State of New Jersey, Department of Defense. Mayor Berry delivered the welcoming address and a special feature of the occasion was the appearance of Governor and Mrs. Robert B. Meyner. The Governor has attended each of these celebrations ever since he became chief executive and spoke at them all. Other addresses were delivered by Brig. Gen. Daniel deBrier, commander, 9072 Air Reserve Group; Charles Kinney, department commander, New Jersey Veterans of Foreign Wars, Frances Totora, president, Department of New Jersey Veterans Foreign Wars Ladies' Auxiliary, and the invocation and benediction were in the hands of Rev. Abram Pepling, Second Reformed Church of Jersey City. A prayer was also delivered by Rabbi A. L. Gottesman, Congregation Beth David of Jersey City. To keep the record straight, I myself for the 26th time delivered an address.

I am sure that the Captain C. E. Fisk Post No. 132, Veterans of Foreign Wars, would much appreciate your having an account of this celebration inserted in the RECORD and I would suggest, if I may, that copies thereof be sent also to those, the manuscripts of whose speeches I here enclose.

With warm regards and hoping that your leg is back in good condition so that you will be able to pound out a victory for the Democrats in the ocming campaign, and hoping to see you soon.

Sincerely,

EDWARD J. HART.

AMERICANIZATION DAY ADDRESS BY MAJ. GEN. JAMES E. CANTWELL AT JERSEY CITY, N. J., APRIL 28, 1957

Governor Meyner, Mayor Berry, reverend clergy, the people of this great city are, for the 26th time, giving a public testimonial of their faith in the American ideal of liberty.

The Veterans of Foreign Wars, with the active cooperation of the city government and many civic minded citizens, have given us this opportunity to declare to the world that the meaning of American has not changed: that we are a free people; that we choose our own destiny and build our lives, our communities, in accordance with the highest principles of self-government.

Ours is a representative democracy. This democracy works because individuals and groups help to make it work; and, under it, political and economic freedom are ever moving forward to greater accomplishments.

But, democracy is, and must be, more than a form of government.

It is a way of life: the why of life of each individual, who works together with other individuals to get better government, and a progressive and more prosperous community.

Democracy is the individual who contributes to his community chest and his religious charities so that all in the community may share in the good things of life.

In democracy we see individuals working through the community for the greatest good of all.

I read with interest the motto of this celebration on the printed program. That motto, Loyalty Means Liberty, is brief in words but long and deep in meaning.

We Americans have much to be loyal to. The whole spirit and essence of our democracy is defined in the Declaration of Independence and the Constitution. And we are loyal to these principles.

We are loyal to the equality of all men, endowed with equal rights, theirs by natural right.

We practice loyalty to our form of government by performing our duties of citizenship; going to the polls; voting for the best candidates; and obeying the laws made by our representatives.

Loyalty is respect for our American institutions and for all men.

From the practice of this loyalty comes liberty. Liberty as we understand it.

For us, liberty is the freedom to control our own affairs by working together for the greatest good of all.

The essence of American liberty is that government derives its authority from us, the people; and, through the government, we control our affairs and our freedoms.

Now we have often heard that vigilance is the price of liberty. The experience of the many countries which have fallen captive to aggressors proves the truth of this saying.

We Americans do practice vigilance, we do protect our American way of life. But, in these dangerous times, a more positive effort is necessary.

In the first place we can and do safeguard our liberties through a spirit of cooperation. It is in this spirit that we recognize the dignity and worth of all individuals, and their ability to govern themselves.

Another way to exercise vigilance is "To know." The educated population will not lose freedom by default. This process of knowledge starts with ourt schools. It contains also information received from other sources of knowledge; the newspapers, books, radio, and television.

We must know something about the machinery of government, economic and social conditions in the Nation, and the country's relations with the rest of the world.

Only with this knowledge can we help to guide the course taken by our communities and country.

With a willingness to cooperate with each other, and armed with knowledge, we are prepared to take positive action for our public welfare.

This action takes two forms. One is that which I have already mentioned, namely, exercising our greatest right of citizenship at the polls. It is a shameful fact of our democracy that barely half of all eligible voters go to the polls.

Let's face the truth: the reasons for nonvoting in most cases are indifference, laziness and lack of a sense of responsibility.

If we are to have a truly representative Government, then all must express their preferences at the polls.

Liberty and freedom, expressed and practiced in our Democracy cost money. Sometimes the cost of freedom is more than just money. The thousands of Americans who have died in our wars are proof of this. But, let us consider only those costs which we, as free citizens, must bear to maintain our free Government and institutions.

These costs are paid by taxes. But then, what would our country be like if no one had to pay taxes?

There would be no public schools; only the rich could then afford an education.

There would be no public water supply. Each of us would be required to dig wells. As we look around us in this great city, we see how impractical this would be. Indeed, it would be impossible.

There would be no sewage and garbage disposal. Our country has been singularly free from epidemics because we, the people, have paid for the best sanitation system in the world.

There would be no police protection, no courts to try criminals and no jails in which to confine them. And—no protection for property.

Our beautiful roads and highways would, without taxes, still be rutted, narrow dirt lanes. There would be no bridges, airports or seaports.

And, without taxes, there would be no welfare for the handicapped, the old and the indigent.

If, in these troubled times of international tension, our country were not safeguarded by adequate Armed Forces, our property, our lives, our freedoms would soon become prey to the totalitarian aggressors who would make us slaves in a godless political system. Remember always that our taxes maintain our strength and have made our country the world leader in this war of freedom.

From its foundation, our country was committed and dedicated to democracy and freedom. It is this democracy which helps to unfold the richness and goodness of human society.

We Americans are dedicated to the work of liberty, a work which must be a persistent effort of cooperation, because freedom does not come easily. And freedom is the responsibility of the individual.

If we do not take a continuous and active part in public life, there can be no true democracy. The most important job in this country, therefore, is that of being a good citizen.

This great city of Jersey City exemplifies the story of our country. We have in this city a mixture of races, religions, and cultures. This city reflects the genius and labors of men and women who came to these shores from all corners of the world.

And here, united in the single faith of democracy, individual dignity and worth, they became Americans. They assumed the deepest obligations which came with the opportunities they found.

Our late, great President, Franklin Delano Roosevelt, speaking of these people, said:

"They came to us speaking many tongues—but a single language—the universal language of human aspiration.

"How well their hopes were justified is proved by the record of what they achieved. They not only found freedom in the new world, but by their effort and devotion, they made the new world's freedom safer, richer, more far reaching, more capable of growth."

This, then, is our heritage: "Loyalty and liberty."

We must not endanger that heritage by indifference, complacency, and reluctance to keep up with the needs of a progressive society.

That heritage is great indeed, but we must build on it, we must make it greater, because we must pass it on to our heirs.

Democracy must ever grow. It cannot remain static, for to do so it would wither and die.

Let not future Americans say that our Demcracy started to lose its vigor and its idealism in this century.

"You and I," to quote Justice Frankfurter, "are heirs of a noble past. But * * * what's past is prologue, what is to come, is your and my discharge."

SPEECH BY HARLAN W. BARNES, NATIONAL COMMANDER, VETERANS OF WORLD WAR I OF THE UNITED STATES, GIVEN AT THE JERSEY CITY AMERICANIZATION PARADE, APRIL 28, 1957, AT PERSHING FIELD, JERSEY CITY, N. J.

I thank you for the privilege of speaking to you and feel I should talk about those things that are dear and nearest to my heart, the Veterans of World War I of these United States of America. I hope you will forgive me for reminiscing for a little bit.

A question that fishes back into my mind a great many times is, "How great is our country's debt to the men who laid their lives on the line in 1917–18, the men who stopped the enemy, who drove them back, who turned defeat into victory? They offered themselves as a living sacrifice, to die if need be, to win at any cost that America might live and the world made safe for democracy. That is literally.

John McCrae's poem, In Flanders Fields, has lived through the years and has been repeated on many occasions, and you may recall the first line of the second stanza. It begins, "We are the dead."

The dead spoke to the living, and we were the living. We caught the torch from failing hands, we held it high, we kept faith with those who died.

Today I speak for the living. I stand alone before you, but as national commander of the Veterans of World War I of the United States, I represent 100,000 members of 900 barracks in the United States. And I speak for 2,995,000 living American veterans of World War I. My strength is the strength of 2,995,000 veterans.

I wish to recall to your memory a poem written by Louis Untermeyer about World War I. The title is "Reveille," and I quote:

"Summoned by a supreme and confident power
That wakes our sleeping courage like a blow,
We rise, half shaken, to the challenging hour.
And answer it—and go."

And go we did. And when it was all over, over there, we came marching home again. A grateful nation gave us a hearty welcome then, the men cheered, the boys shouted, the ladies all turned out, and they all felt gay when we came home. There were reception committees, parades, speeches. We were heroes for a day—but only for a day.

We were quickly forgotten in the roaring twenties, submerged in the depth of the great depression in the thirties and swallowed up by the Second World War in the forties. Unnoticed excepting by those who cared, the First World War and the surviving veterans receded into the past and, instead of a living memory, existed only in a paragraph or two or possibly a page in a school history book.

Forgotten war, forgotten men. Who remembers Armistice Day? Who appreciates the meaning of the hour of 11 a. m., November 11, 1918? We remember because we were there.

I well recall a number of posters throughout the land of ours which showed Uncle Sam pointing his finger directly at us, and the words, "Uncle Sam needs you." We were young and strong and we were taught to love our country as a man loves his mother and father. We did not ask the reason why because we said to ourselves, "Greater love hath no man than this, that a man offer his life for his coutnry."

Forty years have gone by and we have reached the age when many of us must turn to our Uncle Sam and say, "Uncle Sam, we need you."

I have been speaking of the living, and time is running out. For us the hour is getting late, perhaps later than we think. So please do not forget us in our hour of need, the veterans of World War I of the United States of America.

ADDRESS BY DOMINIC L. STRADA, NATIONAL COMMANDER, AMVETS

Days such as today, I believe, are a good time to stop for a moment and spend a little time thinking about the purpose behind them.

We have many great days which we celebrate throughout the year. Days which are honored because of their significance in the history of our Nation.

And we set aside other days for occasions like this to serve as reminders each year of what our heritage is and what our future can be. I am honored to be invited to share the platform with my neighbor, Joe Burke, the national commander of a great veterans' organization, the Disabled American Veterans on a program sponsored by still another fine veterans group, the Veterans of Foreign Wars.

Americanization Day reminds me that being an American brought me an invitation. It wasn't an exclusive invitation by any means * * * about 140 million people have received the same one.

I am speaking of the invitation given to us by right of our citizenship to participate actively in our democracy. It is an invitation which some Americans have passed by.

But those who do accept can take part in the vital and exciting business of shaping their own future in their community, in their State, and in our Nation. Only in free

nations have we citizens this great opportunity.

Participating in government is a privilege and a right guaranteed to us by our Constitution. We should remember that with every right there is a responsibility to accompany it.

Our responsibility here is to exercise the right of governing ourselves. This right or privilege is like a muscle in our bodies. It must be exercised to remain strong. If we neglect it or ignore it, that muscle will lose its strength. It will be of no use to us when and if we should need it.

We have an additional responsibility in this respect. We must use our right of self-government intelligently. We can best do that by making ourselves well-informed on the issues that affect us. By asking questions and finding out the answers, we learn the facts that will help us make a wise decision. If we are uninformed we will lack the capacity to decide the best action to take on matters that may have an important effect on future events.

It is the uninformed people who are most easily controlled. History shows us that the first thing that dictators do when they come to power is to seize and hold all possible sources of knowledge. Then they can spread their poison, knowing that the people will never learn the truth.

Certainly it takes time and trouble to search out the facts, to study and listen enough to form an intelligent opinion. But isn't freedom worth it?

We can use our knowledge to make our wishes known by using your right to vote or by just using the mailbox to let your elected representatives know how you feel.

Senator COTTON, of New Hampshire, made this point very clear recently when he said, "No king ever wielded a scepter more powerful than a 5-cent pencil in the hands of an American citizen when he sits down to write to his Congressman or Senator." And the same thing is true for anyone holding public office. They are responsible to the citizens. It is our duty to make our wishes known to them. It is one of the most important rights granted to those of us rejoicing in American citizenship.

I would also like to urge your participation in another form of good citizenship. That is by taking an interest in the work and perhaps joining some of the civic organizations that exist in your community.

It has been said that Americans are the most organized people in the world and that we are a Nation of joiners. I suppose it's true. There does seem to be a club or association for almost every known purpose one can imagine. But each of them performs some useful function.

We have learned that more can be accomplished through an organized effort than by people working alone. I suppose that is why we place a premium on teamwork. We know that by working together for a common cause we can get much more done than if we each went our own way.

Each one of us has something in which we are particularly interested. By joining others with the same interests we can make progress toward our goals. We can make our position clear with the strength of many behind us. It is the organized effort of free peoples working together that brings results. It can be said that this is part of the American way of life.

I imagine that all of us have heard that phrase, "The American way of life," many times. And I would guess that there has been some puzzling over the many definitions given to it. There are many ways of defining the American way because it means something different to each of us.

Actually there is no single definition. It is like religion or like love. It means different things to different people.

I believe that the moment we accept one, single definition for the American way of life, or for what is Americanism, we are in danger. That would mean that everyone's thinking about their country had been forced into a single mold. And that would be the exact opposite of the purposes of our democracy. We prize individual thinking and individual liberty. And we should also prize and respect each individual's thoughts on Americanism.

If any general definition is offered of this term, I would like to suggest that it should include the thoughts that Americanism is love of our country and a desire to see it preserved, strengthened and improved in every way.

I spoke earlier of the need to seek information and answers. All of us are free to do it. It is this freedom to search for knowledge and understanding that I think is one of our best ways of preserving our Nation as we know it today.

I look on the knowledge of the history of our country and its great heritage of ideas and documents regarding the freedom of the individual as protective armor in the cold war in which we are now engaged.

This cold war is a struggle of rival ideas. The battlefield is within men's minds throughout the free and captive world. We can repel foreign and subversive ideas with a strong knowledge of what our Nation stands for.

Too often we have heard of Americans accepting the most outrageous lies about our country and its actions circulated by our enemies. If they had taken the trouble to learn the truth themselves they would have known full well what was fact and what was false.

But if they won't take the trouble to learn, and there are many who will not, then it is up to us to strengthen ourselves and pass along that strength to all others.

Let us remember that power lies within each one of us. It is a power that is as important to the defense of our Nation as anti-aircraft batteries and rockets and planes. That power is a belief and appreciation of what this Nation means to us.

Let us develop this power, this inner strength, through knowledge and understanding. If we know the things that have made our Nation great, then all of us have made a genuine contribution to making it even greater in the future.

TWENTY-SIXTH AMERICANIZATION DAY CELEBRATION, JERSEY CITY, N. J., 1931–57, SPONSORED BY CAPTAIN C. E. FISK POST, NO. 132, VETERANS OF FOREIGN WARS OF THE UNITED STATES, IN COOPERATION WITH THE CITY OF JERSEY CITY

"Loyalty means liberty."

PARADE ORDER, SUNDAY AFTERNOON, APRIL 28, 1957

General committee: Honorary chairmen, Mayor Bernard J. Berry, George A. Thornton, Sr.; general chairman, A. Pat Menendez.

Parade organization: Grand marshal, Lt. Col. John P. Carbin, Jr., antiaircraft artillery coordinator, State of New Jersey, Department of Defense; chief of staff, Samuel Bardach; adjutant, Arthur Devey; assistant adjutant, Exee Martel; bugler, Jack Robert.

GENERAL ORDERS

To all organizations participating in the Americanization Day parade in Jersey City, N. J., Sunday, April 28, 1957. The following is published for your information and guidance:

1. Order of parade and place of assembly:

GRAND MARSHAL'S HEADQUARTERS

(Assemble at Belmont Avenue and Boulevard)

Mounted police escort.
Grand marshal.
Chief of staff.
Adjutant.
Bugler.
Staff: Aids to grand marshal.
United States Army Band, First Army.
Regular Army units.
United States Marine Corps.
Band, United States First Air Force (Mitchell Field).
New Jersey National Guard, Commanding Officer Maj. Gen. Charles F. Kenny, 650th AAA BN (AW) (SP).
Headquarters and Headquarters 254th AAA Group, New Jersey National Guard, 1st Lt. Charles Peer, commander.
Band, Keyport Fire Department Band (Keyport, N. J.).
Organized Reserve Corps of the Army.
Fourteenth Special Infantry USMCR Marine Corps Training Center, Jersey City, N. J.
Band, St. Michael's High School (Jersey City, N. J.).
United States Naval Surface Battalion 3–5: Comdr. E. G. McGovern, commanding officer; commanding 3–19 Division, Lt. Comdr. R. A. Cosgrove; commanding 3–33 Division, Lt. Comdr. C. V. Storer; commanding 3–22 Division, Lt. Comdr. J. T. Crowley.
Reserve Officer Association of the United States.
St. Peter's College ROTC Band.
Band, Melrose Drum and Bugle Corps (South Amboy, N. J.).
Band.
Color guard, Jersey City Police Department.
Jersey City police honor guard.
Color guard, Jersey City Fire Department.
Honor guard, Jersey City Fire Department.
Jersey City Fire Department equipment.
Red Cross mobile units.
New Jersey Amputee Veterans (auto).
United Spanish War Veterans Camp, No. 6, (auto).

FIRST DIVISION (FIRST SECTION)

(Assemble on Glenwood Avenue, east and west of boulevard

Assistant marshal, Louis Lepis.
Assistant marshal, Clarence Doud.
Assistant adjutant, Harriet L. Reitze.
Assistant adjutant, Bob Maretzky.
Band, Perth Amboy Drum and Bugle Corps.
Boy Scouts of America.
Band, Girl Scouts of America (Hoboken, N. J.).
Girl Scouts of America (Hoboken, N. J.).
Band, Girl Scouts of America (Jersey City, N. J.).
Girl Scouts of America (Jersey City, N. J.).
Band.
Band, Jersey City Lassies.
Jersey City Board of Education.
Band, Junior Herd No. 108—Essex Temple, No. 42 (Newark, N. J.).
Pride of Newark Lodge, No. 93 I. B. P. O. E. W.
Roxie Juvenile Elks, No. 25 (Newark, N. J.).

FIRST DIVISION (SECOND SECTION)

(Assemble on Kensington Avenue, west of boulevard)

Assistant marshal, Clinton C. Cook.
Assistant marshal, Arthur Praet.
Assistant adjutant, Andrew A. Gallagher.
Assistant adjutant, Joseph Knoeringer.

Bands: John Hand Tri-County No. 2906, VFW (Pompton Lakes, N. J.); Storr-Richie No. 506, VFW (Plainfield, N. J.); St. Vincent's Cadets, National Champs (Bayonne, N. J.); Fairlawn No. 281, VFW (Fairlawn, N. J.); Mendel School of Baton Twirling (Union City and Fairlawn, N. J.); Capt. Rodney Fiske Post 335 (Cranford, N. J.); Alexander Hamilton Post 139 (Paterson, N. J.); Woodbridge Post 4410, VFW; Choimer-Trace 7914, VFW (Glendora, N. J.); Carlstadt Fife Drum and Bugle Corps, Snyder High School.

Department of New Jersey VFW Colors and Color Guard (Mounted) (Courtesy Lucky 4 Ranch, Pompton Lakes, N. J., Oliver McKeeby, ranch foreman.)

Department of New Jersey Veterans of Foreign Wars of the United States and auxiliary will march in numerical sequence with their respective counties in alphabetical order.

FIRST DIVISION (THIRD SECTION)

(Assemble on Kensington Avenue, east of boulevard)

Assistant marshal, Peter Amoroso.
Assistant marshal, George Bradley.
Bands, Union Beach Community Band (Union Beach, N. J.).
Department of New York Veterans of Foreign Wars of the United States and Auxiliary.
Department of Maine Post 932, VFW.
Department of Connecticut Colors and Color Guard, Posts 511, 583, 585, 5095, 5964, 8075, 201, 1979, 7790, and 1946, and Ladies Auxiliary.
Gold Star Mothers (colors and color guard).
American War Mothers (colors and color guard).
Navy Mothers of America (colors and color guard).
Widows of World War I (colors and color guard).
Band, Wilson Gugelman Post No. 1302, VFW (Brian Boru Pipers, Kearny, N. J.).
Military Order of Cooties, VFW and Cootiettes Club of United States.

SECOND DIVISION (FIRST SECTION)

(Assemble on Jewett Avenue, east of boulevard)

Assistant marshal, Joseph Plattner.
Assistant marshal, William Cullinane.
Bands, West New York Post No. 15, American Legion; Quinn Post No. 52 (Jersey City); Morristown Post No. 59, American Legion (Morristown, N. J.).
American Legion and Ladies' Auxiliary, Department of New Jersey.
American Legion and Ladies' Auxiliary, Department of New York.
Forty and Eight, all units, Department of New York and Department of New Jersey.
Isien Fire Department Band, Barringer Walker 139, Lyndhurst, N. J.

SECOND DIVISION (SECOND SECTION)

(Assemble on Jewett Avenue, west of boulevard)

Assistant marshal, James Calabrese.
Assistant adjutant, Al Young.
Band, Dickinson High School (Jersey City, N. J.).
Disabled American War Veterans and Ladies' Auxiliary.
AMVETS and Ladies' Auxiliary.
Veterans of World War I and Ladies' Auxiliary.
Band, Lincoln High School (Jersey City, N. J.).
Catholic War Veterans and Ladies' Auxiliary.
Jewish War Veterans and Ladies' Auxiliary.
Marine Corps League and Ladies' Auxiliary.

THIRD DIVISION

(Assemble on Fairview Avenue, west of boulevard)

Assistant marshal, Franklin Perkins.
Assistant marshal, Al Larsen.
Assistant marshal, D. C. Coon.
Assistant adjutant, Joe Yunker.
Band, Polish Falcons No. 126 (Elizabeth, N. J.).
Chinstrap Post, 29th Division Association and Ladies' Auxiliary.
Uniformed Special Deputy Sheriff's (Passaic, N. J.).
Army-Navy Union and Ladies Auxiliary.
Ancient Order of Hibernians No. 1 (Jersey City, N. J.).
Canadian Legion Department of New York, New Jersey, Newfoundland, and Canada.
Foresters of America and Spirit of '76.
Improved Order of Redmen and Degree of Pocohantas.
Band—Ferris High School of Jersey City.
Grand Council Order of DeMolay.
Loyal Order of Moose 848 and Women's Chapter 848.
Legion of Guardsmen.
Jersey City Lodge of Elks 211 (color guard).

FOURTH DIVISION

(Assemble on Fairview Avenue, east of boulevard)

Assistant marshal, Francis Gill.
Assistant marshal, Harold Gotthelf.
Assistant adjutant, Max Reason.
Surma Ukrainian Band.
Ukrainian units.
Band, Our Lady of Lourdes (Paterson, N. J.).
Louis La Pointe Association (Jersey City, N. J.).
Polish Legion of American War Veterans (Post No. 9, Jersey City, N. J.).
Polish Association of America No. 51 and Ladies Auxiliary War Veterans.
St. Demetrios Greek Orthodox Community—Federation Hellenic, Community of Greater New York.
Cowboys—cowgirls—all mounted units.
Rainbow Rangers—West Hudson Rangers (Hudson County, N. J.).
Captain Clinton E. Fisk Post 132 and Ladies Auxiliary.
All bands not listed will be assigned positions by chief of staff. All units not listed will go in this division.

PERSHING FIELD SPEAKING PROGRAM

1. Invocation, Rev. Abram Pepling, Second Reformed Church, Jersey City, N. J.
2. Welcome address, Hon. Bernard J. Berry, mayor of Jersey City, N. J.
3. Address, Hon. Robert B. Meyner, Governor of New Jersey.
4. Address, Harlan W. Barnes, national commander, Veterans World War I.
5. Address, Dominic L. Strada, national commander, AMVETS.
6. Address, Joseph F. Burke, national commander, DAV.
7. Address, Brig. Gen. Daniel DeBrier, commander, 9072d Air Reserve Group, Atlantic City, N. J.
8. Address, Charles Kinney, department commander, New Jersey VFW.
9. Prayer, Rabbi A. L. Gottesman, Congregation Beth David.
10. Address, Frances Tortora, president, Department of New Jersey, VFW Ladies' Auxiliary.
11. Address, Hon. VINCENT J. DELLAY, Congressman 14th District.
12. Address, Hon. ALFRED D. SIEMINSKI, Congressman 13th District.
13. Address, James F. Cantwell, major general, New Jersey National Guard.
14. Address, John W. Mahan, national junior vice commander in chief, VFW.
15. Pledging allegiance to the flag of the United States (after parade).
16. Benediction, Rev. Abram Pepling, Second Reformed Church.
17. National anthem, Captain Clinton E. Fisk Post band, Walter Lippengoen, conducting. Gloria Santo Mauro, soloist.

OTHER GUESTS

Commissioner Lawrence A. Whipple.
Commissioner Joshua Ringle.
Commissioner Joseph Soriero.
Commissioner Joseph T. Michalski.
Comdr. William Stuhr, USNR.
Harry N. Weeks, department commander, New Jersey American Legion.
Hon. Edward Hart.
Frank G. Hahn, national council member, VFW.
Brig. Gen. Walter D. Lamont, Jr., commander, C. G. Armored Division, New Jersey National Guard.
James F. Patten, State commander, New Jersey DAV.
Col. John G. Cassidy, representing First Army.
Charles T. Brown, New Jersey State commander, Marine Corps League.
Commissioner James P. Clark, president, Boulevard Commission.
Dr. Louis R. Panagrosso, State commander, New Jersey CWV.
Gustave G. W. Leagler, department commander, New Jersey Veterans World War I.
Daniel S. Brady, department commander, New York VFW.
Harry Zax, Department of New Jersey JWV.
George Hunt, junior vice supreme commander, MOC.
Thomas Bennett, department commander, Connecticut, VFW.
Alex M. Shields, national commander, 29th Division Association.
Frank Sturges, general chairman, Connecticut Loyalty Day Committee.

AMERICANIZATION PROGRAM COMMITTEE

A. Pat Menendez, general chairman.
Commander: Francis Gill.
Auxiliary president: Lisa Russell.
Parade chairman: Samuel Bardach.
Adjutant: Arthur Dovey.
Auxiliary chairlady: Mary Gill.
County commander: Harold Nievelt.
Military liaison: Maj. Charles F. Kenny, Comdr. William Stuhr, United States Naval Reserve, Col. Frank B. Chapman, Maj. Richard F. Carlisle, United States Marine Corps Reserve.
Field chairman: Harry Young.
Public relations: Harold Nievelt.
Music chairmen: George A. Thornton, Sr., Jack Robert.
Reception chairmen: Clinton C. Cook, Francis Gill, George Bradley.
Aids to grand marshal: Capt. Francis X. Burke, C. M. H., Lt. Stephen R. Gregg, C. M. H., Sgt. John W. Meagher, C. M. H., Nicholas Oresko, C. M. H., Hector A. Cafferata, C. M. H., "Marty" Mahar.

DAYLIGHT SAVING TIME

2. Time of assembly and march, first call, 2:15 p. m.; assembly, 2:25 p. m., forward march, 2:30 p. m.
3. All organizations are urged to be in line in their appointed place at 2 p. m. to enable their division aid to make his report to the grand marshal from 2 to 2:15 p. m. on the northwest corner of Belmont Avenue and Hudson Boulevard. Therafter, until the demobilization at the head of the parade, division aids will report to the grand marshal at the command post immediately after first call at 2:15 p. m.; after reporting their respective units present, they will rejoin their respective divisions. Colors will not be massed in the parade.
4. After each division passes in review all colorbearers will assemble with their colors at the north end of Pershing Field, for massing and parade of colors.
5. Units that do street drills are requested to put on their drills whenever possible, but they are not to hold up the parade.
6. The reviewing stand will be at Pershing Field.
7. The reviewing officials will remain in their positions after the parade for the review of the massing of the colors passing the reviewing point. All division commanders and unit commanders will salute the reviewing officer. Units will execute eyes left upon command and standards will be dipped. The parade will be reviewed by the Honorable Governor Robert B. Meyner; Hon. Bernard J. Berry, mayor of Jersey City; Hon. Vincent J. Dellay, and Hon. Alfred D. Sieminski, Congressmen of New Jersey; Commissioners of the city of Jersey City; the grand marshal and his staff; and national and State officers of all veterans' organizations.
8. Route of march: Parade will move off at 2:30 p. m. following Hudson County Boulevard north to Manhattan Avenue, thence east on Manhattan Avenue to Pershing Field, where organizations and

units will be assigned positions for review and the massing of colors.

9. Floats: Floats will enter Pershing Field from Manhattan Avenue and follow to new ramped exit, at the southeast end of the stands to Central Avenue.

Sgt. Harry Young, commanding.
Sgt. William Sewell, assisting.

Lt. Col. JOHN P. CARBIN, Jr.,
Grand Marshal; Antiaircraft Artillery Coordinator, State of New Jersey, Department of Defense.
SAMUEL BARDACH, *Chief of Staff.*

Water Transportation Policy for New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a news release on the report to the New England governors' conference by the New England governors' committee on public transportation, entitled, "Water Transportation Policy for New England."

The news release follows:

The chief value of water transportation to present-day New England is its low-cost delivery of fuels and raw materials, essential to the region's economy.

This is the major conclusion drawn from the report on water transportation made public here today by Donald W. Campbell, chairman, New England governors' committee on public transportation. It is the eighth in the series of reports published by the committee.

In its latest report, the committee finds that the enormous tonnage of freight handled through New England's ports has doubled since 1945. It adds, however, that "almost all the traffic, and the increase in traffic, is in the form of fuels and industrial raw materials, to the extent that petroleum products, bulk commodities and coal, all incoming cargoes, constitute well over 90 percent of New England's waterborne tonnage."

"These cargoes," it asserts, "are of the utmost importance to New England's economy. It is to the region's interest to be sure that they move at minimum cost."

The committee states further that "these cargoes move in privately operated ships. Most New England ports are not used for public transportation at all." Only Portland and Boston, it asserts, now regularly handle any significant volume of general cargo.

The committee's conclusions are based largely on the results of the most comprehensive study ever made of New England's ports, their operations and development which is published with its report to the governors. This study was made by Dr. Romney Robinson, associate professor of economics, Brandeis University.

The committee sees "little prospect for the establishment of general cargo service through other New England ports, desirable though this might be with respect to land transportation costs. The true requirements of a shipper or receiver, coupled with the requirements of the steamship companies, give enormous drawing power to the very largest ports (such as New York). These ports have frequent sailings from and to all parts of the world."

The committee finds that "coastal general cargo traffic, once of tremendous importance, has almost completely disappeared. This fact indicates that water transportation today is less desirable than it once was if there is a land transport alternative. * * *

The report states that it is possible that technological developments may substantially alter port operations, and may restore the coastal trade, but it also goes on to say that "with respect to technological development the ocean transportation industry has lagged behind manufacturing industry. There have been few changes in the manner of shipping and handling general cargo. As a result, all branches of the industry, including the ports, are especially afflicted by high labor costs." This fact, the committee asserts, is especially disadvantageous to New England.

"The coastal traffic will not be revived until and unless innovations accomplish considerable reductions in the per-ton cost of cargo handling and ship operation. One such prospect is the roll-on, roll-off ship for transport of heavy trailers. At one time Providence seemed likely to become an operating base for trailer-ship service, but these plans have been suspended."

The committee concludes that "it does not seem appropriate or possible to develop a common New England policy with respect to port affairs or port development." Rather, it believes that the development and functioning of each of the ports must be dealt with by their respective authorities on an individual basis, with each port striving for the maximum use of its facilities, and continuing alert to take advantage of any favorable change in conditions or operations.

Professor Robinson's research report presents considerable data concerning the 15 New England ports, each of which handles 500,000 gross tons of cargo annually, and detailed analyses of the situation and prospects of the 6 largest ports. These are Portland and Searsport in Maine; Boston; Providence, R. I.; and New Haven and Bridgeport in Connecticut. Eleven pages of his report are devoted to the problems and opportunities confronting the port of Boston, which generates, he states, local expenditures of $81 millions a year.

From its consideration of the port of Boston, the committee derived two recommendations, as follows:

1. That an intensive study be made of the precise extent of New England's need for waterborne traffic, in order to determine Boston's potential traffic base.

2. That Boston give serious consideration to the establishment of new facilities for the storage of petroleum and petroleum products, perhaps on one of the islands in the harbor.

Citing the latter as an example of the need for keeping up with developments in the private transport of fuels, the committee points out that already the larger tankers now in service are too big for Chelsea Creek, where most of Boston's oil-storage facilities are located. The harbor islands, on the other hand, can be reached by vessels of any size now in prospect. Under this plan, individual oil plants would be supplied by pipeline from the proposed island facility.

Asserting that the "extent of Boston's decline has sometimes been exaggerated," the committee finds "it is still a ranking United States port, and one which has made considerable progress in overcoming its old problems. Boston's physical facilities have been greatly improved. The new Massachusetts Port Authority should afford the port greater freedom of operation than it has hitherto enjoyed. Success in the rail rate parity case, now pending, would give Boston equality in rail rates to and from central territory with the ports of Philadelphia and Baltimore.

"But this should not be regarded as a panacea, for Boston would then compete with New York on the same basis as it now must do. Yet one reason why Boston does not secure more central territory business at the present time may be that the rail and water carriers are insufficiently aggressive in soliciting bookings via Boston. Removal of the rate disparity would dispense with their principal excuse for not giving Boston equal status with the ports of Philadelphia and Baltimore. To increase its traffic, Boston must increase its work of traffic solicitation, and the new authority should afford it the opportunity of doing so."

The Gerry Murphy Case: Certain Corrections

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PORTER. Mr. Speaker, my distinguished colleague from Louisiana [Mr. LONG], in the Appendix of the RECORD May 27, beginning at page A4065, states that he is indeed sorry that I see fit "to continue this unfriendly controversy with regard to one of the foremost neighboring republics to the south and one of our stanchest friends in the free world, the Dominican Republic, and its President Trujillo."

I point out that Mr. LONG, not I, began this exchange. And I cannot allow the gentleman's gargantuan and fantastic inaccuracies to go unchallenged. In the interest of brevity, let me deal tersely with the main errors in his latest remarks.

First. The gentleman believes the Dominican Republic to be "democratic and progressive" and, in another place, "great and democratic," "one of our stanchest friends in the free world." The fact is that it is terror-ridden dictatorship. Our State Department will so testify. Every authority says the same thing.

Second. The gentleman accuses me of attempting to convict the Dominican leaders for Gerry Murphy's disappearance on hearsay evidence. I am a lawyer. My distinguished friend from Louisiana is a dentist. I say that the evidence against Dictator Trujillo, both real and circumstantial, is sufficient to convict him in any American court and would not be subject to being stricken as inadmissible hearsay.

Perhaps my friend from Louisiana made his statement before he had an opportunity to hear the CBS Edward Murrow broadcast, The Galindez-Murphy Case: A Chronicle of Terror. I say again, as I have said off the floor of the House, that the Dominican Government, which means Rafael Trujillo, is guilty of Gerry Murphy's kidnapping and probable murder.

My colleague has never deigned to discuss the evidence, just to characterize it. I refer him to my speech in the House on February 28 where the evidence is discussed. I also remind Mr. LONG that the Dominican Government's explanation of Murphy's death was sternly re-

jected by our State Department and that the House Foreign Affairs Committee has decided to consider the Murphy-Galindez matter in executive session June 4.

Moreover, in its latest note to the dominican Republic, our Government cited the investigation into Murphy's activities and stated that "sufficient evidence has now been uncovered to indicate that Mr. Murphy may have been connected with the disappearance of Dr. Jesus de Galindez in New York on or about March 12, 1956, acting on behalf or in association with certain Dominican and American nationals."

Our Government has asked that the former Dominican consul general, Arturo Espaillat, return here without diplomatic immunity "in order that he should be amenable to the usual and lawful procedures in matters of investigation and trial."

This request was made on May 2. As of May 29, no reply had been received from the Dominican Government which had previously made repeated official declarations of willingness to cooperate in this investigation.

Third. The gentleman from Louisiana states that the Murphy case is one of the "shapes and forms" of the Communist effort "to overthrow the present great and democratic Government of the Dominican Republic." He gives no evidence for this allegation, which implicates me, the State Department, and many others. He says my article in the June Coronet magazine, The Butcher of the Caribbean, is "a lurid rehash which reeks with its communistic origin." Again, no evidence. Again, no discussion of the facts. The reaction to my article from those who know Trujillo has been entirely enthusiastic, as has the reaction from those who previously did not know about this tyrant. It may be a "lurid rehash" to my colleague but to date I have found no such reaction elsewhere.

Fourth. The gentleman from Louisiana states that I impugned, "if only by implication," the character of Majority Leader JOHN MCCORMACK by using his name in my Coronet article. I did nothing of the sort. I indicated a disagreement but I specifically wrote:

> My respect and admiration for Mr. MCCORMACK was—and is—immense.

No other colleague, including the distinguished and beloved majority leader himself, has indicated to me, directly or indirectly, that my mention of Mr. MCCORMACK was in any way discourteous. The disagreement between my colleague from Louisiana and myself centers about entirely different matters, namely, the nature of the Dominican Government, its responsibility for the disappearance of my constituent, and the motivations for my pressing for a change in our Government's policy toward such tyrants. I am aware of no such disagreements with my good friend and mentor, the kindly and truly liberal JOHN MCCORMACK, of Massachusetts.

Fifth. The gentleman from Louisiana states that my saying I must carry a gun impugns the honor of every Member of the House. No other Member has even hinted that he held a similar view. I carry a gun, on occasion, for self-protection because I have been so advised by the police, because I have received many such recommendations from responsible persons who know Trujillo and his gang, and because my own conclusion on all the facts is that a weapon might come in handy. My colleague asks me if I carry the gun on the floor of the Congress. The answer, of course, is that I do not.

I shall continue to fight, as best I can, tyranny of every kind, whether Communist or otherwise. My constituents in Oregon, along with other American citizens, proud of their heritage as free people, rightfully expect this of the Representatives they send to Congress.

All Asians Are Anticolonial and They Will Protest Violently Even to Their Best Friends, if the Latter Seem to Them To Be Acquiring Special Status or Privileges

---

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. JUDD. Mr. Speaker, the growing resentment toward the United States in Asian countries, of which the outbreak in Formosa is only the latest and most serious manifestation to date, is being interpreted by some as just anti-Americanism and lack of appreciation for the vast help given these countries by the United States. That is too simple an explanation. Rather, the resentment is a hangover to the opposition to western colonialism, extra territoriality, special privileges, and status for white men, which the Chinese have resisted since those practices began with the Opium War in the 1840's.

Many Americans seem to have forgotten that it was Chiang Kai-shek and the Chinese Nationalists which led the first anti-imperialist movement on the Asian continent and succeeded, with American encouragement and help, in abolishing the old foreign concessions in major Chinese cities. When anyone, whether European, Russian, Japanese, or American seems to the Chinese to be reestablishing positions of special privilege, the stage is set for some incident to set off an explosion, whether the incident is spontaneous or planned by enemies of good relations between China and the country involved. Gratitude for outside aid cannot be expected to include subservience to foreigners in their own land, even if those foreigners are American.

Some of us have warned repeatedly against stationing too many Americans in Formosa, living in the best quarters on the island, and enjoying the highest living standards in Asia. In a speech here last year I warned that if we did not better screen and indoctrinate our personnel abroad we would find that we had trained good armies in areas where the populace might not be solidly on our side. We might find ourselves in Korea, Japan, Formosa, Okinawa, the Philippines, like Britain on Cyprus.

The above is not to justify the inexcusable outrage that happened to our Embassy in Taipei, it is, rather to try to understand it, to learn from it, and to take necessary steps to prevent further deterioration. Just as prompt understanding and realistic action in the Middle East have greatly improved the situation there in recent months, similar prompt changes in certain policies and procedures in Asia can give us better relations and greater security there with fewer Americans on foreign soil and less cost to American taxpayers.

One of the best articles I have seen on the whole complex situation is by Keyes Beech, of the Chicago Daily News Service, and I include it under leave to extend my remarks:

RESENTMENT GROWS IN ASIA

(By Keyes Beech)

TOKYO.—The savage attack by a Chinese mob on the American Embassy in Formosa spotlights the growing anti-Americanism in almost every Asian country where United States forces are stationed.

The mob action in Taipei—sparked by acquittal of an Army sergeant who shot and killed a Chinese peeping tom—cannot be divorced from the jurisdictional dispute between the United States and Japan over an Illinois soldier accused of killing a Japanese woman who was picking gun shells.

Okinawans showed their resentment of American military rule by electing a Communist mayor of their largest city.

In the Philippines, negotiations for United States military bases broke down over the question of which side will try American servicemen charged with crimes against Filipinos.

In Japan there is continuing pressure for the abrogation or drastic revision of the American-Japanese security agreement on the ground that it is unfair to Japan.

And in Bangkok, it's page one news if a drunken American soldier makes a pass at a Siamese girl on the street.

The violent outbreak in Taipei reminded old Far Eastern hands of the bloody anti-foreign riots in pre-Communist China when unreasoning mobs stoned or killed every white man they could lay their hands on.

It also was a sharp reminder of what well-meaning Americans too easily forget, if indeed they ever knew—that they are foreigners in Asia.

The problem is as old as the arrival of the first white men in Asia, but with modern twists.

As the British did when they first went to China in the middle of the last century, Americans today have where possible brought their own law with them for their own people.

The name for this is extraterritoriality, and it's an ugly name in the Far East with its memories of white domination.

Envy, frustration, an inferiority complex and clash of cultures all lie behind the furious outburst in Taipei.

In America it may be legally permissible for a husband to shoot a prowler who is peering through the bathroom window while his wife is taking a shower.

But in the Orient it is not. In Japan, for example, you can be indicted for murder if you kill a robber who enters your home unless you can prove he was armed and you acted in self-defense.

In Formosa as elsewhere in Asia the standard of living which Americans bring with them—symbolized by two-toned cars

and big white refrigerators—arouses envy and resentment. To Asians, all Americans are rich beyond belief.

So long as there was war or immediate threat of war in Asia, the presence of American troops could be justified on the grounds of military necessity.

But with Asia apparently embarked on a peaceful path, it will be more and more difficult to justify keeping American forces on foreign soil.

It could be that the sacking of the Embassy in Taipei will mark the beginning of a movement to withdraw all United States forces from the Far East. Certainly Red China couldn't have been presented with a juicier propaganda plum.

Housing Conference Report Offers Chance for Big Savings

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. VURSELL. Mr. Speaker, while the other body last week, by amendments, made considerable improvement in the housing bill reported to it by the Banking and Currency Committee, if the Members of the House, when considering the conference report that will soon come to us, will stand firm and refuse to concur on certain provisions of the bill, which yet should be corrected, we can save the taxpayers in the future billions of dollars.

The House bill, when it went to the other body, contained the Fisher amendment, which was stricken out by that body. The difference between these two bills in this one instance with respect to public housing is so fundamental that the House should refuse to concur. If the Fisher amendment can be maintained over future years, it alone will save the taxpayers billions of dollars.

Then, again, 4 or 5 of the public-housing amendments approved by the other body are so far reaching, in adding additional expense that they should be stricken, as they go beyond the welfare purpose which was the original intent of the law.

Here are their provisions:

First. Would permit over-income tenants to remain in public housing indefinitely if the public housing authority determines that adequate housing is not available in the private market consistent with the tenant's income less all his exemptions—section 401 (a) of the Senate-passed version of H. R. 6659.

Second. Would repeal the requirement that a community have a workable program for the prevention of slums or blight as a prerequisite to public housing—section 401 (c). Note: The workable program was placed in the law in 1954, repealed in 1955, and reenacted in 1956.

Third. Would increase the income exemptions for determining whether a family is eligible for admission to public housing. Exemptions are also increased for determining eligibility for continued occupancy. The exemptions relate to adult members of the household other than the principal wage earner, and apply to the wages of this other adult group; that is, grown children, in-laws, and so forth, section 401 (b).

Fourth. Would increase the construction cost limits for public housing from $1,750 to $2,000 per room; and where designed for elderly persons, from $2,250 to $2,500 per room—section 401 (d).

URBAN RENEWAL SHOULD BE REDUCED

The Senate bill carries $250 million more in authorizations for urban renewal than was carried in the House bill. The House by all means should refuse to concur, and reduce the amount by $250 millions.

In urban renewal the House bill provided that no one State could have allocated to it over 10 percent of the total funds allocated in the bill. New York City has been allocated and committed an amount of $92 million, which has about reached its allotment, and consumed the State's allotment.

Chicago has $74 million, Philadelphia $54 million, and many other big cities many other millions.

The mayors of these large cities have been insisting the allotment percentage per States be raised from 10 to 15 percent.

The Senate bill raises these allotment rates from 10 to 15 percent, which will lift the ceiling to the extent that New York City and other cities can secure up to $200 million of the taxpayers' money in grants—none of it to be returned. The House adamantly refuses to concur in this amendment.

There has been allocated for urban renewal a total of $1¼ billion in grant money to do a face-lifting job, so to speak, mostly in improving large cities at the expense of every taxpayer in every congressional district in the United States.

I am wondering how many Members of Congress know that these funds are all grants to be given away, with not a single dollar returned to the Treasury, from which it comes.

It would seem to me that no Congressman can defend before the people in his own district the giveaway of over a billion dollars of the taxpayers' money out of the Treasury to the wealthy big cities of the country, and to many cities of smaller size—all of which are more able to improve their own cities than is the Federal Government—thereby taxing all laboring men, farmers, professional and small-business men throughout the Nation.

It would seem to me that if we believe in economy that we ought to put on the brakes and reduce the costs carried in this housing bill rather than to expand and increase them year after year.

The House of Representatives, which reduced the defense budget by $2½ billion, ought to seize upon the opportunity of reducing the intolerable and unnecessary waste provided in the housing bill that will come before us shortly in a conference report.

Budget-Cutting Time—Everyone Must Do His Part

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. COLMER. Mr. Speaker, one of the important reasons for the magnitude of the budget is that in the years past, both during peace and war, people generally believed in economy in Government by and for the other fellow. The chief obstacle which we now encounter in cutting the budget, in this economy drive, is that everyone wants the cut to be borne by the other fellow.

If this alltime high peacetime budget is to be substantially trimmed that selfish policy of "letting George do it" must be abandoned. The cuts must be borne proportionately by all American citizens.

Under the title "High Taxes Result of Unbridled Spending," on March 19, 1952, I laid before the House my own views as to the necessity for applying the brakes on the inflationary trek the Government was pursuing. Among other things, I pointed out:

> The policy of everybody "touching" the Federal Government had likewise developed into the policy of the Federal Government "touching" everybody. Even the humblest citizen now realizes that the Federal Government is no Santa Claus. In fact, we have reached the saturation point in taxation.

Under a 10-point program, I then said among other things:

> And finally, the citizens of the Republic, now conscious as never before of the burdens of taxation, must practice the doctrine of States responsibility as well as States rights. The practice of looking to Washington for Federal aid in civil responsibilities of their own must cease. They must realize that there is no State, county, or city whose financial statement is not sounder than that of the Federal Government.

Among those who have practiced the selfish but shortsighted policy of attempting to get everything they could out of the public till while at the same time clamoring for economy in Government—by the other fellow—have been many of our big industrialists and business people. It was, therefore, with much interest that I read a recent editorial from the Iron Age of May 30, 1957, taking businessmen to task for this policy, which was called to my attention by the able and highly respected veteran of the Washington press, Paul Wooten.

The editorial by the able editor in chief of that splendid magazine, Mr. Tom Campbell, follows:

BUDGET-CUTTING TIME—EVERYONE MUST DO HIS PART

> This is a soul-searching piece. Unless you want to search yours, don't read it. Because we aren't going to mince words.
>
> Everyone in his right mind wants our Government to cut its costs. We realize we are going hog wild in national spending.
>
> Business people are clamoring for a reduction in the budget. Congressmen are hear-

ing from home. They listen when the trend is toward rigid economy. That's why they are on a rampage to cross up the President on the budget.

It is improper to wave the flag when using an argument for cutting Government spending. Business can dispense with the patriotic gesture. Management wants less spending because it is tired of the permanent tax gun held at its head.

If we must yell for reduction, let's be honest about it: Let's not be hypocritical—either consciously or as the couch boys would say "with socially acceptable symbols." The best way to deal with this question is to decide right now that we will withdraw some of our demands from the Government pork barrel.

Let's not change our hats so often. If we are on the chamber of commerce and want more Government help for our city or pet project, then it is up to us to cut it down—or out.

Suppose we are trying to get this or that project built or changed at Government expense; let's either ask for it and shut up about a cut in the budget; or ditch it and go all out for economy.

A deep cut in the budget will eliminate some important statistics from the Census Bureau. Do we want that? If that's what we want, we must not be so prone to say that what the other fellow wants is silly and uncalled for. Let's be consistent—even if being consistent is quite a miracle these days.

If we want the budget really cut, we must see some defense contracts go down the drain. If we are willing—as we say in our private clubs—to believe that the Reds are bluffing with a lot of their talk, then we can demand a cut. But if we do, we must see some of our projects wiped out. It can't always be the other fellow's pet. There aren't enough other fellows to stand what we won't take.

Let's fish or cut bait: Either we want less Government spending and will give up our pets or we don't. It calls for basic honesty.

Too Many People?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of Wednesday, May 29, 1957:

TOO MANY PEOPLE?

It is startling, and some would even say dismaying, to note how human beings continue to increase in numbers. Right now, according to the latest United Nations statistical study, they are multiplying at a rate of 120,000 a day or 43 million annually. And as a result, unless there is a marked slowdown in this trend, the world's present population of 2.7 billion may double to a total of 5.4 billion by the end of the century, which is barely more than 40 years away.

Accordingly, assuming that an atomic-hydrogen war does not intervene to wipe out most of mankind, the world between now and the year 2000 will almost certainly find itself having to undergo unprecedented adjustments and readjustments to meet the political, economic, social, cultural, and other pressures that are sure to develop if people keep on increasing at the current rate. In our own country, for example, the prospect is that our population will grow from today's 170 million to well over 300 million in the next 4 decades or so. There is little doubt, of course, that our richly endowed Nation can become more prosperous than ever with such a growth. Even so, a gain of that size can hardly fail to have a profound effect on our way of life or to cause problems and changes of the first magnitude in fields as diverse as education, traffic controls, conservation of resources, urban development, and the length of the workweek and work year.

As for the rest of the world, there will be comparable problems and changes. Worse still, according to the pessimists, this population "explosion"—apart from crowding far too many humans into the far too little territory of the smaller countries—may easily become extreme enough to create a nightmare of global famine. As these observers see the future, mankind, even if it succeeds in doing away with war, ridding itself of disease and thus increasing everybody's life expectancy, will by its vast growth make mass starvation inevitable. But there are others who take a brighter and more persuasive view. In their judgment, if the nations can manage to conquer pestilence and establish an enduring peace, they should be equally capable of producing sufficient food and achieving a reasonably good life for tremendously larger numbers of people—especially so because of the great promise inherent in things like modern technology and atomic energy.

Yet, although the pessimists thus seem to have been much too easily dismayed by it, the potential population growth between now and the year 2000 is full of unparalleled significance. For human beings cannot multiply from 2.7 billion to 5.4 billion, within a span of only some 40 years, without bringing to bear on their own lives, and on the lives of individual nations and the world in its entirety, the most far-reaching and most complicating influences. The outlook is one that challenges the wisdom of man, and if he is to deal with it successfully, he must begin to deal with it now.

Rights of the Workingman

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SCUDDER. Mr. Speaker, no Member of this Congress has a more profound belief in the rights of the workingman than I have. He has a right to organize and bargain collectively for those things that improve his economic position in our great economy. He also has a right to a binding contract that insures those things for which he lawfully bargains. He has those rights when dealing with private industry. The law gives them to him. But he does not have those rights when dealing with Government when the Government or some segment thereof is operating a proprietary business venture in competition with its citizens.

Many leaders of organized labor, in fact the majority of them insist that the Government should build and operate these hydroelectric projects. In fact, some of the leaders of labor think the Government should produce and distribute all of our electric power. But what leaders of labor or members of an organized union are better able to judge what is best for them than those working in the electric industry?

The International Brotherhood of Electrical Workers at one time supported Government development of power facilities but they have found through bitter experience that Government ownership is not what it is cracked up to be. Their rights, working conditions, pay, and other benefits when working for Government power operations are inferior to those obtained from private industries.

Those leaders of labor who so ardently support Government ownership of electric properties might well listen to their brothers in the IBEW who, from past years of experience, are much better informed on the subject.

Mr. Speaker, under leave to extend my remarks, I would like to include at this point an article from the March 1957 issue of the Utility Reporter, an IBEW monthly, entitled "Trinity River Project":

TRINITY RIVER PROJECT

One of the biggest political battles of recent years is shaping up over the power which will be developed in connection with the giant Trinity River project.

Public power advocates seek Federal construction, operation, and distribution of the power facilities generated on the project. Private power offers to construct the hydroelectric plants and to distribute the power, paying the Government for the falling water used in power generation. The latter is referred to as the "partnership plan."

The main difference between this and other public-private battles lies in the joint venture proposal as contained in the partnership plan offered by private industry. The underlying principles here are still at odds in that the right of the private power industry to remain in regulated private business is at stake.

Now we are just as concerned as any citizen regarding proper and beneficial utilization of our natural resources. We want adequate flood control, wildlife protection, irrigation water, reasonable power rates and reasonable taxation. It is up to the Congress to work out these things for the general good without ignoring the fact that a regulated private power industry exists which employs thousands of utility workers engaged in public service.

While our brotherhood supported Federal development of power facilities during the early days of the Federal power programs, we have had a bitter lesson with respect to the results of public power expansion over the country.

Many areas where governmental agencies have gone into the power business are now disgraceful examples when it comes to the working conditions and wages of utility workers. The right to self-organization, grievance procedure, contracts and the right to strike have been stripped from thousands of American workers.

Yes, we are a minority voice in this great controversy, but we are the voice of thousands whose rights have been disregarded and whose families suffer as a result.

Fortunately, many municipal and other governmental power producing and distributing groups are organized under the International Brotherhood of Electrical Workers. Some have good wages and working conditions; yet a great many groups are still at the mercy of amateur "utility executives" who sit on governing boards and who know little about the management and operation of the power business. These operations are covered by laws which effectively strangle the right to organize and to be

represented by a legitimate union for the purpose of collective bargaining.

We represent both private and public agency employees in our local union jurisdiction. Fortunately, we have good management and good conditions and wages in our public groups at present. We do not have legal contracts in any of these public power agencies. We find it nearly impossible to organize many workers in other public agency groups in our jurisdiction. These groups are examples of what we mean when we talk about disgraceful conditions and wages.

We do have contracts, and fairly good ones, in all of our private companies plus limited union security. Here self-organization and free collective bargaining are guaranteed by law as contrasted with laws against us in public agencies.

Our local union has a direct stake in the method by which the Trinity River project is developed. First, we are losing people and jobs to the ever-increasing mechanization and automation of the power industry. We need more, not less, work opportunity for the working people we represent. Should the partnership plan be adopted, it will mean some more jobs for our people in the construction, operation, and maintenance of the powerhouses, transmission and distribution facilities. If the Government takes over these facilities, we lose not only those jobs, but more jobs if the invasion spreads to Federal power marketing in communities and industries now served by Pacific Gas & Electric who employ the members of our union.

Our brothers in some other unions might pause and take note of a few other facts surrounding this issue. We note that many support public power, highway construction, and other public works projects financed by the taxpayers through the United States Treasury.

Why? Mainly because they want jobs for their members.

On the Trinity River project there will be thousands of jobs for construction workers no matter who builds and operates the power facilities.

The record shows that the tremendous postwar expansion program of Pacific Gas & Electric involved hundreds of millions of dollars in construction work performed by many thousands of union building trades workers. Fair union contractors built dams, tunnels, hydro plants, and steam plants for Pacific Gas & Electric, employing members of organized labor.

The record also shows that the Federal Government constructed a big transmission line in connection with the recently completed Folsom project.

Who built it?

The contract for this line was let to a nonunion electrical contractor from out of State who brought his nonunion workers and equipment into California. He made his low bid pay off because by use of substandard wages and conditions.

We believe that the joint venture proposal embodied in the partnership plan can be worked out so that the public good is protected by the Congress, the rights of our members in private industry will be protected, and organized labor will be afforded job opportunities in the construction trades under union contracts.

We stand with our brotherhood in support of properly regulated private power and the right of free organization and collective bargaining in the power industry.

Therefore, the policy of Local Union 1245 of the International Brotherhood of Electrical Workers supports the joint venture principle of the partnership plan in the development of the Trinity River project.

Northwest Citizens Favor Power Cooperation

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD at this point an editorial from the Bellingham Labor News, a publication circulated among labor-union members in the Bellingham, Wash., area. This publication, edited by Charles E. King, has consistently exhibited its interest in the Northwest and development of its industrial future, and has supported its interest in the Northwest and development of its industrial future, and has supported programs designed to bolster our present industrial economy and to encourage new industries.

The editorial which appeared in the May 23 issue, is a discussion of a recent survey which tested public opinion in the Northwest regarding development of hydroelectric power. It is written in an analytical style and points up the results of this survey and the interpretation of this veteran labor editor of these results.

It is of benefit to our area that publications such as the Bellingham Labor News take a responsible, objective look at developments which will influence the future of all of us. Certainly power is a major factor in our future, and I am pleased that more and more groups are beginning to realize that we must work together, that there is no room for bickering and the endless lawsuits and appeals that some groups have used to delay power development.

Text of the editorial is as follows:

NORTHWEST CITIZENS FAVOR POWER COOPERATION

Citizens of the Puget Sound-Cascade region prefer the concept of cooperation between public and private power to either alternative of all public or all private power by a 4-to-1 margin, a scientific survey just completed by Louis Harris for this region discloses.

In the 1957 survey people were asked what they felt were the five major concerns on their minds when they went to the polls last November. The results indicated these were the international situation, the high cost of living, schools and education, labor problems—initiative 198 was cause of deep concern at that time—and the need for strong leadership in troubled times.

Scarcely more than 2 out of 100 persons interviewed said the power issue (public versus private) was of much concern to them last fall, the survey revealed.

The main facets of public opinion on power today in the Puget Sound-Cascade region are these, the survey indicates:

Support for the philosophy of partnership and cooperation in the power field has grown substantially. In 1956 by nearly 3 to 1 count, the people of the region preferred the concept of cooperation between private and public power; now it is 4 to 1. In fact, close to 7 out of 10 people in this region express a rather firm belief that electric utilities work in harmony to meet today's and future power needs and to fully develop the Puget Sound-Cascade region.

Right here in Whatcom County we have a stupendous example of private and public power working almost side by side. On the upper Skagit River the city of Seattle is continuing its power development. Just now it is building the high Gorge Dam. A few miles away on the Baker River the Puget Sound Power & Light Co. is erecting a $17 million dam to harness more power from that turbulent stream.

On this theme the survey states:

"The people indicate satisfaction with the approach Puget Power has taken in working with its neighboring electric utilities in the Puget Sound Utilities Council. Strongly advocating this 'new era of cooperation,' the people have grown to recognize many of the specific advantages the entire region will receive from the council.

"We find, then, from the day in and day out service in the home, to the key role of electric power in the future of the region, and to the new and unique approaches of cooperation among private and public utilities, the record of the Puget company receives an exceptionally high vote of endorsement. It should be taken as a challenge to the company to raise its sights even higher, for when a people are this responsive and when a utility is this much in step with its customers, there is no ceiling on what attainment can be reached."

Barges Help Build Our Area's Future

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Barges Help Build Our Area's Future," which appeared in the May 23, 1957, issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

BARGES HELP BUILD OUR AREA'S FUTURE

A lot of publicity was given the recent christening of the Mark Eastin, West Kentucky Coal Co.'s towboat which will ply the Ohio and the Mississippi and power big barges hauling coal whose final destination is Tampa, Fla. The Mark Eastin, as has been mentioned before, is the largest and most powerful towboat on inland waters.

Naturally the company that ordered it, the Nashville Bridge Co. that built it, and General Motors, which powered it, are proud of the craft. It is not just another boat, but it marks the beginning of a new era in coal marketing in our area. Most of the papers know it and gave it proper attention, Louisville being the exception, as often is the case.

Anyway, the reason that the Mark Eastin marks a new epoch is because it is a notable unit in a wave of expansion which is sweeping along the great inland waterways in the heartland of the United States. This expansion is destined beyond any doubt to affect profoundly the Nation's future and the Nation's population. Being a part of this heartland, we can appreciate properly what is going on, and applaud it.

Along the Ohio, the Mississippi, and the Gulf of Mexico, a new multibillion dollar industrial network is springing up, as most people already are aware. And revitalized water transportation has helped make this economic advance possible.

We were surprised the other day to note that the big barge lines which are hauling an increasing amount of freight chalked up in 1956 the big total of 25 billion ton-miles of freight. The barge lines, together with the unlimited water supply afforded by the Ohio, the Mississippi and the tributaries of those big streams are basic factors in the industrial boom in the areas on and in the vicinity of the rivers.

And quite a boom it is. The whole Nation is beginning to wake up to the fact that from Minneapolis to New Orleans, from Pittsburgh to Brownsville, Tex.; from St. Louis to Carabelle, Fla., and from Uniontown and Grand Rivers to Tampa, industry is alert to the advantage of new plants with river connections.

Rail freight rates have reached a point, for instance, where railroads in many shipments charge more for hauling coal than the mines and miners receive for producing it. With this situation applying to other industries as well as to coal, it is no wonder that a lot of people are looking riverward for haulage.

Purring quietly along, slick new diesel towboats like the *Mark Eastin* are pushing massive barges by the thousand up and down the waterways, carrying coal, phosphate, motorcars, and what not—also carrying the material to build new industrial plants, then the raw materials the plants use, and, finally, the finished products the plants turn out.

To point up the importance of this trend toward barge transportation, a southern governor recently said in a TV interview which was noted everywhere: "I have been all over the United States trying to lure industry and payrolls to my State. The first thing I am asked about is do we have plenty of water and barge transportation."

The diesel towboat like the new *Mark Eastin*—which pushes rather than pulls—is strictly 1957, as pictures in recent editions of the Messenger showed. The captain consults radar to make sure his channel is clear of obstacles. He calls his dispatcher on the radiotelephone to pick up shipping information, weather, and landing instructions. His crew lives well in spacious air-conditioned quarters.

To summarize, today the importance of barge lines in national transportation is proven. It is proven in our own territory, and our mines and miners will benefit therefrom.

TVA Pays in Taxes

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I am enclosing a very timely editorial which appeared in the Memphis Commercial Appeal on the matter of taxes paid by the Tennessee Valley Authority.

Many of my colleagues, and many in the country, do not have proper information in this respect, and I think this editorial will be very revealing.

The editorial follows:

TVA PAYS IN TAXES

Cleverly worded attacks on the Tennessee Valley Authority by power companies have left people at a distance with the idea that TVA is tax free. The idea is to reduce the sting of comparisons between the price of electricity in the TVA region and in other areas.

Within the TVA area there are annual stories when TVA makes its annual payments to States and counties. It is understood that TVA puts more into local and State government treasuries than private power companies ever did. The TVA advantage in taxes thus comes down to the fact that the Federal Government does not tax Federal agencies.

This is much less than being tax free; and when it is understood outside the Tennessee Valley, the attack on TVA is blunted. We can settle for that gain in understanding without going on to the matter of much of the Federal taxation being on profits, of which the TVA pays none in cash, or taking up the matter of how much more income tax is collected in this region than before TVA.

Far from being tax free, TVA is the largest taxpayer on the books of the Tennessee State government. It put about $400,000 more into the State treasury than the next biggest taxpayer last year, and the gap is much larger this year.

TVA is paying more than the law requires.

TVA is paying more each year—$596,000 more this year than last and $865,000 more than 2 years ago.

The payments by TVA itself this year come to $4,744,000. That is the wholesale end of the business.

The municipal power systems and co-ops are paying another $7,500,000. They are the retailers.

TVA pays the Government and the region in ways beyond taxes. But TVA pays in taxes, too.

Hon. Harold D. Cooley

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. POAGE. Mr. Speaker, last week one of our distinguished colleagues, chairman of the Committee on Agriculture, and my good friend, Hon. HAROLD COOLEY, was the recipient of a degree from the State College of Agriculture and Engineering of the University of North Carolina. Along with the degree went a well-deserved citation for his outstanding work in behalf of farmers and farming.

The citation read:

CITATION, NORTH CAROLINA STATE COLLEGE OF AGRICULTURE AND ENGINEERING OF THE UNIVERSITY OF NORTH CAROLINA, HAROLD DUNBAR COOLEY

HAROLD DUNBAR COOLEY, who was born in Nashville, N. C., attended law schools at the University of North Carolina and Yale University. In February 1918 he was licensed to practice law. During World War I he served in the Naval Aviation Flying Corps.

Now a Member of the United States Congress, he has served the Nation since 1934 as Representative from the Fourth Congressional District of North Carolina.

In the 80th Congress he was a member of the Select Committee on Economic Aid to European Countries. This committee made recommendations which became the basis of the Marshall plan.

He has served as chairman of the House Committee on Agriculture in the 81st, 82d, and 84th Congresses, and continues so to serve in the present Congress.

Mr. COOLEY has long maintained a sympathetic and active interest in teaching and research programs of North Carolina State College, as well as of State universities in general. He sponsored legislation permitting schools of textiles to purchase from abroad, without payment of existing heavy import duty, machinery and apparatus for purposes of education and research.

North Carolina State College gratefully recognizes him as a statesman and leader who has contributed to the educational, agricultural, industrial, and economic well-being of our State and Nation.

On Taking the Fifth

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of June 1, 1957:

ON TAKING THE FIFTH

When our Constitution was in process of construction Thomas Jefferson pleaded ardently for a Bill of Rights and James Madison, who did not consider the omission of such a Bill of Rights "a material defect," used his influence for purely political reasons in the First Congress to secure the adoption of what became the first 10 amendments. Presumably all parties concerned thought that settled the matter.

But today the Supreme Court still finds it necessary, under some prodding from the lower courts, from congressional committees, and from public opinion, to reassess what the fifth amendment means in terms of today's life and today's law. This week, in a ruling involving this and other points and two other defendants, it held that Max Halperin was entitled to a new trial on three counts of an indictment against him because a judge in the Federal Court of Appeals had instructed the jury that Mr. Halperin's use of the fifth amendment when testifying before a grand jury could be considered in arguing the question of his truthfulness and trustworthiness as a witness.

This is not the first time that the High Court has felt impelled to rule in this manner. This ruling may not even be the most important. It is, however, fairly simple, since Mr. Halperin was actually a defendant in a criminal case and refused to answer the grand jury's questions in his own protection and not for conscience' sake. Mr. Halperin, indicted, tried and convicted in connection with tax frauds, was in a different position from those present or former members of the Communist Party who have "taken the fifth" to protect former associates.

But the reasoning in this phase of the case against Mr. Halperin and his two associates is compelling, no matter what the nature of the case. The defendant's refusal to answer questions put to him before the grand jury was in effect used in his trial to "reflect on his credibility" and thus to impair the value of his testimony at his trial on his own behalf. It seems clear that he was thus deprived of the protection which the fifth amendment was intended to give to innocent men—and we must never forget that every person on trial must be considered innocent until he is proved guilty.

To the unanimous opinion of the Supreme Court Chief Justice Warren and Justices

Black, Douglas, and Brennan added a brief comment of their own. Justice Black, speaking for these four, said:

"I can think of no special circumstances that would justify use of a constitutional privilege to discredit or convict a person who asserts it. The value of these constitutional privileges is largely destroyed if persons can be penalized for relying on them."

The question here is not whether Mr. Halperin and his associates are or are not guilty of the offense charged against them. Nor would the question be any different if they were charged, as they are not, with conspiracy against the United States as members of the Communist Party or of any other potentially destructive group. The constitutional guaranties are properly available to the guilty as well as to the innocent. The most harmless and innocent of us, the least conspiratorial, may feel the more secure in our lives, our liberty and our opinions because of such decisions as this handed down by the High Court.

The lower Federal courts and the State courts must act in harmony with the principles laid down by the Supreme Court. The majesty of the law will rule. We cannot bring the same compulsion to bear on the acts and opinions of private persons and organizations. We must, however, be logical and fair in our attitude toward persons who invoke the principles of the Bill of Rights.

In the first place, we should insist that they have the protection of those rights to the full extent of the law. In the second place, we must make a distinction between legality and competence. A banker who invokes the fifth amendment when charged with embezzlement will scarcely retain the confidence of his depositors. Labor organizations need not continue to support a labor leader who invokes the fifth amendment or any other amendment to avoid accounting for union funds.

But when all the exceptions are noted and when all allowances are made for the pressure of public opinion in cases that stir hot emotions, still it must be said that no court conviction and no punishment can be just or good for the Nation if it is achieved to the detriment of any one of our basic liberties. We think that is what the Supreme Court has been trying to say and we hope it will keep on trying to say it.

Insatiable Public Power

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. DAGUE. Mr. Speaker, the present controversy raging between the proponents of public power and those who, like the people of Pennsylvania, must pay the bill for subsidized current, is pointed up by the article by George Peck which appeared in the Coatesville (Pa.) Record on May 29, last, and which is included in these remarks.

No reasonable person with whom I have talked wants public power projects turned back to private ownership. All we ask is that the consumers who live in these favored areas shall pay the full cost of production and expansion, including full State and local taxes, which should be written into their monthly tax bills just as it is in Pennsylvania where our electricity is produced by private firms.

Mr. Peck's article follows:

TVA OCTOPUS REACHES FOR MORE SUCKERS

(By George Peck)

The TVA octopus, not content with being the biggest single electric utility monopoly in the world, is stretching out its tentacles to grab more power for itself. The suckers of these tentacles are reaching to suck more from the American taxpayer, who in this TVA picture (to make a play on words) is himself a victimized sucker.

The Tennessee Valley Authority now wants to do its own financing through sale of revenue bonds to the public without congressional control of how or where it shall expend the funds thus raised.

A brief review of the original intent of Congress and how TVA has consistently circumvented this intention is necessary at this point to make crystal clear how this new reach for power could vest total authority in the TVA Board—the ultimate goal of the Socialist supporters of this vast Government operation.

TVA was created in 1933 as a flood control and navigation project, with the sale of surplus power incidental to these purposes. In 1935 the TVA Act was amended to give the Authority sweeping new powers in performing service to electric preference customers by authorizing it to acquire existing electric facilities and establishing new rules and regulations in the negotiation of power sale contracts.

The Authority used these new powers to force all electric companies in the area out of business and, as a result, set about through rigid contracts to make all rural and domestic users in the valley captive customers of TVA. Created originally as a purely hydroelectric operation, TVA next set about to convince Congress it needed steam plants to adequately service all of the customers. Today the operation is 61 percent steam; 39 percent hydro.

Moreover the TVA Act instructs the Authority to sell surplus power to local and public agencies with preference to the former, and to give primary attention to the needs of domestic and rural customers. But the 1956 Annual Report of TVA shows that less than 15 percent of its total sales went to domestic and rural customers.

In other words, it has created a crisis by selling the bulk of its power to other than the preference customers designated by Congress.

Even though American taxpayers already have invested approximately $1.5 billion in TVA power facilities, the Authority thinks this is not nearly enough. It is demanding a free hand to do its own financing with revenue bonds, instead of as presently handled through tax-free congressional appropriations or from power revenues.

A noted authority on electric power, Walter H. Sammis, has pointed out to Congress that well over one-half of TVA's sales were taken by the Atomic Energy Commission and other Federal agencies. He cited the Comptroller General as stating that "there is no assurance that the demands of AEC and other Federal agencies will not sharply decrease, leaving the TVA system with surplus capacity of millions of kilowatts."

Mr. Sammis has been active in electric industry affairs for more than 30 years. He is president of both the Ohio Edison Co., and the Pennsylvania Power Co.; is a past president of the Edison Electric Institute and has served on the board of the National Association of Electric Companies. His words, therefore, cannot be taken lightly, when he says that "the existence of a considerable surplus capacity could be a temptation to further expand the TVA area in order to find additional markets."

"To permit TVA to issue revenue bonds," he told Congress, "would inevitably result in the unleashing of tremendous additional amounts of subsidized electric power upon an industry already unfairly affected by TVA's operations. TVA, as an unregulated monopoly, could ultimately destroy investor-owned companies now serving the areas in which TVA might expand."

But of prime interest to the everyday, taxpaying citizen, is Mr. Sammis' statement that such expansion of TVA, which he called a form of socialism, could result in a loss over the years of billions of dollars in tax revenues to local, State, and Federal agencies.

Taxpayers everywhere already have paid $1.5 billion in tax dollars to give a comparative handful of people in the TVA area subsidized electric power. Moreover, these taxpayers have been losing millions of dollars every year through TVA's tax-exempt status. They would stand to lose additional billions if TVA were enabled to expand outside its present area through moneys raised by sale of revenue bonds.

Congress can and should stop this new grab for power by cutting off the tentacles of the TVA octopus.

Economic Highlights

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks in the RECORD, I should like to include a clipping from the Greenville Advocate, published at Greenville, Ill., one of the most progressive newspapers in my congressional district.

This paper publishes a poll taken by the American press of the opinions of the country editors of the Nation on major public questions, which I thought would be of interest to the Members of Congress:

ECONOMIC HIGHLIGHTS

How would the country editors of this Nation vote on major public questions if they were in their Congressman's shoes? The American Press, which is an independent magazine for hometown newspapers, decided to find out by means of a survey. In its March issue it publishes the results, tabulated from the replies of 794 country editors, representing every section of the country. Here, in brief form, are some of the questions and findings ("No Answer" replies are not included in this summary, hence the percentages do not total 100).

1. Should the President have the authority to use United States forces in the Middle East if he deems it necessary to stop Communist aggression? The "Yes" faction has the overwhelming majority—71 percent to 27 percent.

2. Should foreign aid (which has been running at about a $4 billion annual rate) be increased, decreased, or maintained at the same amount? Only 6 percent of the editors say "More," while 63 percent say "Less," and 26 percent favor the same amount.

3. Should John Foster Dulles continue as Secretary of State? Mr. Dulles is given a vote of confidence—57 percent to 38 percent.

4. Should farm price supports be returned to the old 90 percent of parity level? Only 22 percent favor this, as against 74 percent opposed.

5. Should corporation taxes be moderately reduced, by returning to the rates of some yeras ago? This is a very close one, with 32 percent favoring reduction, 35 percent favoring continuance of, and 29 percent endorsing reductions on the first $25,000 of profit?

6. Should corporations be exempt from taxation on that portion of earnings they distribute as dividends and upon which individuals pay taxes—that is, should this form of double taxation be eliminated? The vote is 69 percent "Yes" to 28 percent "No."

7. Should any budget surplus be applied to reducing taxes or to reducing the national debt? A big majority, 70 percent, prefers to reduce the debt, as against 25 percent favoring tax cuts.

8. Should the bill authorizing a minimum of $600 million a year of Federal money for school construction be approved? Here is another close one—45 percent of the editors say "Yes," and 53 percent "No."

9. Should bills requiring that cooperatives and savings and loan associations be subject to the same taxation as other businesses be approved? The "Ayes" have it, overwhelmingly—86 percent to 12 percent.

10. Should first-class postage rates be raised to 5 cents, along with the provision that airmail would be used when possible? This proposal received a "No" majority of 60 percent, as against 39 percent saying "Yes."

11. Should the Vice President be relieved of his job presiding over the Senate, and given special executive duties? The editors strongly favor this much-discussed possibility by a margin of 63 percent to 33 percent.

The American Press prints pages of comment from country editors on these and other issues. One thing is clear—whatever side or solution they favor, most of them have definite ideas and they don't hesitate to express them vigorously.

Industrial Planning in Birmingham District

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. HUDDLESTON. Mr. Speaker, my district abounds with choice industrial sites. Many areas, of course, are already widely known for their bustling industries. Plans are now being formulated for the development of at least six select sites in Jefferson County into large, well-planned "industrial parks."

This type of orderly development is the latest concept in industrial planning. It is something of the counterpart of the successful neighborhood shopping center or the residential subdivision. In an "industrial park," services to plants may be consolidated in order to provide improved facilities for all. Such a development can assure the potential industry a satisfactory location with adequate transportation facilities and utility services already available.

One of the largest industrial developments now under way in Jefferson County—indeed, in the entire South—is in Pinson Valley just northeast of Birmingham. This area, stretching from Tarrant to Pinson, has a tremendous industrial potential. It is near a large industrial water supply, on a four-lane superhighway, with level tracts large enough to accommodate any type of industry. It is significant that a railroad, the L. & N., is taking a leading role in this important development, for this assures more than adequate rail transportation.

It is forward, orderly planning like this which pays off in economic prosperity. We are fortunate indeed that Jefferson County has such ideal industrial sites. It is also encouraging that our county has the industrial know-how and foresight with which properly to plan the full and maximum development of these areas.

Under leave heretofore granted, I am happy to insert a news article entitled "Pinson Valley To Be Developed Into Bustling Industrial Park," which appeared in the Birmingham News of May 26, 1957, and an editorial headed "Pinson Valley Industrial Sites Are Developing," which appeared in the same fine newspaper on May 28, 1957:

[From the Birmingham (Ala.) News of May 26, 1957]

PINSON VALLEY TO BE DEVELOPED INTO BUSTLING INDUSTRIAL PARK

(By Irving Beiman)

Development of Pinson Valley into a new industrial district attractive to industrial prospects received substantial stimulus today from the Louisville & Nashville Railroad.

Through Birmingham's Committee of 100, the railroad announced it has purchased 600 acres from L. P. Munger and others in the heart of Pinson Valley. The L. & N. last year bought more than 200 acres just south of Mount Pinson; the current purchase makes the railroad the largest landowner in the valley.

John E. Tilford, L. & N. president, said the entire area between Tarrant City and Mount Pinson is to be developed by the L. & N. and other owners into one of the largest industrial parks in the entire South.

RESIDENTIAL COUNTERPART

Paul S. Sieverling, director of the Committee of 100, said today's modern planned industrial district is a counterpart of a modern residential subdivision. The success of this type of development has been phenomenal wherever established.

Owners of the Munger land bought by the L. & N. had refused many times in the past to sell any part of it, because they were waiting for a purchaser with the know-how and financial ability to develop the area for expansion of Birmingham's industrial establishment.

A. C. Montgomery, president of Montgomery Real Estate and Insurance Co., handled sale of the land to the L. & N.

Mr. Tilford said experience has shown that unless industries "can be assured of satisfactory locations, with adequate transportation facilities and utility services, along with a friendly and responsible civic attitude, they will establish themselves elsewhere where these conditions prevail."

A WAY TO GROW

"Acquisition of the Pinson Valley property opens up a great new area for industrial expansion and fills a vital need," said Mr. Tilford.

"We are now beginning to feel in Birmingham for 'a way to grow.'

"In addition to acquiring this industrial property, the L. & N. is spending $10 million in expanding and modernizing its nearby Boyles Yards, which will enable us to provide unexcelled rail transportation to industries locating in the new area.

"This substantial investment by the L. & N. is in line with our traditional policy of assisting in the development of the Birmingham district and demonstrates our faith in the continued growth of the area.

"The specific manner in which the Pinson Valley will be developed will be governed somewhat by the character, size and specific needs of the industries which all of us working together may influence to establish themselves in the area.

"Our industrial development department and other company representatives will continue to cooperate closely with the Committee of 100, civic officials and other agencies in these development efforts.

"I wish to express my appreciation for the real interest and assistance of all the civic and business leaders who are working with us to make this a development of which everyone in the central Alabama area may be proud."

RIPE FOR DEVELOPMENT

Mr. Sieverling said the Committee of 100 for the past 2 years has been working steadily to establish a number of industrial districts in Birmingham. He said the committee felt the Pinson Valley was one of the finest tracts of land in the entire South, and was ripe for orderly, planned development.

The south end of Pinson Valley already is under development just north of Tarrant City, where the Birmingham Realty Co. has a 75-acre area which is being subdivided into tracts for small manufacturing, warehousing and truck terminal facilities. This area, as well as the entire valley, is served by the L. & N.

Sidney Smyer, president of Birmingham Realty Co., said improvement of this property, including all utilities, streets, etc., will be made and already widespread interest is developing among firms seeking locations which provide the facilities they require, including easy access and close proximity to Birmingham.

"We have already signed a contract with a large distributing firm who will occupy 8 acres," Mr. Smyer said.

A number of new plants already have located in Pinson Valley. They include Ketona Chemical Co., Hutchinson Metal Decorating Co., Dixie Electrical Manufacturing Co., Birmingham Lead & Smelting Co., Richards Tank Corp.

MANY DUE CREDIT

Mr. Sieverling said credit for the start of the Pinson Valley industrial district is due many, including the Jefferson County Commission, which has authorized an immediate study for a sanitary sewer system and access roads to serve the area; W. Cooper Green of Alabama Power Co.'s industrial development department, on power problems; Clarence Cook of Alabama Gas Corp., on gas problems; the Jefferson County Planning and Zoning Commission; Birmingham Mayor James W. Morgan; S. D. Moxley, chairman of the Industrial Water Board of the City of Birmingham, on studies and planning for doubling the supply of industrial water available for industrial users; a number of Birmingham realtors: L. & N. Railroad officials, and individual property owners.

OTHERS PROPOSED

The Pinson Valley industrial district is the first for Birmingham, Mr. Sieverling said, but since interest has been so widespread, other districts have been proposed and will be developed.

Among these are:

Robert Field, a 132-acre tract in the western section of Birmingham, is to be developed by the Frisco Railroad into an industrial park. All utilities will be available.

An area of 2,500 acres south of Bessemer is available for development and already the new Natco plant for manufacturing clay conduit is being constructed there.

The vast valley between Birmingham and Trussville and beyond toward Chattanooga contains some outstanding industrial sites. No actual development has been made here, however, but it is a definite possibility for a planned district.

Both the Bessemer and Trussville areas are served by the Southern Railway.

An 80-acre tract at Irondale has been made into an industrial park and General Motors has purchased a site here for a district warehouse to serve several Southern States. Birmingham Manufacturing Co. will erect a plant on a 10-acre tract in this park for the manufacture of trailers. Construction on both buildings is to start in the near future. This park is served by the Seaboard Railroad.

The increase in facilities at Birmingham Airport has opened up approximately 200 acres of manufacturing sites which the city of Birmingham will lease to manufacturers serving the aircraft industry. A large tract here is served by the L. & N. Railroad.

WHAT INDUSTRY WANTS

The importance of these developments for industry around Birmingham cannot be overemphasized, Mr. Sieverling said. "If Birmingham is to take advantage of the vast industrial growth of the South it must furnish the facilities industry wants and can get in other cities," he said.

"In the Pinson Valley, industry can find what it needs—tracts large enough, and properly planned and zoned, to accommodate any size industry—a four-lane highway for easy access—level land with a minimum of grading for plant sites, all utilities and railroad facilities, and close proximity to a major airport and to the Birmingham metropolitan area with all its diversified industries and transportation facilities."

[From the Birmingham (Ala.) News of May 28, 1957]

PINSON VALLEY INDUSTRIAL SITES ARE DEVELOPING

Development of Pinson Valley northeast of Birmingham into a flourishing industrial park should be greatly stimulated with purchase of 600 acres in the area by the Louisville & Nashville Railroad. The railroad, with the aid of the Committee of 100, plans to offer the land as sites for new plants, distribution centers, and other business establishments.

The valley is one of the most promising areas for industrial development in the Birmingham district. It has all the necessary utilities and railroad connections, a four-lane highway for easy access, tracts large enough for any size industry, level ground requiring a minimum of grading, and close proximity to the city.

With vigorous promotion of its advantages, the area can become a major industrial park contributing to the economic strength of the entire community.

The Firestone Tire & Rubber Co.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. AYRES. Mr. Speaker, the cover story in the May 15, 1957, issue of Investor's Reader is on the Firestone Tire & Rubber Co., its management, history, and philosophy. The story also records the election to the presidency of the company of Raymond C. Firestone, the fourth son of the founder.

The worldwide headquarters of the company is in my district, the 14th of Ohio, and I am proud that the thousands of men and women who are employed in Firestone's Akron plants and offices are my constitutents.

The magazine carrying this story is published "for a better understanding of business news" by Merril Lynch, Pierce, Fenner & Beane.

While the story on Firestone gives a brief historical account of one American business, in my opinion it does much more than that. It epitomizes all that is good in our American system of free enterprise.

On August 3, 1900, the Firestone Co. was only a newly issued charter, an office, a small bank account, and one man, self-pledged to the ideal of quality and service, who staked his capital and his efforts on a vision of the future.

Today, Firestone is part of the American scene. It is one of America's greatest industrial organizations. It gives employment to more than 45,000 persons in the United States and to 40,000 more in other parts of the world. Firestone has served with distinction in three wars. And the company and its products are known and respected throughout the world.

Such sound and desirable growth takes place only where there is freedom and men like Harvey S. Firestone.

Fortunately for our country we have freedom to venture and to grow. We have men with ideals and vision. These two factors, freedom and men, helped to make our country the great Nation it is. Such freedom, such men, will always help to keep it great.

And since this truth is obviously implicit in the Investor's Reader story on Firestone, I feel that it is appropriate at this time to make the story a part of the record of this body.

The headline reads as follows: "The New Voice of Firestone—Founder's Son Combines Past and Present To Mold Tiremaker's Future."

And the story itself, in part, goes on:

After the middle of next month radio and TV's Voice of Firestone will be stilled for a while as the venerable concert program takes its first summer vacation in 28 years on the air. In the fall only the TV version of the Voice will return. But this revision of its most famous advertising showcase is not expected to interrupt the song of continued profits and growth by the Firestone Tire & Rubber Co.

A prominent voice in this triumphant corporate chorus is Raymond Christy Firestone who stepped into the company presidency in January. At the same time 66-year-old Lee R. Jackson became vice chairman of the board after serving as president for 9 years. Senior brother Harvey Samuel Firestone, Jr. (59), retains top post as chairman, a job to which he was elected in 1948 after 7 years in the presidency.

Through such a skillful blending of family succession and other personnel the Akron, Ohio, rubber company has grown to be an industrial giant without losing its family personality. The Firestone management team is now headed by Chairman Harvey, Jr., and President Raymond, along with brothers Leonard (49), who heads the California subsidiary, and Roger (44), president of Firestone's plastics company, plus nonfamily Directors Jackson, James Trainer (executive vice president), John Shea (vice president), Harvey Hollinger (financial vice president), and Joseph Thomas (secretary and general counsel). Together they apply the policies and philosophy of founder Harvey S. Firestone, Sr., to today's problems.

The new Firestone president, a handsome, youthful-looking man with a quiet friendly manner and sparkling blue eyes, is the fourth of Founder Firestone's five sons. In his suite at Manhattan's Ambassador Hotel last week he smilingly summed up his career with the company: "I'm 48 years old, so I guess you could say I've been with Firestone for 48 years."

EXECUTIVE TRAINING

Ray Firestone got his first taste of executive duties as manager of the football team at the Hill School. At Princeton he majored in psychology and was elected polo captain as well as the member of the class of 1933 most likely to succeed. After graduation he began by pumping gas at a Firestone service station in Los Angeles. He moved on to successive jobs as salesman, store manager, district manager, division head.

In 1937 he became president of Memphis manufacturing and sales subsidiary Firestone of Tennessee, remained there until 1948 with time out for a stint as a War II Air Transport Command pilot. Ray Firestone next became vice president in charge of Firestone research and development, 5 years later was named executive vice president. By the time he was elected to the presidency this year he had gained first hand experience of almost every phase of company operations.

Although his Firestone responsibilities currently offer no time for polo playing, sportsman Firestone does enjoy riding, hunting, shooting. He also does some farming (but "I'm not a good farmer; for good farming is a fulitime job") and takes an active interest in Homestead Farms, an experimental farm maintained by the company at his father's birthplace in Columbiana, Ohio. He is also a director of the national 4-H committee and in 1951 was named honorary American farmer by the Future Farmers of America. But Ray Firestone has no secret yen to substitute farm for Firestone: "I always wanted to be part of the company. I never wanted or even thought of doing anything else. Dad always made the company very interesting to us."

EARLY TREADS

Harvey, Sr., and his sons made Firestone a company of international interest. Starting in 1900 with $20,000 cash and a tire mounting patent, Harvey Firestone set up a corporation to manufacture solid rubber tires for horse-drawn carriages. To compete against large established firms in the field he set out to manufacture tires which could win acclaim on their merit and coined the phrase which is still the company's motto: "Extra quality at no extra cost."

Soon however fledgling Firestone ran into difficulty. A new "clincher" type pneumatic tire was developed and patents were controlled by a monopolistic licensing association. Harvey Firestone countered by securing patents for a "straightside" pneumatic tire. All he then needed was a market. At this stage another young pioneer named Henry Ford was laying plans to build 2,000 cars to sell at $500 apiece. In 1906 he gave Firestone the contract for the tires. Firestone delivered and the company that year reported sales of over $1 million for the first time.

Firestone now supplies Ford, General Motors, Studebaker-Packard, and most of the major truck, bus, and farm machinery makers with a substantial but undisclosed percentage of their tire needs. (Chrysler has an exclusive contract with Goodyear.)

Tires remain the major part of Firestone business. The company also does a hefty volume in replacement tires and when the original equipment market is off in years of reduced auto output, ws usually find a good increase in our replacement business. This happened last year and Firestone still managed to sell a near-record number of tires.

In its 57-year career Firestone has grown into the world's largest rubber producer tonnagewise although in sales it ranks second to industry leader Goodyear which last year racked up $1.4 billion in sales or $300 million more than Firestone. The company operates 38 plants in the United States, 34 more in 12 foreign countries; it owns rubber plantations in Liberia, is setting up others in key spots throughout the free world.

The plantation venture began in 1926 when the company created its own source of supply by establishing a natural rubber plantation in Liberia. The investment has proved a boon to all concerned. Ray Firestone cites: "We've been in Liberia for many years and we're glad we pursued it. It's been a fine thing for the company and during World War II it was vital for our country. There were some things that could not be made without natural rubber. And our Liberian plantation was one of the two major sources available to the United States."

In its turn, Firestone has been singled out for its contribution to the African Republic. The National Planning Association last year wrote up the story of the company's Liberian operations as a model venture in American business aoroad. Encouraged by this success in Liberia, the company recently set up a rubber plantation in Brazil, is adding still other plantations in the Philippines and Guatemala in the near future.

Synthetic stretch: At the same time, Firestone has made big tracks in synthetic rubber. The company operated the Government-owned plant which turned out the country's first synthetic latex in 1942. It now has 2 synthetic plants able to produce 230,000 tons of synthetic rubber a year. They turn out over 25 different types of the material in solid and liquid forms.

Tireman Firestone points out: "We use synthetic rubber over natural rubber on about a 60-to-40 ratio for automobile tires and other produtcs. Up until now, however, truck tires had to be made exclusively of natural rubber. We have just developed a new synthetic which matches, may even surpass natural rubber for truck use."

The new synthetic which is called Coral rubber possesses the properties of natural rubber. Although still in the pilot plant stage, tough Army Ordnance tests on military truck tires have proved the substance behaves as well as natural rubber even when subjected to high speeds, heavy loads and intense temperatures. Ray Firestone says proudly: "It can do away with stockpiling supplies of natural rubber, make us completely independent of outside sources in case of war."

Even apart from synthetic content, tires have changed greatly in Firestone's 57 years. Like its competitors, Firestone has introduced many improvements: nonskid treads, insulation against internal heat, tubeless models, etc. President Firestone explains: "We have always looked for ways and means to make a better product. The tire industry has been highly competitive—that's why it has developed so. The cost of tires and tubes per mile of driving is a small fraction of what it was years ago—less than $1 for each 1,000 miles of service against almost $4 in 1915."

On Memorial Day 1911 Firestone tires were used on the first full 500-mile Indianapolis Speedway auto race. From 1920 on, Firestone tires have been on every winning car (as well as most of the other cars) in this classic and next month Firestone tires will be used on the 10 fastest American cars sent abroad to race the 10 fastest European cars at a meet in Monza, Italy. Ray Firestone proudly offers: "We test on the speedways to give more safety on the highway."

In addition to these headline events, Firestone carries on an extensive research development, and testing program. Research-minded Ray figures: "Each year we spend increasing amounts of money for research and development. We think we're in a fine business and we want to take care of its future."

President Firestone is quite optimistic about the future: "As I see it, tires are the major part of our growth business." Echoing his father's philosophy, "the whole structure of business is making and doing useful things for others," he links this growth to people. "Population is steadily growing, so is the standard of living. There will be more people throughout the world—and more people wanting cars, more people needing tires."

Address by the Honorable Dewey Short, Assistant Secretary of the Army, at Dedication Ceremonies, Paul W. Shafer Memorial Bridge, Battle Creek, Mich., May 27, 1957

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an address delivered by the Honorable Dewey Short, Assistant Secretary of the Army for Civil-Military Affairs at the dedication ceremonies opening to use the Paul W. Shafer Memorial Bridge at Battle Creek, Mich.

As most of you will remember, the late Paul Shafer and our distinguished former colleague, Dewey Short, were comrades in the dearest and finest tradition. Devoted one to the other, they spent many happy hours in both pleasure and in constructive undertakings.

I should like to have heard this address as it was given by my good friend, Dewey Short. Limited as he was by the proprieties and regulations of the Department of the Army, much of the tribute paid to his old friend was not reduced to manuscript. But all of us, who remember the eloquence, the splendid voice and the superb use of words which have so long associated any effort of Dewey Short with speech, must know that he rang a golden bell.

That part of the speech which was prepared is included and follows:

Ladies and gentlemen, I am doubly honored and pleased to be with you, today. On this occasion "wild horses could not have kept me away." Project Battle Creek is an excellent, but unfortunately too rare, example of joint Army—Federal Government—local partnership. Many advantages spring from such a relationship. As the representative of the Army, I am proud to be here to pay tribute to your vision and hard work.

The Army has a particularly close interest in Battle Creek as three of my close colleagues are loyal Michigan sons. They are Secretary of the Army, Wilber Brucker, formerly governor of your State; Army General Counsel, Frank Millard; and the Assistant Secretary for Financial Management, George Roderick, who you may recall participated in the ground breaking ceremony here, last summer.

Secondly, this Paul W. Shafer Memorial Bridge represents a particularly fitting tribute to one of our closest friends. Paul Shafer and I spent many years as Congressmen and comrades in Washington. Indeed, we both served on the House Armed Services Committee, so that I have an intimate professional, as well as personal knoweldge of the kind of man Paul Shafer was.

His continuing concern for the well-being of his constituents is physically manifest in this bridge and in the related civic project promising relief from recurring floods, average annual flood damages are estimated at $490,000—relief from the blight of city slums—relief from the congrestion of downtown railroads—and relief from the frustration or chocked highways.

But these physical manifestations are like drops of water in the river of Paul Shafer's lasting influence over his fellow men. His deeds, his example, his spirit will remain forever.

Paul, along with former Mayor Bill Bailey, who maintains his extremely active interest in these matters as chairman of the railroad and planning board here in Battle Creek and as secretary for the National Rivers and Harbors Congress, supplied the initiative needed to get the original idea translated into action. Mayor Frank C. Wagner, the city commission, and the Kellogg Foundation through its president, Dr. Emory W. Morris have made major contributions. And, of course, your Congressman AUGUST JOHANSEN, formerly Paul Shafer's assistant, ably and tirelessly represents you in Washington and continues the work toward project completion.

The job of coordinating the several, sometimes conflicting, interests in this project of municipal improvement must have been most difficult. And yet such coordination is essential for the sound planning and construction of comprehensive programs such as this. The Army long ago learned to appreciate the value of coordination of all interests involved in a major undertaking. It pays off.

This extraordinary project has an even greater significance than many people may perhaps realize. The administration constantly points to project Battle Creek as an example of the best in Federal and local partnership in major public works—the method of joint enterprise.

We believe that joint enterprise is the best answer to the great historical problem of how to get big jobs done. And you in Battle Creek have shown the Nation how to do it.

President Eisenhower devoted a considerable portion of his state of the Union message to the critical problem of conserving and utilizing our natural resources. Perhaps you will be interested in his exact words:

"The whole matter of making the best use of each drop of water from the moment it touches our soil until it reaches the oceans, for such purposes as irrigation, flood control, power production, and domestic and industrial uses clearly demands the closest kind of cooperation and partnership between municipalities, States, and the Federal Government. Through partnership of Federal, State, and local authorities in these vast projects we can obtain the economy and efficiency of development and operation that springs from a lively sense of local responsibility.

"Until such partnership is established on a proper and logical basis of sharing authority, responsibility, and costs, our country will never have both the fully productive use of water that it so obviously needs and protection against disastrous floods."

In concluding the President uttered this rather impressive and thought-provoking warning: "If we fail in this, all the many tasks that need to be done in America could be accomplished only at an excessive cost, by

the growth of a stifling bureaucracy and eventually with a dangerous degree of centralized control over national life."

So you can see what underlies the administration's joint enterprise concept, exemplified so well by this project. It is not, as some interests have misconstrued, Government support of various private power interests.

As Abraham Lincoln once said, "The role of government is to do for the people what they cannot do at all for themselves, or so well do in their individual capacities." And he said, "In all those things where people can do these things for themselves, Government ought not to interfere."

That is why we are so proud of this splendid project here in Battle Creek. It is an object lesson in civil enterprise. You did not just turn everything over to the Government, wash your hands of the responsibility and wait—with the emphasis on wait. You went to bat for your own ideas; you put up your own money; you insisted quite properly in taking the lead in planning, and in general you saw to it that things were done correctly—as a joint enterprise.

Whenever the Federal Government, either by design or default, assumes complete control of a project, several noxious corollaries usually crop up. First, there is a transfer of initiative, self-reliance, and responsibility from local bodies (which are most effective and often more knowledgeable, because they are on the scene) to a Federal bureaucracy in Washington. I know that by personal experience.

Second, the whole process of public-works development tends to become the subject of political manipulation at the national level and intensifies the struggle of section against section for both Executive and congressional favor.

Third, it inevitably dooms many areas to indefinite delay and disappointment. No matter how large the Federal tax revenues and appropriations are, there can never be enough to do all the jobs that need to be done. Some areas are bound to wait or go without development.

As you may not realize, over three-fourths of our total Federal budget is committed in advance to present defense needs and the cost of past wars. The remaining 25 percent must cover such essentials as your postal service, the Weather Bureau, civil defense (with headquarters right here in Battle Creek), our national parks, the school-lunch program for your children, public-health programs for all of us, a Federal judicial system to insure justice and to maintain the FBI to keep our society a safe and democratic place to live in. Believe me, there are many proper demands for the available Federal dollars. Is it any wonder that useful projects must be delayed?

Finally, when we relinquish our local responsibilities and turn them over to the Central Government, we destroy the very concepts on which this Nation was founded and which led to its greatness. Too often in recent years people lose sight of the importance of local governments. They are the basis—the foundation—of our Federal system, and we must not destroy the structure by weakening the foundation.

Joint enterprise, then, as so dynamically typified here in Battle Creek, is the culmination of our democratic philosophy and experience in this field. Through it, we shall progress to our goal of bringing a better life to all our people. Your administration, your Congress, and your Army congratulate you on your accomplishments and the manner in which they are being achieved.

In closing, may I congratulate you on preserving the memory of a fine Congressman and an excellent friend, Paul Shafer, in such a fitting manner. He would be proud. And, I am sure, all of us are very happy.

Civil Aeronautics Board Audit

EXTENSION OF REMARKS
OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. LAIRD. Mr. Speaker, on May 22, 1957, I discussed on the floor of the House two orders of the Civil Aeronautics Board dealing with audits of the books of Pan American World Airways, Inc. I was not, at that time, aware of the position and steps taken by Pan American and, in view of additional information that has come to my attention, I believe that in fairness to Pan American such matters deserve further comment. In my previous remarks I suggested that in view of the nature of the charges made in the orders of the Civil Aeronautics Board, Pan American, if these charges are without merit, should welcome a complete and thorough investigation. The fact that Pan American does welcome the Board's investigation has since been confirmed to me in a letter of May 29, 1957, from Mr. Samuel F. Pryor, vice president and assistant to the president of Pan American World Airways.

Mr. Pryor's letter also referred to a letter written by Pan American's comptroller, Mr. John S. Woodbridge, on May 22, 1957, which reflects Pan American's position and which has been printed in the CONGRESSIONAL RECORD. It appears that there is, and for some time has been, considerable controversy between Pan American and the staff of the CAB with regard to the matters I mentioned. These matters are under review and litigation. I recognize the tentative and preliminary character of the Board's incompleted audit as mentioned in Mr. Pryor's letter and commend Pan American's attitude of cooperative willingness that both sides should be fully heard and adjudicated by competent authorities in accordance with our American tradition of fair play. In my statement on May 22, 1957, it was not my purpose to prejudge the pending complete audit by the Board. Obviously, it would be unfair and improper to prejudge any pending case before the Civil Aeronautics Board. I commend Pan American for its willingness to cooperate fully with this complete audit.

Mr. Speaker, in the interest of fairness, I insert the letter I received from Mr. Pryor in the Appendix of the RECORD. The letter is as follows:

PAN AMERICAN WORLD
AIRWAYS SYSTEM,
New York, N. Y., May 29, 1957.

Hon. MELVIN R. LAIRD,
House of Representatives,
Washington, D. C.

DEAR MR. LAIRD: This is in reference to your remarks on the floor of the House on May 22, 1957, concerning two orders of the Civil Aeronautics Board issued in March 1957, one to investigate transactions between Pan American and its affiliated companies in which it holds investments, and the other seeking to reopen the Atlantic division mail rate for the years 1946 through 1954 on the basis of an incomplete report of an audit made for 1954 which raised questions primarily in regard to certain such transactions. As you are aware, the Board's order No. E-11146 dealing with such matters, included:

"The Board recognizes, of course, that the information now available to it may be subject to substantial qualification. As heretofore noted, the audit to date is incomplete, and substantial further investigation and analyses are required. Also, it is possible that the questionable areas disclosed by the audit may already have been, to some extent, taken into account by disallowances made in this or other mail rate proceedings; and Pan American is yet to be heard in connection with all of these matters."

As for Pan American's welcoming a complete and thorough investigation, apparently Pan American's 1956 annual report had not come to your attention at the time of your remarks. Therein the company stated that it "* * * welcomes the Board's investigation, which will demonstrate that these affiliations have been of tremendous benefit not only to the company itself, but also to the national defense, the foreign relations, and the general aviation position of the United States, as well as to the countries concerned. Equally important, they have resulted over the years in substantial savings in United States subsidy. The company has petitioned the Court of Appeals for the District of Columbia Circuit to review the Atlantic division mail rate as inadequate, because of the Board's action in computing a fair return from these affiliates on the basis merely of the company's initial investment rather than current book value (as determined in one instance by the Board itself), and for other reasons. Prosecution of this appeal in the courts will be resumed at the earliest opportunity."

Further, on May 22, 1957, Pan American's comptroller, Mr. John S. Woodbridge, addressed a letter dealing with the same subject to a Member of the Senate. For purposes of your additional convenience, pertinent excerpts of that letter are as follows:

"For years there has been a fundamental area of disagreement between the Civil Aeronautics Board staff and Pan American with regard to mail rates and the proper accounting principles upon which to base them.

"For example, in fixing the mail rates for Pan American-Grace Airways (Panagra), which is owned 50 percent by Pan American and 50 percent by W. R. Grace & Co., the Board has accepted an investment base of several million dollars, most of which has been built up by plowing back a very large part of the earnings over the entire life of this pioneer company. While the Civil Aeronautics Board staff has apparently permitted one owner, Grace, to take its full share of the earnings based on the actual investment, it has allowed Pan American to retain less than 20 percent of its share of the earnings, and has disregarded the great bulk of Pan American's investment representing its share of the earnings plowed back over a period of 25 years. Pan American has no objection to Grace receiving its half of the earnings based upon the true investment fixed by the Board, but considers it grossly discriminatory and illegal not to grant Pan American the same treatment as to earnings from their joint company. The Civil Aeronautics Board has adopted this same philosophy in dealing with all of Pan American's other affiliates. It would treat Pan American's investment on exactly the same basis as it would if all of the earnings of these affiliates had paid out in dividends over the years instead of being retained in the business.

"Pan American has taken this and other related questions to the courts for adjudication. Pan American certainly feels that it has a good case and we believe that nothing

should be done to prejudice it before the courts have finally decided the matter.

"• • • Pan American welcomes the CAB inquiry, and we are confident that when the courts finally have decided the mail rate case the result will not be adverse to Pan American. Meanwhile, it would be inappropriate for me to comment on the specific matters referred to in the Board's order of investigation. These will be fully answered in that proceeding.

"The further order of the Civil Aeronautics Board itself reveals that the Board's conclusions are tentative and that they may be subject to substantial qualification. It also points out that Pan American is yet to be heard in connection with all of these matters.

"There is a very substantial area of controversy between Pan American and the CAB staff. Both sides should be fully heard, and the matter should be settled in accordance with our American tradition of fair play. Meanwhile, it would be unfair and improper to prejudge the case."

Upon consideration of the foregoing, we are confident that you will want to bring Pan American's side of the controversy to the attention of your colleagues in an appropriate manner.

Should you wish any additional information concerning Pan American's operations and activities please do not hesitate to call upon us.

Sincerely yours,

SAMUEL F. PRYOR,
Vice President and Assistant to the President.

The Simple Facts About Money

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. PELLY. Mr. Speaker, under previous unanimous-consent request, I include for printing in the Appendix of the RECORD a short explanation of where the money in this country has gone.

In a few simple words, a banker points out why money is in short supply and the danger of artifically created low interest rates. If my colleagues will take a few moments and read this brief statement, they will get more out of it than they ever would have obtained from the reading of an entire proceedings of a congressional investigation into the banking and monetary system of this country. So, if all the disappointed Members who supported a resolution calling for such a study really want to know the answers, read this:

WHERE THE MONEY HAS GONE

(By Dietrich Schmitz, president, Washington Mutual Savings Bank)

The Argus of May 17 carried a front-page article headed, "Where's the Money Gone?" which briefly summarizes the effects of the present monetary situation. Comments are also made relative to the attractiveness of series E United States savings bonds.

Where has the money gone? The answer very simply is that we just have too many borrowers and not enough savers. So, like any other commodity where we have a greater demand than supply, a shortage ensues.

All any interested person has to do is look over the statistics, which are readily available and which show the fantastic increase in debt that has been developing in recent years. This refers not only to our National Government, but to State, local, and school district debt, corporation debt of all kinds, real estate mortgage debt, and, last but certainly not least, personal installment debt incurred for the purchase of automobiles and all other types of consumer durable goods.

Money, like any other commodity or service, finally winds up in the same position as tickets to New York's most popular musical comedy, My Fair Lady. As everyone knows, there are not enough seats to go around, and so, if you insist on attending, you have to pay a premium.

So the answer to your question is not too complicated. We need more savers and fewer spenders. To attain that position is not so simple, however. Our whole modern philosophy is to enjoy the so-called material pleasures of life before we have the money to pay for them.

If we are going to effect any change in that attitude, it is apparent we must offer a greater reward to the man who is willing to save first. In other words, higher interest rates benefit the saver at the expense of the borrower, who, after all, ordinarily does not have to go into debt unless he wants to.

And just a word on your comments relative to buyers of savings bonds. Series E savings bonds are still the world's best investment. Possibly as of this date a 3¼-percent return is not exactly in line with the market. But you must not overlook that an article like series E bonds cannot be adjusted from day to day, and, most importantly, any holder of a series E bond always has the privilege of redeeming his bond for cash, with a positive guaranty against loss, if he feels he can do better in some other preferred investment. Over the years savings bonds have directly created a sounder and better financial background for millions and millions of American citizens.

The greatest threat to the future of America—aside from another world war—is inflation. Artificially created low interest rates to encourage a further increase in debt would lead the way to further and sharper inflation of the American economy and a further devaluation in the purchasing power of the United States dollar.

In all seriousness, may I conclude, "Let's not be so foolish"?

Costly Low Pay

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent editorial as result of the long and studious investigation and study by the Cordiner commission, which merits the immediate attention of the Congress. The editorial appeared in the Boston Evening American on May 27, 1957:

COSTLY LOW PAY

We doubt whether any business could survive an 87 percent turnover in its skilled technical personnel.

Our Armed Forces are not a business in the ordinary sense, but in another, they comprise the most important business in the free world since they are our only real guaranty against subjugation and death.

But they just cannot hold the men they train in electronic and other technical skills against the greater lures and incentives of private life.

This theme has been effectively stressed by Ralph J. Cordiner, president of the General Electric Co. and the head of a civilian committee which has been looking into salaries in the Armed Forces.

All the "dream weapons" now in existence or on the drawing boards are not enough. They must be combined with brains and skills.

"The challenge to stay ahead of a potential aggressor," says Mr. Cordiner, "means staying ahead in quality of men as well as equipment. The public apparently has assumed that advanced weapons alone will produce an adequate defense and deterrent to war. That is not true."

He has reason to know. His committee recently completed a year-long study and recommended wide changes in the methods and rates of pay for both civilian and uniformed technicians on the Armed Forces rolls—based on knowledge and skills instead of the "Methuselah" system of seniority.

Nothing has been done about it. The Budget Bureau keeps on insisting that this is not the right time to put it into effect.

Yet reliable figures support Cordiner's contention that pay rates based on ability would save $5 billion a year by 1962—and improve combat efficiency by 15 percent.

Can we afford to ignore such savings? Or delay them as inopportune? We don't think so.

Coal and Our National Capitol

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Coal and Our National Capitol" which appeared in the May 23, 1957, issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

COAL AND OUR NATIONAL CAPITOL

Coal was first mined in America near Richmond, Va., in 1701, but for half a century there seemed to be no urgency for developing another fuel when so much firewood was available in this country. Then coal came to be appreciated in the forging trade, and this was to become the principal market after the first shipment was sent down the James River in 1758.

As enthusiasm for freedom and independence flamed through the young Nation, bituminous coal became established as a vital ingredient in the manufacture of war materials. Considerable quantities of coal were shipped to Washington for use in Government buildings and the navy yard in 1800 and 1801. Deliveries were made via the James River, Chesapeake Bay, and Potomac River.

The year 1804 is generally considered as the start of coal mining in Western Maryland, the next source of coal for the Nation's Capital. The Maryland Geological Survey reported:

"Coal was discovered near the present site of Frostburg in 1804, and although various openings were made from time to time and a small amount of coal taken out, more than a quarter of a century passed by before min-

ing operations of any note were inaugurated. The first eastern shipment of coal was made in 1830 * * * the coal was loaded on barges in Cumberland and floated down the Potomac River to Washington. Although profitable for a time, this mode of conveyance was too destructive to life and property to be long utilized and was soon abandoned. The first shipments of coal over the Baltimore & Ohio Railroad were made in 1842, and over the Chesapeake & Ohio Canal from Cumberland in 1850. Since then shipments have been continuous and the record of annual output is complete from 1842."

Nowadays, most of the bituminous coal consumed in the Washington area is produced in West Virginia and transported by rail. The Benning and Buzzard Point plants of Potomac Electric Power Co. consumed more than 700,000 tons per year. Other important consumers include the Naval Gun Factory, and the West Central, Government Central, and Capitol heating plants.

The total United States output of bituminous coal in 1917 was 552 million tons. Last year, production totaled approximately 500 million tons. Whereas the electric utilities burned less than 30 million tons in 1917, today they have become coal's biggest customer, having some 155 million tons in 1956.

Ike Fails To Cast Vote

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. HOLLAND. Mr. Speaker, it has been rumored a movement is on foot in Cumberland Township, Adams County, Pa., to change the voting place to the clubhouse on the golf course so that the President will vote at the next election.

The Republicans of Cumberland Township, Adams County, feel certain that if the polling place is on the golf links the President will not have to break up his game while he votes.

It seems strange that the chief author of Modern Republicanism, Arthur Larson, did not vote at the last general election, and the President did not vote at the last primary.

If this is an example of modern Republicanism—it is due for a short life.

The enclosed clipping by James Helbert, political writer for the Pittsburgh Press, appeared in Sunday's edition of June 2:

LIKE LARSON, IKE FAILS TO CAST VOTE

(By James Helbert)

The President of the United States is a very busy man—which is as startling as saying that Pittsburgh has a rough traffic problem every time it rains and many times when it doesn't.

Dwight D. Eisenhower has a cold war with the Commies and a hot war with Congress over the budget. He has the boiling Middle East and atomic power to contend with.

TOO MUCH GOLF?

Politicians on both sides often nag him and his foes charge he spends too much time out where the grass grows greenest on the golf course.

And it is now being brought out that the President didn't vote in the Pennsylvania May 21 primary at the polling place near Gettysburg where he is a registered Republican voter in Cumberland Township, Adams County.

Now it goes almost without saying that voting is the first duty of a citizen. Presidents, Senators, governors, judges, legislators, mayors, ward chairmen, teachers of civics all agree to that.

It is votes which put Presidents, lawmakers, and other officials into office and it is they who make the decisions which pretty much run our lives.

As the first citizen of the United States of America, it is expected that the President will set the example for all—and especially the younger among us.

LARSON DIDN'T VOTE

Maybe Ike was too busy on that Tuesday election day, but there were contests in Adams County which his vote would have helped decide. It should be noted, though, that he has been stressing the importance of voting.

This recalls Arthur Larson, chief author of Modern Republicanism, who failed to vote for President Eisenhower at last November's election. This was brought to light, and Mr. Larson made it a point to vote at the recent primary election in Pittsburgh.

Modern Republicanism includes let us all hope, the belief and the iron conviction that every citizen should vote at each election.

If the new GOP creed does not include that dogma, the Modern Republicans may stay home some election day and find themselves retired to private life by Democrats—both modern and old fashioned.

Luther Patrick—Editorial Comment

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 31, 1957

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I am privileged to insert in the Appendix of the CONGRESSIONAL RECORD editorial comment of the two daily newspapers in the Birmingham, Ala., district regarding the death of former Representative Luther Patrick of Alabama, Sunday, May 26, 1957. The first of the following editorials is from the Birmingham Post-Herald of May 28, and the second is from the Birmingham News of May 28.

The editorials are as follows:

GALLANT FRIEND

Luther Patrick who in death must have found merciful relief leaves behind a host of friends to mourn his passing.

Nothing he did during his active years, in or out of politics, perhaps earned him as much admiration and respect as the gallant, cheerful manner in which he accepted the adversities of his final years.

He learned to live with pain, to face life with a smile and to work long after most men would have given up in despair.

If ever he complained it was never in the presence of the hearing of his friends.

To live as Luther Patrick lived requires great courage and a brave spirit. He was endowed generously with both.

His example leaves us a warm and glowing memory.

LUTHER PATRICK

Birmingham will greatly miss Luther Patrick. Luther—the first name was virtually imperative with him—was much alive, much concerned with the problems of living, much amused by life even when the going was hardest with him. He "took" life—much in the same sense as reaching out physically and seizing it; life was a thing he very much seemed to hold in his hand, to observe it, to savor it, to enjoy it. Yet always with a tender compassion.

This paper often had not seen "eye to eye" with Luther. Yet it always was with good humor that we and he disagreed. He wrote us letters. He wrote us a good many letters, over the years. They were always sharp, incisive, one might say well honed. It gave The News pleasure to print them. We are certain that the reading of Luther's letters gave many people pleasure also, and even if the reader disagreed, we are sure that the reason for disagreement was clear; Luther could point up an issue.

As a Representative in Congress, he served Birmingham and all this district devotedly. One uses the word "faithful" with care and precision in Luther's case.

As a writer of verse, he was entirely professional. His thoughts were transferred into language with an aplomb rare and, one can quite easily say, thoroughly professional. It takes an unusual man to produce something like "Sleeping at the Foot of the Bed." Great poetry? No; and Luther would have granted as much with his gentle humor and kindly smile. But pleasant, entertaining, and reaching into the human heart, yes. Yes, very much.

Birmingham without Luther Patrick will not be the same place. But his warm spirit will long linger, as will the memory of his hardiness in the face of crippling arthritis.

So long, Luther.

Fiscal Mess

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ABERNETHY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following item from the Wall Street Journal of June 3, 1957:

FISCAL MESS

Early this spring the Treasury raised its interest rate on Government savings bonds from 3 to 3¼ percent. Despite this, the parade of people walking up to cash in their savings bonds has hardly diminished.

Early this month the Treasury, faced with the job of refunding nearly $4.2 billion of the public debt, offered a 57-month note at 3⅝ percent. It was a flop. People who held the expiring securities preferred cash over the new Treasury notes to the tune of $1.2 billion.

And just a week ago Treasury officials gave up hope of selling the public a long-term bond to raise cash. They found the market wasn't receptive at the interest rate the Treasury was willing to pay.

In the meantime the Government's expenses have been rising and tax collections have been coming in only moderately well. The national debt is already some $5 billion more than it was 4 years ago and officials expect it to go higher before it goes lower.

Although there are plenty more such unhappy statistics, this is enough to show that when Robert Anderson takes over as Secretary of the Treasury this summer he will have his job cut out for him.

The plain, simple, and incontrovertible fact is that the Government of the United States is in a fiscal mess.

To put it bluntly, the Treasury of the richest Nation on earth is short of money.

At one point this spring it had hardly enough cash to pay a week's worth of bills. And with current spending rising faster than current income, despite the balanced budget, the squeeze threatens to get worse.

The basic cause of all this is a decade of uncontrolled spending which has now brought us to the point where even the present high tax rates cannot keep the Government's pocketbook filled. But in addition, the mess has been compounded by bad fiscal policy.

To imply, as recent Treasury decisions do, that the Government of the United States cannot borrow money in the marketplace is nonsense. And dangerous nonsense at that, for it also implies that the Government's credit is deteriorating.

The reason the Treasury cannot persuade individuals to invest in savings bonds is that it offers them no real inducement to do so; its recent increase in interest rates was not tailored to the requirements of savers but to a political notion of what the Government ought to pay.

So, too, with the recent financing fiascos, the United States Government can borrow money for 57 months or for 10 years. But short of putting a gun at the public's head it cannot borrow it at a lesser interest rate than the public is willing to accept for tying up money into the long, uncertain future.

Hence the present fiscal mess is purely manmade. The Government has let its own spending get out of hand; the armament program, the foreign-aid program and all the rest have put huge demands on the money market. Yet it is trying to escape the pains of what it has created.

If the Government clings to that fiscal policy only a miracle will keep the mess from getting worse. For if the money squeeze continues and the Government refuses to do what is necessary to borrow from the public, the only alternative will be to borrow it from the Federal Reserve System. In short, to print the money.

There is already tremendous pressure on the Reserve to pump money into the market so that the Treasury can borrow money at a politically satisfactory price. So far it has been resisted but the Reserve can be overpowered because when the day arrives that there are no dollars in the Treasury even Reserve Chairman Martin will have to yield.

We do not envy Mr. Anderson his new job. It will take a man bold and determined enough to sell a sensible fiscal policy in Washington. Or one lucky enough to head the Treasury when Uncle Sam is living so that he doesn't have to borrow beyond his means.

Current Views on Mideast and U. N. Force Problems

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following current views on Mideast and U. N. force problems of Ernest Gross, former United States representative at the United Nations:

CURRENT VIEWS ON MIDEAST AND U. N. FORCE PROBLEMS

Let us turn to the serious Palestine and Suez problems and the significance of the United Nations force in connection with them. Several years ago, Trygvie Lie wrote: "All through the first half of 1948 I was acutely conscious how different things in Palestine could have been had the U. N. had an international force at its disposal."

As it was, the crisis built up.

When the long-smouldering tensions finally burst into flame last fall, many responsible persons at the United Nations and elsewhere feared that this would set off the explosion of world war III. Almost every element of discord, of division and of disaster was present. The festering hostility between Arab and Jew; the Egyptian stranglehold on the economic jugular of Britain and Western Europe; the discord between ourselves and our major western allies concerning the most effective methods of handling the crisis; our long-continued ignoring of Israel's right to passage through the Suez Canal as determined by the United Nations Security Council as far back as February of 1951; the Soviet efforts, both subtle and open, to exploit the tensions and economic sickness of the area; and the suspicions of newly liberated countries of Asia and Africa toward what they rightly or wrongly regarded as the continuing colonial ambitions of their former overlords—all these factors appeared to defy solutions.

Nevertheless, the cease-fire was effected and the overhanging threat of world disaster was removed.

The primary instrument by which this was accomplished was the very action we are commemorating here and now—the mobilization of international forces by the United Nations.

I should like to look back for a few minutes to see how this was done and on what basis. I do so not merely to record the history of an action important to our times, but also to try to gage a little more accurately where we are headed. For, proud as we are of the mobilization of the international force, the basic problems which brought about the bloodshed in the first place have not in fact been resolved. A good hard look at the future role of the United Nations emergency force is, therefore, of grave moment to our own national interest.

Almost at once, after the fighting broke out last year, the General Assembly of the United Nations adopted a resolution which remains a key to the future. It is well to recall that on November 2, 1956, the United Nations did more than merely urge a cease-fire. In addition, it urged all parties to "observe scrupulously the provisions of the armistice agreements." The Assembly also urged that when the cease-fire became effective steps were to be taken to reopen the Suez Canal and to "restore secure freedom of navigation." I ask you to remember these terms of the resolution in the light of what follows.

Two days later the General Assembly requested the Secretary General to submit within 48 hours a plan for the setting up of an emergency international United Nations force to secure and to supervise the cessation of hostilities "in accordance with the resolution of November 2." By brilliant and untiring effort, he actually did so in less than 24 hours.

May I repeat, the resolution of November 2 called for the scrupulous observance of the armistice agreements and the restoration of secure freedom of navigation in the Suez.

Through further brilliant effort, the Secretary General successfully organized a United Nations Emergency Force and worked out with the Government of Egypt the necessary agreements to assure the cooperation of that government. This was necessary for the most obvious reasons, in order to settle in advance such questions as the freedom of movement of the United Nations forces, their immunity from Egyptian jurisdiction, their access to sources of supply, their right to use bases and facilities, and all the other problems incident to such an operation.

In the course of his negotiations with the Egyptian Government the Secretary General gave his interpretations of the General Assembly resolutions relating to the character and functions of the force. These interpretations were approved by the advisory committee of nations set up by the General Assembly. It was on the basis of the resolutions, as interpreted by the Secretary General, that the Egyptian Government consented to the arrival of the United Nations emergency force in Egypt.

In his report of February 11, 1957, to the General Assembly, the Secretary General stated that he was "able to report that the Government of Egypt reaffirms its intent to observe fully the provisions of the armistice agreement to which it is a party, as indicated earlier in its acceptance of the November 2 resolution of the General Assembly." This was, of course, on the assumption that it would be reciprocal on both sides.

When the British and French, and later the Israelis, withdrew their forces in favor of the United Nations emergency force, it was against this background of policies and commitments. It is likewise with this perspective that we must appraise the mission of the United Nations Force and the duration of its stay.

The Secretary General himself announced that the functions of the force would be "to help maintain quiet during and after the withdrawal of non-Egyption troops, and to secure compliance with the other terms established in the resolution of November 2, 1956." (Report of November 6.) He went on to say that the force should not have military functions "exceeding those necessary to secure peaceful conditions, on the assumption that the parties to the conflict take all necessary steps for compliance with the recommendations of the General Assembly."

Again I repeat: The November 2 resolution called for scrupulous compliance with the armistice agreements and secure freedom of navigation in the Suez.

What this all comes to, I believe, is that the test of the success or failure of the accomplishment we honor today will be whether the United Nations Force is permitted to carry out the mission spelled out in the General Assembly resolutions and reports of the Secretary General, to which I have referred.

Its presence should insure against the recurrence of frontier raids, against blockades either of the Suez or the Gulf of Aqaba and against other acts of belligerency outlawed by the armistice agreements. It must stay in position so long as its presence is necessary to prevent a recurrence of the conditions which brought about the crisis. Again to quote the Secretary General: "There is universal recognition that the condition of affairs of which the deterioration formed part, should not be permitted to return." Or, in the words of Ambassador Lodge, our United Nations representative speaking in the General Assembly on the first of March, the role of the United Nations force should "continue until there is a definitive settlement respecting the Gaza Strip" and that the United Nations force should be stationed at the Ttraits of Tiran "until it is clear that the non-exercise of any claimed belligerent rights has established in practice peaceful conditions of navigation." Reference might well have been made by Ambassador Lodge also to peaceful conditions of navigation through the Suez.

This would be entirely consistent with the explanation of our position made by the President of the United States on February 21. In that speech, President Eisenhower said: "We should not assume that if Israel withdraws, Egypt will prevent Israeli shipping from using the Suez Canal or the Gulf of Aqaba. If, unhappily, Egypt does hereafter violate the armistice agreement or other international obligations, then this

should be dealt with firmly by the society of nations."

There is no reason to assume that the President did not mean what he said or that his words do not mean what they so clearly say. With respect to the Suez Canal, therefore, I believe that if Israel is denied passage, the least the society of nations can do in dealing with the situation would be to insist the U. N. force carries out its responsibility. Logic as well as justice demands this.

Egypt accepted the resolution of November 2, calling for compliance with the armistice agreements. In 1951, the Security Council had interpreted the armistice agreements to preclude acts of belligerency, specifically such acts as blockading the Suez against Israel. Egypt consented to the arrival of the United Nations emergency force in Egypt on the basis of the resolutions of the General Assembly, including the resolution of November 2. It follows that the mission of the United Nations Emergency force in Egypt is as much directed toward precluding the blockade of the Suez as it is of assuring against the resumption of any other acts of belligerency, such as border raids or stoppage of shipping to the Gulf of Aqaba. Unless the United Nations emergency force is allowed to perform this function, I fear that the peak of progress we are commemorating today will become badly eroded and undermined.

Moreover, if its mission is restricted unduly, or if the force is withdrawn prematurely—whatever the sources of pressure or provocation may be—the one tangible means of progress toward the goals of the uniting for peace resolution will have been shattered.

The fate of the League of Nations shows that institutions will perish if they are not capable of taking actions and making decisions essential to their survival. This is so self-evident a proposition that it seems trite to say it. But the challenge is always to identify the action or decision which must be taken.

I believe that the accomplishment by the United Nations force of its broad and vital mission is one of those testing points which from time to time confront human institutions. If the force fails, either through fear or favor, we will be navigating a disaster course.

I do not think our credit is so low, nor the will of the free world so weak, that we shall steer ourselves onto the rocks.

Dangers of Communism in Latin America

SPEECH
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. LONG. Mr. Speaker, since I first became a Member of this House, I have been concerned with the dangers of communism in our Latin American countries, and particularly in our neighboring countries of Central America and the Caribbean area. To show that I am not alone in recognizing these dangers is proven by some facts in the book entitled "El Libro De Galindez, Una Obra Cinica y Procaz" and written by an American author—and I use the term "American" as meaning all of the peoples in our Western Hemisphere—was sent to me by a friend and correspondent. In 1956 Señor J. A. Osorio Lizarazo wrote this book which was published in Santiago de Chile and portions which I now desire to quote and place in the RECORD refer to the controversial figure whom I have publically branded, most charitably I believe, as at least a Communist Party-liner.

The book, written in Spanish, has had widespread circulation in Latin America, and I quote the translation as follows:

The thing that makes (Jesus de) Galindez so furious, the thing which apparently leaves him entirely irrational, is the fact that Trujillo has gained a worldwide reputation for his political and economical genius, and has received innumerable citations and awards from the governments, peoples, and educational institutions of other lands all over the world, as well as the fact that the Dominican benefactor has received the highest honors, rewards, and positions of honor and trust from his own fellow Dominicans, and occupies a unique place in the affections of his fellow countrymen. It is certainly more than mere coincidence that this irrational indignation of Communist-murderer Galindez coincides exactly with the position taken by atheistic communism the world over, and particularly by Communist and fellow-traveling leftwing writers.

An indication of how malignantly determined are the men who attack and vilify Generalissimo Rafael L. Trujillo Molina and the Government of the Dominican Republic is to be found in their determination to make of their entirely false and trumped-up charges, as set forth in the stale and rehashed Galindez book, a "continental" matter—that is, an attempt to persuade the people and governments of the continental nations of the Western Hemisphere that the healthy political and economic regime at Ciudad Trujillo in some way presents a "danger" to such continental nations.

The truth is, of course, that without the undoubted political and economic genius of Trujillo, the Dominican Republic today would be, like its neighbor Puerto Rico, no more than a vassal state of its great neighbor, the United States of North America, its people, like those of Puerto Rico, engaged in one of the greatest mass migrations of all history away from their native land.

Beginning in 1930, the Dominican Republic was itself subjected to military occupation by the United States of North America. While that occupation was most benevolent and was undertaken for the benefit of the people of that great island nation, there is no getting around the fact that any nation which is subjected to a military occupation undergoes the greatest humiliation and despair, regardless of the motivation of such occupation or the benevolence of the occupation forces. In the case of the Dominican Republic, the United States of North America, in invoking its Monroe Doctrine, seized the customhouses of the Dominican Republic, and its customs officers were appointed by Washington, not Santo Domingo (now Ciudad Trujillo). Under such circumstances, the easy thing would have been to forget honor, dignity, and sovereignty and permit such benevolent occupation to continue indefinitely—just as Puerto Rico has done. To bring about an end to the causes which made that occupation necessary and to bring about political peace and economic stability—particularly in the face of gross discrimination on the part of the occupying power in the matter of sugar, the staple crop at that time—required almost superhuman abilities.

Such abilities were provided by that Christian God whose ways remain so inscrutable to the finite man.

To the despair and frustration of such as Jesus de Galindez, Communist, murderer, embezzler, there came forth in the Dominican Republic a man who could and has literally performed miracles. Not only has the generalissimo—as he is known by his people who hold him in such great affection—Rafael L. Trujillo Molina brought political peace and tranquility to his island homeland; not only has he made of the Dominican Republic the one nation of the earth free of debt and a model which is the despair of all other nations, but he has succeeded in erasing the bitterness that is the natural consequence of a military occupation.

Such traitors as Jesus de Galindez and Jules Dubois look in vain for a weak spot in the makeup of this great American statesman. They find none, for none is present. Thus, they are driven more and more into desperation, and reckless frustration. The desperation and frustration of these evil and iconoclastic men is only made more burdensome by them by the benevolent and good-natured derision in which they are held by the generalissimo and the people of the Dominican Republic.

History will surely record the life and work of Rafael L. Trujillo Molina as that of a great genius and a great statesman. If history even remembers such of his unimportant detractors as Jesus de Galindez and Jules Dubois, they will rate only a brief and passing notice as human monsters, traitors to all mankind.

Ohio GOP Differs: It Wins

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the May 26 issue of the Detroit News by Will Muller entitled "Ohio GOP Differs: It Wins." This is the first of a series of three articles giving the comparison of the political situation in Michigan and Ohio:

MICHIGAN PARTY'S PLIGHT CONTRASTED—OHIO GOP DIFFERS: IT WINS

(EDITOR'S NOTE.—Interested in preserving a strong two-party system in Michigan, the Detroit News as a public service sent its political analyst to report how Ohio Republicans revitalized their State organization after years of Democratic domination. Michigan Republicans now stand where the Ohio Republicans did after their 1948 defeat. This is the first of three articles.)

(By Will Muller)

COLUMBUS, OHIO, May 25.—Only a line unnoticeable to a motorist today divides a land of Republican want from a land of Republican plenty.

South of the Michigan-Ohio border to the Ohio River, Republicans have won every statewide office, but that held by bushy-haired and unpredictable United States Senator FRANK J. LAUSCHE.

Northward from the same line to Lake Superior, Michigan Republicans have lost every statewide elective office but that held by United States Senator CHARLES E. POTTER.

Frustrated Michigan Republicans, seeing the party's tide running out in their State and sweeping back in across Ohio, are asking: "Why?"

In 10 years the picture in Ohio and the picture in Michigan have been reversed. The Ohio desert has bloomed with Republican victories. The Michigan paradise has be-

come a Republican disaster area, eligible for relief from Washington.

Already the suggestion has been made—quietly and not from Michigan—that Republican National Chairman Meade Alcorn send election shock troops into Michigan to save Senator POTTER in 1958.

The easiest answer, and the one mostly heard when the divergence of party fortunes in the two States is discussed by the nonprofessional politician, is this:

North of the border is G. Mennen Williams, five times Democratic Governor of Michigan, whose personal popularity is overrunning State boundary lines toward the Presidency.

And south of the border is Raymond Charles Bliss, chairman of the Ohio Republican central and executive committee.

Those seeking a serious answer to Republican success in Ohio and Republican failure in Michigan will find other and equally vital contrasts between the two branches of the party itself.

In Ohio the "moneybags" offer no target to their Democratic opposition. When Chairman Courtney Burton and his Ohio Republican finance committee have raised the money for the budget drawn by Bliss, their participation in party affairs is ended.

Any casual reader of politics in Michigan is aware that the big money raisers in his State are determined to say who can spend it. The policies and the very existence of the party are in their hands.

"We couldn't operate that way in Ohio," says Bliss. "We have a pact that the money will be spent for the common good of the party, and the party's objectives are going to be so high it will mean the money goes to provide the best government for everyone."

There is party discipline in Ohio. Anyone availing himself of the Republican label to win an election must abide by the party platform. A party "popoff" survives in the Ohio Legislature like a geranium in January

Last month a proxy to a Michigan Republican central committee meeting covered his colleagues with embarrassment by reading a paragraph of the party promising adequate schools. In Michigan, a platform isn't supposed to survive the campaign.

PROMISE TO BE KEPT

In Ohio, Republicans push their platform as a contract with voters. Afterward it is the Bible for Ohio legislators, Congressmen, United States Senators, and State officers. It is a promise to be kept.

"A politician's only stock-in-trade is his word," says Bliss. "If he wants public confidence, if he wants to win, he'd better keep it good."

In Michigan, party leaders wonder how to "motivate" the precinct workers. In Ohio, the precinct committee owns the party, from the county chairman through Bliss and the State committee.

County committees and county chairmen are elected by the precinct committeemen (delegates in Michigan). A bill to give Republicans that same tool in Michigan was introduced in the legislature's latest session. Republicans killed it.

To run for governor or United States Senator in Michigan, a candidate either must have wealth or commit himself to wealthy contributors. In Ohio, last fall, the State central committee took $150,000 of the approximately $800,000 raised by the finance committee and gave it to the party's nominee for governor.

There was only one string attached. If elected, he must stand by the party platform on which he was running.

The central committee gave another $150,000 to its candidate for the United States Senate, George Bender. He failed of reelection.

In addition, the party asked each candidate to raise all the money he could from his private sources. It refused to provide any campaign literature that didn't tie together all Republican candidates, from the White House to the legislature.

MUST VOTE FOR EACH

"In Ohio," Bliss explains, "it's a party campaign. But we have the office ballot, and we expect each candidate to identify himself to the voters in the campaign."

With the office ballot there can be no straight-ticket voting in Ohio. The voter must place an X before every candidate he wants.

Ohio Republicans have no reputation as labor's foes. In the 1955 legislature labor had sponsored a bill to revise the workmen's compensation system. Industry opposed it.

A bill badly wanted by the State's chambers of commerce was held up until labor got its bill through the legislature. Republicans got credit for the maneuver.

In Michigan today the great debate is on whether the party organization should be controlled by modern Republicans or Taft Republicans. That argument is unheard in Ohio, the late Senator Taft's home State, for Ohio's brand of Republicanism is written into the party platform each election—and all who live up to it are just plain Republicans.

Michigan Republicans are just taking the first step, in their desperation, toward a permanent, year-around party organization. Lawrence B. Lindemer, newly elected chairman at $21,000 a year, has passed his first election and still has only a token staff.

At 17 High Street, Columbus, Ohio, Bliss is sitting down with a 15-member staff of veterans to put the final polish to plans for the 1958 State and congressional campaigns.

Nothing has been left to chance, to trial and error. In politics the game, Ohio has learned, goes to the professional.

Puget Sound Shipyard Sets Work Record

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the May 24, 1957, issue of Salute, publication of the Puget Sound Naval Shipyard, describing a new method of removing armorplate from warships:

You first read about Puget Sound Naval Shipyard's amazing new procedure in armorplate removal back in June of 1954 when the *Franklin D. Roosevelt's* conversion timetable jumped 5 full weeks ahead as the result of its initial use on the big carrier while still waterborne.

As a production news story it was a natural that clicked instantly with the Navy's economy-minded Bureau of Ships, attained further prestige with its inclusion in the CONGRESSIONAL RECORD.

NO PARALLEL

Fifteen months later the story did a press repeat on September 26, 1955. It read even better. This time the plate removal was from off the *Midway*, 43 (26-ton) plates removed from hull to barge in 18 working hours.

Navy production heads everywhere marveled even more at this waterfront feat that telescoped time and labor costs, but to paraphrase the sideshow barker—"They hadn't seen nothing yet."

For last Thursday and during the first 33 minutes of Friday's day shift there took place a plate removal job on the *Coral Sea* that for production speed and dispatch is perhaps unparalleled in this shipyard's history.

EYE "CORAL SEA"

Old-timers could only recall certain phases of the Louisville construction in the early 1930's and those battle damage repair jobs done during World War II as coming anywhere near matching last weekend's record performance.

How did the new record get off the ground? Masters Walt Bruns, S–72, and Dean Calhoun, S–11–26, have the answer. "We had our eyes on the *Coral Sea* from the moment the big carrier docked."

Bruns and Calhoun were soon to find they weren't alone in their thinking. Shop 99's temporary services, transportation, supply, and even administration's tug facilities were to respond to their proposal of a record-breaking assault on the *Coral Sea's* hull plates as if these activities had been tuned in on the Bruns-Calhoun mental circuit all the while.

ZERO HOUR SET

The starboard plates were the first to go in a warmup test carried out over a 3-day period. Forty-three plates going in 14-plus hours, while if not a record, told all concerned one thing—they were ready.

Zero-hour was set at 0745 Thursday, May 16, and all participating shops and activities alerted.

The morning dawned bright and clear, the waters of Sinclair Inlet lay still against the *Coral Sea's* massive hull as the wreckers began their race against time.

By 0800 the first plate had been loosened and lowered onto the barge and all hands knew their timing was as perfect as a 21-jewel watch.

TORRID PACE

As the morning hours sped by, the individual plates fell with increasing speed and rhythm as the time count dropped steadily from 20 minutes a plate to 15, then to 10 minutes and even as low as 8 minutes a plate and then seemingly leveled off at a 9-to-11-minute-per-plate average.

If the pace was torrid, it had more than met its match in the spirit and determination of the workers. When the noon-hour whistle blew, 18 plates had been removed, 25 to go.

At 12:30 they resumed the race. By 1239 the 19th plate was accounted for and by 1247, No. 20 had hit the barge decking. And so it went throughout the day, a minute gained here, a minute lost there, the plates steadily dropping all the while.

RECORD SET

At 1403, the 28th plate was talied, at 1508, the big crane had landed plate 33, and by 1618, plate 40 had gone by the boards. For all intents and purposes the workday was done but there could be no doubt that a record had been set.

In the elapsed time of 7 hours and 48 minutes, 40 plates had been taken off and loaded on the barge.

Forty plates down and three to go the following morning. To show they had not lost their drive, Friday morning saw the production shop combo wrap up the final plates in 33 minutes at an amazing clip of 11 minutes a plate.

PRAISE FOR ALL

In their postrecord recaps, Burns and Calhoun had nothing but praise for all hands. Bruns for the yeomen services of his riggers, divers, tank cleaners, Calhoun for his welders, shipfitters, drillers, calkers, chippers, and burners.

To Lt. Comdr. J. T. Burrill, ship superintendent, they expressed their appreciation and admiration for the smooth way in which he maintained the ship's ballast at the proper draft.

Both masters took cognizance of the tug and barge assistance by Administration, by Transportation's crane and rail service, and Supply's dispatching.

NO ACCIDENTS

Of the latter, Bruns said that Supply had secured all 86 plates on flatcars and ready to ship east within 8 hours after the last plate had been removed from the *Coral Sea*.

Safety, too, came in for a well deserved plug. It was duly noted that on all three plate removal operations, the *Franklin Delano Roosevelt*, *Midway*, and *Coral Sea*, not a single disabling injury had occurred.

Forty-three plates in 8 hours and 21 minutes—no wonder the Armed Forces House Committee acknowledges Puget Sound Navy Shipyard as the leading carrier yard on the Pacific coast.

REMOVAL TIME STATISTICS

Here's the complete running time of the record-setting removal of the *Coral Sea's* 43 portside hull plates. Below is actual time each plate came free from the ship's side and was hanging on the armor removal barge.

The Third Party in Medicine

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. HARRIS. Mr. Speaker, I was privileged on June 2, 1957, to address the Conference of Presidents and Other Officers of State Medical Associations at a session preceding the annual meeting of the American Medical Association in New York City. My speech was entitled "The Third Party in Medicine" and it deals in part with the proper role that the Federal Government can play as a third party to the physician-patient relationship. Because of the importance of the question, I call it to the attention of our colleagues and under unanimous consent I include my discussion herein:

THE THIRD PARTY IN MEDICINE

I consider it a great honor that you have asked me to address you today. I may assume, of course, that you do not expect me to impart to you any knowledge in the field of medicine which I do not possess. I would rather think that you want me to discuss some issues which concern both physicians and Members of Congress because legislative proposals involving these issues have been entertained in the Congress in the past and are apt to be considered again in the future.

Not a day passes on which I as an individual Member of Congress or as chairman of the Interstate and Foreign Commerce Committee do not receive a number of communications involving some questions of health and health care. You may wonder why the Committee on Interstate and Foreign Commerce of all congressional committees should concern itself with questions of health. Certainly the name of the committee does not appear to imply any such concern. As frequently is the case, the explanation is a historical one and readily explains the connection between commerce and health.

Since colonial days our country has depended on merchant vessels to bring goods from foreign lands to our shores and to carry our exports abroad. Merchant seamen manning these vessels, when falling ill or becoming incapacitated, imposed an undue burden upon local facilities and local resources in our port cities.

When the Congress met in 1789, a resolution was adopted appointing a committee to prepare a bill providing for the establishment of hospitals for sick and disabled seamen. However, no such legislation was enacted until 9 years later when the 5th Congress passed an act to establish the Marine Hospital Service (I might say parenthetically that things today are still pretty much the same as they were during the early days of the Republic—it usually takes several sessions of Congress to develop and pass major legislation).

The Marine Hospital Service Act was approved by President Adams on July 16, 1798. It authorized the President "to nominate and appoint, in such ports of the United States as he may think proper, one or more persons, to be called directors of the marine hospital of the United States, whose duty it is to provide for the accommodation of sick and disabled seamen."

The Marine Hospital Service formed the basis of the United States Public Health Service as we know it today, and from this interesting bit of history you will appreciate the historical connection between commerce and health which has resulted in the assignment to the Committee on Interstate and Foreign Commerce of legislative jurisdiction over public health and health care problems.

I would like to make it abundantly clear that the Committee on Interstate and Foreign Commerce feels very strongly that its responsibility in the field of health is one of the most important legislative responsibilities given to it, and the committee takes these responsibilities very seriously indeed. This field of the committee's legislative responsibility differs somewhat from other fields assigned to it because in the case of health legislation the committee deals with human needs of all of our citizens. In many of the other legislative fields assigned to us we are dealing primarily with business organizations and trade associations, etc., and economic considerations frequently predominate and necessarily so.

In an effort to more effectively discharge the committee's responsibilities in the field of health, I have as chairman of the committee appointed a Subcommittee on Health and Science, of 11 members, with Congressman JOHN BELL WILLIAMS, of Mississippi, as chairman. It is my purpose to see that special attention is given to the problems and legislation in these two fields. It is also my aim that this subcommittee of able Members of the Congress keep in mind in the consideration of these matters, the subject which I have in mind for you today, The Third Party in Medicine.

I have not related to you the history of our committee's legislative responsibilities in the field of health merely to explain why our committee and not some other congressional committee has legislative jurisdiction over health measures. I wanted, however, to call to your attention that from the very inception of the Republic, Congress, in case it found such action was justified on the basis of a clearly established need, has accepted the fact that a third party might be required in special situations to provide needed medical services.

Every thoughtful person appreciates, no doubt, that a third party entering into a two-party relationship creates quite a problem. In the case of a marriage relationship, intervention of a third party almost invariably results in a breaking up of the marriage. Fortunately, however, this is not the rule with regard to all third parties. Take for example the case of the relationship between a Member of Congress and his constituents. A third party in the form of an interested group or an executive agency, might attempt to influence the Congressman-constituent relationship. Quite frequently a third party may improve this relationship by helping both the constituent and the Congressman. Then, there are other instances where nothing is further from the mind of a third party than to strengthen the relationship between the Congressman and his constituent, but on the contrary, is out to sever the relationship and to sever if for good.

What am I trying to say? I am trying to say that in the case of the relationship between a physician and his patients, just as in the case of other relationships, each case of a third party must be examined carefully on its own merits in order to determine whether the third party is likely to benefit or harm the relationship.

Let me examine then the nature and purpose of some of the third parties which participate in the physician-patient relationship and let us try to determine whether their participation has been beneficial or adverse. I do not mean with a view of determining the advisability of whether they are good or bad. Most of us have our own opinions about some of these programs. I merely wish to point to some results and with particular emphasis to the trend of today.

Let us take hospitals, for example. Surely they must be considered third parties when it comes to the doctor-patient relationship. However, could you imagine practicing medicine today without hospitals. As a matter of fact, it might be said that the construction of many hospitals, particularly in rural areas and small communities, has contributed to the establishment of new physician-patient relationships, because in many instances physicians could be induced to practice medicine in rural areas and small communities only after adequate hospital

facilities were made available in those areas. Hospitals also help train new members of your profession by providing the facilities where medical students, interns and residents gain the practical experience required by physicians.

If we consider hospitals third parties then can we consider the Federal Government a third party once removed because the Federal Government, through the hospital construction program, has given impetus and support to the construction of new hospital facilities by State and local governments and private, nonprofit organizations.

While hospitals on the whole must be considered third parties which greatly benefit the physician-patient relationship, there have been some instances in which some hospitals have been criticized for disturbing established physician-patient relationships. Such criticism has come from physicians as well as from patients. It has been directed against the practice generally followed by hospitals of being selective about admitting members of the medical profession to their staffs. This selectivity (and I am not criticizing it when I refer to it) definitely affects the relationship between some physicians and some patients.

Where does that leave the hospitals as third parties? On balance, I would think, your profession would not want to do without hospitals. This does not mean however that each and every act of these third parties invariably is beneficial to the relationship with exists between a given physician and his patients.

Let us look at some other third parties. Their number has become legion in recent years. Private insurance carriers and prepayment organizations have increasingly become third parties which importantly participate in the physician-patient relationship. These carriers may be commercial insurance companies, or, they may be nonprofit organizations like the Blue Cross or Blue Shield. They may be prepayment plans organized by employers or employees, or they may be organized jointly by both employers and employees. They may be prepayment plans organized by consumers on a communitywide basis, or they may be prepayment plans organized by local medical societies which compete with consumer-sponsored prepayment plans.

All of these third parties greatly differ from each other with regard to the methods which they employ in participating in the physician-patient relationship. Your profession, through its local, State, and national organizations has scrutinized, and appropriately so, these methods for many years. You have approved some and you have actively opposed others. As I understand it there are many different points of view as to whether a given plan or method is beneficial or detrimental to the traditional physician-patient relationship.

This is a fundamental issue that has beset many Members of Congress, and especially the members of our committee, in the consideration of the many proposals, and I might say, demands which we have had in matters of public health. I am personally concerned about the trend in the thinking that goes into these legislative proposals but want to emphasize here that this is the fundamental principle involved between the traditional system, the freedom and unrestrained relationship on the one hand and governmental interference, or often referred to as socialized medicine on the other.

As new third parties appear on the scene, new issues will be raised for some time to come and perhaps the debate will become heated in particular cases to the point where some of these controversies will, as they have in the past, reach the courts, State legislatures, and the Congress of the United States.

There are other third parties that are not thought of quite as frequently as third parties because their attempts to influence the traditional physician-patient relationship are of a different character. I have in mind drug and pharmaceutical firms on the one hand and foundations and voluntary associations operating in the health field on the other hand. The committee has received a number of interesting communications from members of your profession pointing to the increasing amount of advertising engaged in by some pharmaceutical firms addressed to the public in general. The purpose of this advertising obviously is to create a demand on the part of the general public for particular drugs. Some of these drugs may be sold on prescription only. Therefore, such public advertising is aimed at creating a demand on the part of the patients that physicians prescribe particular drugs. Thus, the pharmaceutical houses engaged in such advertising seek to influence the physician-patient relationship. Some physicians who have communicated with our committee have suggested that such advertising constitutes an unwarranted interference on the part of the particular drug manufacturer in the traditional physician-patient relationship. It is my understanding that the problems have been the subject of study by a special committee established by the American Medical Association. If these practices continue and increase in frequency, our committee too may desire to study how these practices affect the public welfare, or should I say public tranquility.

Public demand for particular drugs, or biological products, is created not only on the basis of public advertisements. Foundations and voluntary organizations concerned with particular diseases aim at reaching the public to arouse interest in these specific diseases and to stimulate their prevention or cure. In some instances substantial differences of opinion have arisen on the part of medical experts, whether a vaccine or a pharmaceutical or biological product is safe and efficacious and whether it should or should not be given to patients. There might be further disagreement among medical experts with regard to the methods which should be employed in applying the vaccine or the pharmaceutical product. The direct contact however which a foundation or other organization may have with the general public may greatly influence traditional physician-patient relationships. We cannot easily forget an experience so recently had which pointed out so forcefully this particular problem.

So, you can see we have a multitude of third parties which seek to participate in the physician-patient relationship. Some of the third parties have become generally accepted by physicians and patients. As to other third parties the situation is often not so clear, and this is particularly true with regard to some of the more recent third parties whose potential power for good or evil is very great indeed. As an example, you have the existing contentions which have arisen recently on certain kinds of prepayment plans.

It is impossible for me to discuss the benefits and disadvantages, both actual and substantial, of all the third parties that I have referred to so far. Therefore, I would like to single out for attention one third party to whose role with regard to the traditional physician-patient relationship I have given particular thought—and I refer to the Federal Government as a third party in medicine.

How are we to judge the role of the Federal Government as a third party? In order to do this we must be ever mindful of the nature of the physician-patient relationship.

In spite of the general tendency toward increasing specialization on the part of the medical practitioner, modern medicine appears to stress more and more the interrelationship of all human functions and the need for dealing with the whole person of the patient. This concept of medicine requires more than ever a peculiar relationship of confidence between patient and physician. Any attempt to make this relationship of confidence over into a service which can be routinized or standardized and which may be purchased at a going price in the market place can only result in destroying that relationship. This does not mean, however, that ways and means might not be found in the future by the medical profession on the basis of carefully conducted experiments of facilitating the rendering of medical services through the utilization of new and improved methods of prevention, diagnosis, and treatment.

If this personal relationship of confidence is to be preserved—and I, for one, am determined that it will be—it follows that the role of the Federal Government as a third party in that relationship must be carefully circumscribed if it is to further and not harm that relationship.

We might postulate, first, that the Federal Government should not play any "third party" role unless there is a clearly demonstrated actual need for such a role, and unless there is substantial agreement that such need cannot be met in any other way.

Secondly, we might say that after the actual need has been clearly demonstrated, and after substantial agreement has been reached that the Federal Government should become a "third party," then the needs should be met, wherever possible, through indirect rather than direct methods. In other words, the Federal role should not be, except in special circumstances like in the case of our Armed Forces, for example, to provide medical services but to help provide the facilities in which, or to create the conditions under which, physicians are enabled to furnish the needed material services without further participation of the Federal Government.

I believe that these two yardsticks—the yardstick of clearly demonstrated actual need and the yardstick of indirectness—have been employed by the medical profession in judging the merits—or the lack thereof—of health legislation. Those legislative programs which the medical profession has supported in the past, such as programs for Federal aid in the construction of hospitals and research facilities, have met this dual test of need and indirectness.

Another program which is pending before our committee, calling for Federal aid for the construction of medical school facilities likewise appears to meet these two tests and thus is receiving your support. Even though there is great urgency for this program to meet an emergency with the economy wave and the consciousness of ever great Federal responsibilities I have as chairman of the Committee experienced difficulty thus far in getting off of the ground with further authorization. Our committee has observed the caution sign emanating throughout the country.

The fact that in the case of some programs the Federal Government is an "indirect third party" does not mean at all that it is an "insignificant third party." Take the appropriations for the National Institutes of Health for medical research. These have grown over a 20-year period from slightly less than one-half million dollars in 1938 to more than $220 million in 1958.

In the case of the Hill-Burton program, Federal funds appropriated for the current fiscal year amount to $125 million, and the budget request for the next fiscal year is only slightly less. Since the inception of the program in 1946, the Congress has appropriated over $937 million for the construction of hospitals.

On the other hand, plans calling for compulsory health insurance which would have resulted in a substantial curtailment of the independent character of private insurance carriers and prepayment organizations have met with your spirited opposition, and I can

truly say, mine too, consistently. I venture to say that in regard to that proposal you probably felt that there appeared to be no clearly demonstrated need for such a far-reaching program, and that the methods proposed in these measures directly injected the Federal Government as a "third party" in physician-patient relations.

Finally, let me say that in my judgment the Committee on Interstate and Foreign Commerce, whenever health legislation comes before it for consideration, will exercise the greatest care to see to it that the Federal Government does not unnecessarily become a "third party" in medicine. When a need for Federal participation has clearly been established, the Committee will examine the proposal to determine whether the methods by which the Federal Government would be called upon to participate are such that they will not adversely affect the all important relationship of confidence that must exist between physician and patient.

I want to remind you, however, that the American people have always felt free to call upon Congress to act in any area of their lives if they feel that a need for action exists. As you well know, a considerable amount of public attention has been focused on the high cost of medical care (of which doctors' fees are only a part). If the American people should feel that large segments of the population, as for example, the aged or the chronically ill are unable to secure adequate medical care because the cost of such medical care is beyond their ability to pay, then they will call upon the Congress to meet these needs.

In this respect the American people have changed little if any since the days when the famous Frenchman, Alexis de Tocqueville, visited these shores. Upon his return to France in 1830 he wrote: "These Americans are the most peculiar people in the world. You will not believe it when I tell you how they behave. In a local community in their country a citizen may conceive of some need which is not being met. What does he do? He goes across the street and discusses it with his neighbor. Then what happens? A committee comes into existence and then the committee begins functioning on behalf of that need."

Today, when individual needs remain unmet, through the efforts of private groups or through local or State government programs, the outcry to have something done in behalf of these needs reaches the Congress with increasing frequency.

I hope that some of the serious health needs to which I have referred can be met by your profession with the aid of private third parties. If they are not met in this manner, public pressure will be growing steadily at enlarging the area in which the Federal Government should participate as a "third party in medicine." The dangers inherent in such expansion of the Federal role in medicine are very real indeed, and much is at stake for your profession. I am confident, therefore, that you will not slacken in your effort to participate actively in trying to meet some of these urgent needs.

Politics and Defense

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mrs. DWYER. Mr. Speaker, in the May 30 edition of the New York Herald Tribune, Columnist David Lawrence wrote what I believe to be the best summing up to date of the actions by the House last week in slashing the defense appropriations.

I was among the minority who voted against these cuts. I did so because I believed our President—certainly one of the great military leaders of history—had more knowledge and more experience to sustain his words of warning against major defense cuts than we in the Congress had to support our stand.

I heeded the President's warning that any major cuts in these appropriations would seriously endanger our defense efforts; I believe the majority of the House, in ignoring that warning, has gambled with the security of our Nation.

I believe it would be well for every Member of this body to study Mr. Lawrence's column. For that reason, I am inserting it in today's CONGRESSIONAL RECORD.

The column follows:

HOUSE DEMOCRATS' NAY VOTE ON DEFENSE LAID TO POLITICS

(By David Lawrence)

WASHINGTON, May 29.—The rollcall vote they took in the House of Representatives today was a most telltale affair, pointing up how capricious are the wiles of modern politicians.

For it reveals the deliberate strategy of the Democratic Party in Congress to play politics with the national-defense budget in the hope of embarrassing the Eisenhower administration at the polls in the 1958 congressional elections.

There were 203 Democrats who voted against the President's request to restore certain items that he felt were necessary for the Military Establishment. Only 11 Democrats went along with the President. Even if the 39 Republicans who didn't vote with the President had joined with the 140 Republicans who supported his proposals, the total vote would have been only 179. Adding the 11 Democrats would have made the total 190—still not enough to overcome the solid bloc of 203 Democratic votes against the President.

SUCH UNITY HELD UNUSUAL

It is most unusual to find on military matters such a unity in any political party. The 39 Republicans who differed with the administration for a variety of reasons constitute a minority of the Republican Party, and it is rare indeed for the party in power or the opposition party to command complete support from its respective membership. What is significant is that this time there were only 11 Democrats who dissented from party discipline and went along with the request to sustain the military planning of the President. Why did 203 ignore the request of a President who is himself a military man and whose recommendations are based on the best judgment of military advisers dedicated to the Army, the Navy, and the Air Force and who are not themselves involved in partisan politics?

One reason for the curious lineup in which the Democrats recorded 203 votes against the President is that it seemed to most of them a clever way to put Mr. Eisenhower at a political disadvantage before the country—to discredit his leadership, if possible.

A "BOOKKEEPING" MATTER

But actually, it will be asked, will the vote hurt the military program seriously? The answer is that nobody knows what international emergency at any moment may catch us short of equipment and manpower, as happened when the Korean war broke out. The Democrats who voted to cut the appropriations for the military services were assured by their leaders that no real damage was being done because the cut is largely a "bookkeeping" matter. Thus, out of the $2.5 billion which the headlines will announce as having been cut from the President's request for funds for the next fiscal year, more than half, it is conceded, represents transfers or postponements of projects. Later on, in the next fiscal year, the usual deficiency or supplemental bills will be offered and a large part of the cuts may be restored. That's been the practice in the past but, meanwhile, the "cut" makes a good showing, politically, and the Democrats feel they will gain votes by their performance.

Actually the record of the last 8 years is that the final appropriations in every fiscal year were in excess of the amounts first given approval by Congress. The following shows these increases:

In 1948 by $6 billion, in 1949 by $3.7 billion, in 1950 by $6.2 billion, in 1951 by $7.6 billion, in 1952 by $1.7 billion, in 1953 by $2 billion, in 1954 by $3.3 billion, in 1955 by $900 million, in 1956 by $2 billion.

SPENDING HARD TO GAGE

The net effect is to make it difficult to gage the spending from year to year. Many people do not know that, when contracts are let and firm commitments are made, the fulfillment of the projects extends beyond 12 months. This carryover of unspent funds, held in reserve to pay for uncompleted work, cannot be utilized unless the work in process is discarded altogether, with huge losses of the initial expenditures.

The division today between the executive and legislative branches of the United States Government is unparalleled in the world. There is no way to fix responsibility here in either party. If a war broke out in the near future—whether a local war or a big war—the executive would have to fight the war with the inadequate tools and insufficient manpower voted by the Congress. If the same party were in control of both branches of the Government, there would be little opportunity for playing politics with national defense. The dissenters in both parties would offset one another.

The failure of the voters to elect in November 1956, a single party to control both Congress and the Executive may yet prove the most costly blunder in American history. For the military program is being disarranged and delayed at a time of crisis in world affairs while a vote of lack of confidence in the Executive is broadcast to the world, including the enemies of the United States.

The Mobilization of International Forces by the United Nations

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert portions of the address, The Mobilization of International Forces by the United Nations, by Ernest A. Gross, former United States representative at the United Nations, given Monday, June 3, 1957, in Pittsburgh, Pa., at the annual Peaks of Progress breakfast given by Kaufmann's Department Store for a distinguished group of the civic and educational and business leaders of Pittsburgh and Western Pennsylvania.

The address follows:

THE MOBILIZATION OF INTERNATIONAL FORCES BY THE UNITED NATIONS

There has never been a time in history when men have been free from the menace of aggression. There probably never will be. And when I use the word aggression, I think not only of prowling imperialism or dictatorship, but I refer also to those equally ancient enemies of man—hunger, disease, illiteracy, and despair.

But even though, as the French say, the more things change the more they stay the same, it is true that even in the political life of nations there can be something new under the sun.

There are at least two facts of international life which mark our world today which all must agree are unique and unprecedented in the long history of mankind. One of these facts is what I would call the new-found power of the individual. For the first time, all over the world, vast multitudes are attempting, in their own lifetime and through more or less organized effort, to achieve higher standards and to live richer and more meaningful lives. In fact, most are less concerned about where the next invasion is coming from, than where the next meal is coming from. The other unprecedented fact is the new-found power of the atom.

Is this a force for good or evil, for war or peace, for extinction or survival?—these are the questions the atom asks us.

We are expected to find answers to these questions in a rapidly shrinking but divided world, overshadowed by the threat of Communist imperialism. In face of these complex and clashing problems, some people are inclined to seek escape from reality. Some time ago I heard a radio commentator wind up an analysis of foreign policy with the impassioned announcement: "There is no other way out—we must have peace, whether the Russians like it or not."

Frustration may be a good cellar in which to hide, but we have been given a role to play—whether we like it or not—which requires somewhat more initiative than crouching in a cave.

Peace connot be achieved by incantation. It must be built.

I hope you will agree with me that this introduction does have a direct bearing on the purpose for which we meet this morning. The mobilization of international forces by the United Nations is being celebrated as the most important human achievement during the past 12 months. I believe that future historians will fully confirm the wisdom of the committee of eminent Pittsburghers who have selected this achievement as a peak of progress.

This is so, not only because of the hard practical value of the development of the United Nations Emergency Force but also because of its symbolic importance and the promise it holds for the future—as part of the effort to make the United Nations a more effective force for peace and justice.

It seems to me to require an unusual degree of scepticism to regard it as a mere coincidence that the United Nations came into being at the precise moment of history when atomic force was unleashed. The charter was signed in San Francisco on June 6, 1945. Four weeks later the first atomic bomb, produced at Los Alamos, was exploded in the desert. That same month the United States Senate ratified the charter, just 1 week before Hiroshima was destroyed.

It would not be accurate to say that the creation of the United Nations was a direct response to the challenge of atomic force. Indeed, very few people were aware of this new fact of international life when the charter was signed in San Francisco. But I believe it is fair to say that the same creative power, the same surge of human effort and the same outreaching for the secrets of mind and of nature, accounted for the one as for the other.

However, the United Nations today is a different organization from that which the successful wartime coalition built 11 years ago. There was never any doubt that the veto, if abused, could gravely limit the effectiveness of the United Nations. This did not deter all of the big powers—ourselves included—from insisting upon reserving the veto power. Soviet abuse of the veto has gone much further than anyone anticipated. It has greatly impaired and indeed deformed the organization. Nevertheless, the abuse of the veto is not a disease of the charter. It is a symptom of the disease of nations and in particular of the one nation which has from the beginning failed to carry out its obligations.

Another casualty of the Soviet revolt against the charter is the original plan to set up United Nations military forces. Observation of the death struggles of the League of Nations had shown that no nation could feel secure unless there were brought into being a system of general or collective security. It was also understood that an important element of such a system was to place armed forces at its disposal. It is difficult to see why this should have come to anybody as a surprise. Throughout history, people had been finding it out the hard way in their own villages, cities and nations.

The refusal of the Soviets to go along with what the rest of the world regarded as reasonable proposals, nevertheless, destroyed the original grand design; the World Organization has not been vested with actual preponderance of military power for peace. Again, this is not a state of affairs which one can blame on the United Nations or on mechanical defects of the charter. Like the abuse of the veto, it is a symptom of the disease of nations. However, history does not stop because solutions are hard to find.

In fact, the lessons of history show that, like forging iron, problems can sometimes be hammered into shape while they are red hot. Palestine and Korea are examples.

The Soviet Union, which had obstructed for so long the creation of any machinery to enforce peace, unintentionally set that machinery in motion when it pushed the button for the unprovoked aggression against the Republic of Korea. Their absence from the Security Council was a fortunate circumstance from the standpoint of speed—although I cannot agree that we would not have been able to move if they had been present. As American representatives to the Council on June 25, 1950, I can attest that if the Soviets had shown up that Sunday at the meeting, we would have convened the General Assembly forthwith.

However, the important point is that we did move—and the free world marched in step with us. For the first time in history, military forces were mobilized by a world organization, placed under a unified command and charged with a collective responsibility. And the resolution calling upon the aggressor to withdraw was enforced under the United Nations flag.

But the cumbersome procedure, the difficult improvisations and the inadequate degree of material contribution from our friends, all this made it clear that although overt Communist aggression had been checked, much more needed to be done if security was to be more than the shadow of an idea.

One big stride was taken in November 1950—the year of Korea. The uniting-for-peace resolution was approved by the General Assembly of the U. N. The aim of this was clearly expressed in the document itself: Responsibility of the Assembly is not ended because of the failure of the Security Council to discharge its duty to maintain peace. Abuse of the veto, in other words, can obstruct the U. N., but it will not be allowed to suffocate it.

The three major steps required were also set forth: Observation which would ascertain the facts and expose aggressors; the existence of armed forces which could be used collectively; timely recommendation by the General Assembly to members of the U. N. for collective action.

If we are forced to note that we have only stumbled and faltered in the direction marked out by the uniting-for-peace resolution, we must also realize that it is precisely the event we are celebrating today which constitutes the first real stride toward that goal.

There are some who belittle the achievement, who are inclined toward the view that the U. N. can ever be anything much more than a debating society. Yet, practical minds are more often than not the best source of lofty ideals.

To those who are cynical, it may be of interest to hear a sentence from a letter to former Secretary-General Lie, sent by a person whose reputation shields him from charges of softheaded one-worldism:

"It is my personal view confirmed by many thoughtful men who have conferred with me that you should now proceed vigorously to provide within the structure of the United Nations a permanent supreme military command adequately staffed to develop and maintain current, on a global basis, strategic and logistical plans designed to effect the immediate deployment of the available military force to meet any emergency situation and to keep the United Nations constantly informed on the military aspects concerning any area of actual or threatened trouble."

This was the studied opinion of one who had some familiarity with military affairs in general and Korea in particular—Gen. Douglas MacArthur.

P. G. & E. Co Has Been Biggest Beneficiary of Central Valley Project Low-Cost Power

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. ENGLE. Mr. Speaker, in its efforts to grab off the Trinity project power facilities for its own benefit, the P. G. & E. Co. has made a big fuss about Central Valley project power being given to a favored few at subsidized rates. Of course, as I have pointed out many times previously, the CVP power operations are not subsidized, and as a matter of fact, Central Valley project power is paying its way with interest, is financially aiding irrigation development, and in addition is returning a nice profit to the Federal Government. However, the power is marketed, pursuant to existing law, at the low rates compared to P. G. & E. rates.

If the energy is going to a favored few, then the Pacific Gas & Electric Co. must be particularly favored because, over the 13-year CVP operating period, the P. G. & E. Co. has received 80 percent of all the energy generated while preference customers have received about 10 percent, with the other 10 percent going to Federal agencies and project use. The

P. G. & E. Co. has profited greatly by this purchase from the Central Valley project of 19.2 billion kilowatt-hours at an average of 3.7 mills per kilowatt-hour and the disposal of this energy at from 2 to 4 times that amount.

For the information of my colleagues, I am including an excellent editorial on this subject from the Sacramento Bee:

LOOK WHO IS RECEIVING THIS SUBSIDIZED POWER

In its efforts to defeat the Government generation of electricity the private power lobby has been trying to make the public think the taxpayers in general are subsidizing the low rates enjoyed by those who receive electric energy from the Federal projects.

This attempted brain washing is, of course, sheer nonsense since the power sold from the Government undertakings pays back all the money advanced from the Federal Treasury, plus interest, plus operation and maintenance costs, plus replacement and in nowise is a charge against the taxpayers.

But it is interesting to note that if purchasers of Government power are "subsidized," the biggest subsidy from the Central Valley's project has been going to the privately owned Pacific Gas & Electric Co.

Since its generators first began turning, the Central Valley's project has developed 23,900,000,000 kilowatt-hours of electricity.

Of this amount the Pacific Gas & Electric Co. got 19,200,000,000 kilowatt-hours.

Only about 3,700,000,000 kilowatt-hours went to Government installations and public agencies such as the Sacramento Municipal Utility District and for project use.

In March the Pacific Gas & Electric Co. promoted large advertisements in support of the so-called partnership on the Trinity River. These stated:

"Don't be fooled by those whose purpose is Government distribution of power. They want the Government to build the power-plants and transmission lines and sell power on a Government-ownership basis. This would result in an unnecessary burden on taxpayers and water users, and use of electricity at subsidized rates by only a favored few."

In view of the fact the Pacific Gas & Electric Co. has received more than two-thirds of Central Valley's project power, a good question is who is fooling whom?

What should interest the customers of the Pacific Gas & Electric Co. very much is that the publicly owner Sacramento Municipal Utility District is selling its share of Central Valley project power at rates about 30 percent lower than those of the privately owned utility.

And the Pacific Gas & Electric Co. currently is asking the public utilities commission for another 6-percent rate increase.

Waste and Fantasy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. MULTER. Mr. Speaker, the following editorial, which appeared in the Wall Street Journal of May 29, 1957, is most timely:

WASTE AND FANTASY

Some years back Variety, the show business weekly newspaper, reported that among movie offerings as part of the United States Information Agency's attempts to win men's minds the one called Christmas in Vermont proved quite popular among unenlightened natives who had never seen snow. The Fulton Fish Market and Window Washing in the Empire State Building weren't quite up to the snow scenes.

And not so many years ago Mr. Eugene Castle noted in a book which listed some of our more unusual foreign aid ventures that, when USIA propagandists needed a headquarters in Paris they bought a Rothschild palace.

These criticisms come to mind because of a statement by Mr. Abbott Washburn, Deputy Director of USIA, about crippling the Agency's operations. USIA wanted $140 million for spending in fiscal 1958, compared to $113 million for fiscal 1957 and to $87 million for fiscal 1956. The House cut the most recent request to $106 million and the Senate went even further. Mr. Washburn says that while his agency can do a relatively effective job on the money the House would allow, the Senate figure of $90 million will cripple operations. So the joint conference committee gave USIA $96.2 million.

Whether USIA—admittedly a propaganda instrument—has ever done or can ever do an effective job will be forever debated, we suppose. What, however, seems to be beyond argument is that whatever sort of job it does could be done far less expensively and expansively than USIA did it in the past.

We say that because when it was engaging in such fantastic waste as buying a Rothschild palace and in such wasteful fantasies as trying to win the battle for men's minds with free movies about the Fulton fish market and snow scenes in Vermonth, it was getting by on considerably less than what it now says would cripple its operations.

Atomic Giveaway

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an article by William Henry Chamberlin which appeared in the Wall Street Journal on May 14:

ATOMIC GIVEAWAY—THE GLOBAL AGENCY FOR PEACEFUL NUCLEAR DEVELOPMENT COULD POSE A SERIOUS THREAT TO UNITED STATES SECURITY

(By William Henry Chamberlin)

There has been far less discussion of the atomic giveaway program involved in United States membership in the International Atomic Energy Agency than the importance of the subject demands.

The alluring slogan, "Atoms for Peace," and the sponsorship of the Agency by the President and other high officials have tended to stifle doubts, or at least the open expression of doubts. But there are some disquieting features about this scheme, which seems better adapted to an age of far-reaching international confidence and good will than to the real world of the cold war and hostile coalitions.

Here are some of these disquieting features which, it is to be hoped, will be thoroughly canvassed during the current hearings and during the Senate debate preceding the vote on whether the United States should enter the Agency.

First, we shall be in the invidious position of a "have" Nation subject to the voting control of a majority of "have-nots." The Agency, to which 80 nations have given initial endorsement, is organized on the principle of one nation, one vote. The United States is expected to contribute to the Agency information, scientific and technical personnel, fissionable material, and money.

Very few of the other member nations will be in a position to contribute any of these things. Yet their votes can control the distribution of our contributions. This might lead to consequences that would startle American public opinion, to say the least.

There is nothing to prevent the Agency, by majority vote, from admitting Red China to all the benefits of have-not membership. Nor is there anything to prevent part of the 11,000 pounds of enriched uranium, which the United States has already promised to make available to the Agency, from being shipped to the Soviet Union, to Red China, or to any Soviet satellite state.

GROTESQUE POSITION

It is somewhat grotesque that this country simultaneously imposes so many restrictions on exports of strategic material to the Soviet bloc and to Red China and leaves such a large loophole open for the shipment of uranium, surely the most strategic material of all.

Second, the difficult if not impossible problem of control is not clearly solved under the terms of establishment of the Agency. The enriched uranium which this Government has already promised to make available is supposed to be for nonmilitary use. But it is scientifically possible to convert uranium of this type into fissionable material for A-bombs.

The only safeguard against this would be a system of continuous close inspection to which Communist nations have been extremely allergic in the past. Nothing less than such inspection would afford any guaranty that the United States was not supplying its enemies with the deadliest kind of munitions.

Third, the sanctions which can be invoked in the event of breach of the agreement seem inadequate. All the Agency can do in the event of violation is to cut off the supply and report the affair to the United Nations. There have been many occasions when it was impossible to get a clear-cut decision from the United Nations. The Agency could do nothing if the nation guilty of violation should seize the material and throw out the Agency's inspectors.

Fourth, the establishment of an International Atomicy Agency could set a precedent for other international bodies, dealing with electrical power, steel, wheat, cotton, or almost any foodstuff or raw material under the sun. In any such body the United States would have the same unfavorable position of a have among the have-nots.

What makes United States membership in the International Atomic Energy Agency still less desirable is that there is an entirely safe means of realizing the benefits which are supposed to flow from the Agency. The United States has already concluded almost 40 bilateral agreements with friendly countries looking to cooperation in atomic research and in the construction of power reactors.

CHANCE TO CHOOSE

The advantages in the bilateral approach are that the United States is in a position to choose which countries may be helped without risk to American national security and to impose safeguards which seem adequate in the judgment of the men charged with responsibility for America's own atomic program. Both these advantages would be forfeited if the United States should enter the International Agency, which maintains complete control over all the fissionable material it receives.

An International Atomic Energy Agency of the type now proposed might well be a logical development in a world where national differences had been reduced to a minimum, where there was no fear that some nation or group of nations might have the design of using the terrific destructive power of nuclear weapons to achieve world domination. This is not the situation, at the present time.

It is a very curious sense of relative values that makes the administration throw as many roadblocks as possible in the way of American newspapermen going to Red China and haggle with other powers over what is permissible for exports to China and the Soviet bloc and at the same time support a scheme which could result in the transfer of such a vital nuclear material as uranium to Communist countries. If this is not possible under the constitution of the Agency, it is the obligation of its administration sponsors to explain why it is not possible.

SPEED IN MOSCOW

The suggestion is now being made that the recent Soviet ratification of this plan should hasten its approval by the United States Senate. But it could certainly be argued with equal plausibility that any scheme accepted with such unusual speed in Moscow should receive long second look in Washington. Just because there has been so little advance discussion of the International Atomic Energy Agency, every detail of the project should receive a thorough going over at the hands of independent-minder Senators.

The apparent defects should at least inspire some sweeping reservations, if it is not decided that they warrant the scrapping of the whole project.

Brooklyn Is Seventh Among Nation's Leading Industrial Counties

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. ROONEY. Mr. Speaker, the following interesting article was published in the May 1957 issue of Highlights, put out by the New York City Department of Commerce and Public Events:

KINGS IS SEVENTH AMONG NATION'S LEADING INDUSTRIAL COUNTIES

Kings County—Brooklyn—is seventh among the leading industrial counties of the United States. Its total volume of employment in industrial countries in 1954 was outranked only by Cook County (Chicago); Los Angeles County; New York County, and Cuyahoga County (Cleveland), in that order.

In New York State, Brooklyn ranks second to Manhattan among the most highly industrialized counties. The volume of manufacturing employment in 1954 exceeded that of Erie, the State's third leading manufacturing county, by nearly 59 percent.

These data are a result of a City Department of Commerce analyses of a New York Commerce Department report on trends in Brooklyn's manufacturing industries.

Brooklyn accounted for nearly 25 percent of New York City's total manufacturing employment and value added by manufacture. The stability of diversity of the borough's industrial structure is cited as the principle reason. A view of the development of Brooklyn from 1899 (when sugar and molasses refining accounted for 86 percent of New York State's production, and cordage and twine for 52.5 percent of the State's manufacturing in this category) discloses that little change in Brooklyn's total share of industry has taken place since 1899.

Nineteen of the twenty major manufacturing groups are represented in Brooklyn, and employment in 1954, the last available census figures, showed that industry was concentrated in five broad lines:

	Percent
Apparel and related products	24.4
Food and kindred products	13.3
Machinery	10.7
Metal products	10.4
Miscellaneous manufacturing	9.8
All other industries	31.4

Since 1899 the pattern of the borough's industry has shifted.

In 1947, the latest census of manufacturers figures it is recalled that Brooklyn produced 63.6 percent of New York State's ships and boats; 39.2 percent of beverages; 37.1 percent of special industrial machinery, and 36.3 percent of paints and allied products.

By employment, Brooklyn's major industry is apparel and allied products which represent 24.4 percent of total borough employment. Second, is food and kindred products with 13.3 percent, third is miscellaneous, including ordnance, representing 9.8 percent, and fourth is fabricated metal products, representing 9.1 percent.

Four of the seventeen major industry categories in Brooklyn showed a decline in the number of establishments: Chemicals, losing 3 plants; apparel, losing 10; stone, clay, and glass, dropping 16, and leather and leather products, 45.

A New York City Department of Commerce and Public Events survey discloses that 575 industrial structures were completed in Brooklyn from 1946 to 1956, 34.5 percent of the city total. Brooklyn was second among the 5 borough in the addition of new factory buildings, being outranked by Queens which added 782 during this period, 47 percent of the 5-borough total.

Census of Manufactures data on new plant and equipment expenditures discloses that Kings County ranked third in New York State in 1947, following, in order, Erie and New York. During this period Kings County (Brooklyn) spent $53,471,000 or 10.7 percent of the State total of $497,443,000. In 1954 Kings County spent $45,032,000 or 7.8 percent of the State total of $572,125,000.

Resolution of the Union of American Hebrew Congregations

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the texts of the resolutions adopted by the 44th general assembly of the Union of American Hebrew Congregations, which met in Toronto, Canada, from April 28 to May 2, 1957.

The Union of American Hebrew Congregations is the parent body of 540 reform synagogues throughout the United States and Canada and, since its inception in 1873, the union has sought to apply the majestic moral principles, which underlie both religion and democracy, to the crucial issues of the day.

These resolutions were recommended by the Commission on Social Action, whose membership is drawn from the Union of American Hebrew Congregations, the Central Conference of American Rabbis, the National Federation of Temple Sisterhoods, the National Federation of Temple Brotherhoods and the National Federation of Temple Youth. It has been my happy privilege to serve as a member of that commission for many years.

The resolutions are as follows:

RESOLUTIONS OF SOCIAL ACTION SIGNIFICANCE ADOPTED BY 44TH GENERAL ASSEMBLY OF THE UNION OF AMERICAN HEBREW CONGREGATIONS, TORONTO, CANADA, APRIL 28–MAY 2, 1957

DISARMAMENT AND WORLD PEACE

One of the most sacred of our Jewish religious teachings is the messianic vision of universal peace. In this nuclear age, this vision has become a sheer necessity if total world suicide is to be averted. With undimmed faith in man's capacity to establish God's kingdom on earth, we rededicate ourselves to the pursuit of lasting peace with justice. Accordingly, we:

1. Commend the efforts of the United States, Canada, and other governments toward the achievement of universal, enforceable disarmament, and we urge that all such efforts be carried forward with the utmost urgency, imagination, and flexibility.

2. Call upon our congregations and social action units to continue earnest study of the problems threatening world peace. Such active concern is incumbent upon all who seek to translate religious principles into action.

3. Urge the Union of American Hebrew Congregations to join hands with other religious groups in strengthening the United Nations and advancing the ideals of universal peace.

Believing that the achievement of an enduring and just peace is the paramount moral issue on the agenda of mankind, we pledge our energies and our resources to this indispensable religious task.

SEGREGATION LAW AND ORDER

The Union of American Hebrew Congregations reiterates its unequivocal support of the United States Supreme Court decisions banning racial segregation in the public schools, as set forth in the resolution adopted by the 43d general assembly.

SEGREGATED HOUSING

We recognize that racial segregation is not a problem which applies to one section of the country only, but that it presents a moral challenge to every community in America with varying forms and intensity. One of its serious and widespread expressions is in residential housing. In the North, as well as in the South, the continuing pattern of segregation in private housing threatens to invalidate much of the progress which has been made in civil rights in recent years and, also, to impair the spiritual values of religion and democracy alike. We therefore commend those Christian denominations which have recently met this challenge with boldness and courage by calling upon their members to open housing on a nondiscriminatory and nonsegregated basis. By their action these church groups have pointed to the path of religious duty.

In this spirit, the Union of American Hebrew Congregations herewith pledges its support to the principle of equal housing opportunities for all and urges the members of its constituent congregations to follow nonsegregated practices in the selling, buying, and leasing of residential housing. By such action, we will contribute significantly to the strengthening of democracy, to the moral health of our communities, and to the real-

ization of the prophetic principles of our faith.

CIVIL RIGHTS

At its last general assembly, the Union of American Hebrew Congregations urged our Government to take measures for protection of the civil rights and civil liberties of all Americans. President Eisenhower's civil rights program is an important forward step in the safeguarding of these rights and liberties.

Our union fully endorses the President's program and urges the Congress to enact it speedily into law.

IMMIGRATION

We feel constrained to express our deep disappointment over the decision of the Administration not to admit to the United States a fair number of refugees from Egyptian persecution. This decision, as stated by Deputy Attorney General Rogers on April 18, was that the President would not exercise the parole authority of our immigration law in behalf of the Egyptian refugees.

This indifference to the tragic plight of the innocent victims of Nasser's inhumanity stands in sharp contrast to the prompt and generous succor offered with the warm support of the American people, to those who fled from Communist tyranny in Hungary. There is no justification in law or in morality for such a double standard. The United States failure to aid Egyptian expellees is unworthy of the great American tradition of asylum. The United States should do no less to ameliorate this human tragedy than have other free nations, notably Canada, which has sent a mission to Cairo to facilitate family reunions on Canadian soil for the victims of Egyptian terror.

We urgently request the President of the United States to reconsider this decision so that the United States may open its doors to a fair portion of the hapless refugees from Egypt.

AMERICAN COUNCIL FOR JUDAISM

The American Council for Judaism has, through official statement and by publications of its representative leaders, repeatedly slandered the U. A. H. C., misrepresenting our positions and casting aspersions on the American loyalty of our adherents. The U. A. H. C. has, until now, remained silent, in the face of these untruthful accusations. But, in view of the most recent attack, continued in a letter to our president which was further released to the public press in advance of its receipt by Dr. Eisendrath, we are constrained to make the following statement:

1. We recognize the right of the American Council for Judaism to freedom of opinion and expression; but we insist that the great majority of individuals and congregations which compose our Union have the same right of opinion and democratic action.

2. The American Council for Judaism misrepresents historical Judaism as well as what it calls "classical Reform Judaism." There is no antithesis between Judaism as a religion, and Jews as a people.

3. The American council has wantonly impugned the national loyalties of all those Jews who disagree with it. We insist that the Jews of Canada and the United States are properly interested in and concerned for the State of Israel without, in the slightest degree, diminishing their abiding loyalty to their respective countries.

4. The American Council for Judaism has furnished material for professional anti-Semites, who have publicly endorsed its position, and has played directly into the hands of Arab propagandists.

5. In a number of communities, representatives of the American council have employed morally reprehensible methods to undermine existing congregations and to introduce division and discord into them.

Therefore, this General Assembly of the U. A. H. C. declares that the view of Judaism held by the American council is at variance with the view of the overwhelming majority of Reform Jews in the United States and Canada. We shall continue to uphold the positive ideals of Judaism in general and of Reform Judaism in particular, without fear or hesitation.

Steel's Second Century

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. MADDEN. Mr. Speaker, last year, 1956, Gary, Ind., now a city of 170,000, celebrated its 50th anniversary. Today it is in the heart of the greatest industrial region in America, the Calument region of Indiana.

The following is an editorial from last Sunday's edition of the Gary Post Tribune:

STEEL'S SECOND CENTURY

The beginnings of the modern steel industry are reckoned from the time a century ago when Sir Henry Bessemer in England and William Kelly in Kentucky developed nearly identical ways of producing steel quickly, cheaply, and in large quantities.

A lot has happened in the last century. Steel is the industry that has put backbone in our fabulous skyscrappers all across the land, has flung 60 million cars onto our streets and highways, has provided the sturdy frame for our multiplying factories and made our homes into veritable workshops of automatic machinery.

American steel also was the tough muscle that enabled this country and its allies to strike victorious hammer blows at the enemies of freedom in two World wars. Today it provides the core of our continuing effort to keep new aggressors in check.

As early as 1890 the United States steel industry has pushed to the fore in the world. By January of this year, our steelmaking capacity had attained the record level of 133.5 million tons annually, or about 40 percent of the world's total.

The industry employs 675,000 persons in 270 communities, spread over 31 States. Obviously it is basic to the American economy as is no other activity.

If a look back is satisfying, a look into the next 100 years is just as pleasing. Benjamin Fairless, now head of the American Iron and Steel Institute, foresees structural marvels of stainless steel lending a wholly new aspect to our great metropolitan centers. He envisions, too, that steel will play a vital part in the revolutionary developments that will bring incredible air transport speeds, still wider use of electronics, solar energy, and atomic power in industry. The steelmakers' laboratories already are researching special steels to assist these advances.

For the industry, the real problem is how to build fast enough, how to finance and construct the added facilities that the expanding economy must have, and how to get the trained manpower for their operation.

Individual companies are going forward with programs extended over varying periods of years. Overall, however, their projects indicate investment in new plants and equipment may average arountd $1 billion a year for the next decade.

American steel's first century has been one of the wonders of industrial civilization. Its second hundred years promise a new cavalcade of progress that should help to lift the living levels not only of Americans but of many who live beyond our borders. And the Calumet will make a steadily increasing contribution to the advance. Last week's announcement of a new mill for Gary Works is further evidence of that.

Guy Bizzell Top Teacher

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. THORNBERRY. Mr. Speaker, Mr. Guy Bizzell, high school speech and English instructor, A. N. McCallum High School, Austin, Tex., has been named as a cowinner of the Teacher of the Year award sponsored by McCall's magazine, the United States Office of Education, and the National Council of Chief State School Officers—a division of the National Education Association. Mr. Bizzell received earlier recognition in Austin when he was awarded the Scarbrough award for excellence in teaching in 1956.

Last Wednesday, Mr. Bizzell was received at the White House by President Eisenhower and was honored by the Texas delegation on Congress at its weekly noon luncheon in the Speaker's dining room as the guest of Senator LYNDON B. JOHNSON, majority leader of the Senate, Senator RALPH W. YARBOROUGH, and myself.

In the June issue of McCall's magazine an article appears announcing that Mr. Bizzell, along with Mrs. Mary Field Schwarz, Independence, Mo., have been selected for the award. It appears in the Appendix of the May 28, 1957, issue of the CONGRESSIONAL RECORD where it was included in the remarks of the distinguished gentleman from Missouri, Mr. CHRISTOPHER, who has the privilege of representing the congressional district where Mrs. Schwarz resides.

On Tuesday, May 28, 1957, there also appeared in the Austin American, Austin, Tex., an excellent article by Miss Anita Brewer, which tells the wonderful story of Guy Bizzell. Because the story is inspiring to all of us who recognize the importance of dedicated men and women in the field of education, I know that it will be of interest to those of us in Congress.

The article is as follows:

GUY BIZZELL TOP TEACHER

(By Anita Brewer)

Guy Bizzell, teacher at A. N. McCallum High School, is winner of the 1957 national Teacher of the Year award sponsored by McCall's magazine and the United States Office of Education.

Wednesday morning Bizzell will be presented to President Dwight D. Eisenhower at the White House and congratulated for the high honor he has received and the great example he has brought to the profession of teaching. Sharing national honors with Bizzell is Mrs. Mary Field Schwartz, third-grade teacher from Independence, Mo.

The Guy Bizzell story is an inspiring one—of a boy who chose speech as a career because he considered himself to be shy and inarticulate. A modest and unassuming man, he gives his students credit for his nationwide fame as a teacher. He has refused positions outside the classroom because he believes his success depends on work with individual students. Bizzell invests much care and interest in his high-school students.

His students have the highest praise for him, both as an instructor and as a friend. His principal, N. H. Wittner, commends him with these words:

"He makes a real difference in the lives of children. There's no way to measure the great influence that he exerts. With his good humor, sympathy, and respect for personality, coupled with a thorough knowledge of his field, he creates an atmosphere for learning to which children respond almost as if by magic."

Bizzell's success as a teacher was described by a colleague in these words:

"In the field of English he is one of those rare persons who possess the gift for making literature a vital and exciting experience for children. When you get high-school students to hurry to a class in Shakespeare, so they won't miss anything, as Bizzell can do, you have achieved the pinnacle."

Bizzell takes a personal interest in all his students, and, in return, each feels he is an individual in the eyes of Bizzell. He will not tolerate unkindness on the part of any student toward another and maintains a relaxed, informal classroom manner that is mild, but controlled. He is never too busy to talk with students or give them extra help.

The Teacher of the Year was selected after months of study and observation by representatives of the Office of Education and McCall's. All nominations were made by State departments of education, at the invitation of Dr. Lawrence Derthick, United States Commissioner of Education. Nominees were observed at work in their classrooms, and students, parents, civic leaders, and educators were interviewed on the effect of a teacher's work on the community.

An example of Bizzell's innate modesty was his appearance at a meeting of the Austin School Board shortly after he was nominated as the Texas representative in the national contest.

"This honor," Bizzell said, "is not a personal one. I only stand for the work that is being done by all teachers."

A native Texan, Bizzell attended Lon Morris Junior College and graduated from the University of Texas. He spent four summers at the Pasadena Playhouse School of the Theater, and following service with the United States Army during World War II, took a summer course at Northwestern University's school of speech, returning in the fall to his high-school teaching job in Austin.

In addition to his English and speech courses, Bizzell has taught his pupils the art of choral speaking and his groups have appeared on radio and television, before teachers' associations, and at university conferences. He himself writes most of the material for these programs.

Married to a French girl whom he met during the war and the father of two children, Bizzell lives modestly at 5509 Shoalwood.

Although the financial benefits from teaching are small, Bizzell is dedicated to his job "because it keeps me in close contact with young people and ideas. I only hope that my students learn half as much from me as I learn from the experience of teaching them."

Last summer Bizzell and his family walked to France to visit Mrs. Bizzell's family. The Bizzells do not own an automobile, and to save bus fare Bizzell walks wherever he goes and to and from school each day. The money transportation would cost, the Bizzells put in a bank. Finally the nickels and dimes piled up enough for the trip to France.

In Washington Bizzell will visit with Representative HOMER THORNBERRY, of Austin, and Senators LYNDON JOHNSON and RALPH YARBOROUGH. Bizzell and Otis Wiese, editor of McCall's magazine, will have lunch Wednesday with the Texas delegation at the Capitol.

Georgetown Visitation Convent

EXTENSION OF REMARKS
OF

HON. JOHN J. ROONEY

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ROONEY. Mr. Speaker, on Wednesday of this week the 158th graduation ceremonies of Georgetown Visitation Convent will be held for high school and junior college girls and on the same afternoon ground will be broken for a new classroom building.

In this connection, the following highly interesting article entitled "School With a Past," by Meredith S. Buel, was published in the Sunday Star magazine, Washington, D. C., June 2, 1957:

SCHOOL WITH A PAST

(By Meredith S. Buel)

In Georgetown, protected from prying eyes by an encircling fence, lies a reverent and scholarly retreat from which proper young ladies have emerged with their diplomas later to be heard of around the world.

This Wednesday, during commencement week, the 158th graduation ceremonies of Georgetown Visitation Convent will be held for high school and junior college girls. In the afternoon, groundbreaking ceremonies will be held for a $550,000 classroom building on the 35-acre school site at 1500 35th Street NW.

The convent story concerns numerous women who have been in the national spotlight as a result of training by a group of devoted nuns who in the past have had to scrape for every nickel and piece of bread to keep the school going.

Georgetown Visitation was founded in 1799 by the Most Revevend Leonard J. Neale, S. J., then president of Georgetown University and later second archbishop of Baltimore. It was the first Catholic girls' school in the Thirteen Colonies and is a year older than Washington. The convent's direction was entrusted to three pious ladies who became Sisters of the Visitation, the order charged with running it.

Hardship plagued nuns and students alike during those early years. Snow blew through the cracks of the original small schoolhouse. Heat was rationed to five sticks of wood a day for the iron stove. Nuns had to sleep on straw pallets. In the War of 1812—1 of 7 wars the school has lived through—the horrified nuns watched from their garret window as the British burned the Capitol and the White House.

The convent's Sister Stanislaus Jones was a daughter of Commodore Jacob Jones, a hero of that war. Sister Stanislaus, through corresponding and sympathizing with convicts, was instrumental in starting the first United States prison chaplain service.

During the period of the Mexican revolution Emperor Agustin de Yturbide, who later was assassinated, sent his wife and three daughters to live at the school, the children becoming students.

Around 1829 President Andrew Jackson, whose relative, Mary Wilcox, later graduated from the school, had sisters and students visit him at the White House. The year before the school charter was approved by President John Quincy Adams and certified by Henry Clay, then Secretary of State.

The beautiful Harriet Lane, a convent honor graduate, was the niece of President James Buchanan. She served as White House hostess during his term in office, 1857-61. One columnist wrote that it was "Harriet's convent training that provided her with the grace and accomplishment she used to fill the leading role in American society."

During the Civil War only 24 students were enrolled. A Protestant baker, John Gissell, supplied free bread daily to keep the nuns and their charges alive. They still found enough refreshments to give some to Union Army troops outside the school's walls. Union Gen. Winfield Scott, whose daughter had attended the convent, saved it from being turned into a military garrison, telling the Government "it is a place made sacred by the grave of my child."

Close ties developed between convent graduates and prominent figures of the Civil War period. Adelaide Cutts, grandniece of Dolly Madison, became the wife of Stephen A. Douglas, famous for his part in the Lincoln-Douglas debates. Irene Rucker married Northern Gen. Philip H. Sheridan and Caroline Julia Deslonde married Southern Gen. Pierre Gustave Toutant de Beauregard. Gen. George G. Meade's sister Minnie was an important alumna.

Shortly after the war, one convent graduate, Emily Warren, helped to build the Brooklyn Bridge. Emily married Engineer Washington A. Roebling, who became ill while building the bridge in 1869. Watching its erection from his bedroom window, he would give detailed instructions to his wife. She then would go over construction changes with his engineers, climbing over the bridge to show them.

About that time the convent began to prosper. In 1873 the present red brick classroom building went up. The year before that, Ida Honore received her diploma. She went on to marry Gen. Frederick Dent Grant, son of former President Ulysses S. Grant. Her sister Bertha Honore (class of 1867) became Mrs. Potter Palmer, whose husband built Palmer House in Chicago. She has been called the Pearl Mesta of the Gay Nineties.

An 1879 graduate, Harriet Munroe, became a nationally known poetess. She was known as the "patron saint" of young poets, having published so much of their works in the magazine Poetry which she edited in Chicago. Her convent teacher had been Sister Jane Frances, cousin of Ralph Waldo Emerson.

The convent has continued its success during the 20th century, its buildings and grounds now being valued at close to $1.5 million. One of its students was Suzanne Silvercruys (now Mrs. Edward Ford Stevenson), a gifted sculptress. She is the sister of Baron Robert Silvercruys, the Belgian Ambassador.

One of the 374 girls now attending the convent is Uoeli Kilmer, granddaughter of poet Joyce Kilmer, who was killed in World War I.

The school prides itself on ties that hold from one generation to the next. For instance, Ellen Ewing, a daughter of Thomas Ewing, a former United States Senator and Cabinet secretary, married another Civil War hero, Gen. William Tecumseh Sherman. Their two daughters, Ellen and Rachel, attend the convent.

Recently a school visitor noticed rice on the convent floor and a hastily snuffed-out cigarette in an ash tray.

"That happens often," Mother Mary Cecelia Clark said with a smile. "A graduate is likely to stop by for a chat after her wedding, even before going on her honeymoon."

H-Bombs for Posterity

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. MILLER of Nebraska. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include the text of a sermon entitled "H-Bombs for Posterity," delivered by the Reverend Paul T. Dahlstrom in the Plymouth Congregation Church in Scottsbluff, Nebr., on May 19, 1957.

The Reverend Mr. Dahlstrom brings out with startling clarity some of the gnawing fears of mankind as man moves deeper into the nuclear age. These fears will continue to grow in the weeks and years that lie ahead of us until men of science can set down the unquestionable truth about the effects and aftereffects of nuclear explosion. Perhaps it will then be too late.

There can be no feeling of security in this world while this question exists in the mind of man, "Have we gone beyond the prerogative set by God for man and harnessed a cosmic monster that will one day destroy us?"

Only recently, Mr. Speaker, some ghastly new testimony has been made public by press and radio. You have read and heard this testimony presented by scientific witnesses before a Joint Atomic Energy Subcommittee. As an example, I quote this paragraph from the May 29 edition of the Washington Post and Times Herald:

> Based on Russia's expected atomic capability by 1960, this country could be showered with 250 superbombs, equivalent in explosive power to 2.5 billion tons of TNT, enough to cause 82 million deaths, half of them from radioactive fallout alone.

That testimony is horrible almost beyond comprehension. Consider the implication: 250 superbombs—2.5 billion tons of TNT—82 million dead.

Do you recall how few the years have been since the B–17 was called the ultimate in airpower; the blockbuster the ultimate in destruction?

As evidence mounts to greater and more horrifying proportions, is it not time for a reevaluation?

I can remember when poison gas was outlawed as something too horrible even for warfare. It is still outlawed. But you and I know the use of poison gas is only childish play as compared with the horrors of atomic war.

You know and I know that an all-out world war would mean the destruction of civilization as we know it.

The United States will never start a war of aggression but in the case of an atomic attack, no matter how severe, America has the men and resources to retaliate instantly and annihilate the aggressor. From what I can learn, the fallout from a worldwide atomic war might have the capacity of destroying all life—animal and plant—making this a dead planet for a thousand years.

If the nations of the world can outlaw poison gas in war, those same nations can go further and eliminate from their arsenals the most ghastly death potential in all the history of earth. We can't do it alone; there must be cooperation of the nations.

I am hopeful the disarmament conferences will bring to the nations of the earth and their leaders the full impact of what may happen at any moment in any year—an atomic war that could leave this a dead, charred planet without life, without hope, without future—spinning uselessly in endless space.

The Reverend Mr. Dahlstrom brought the nuclear weapons sermon to his people in a typical Nebraska city to exploit the theme, "We are dealing with the fate of mankind." I present it for your consideration and discussion.

The sermon follows:

H-BOMBS FOR POSTERITY

In the May 16 copy of the Reporter magazine, the editor, Mr. Max Ascoli, asserts that: "All nuclear weapons tests, no matter how tiny the weapon, are acts of hostility against mankind." This spirit sets the tone of the whole issue of that periodical and it is obviously the fruit of some very serious and sober thinking through of the implications of the power of atomic energy.

The significant fact about this statement and the information of this issue is that it is the first important periodical to my knowledge which points out facts which contradict the official line of our Government and the Atomic Energy Commission. This is the first breakthrough of the silence and assent which the American people have afforded themselves since the A-bomb was first released. And one cannot help but hope that this will be the beginning of a thorough public discussion of the use of atomic energy. The purpose of this sermon is to keep the pot boiling, and I trust you will become missionaries of the boiling pot.

Until this time, there has been some reason to assume that the experts are all agreed that adequate safety precautions are both possible and have, in fact, been taken relative to the use of atomic energy, but now it comes out that such is far from the case. In fact, there seems to be a raging controversy within the ranks of the experts about the dangers and the problems.

There is, on the one hand, the people charged with the defense of our country, and on the other hand, those who know the scientific facts and the medical facts. These two are obviously in conflict, and, frankly, one cannot help but hope that this controversy will get on the front pages of our papers. Our lives and the lives of our children are at stake, and we should be the ones to decide how many lives should or should not be sacrificed on the alter of fear and curiosity.

Perhaps the most significant fact about the initial stages of this controversy is that the military mind is on the side of continued testing and of continued weapons development, while the moral minds of such greats as Dr. Albert Schweitzer and the atomic scientists of Germany are against it.

Listen again to the editor of the Reporter magazine: "Of course, there is a remedy. An old man in Equatorial Africa has said the word. The leading German scientists have said the same word. The word is 'no.' No cooperation on the part of any man who can deny his skill—not to speak of his enthusiasm—to this insane, unending race."

If that seems too strong a potion for you to take, it might add some force to note that the same periodical reports that on a ranch near Warm Springs, Nev., about 100 miles north of the test site, little Martin Bardoli used to wait excitedly to see the sky light up with atomic flashes, but he is not doing this now. He died recently from leukemia, which is one of the results of exposure to the debris of atomic explosions. Perhaps this would go unnoticed by many, but it was revealed last Sunday on TV that the amount of radiation in children's bones now is four times what it used to be, and this is a known cause of childhood leukemia. Granted these are reports, but the significant thing is that the Atomic Energy Commission has repeatedly refused to inform the public as to the real nature of radiation exposure. It is time that the American people put the heat on their Government so that they can know the truth. Obviously, less than the truth is being released to the public.

This is no accusation that the people charged with the responsibility of this knowledge are evil people. That is not the case. They are in reality, dedicated public servants. They are hamstrung, though, by the fears of war and the military mind. Atomic energy is not only a weapons force. It is a force for human betterment, and it is time that we inform our Government that we want to know the truth and all of it. The foundation of democracy is faith in people and their judgment when it comes to their own welfare. The AEC is not keeping faith with the democratic process, and it is time that the American people rise up and insist from their representatives that the AEC practice democratic principles. When citizens begin dying, it is time to get at the facts. To paraphrase an old slogan, "No dying without representation."

In the same issue of the Reporter magazine, the statement was made that the AEC kept a prominent genetecist from reading a paper at the Geneva Conference relative to the effects of radiation on future generations. This is a overt confession that the facts are too inflammatory of public opinion. This is enough to indicate that the lives of future generations are jeopardized. Again the question reverts back to an attitude of secrecy which is a denial of the democratic process (p. 28, the Reporter, May 16).

Recently, Dr. Warren Weaver of the Rockefeller Foundation, Chairman of the National Academy of Science's Committee on Genetic Effects of Atomic Radiation said, "I do not think it is fair to the people of the United States or the people of the world to give them the impression that there is no danger involved in this, for there is." He was here referring to atomic testing on the Nevada flats (the Reporter, p. 11, May 16).

Now we are not living in Nevada, but we are in a direct line of fallout, if upper winds are any indication of where this debris goes. And I have heard that we are indeed having heavy fallouts here. This is all hush-hush information and it is whispered, instead of spoken. Now, this again is rumor; but if there are rumors like that going around, then we ought to get the facts.

Of course, the official line of the governments involved in this thing, and that includes our own, is that all is well and that there is no fear of much permanent hurt taking place.

Listen to Eric Sevareid's statement relative to the kind of people who are concerned enough to speak out, "In any case, the pressures are piling up. The Pope has been expressing concern; Mr. Adlai Stevenson has returned to his proposal that we

suspend our own tests of the bigger bombs; from his African medical mission, Dr. Albert Schweitzer has issued his own plea that the tests be stopped—there is no reason to suppose that he possesses information other than already published, but he accepts the pessimistic view of radiation. The British Government is under heavy pressure; Bertrand Russell is among those trying to organize a shipload of direct actionists to sail into the area of the next projected British tests in order to prevent the test and dramatize the issue to the world" (p. 13, Reporter magazine, May 16).

Eric Sevaried is a responsible reporter and this is of enough concern to him to say this on the Columbia Broadcasting System.

It would seem then that we are not being wise in covering up what is such a deep concern to people of the stature of Drs. Schweitzer and Russell.

For a full generation of scholars it has been known and discussed that the major problem of our time is cultural lag. This means that our technological development is far and away ahead of our knowledge of human nature and behavior. The sudden breakthrough of atomic knowledge is, of course, a spectacular advancement of the problem so that now we are in a crisis which could undo everything.

The seriousness of atomic testing is pretty well summed up in the fact that not much is known about levels of toleration and there is no going back. Once the air and soil as well as the sea is polluted, that's it. It will go on for thousands of years.

I remember a prominent physician in Minneapolis, who attended the Bikini underwater explosion, telling a group of clergymen that it is very possible to so pollute the air and soil and sea that all forms of life will be destroyed. He noted in 1947 that 500 Hiroshima-type bombs might do it.

In the May 20 edition of the New Republic, the following facts are revealed by Dr. Jack Schubert, a world famous authority on radioactivity who is a former senior scientist with Argonne Laboratory, lecturer at the University of Chicago, and United States delegate at the Geneva "Atoms for Peace" Conference; and Dr. Ralph Lapp, atomic physicist who has served as General Staff adviser to the War Department, Director of the Research and Development Board, and head of the Nuclear Physics Division, Office of Naval Research.

1. "Microscopic fragments, which arise from every nuclear bomb explosion, consist of fission products of bomb material, and ordinarily they would float around in the atmosphere for very long periods of time before coming back to earth."

2. The Bikini test threw debris up over 100,000 feet. "This gargantuan 'Bravo' explosion was the equal of that which would be produced by 15 million tons of TNT and created a fiery crown which capped the island and its surroundings with a 3½-mile wide fireball. The entire island was extirpated from the sea, leaving a gaping hole in the ocean floor. The evaporated metal of the test structure, the pulverized concrete underneath, and millions of tons of sand, coral and sea water were sucked upward by the ball of fire as it roared into the sky."

3. "AEC officials estimate that when all the strontium injected into the atmosphere from all bomb tests to date, falls out, the total will amount to 22 millicuries per square mile (this is a value of twenty-two one-thousandths of a gram of radium) in the Midwest of the United States. This means that there has been a commitment of 44 megatons of fission energy to the atmosphere within the past 4 years. (This approaches a value of 100 megatons through January 1957.) Such a staggering weight of explosives corresponds to 50 times the total bomb tonnage dropped on Germany throughout World War II."

4. In conclusion, these doctors say this, "Some risk must be run for the sake of national security, but where one fixes the limit beyond which risks must not be taken is the all-important question. And we should insist that the calculation of the risk be made in the open, in the light of all available physical and biological data." The world has suddenly become a small sphere—too restricted in surface area for the 'safe' testing of superbombs like the 'Bravo'."

5. The British Atomic Scientists Association, along with many reputable American scientists say positively that: "every bomb test creates additional radiopoisons which kill a certain number of people."

Now I do not for a moment think that the people who are doing this bomb testing have as their intention, the destruction of the human race. Neither do I think that they feel this program is endangering many lives. I am sure that they realize they are endangering some, however, for even the basic science courses in college teach enough about radiation dangers to reveal the fact that this is poisonous stuff. If you do not believe this, ask a radiologist and then look up the mortality tables of radiologists.

It was not too long ago that shoe-fitting X-ray machines were labeled dangerous by doctors and there is an effort to keep anyone from absorbing too much X-ray damage by limiting the number of X-rays. This is hint enough of the power of this type of energy.

The point is that the people who are in control of this atomic energy program are geared into the military mind, and I do not need to remind you that this is not a particularly peaceful mind-set. This is, in fact, a real danger, for the military mind deals with people in terms of statistics and not in terms of ethical values at all. Furthermore, the military mind deals with that inflamatory thing called nationalism. And it avowedly exploits it for all it is worth. Thus, it is dealing with physical power unlimited, plus human emotions. This is a potent combination. The problem is in ourselves and in the ways in which our fears are used and the ways in which we succumb to the psychology of belligerency.

In a meditation which was recently written by myself, I said that, "In our time, religion has returned from the battlefield of human affairs to the role of a narcotic. Gone are the prophets of justice and the apostles of peace and good will." Of course, this is a strong statement, but in essence it is true. The Christian forces of the world are much too willing to win status by conforming to the pressures of the world. than by protesting them. There is much too much willingness to deal with the minutae of the daily grind than the really big and enduring problems of mankind.

The purpose of saying this is to point out the need for the churches to speak for the Christian conscience in the manner of Dr. Schweitzer and the other lone voices of the Christian conscience.

Part of our problem is that we have never, within the memory of any of us, seen modern warfare conducted on our own soil. We do not know conventional bombing, so that it is understandable that we are not too frightened of the consequences of atomic bombs. The German people know about this, though, so perhaps that is the reason that the German atomic scientists have simply said "No." They do not want any part of it.

It seems to me that there is intelligence in learning from the experience of others. This is also true of the English people. They, too, are fed up with this mad race for mutual destruction. And I am suggesting that it is about time that we do the same thing.

The cry nowadays is for economy in government. Well, if we really want to economize, here is one place where the logic of economy makes sense. The fact that it does not make sense when applied to human-welfare programs further heightens the need to conserve human resources by stopping the military expenditures, or at least cutting them back to a small part of the total national budget.

The idea that we must prepare for war to maintain our economy is one that has been foisted upon the public mind with a great deal of effectiveness, and it is time that that, too, is exposed for what it is, namely, a trap to prevent the Nation from really going to work on the matter of solving the problems of human welfare which properly are the responsibility of the community. The large military budget simply destroys this basic concern, for it creates a false economy and it puts the pressure on the wrong things.

Our need for schools is illustration No. 1. We think we need bombers more than schools, and the fact is that the bombers are getting built and our schools are not getting built.

Actually, what I am saying is that the matter of keeping the cold war going is just as much our responsibility as anyone else's. The temptation to blame others for it is much too convenient, and it is too easily tied in with our irrational fears. The fact that the cold war is turned on and off by each of the contending sides is proof of this. If it can be turned on and off, it can be turned off for keeps. Our own involvement cannot be abdicated, either. We are a part of this madness, and it is time we return to sanity.

When the atomic scientists put a picture of a clock with a reading of 4 minutes to 12 on the face of their own periodical, after the first A-bomb was exploded, they were saying in clear language that this is it. We are dealing with the fate of mankind, and it is not just the few accidental deaths like Japanese fishermen and Nevada children. And, anyway, our Christian conscience cries out for them as for ourselves. This is the meaning for the Christian view of life.

The purpose of this sermon is to create discussion and openness toward public issues within the Christian community. This is part of our responsibility, and when we begin to measure up to its purpose we will begin to build a world which is gloriously fit to live in.

Do you want to?

Prophet Unheard

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, back in 1913 when the 16th amendment was ratified, the Honorable Richard E. Byrd, of Virginia, father of the present Senator HARRY BYRD, prophesied that a hand from Washington would be stretched out and placed on every man's business. His words have indeed come true and now the Federal income tax has reached a point where it is seriously hampering initiative and competition. This article was printed in the San Antonio (Tex.), Light, and follows:

PROPHET UNHEARD

So, you've just shoveled up your Federal income tax, pursuant to the 16th amendment, ratified in 1913 after its proponents

vowed it would never take more than a split fraction of anyone's earnings.

But there was one prophet who warned as follows while the amendment was under consideration:

"A hand from Washington will be stretched out and placed upon every man's business; the eye of a Federal inspector will be in every man's countinghouse.

"The law will of necessity have inquisitorial features; it will provide penalties; it will create complicated machinery. * * *

"An army of Federal inspectors, spies and detectives will descend upon the State. They will compel men of business to show their books and to disclose the secrets of their affairs. They will dictate forms of bookkeeping by which men must keep an account of their earnings.

"When the Federal Government gets a stranglehold upon the individual businessman, State lines will exist nowhere except upon the maps. Its agents will everywhere supervise the commercial life of the States."

The prophet was Speaker Richard E. Byrd, of the Virginia House of Delegates, father of the present Senator HARRY F. BYRD.

Few bothered to listen to him.

Did Judge Hoffman Have His Mind Made Up Before Hearing Integration Cases?

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the complete text of an editorial which appeared in the Roanoke World-News on Thursday, May 30, 1957, under the title, "Did Judge Hoffman Have His Mind Made Up Before Hearing Integration Cases?"

There recently appeared in the CONGRESSIONAL RECORD in the extension of my remarks a forthright and interesting address delivered by the Honorable HARRY F. BYRD, senior Senator from the Commonwealth of Virginia, before the Hampton Roads Maritime Association in Norfolk, Va., on May 9, 1957, in which Senator BYRD referred to the manner in which United States District Judge Walter E. Hoffman had rendered his decision in the Newport News and Norfolk school cases.

I have been associated with Senator BYRD in public life for 35 years and I have never known him to make a statement which it was necessary for him to retract and he will not have to do so in this instance because his statement is absolutely true. I am in wholehearted accord with the statements made by my friend, Senator BYRD and with the views and comments of the editor of the Roanoke World-News as contained in the following editorial:

[From the Roanoke (Va.) World-News of May 30, 1957]

DID JUDGE HOFFMAN HAVE HIS MIND MADE UP BEFORE HEARING INTEGRATION CASES?

The Norfolk Virginian-Pilot has taken vigorous exception to an editorial in the World-News of May 14 criticizing United States District Judge Walter E. Hoffman's conduct on the bench in handling Newport News and Norfolk school integration cases.

Our editorial was based upon Associated Press stories of the cases dating back to last October 18 and on remarks by Senator HARRY F. BYRD before the Hampton Roads Maritime Association on May 9.

In the course of his address, Mr. BYRD accused Judge Hoffman of "arrogance and prejudice" and of "bombastic and political statements." Hoffman, said BYRD, reportedly stated before hearing evidence or arguments in the cases that he was inclined "to throw the whole case out of the window" and "this he did by reading a decision prepared before the hearing."

In addition, said BYRD, "this judge further said from the bench 'the integration problem will never be resolved in Virginia until we have a different political leadership.'" Later challenged about this, the Senator stated that he had good authority although the stenographic record failed to show the remark was made.

It might be well to point out here something that all newspaper and court reporters know: remarks frequently are passed before, during, and after actual hearing of evidence, which are not put in the record.

DETAILING THE CASE

The Virginian-Pilot, in defending Judge Hoffman, dwelt largely upon the matter of whether or not the decision was prepared before the hearing. Senator BYRD said it was. Let us go back a bit in the record.

On October 18 Newport News and Norfolk school boards with aid of the attorney general filed a motion to dismiss NAACP suits which demanded immediate integration. They contended that administrative remedies were open to the plaintiff under State law. Judge Hoffman ordered briefs filed by December 20.

Was the judge's mind already made up? We quote from an Associated Press story of November 17 which makes it obvious that his mind was not open either when the hearing started or when it ended:

"And just before he adjourned court, Hoffman reiterated a statement he had made shortly after arguments began this morning:

"'I have very serious doubts' about the constitutionality of the legislation, designed to preserve Virginia's traditional system of racially segregated schools.

"The legislation, enacted by the general assembly at a special session this year, is good politically but does not reflect good judgment, Hoffman said."

EXAMPLES OF CONDUCT

Farther down in the story:

"The proceedings were spiced by numerous exchanges between Hoffman and Almond. The attorney general became visibly more irritated as Hoffman interrupted his impassioned arguments time after time. Most of the interruptions occurred just as Almond was approaching a peak of a burst of oratory."

"They sure made it complicated, didn't they?" Judge Hoffman was quoted as saying of the new laws. At another point the AP quoted him as saying "We've got it and we've got to eat it." Again, he told Almond: "Norfolk will never close its public schools."

At conclusion, the AP story said:

"Courtroom spectators, amused over the exchanges between Hoffman and Almond, recalled that Hoffman unsuccessfully opposed Almond for the position of State attorney general several years ago."

As arguments ended, said the AP, Judge Hoffman observed: "If I had to rule on it today, I would have to throw it out the window" (constitutionality of the new State act).

On January 11, 1957, Judge Hoffman read a lengthy prepared statement denying the petitions to dismiss the NAACP suits. Languade contained therein made it perfectly plain what his attitude would be when he actually heard the suits against Newport News and Norfolk on February 11–12. Evidently this was the statement to which Senator BYRD referred. In it Judge Hoffman held new legislation passed by the general assembly special session in September to be unconstitutional on its face.

HIS MIND MADE UP

This meant unquestionably that Hoffman had made up his mind and that the hearings on February 11–12 would be mere formalities. That is what happened. He handed down his rulings without leaving the bench after "hearing" arguments and to quote the AP, "relying on notes taken during closing arguments."

We put "hearing" in quotes because Judge Hoffman continually interrupted Attorney General Almond and attorneys for the defense. He made plain his dislike for the general assembly and the legislative process.

On February 12, the Associated Press, detailing the Norfolk case hearing and decision, said:

"The Norfolk school board could have submitted a reasonable plan for gradual compliance if the general assembly had not made 'whipping boys of school boards and school superintendents,' Hoffman said.

"Norfolk has endeavored 'to formulate some ideas and plans' looking toward eventual integration in the schools, Hoffman said. 'But the general assembly put everything in reverse in September. I am glad the Norfolk members of the legislature did not participate in that action.'"

IMPROPER LANGUAGE

This, we repeat, is not proper language from the bench. The court's personal antipathy toward the General Assembly of Virginia had no place in a decision which should have been carefully deliberated and written rather than extemporaneous.

Further, it was not within the proper province of Judge Hoffman to discuss what the assembly and its Norfolk members did or didn't do.

There was yet another incident. Again quoting the AP:

"In his extemporaneous remarks from the bench, Hoffman said: 'I understand that some of the leaders of Virginia have said they would like to see whether a Federal judge has nerve enough to punish for contempt, and I can assure you the order will have to be complied with. I might be reversed but the order will have to be complied with and there is no sense fooling anybody about it.'"

HE WENT FAR AFIELD

Here Judge Hoffman obviously went so afield to threaten the State's leadership with punishment for contempt when no such matter was before him. It would be time enough for him to consider such a matter after his order had been tested in higher courts, as is being done, and when and if contempt were demonstrated.

Several times Judge Hoffman displayed anything but a judicial temperament. For example, when the State endeavored to introduce evidence which it considered pertinent to a plea for more time in putting integration into effect, he declined, saying "there is no use putting all this hullabaloo in the record."

Since when did the rights of both white and colored children in the public schools become "hullabaloo"?

AN ADMITTED FAULT

Concluding its editorial, the Virginian-Pilot said:

"But the record does not seem to us to subject Judge Hoffman to the criticism that he came into court with a prepared statement rejecting all contentions of the defendants prior to hearing a word of argument, or that

before attorneys took the floor he stated that he was inclined to throw the whole case out the window.

"We say this after having said that Judge Hoffman has sometimes spoken too freely from the bench. His friends, and probably he himself, know he has come under criticism for doing so. But there is an important distinction between extraneous, or irrelevant, comments from the bench, and the attribution to Judge Hoffman of comments on a case before him, or a mode of conduct toward such a case, so grave in import as perhaps to constitute judicial error. In fairness to Judge Hoffman we think the errors of attribution should be corrected."

We must beg to disagree with emphasis. Everything that a judge says on the bench during the conduct of a case—his very attitude in dealing with attorneys—becomes an important part of a case. What the Virginian-Pilot calls extraneous, irrelevant comments become interwoven with testimony and formal argument.

Once again we point out that Judge Hoffman is an appointee of the President, confirmed by the Senate of the United States, but this does not automatically make him omnipotent or superior in judgment to the elected representatives of 3,000,000 people. He has shown very questionable judicial temperament and at times an amazing lack of judgment. It is obvious that he talks too much on the bench and all too often without thinking.

Whether or not the statement was prepared before hearing evidence is not too important but it is important whether or not he had his mind made up beforehand and the evidence points in that direction.

British Decide To Go It Alone

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, David Lawrence, writing in the Evening Star recently, called attention to Britain's decision to trade with the Red Chinese. The United States still maintains its embargo on trade with Red China but this country must reexamine its exports to England to prevent machine tools and other strategic material from being reshipped by England to Red China. The article follows:

BRITISH DECIDE TO GO IT ALONE—DECISION TO RELAX EMBARGO HANDS COMMUNISTS A COLD WAR VICTORY

(By David Lawrence)

Sometimes it seems that, if the Communists only wait long enough, they will outtrade and outmaneuver the West. For apparently the alliance of the free world is not sufficiently sturdy or patient enough at times to maintain unity against the common enemy.

Pressed by British businessmen who want to sell their goods, the London government now has decided to relax its embargo on trade with Red China. Without getting a single concession in return, the British Government has yielded to the Red Chinese and will ship to them many of the commodities which hitherto have been banned.

This will strengthen Red China and help industrialize a country which is hostile to the West.

The United States Government is disappointed over the action and has said so publicly.

The British, on the other hand, are repeating a fallacious argument they have made often in the past, namely; that, since the goods can go into Soviet Russia, it is illogical to bar direct shipment to Red China of goods now going there indirectly.

The answer is that at present it costs the Soviets and the Red Chinese lots of money and takes a great deal of valuable freight space to send the goods over the trans-Siberian railway from Russia to China. Likewise, it is expensive to send by long sea voyage from Britain cargoes that can only be landed either in Eastern European ports or carried to Siberian coastal ports, and all this with great difficulty and delay in certain seasons of the year.

Why should things be made easier for the Red Chinese, and the expenses of Soviet Russia cut down and her internal burden with scarce goods eased? These are questions which the British have not satisfactorily answered.

It is known here that an influential lobby in England has been steadily pressing the Conservative government to relax the trade embargo. Britain exists to no small extent on world trade, and it is a sad fact that, even in the early years of World War I, some British businessmen traded with the enemy, much to the discomfiture of the United States, then a neutral, whose goods were stopped at that time on the high seas even when destined for other neutral countries.

The power of the trader in politics is well established. In a sense, the losers in business could be taken care of through indemnities or through purchase of surpluses. After all, if a trade embargo will help to keep the Communist countries weak and if, through trade embargoes, the military machine of a potential combatant can be kept from reaching effectiveness, the people of many western countries might rather see the business interests compensated in some other way.

Now the Red China regime is to have access to tractors, trucks, locomotives, generators, and other vital commodities hitherto embargoed. It could lead to a breakdown of controls on the really strategic items, too. It may be the beginning of the crumbling of the alliance that has thus far kept the economic sinews of the West from helping the Communists of both Soviet Russia and Red China.

It is too early to tell how Congress will react to the change made by the British. Long and earnest efforts were made in vain by the State Department to persuade the London Government not to relax the embargo. Each government, of course, decides for itself, as there is no control over the policies of independent nations. Whatever has been agreed heretofore has been by voluntary action.

But if the alliance breaks down, America will have to make her own decision with respect to other phases of the embargo. Will American companies, for instance, furnish the British vendors with any goods to ship to Communist China? The rule here is that the same ban will be maintained as before on American exports, but it will be much harder to police this now since the British have begun to let down the bars.

Fifteen countries have been meeting in Paris for more than a month trying to work out a unanimous agreement on maintaining the embargo, but the talks broke down because the British wanted to go it alone.

It is an unfortunate development and must be marked up as a signal victory for the Communists in the cold war. It was handed to them on a platter by Great Britain.

Investigating the FCC

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. REUSS. Mr. Speaker, I rise to offer my congratulations to our colleague, JOHN DINGELL, of Michigan, for his energy and resourcefulness in bringing to the attention of this body—and of all American citizens—the strange maneuverings of the Federal Communications Commission in recent months.

Mr. DINGELL has performed a real service which will not go unnoticed, I feel sure, by the Subcommittee on Legislative Oversight of the House Interstate and Foreign Commerce Committee in the investigation which it is now initiating into activities of administrative and regulatory agencies. If the public interest is no longer being protected by the agencies created by Congress to protect it, then it is high time that the American people were made aware that political favoritism, rather than the public good, is determining public policy. I sincerely hope that the subcommittee will make its first order of business turning the spotlight of publicity on the Federal Communications Commission.

In this connection, Mr. Speaker, I wish to draw the attention of this body to an editorial which appeared in the Madison (Wis.) Capital Times on May 29, 1957. Here is described yet another instance of the FCC's apparent susceptibility to partisan pressure. I trust that this case, too, will be thoroughly investigated by the subcommittee.

STRAIGHT TALK BY REPRESENTATIVE DINGELL ON POLITICS IN FCC

The Capital Times is glad to note that there is one Member of Congress with the courage to stand up and call public attention to the part politics is playing in the affairs of the Federal Communications Commission, particularly in the granting of TV licenses.

Representative JOHN DINGELL, Democrat of Michigan, charged in the House of Representatives Tuesday that the FCC is the "most politics-ridden of all regulatory agencies."

He demanded a congressional investigation of the FCC and charged that the Commission Chairman, George McConnaughey, "is a man who tried to take care of his friends."

Representative DINGELL has hit at a problem that has been concerning more and more people as they watch the way in which TV licenses are handed out to corporate interests and to newspapers who have thrown their political support to Republicans.

He is the first Member of Congress who has had the courage to tackle the problem head-on. Most of them have ducked around, pussyfooting on the issue because of their fear of antagonizing the TV stations who are able to hand over free time to Congressmen to build up their political stock.

It is obvious that Representative DINGELL is putting the public interest over selfish personal interest in the stand he has taken on this issue.

He referred, in his indictment of the Commission, to the way it recently overruled its own examiner's recommendation in the granting of a hotly contested VHF license in

Boston. The Commission ruled that the license go to the Boston Herald-Traveler.

The Capital Times knows from its own experience of the Boston incident to which Representative DINGELL refers. The Badger Television Co., in which the Capital Times has an interest, was party to an application for a Madison TV license before the Commission. That license was being sought by Badger Television Co., Inc.

This application had behind it 30 years of pioneering radio experience in this community through station WIBA. During those 30 years not one black mark was entered in the FCC records against WIBA.

The Commission examiner who investigated the Madison situation recommended that the license be granted to the Badger Television Co. But for the first time in his experience with the Commission he was overruled and the license granted to the Murphy interests of Superior, which now has been granted four TV licenses.

Representative DINGELL's charge of "politics" on the Commission is not one that surprises the Capital Times. In our case the Commission was pressured by the late Senator Joseph McCarthy, whom we opposed in this State from 1946 on, to vote against granting a license to any firm in which the Capital Times was interested.

Commissioners McConnaughey, Lee, and Doerfer were known to be friends and supporters of McCarthy. In addition, Doerfer had carried a grudge against the Capital Times from the time that he served as a member of the Wisconsin Public Service Commission, which has frequently been under attack from this newspaper because of its subserviency to utility interests in this State.

The political decisions of the Commission can be no better illustrated than in Wisconsin where the people of the State, whenever they turn on a TV set, stand virtually no chance of tuning in a station owned by interests that did not support Eisenhower and McCarthy in 1952.

The notable exception is the Milwaukee Journal station which got its license before the advent of the Eisenhower administration.

But in Milwaukee, the Hearst interests have also been given a TV license and the Hearst interests have been solidly Republican and pro-McCarthy.

The Columbia Broadcasting System, which dominates the FCC, has also been given a TV outlet in Milwaukee. When CBS wanted a Milwaukee outlet, the FCC, which originally ruled that no 1 concern could own more than 5 VHF outlets, changed its rule to accommodate CBS and permit the addition of 2 more UHF outlets.

In Wausau the station is owned by 6 Wisconsin River Valley newspapers, all of which supported Eisenhower and McCarthy in 1952 and all of which enjoy a monopoly situation in the city in which they publish.

These papers own the only VHF license granted in the whole Wisconsin River Valley. Every week they advertise that Representative MELVIN LAIRD (Republican of Marshfield) will speak over the Wausau outlet.

In Eau Claire the Murphy interests, which have the VHF outlet in Madison, own a large share of the station in that community.

In the northwestern corner of the State, Duluth dominates. The station there is owned by the Ridder newspaper interests, also Republican.

The western tier of Wisconsin counties look to Minneapolis and St. Paul for TV service. In Minneapolis the big station is owned by the Cowles interests, which also have a monopoly of the newspaper field in that city. Republican, of course.

In St. Paul the Ridder interests are again found dominating TV and holding a monopoly of the newspaper field.

In La Crosse, 40 percent of the TV station is owned by the La Crosse Tribune, a solid Republican paper which went down the line for Eisenhower and McCarthy in 1952.

In Madison, the Murphy interests were awarded the VHF outlet over The Capital Times. The Murphy interests, which are Republican, hold four TV licenses. The Capital Times holds none.

Representative DINGELL's charge that politics has influenced FCC decisions should be investigated. Representative DINGELL might be interested in knowing that there is on record in the FCC two letters from the late Senator McCarthy, whose political advancement we fought from 1946 onward, urging that no TV license be granted to any firm in which the Capital Times is interested.

Address of Edgar F. Kaiser

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. BOGGS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address of Edgar F. Kaiser to the Advertising Club of Washington, April 30, 1957:

Mr. Chairman, distinguished guests, ladies and gentlemen of the Advertising Club of Washington, several months ago, I received your invitation, from Bob Lewis, to talk with you today. I was advised that you had selected me to receive, in behalf of the Kaiser organization, your Achievement Award. We are deeply appreciative of this honor.

Whatever achievements we have made is, in our case, the result of having a founder—my father—who gave responsibility to young men * * * and of being privileged to have an organization composed of men who operate on the fundamental precepts of any successful operation—integrity, hard work, service to others, and faith.

I must confess frankly that when one receives an invitation like yours, the first thing he usually does is to look at his schedule and find out if the date will fit with his other commitments. The second thing he does is to heave a sigh and say to himself, "What shall I talk about?"

I went through the first one easily, that is, if the date would fit, because of the honor to our organization and because of the privilege of meeting with you.

On the question as to what I should talk about—I received specific instructions from Chad Calhoun who, as many of you know, has for over 20 years headed all of our companies and divisions here in Washington. Also from Walt Cloke, head of our public relations here in Washington and, likewise, from our good friend and counsel, Lloyd Cutler.

They really worked me over. But when it was all done I could sum it up by saying that they all said: "This is basically an advertising group and, therefore, they are primarily interested in what you are doing in advertising and public relations."

They next said, "Edgar, because you have spent more time than anyone else in the organization in South America, we think the members would be interested in hearing about what we are doing and how we are doing in South America."

They then decided that I should talk, primarily, about South America and specifically, what we have done in South America with respect to advertising and public relations.

Now, bear in mind, I'm giving this talk but, at this point I really hadn't had much to say about it.

They prepared several drafts for me and I must admit they were pretty good. Then, as a result of a meeting I had in New York with Brownie Reid of the New York Herald Tribune, who needled me, not about what we were doing in South America, but about what constructive action we were taking on an overall basis to stimulate other American business in taking an active interest in foreign operations, I decided that this would be a good forum before which I could present the opinion of an expert, and you all know the definition of an expert.

When the drafts were completed I found myself in the position of being an oracle on philosophy and general conversation as well as a general adviser to the administration. So you can sum this up by saying the boys wrote a pretty good talk for me, but I loused it up thoroughly by trying to become an economic adviser on foreign operations. I finally decided yesterday that I had better talk to you on the subject of our businesses. This is a subject of which I have some understanding.

Our organization was founded by my father, who is a great leader. He taught our organization some fundamental principles, which I mentioned earlier as being characteristic of the men in our organization. These are integrity, hard work, service to others, and faith.

I want to tell you first how we operate. The head office of our companies and divisions is in Oakland, Calif. There we operate as a staff on a horizontal basis. The independent companies we operate, such as Kaiser Steel, Kaiser Aluminum, Permanente Cement, and all the divisions of Kaiser Industries, such as Willys Motors, Kaiser Engineers, Kaiser Metal Products, are vertical operations, autonomous in their own management, and with full responsibility.

The staff operation at Oakland consults on policies, but the operations themselves are run directly by the heads of the divisions and the heads of each company. These companies and divisions did a sales volume in 1956 of approximately $900 million.

We are diversified, it's true, and diversification is a very popular word and idea, but don't misunderstand it in our case. We are not diversified merely for the sake of diversification. We entered into every phase of business we are in today because the founder saw an opportunity for service and growth, and not primarily for profit.

Profit is a requirement of a successfully operated business, and this is true in any country in the world, but it is not an exclusive goal. Profit is a part of the mechanics of good business practice, but, in our judgment, and in the planning of our businesses, the real goals are the principles of growth and service. If you exercise good management practice, and carry the principle of service foremost in everything you do, the profits will expand proportionately.

We went into sand and gravel, which was our first industrial operation. Existing quality and delivery, in this case, were undependable. There was a need for better service, and we went into it, first, to supply our own contracting operations, and then we saw the opportunity of serving the entire building industry. Today, in northern California, the industry is sound, the quality and delivery are dependable.

In 1937, just before World War II, there was a great shortage of cement on the west coast, particularly in northern California. When Shasta Dam was proposed, and the Bureau of Reclamation called for bids on cement only, we made a bid without even

having a cement plant. We were the successful bidders, and that was the start of Permanente Cement. There was a shortage, a need, a service to be performed.

We went into the steel business in southern California during the war. There was a shortage, and we couldn't get balanced tonnages to meet our shipbuilding requirements.

Following the war—in 1945 and 1946—the entire country, you will remember, was suffering terrific shortages in steel. Yet, the wartime aluminum plants were idle. They were considered "white elephants." Again, our founder had vision. He saw the future of aluminum.

Bear in mind that many people thought we were making a great mistake. We were operating a steel business—and they thought that we were starting an industry that would be competitive. It is true—we were, to some extent, but the point is, however, there was a shortage, a need, and, irrespective of its competitive effect, we started an aluminum business.

At the same time we started an automobile business. I think you all may have heard something about that. It had troubles—and plenty of them. I had some personal experience with this one. I went to Detroit to spend 30 days—and wound up spending 8 years—in a rather highly competitive business, to say the least. But the point is still the same—there was a shortage at the time, and, here again, the principle was to serve a need.

Regardless of the problems that developed, we did perform a service. Subsequently, we acquired Willys Motors, and today we are the largest manufacturers of 4-wheel-drive equipment in the world.

Instead of permitting the passenger-car business to go through bankruptcy, injuring suppliers, dealers, and stockholders, we looked for a need. We found the 4-wheel-drive field, and we reorganized the company so the automotive stockholders now own a share in all the businesses we operate.

You may well say to me, "Well, I've heard something about Honolulu. What about Honolulu? Why are you building a hotel—the Hawaiian Village—in Honolulu?"

The answer is just the same. The mechanization of modern business plus the necessary increase in standard of living to our economic way of life has increased vacation time. Some years back, only a few could afford vacations. Today, many can afford them.

When my father went to Honolulu he recognized the need and saw the opportunity. He immediately started building a facility to service this need. While some—those who don't really know him—have said, "He likes Honolulu" or "It's a pastime for Henry." I can tell you one thing, the minute he has finished that project he'll be back here doing something else.

I can't stop talking about service to others without mentioning Kaiser hospitals and the Kaiser health plan. There again, look back in the life of our founder. His mother died when he was 16 and she died because of inadequate medical attention. He knew it at the time and there was nothing he could do about it. As a result, all of his life he has had a burning ambition to develop a plan that would make it possible for people to afford to be sick.

That's a strange way of saying it, I know, but it is the fact. Sickness comes to many and they can't afford it. So, there again, with a need for a service in mind, we established the nonprofit Kaiser hospitals and the Kaiser health plan. Today the health plan has a membership of over half a million people.

We were not the only ones to do this. We have stimulated others to enter the field of prepaid medicine. The result has been a medical plan which is able—and this is another important phase of it—not only to furnish good medical and hospital service at a price people can afford, but to support itself. In addition, it is able to expand without outside assistance. The doctors are not employees but a partnership with their own patients. It is just the opposite of socialized medicine, which some of its misinformed critics have labeled it.

Now I have taken you sketchily through some of the independent companies for which we have management responsibility, but not all of them.

I haven't given you this picture of the Kaiser organization for the purpose of a commercial, but for the purpose of laying the foundation to talk to you on the subject that is the key to American business in South America—service to others.

There is no doubt that the opportunity to make a contribution of this nature—service to others—exists in Latin America. The challenge is obvious. There is a tremendous need for improved transportation, better roads, water systems, steel plants, power, and dozens of other elements that contribute to a higher standard of living.

And now I come to what we have done in South America. Years ago, in the early 1920's, we went into Cuba, as contractors, to build 220 kilometers of highway in the Province of Camaguey. That was the center section of the central highway from Santiago to Habana. This was our first Latin American experience. From then until 1954 we concentrated our activities domestically.

You will recall, earlier, I mentioned something about the automobile business. When we phased out of the passenger-car business in this country, we had equipment which from the standpoint of the automobile business was practically new, that was idle, not required. We had both Willow Run and Toledo equipment.

So, there we sat with a substantial amount of excess machine tooling and die capacity that was not required for the four wheel drive manufacturing business at Toledo. Instead of selling it off, however, which is what happened in the case of most automobile businesses, we looked for a need. South America was the obvious place.

Our surveys indicated that one of the greatest deficiencies was adequate and efficient transportation. As manufacturers of the Jeep, Jeep station wagons, and Jeep trucks, we were confident that Willys Motors could make a contribution in this field.

We went to South America and started negotiations. The result was the formation of a new company, Industrias Kaiser Argentina, now known as IKA. Construction began in early 1955. Fourteen months later the first Jeep rolled off the line. Today, the main plant, located in Cordoba, is producing over 1,000 units a month.

You will be interested in some of the facts about that operation. We had heard a good many stories about the efficiency of Latin American labor. There was a great doubt as to whether it was as efficient as labor in this country.

I'm not talking about labor rates because there is, for both hourly workers and supervision, a substantial difference between what we pay in this country, and what is paid in Argentina. This important point is that the productivity per man is almost 1½ time that which we experienced in this country, using identical equipment. In other words, the output per man is higher. The quality is equal, or better, once they have had the training.

To go on with our Argentine operation, IKA was based on a three-way partnership. First, the Argentine people; second the Argentine Government; and, last, the Kaiser interests.

More than 8,000 Argentine stockholders purchased approximately 46 percent of the common shares of IKA. The Argentine Government invested 22 percent, and we hold the balance of 32 percent.

This decision was based on sound business practice, and it expressed our philosophy. It also had public relations overtones, which have been very beneficial to the Argentine operation.

When I say "our philosophy," I want to make clear that we believe that the best method of operating in the Argentine, or in any foreign country, is to have an ownership where at least 50 percent, and, preferably, a little more, is vested in the hands of the people of the country in which you are working.

I realize this is a broad, general statement, but it is a firm belief of the Kaiser management. I know there are many who may question this belief. However, it is our sincere conviction that any successful company in South America, or anywhere else abroad, will be one in which the public of that country owns a majority stock interest.

There must be centralized responsibility, and it is, likewise, our belief that in the initial period of establishing a company American business can make a contribution, if it has the management responsibility. But, what is the use, when you really strip it down, of trying to retain management responsibility, or control, by a majority stock interest?

We believe that any management group will hold responsibility if they do a good job. If they don't do a good job they won't and shouldn't.

But, you can also theorize on another point. Suppose, to be specific, the Kaiser management is good, but, for some reason or other, after the operation has been running a while the management isn't wanted. You are in a foreign country. What are you going to do about it? In our judgment, if they don't want you as management, you had better be out anyway.

If you are doing a good job, and making yourself wanted, you will be given management responsibility, regardless of the amount of your stock control.

I don't think you are thinking it through if you take the position—well, let's take IKA as an example. The Kaiser interests own 32 percent of the stock. It could be said that we must retain management control in order to protect our stock interest. I don't think that holds true. The best protection for the 32 percent stock interest is to continue to do a good job and to make ourselves wanted.

Now, how do you do that? We soon learned that there was more to being an accepted member of the industrial family of Argentina than just being a partner. We discovered that to be accepted we first had to know, and understand, the Argentines. Secondly, they had to know us.

You must understand their national customs, their attitudes, and, if possible, learn their language. Some of these things may sound unimportant and apart from the job of building a plant and manufacturing automotive vehicles, but, believe me, they are not. Perhaps this could be described as the "people-to-people" approach.

When President Eisenhower called a conference, in September of 1956, for the purpose of discussing ways and means of building better international understanding, he defined it as being the active support of thousands of independent, private groups, institutions, and millions of Americans acting through person-to-person communication in foreign lands.

To assist the Argentines to learn more about us, and our reasons for establishing an automotive plant in their country, we started a program of telling the story of the Kaiser affiliated companies in news releases. The releases outlined our experience and our

background, not only in the automotive field but in all of our various businesses. They were translated into Spanish and sent to virtually every newspaper in Argentina. Simultaneously we began an advertising program. (At last, I got to that subject of advertising.)

That advertising program combines the features of an institutional—or public-relations approach—and, I must admit—some of the characteristics of what you—in your business—define as the "soft sell."

We are still using this campaign. Its copy is brief. It is directed to the Argentine people. It carries the message that IKA—not the Kaisers—makes a quality product—a dependable product—and is making a real contribution to the national economy of Argentina. The ads point out that, during the building of the plan, more than 1,200 men were on the job of construction, that more than 50 major contracts were placed with 37 Argentine contractors—and that orders in excess of 100 million pesos—for production parts—had been placed with Argentine vendors. This, in turn, was related to the Argentine economy.

When the first Jeep rolled off the line, we announced—by advertisement—that the first Argentine Jeep had been born. The copy emphasized that this would not have been possible without the staff of Argentine engineers, Argentine technicians, Argentine workers, Argentine suppliers, and, last but not least—in fact, the most important—the confidence and trust of the Argentine people.

One of the latest advertisements of IKA points out how its operations benefit the Argentine buyer, and his country. The copy states that IKA is making 4 Jeeps, at the same cost as importing 1 Jeep from the United States. The ad further points out, that this Argentine Jeep not only aids the country's foreign exchange position, but it provides jobs, stimulates other local industries, provides economical transportation, and increases personal income.

Now, let's stop here for a minute. You and I know that advertising is a vehicle, and you can't sell any public, whether they are citizens of the United States, or citizens of any country in the world, unless you state facts. You can't fool people—and the facts are, in this case, that IKA's Argentine operation is really doing the things IKA says it is doing.

IKA is not an assembly plant. It is a manufacturing plant. It builds its own engines complete, the first and only such plant in all of South America. It has a tremendous automatic stamping plant, the first of its kind in South America.

And, by the way, that plant down there is no small plant. It's almost a million square feet—and growing larger day by day.

But, again, you and I know, it doesn't do any good to have these things exist unless you tell people about them. Advertising—in all its forms—is the vehicle to tell them about it.

When you have the responsibility for managing a company in South America, or any foreign country, don't tell people how good you are. Tell them the facts. Tell them how good they are, and what they are doing to make the operation possible. We think that that is what is meant by "people to people."

You can have a shortsighted policy. You can place the emphasis on exporting from this country, but it is shortsighted because a change has taken place. Certainly, in the South American countries, of which I have some knowledge, they are facing a very serious situation. Almost without exception, they recognize—and we recognize—that they must raise their standard of living.

Certainly we'll all agree that the only way for real world peace is to raise the standard of living of the people of the world. You can't have in this day of communication and transportation a standard of living such as we enjoy in this country, while the great majority of the rest of the world exists on a substantially lower standard of living. This breeds discontent and unhappiness aside from the fact that it is basically wrong.

So, therefore, back to my point. The standard of living must be raised. As it is raised, it will create a terrific demand on the foreign exchange, because it means these countries must buy more than they export. However, the minute they do that, the country is in trouble. I know these are obvious things. We all know them, but it is good to talk about them once in a while.

So, what is the answer? There is only one. If we admit the fact that they are going to raise the standard of living, then that means they must, where the demand justifies it economically, produce more and more of the products needed to support their national economies.

Regardless of whether we think, in one country or another, they should concentrate on, let's say, agriculture, or some particular product, because of their geographical position; they are not going to do that. They are not willing to shift between feast and famine, depending on the world price of a single product, such as wheat or coffee.

They are going to make at home the things they have to have to bring up their standard of living, or there won't be any peace within the country, nor in the world.

So, what is our job? Our job is to give every bit of know-how—and technical assistance—we can to help them produce the things they need and can't afford to buy because of their exchange position.

Some American companies will gradually lose some of their export business. However, they can replace some of this volume by establishing companies in foreign countries that are required to build their own economies. But also the facts are that we do a greater volume of business with the highly developed manufacturing countries than with the underdeveloped areas.

We are constantly expanding our businesses in this country. But, you might ask, "How do you expand if the volume of American exports declines?" There is a change. You expand not by exporting but by being a part of the businesses that the foreign countries need to raise their living standards.

Now, you can say to me—"Well, what is going to happen in this country? Does that mean we are going to lose our position as the world's greatest mass producers?"

No—it doesn't mean that at all. We are going on to new fields—and there are thousands of them. We are going to do other things with that labor. We in the Kaiser organization believe that.

We don't believe that you hold anything by protection or monopoly. You only hold something if you are providing a service—and are constantly searching for new fields of growth and expansion.

Now I have talked a lot about the Argentine. The reason I have done it is because it is the first country we went into. Today, we are in Brazil—building jeeps, starting to do the same thing we did in Argentina. Our engineers are working with Colombia and Paraguay—and it is our hope that we will continue to expand in many other countries in South America.

South America has unlimited opportunities. There are 150 million people—and, 10 years from now, there will be over 200 million. A very substantial percentage of the 150 million are nonconsumers—don't buy a thing. Just look at the opportunity. As you and I know, those people are going to enjoy the same things we have just as quickly as the Lord will let them. They are going to practice the precept, "God helps those who help themselves."

I believe in the people-to-people program. I believe that is the only route to world peace and I believe that it is not "Let Joe do it" or "Let the Government do it."

Certainly we need Government help and assistance. In our country our people have as yet failed to recognize that some of our good friends—England, France, Italy, and others—have much better programs for assisting their private businesses in developing and growing in foreign countries than we do.

I believe we will correct that in time. I believe there will be a recognition, as our people travel more and understand the needs of the world better, that we must give every reasonable, practical, constructive assistance we can to private business to help the world achieve a higher standard of living.

This is an opportunity for American business. This is an opportunity for the United States. This is the road to peace, and you, as advertising men and women, have a vital role to play in developing this people-to-people concept.

By advertising, by all forms of communication, we must let the people of the world know what we are doing. We must try to understand the people and their needs, and we musn't approach it as though we know it all. We had better find out first: What do they think? What do they need? And how can we help them attain that need?

And climbed the topmost steeple.
But God replied: 'Go down again;
I dwell among the people.'"

Opinion and Comment From the Fifth District of Wisconsin

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1957

Mr. REUSS. Mr. Speaker, my 1957 Opinion Questionnaire was recently sent out to obtain the views of my constituents on four questions. More than 1,000 replies were received, and I have just tabulated the results. I am sure that many of my colleagues will be interested in the results, and in the supplementary comments volunteered by my constituents.

1957 OPINION QUESTIONNAIRE

Question No. 1:

Congressmen have different theories on how best to serve the citizens they represent. For example:

Type A, in order to promote private or local interests of his constituents most effectively, may follow the line of least resistance and avoid fighting hard on controversial questions.

Type B may go to bat vigorously for what he believes in, even though by so doing he may antagonize other Congressmen and thus be less able to obtain his colleagues' support for measures of special concern to his own district.

If you had to make a choice, would you think it better to be a type A or type B Congressman?

Answers: Type A, 14 percent; type B, 86 percent.

"I think a fighter is always respected, even by his colleagues," was a typical comment. Another: "I dislike anyone

taking a back seat—too timid to speak on issues. I believe in giving them hell."

Some persons checked type B with evident hesitation, expressing the view that the proper ground lay somewhere between A and B.

I would like to see my Congressman be firm and bat vigorously on issues where principles are involved, but a compromising give-and-take attitude may be wise in other cases—

One woman said.

It requires study, shrewd judgment and a good personality to trade votes effectively—

Commented another.

And a dentist came up with this one:

How about a type C, a vigorous diplomat?

PRESIDENTIAL LEADERSHIP

Question No. 2:

Do you feel that President Eisenhower is or is not providing adequate leadership?

Answers: Is, 33 percent; is not, 67 percent.

On the affirmative side, there were partisan comments:

Ike has given the Government back to the people after 20 years of mismanagement.

And nonpartisan ones:

I feel the President is not satisfying either party 100 percent but watching the interests of all the people, or at least he is trying to.

A number of those who thought that the President had failed in leadership expressed either their sympathy or liking for him. Some felt he faced an impossible task requiring superhuman abilities; others mentioned the handicap of ill health; a number saw him as the victim of his own party's obstructionism.

A few specific criticisms:

I think the inadequate national leadership of the present administration is indicated by the apparent confusion regarding the budget.

Ike has failed to utilize his capabilities by not getting men in his Cabinet who would implement, and not question, policies which the President calls his own; by not taking a strong, clear stand on desegregation, and by talking morals when things get rough (Hungary and Sues) and sitting idle when at least some of his principles could be given effect.

President Eisenhower should devote more time for his pay and less to his play.

REPUBLICANS COMMENT

The most bitter attacks seemingly came from members of the President's own party. For example:

Ike is wrong. He has lost his head. I have been a Republican all my life but I am sorry I voted for him. We should bring our own men back home and mind our own business.

Or this one:

The big crusade that began in 1952 has bogged down and will remain so because the real Republicans have been driven into silence by the offensive nature of much of the present administration's program.

And finally:

President Eisenhower's attitude toward inflation—his continuation of policies inaugurated by the Democrats—is appalling. He is creating untold hardships among people, especially old people, with fixed incomes. He is also eliminating the middle class which was the very backbone of this Nation. I'm looking for a new party.

REDUCE TAXES OR DEBT?

Question No. 3:

It appears that the Federal budget now under consideration cannot only be balanced, but a surplus obtained. In your opinion, for which purpose should a surplus be primarily used—for a general tax reduction, or to reduce the national debt?

Answers: Tax reduction, 48 percent; debt reduction, 52 percent.

Those favoring debt reduction argued that the surplus would be too small to give real tax relief; that the national interest calls for debt reduction in good times no matter how attractive tax relief might seem; that failure to reduce the debt merely hands it on to our children and grandchildren; and that tax cuts may be penny wise, pound foolish acts, not only leaving the debt undiminished but also, if achieved by haphazard budget slashing, jeopardizing programs such as foreign aid and defense which will determine whether our country and our children have a peaceful, independent future.

Those who argued for immediate tax reduction had equally strong reasons.

You take my take-home pay of $90.31 every 2 weeks and I cannot afford high taxes—

One person wrote.

I think there should be a general tax reduction because my husband earned $4,056.50 total income last year and we are a family of 4 so we paid in $254 in Federal taxes plus $33.96 in State taxes, and yet our minimum in order to have a decent living standard is supposed to be $5,592. With that we would be able to buy more things, and we sure need a lot of essentials, and that would put more people to work and they will pay taxes too—

Said a housewife.

One woman wrote that, although she believed in reducing debt, personal and governmental—

Psychologically we have reached a point of frustration because of hidden taxes and double and triple taxes on money earned, and it is therefore time to reduce taxes.

Some called particularly for tax reduction for the low income groups, not only on grounds of greatest personal need but also on the contention that increasing the purchasing power of those who spend the major part of their income would provide a boost to the whole economy.

ENTERTAINING DICTATORS

Question No. 4:

Do you think that the United States should invite the chiefs of other nations to be official guests of this country, even if the governments they represent are totalitarian dictatorships?

Answers: Yes, 57 percent; no, 43 percent.

Those who opposed expressed fear or pessimism concerning the results of such visits, assuming that the visitors would represent unfriendly powers.

One man said that "We Americans are so easy going and trustful" that foreign visitors would "pick up a lot of information about our country which could be of great value to them."

Others doubted that such visits would win friends or diminish antagonisms toward us. Some linked arguments against foreign visitors to their opposition to foreign aid programs in general:

It seems every time a chief from another nation is our guest, all he wants is money. Let's use this money for the benefit of Americans.

Those who answered "Yes" frequently qualified their replies. They suggested that the visitors and their staffs be closely supervised and that lavish red-carpet welcomes be avoided. Many said that such visits should be carefully timed and their potential benefits weighed in terms of our country's self-interest and the development of a more peaceful world.

The conviction that international tensions can be removed only through contact and negotiation appeared in most of the comments favoring visits by foreign leaders.

"We should not be afraid to show our democracy to anyone" and "Let them see our capitalist country so they get impressed as to how much better life is here" were two typical remarks.

Many replies pointed out that totalitarian governments would not just dissolve if we ignore them. As one said:

While I am opposed to the type of government in some countries, such as China and Yugoslavia, I feel we cannot pretend they don't exist by refusing to recognize them or refusing to invite them to our country as official guests. We must begin somewhere if we want to solve our international problems.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Federal Government Promotes Growth of Monopoly

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. MARSHALL. Mr. Speaker, I want to call the attention of the House to a significant address by Dr. Walter Adams, professor of economics at Michigan State University, before the 23d annual convention of the Independent Bankers Association at Miami Beach, Fla. This important address on the growth of monopoly is printed in the June 1957 issue of the Independent Banker.

The address follows:

FEDERAL GOVERNMENT PROMOTES GROWTH OF MONOPOLY

Speaking on the monopoly problem recalls what Alexander Pope said in the 18th Century: "Vice is a monster of such frightful mien that to be hated needs but to be seen; but seen, too oft, familiar with the face, we first endure, then pity, then embrace."

Monopoly is much the same story. And large segments of American society have taken bigness and monopoly for granted.

It is always a pleasure to address this association, which not only pays lip service to the ideals of a free competitive enterprise economy but, rather, is an organization which puts up a militant fight often against great odds on behalf of this ideal. And it would not be surprising if the leaders of this association at times lost courage.

I am reminded of the story which is a favorite of Senator KEFAUVER of Tennessee. Senator KEFAUVER tells about the vast atomic energy experiment conducted in his neck of the woods, and the Atomic Energy Commission had assembled experts, scientists, leaders in various fields, to study this experiment. When everything was set, the scientists backed off to a safe distance.

The atomic blast occurred, and after a safe interval, the scientists slowly edged up to this huge crater in the earth that had been created by the blast, and, there, to their amazement, at the bottom of the hole, they saw the figure of an old man dressed in a Confederate uniform and carrying an old Confederate musket. As this man reached the top of the crater, he said, "I don't care what General Lee says. I'm giving up."

Well, fortunately, this association doesn't play the game that way. Now, everybody is the small-business man's friend. Small business is part of the American institutional fabric. Small business ranks with truth, justice, motherhood, the American flag. Everybody is for it, but very few people do something on behalf of small business.

If we look at the facts, we find that according to a recent survey of Fortune magazine for 1955, there is a picture of vast concentration of economic power in the American economy. The 50 largest insurance companies have 90 percent of all insurance company assets. The 50 largest manufacturers made 27 percent of all manufacturing company sales. This is 50 companies, out of 325,000 such companies in the United States.

The 50 largest corporations in all fields had sales of $86 billion or 28 percent of the total gross national product. Concentration is high, and in many fields may be increasing rather significantly. Why, Let's review some of the factors that explain this phenomenon. First and foremost is the merger problem.

Mergers have been going on in a veritable wave over the last 6 years. In 1950, Congress passed the so-called Celler-Kefauver Act. This was an antimerger act that provided that all mergers which have the effect of substantially lessening competition are unlawful.

Now, this did not mean that every single merger, regardless of its competitive significance, would be outlawed. Nothing of the sort. Only those mergers which had a tendency toward monopoly, which had the effect of substantially lessening the competition—only those mergers were considered unlawful.

Let's see how that law is applied. Not long ago, the Bethlehem Steel Co., the second largest steel company in the United States, proposed to merge with the Youngstown Sheet and Tube Co., the sixth largest steel company in the country.

What was the rationale behind it? Bethlehem argued, "Here, we are located in Bethlehem, Pa., Sparrows Point, Md., and Buffalo, N. Y. Youngstown is located in the Chicago area primarily. If we are allowed to merge, then Bethlehem will be in a stronger position in the Chicago area to compete with the giant United States Steel Corp. and the Gary plant they have out there."

Bethlehem argued that this would be no danger to the competitive system in the steel industry because, "After all, the combined Bethlehem-Youngstown Co. would still be significantly smaller than United States Steel. Therefore, "this would increase rather than decrease competition."

The Justice Department has filed suit to block this merger, and I think rightfully so.

Let me give you my views if I may on the significance of this merger. We are all for increased competition, but competition can be increased in 1 of 2 ways. If you want to move into the Chicago area, you can either build or buy. If Bethlehem moves into the Chicago area by building additional plants, then what you have is an addition to competition, a strengthening of competition. You have one more company in the field.

COMPETITION LESSENS

But if you permit Bethlehem to buy Youngstown, the competition against United States Steel may be strengthened, but instead of having 3 companies in the country, you only have 2, and potential competition from a strong outsider has been substantially diminished.

Certainly, we can say that in the steel industry, Bethlehem standing on its own legs or Youngstown Sheet & Tube standing on its own legs should be large enough to be efficient. The solution to the competitive problem in the steel industry may not be so much to build up Bethlehem and Youngstown, but, perhaps, to question the present size of United States Steel. If you want to increase competition, it is wise to achieve that purpose by making companies build additional plants rather than by permitting them to buy out existing competitors.

Now, you find that despite the Celler-Kefauver antimerger act, mergers have been on the increase. In 1954, you had 617 mergers. In 1955, you had 846, and in 1956, you had 905.

I need not tell you what the story is in the banking field. During 1955, 225 banks with total assets of $9,616 million were merged, consolidated or acquired by other banks. During the 6-year period from 1950 to 1956, 830 banks with assets of $18,600 million were merged, consolidated or acquired. Moreover, these mergers took place for the most part in the key industrial areas of the country.

These mergers were part of the process whereby big banks grew even larger, and smaller banks were swallowed up. Today, there are about 14,000 commercial banks in America. Twenty-four of these have a billion or more of assets each.

In California, there is the fabulous Bank of America with resources of $9 billion. In New York City, there are two giant banks, the Chase Manhattan and the First National City, each with resources of over $7 billion. Ranging below them in size, New York has four $3 billion and two $2 billion banks. Together, these 8 banks have perhaps 85 percent of all of the deposits in New York City.

It is strange that these huge banks should be trying to expand through merger and consolidation when, as a matter of fact, some bankers tell me, a bank with $500 million can do everything in the public interest which such a large bank can do. In other words, there is little economic justification for this expansion.

Within the last 6 years, 147 banks in New York State have been merged, consolidated, or acquired by other banks. The resources of the banks, which have just disappeared, were $10 billion, almost one-sixth of the resources of all the banks in all of New York State.

The story is the same in California, in Oregon, in Washington, in Pennsylvania, in Rhode Island, in numerous other States. California, for instance, had long been the scene of bank mergers and consolidation. By 1950, California had only 149 banks compared to 600 in the little State of Kansas, but between 1950 and the end of 1955, 86 of these 149 California banks were merged, consolidated or otherwise taken over, a reduction of over 60 percent in the number of banking institutions in this huge and growing State.

MOUNTING DANGER

The story is the same in many other parts of the country, and the end result is not only a decreased number of banks and less competition, but a more highly centralized control of the Nation's financial system with mounting danger to the entire national economy if a relatively few individuals should decide for whatever reason to misuse their control over the lifeblood of the economy.

This is the merger picture. It is a pattern of lack of enforcement, in part, by the Government. The Justice Department and the Federal Trade Commission, to some extent, have become policemen looking the other

way, but I think there is another aspect of the monopoly that ought to be stressed.

I say to you that monopoly in America today does not come about merely as the result of private restraints and private monopolizing. Monopoly is fostered, is promoted to some extent, by the Government itself.

The Government today is a big spending unit. It spends over $70 billion annually and no longer can we say that what Government does has a neutral impact on the economy. Any outfit spending that much money certainly has no neutral impact.

POWER OF GOVERNMENT

How does the Government use its power and how does that power often result in greater concentration rather than in competition? First, in the field of defense contracts, you will find that during the Korean war, the 50 largest corporations got two-thirds of the Government war contracts. The largest 10 corporations got 40 percent of these war contracts.

"Well," you say, "that is only natural. Maybe only big business can do the job. But these big business firms subcontract a great deal, and the small-business man has an opportunity to participate in Defense Department spending that way." But you find that the subcontracting picture is pretty much the same.

Again, during this same period, we find that 56 percent of the subcontracts went to other large firms and left only 14 cents of the total procurement dollar to small business.

These are not the findings of Walter Reuther or John L. Lewis. These are the findings of Senator THYE, Republican of Minnesota, in one of the most devastating reports ever published by the Senate Small Business Committee on this question of concentration of defense contracts.

More serious aspects of these Defense Department contracts are the research contracts. In the fiscal years 1954 to 1956, the Department spent $4,771,000,000 on research contracts. These, too, were highly concentrated. The 100 top contractors got 85 percent of this total. The 200 top contractors got 91 percent, and the 500 top contractors got 98 percent. Obviously, there was very little left for small business in this pattern.

Curiously enough, the fruits of this research that was paid for at public expense accrue not to the general public, not to the business community as a whole, but rather to the people who did the research as contractors for the Defense Department. There were 6,788 patents issued to these people who did research for the Government at Government expense, and 52 percent of these patents went to just 15 companies—52 percent going to 15 companies out of more than 600,000 corporations in the United States.

Maybe this is a good thing. Our present Secretary of Defense feels that it is. He believes that we ought to have a narrow mobilization base. We ought to rely only on a few large contractors. He says, "This is sufficient."

TAXPAYER PAYS

But look at the implications. When Mr. Wilson took office in 1952, there were four contractors making the medium tank for the United States Army. There was General Motors, and three other small fly-by-night organizations, the Chrysler Corp., the Ford Motor Co., and the American Locomotive. Mr. Wilson moved in and said, "This job has to be done by a big outfit. It is more efficient to have 1 rather than 4," and so Ford, Chrysler, and American Locomotive went down the drain, and there was only one company building medium tanks for the United States Army.

Maybe in the short run, this is more efficient, but I submit to you that 2 years later, how many people would be bidding on a medium contract for the United States Army? Maybe General Motors offered the best deal to the Government in the short run, but, certainly, if you eliminate the other companies, you are not going to get much competitive bidding, and the taxpayer is going to pay through the nose in the long run.

I am not a military strategist, but from a purely military point of view, it would appear that it is unwise to put all of your eggs in one basket. General Motors may be good, but it isn't that good.

On the question of taxes, we find the same story. Here, again, what the Government does has considerable consequence as far as the future of competition is concerned. Now, we have heard a great deal about tax relief. A bill was introduced into the Senate at the beginning of this session by Senator SPARKMAN, of Alabama, and by Senator FULBRIGHT, of Arkansas.

This bill had fairly broad bipatrisian support in the Senate. The purpose of the bill was to reduce the corporation tax on small business. The bill was defeated in the United States Senate. The argument was, "We can't afford tax relief for the small-business man, moderate though that tax relief may be."

This is the same Senate, ladies and gentlemen, which sanctions giant tax loopholes for powerful pressure groups in the United States, primarily the oil industry. This is the same Senate that sanctions the 27½-percent depletion allowance, which is an absolute outrage, for the giant oil companies.

Most recently, we had this come to our attention. This, I think, is a scandal of major proportions. It involves the overseas operation of four giant American oil companies. They are Standard Oil of New Jersey, Standard Oil of California, Socony Vaccum, and the Texas Co.

These four companies jointly own the Arabian American Oil Co. Under their concession agreement in Saudi Arabia, they agreed to pay Ibn Saud 27 cents for every barrel of oil they lifted. It turned out that their profit on every barrel of oil was $1.10. Ibn Saud came back to the Arabian American Oil Co. and said, "I don't think I am getting a fair shake. I am getting less than one-fifth of the profits. I want an even shake."

TAX DODGE

They tried to figure out a way whereby Ibn Saud could get more without Aramco getting less, and they devised an ingenious way of having Ibn Saud get more without Aramco getting less, and the United States Treasury footing the bill. This is the way it is done. Let me illustrate it for you. Maybe you can use it. Professors are not all eggheads, not all of them. They can't afford to be when they speak to a noncaptive audience like this one.

If you earn a hundred dollars in the State of Pennsylvania, and there is a Pennsylvania tax on you to the tune of $10, then for Federal income tax purposes, what can you do with the $10 tax you paid to Pennsylvania? You can deduct it from your $100 tax income, and your Federal liability is only $90. If the Federal tax rate is 10 percent, then you pay $9 in taxes to the Federal Government.

Assume you make a hundred dollars in Saudi Arabia. This $10 is no longer a deductible item. It becomes an offset item. This means that you pay your tax to the United States Treasury on the basis of 10 percent on $100, which would be $10, but since you have paid $10 in taxes to Saudi Arabia, you can use that as an offset against the $10 you owe to the United States Treasury, and what do you pay into the United States Treasury? Zero.

For 1956 Aramco paid $80 million to Ibn Saud in the form of royalties. They paid $200 million in the form of taxes. By the way, this tax legislation is democratically enacted by Ibn Saud himself, giving him a total of $280 million in income. Aramco also got $280 million. They had a 50-50 split.

For tax purposes, how is that $280 million of Aramco treated? Ordinarily, under the Federal income tax, they would have to pay 52 percent into the Treasury, amounting to, roughly, $145 million, but they had an offset of how much. Two hundred million they had paid to Ibn Saud. This offset was more than enough to balance out the tax liability of roughly $145 million. So, this fantastically profitable company paid nothing into the United States Treasury.

IN VENEZUELA, TOO

This is not only Saudi Arabia. The same thing goes on in Iran, in Iraq, in Venezuela. I submit to you that here is a loophole in the tax laws amounting to at least a billion dollars, but when you say, "Let's give some piddling tax relief to the small-business man," the United States Senate in its infinite wisdom says, "We can't afford it." However, Aramco goes on merrily, and then we say Aramco is big because it is efficient. Aramco is big because it is good. Aramco is big because people want it to be big.

I say to you, this is not the result of natural selection. This is not the result of immaculate conception. The fate of these companies is determined by what the Government does and by the manner in which the Government treats them. I will not go beyond this point, to suggest that the oil companies have not been particularly bashful about infiltrating their personnel into the State Department and Treasury, both.

Now, I think important areas we ought to give some consideration to are the so-called regulated industries. In the 1930's, New Dealers and others believed that every time you set up a regulatory commission that this was an excellent way of protecting the public interest. The more regulation you have, the safer the public interests will be. The less you rely on competition the better off you are. Well, I suggest to you that after 20 years of experience, we can no longer accept this philosophy, because some of these regulatory commissions have abused their trust, and some of them have promoted monopoly, and they have stifled competition.

BUREAUCRATIC REASONING

Let me give you a concrete example—In the trucking industry. No man can enter the interstate trucking industry today unless he has a certificate of convenience from the Interstate Commerce Commission.

If you want to haul steel rods between Detroit and Chicago, you have to prove to the ICC that nobody is capable of performing the job, and if you say to the ICC "but, gentlemen, I can do the job cheaper than the one company that is now in the field," the ICC will say, "That matters not." And you say, "I can do the job more efficiently." "That matters not." "Potential customers want me to do the job rather than X." "That matters not. You cannot enter into the trucking industry."

Under Federal regulations, there is only one area of the trucking industry, which is exempt from this bureaucratic stranglehold of the ICC, and that is the segment dealing with the hauling of agricultural commodities. If you haul agricultural commodities, you are exempt from the commission regulations. That is, they can't tell you where you can operate or how you can operate. All they can check is safety regulations, financial responsibility and so on.

The ICC has been very unhappy about this agricultural exemption, because this provided a breath of fresh air, a breath of competition in the industry. They said, "Okay, we will define the meaning of agricultural commodity. We will tell you what you can haul and what you can't haul."

These are some of the definitions. They decided that redried tobacco on stems is an

agricultural commodity but that redried tobacco leaf is not; that a live chicken is an agricultural commodity, but a chicken with its head cut off is not; that nuts in a shell are an agricultural commodity, but that shelled nuts are not; that milk is an agricultural commodity, but that buttermilk is not.

COURT LAMPOONS ICC

So bad has this situation become that the ICC is being lampooned in the decisions of the courts. They have lost every single case in which they have interpreted the meaning of an agricultural commodity. Here you have one situation where the Secretary of Agriculture moves into court and says, "I think this is an agricultural commodity," but ICC says, "No. The Secretary of Agriculture doesn't know anything about this field. We tell the court this is not an agricultural commodity, this is not exempt, this is subject to our regulations."

Let me read an excerpt of how the late Judge Frank in the second circuit court characterized such a commodity. This was an evacuations case of the ICC:

"If, however, the Commission is sustained in this case, and, accordingly, behaves similarly in future cases, then its conduct will indeed be a mystery. Its so-called 'valuations' will then be acceptable no matter how contrived.

"In that event, it would be desirable to abandoned the word 'valuation'—since that word misleadingly connotes some moderately rational judgment—and to substitute some neutral term, devoid of misleading associations, such as 'valuation' or, perhaps better still, 'woosh-woosh.' The pertinent doctrine would then be this: 'When the ICC has ceremonially woosh-wooshed, judicial scrutiny is barred.' It would then be desirable to dispense, too, with the Commission's present formula. 'Taking into considerations, etc.' replacing it with patently meaningless words—perhaps the same words spelled backward (i. e., Gnikat otni noitaredisnoc, etc.).

"Then no one would be foolish enough to believe that the figures in a commission plan necessarily have anything to do with deliberation, but everyone would know that the figures might well have been the product of omphalic inspiration, or ornithomancy, or haruspication, or aleatory devices, and that the conclusions of ICC might well be but the conjurations of mystagogues."

These are the people who protect the public interest in the trucking field. You find that the great exponent of free enterprise, like our Secretary of Commerce, Sinclair Weeks, came before the Small Business Committee and said, "The ICC is doing a good job. Competition is a dangerous thing. You can't let too many people get into the trucking industry."

This doesn't sound like Mr. Weeks that you read about in the newspapers.

UNHOLY ALLIANCE

Here is an unholy alliance of vested interests curtailing freedom of entry into an industry. You have the railroads, the big trucks, and the teamsters, strangely enough, joined with the ICC, to prevent entry, and when a little owner-operater tries to engage in what he reads about as freedom of enterprise, he is being told, "You are just a gypsy. You are irresponsible. You can't be trusted."

In the automobile industry, our problem is that we can't get enough firms into the industry to have more competition. Here, we have an industry where people are breaking their necks to get into it, and who says, "You have to stay out"? The United States Government itself.

I submit to you that by many of these regulatory commissions the Government itself promotes exactly what the antitrust laws are designed to prevent. The same story is true not only in the trucking field but to a lesser extent also in airlines. If you examin the field of television, if present trends continue, you will find that the United States will end up with two major networks, and a great opportunity for a competitive allocation of channels will have been missed.

I don't know all the answers. I don't know very many of them, as a matter of fact, but I have a feeling that a great myth has grown up. The apostles of big business keep assuring us that bigness is inevitable, that "big" is more efficient, that "big" is superior, and since they can do the job better, they will survive, and the little man, like the Indian and the Buffalo, will be a thing of the past.

I don't share that view. I am reminded of the story they tell about Jim Farley and Al Smith. One weekend Farley and Smith wanted to get away from it all. They went on a hunting trip in a remote area of the woods. You know what men do on an occasion like that. They arrived Friday night, sat down and played cards, drank a little bit, played way into the night, and early the next morning, they got up, did their hunting, their fishing, came back to repeat this pattern on Saturday night, and they got to bed about 4 in the morning.

They got up early the next day, Sunday morning, to go to mass. Jim Farley turned back and looked at his Protestant friends snoring away in the cabin and said to Al Smith, "Wouldn't it be the damndest thing if they were right and we were wrong?"

Well, I say to the apostles of bigness, maybe they are not right, and maybe their attitude ought to be more tolerant. They, too, may not have all the answers.

The Late Honorable Robert Crosser

SPEECH
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SPENCE. Mr. Speaker, I have heard with profound regret of the death of our distinguished former colleague, Robert Crosser. He was born in Scotland in 1874 and moved to Cleveland, Ohio, with his parents when he was 7 years old. He had been a teacher of law, a member of the Ohio State Constitutional Convention, and had attained distinction in his profession before he came to Congress in 1913. Robert Crosser had a long, distinguished, and useful career in the House of Representatives where he served 19 terms. He was chairman of the House Interstate and Foreign Commerce Committee for many years and was the author of much progressive and constructive legislation. Under his chairmanship his committee explored the pioneer field of railroad retirement and unemployment insurance. He was author of laws on these subjects together with the Railway Labor Act of 1934.

Bob Crosser served his people with fidelity and zeal. He had an infinite capacity for work and an intense interest in legislation beneficial to the plain people. He was a man of genial and friendly disposition as was evidenced by his many friends in the House. The confidence and respect his people had in him is expressed by the many approvals they gave to him in succeeding elections.

The country and his community has sustained a greal loss and he will be remembered with admiration and respect by all who knew him. After his long, patriotic, and devoted life, I know the great Judge of all will render His judgment, "Well done, thou good and faithful servant."

Fifty Years of Teaching

EXTENSION OF REMARKS
OF
HON. GEORGE A. SHUFORD
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. SHUFORD. Mr. Speaker, under leave to extend my remarks I wish to include an editorial of the Times-News published in Hendersonville, N. C. This editorial pays tribute to Miss Sue Lanning and her distinguished teaching career, and I feel it is worthy of the attention of all Americans, as well as the people of the 12th Congressional District of North Carolina, and should be inserted in the RECORD.

Miss Lanning's life has been a dedication to the personal development of her pupils, as well as to their educational development. By her example and teaching she endeavored to send into the world a fine group of boys and girls with stanch characters, fitted for a more mature life. North Carolina should be proud to have such an outstanding teacher in the State, and it is hoped that the work to which she gave 50 years will inspire North Carolina to carry on the educational program which she helped develop and to which she contributed so much.

FIFTY YEARS OF TEACHING

Fifty years is a long time for a person to devote to any profession or job but in a few more weeks Miss Sue Lanning will have rounded out 50 years as a school teacher.

Miss Sue is a member of the faculty of Fletcher School and it was at the school auditorium that former students, associates, and friends gathered Monday night to honor her long service to the youth of Henderson County.

Miss Sue is finishing her long career in almost the same place she first attended school as a small girl. The Fletcher School is a consolidation of several smaller schools (in 1928), one of those being Patty's Chapel where she started.

She has taught 45 of the last 50 years in Henderson County and 36 of them at Fletcher. She is well along in her second generation of students and there are now pupils in the school who are grandchildren of her earlier students.

Her long career covers almost all of the recorded history of public school education in Henderson County. She began teaching in a 1-teacher school where she taught all 7 grades. She has seen public-school educaton progress from the 1-teacher schools, taught for only a few months of each year, to the present consolidated schools with a 9-month term. With this visible progress in physical facilities and with the development of teaching methods she has kept pace.

If the product of our public schools has kept pace with the physical development (and we believe that it has), it is because of the dedication by such people as Miss Lanning of their lives to the instruction of

young people, instruction not only in the subjects that are taught from the book but also in the intangible field of character development. As former County Superintendent R. G. Anders said on Monday night: "Your students may have forgotten what you taught them, but they have not forgotten you."

Miss Sue hasn't made a lot of money in the last 50 years. If she was working only for the financial return, she probably would have quit long ago. But she must derive great satisfaction from the knowledge that for each working day of the last half century she has had some part in developing the character of boys and girls. There is no way of knowing what she has accomplished because her work was with intangibles that cannot be valued in the market place.

On any other subject, this newspaper would not attempt to speak for the people of Henderson County. But we feel that we do not assume too much authority when we say to Miss Lanning: The people of Henderson County thank you for your long years of devoted and dedicated service. May God bless you.

Does Aid Help or Hurt Friend?

EXTENSION OF REMARKS
OF
HON. ALTON LENNON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. LENNON. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD an editorial from the Wilmington Morning Star of May 27, 1957, entitled "Does Aid Help or Hurt Friend?" The able editor of North Carolina's oldest daily newspaper sets forth some provocative and timely suggestions as we consider the foreign-aid program.

The editorial follows:

DOES AID HELP OR HURT FRIEND?

If, without knowing the author, you read the following statement, who would you guess said it?

"Economic dependence on the United States (by foreign nations) has grown beyond expectations. The sooner nations get on their own feet, the better off they will be."

Would it have come from the late Senator Taft, or from Senator KNOWLAND, or from some other Old Guard Republican or conservative Democrat?

Well, such a statement was made by Amjad Ali, Finance Minister of Pakistan, who clearly pointed out the recipient of American aid sometimes thinks it hurts more than it helps. And, goodness knows, the United States has poured plenty of financial and military aid out to Pakistan.

Whenever a nation or an individual becomes dependent upon financial handouts, that nation or individual loses its natural desire to work out personal problems. If the Federal Government would only let industry, individuals, nations, and all other segments of finance seek their respective levels by removing the false economy it has created to serve its own ends, perhaps this world would be a better and more interesting place. But as long as foreign nations can count on a weekly or yearly allowance from the United States, those countries are going to discover they cannot stand on their own economic feet if and when the subsidy is withdrawn.

Formosa is totally dependent upon American aid—but obviously they don't love us there for our kindness. The Chinese people on Formosa who rioted and destroyed American property were giving vent to their emotions—expressing open resentment at having to be dependent on the United States even for existence.

Just as man has pride, so do nations want to stand alone. Foreign aid is necessary in wartime when allies are fighting for a common cause. But to carry that program over year after year under one guise or another will eventually result either in open resentment or smoldering mistrust.

Address of Hon. Peter F. Mack, Jr., of Illinois, at Memorial Day Service, Honor Roll Park, Morrisonville, Ill., on Thursday, May 30, 1957

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. LOSER. Mr. Speaker, our distinguished colleague, the Honorable PETER F. MACK, JR., delivered an outstanding address at Memorial Day services at Honor Roll Park in Morrisonville, Ill., on Thursday, May 30, 1957.

Under leave to extend my remarks, I am inserting in the RECORD this very fine address:

ADDRESS OF HON. PETER F. MACK, JR., OF ILLINOIS, AT MEMORIAL DAY SERVICES AT HONOR ROLL PARK, MORRISONVILLE, ILL., ON THURSDAY, MAY 30, 1957

I am proud to have been asked to participate in your Memorial Day service. But I am wondering why I was selected for this high honor.

Possibly it is because I am your neighbor and treasure the association and friendship of your fellow townsman.

Perhaps it is because I have served in the military service and have a continuing interest in it through my participation in the active Naval Reserve.

I think it is more logical, however, that you chose me because of my office as your Representative in Congress.

This office has been made possible by those men who have given their lives to protect our democratic form of Government.

Without their sacrifices our Congress would not exist nor would the liberties which we enjoy under our representative form of Government.

Therefore, it was appropriate for you to call on me, as your Congressman, to participate in this memorial service, so that I can be reminded of the responsibilities we have assumed in continuing the fight for a peaceful world.

Many of the Morrisonville men who gave their lives, and whose names appear on the honor roll in this park, were personal friends of mine.

There is no honor we can pay that is too great for the one who has made the supreme sacrifice of giving his life for his country.

In our feeble way, we are trying to remember the great contributions of our war dead and the sacrifices they made, by inscribing their names on this scroll and coming to honor them every Memorial Day. This is little enough for the service they rendered.

We should pray to God every single day of our life in this democratic country that these men we honor today will be sufficiently rewarded and decorated in the halls of heaven for their sacrifices on the sea, in the air, and on the battlefields of Europe, Korea, and the South Pacific.

Most of us here today are old enough to remember Memorial Days when there were still a few Civil War veterans around to occupy seats of honor on the platform.

We can recall when men who had fought in the Spanish-American War of 1898 were in the vigorous prime of early middle age.

Youthful veterans of the First World War led the march to the cemetery on Memorial Day. Most of us called it Decoration Day then.

Now, it is we veterans of World War II who have turned gray at the temples.

Veterans of the Korean war are the latest group of Americans who offered to give their lives that the Nation might live.

Each of the earlier wars had its troublesome aftermath. But none posed as many vexing problems, as much uncertainty or as grave a threat to our very existence, as our present concern with the hydrogen bomb.

In Washington this week the congressional Joint Committee on Atomic Energy, composed of Members of the Senate and the House of Representatives, began public hearings on the question of radioactive fallout from nuclear weapons explosions and its effect on man.

These hearings probably won't get as many headlines as the investigation of Dave Beck, but a Washington newspaper calls the fallout hearings the biggest quiz show of the century. As this newspaper put it, the question is: How much radiation from weapons tests, natural cosmic rays and medical X-rays can man tolerate without placing a veto on future generations?

The answer of the scientists seems to be nobody knows.

Nobody knows for sure how much radiation the human system can tolerate without hazard to health.

Nobody knows for sure how big a nuclear dose can be absorbed without harm to future generations.

We do know that radiation from any source—natural or manmade—is harmful.

The fallout hazard probably is greater in countries like the United States where medical X-rays already have subjected many people to considerable radiation.

Just what is fallout? I have heard it defined as the dropping back to earth of radioactive particles hurled into the atmosphere by nuclear explosions.

Scientists tell us that the most dangerous element of radioactive fallout is strontium 90. Two physics professors, John Fowler of Washington University in St. Louis and Norman Goldberg of the University of Pennsylvania, told of the dangers from strontium 90 in an article reprinted in the CONGRESSIONAL RECORD.

They wrote: "There is a strong possibility * * * that any amount of strontium 90 can cause serious damage—leukemia or bone tumors. Many scientists strongly suspect that any radiation which takes us appreciably above the existing natural level of radiation, which is due to cosmic rays, natural radioactivity in the soil, etc., is dangerous. We do not know what amount of damage is being done by these natural radiations and so cannot safely evaluate the effect of adding to them."

Yet we are told by a member of the Atomic Energy Commission, Dr. Willard Libby, that the risk from fallout is extremely small. Dr. Libby feels that these risks have been exaggerated by the many scientists and others who have called upon the United States, Britain, and Russia to stop testing large nuclear weapons.

On the other side of this question we have such scientists as Linus Pauling, winner of the Nobel prize in chemistry, and Laurence H. Snyder, president of the American Association for the Advancement of Scientists; such humanitarians as Pope Pius XII and Dr. Albert Schweitzer, and such statesmen as Adlai Stevenson, all of these men have

urged that the testing of nuclear bombs be halted.

Just this week a petition signed by 25 prominent scientists, including Dr. Pauling and Dr. Snyder, states that—and I quote—"Each added amount of radiation causes damage to the health of human beings all over the world and causes damage to the pool of human germ plasm such as to lead to an increase in the number of seriously defective children that will be born in future generations."

Even Dr. Libby, who sees no real danger in continuing the tests, concedes that—and again I quote—"No scientist maintains that there is no risk at all from test fallout."

Another official who holds somewhat the same view is Dr. Charles L. Dunham, Director of the Biology and Medicine Division of the Atomic Energy Commission. Testifying before the joint committee, Dr. Dunham said that there is no question that any quantity—I repeat, any quantity—of radioactive fallout is undesirable.

But then he went on to say that other policy considerations besides health govern the continuance of weapons tests. Dr. Dunham said that from 300 to 500 scientists employed by the Atomic Energy Commission are now devoting their full time to studying radiation hazards.

My own view is that the United States should take the initiative now—with or without an international agreement—to stop the testing of large nuclear bombs.

Limited experimentation with small nuclear weapons may be necessary. But we should strive for an agreement that will put a stop to explosions of hydrogen bombs and other large nuclear devices that scatter harmful radioactive ash all over the world.

The United States was the first Nation to achieve atomic fission. We were the first Nation to drop an atom bomb. We are the only Nation that has ever used a nuclear bomb as an instrument of warfare. We have a greater moral responsibility than any other nation in this matter. I am not criticizing the decision to drop the atom bomb on Japan during World War II. Responsible statesmen and military leaders say these bombings actually saved lives by shortening the war.

I do say, however, that because we were the first to use the atom bomb in war, we have a moral responsibility to take the lead in taming the atom.

We should concentrate our efforts on adapting nuclear energy to peaceful uses so that it will become a blessing to mankind instead of a curse.

In my humble opinion there is nothing constructive to be gained from continued testing of hydrogen bombs or other large nuclear weapons.

I am not an atomic scientist. But as a layman with a continuing interest in this subject, I have been convinced that we already are capable of devastating one-quarter the surface of the earth in a matter of a few hours. Must we carry the art of destruction to any greater degree of perfection?

The small nations of the world look to the United States for leadership in this matter.

We must remember that nuclear weapons are now being manufactured by only three nations—the United States, Britain, and Russia.

But the peoples of the small countries of Europe and Asia, Africa, and the Americas, cannot evade the hazards to which they are exposed by our continued experimentation.

It has been said that the soil of Japan has been contaminated by Russian experiments in Siberia while the fish that are the staple of the Japanese diet has been contaminated by American experiments at Bikini.

Our moral responsibility is all the greater because of these risks to other peoples because of a national policy over which they have no control.

Why do not the United States, Britain, and Russia come to an agreement to end the testing of atomic bombs? Albert Schweitzer, the great humanitarian and winner of the Nobel peace prize, gives this answer.

"The real reason," Dr. Schweitzer wrote, "Is that in their own countries there is no public opinion asking for it. * * * Public opinion in all nations concerned must inspire and accept the agreement."

The Gallup poll recently reported that 63 percent of Americans believe the United States should stop testing nuclear weapons and H-bombs if Russia also agrees to stop.

It is my belief that the United States, without risk to our security, can stop these tests now, without waiting for agreement from Russia.

The effect of such a decision by us would go farther toward winning allies in this troubled world than the billions we have spent on foreign aid.

It has been said that the cold war is principally a battle for minds and souls of peoples in the neutral nations.

The proposed ban on further testing of H-bombs is a propaganda weapon of the greatest magnitude. Let's use it to advance the cause of peace in the world.

Armenian Independence Day

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. MAY. Mr. Speaker, on June 2, in New Britain, Conn., I had the distinct privilege of being principal speaker at a gathering of 350 people of Armenian descent who were celebrating the 39th anniversary of Armenian independence day.

On May 28, 1918, Armenian independence was proclaimed and a democratic republic was established. Independence for this valiant people was short-lived, however, and after 2½ years the Armenian Republic was beset by Soviet intrigue and invasion. During the existence of the republic, the United States was generous in its assistance to the Armenian people by sending clothing, food, and medicine.

A heroic stand was made against the occupation by the Soviet Union in February 1921. The Soviets were ejected and for a period of 3 months were kept from occupying the country. Ultimately, the small republic, faced with overwhelming military odds, fell and since that time, Armenia has been under the heel of Soviet tyranny. It is now one of the so-called independent republics of the Soviet Union.

In the United States and elsewhere in the world there are people of Armenian origin who will never rest until the beloved land of their origin is again a free and independent nation. To work toward this end, an organization was formed and is known as the American Committee for the Independence of Armenia.

Let us in Congress remember that the cries and prayers for freedom from the Armenian people, although not audible from behind the Iron Curtain, are, nevertheless, as real and as fervent as the cries of the Hungarian people and those of the other captive countries. Let us work and pray, too, for the eventual liberation of the brave and suffering people of Armenia.

Vision, Work Made Ensley South's Steel Center

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. HUDDLESTON. Mr. Speaker, one of the outstanding steel-producing centers of the world is located in my district. Ensley, Ala., one of the larger suburbs of Birmingham, has long been known for its wide variety of steel products. It is also famous for its steel-producing techniques.

Before the South's first commercial heat of basic steel was tapped at Ensley on Thanksgiving Day, 1899, there were those who said the mill could not produce steel from the Birmingham red iron ore. Those disbelievers had discounted the ingenuity, devotion, and foresight of the pioneer residents of the Ensley district. True, it takes far more than the basic mineral ingredients to produce steel, but the Ensley folk overcame the obstacles and handicaps. At times, it was necessary to go beyond the shores of our own Nation for experts in the field, but Ensley succeeded in producing steel by the open-hearth method and also in using open-hearth steel to make top-quality rails.

Today, I am proud to state, through many long years of hard work, patience, and endurance, Ensley has become the steel capital of the South. Under leave heretofore granted, I am pleased to insert a short history of this distinguished steel-producing area which appeared in the May 31, 1957, issue of the Birmingham Post-Herald, one of my district's fine daily newspapers:

VISION, WORK MADE ENSLEY SOUTH'S STEEL CENTER

The Birmingham district's ancestor of all southern steel mills is still going strong. And what's more, it shows no signs of slowing down.

Dean of southern steelmakers is the Ensley Steel Works of United States Steel's Tennessee Coal and Iron division.

There the South's first commercial heat of steel was produced almost 60 years ago. It was here, too, that the Nation's first open hearth steel rails were turned out more than half a century ago.

Since then, many millions of tons of steel have flowed from the Bessemer converters and the open-hearth furnaces at Ensley, and enough rails have been produced at the plant to crisscross the continent. A large proportion of the wide variety of steel products made at TCI's other plants in the Birmingham district are rolled from primary metal made at the Ensley works.

Giving the South a steel industry was not easy. As a matter of fact, only a few men at first thought it could be done.

It was widely known that the Birmingham district had all the major ingredients for steelmaking, but, unfortunately, the red iron ore so abundant in the heart of Red Mountain was not suitable for making good steel by processes then in use. To begin with, it contained a very low percentage of iron. Furthermore, it also had many chemical substances which would have to be removed before good steel could be made from it.

TCI's officials at Ensley, however, refused to concede that steelmaking was impossible here because nobody had yet found a way to do it.

A young engineer was brought from England to study the low-grade ore and see if he could devise a furnace which could handle it. After much experimentation, he developed a basic ironmaking furnace, the lining of which was capable of counteracting the undesirable chemical elements in the ore, thus producing what has come to be known as basic iron.

At first TCI contented itself with making and selling basic iron in the form of blooms and billets. Then, however, it found that some northern plants were buying its iron and converting it to steel.

"If they can do it, so can we," said TCI officials, and so they set about to develop an open-hearth process capable of making good steel from Birmingham iron.

Utilizing essentially the same principles evolved in building the basic blast furnace, they devised the basic open-hearth furnace. On Thanksgiving Day, 1899, the South's first commercial heat of basic steel was tapped from the new open-hearth furnaces at Ensley.

It had not been many years since steel rails had replaced the relatively brittle ones made of iron. At the turn of the century all of the American rails were being made in certain northern mills, from steel produced in the bessemer converter, and it was believed that open-hearth steel was not suitable for that product.

Again, however, TCI people were not convinced that it could not be done, so by 1902 the Nation's first mill for making rails from open-hearth steel had been installed at Ensley. That mill is still producing high-quality rails for the railroad industry.

Rails are the only finished steel products made for the trade at the Ensley plant, although great tonnages of its billets and slabs are transported to plants at Fairfield and Bessemer for making many dozens of useful products.

The Ensley works, however, does make one other consumer product which is of considerable importance in the South. That is basic slag, an excellent soil conditioner for farms, pastures, and lawns. The plant at Ensley is America's only producer of basic slag soil conditioner.

The very chemical elements which at first made it so difficult to produce satisfactory steel from Birmingham ores are responsible for making the Ensley slag a good plant food In the steelmaking process, these elements are absorbed from the iron by molten limestone.

When this material is taken from the furnace, it is allowed to cool and harden, after which it is pulverized and bagged for sale. Experiments conducted throughout the South have proved that it is one of the best soil builders available.

General superintendent of the Ensley Steel Works is Dudley Vaughan, who began his career at that plant more than 45 years ago, as a blueprint boy. Largely self-taught in the steel business, Mr. Vaughan has become a foremost authority on open-hearth practice. He had served as assistant general superintendent of the big Fairfield Steel Works from 1943 until his appointment, last October, to the general superintendency at Ensley.

J. J. Shannon, a widely recognized expert on blast furnaces, is assistant general superintendent of the plant. Mr. Shannon was for many years superintendent of blast furnaces at Ensley.

Revision of the Natural Gas Act

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. COAD. Mr. Speaker, the following is a statement which I made before the House Interstate and Foreign Commerce Committee in opposition to the measures which call for the revision of the Natural Gas Act. My statement to this committee is as follows:

STATEMENT BEFORE INTERSTATE AND FOREIGN COMMERCE COMMITTEE ON JUNE 4, 1957, BY HON. MERWIN COAD, OF IOWA

Mr. Chairman, I am MERWIN COAD, Representative in Congress from the Sixth Iowa District, and I appreciate the opportunity afforded me in coming before your committee. I will be brief in my statement as I know you have heard many learned persons to date on the subject under consideration and many are yet to be heard.

The Sixth District of Iowa is composed of 15 large counties which are largely rural but are dotted with many towns and some small cities. We already have many of our communities using natural gas and at the present time arrangements are being made and negotiations completed to bring more natural gas to still additional towns and communities in the district. The people desire the efficient, clean, and moderately priced natural gas for use in their homes and for industrial purposes.

There are no oil or gas wells located in the State of Iowa, much less in the Sixth Iowa District. Therefore, all of the people whom I represent are consumers and I am stating this case in their behalf. However, even though all my people are consumers, they are still aware of the fact that those who produce, transport, and distribute natural gas must make a healthy margin of profit in order to continue their operations. There is no controversy whatsoever about this. But on the other hand, it is obvious that the rights of the consumer must be protected in those measures which would change the situation which has seemingly been fair and equitable to all involved. Admittedly the producers through to the distributors of natural gas have been regulated by one or another agency of the Government whether Federal, State, or local. But even so, there have been no cases recorded publicly to my knowledge wherein any Government agency acted in such manner as to bring about the economic death of any natural-gas producer, transporter, or distributor. In fact, the economic picture of the entire gas industry has been, throughout the years, one of good health. The general utility field has been one of the surest and safest attractions for capital.

It is obvious then, when an industry which has fared well under the observation, supervision, and regulation of a governmental agency wants to be removed from this control, it is not to reduce its pricing structure, nor to lower its profit level. Quite to the contrary, the only reason any group would want to free itself from any constricting regulation would be to further enhance its own economic picture.

Let us remember that those who are natural-gas consumers are limited and controlled. They are limited to using natural gas for they are controlled by the fact that they have a heavy investment in those appliances which utilize only natural gas. It is not a matter of deciding one day to change from one fuel to another.

Further, it should also be remembered that the industrial users will not shoulder the load of any increased costs, for already the home user pays the bulk of the costs which include the profit and the industrial users pay little more than the actual cost of the gas plus transportation.

Obviously, the consumer will pay for any increase in the cost of natural gas, just the same as the consumer pays the increased cost of any commodity. With the pricing structure the way it is already set up, it will mean that the families, in their homes, will pay any increase in the cost of natural gas.

There are millions of American families tied to the natural gas lines. Unless the Congress maintains a constant vigil for their rights, they stand unprotected.

Originally, the Natural Gas Act of 1938 was to protect the consumer against exploitation at the hands of natural gas companies when it was clearly seen that the States could not adequately supply this basic protection. It is also a known fact that the large oil companies control the production of natural gas. These companies have fared very well under the present regulatory law and the people's rights have been protected. Surely, for the sake of justice and fairness it would be unwise to turn loose these industrial giants upon the unorganized forces of our family unit consumers.

There have been many attempts to repeal the Natural Gas Act, but always there have been those who have stood firmly voicing the concern of the people who are not in a position to speak for themselves. Today, I stand in opposition to H. R. 6790 which would only free the producers of natural gas from pricing control. I do not believe this bill would be in the best interests of my people, nor would it be in the best interests of the total American consuming public. The only ones who would benefit by this measure would be those who are the producers of natural gas and their profit-and-loss sheets do not provide evidence that they have been the recipients of any economic abuse under the present Natural Gas Act.

I take this opportunity to express to you again my appreciation for the graciousness of your committee in permitting me to make this statement.

Poll on Immigration and Deportation

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert the following results of a vote taken by the Commonwealth Club of California on immigration and deportation. This poll was taken following the circulation to all their members of a report of the club's

immigration section preceded by an 18-month study of the subject.

Should the immigration law be amended so that—

1. (a) Quotas will be changed from the present 1920 census base [1] to that of the most recent published census? Yes, 926; no, 555.

(b) Unfilled portion of annual quotas will be made available for use by other nations in succeeding years? Yes, 673; no, 794.

2. (a) All immigrants, regardless of race, will be charged to country of birth? Yes, 967; no, 418.

(b) Quotas for specific countries will be abolished, and an overall quota established to which every immigrant would be chargeable, regardless of origin, birthplace, or race? Yes, 421; no, 975.

3. Immigrants born in Western Hemisphere will be made subject to quota? Yes, 951; no, 491.

4. Broader discretion will be given for administrative relief against exclusion or deportation regulations? Yes, 1,012; no, 461.

5. Commencement of deportation proceedings will be limited to 10 years after cause for deportation? Yes, 760; no, 714.

6. The immigration and nationality laws will be administered by an independent commission rather than by a bureau in the Department of Justice? Yes, 581; no, 883.

7. A visa review board will be established to consider appeals from denial of visas? Yes, 1,005; no, 477.

8. Specific provision will be made for court review of decisions of administrative authorities in all important immigration matters? Yes, 1,185; no, 299.

[1] Whereby quotas have been prorated on a percentage basis to each country according to the national origins of the United States population.

Extension of FDIC Power Hits State Bank Departments

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. MARSHALL. Mr. Speaker, many Members of the House have a high regard for Ben DuBois, secretary of the Independent Banks Association, and respect his sincere interest in sound economic policies to promote general prosperity and assure the healthy growth of small and independent enterprise.

In the June 1957 issue of the Independent Banker, Mr. DuBois discusses an apparent infringement on the responsibility of State banking departments by the FDIC. What he has to say is worthy of our study and consideration. Under leave to extend my remarks, I include his article entitled "Extension of FDIC Power Hits State Bank Departments."

EXTENSION OF FDIC POWER HITS STATE BANK DEPARTMENTS

(By Ben DuBois)

The Federal Deposit Insurance Corporation came into being for the purpose of insuring bank deposits as a protection to the depositing public. It was permitted to examine nonmember State banks and, in case of necessity, State members of the Federal Reserve System and national banks. The purpose of this examination privilege was to minimize the Corporation's risks. This has been accomplished.

During the 22 years that the Corporation has been operating, the total net loss has been a little less than $21 million. For the year ending December 31, 1956, net income from United States Government securities alone amounted to over $43 million. Total expenses and losses for that year were about $10 million dollars. The total losses in 22 years were much less than the income on investments for 1 year. The Corporation certainly has minimized its risks.

From the insurance standpoint the Corporation has done an excellent job. It is very much a worthwhile organization. It has brought a high degree of stability to banking. It has proved that the insurance of deposits is feasible, and the banking fraternity and the public in general look upon the Corporation with deep respect.

COMPLAINTS HEARD

But through its examinations, the Federal Deposit Insurance Corporation is becoming a policymaker. Monetary policies should be left to the Board of Governors of the Federal Reserve System. Also, the FDIC is encroaching upon the prerogatives of the banking departments, in some instances pushing the State banking departments into subservient position.

We hear more complaints about the examinations of the FDIC than we do of the other examining agencies. The Comptroller of the Currency sits on the FDIC Board. We hear little criticism of national bank examinations.

Is there a movement on foot, abetted by the Comptroller as Director of the FDIC, to encourage State banks to change to a National charter or to avoid the irritating examinations by the FDIC by becoming a member of the Federal Reserve System?

ALL EXAMS THOROUGH

It can be assumed, we believe, that examinations by the National Banking Department and by the Federal Reserve banks, are fully as thorough as the examinations by the FDIC. From personal experience, we believe the examinations by the State banking departments are equally good.

Is the assumption of more and more direction to banks by the Corporation through its examinations a scheme of the FDIC to break down the autonomy of the States and to supervise, direct, and make policies for State banks through a Washington office?

Perhaps there is no well-laid plan to do any of the things enumerated above. Maybe it is merely Washington bureaucracy stretching out for more control.

We believe we see dangerous handwriting on the wall that should be heeded. We often wonder why the FDIC as an insurer needs to examine all nonmember State banks. It accepts in general the examinations made through the Comptroller of the Currency's office as well as examinations made through the different Federal Reserve banks. Couldn't it accept the examinations made by the different State banking departments?

The State banking departments have a responsibility for seeing to it that the banks under their supervision are properly run. These agencies will do their utmost to protect depositors of State banks. It is patent on its face that the Corporation sort of looks down its nose upon examinations made by State banking departments.

State banks, of course, pay a fee for examinations by the State banking departments. The FDIC makes no charge, but the banks pay for this examination nevertheless through the premiums they pay to the Corporation.

If the Corporation maintained only a skeleton crew for examining problem banks, it could lessen its cost of operation and we believe that ultimately it could return more of the premium the banks pay the FDIC.

As long as the Corporation fails to recognize the competency of examinations by State banking departments, the more it puts our State banking departments in a subservient position.

SETTING A TREND?

Perhaps the trend is toward eliminating examinations by the State department. Then the only thing that would be left is the right of chartering. These rights are infringed upon a bit because when a State issues a new charter, the new State bank may get insurance or it may not.

On the other hand, a charter issued to a national bank automatically gives it insurance. If a going bank can't secure insurance from the FDIC, it may join the Federal Reserve System and then the Corporation will insure it. It appears to be a lopsided situation.

When a newly chartered State bank makes application to the FDIC for insurance, the Corporation in many instances withholds insurance until the bank management selects an executive officer satisfactory to the FDIC.

The Corporation does not leave it to the State banking department to decide whether or not the proposed executive officer is competent. Taking away from the State banking departments their responsibilities weakens these departments.

Perhaps in some instances the shucking of responsibility is pleasant. Final disposition of troublesome problems can be placed on the other shoulders. However, if we are to maintain strong State banking departments, these departments must measure up to their responsibilities.

It is our belief that when the Congress permitted the FDIC to examine banks it was for the purpose of minimizing risks, not to give the Corporation power to set policies and to select managing officers for the banks.

It was not the intent of Congress, surely, to have the Corporation dominate the situation and to put State banking departments in a position of less responsibility.

Unless corrections are made, our dual system of banking will become a hollow shell and by indirection its substance may be destroyed.

A 51-Million-Acre Corn Base Program

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. COAD. Mr. Speaker, the following is a plan presented to me by a constituent, Mr. Carl Hoyer, of Fort Dodge, Iowa, who is president of the Webster County Farm Bureau. It deals with the farm problem and is evidence that Mr. Hoyer is continuing with those of us who are constantly working of this situation. I present the plan here so that the entire membership of this House might study its merits:

A 51-MILLION-ACRE CORN BASE PROGRAM

This plan would provide for approximately 20 percent of crop acres to be put in soil bank with average payments of $28 per acre.

This program would take care of the objections of farmers not wanting to participate. First, it would allow a farmer to plant about 60 acres of corn on a 160-acre farm that is all cropland. If this were done it would allow

farmers to plant more corn (which is by far the best pay crop in the agricultural corn producing area) and thereby eliminate the possibility of diverting acres from corn to grain sorghum or other feed grains.

By taking 20 percent of crop acres and putting them into a soil bank, we would take 2 times as many acres out of production, as the acreage reserve of the present soil bank bill now does at the same cost to Government. This would be the same land on which farmers are being paid about $50 per acre this year, only this plan would give the farmer the choice of putting into the soil bank the cropland he chooses. Land would most likely be taken out of oats or hay. Farmers would not object to taking this land out of production because they say they don't make money on these crops anyway.

This program would solve the surplus feed problem because by taking 20 percent of crop acres out of production we should cut total feed units by about 5 to 10 percent. This would balance supply and demand, and take care of surpluses.

Land placed in this soil bank should be seeded, but no extra payments should be made, as the farmer is the one who benefits from the seeding. Also setting up of seeding requirements by ASC offices would raise administration costs. These regulations cannot be enforced because who could tell where the seed was planted?

This program should be tied in with a flexible support program of from 75- to 90-percent parity. I see no reason why we should take less than 75 percent of parity with a reduction program of this kind. A floor of 75 percent would take away much of the criticism and 75 percent is low enough to increase consumption and not stimulate high production. A farmer would have to participate in the soil bank in order to be eligible to seal any feed grains or ASC payments.

I have talked to quite a few farmers and other leaders in the county. They are very favorable to this program and thought I should write it up. I would welcome any suggestions as to changes that you think would improve it.

I humbly and prayerfully present this program to you, with the hope that it may in some way help to set up a farm program that will help agriculture out of the very distressful conditions we are now facing.

CARL HOYER.

FORT DODGE, IOWA.

Protest Against Reduction in Wheat Price

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. BREEDING. Mr. Speaker, the farmers in my area are bitterly opposed to the recent reduction in wheat prices, and I have made my own feelings a matter of record with the Secretary of Agriculture. I would like to extend my remarks in the RECORD to include a resolution presented to me by the Farmers Union Local, No. 1624, Belle Plaine, Kans., urging that the support price on wheat be restored to $2 per bushel:

Whereas the price of gasoline has gone up from 1 to over 3 cents a gallon. Farm machinery, cars, and trucks have also gone up in price. In fact, all costs of operation except those involving other farmers have gone up;

Whereas Kansas has reduced its wheat acreage from over 14 million to just over 5 million acres and the expected yield is 83 million bushels compared to 195 million bushels for the 10-year average;

Whereas there is now in operation production payments on wool and sugar which have not caused surpluses: Therefore be it

Resolved, That the support price of wheat be set at $2. The agricultural situation is about the same as last year and unless last year the price was raised as a political move to get votes, it should be set at $2 again; be it further

Resolved, That copies of this resolution be sent by the secretary of the Redman Farmers Union Local, No. 1624, on May 20, 1957, to President Eisenhower, Secretary of Agriculture Ezra Benson, to Senator Andrew Schoeppel, Senator Frank Carlson, Representative J. Floyd Breeding, and to the State Farmers Union paper.

FRANKLIN BURGER,
President.
MRS. GERALD WATKINS,
Secretary.
H. H. ZIMMERMAN,
Legislative Director.

Panama Canal: Capacity Threatened by Water Shortage

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. THOMPSON of Texas. Mr. Speaker, in my remarks in the Appendix of the CONGRESSIONAL RECORD of February 6, 1957, page A804, I commented on the proposal to widen Gaillard Cut—formerly Culebra—from its present minimum width of 300 feet to 500 feet as a step in the right direction for the adequate modernization of the Panama Canal.

The navigational hazards and other adverse effects on capacity of the present restricted cut have long been recognized. But these are not the only grave problems involved in the modernization of the Panama Canal.

In the May 19, 1957 issue of the New York Times, a special dispatch from Balboa, C. Z., reported a closing of the canal to certain types of deep-draft vessels, because of shortage of water in the summit level, as narrowly averted. The situation described cannot be considered alone, for it is merely another of seven major canal operating problems that must be considered in any realistic handling of the question of modernization.

For a listing of these problems the attention of the Congress is invited to a summary and discussion of them on pages 43–44 in the hearings on the operations of the Panama Canal and Canal Zone Government before the Committee on Merchant Marine and Fisheries, March 29–31, 1955, in which I was a participant.

The limited operating range of Gatun Lake—87 to 82 feet—as indicated previously, is but a single problem. Its obvious solution, as stated in the summary, consists of raising the lake level to its optimum height—approximately 92 feet.

The current water shortage together with the growing traffic, which in April was 905 vessels of all classes, is further reason for immediate consideration of the overall canal problem. Certainly the time has passed for individual treatments of operational symptoms that have featured recent canal official efforts, and which have only served to delay, if not confuse, the real issues.

This latest operating crisis, I submit, as the result of almost a decade of close observation of Panama Canal matters, can be adequately and economically met only by means of an independent inquiry under congressional authorization along the lines contained in measures to create the Interoceanic Canals Commission, which are now pending. The time for procrastination should be over.

Under leave granted to extend, I quote the text of the indicated news dispatch:

CURB IS AVERTED AT PANAMA CANAL—RAINS RAISE LEVEL OF GATUN LAKE PERMITTING CONTINUED TRANSIT BY TANKERS

BALBOA, C. Z., May 17.—The closing of the Panama Canal to heavy-laden tankers and ore ships has been averted for the time being, it was revealed today.

An extraordinarily long and severe dry season lowered Gatun Lake to such extent that canal officials had fixed June as the day when they probably would deny transit to deep-draft supertankers and ore vessels plus any other ships equally unwieldy.

However, heavy rains last week end, plus some rain since, have averted this necessity.

Gatun Lake remains between 3 and 4 feet lower than normal. Today was about 5 inches above the level at which canal authorities would have had to start picking and choosing vessels able to make the transit.

The dry season on the isthmus normally extends from about Christmas to mid-April.

Even in this time there are normally periodic showers.

But this year it was mid-May before the first rains came, and there had been scarcely a sprinkle anywhere on the watershed since December.

In 1946 Gatun Lake fell to a lower level than this year, but at that time canal traffic did not include supertankers.

Further complicating the problem of canal officials is the fact that traffic continues at record levels.

Nine hundred and five ships of all classes used the canal in April. This made April the second best month in canal history.

The best month was March, when 60 more oceangoing vessels transited than in April.

The Late Robert Crosser

SPEECH
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. CHENOWETH. Mr. Speaker, I was greatly saddened when I learned of the passing of our former colleague, Robert Crosser. I wish to join in paying tribute to his memory.

I had the great pleasure and privilege of serving on the House Committee on Interstate and Foreign Commerce when Mr. Crosser was chairman. I soon learned to admire his sterling qualities and recognized him as an outstanding

American. My service on this committee under the leadership of Bob Crosser was a most happy experience, and I shall always have pleasant memories of my association with Mr. Crosser.

He told me the story of his life and of the fight that he had to make in order to reach the pinnacle of success that he obtained. It is an inspiring and challenging story and made a deep impression upon me. He was a philosopher and a keen student of history.

I always enjoyed a visit with Mr. Crosser. He was always in good spirits, in spite of his physical ailments. I was proud to have him as a friend, and my life is richer for having known Robert Crosser.

I wish to extend my sincere sympathy to his daughter and son, and to the other members of the family.

Joint Statement of Secretary of State John Foster Dulles and Secretary of Defense Charles E. Wilson

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

JOINT STATEMENT OF SECRETARY OF STATE JOHN FOSTER DULLES AND SECRETARY OF DEFENSE CHARLES E. WILSON

The case of United States Army Sp3c. William S. Girard has far-reaching implications, involving as it does the good faith of the United States in carrying out a joint decision reached under procedures established by treaty and agreement with Japan.

The case involves actions by Girard which caused the death of Naka Sakai, a Japanese woman, on January 30, 1957. The issue arose as to whether or not Girard should be tried by United States court-martial or by a Japanese court. After careful deliberation in the joint United States-Japan committee established by the 2 Governments pursuant to treaty arrangements, the United States representative on this committee was authorized to agree, and on May 16, 1957, did agree, that the United States would not exercise its asserted right of primary jurisdiction in this case. In view of this completed action, attempting to prolong the dispute over the jurisdictional issue would create a situation which could basically affect United States relations not only with Japan, but also with many other nations.

For these reasons, Secretary of State John Foster Dulles and Secretary of Defense Charles E. Wilson have carefully reviewed all the available facts in the case. They have now concluded that the joint committee's agreement that Girard be tried in the courts of Japan was reached in full accord with procedures established by the treaty and agreement, and that in order to preserve the integrity of the pledges of the United States, this determination by the joint committee must be carried out.

The Secretaries' review disclosed the following:

The incident occurred in a maneuver area provided by the Japanese Government for part-time use of United States forces. The Japanese Defense Force uses the same area about 40 percent of the time. When the area is not in use by either the United States or Japanese armed forces, Japanese civilians are permitted to farm or otherwise use the area.

Efforts to keep civilians away from the area during such military exercises have not proved effective. In this particular case, red boundary flags were, as customary, erected as a warning to civilians to keep off, and local authorities were notified of the proposed exercises. But, as was frequently the case, a number of Japanese civilians were in the area gathering empty brass cartridge cases at the time of the incident. These civilians had created such a risk of injury to themselves in the morning exercises when live ammunition was used that the American officer in charge withdrew live ammunition from the troops prior to the afternoon exercises. In the interval between two simulated attacks during the afternoon, Girard and another soldier, Sp3c. Victor M. Nickel, were ordered by their platoon leader, a lieutenant, to guard a machinegun and several field jackets at the top of a hill. Girard and Nickel were not issued live ammunition for this duty.

It was while these soldiers were performing this duty that the incident occurred. Mrs. Naka Sakai, a Japanese civilian, died a few moments after being hit in the back by an empty brass rifle shell case fired by Girard from his rifle grenade launcher. She was not over 30 yards from Girard and was going away from him when he fired the rifle. Girard had previously fired similarly in the vicinity of a Japanese man, who was not hit.

Girdard's action in firing empty shell cases from the rifle grenade launcher was not authorized. He asserted that he fired from the waist, intending only to frighten the Japanese civilians. Others stated, but Girard denied, that empty shell cases were thrown out to entice the Japanese to approach.

Under the United States-Japanese Security Treaty and article XVII of the administrative agreement under that treaty, as established by the protocol adopted September 23, 1953, the authorities of Japan have the prior right to jurisdiction to try members of the United States Armed Forces for an injury caused to a Japanese national, unless such injury is one arising out of any act or omission done in the performance of official duty.

The Japanese authorities have taken the position that Girard's action in firing the shell cases was outside the scope of his guard duty and was, therefore, not done in the performance of official duty.

The commanding general of Girard's division certified that Girard's action was done in the performance of official duty.

In accordance with the procedure established under the treaty and administrative agreement, the disputed matter was, on March 7, 1957, taken before the joint United States-Japan committee established under the provisions of the treaty and administrative agreement previously referred to.

Various meetings were held between the United States and Japanese representatives on the joint committee. As is customary, a representative of the American Embassy in Tokyo also attended these meetings in the capacity of observer. Both sides continued to press their respective claims to primary jurisdiction, and the committee was unable to reach agreement.

The commanding general, Far East Command, reported the facts to the Department of the Army, the executive agent for the Department of Defense. The Department of Defense considered having the joint committee refer the matter in dispute to the two Governments for settlement, but rejected this procedure as inadvisable under the circumstances. Department of Defense instructions were accordingly issued, through the Department of the Army, to the Far East Command to the effect that the United States representative on the joint committee should continue to press the claim for jurisdiction, but that, in case of continued deadlock, he was authorized to waive jurisdiction to Japan. After 3 weeks of additional negotiations, the United States representative waived jurisdiction in the name of the United States.

Girard was subsequently indicted by the Japanese judicial authorities for causing a death by wounding—the least serious homicide charge for which he could have been indicted under Japanese law. In determining whether Girard's actions were in violation of law, all the facts, as presented by both sides, must now be weighed by the Japanese court, just as they would by a United States court-martial, if trial were held under United States jurisdiction .

In accordance with Public Law 777 of the 84th Congress, the United States Government will pay for counsel chosen by Girard to defend him in this trial. Pursuant to the administrative agreement under the Japanese treaty, Girard will be guaranteed a prompt trial, the right to have representation by counsel satisfactory to him, full information as to all charges against him, the right to confront all witnesses, the right to have his witnesses compelled to attend court, the right to have a competent interpreter, the right of communication with United States authorities, and the presence of a United States representative as an official observer at the trial. This observer is required to report to United States authorities on all aspects of the trial and the fairness of the court proceedings.

The United States authorities will, of course, see that all evidence is available to Girard and his counsel, and will render every proper assistance to him and his counsel in protection of his rights.

United States troops are stationed in many countries as part of our own national defense and to help strengthen the free world struggle against Communist imperialism. The matter of jurisdiction in cases of offenses against the laws of host countries, whether by our servicemen abroad or by servicemen of other countries in the United States, is dealt with by mutual agreements.

In the operation of this system in Japan there has been the greatest measure of mutual trust and cooperation. Since the present arrangement became effective in October 1953, Japan, in the overwhelming majority of the cases in which it had primary right to try American personnel, has waived that right in favor of United States action. There is every reason to believe that trial of United States Army Sp3c. William S. Girard in the Japanese courts will be conducted with the utmost fairness.

Item Veto

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. POFF. Mr. Speaker, under leave to extend my remarks, I quote herewith an editorial which appeared in the June 1, 1957, issue of the Lynchburg News, concerning the item-veto power in support of which several of us who authored the bills on the subject have recently been testifying before the Willis Subcommittee of the Committee on the Judiciary:

WHY CONGRESS BALKS

The item-veto power for which President Eisenhower has recently asked the Congress, and which Presidents before him have recommended, is one of those things that makes such good sense that the wonder is that it was not done long ago. Everybody has talked about it, everybody has approved it in principle, and nobody has done anything about it. It is still in the talk stage and seems likely to remain there for an indefinite time to come.

The item veto is aimed at one of the oldest evils in the Congress—the pork barrel. Under the law requiring the President to accept or reject an omnibus appropriation bill in whole, to take it or leave it, a President has generally left it with strong words that break no pork-barrel staves. The result is that when several legislators join together to add one appropriation to the bill they succeed because there are other legislators waiting with their pet little appropriations and don't want to antagonize anybody. "You tickle me and I'll tickle you" and let the taxpayer foot the bill. The President is helpless. He can't veto these little vote-getting expenditures without vetoing the whole measure which contains the appropriations necessary for the operation of the Government.

The laws of 40 of the 48 States empower the Governor to veto items in a measure without having to veto it all, and no State has returned to the old money-wasting system. In Virginia no one has really ever dreamed of going backward. But in the Congress of the United States it is different. The Congressmen have easy access to a big, fat pork barrel and have no idea of blocking it. And that's why it's not a wonder that while everybody talks about doing something about it nobody does.

In Virginia and many other States a roll call vote on every piece of major legislation is required for final enactment, and we hear of no calls for changing that system of keeping tab on how the legislators vote. But in the Congress of the United States it is different. Many measures of importance are passed and sent to the White House by a voice vote. That is to say, in such instances the Congressman is not required to put himself on record, something supposedly an essential part of the democratic process. Sometimes Congressmen don't want their constituents to know how they vote and sometimes they can prevent them from knowing when they do not have to stand up and be identified. Nobody openly defends this system but every Congressman expects some day he may want to take advantage of it. So shifting from secrecy to openness isn't an easy thing to do, and hasn't yet been done in the Congress.

So here are two things that make sense but aren't done and, it seems likely, never will be done and the reasons in both cases are simple. There's nothing to wonder about at all.

Resolution on Aid to Poland

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. CORBETT. Mr. Speaker, under leave to extend my remarks, I include the following resolution which was adopted by the Polish Roman Catholic Union, group 224, Natrona, Pa., petitioning the Government of the United States to render economic and technical assistance to Poland:

RESOLUTION ON AID TO POLAND

Whereas the courageous fight for freedom waged by the Polish people inside of Poland has gained for them admiration all over the free world; and

Whereas the emancipation from Soviet domination achieved after the mass demonstrations in Poland in October 1956 is only of limited extent; and

Whereas the reforms introduced by the present regime since its accession to power represents, in fact, a strong deviation from the orthodox Communist doctrine, as proclaimed and followed by the Kremlin; and

Whereas we must, after all, recognize the humanitarian principles transcend that form of government; and

Whereas the people of Poland at this moment face a war not of bullets, but a struggle for their very existence; and

Whereas the western allies forgot geography, and forgot that Poland is historically the bulwark of the Christian West against Asiatic barbarism; and

Whereas upon every battlefield of World War II Polish blood was shed without stint, in the cause of a free fatherland which the allies of Poland were legally committed by treaty to restore; and

Whereas families of Polish soldiers, sailors, and airmen killed in the battle of Britain, at Monte Casino, at Alamein, in Burma, and in the Pacific mourn their dead, frequently in dire financial straits, as do the surviving relatives of Polish officers murdered in the notorious Katyn massacre; and

Whereas these Polish citizens today lack food, fuel, and the barest amenities of comfort; and

Whereas these great people have been oppressed, looted, robbed, and driven to desperation by lack of basic necessities of life as demonstrated by the Poznan uprising which sparked other revolts; and

Whereas millions of gift parcels of foodstuffs, clothing, and drugs were shipped by Polish-Americans to their destitute relatives but today this zeal is thwarted by the imposition of prohibitive import duties, which few of the intended recipients can afford to pay; and

Whereas the people of Poland have always been among our stanchest friends whose ancestors have stood in ranks with George Washington in the War of the American Revolution and all wars since, in which the United States was involved; and

Whereas these people have participated in the development of our great American economy as we know it today; and

Whereas there is little danger that Soviet Russia would profit directly or indirectly from any economic and technical assistance given Poland under her present regime, and a realistic appraisal of the situation points rather in an opposite direction: Wherefore be it

Resolved, That we, members of the Polish Roman Catholic Union, group 224, assembled in convention on Sunday, April 14, 1957, in Natrona, Pa., call upon and strongly urge the United States Government to give financial aid and economic assistance to the downtrodden people of Poland, and that it is in the interest of the United States, as the acknowledged leader of the free world in its fight against communism, that adequate economic help be given to Poland at this particularly propitious and crucial moment; and be it further

Resolved, That a copy of this resolution be sent to the following: Hon. JOSEPH CLARK, United States Senator; Hon. EDWARD MARTIN, United States Senator; Hon. ROBERT J. CORBETT, Congressman.

POLISH ROMAN CATHOLIC UNION,
GROUP 224,
WALTER BARANOWSKI, *President*.

Address by Fred C. Scribner, Jr., Assistant Secretary of the Treasury Department, at the 71st Commencement Exercises of the United States Coast Guard Academy, New London, Conn., June 1, 1957

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. DELLAY. Mr. Speaker, I was privileged on June 1, 1957, to attend the 71st commencement exercises of the United States Coast Guard Academy in New London, Conn. Mrs. Dellay and our grandson, Vincent John, accompanied me. We were cordially received and so impressed by the ceremony and the address of Assistant Secretary of the Treasury, Hon. Fred C. Scribner, Jr., that I have asked unanimous consent to have Mr. Scribner's address printed in the Appendix of the CONGRESSIONAL RECORD so that his outstanding remarks may be brought to the attention of my colleagues:

We meet this morning in historic New England to write another major chapter in the record of this academy. I am grateful for the opportunity which tradition and your invitation have given to me to participate in this important event. The presence of members of the Treasury Department at this commencement emphasizes once more the importance of your school and your service in Treasury tradition and operations.

This Department, of which we are all a part, has been described as being responsible for more varied and diversified activities of major importance than any other governmental department in this or any other country.

We collect the revenue. This means the collection of income taxes from more than 60 million Americans, as well as the collection of excise, social security, and other taxes. We operate the customs through which all persons and shipments of commodities entering the United States must be cleared. In 1956 a record number of more than 128 million people were cleared through customs. We are required to manage the public debt which now stands at approximately $274 billion. Through the Secret Service we guard and protect the President of the United States and his family, one of the most responsible duties in the Government. We operate the mint, the Bureau of Engraving and Printing, keep the accounts of the United States, do our best to prevent the use and distribution of narcotics, and carry out hundreds of other functions.

Through your operation under the Treasury we have responsibility for the enforcement of maritime laws and the provision of marine safety. Your service from its earliest days has been a strong right arm of the Treasury.

The Revenue Marine Service was authorized by the First Congress at the urging of the first Secretary of the Treasury, Alexander Hamilton, whose bicentennial we celebrate this year. That service was essential in 1790 to guarantee the solvency of the new Nation by the prevention of tax evasion through smuggling. The marine service with 10 vessels did its job well. Ever since the Coast Guard has been called upon to do difficult and essential tasks. It always responds.

Alexander Hamilton is, in a sense, responsible for the ability of the Treasury Department and the Coast Guard to give you the education and training which you have received at this institution. We are indebted to him for his vision in establishing the forerunner of our Coast Guard service. As part of the year-long bicentennial celebration we might well have designated this the Hamilton class of the Coast Guard Academy.

A study of his life and service would be a source of real inspiration to you as you begin your own careers as officers of the United States. Hamilton was a most ambitious man. He was not, however, ambitious for great wealth or for powerful position. He desired rather to build something which would endure for the lasting benefit of his country. He set an example of country over self and public service over private profit which we can emulate to the benefit of ourselves and the people whom we seek to serve.

Not only do we of the Treasury take the utmost pride and satisfaction in your contributions to your country, both in time of peace and in days of conflict, but, in like fashion, the American people have a tremendous and deeply felt affection and esteem for this seagoing service which you represent. Yours is indeed a unique organization—a military organization which is fully functioning and in active status in peace as well as in war; a highly specialized, technically trained service which each day brings to our people and the visitors to these shores the many essential services which you and you alone are trained to provide.

Since the undeclared war with France in 1798 through the hostilities in Korea, the Coast Guard has been an important part of the country's fighting forces. Vessels and men of this service have written distinguished records wherever they have been called upon for combat service.

Equally great is your record of service to humanity in times of peace.

In the coastal areas of our country—yes, in all sections of our Nation—when disaster strikes our people think at once of the United States Coast Guard, and you are there promptly. You are there if the call is for a dangerous rescue far at sea. You are there when word comes that one of the hundreds of planes which daily approach our shores is in trouble and needs escorting. You are there if major floods require the removal of marooned men, women, and children. You are there when a helicopter is needed to bring a sick or injured seaman from the sea for hospitalization. You are there if a small sailboat in Casco Bay has overturned.

One cannot live on the shores of New England and be very far from a Coast Guard station. Your installations and men are known to us as neighbors and admired and respected as we admire and respect all who follow the sea. We know from firsthand observation your daily service to those who travel by sea, and we witness your many rescue operations—some dramatic—but many unheralded although of equal importance to those involved. We know, too, that your aid does not ask the nationality or the religion of those who need your help. Perhaps more than anywhere else, the brotherhood of man is practiced at sea.

In the past few months, as in prior years, many records of heroic deeds have been written into the annals of this service. Coast Guard men and equipment saved hundreds of lives in the New England and California floods of 1955. You well remember the thrilling rescue by the *Pontchartrain* of the 31 people on board the Pan American aircraft which ditched in the Pacific last October after the plane had spent part of the night circling that Coast Guard ocean station vessel. Acting under even more adverse conditions, the *Chincoteague* rescued 33 crewmen from the *Helga Bolten* just 2 weeks later.

Less than a month ago the cutter *Duane* on ocean station Echo in the Atlantic, rescued the entire crew of the freighter *Bornholm* when it became necessary for that crew to abandon ship in heavy weather.

One cannot meet here this day, not far from the first settlement in this north country and in this beautiful spot, mindful as we are of the hundreds of your brother officers who preceded you, without calling to mind the changes which this Nation and the world have witnessed since the first vessel of the marine service slipped into the water shortly after 1790. We call to mind too the skill with which this service has adjusted to these changes.

This service has grown and remained vital because, through the foresight of its officers and those responsible for its course, it has, to a remarkable degree, kept pace with the needs and demands of those who travel by sea and with all those scientific developments which will enable you to be a more effective service. From sail to steam, from wood to steel, from shore patrol and tower to radar, from the sea to the air, you have rapidly and effectively adopted those changes which have kept the service in the forefront of this country's military forces. The first use of wireless aboard a service ship was aboard a vessel of the lighthouse service. A revenue cutter, the *Grant*, was the first United States ship to employ wireless for tactical purposes. Radar was quickly and effectively adopted by the service at the earliest possible date.

You played a prominent part in the development of the famous electronic system known as Loran or long-range aid to navigation which was born shortly before our entry into World War II. Loran was of inestimable value in that effort. By 1956, 49 Loran stations were being maintained in the Atlantic, the Pacific, and the Gulf of Mexico. Thirteen additional stations have been or are to be added providing further coverage in the Caribbean area and at the northern and southern approaches of the vital Panama Canal.

You have been quick to serve not only at home, but also to aid other peoples throughout the world.

In the last decade the Coast Guard has assisted many foreign nations in establishing and training organizations similar in purpose and scope to our own service. Your service has given foreign representatives the opportunity to study at Coast Guard schools, training stations, and installations and gather ideas to take back to their own lands. You have furnished vessels for service in foreign countries.

In 1946, at the request of the Joint Chiefs of Staff, the Coast Guard furnished a detail to aid the new Government of South Korea in the creation of a Korean coast guard.

Today a Coast Guard detail is in Liberia training native personnel in the operation of 40-foot patrol boats, furnished to that Government by the United States.

Assistance from this service has gone to Portugal, the Philippines, Formosa, Thailand, Brazil, Argentina, Costa Rica, Spain, Greece, and many other countries. Intergovernmental cooperation of this type puts into active practice our President's desire to bring closer the people of all the world and is a valuable contribution to maritime safety and world peace.

Now this class of 1957 comes to add its names to the roll of Coast Guard leaders and to carry on in the fields of service at peace and at war, at home and abroad, which I have so hurriedly sketched. We are proud of this class and you have every reason to share this pride.

Some 5 years ago thousands of American boys, who had already marked themselves as more than average young men by the completion of a secondary school education, began to think of this Academy and of service in the Coast Guard. More than a thousand completed their preliminary papers and presented themselves for examination for admission to this class. Out of every 6 who stood for the examinations only 1 was chosen. And so, 197 were accepted to undertake this difficult Coast Guard training approximately 4 years ago; a training requiring exceptional physical and mental capacity. Two-thirds of the class did not survive the rigorous requirements you have completed. Your records which have brought each of you, after matching you in competition with your fellows, to this point justifies my great confidence in the capabilities and the future of those who constitute this class. We know that you fully appreciate the capacities which you possess, the demands made on you by the courses which you have completed, and your prospects for the future.

We do, however, expect far more from you than was demanded of those who sat in your places in earlier years. No longer will it be sufficient to know and to do well the daily tasks of your appointed rounds.

My generation has discovered the means whereby man can destroy himself. This Nation and other nations now hold the almost incomprehensible power developed by atomic science. We leave this awesome heritage to you. It will be for you, our leaders of tomorrow, to make certain that man's ability to live with man catches up with man's ability to destroy himself.

This calls for concern by all Americans, in service or out, with world events everywhere. We must now know and understand not only the hopes and ambitions of our own people, but of the peoples of Asia, of Africa, yes, of the world. This is not a knowledge for someone else to acquire. This is not a problem for someone else to solve. The fact that you are about to become commissioned officers of the United States does not entitle you to turn away from the demands of this problem. It's your problem and my problem.

Force must be replaced as a means of settling international disputes. To meet this challenge we must be concerned with the stirrings of people who today seek for themselves the privileges they have now learned can be held and treasured by free men everywhere. We are indeed one world. We are called to the labors which this fact entails. Our people must fully realize the burden which this Nation, the leader of the free world, now has as it strives to lead the peoples of the world to the goal of lasting peace.

We might wish this burden was not ours. Such wishing will solve no problems. Every American must share the burden. He must keep alert to developments everywhere in the world. He must, in his small way, do to the best of his ability that which he can to solve the problems of this atomic age.

It is because I believe you are to be leaders in your generation, because of the amazing record of this service in recognizing new demands created by the advances of science, because men of the sea have always seen the need to cooperate with other nations and other peoples, and because in serving humanity your predecessors have not been concerned with race, color, or creed but only with the needs of those in peril, that I have discussed with you this new and heavy burden which my generation has passed to you and the responsibilities which will be yours.

The problems are not easy and the solutions are not readily at hand, but the job can and will be done.

I voice here to you the hope which our great President so eloquently expressed in his second inaugural address. He then said:

"So we voice our hope and our belief that we can help to heal this divided world. Thus may the nations cease to live in trembling before the menace of force. Thus may the weight of fear and the weight of arms be taken from the burdened shoulders of mankind. This, nothing less, is the labor to

which we are called and our strength dedicated."

Shortly, the class of 1957 will take the time-honored and traditional oath administered to commissioned officers of the Coast Guard. You will join the ranks of thousands of brother officers, past and present, who in their time in this beloved place have stood with pride and pledged "both their lives, their fortunes, and their sacred honor" to this service and to our country.

West Point each year pays tribute with understandable pride to its "long gray line." You, too, have your line. Your "long blue line" extending from Hopley Yeaton, and including Alex Fraser, John Faunce, Mike Healey, Harry Hamlet, and R. R. Waesche, and other Coast Guard greats, right down to that noble soul, the anchor man of this class of 1957.

With this ceremony, you take your places in the brotherhood of commissioned officers of the Coast Guard. Of the Coast Guard, perhaps more than any other service, we can with full propriety speak the words of Shakespeare, "We few, we happy few, we band of brothers." You have earned an honored position. May you always be worthy of this great tradition, the fine professional heritage which will be yours.

It has been a rare privilege to be present at this commencement. In the months and years of your service in this vigorous, progressive, closely integrated organization, we shall depend on your support and assistance in the common tasks which we shall undertake. I bring you the best wishes of Secretary Humphrey. Wherever you may serve, whatever duty you may undertake, you are officers of the United States Coast Guard and of the Treasury Department of the United States, and we will be with you all the way.

The Kansas Mental Health Program

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. AVERY. Mr. Speaker, since World War II the State of Kansas has made amazing strides in the field of mental health. The State is now recognized as one of the leaders in this field. A long-range program was started under the administration of Senator FRANK CARLSON, then Governor, in 1947. Since that time the people of Kansas have devoted their efforts to a progressive program regarding mental health.

The following article, which appeared in the Topeka (Kans.) Daily Capital on Saturday, May 11, 1957, indicates the results of this excellent work. The people who staff our hospitals in Kansas are highly qualified, and in addition are most dedicated to their work. This letter which is referred to in the newspaper article speaks for itself:

LETTER SHOWS APPRECIATION OF TOPEKA (KANS.) STATE HOSPITAL WORK

Appreciation could not have been expressed more sincerely than in a letter received recently by Dr. Alfred Paul Bay, superintendent of Topeka State Hospital.

The letter was written from a man in California, whose mother had been a former patient at the hospital. In part, it read:

"DEAR DR. BAY: We always have time to find fault, but at the same time we're always too busy to write a letter of thanks.

"I want to take this opportunity to thank you and your fine staff for the loving care my mother received when she was a patient at your hospital.

"My sister visited my mother on many occasions while she was there and gave me a fine report on the operation of your hospital, and especially the doctors and nurses taking care of my mother.

"I am sure if more States, my own included, would pattern their State hospitals after your hospital in Topeka, this would be a better United States to live in. Thanks again. Very truly yours."

Dedication of New Branch Post Office at Davenport, Iowa

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. SCHWENGEL. Mr. Speaker, on Saturday, June 1, I had the privilege of participating in the dedication ceremonies for a new branch post office at Davenport, Iowa. The speaker at this event was the Honorable Bert B. Barnes, Deputy Assistant Postmaster General. His remarks for that occasion enlightened me on the forward-looking program which has been mapped out to improve our mail service. With the thought that my colleagues will find these remarks of interest, under unanimous consent, I insert Mr. Barnes' speech in the Appendix of the RECORD:

ADDRESS OF DEPUTY ASSISTANT POSTMASTER GENERAL BERT B. BARNES AT THE DEDICATION OF THE NORTHWEST STATION, DAVENPORT, IOWA, JUNE 1, 1957

Dedication of a new postal facility is always a pleasure. It is, believe me, a keen personal pleasure to be in Davenport on this occasion, and an honor to bring to you the greetings and good wishes of Postmaster General Arthur E. Summerfield who is endeavoring to give to the American people the kind of modern efficient mail service they so richly deserve.

TRIBUTE TO DAVENPORT

This postal facility is symbolic of the vigorous, forward-looking spirit of the many public-spirited men and women who have worked so hard to make this building a reality. Among these I want to mention specifically Postmaster Kroppach, Mayor Beuse, Mr. Henry B. Hook, president, chamber of commerce, Mr. Harvey Hoffman, of the Davenport Daily Times, and Mr. C. U. Nolan, president of the Northwest Davenport Businessmen's Association. No doubt there are many others whose names should be mentioned. And I am sure you know that none of these accomplishments could be realized without men like Senator HICKENLOOPER, Senator MARTIN, and Congressman SCHWENGEL.

THE AMERICAN POSTAL SYSTEM

This dedication is further recognition of the great growth of the entire American postal system, and the contribution of that system to the development of the expanding American economy. Without such communications, this country could never have developed its increasing pace of progress, its higher and higher standards of living.

Let me give you some dimensions of the American Postal Service:

In our 37,000 post offices we will handle about $23 billion this year. We will sell more than 24 billion stamps in spite of the fact that more than half of our mail is handled under permit by use of postage meter machines or otherwise. Our 32,000 rural letter carriers will travel more than a million and a half miles each working day. We will operate 85,000 vehicles, the largest motor vehicle fleet in the world.

This year, our 508,000 postal employees will handle nearly 60 billion pieces of mail—far more than all of the rest of the world combined.

The Census Bureau reports that in a recent 12-month period, 1 out of every 5 persons in this Nation changed his address—a staggering total of 33 million people moved in one 12-month period making postal adjustments necessary. I think anyone will agree that this is big business. And it is a growing business—one that has doubled in the last 20 years and which is still expanding at a consistent and regular rate. In 10 years we expect our volume to be more than 70 billion pieces and we will be furnishing service for an estimated United States population of about 200 million people.

POSTAL MODERNIZATION

All of this shows that your postal service must be dynamic and progressive to keep up with the Nation's vital needs now and in the years ahead. To meet these needs Postmaster General Summerfield embarked on a program which is the most revolutionary in the history of the American Postal Service. He has established the foundation for the postal service of tomorrow. The fruits of this program are becoming more and more apparent. This is one building of many we are having constructed under our leasing program—in fact they are being contracted for at the rate of about two each working day. And buildings are only one phase of the massive reorganization of your postal service.

Service has been improved in many ways. We made some bold alterations in our transportation patterns to speed the mail. We expanded the use of highway post offices, trucks, and buses, when these surface carriers could deliver the mail faster than the trains.

As you know, we have been experimenting with flying regular 3-cent letters by airplane on a space available basis. The experiment has been a tremendous success and last year more than a billion first-class letters arrived 24 to 48 hours earlier than they otherwise would have. And this was done without increasing our cost.

To meet the service needs caused by the growth and spreading of our cities, we have added in 4 years the equivalent of 20,000 new carrier routes, serving approximately 5 million more families and 800,000 additional business firms.

There have been many changes in mailing procedures for the public, and every change has been an improvement aimed at streamlining the service and making it easier to use and more efficient. We have added new services long needed, such as certified mail at less cost than registered mail and combination mail to permit mixing of letters and parcels.

We have given the postal service a New Look. You are now seeing the new modern lobby counter for ease in conducting postal business, the eye-saving fluorescent lighting, new equipment, electric tying machines, conveyor belts, as well as sparkling red, white, and blue collection boxes and trucks, and the new uniforms for letter carriers and other employees who are required to wear uniforms. And, to show that we haven't overlooked anything, we have retired the traditional scratchy post-office pen and replaced it with modern ball points.

While we have been doing all this, we haven't ignored the human element—the

welfare of our dedicated postal employees. With the help of the Congress, we have an entirely new pay plan, with incentives and opportunities for promotion, low-cost group life insurance, liberal retirement and survivorship benefits, uniform allowances, and unemployment compensation.

More payments are authorized for suggestions made and adopted. Competitive examinations are held for promotion to most first-line supervisory positions. Employee skills and understanding are improved through a variety of training programs. We have better working conditions through new buildings, improved heating, lighting, ventilation, and color arrangements, new vehicles, office machines, rest bars, caddy carts, and various automatic equipment. Much has also been done to make work safer for all. Our safety program, for example, has reduced our motor-vehicle-accident rate by more than two-thirds. We are giving our management and our employees the techniques and tools they need to do an efficient job.

Our office of research and engineering has inaugurated an unprecedented program of scientific research and development to give us improvements such as machines to face and cancel mail, to sort mail, to read addresses electronically, and to otherwise expedite the movement of the mail. Some of these machines are already in pilot operation.

For example, the first automatic letter-sorting machine ever installed in the American postal system was officially put into operation recently. This machine, sorting mail for 300 destinations at the mere touch of keys, is a major breakthrough from the past.

We are doing other things. In Baltimore, Md., for example, we already have the first mechanical parcel-post sorting machine with an electronic memory system. In Detroit, Mich., conveyors move letters effortlessly from workspace to workspace on the post-office floor. In cooperation with the National Bureau of Standards and 11 American firms, we are developing many other postal machines of tomorrow.

Electronic brains will read addresses on mail, remember tens of thousands of items, and sort millions of letters a day. Other machines will separate raw mail according to size, automatically locate and cancel the stamps, and postmark the mail.

Our program is paying off, not only in service improvement but in cost reduction. Let me give you three simple statistics:

1. Within less than 3 years we reduced our transportation costs by approximately $50 million on a comparable basis—or 12½ percent.

2. Our accounting and financial reorganization has reduced unnecessary manual bookkeeping, resulting in the savings of millions of dollars each year.

3. During the current fiscal year we will handle 18 percent more mail than in 1953 and we will do it with less hours of work, except for the increase in city carriers to improve service in growing urban and suburban areas.

THE POSTAL DEFICIT AND POSTAL RATES

In solving our financial problem, however, we still have a long way to go. In 1952, the year before we took office, the reported postal deficit was $720 million. That was $2½ million every working day. At the end of the current fiscal year the basic comparable deficit will be about $211 million. However, due to newly added costs of $304 million annually consisting of such items as salary and rail rate increases our deficit at the end of this year will be about $515 million.

Of course, the deficit is still far too high. It is high because postal rates are virtually the same as they were in 1932, and our postal costs have doubled in the last 25 years. We are paying 1957 prices for the things we purchase, and we are charging 1932 prices for the things that we sell.

That's why we are asking Congress again this year to grant us modest increases in the postage rates. Without a rate increase, despite all our efforts, the deficit for the fiscal year 1958 will amount to about $651 million.

In the last 12 years postal deficits have totaled more than $5 billion which means that we have added that much to our national debt. We think that there is no excuse in the world for expecting our children and our childrens' children to pay our postal bills for us. And many polls have shown that the American people agree with us and are willing for the rates to be increased.

OPERATING FUNDS

All postal receipts are deposited in the United States Treasury. The only operating funds we have are those appropriated by the Congress. I am sure you are aware of the difficulty we have experienced in our effort to secure sufficient funds with which to properly operate the postal service this fiscal year. Finally a supplemental amount of $41 million, instead of the $47 million requested, was appropriated.

As result of this lack of funds we have made very few extensions to the city and rural delivery services since February 15 and some of the curtailments started on April 13 are still in effect. By June 30 there will be somewhere between three hundred and four hundred thousand families and thousands of small-business concerns in surburban areas without suitable mail service.

Unless we receive a supplemental appropriation for the fiscal year 1958, additional curtailments of service will be necessary soon.

We have done everything possible each year to submit an absolutely honest estimate of our needs, with no inflating or padding. You will be interested in knowing that at the end of fiscal years 1953, 1954, and 1955 we returned to the Treasury of the United States $84 million; $109 million, and $43 million, respectively, or a total of $236 million. During 1956 we requested and received a supplemental appropriation of $16 million and during the current fiscal year we needed $47 million and received $41 million. These amounts were needed due to added costs, a tremendously increased volume of mail and an unusual spreading in city population over which we had no control.

When you consider the fact that we have an annual budget of approximately $3 billion, it is amazing how close our estimates have been to our actual needs. No one is more anxious to reduce expenditures than are we and we will continue to operate as economically as possible and hope that we are not forced to further inconvenience our patrons.

A SYMBOL OF FREEDOM

And now, as a conclusion, I come to perhaps the most important point of significance about our meeting here today.

It is the one thought that we as American citizens should hold paramount in our minds as we dedicate this postal station, and that is the meaning and value of our postal system as a symbol of American freedom.

We all know the human importance of the postal service—the way in which we are privileged to be the means of holding scattered families together, of giving comfort and love and news to all the peoples of the world.

It has helped foster the material progress of civilization. It is the handmaiden of our great free press and has served well the cause of democracy.

Consider this for a moment—tyranny and a free and uncensored postal system cannot exist in nature together. In the sick and sunless lands behind the Iron Curtain, there is no such freedom as we enjoy and take for granted.

Think what any one of the 800 million slaves of the totalitarian despots would give for just a small touch of our God-given freedom to write without fear or reprisal.

That's why we must strive to make of our postal service the greatest system of communications, the pride of free men everywhere and the despair of despots—for the better and stronger we make it, the more secure will we all be. If we preserve this freedom, all the other freedoms are safe.

So with this in mind—it is a great honor and a privilege for me to declare this latest example of national progress in our postal system—the northwest station of the Davenport Post Office—open for business beginning next Monday morning.

Thank you.

Contrasts in Costs: American Ships and Their Foreign Competitors

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. ALLEN of California. Mr. Speaker, on May 31, 1957, there appeared in the Journal of Commerce an article comparing the costs of construction of 2 new ships, 1 the Matson Line's *Matsonia*, and the other the Swedish-American Line's *Gripsholm*.

The article points up rather well one of the difficulties which the operator of American-built ships must overcome when competing with operators of foreign-built ships. Accordingly, I incorporate it as a part of these remarks:

SHIPPING OUTLOOK: SOME CONTRASTS IN COSTS

(By Edward P. Tastrom)

The port of New York during the past 10 days has played host to several new vessels ranging from maritime training school ships to new passenger liners.

Two of the maiden voyage arrivals deserve particular notice because of the contrasts which they offer that pinpoint the question of shipbuilding costs.

First, let us take a look at the Matson Line's *Matsonia*. This is an 18,600 gross ton reconversion job done in an American shipyard at a cost of $20 million. The result is a handsome ship of which both the yard and the line can be proud.

Now let us turn to the Swedish-American Line's new *Gripsholm*, which arrived here a few days later. This is a 23,190-gross-ton passenger liner, beautifully turned out in every respect. She was built new from the keel up at Italian yards, at an estimated cost of $14 million.

What this all adds up to is that the Swedish owners obtained a ship that is 25 percent larger at a price that is 30 percent lower than the latest addition to the American-flag passenger fleet. If the *Matsonia* were built new here from the keel up, the cost difference would be even greater.

The facts we have mentioned speak for themselves. They mean that without construction subsidy aid we cannot hope to get new American-flag shipping. This is a specific example that should be remembered and cited whenever the question is raised, "Are subsidies necessary?"

The $6 million difference in construction costs means approximately $300,000 higher annual capital charges alone for the American operator, assuming a 5-percent rate on

borrowed money. This takes no account of higher wage and other operating costs.

The Swedish Government, it should also be noted, is quite realistic in the matter of aids to its shipping industry. To insure that its merchant marine is kept in a strong condition and is composed of modern ships, owners are permitted to accelerate depreciation on new vessels.

The allowance is 30 percent annual writeoff of costs. This means that in 3⅓ years the cost of any new ship can be written down to a nominal book figure or written off in full.

The law also provides that during years when a shipping company has losses or no profits to report the depreciation writeoff can be husbanded and resumed when profits again permit its application.

The net result of this is quite obvious. By accelerating depreciation, the steamship industry in Sweden can build up capital reserves, assuring the lines of some "fat" in the lean years and providing the needed cash funds for new construction. This assures a strongly entrenched shipping industry that can keep itself competitive.

High costs are an integral part of the American economic system. This promises to be so in the foreseeable future. If we recognize this as one of the facts of life, then the only question that remains with respect to our merchant marine is what we propose to do in order to keep it in a strong competitive position. Subsidies provide a sensible answer.

Flour Millers' Objections to Flour Giveaway Program

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include several letters which I have received in protest to the administration of the relief program for surplus food. These letters illustrate graphically the severe economic penalty imposed not only on the flour millers but their employees and related local businesses. I believe that these people deserve consideration of their views:

CLAFLIN, KANS.

Congressman J. FLOYD BREEDING,
Washington, D. C.

DEAR SIR: Claflin has a flour mill, has had one for 70 years or more, and it has employed up to 30 men at times, and is a big factor in the prosperity of the town.

Now the mill is down to two 4-hour shifts a day and the incomes of the employees are below a decent living standard.

The reason: The Federal Government give-a-way program of food for the needy. Thirteen big mills are making the flour distributed from Government aid programs, and small mills cannot compete on bids with these favored big ones.

I don't know whether the flour given away is produced from surplus wheat in Government warehouses or not. That is immaterial in respect to the effect on the small mills.

You are from a wheat country and State and I imagine you are against the program. If not you should be, against it, that is.

The relief program could be handled by issuing script, which would be used to purchase the flour as needed, and the producers, handlers, and distributors of the flour would not lose the business now given to the big mills. The script would be redeemed by the Government, the money being spread out among millers, handlers and grocery stores, instead of being given to the big millers, and the railroads that haul the flour.

I have no doubt that there are many other mills out here in the wheat country that are having the same curtailment of business because of the giveaway program of the Federal Government.

Yours truly,

W. M. HUFF.

CLAFLIN, KANS., *May 10, 1957.*

Congressman J. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR SIR: As our Representative I am asking you if something could be done about the giveaway food program. I'm employed at the Claflin Flour Mills and have to bear the burden of small pay checks due to the little amount of running time, caused by the giveaway flour which is shipped directly into our trade territory, the smaller mills cannot compete with the large plants, and the result is we are penalized and have to bear the burden of decreased income. Salesmen visiting our plant tell us about the abuse of this giveaway flour. Perhaps the program could be handled by issuing script which could be used as money, and the distribution would be made through regular channels, giving producers, businessmen, and the transport and distribution agencies their usual business.

Hoping you will make a special effort and try to work out a program, that will benefit us all,

Sincerely,

FRANK GERSTEUKORN.

CLAFLIN, KANS., *May 1, 1957.*

Congressman J. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR SIR: Please take notice that I as an employee of the Claflin Flour Mills am working very few hours on account of the so-called free flour being distributed. Not only am I suffering but many other fellow employees here as well as in many other smaller mill operations.

As our Representative, we feel you will do all in your power to find a solution to this problem.

I suggest that the Government program could be handled by issuing script which could be used as money and distribution would be through regular channels giving producers, businessmen, and the transport and distribution agencies their usual business.

Thanking you.

ALEX HEKELE.
ELEANOR HEKELE.

CLAFLIN, KANS., *April 28, 1957.*

Congressman J. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR SIR: We would like to highly protest the flour giveaway program conducted by the Government for the last couple of years.

Since it is carried on in our trade territory the Claflin Flour Mills has been forced to run two 4-hour shifts each day, which caused a hardship on the mill employees, as the mill is small and cannot compete with the larger mills in bidding on the Government contracts.

If this practice is not discontinued immediately, most of the small mills in Kansas, including your district, will be forced to close down.

We would like to bring this to your personal attention and would appreciate anything you can do concerning this matter as our Congressman.

Sincerely,

HERMAN A. STEIMEL,
Second Miller and President of Local 160, Claflin, Kans.

LIONS INTERNATIONAL CLUB,
Claflin, Kans., May 8, 1957.

Congressman FLOYD BREEDING,
Washington, D. C.

DEAR SIR: The Lions Club of Claflin is concerned about the fate of the milling industry in this area. The local mill is operating half time, because of the administration's relief program, with which you are no doubt familiar.

This is just one of the many problems resulting from the Government's attempt to get rid of surplus commodities, and in most cases the small manufacturer is hurt by Government practices.

We hope you will do all you possibly can to remedy this situation.

Sincerely,

WAYNE E. HUFF,
Secretary.

THE CLAFLIN CLARION,
Claflin, Kans., May 21, 1957.

Mr. TRUE D. MORSE,
Under Secretary of Agriculture.

DEAR SIR: Regarding a letter written by you recently to Congressman J. FLOYD BREEDING, of Kansas, I would like to point out a few facts. You state that small mills are not equipped to process flour to Government specifications. Any mill not equipped to process any grade of flour would very soon be out of business, or would have to switch to producing feed entirely.

The local mill is owned by the Colorado Milling & Elevator Co., of Denver, and can produce the finest quality of flour. You quote figures on distribution of commodities in Kansas, which has no bearing on this case. The bulk of flour sales from this mill have been in the South, mostly Louisiana, Mississippi, Georgia, South Carolina. The relief program which is the cause of the difficulty is most abused in the South. Commodities are given freely, without regard of actual need. A cafe operator in southern Oklahoma made the remark that he got all the flour he needed by trading with people who were on relief or were receiving Government flour regardless of need. In other words, surplus flour has become a bartering medium in some areas. Sugar is another commodity which is being handled the same, apparently.

The system of relief adopted in most of this country makes the salary of the administrator directly proportional to the amount of relief administered. Naturally, this results in a disregard of the actual need of a relief client.

The Claflin flour mill has produced flour for the Government surplus program, but only in small amounts.

Because of the loss of their markets in the South, this mill is operating on half time, with each worker getting only 4 hours per day. Eventually half of the workers will have to be laid off, in order for the other half to make a living wage.

I doubt very much if the school-lunch program or the charitible institutions are at fault. It is the careless distribution of relief to persons who are not actually in need.

With sincere regards, I remain,

WAYNE E. HUFF, *Publisher.*

(Copy to Hon. J. FLOYD BREEDING.)

CLAFLIN, KANS., *May 1, 1957.*

Hon. J. FLOYD BREEDING,
Representative, Fifth District.

DEAR SIR: I am writing you to tell you that I am opposed to the Government free-flour program. It has affected our working time

greatly. Most of this free flour has been going to the areas where we sell flour. I am employed by the Claflin Four Mills, Claflin, Kans. We have been reduced from a 40-hour week to 30-hour week and in some cases even less. With prices going up this cut in earnings is greatly affecting our living standard. Please consider this matter.

Thank you.

BERNARD SCHNEWEIS.

Tribute to War Dead

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item from the Wilkes-Barre (Pa.) Times-Leader of June 1, 1957, appearing in Harrison Smith's column Valley Views:

TRIBUTE TO WAR DEAD

On each Memorial Day for nearly 4 decades the traditional ceremony involving the destruction of a miniature vessel has come to be regarded by Wyoming Valley residents as a regular annual feature of local services honoring heroes of past wars who have given their lives for their country.

While considered locally as a commonplace activity each year, the observance has earned an enviable reputation as the Nation's most unique Memorial Day tribute.

According to Michael F. Teresinski, former commander and now judge advocate of Christian E. Stegmaier Post 50, Veterans of Foreign Wars, the ceremony originated as the result of an idea discussed during World War I by William P. Williams, trustee of General John J. Pershing Post, VFW, as Post No. 50 was originally named.

INITIAL LAUNCHING

It was on May 30, 1918, shortly after the local 109th Field Artillery had landed overseas, that the first miniature battleship was launched from the river common, as a cannon salute was simultaneously fired.

Originally, the launching was to pay special tribute to the sailors and marines of Luzerne County who lost their lives at sea, and it was planned that the miniature boat should float down the Susquehanna River to the Chesapeake Bay and thence into the ocean.

On this first occasion, Secretary of the Navy Daniels came to Wilkes-Barre to deliver the principal Memorial Day address, which was witnessed by thousands of spectators who gathered on the North River common opposite Hotel Sterling.

The first committee to conduct the launching program, headed by W. P. Williams, had as its members Isaac Hess, Sidney DeLeon, Gustave Johnson, Michael Canyuch, John Casey, Harry Hafner, John Ross, and Edward B. Rehill.

In addition to Pershing Post, No. 50, other veterans organizations of the period also participated in the ceremony, including a large representation from Encampment, No. 135, Union Veteran Legion.

The attractive replica of the then flagship of the United States Navy, however, did not even reach Nanticoke before it was commandeered by a group of boys who had obtained a rowboat and towed the flower-laden vessel to the shore.

NEARLY REACHED HARRISBURG

The next year, due to advance publicity in the newspapers, the boat floated nearly to Harrisburg before it was again captured by some persons fishing in a rowboat, which led to the decision by the post committee on the following year to blow up the boat in midstream as it floated by the reviewing stand on the river common, and the firing of a cannonade was discontinued.

To accomplish the destruction of the boat a time fuse was set on several sticks of dynamite placed in the hull of the small boat so that it would explode as it passed downstream. On one occasion, however, the boat passed out of sight at the bend below Wilkes-Barre connecting railroad bridge before it exploded, and ever since that time, as a safety precaution, the boat is now moored to an anchor in the middle of the river.

While first intended as a special salute to those Luzerne County navy and marine personnel who were lost at sea in the service of their country, as the years progressed the launching and subsequent sinking of the flower-laden vessel eventually became a symbol in memory of all servicemen who gave their lives in past wars. Instead of firing cannons or aerial bombs, which used to accompany the launching on each Memorial Day, the incident is now marked by three volleys from a firing squad, followed by the blowing of taps.

On each Memorial Day, Wyoming Valley can indeed be proud of this tribute to its war dead, conceived 39 years ago by William P. Williams, which, as far as it is known, is the only such program held throughout the United States.

Single Service Threatens Anew

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of May 28, 1957:

SINGLE SERVICE THREATENS ANEW

One of the most disturbing developments of recent months is the growing number of well-meaning people being led astray by the illusionary advantages of a single military service.

Perhaps the most striking conversion was revealed at the recent annual convention of the United States Chamber of Commerce in Washington. The 2,000 delegates approved without a single dissenting voice a resolution calling for Congress to provide Defense Secretary Charles E. Wilson with the power necessary to complete the unification of the Military Establishment."

If the Military Establishment was completely unified, there would be one supreme commander, one service, one uniform, one promotion list.

What do the proponents claim for complete unification? One argument—it was uppermost in the minds of chamber of commerce delegates—is that billions of dollars would be saved. The other is that complete unification would end the interservice rows which flare up in the Pentagon from time to time.

The drive for greater efficiency in the armed services has the support of every American. In eliminating duplication, a completely unified Defense Establishment might cut some costs. But in doing away with wasteful duplication, there is a terrible likelihood that essential competition would also be destroyed.

Perhaps there can be greater coordination between services. Recent Defense Department attempts to select either the Army's Jupiter intermidate-range ballistic missile or the Air Force's Thor IRBM are a good thing. But it is highly significant that during this decision making, the Navy was authorized to accelerate the development of the Polaris, another IRBM. Why a third when two seemed to be a crowd? Because the Polaris will be launched at sea and thus has different requirements. The Navy had a chance to state its own case.

The idea that unification will end interservice bickering is another mirage. Defense Secretary Wilson has stated that a single service "would only force differences of opinion to appear in other forms." Furthermore, he declares, the "stifling of intelligent discussion for the sake of unanimity is foreign to our concept of a free society."

Here may be the most eloquent argument against Prussianizing our Armed Forces. It was the defect that Senator STYLES BRIDGES, Republican, of New Hampshire, warned his colleagues about in a recent address. "I know of no proposal which, if adopted, would place our national security and form of Government in greater jeopardy."

The whole concept needs to be pushed back into the oblivion from which it sprang so recently and impetuously.

Emerson Has a Birthday and a Lesson for Us

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Castle, (Ind.), Courier-Times of May 30, 1957:

EMERSON HAS A BIRTHDAY AND A LESSON FOR US—HIS WISDOM IS JUST AS APPLICABLE TODAY AS DAY HE WROTE IT

This month marks the anniversary of the birth of Ralph Waldo Emerson. This famous early American poet and philosopher was born May 25, 1803. It was he who wrote those famous and veracious lines:

"What will you have?
Pay for it, and take it."

How appropriate to a time when our Federal Budget is getting a going over. The philosopher's observation on life is just as true today as it was when he wrote it. The only thing that has changed is the sequence. In his day you paid for a thing and then took it; today we take it and then we pay for it.

Well, we, the American people, have ordered a lot of stuff, and now the bills are coming in, and so we complain about high taxes. We've ordered more benefits for agriculture and labor, and bigger payment to veterans; a big super-duper highway program, housing projects, and school-building programs.

Some of it is necessity and some of it is luxury parading in the garb of necessity.

Besides this, the cost of everything to the Government has risen, just like costs have risen for everybody.

Then there's a lot of money involved in the changeover that our defense forces are undergoing from traditional arms to a nuclear fighting force. This involves a lot of scrapping of old dies and making of new ones, as well as replacement of obsolete ships and guns with those of the new age.

The most ridiculous thing in this whole clamor to reduce governmental expenses is that the guns have been trained on foreign aid—our program to win the war with Russia by peaceful means.

In the first place, this program really involves only about $1 billion out of the total budget of about $72 billion. If all of it were cut out, the budget would be reduced by only one-seventy second. (Foreign aid current request sometimes is listed at $4.4 billion, but this includes such items as the cost of our own airbases in Spain and Saudi Arabia, etc., and is really a military item of our own. Stripped of such things, the aid that goes to other countries is only about $1 billion.)

Secondly, this item was $6.3 billion in 1949. If other things had been reduced like foreign-aid appropriations, we'd have a tax cut worth talking about.

Finally, a lot of plain extravagance and waste have been glossed over like they weren't there. The Hoover report, for instance, pointed the way to saving of $5½ billion in governmental administration alone. There's something to holler about.

Speech of Hon. E. L. Forrester, of Georgia, Before the Georgia Bar Association, Savannah, Ga.

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I am glad to include an address delivered by our able colleague, the Honorable E. L. (TIC) FORRESTER, before the Georgia Bar Association in Savannah, Ga., on May 30, 1957.

The gentleman from Georgia is an able and distinguished lawyer. I am glad to be associated with him on the Judiciary Committee of the House of Representatives.

The address of Congressman FORRESTER should be of particular interest at this time because of the so-called civil rights bill which will come up befor the House tomorrow. It is as follows:

SPEECH OF E. L. (TIC) FORRESTER, OF GEORGIA, BEFORE THE GEORGIA BAR ASSOCIATION, SAVANNAH, GA., MAY 30, 1957

Mr. Chairman, my colleagues of the bench and bar of Georgia, distinguished guests, ladies and gentlemen, I am sure that all of us have experienced certain satisfactions from our professions, our public life, and public service. Over all of the experiences I have had over many years the most satisfying are those I derived from being just a country lawyer and being one of you. One of the finest compensations in my life has been the privilege of knowing you, working with you, sometimes maybe working against you, associating with you, and at all times partaking deeply of the generous friendships which the Georgia bench and bar has undeservedly but completely extended me through the years.

I have always loved the bench and bar of Georgia. I always will. I know as a fact that there has never been a greater bench and bar than the bench and bar of our great State. Almost 7 years of service in Congress, and during that entire time being a member of the House Committee on the Judiciary, has further pointed up that positive fact.

I am keenly and deeply appreciative of the great honor extended me when, in your generosity, you permitted me to appear on your program. I have looked forward to being with you. It is a distinct pleasure to be here. Unless I get news from Washington that certain legislation is likely to be brought upon the floor this week I plan to stay through this convention and indulge my desire to have the opportunity of fraternizing with you and to renew the bonds of friendship and affection that we have had for each other over the years.

It is an additional honor, and additional privilege, to appear before this convention at a time when my warm and genuine friend, Howell Hollis, is president. Under Howell's leadership the Georgia Bar Association has had one of its most productive and progressive years. He is an outstanding lawyer, a conspicuously brilliant public servant, a man of incorruptible integrity, a devoted friend, and one whose future demands our brightest hopes and fondest expectations.

Permit me to express my gratitude over the splendid but most generous introduction by my long-time friend, Ernest Vandiver. I have observed Ernest as you have observed him, both as a lawyer and as lieutenant governor of our State. He has made a brilliant record. He is capable and efficient, the possessor of that rare indomitable courage necessary to support his convictions and a most effective champion of the principles in which you and I believe.

It was suggested to me that you would like for me to discuss the legislation pending in Congress masking itself under the spurious label of "civil rights." That I will attempt to do.

Those of you who know me, I do not have to assure that I was perfectly happy down in the little town of Leesburg, Ga., in the role of a country lawyer and solicitor general of our judicial circuit. I believe you know that I had no desire whatever to leave the section of Georgia which had been so kind to me, to leave the bench and bar, which had been a part of my life, and to take up my abode in Washington, other than the desire to try to be of assistance in restoring our ancient landmarks, to preserve our Constitution, to preserve our racial integrity and the racial integrity of any group or groups which take pride in their respective races upon the premise that their race is worth preserving. To that end I committed myself and to that end have I labored. If, and when, those desires are to any appreciable extent gratified, then I will consider that my work has been done and you can certainly expect me to return to Georgia for the balance of my days, with a generous amount of those remaining days being used in associating with you and the people who are the bone of my bone and flesh of my flesh. Yes, you can expect me then to spend the remainder of my days with the people whom I respect, admire, and genuinely love.

It so happens that I have been exposed to civil-rights legislation during the entire time I have been a Member of Congress. I have been on the committee which has handled this legislation, and I have had the opportunity to know this legislation as fully as any man in Congress. In order to discuss this legislation with you, it will be necessary that we discuss some of the background of this legislation.

This type of legislation had its inception as an aftermath of that terrible War Between the States when brothers were arrayed against brothers. It had its birth in an era of hysteria and at a time when there had not been a sufficient cooling period for minds of ordinarily reasonable men to act calmly and with judgment. Maybe with generosity, maybe with truth, we could draw upon that principle of legal jurisprudence that persons acting under the excitement of passion, without any mixture of deliberation whatever, and without malice, will not be held to the same strict accountability to the law as would a person acting in a calm atmosphere and at a time when irresistible passions were not aroused. It is not surprising to lawyers that civil-rights legislation was passed shortly after the War Between the States, for our legal minds are trained to take into consideration the infirmities and weaknesses of mortal man. Though that legislation was unjust and added to the problems of a prostrate section trying to arise from the ashes, we can see extenuating circumstances, perhaps, and ponder whether that legislation was inspired by malice or because of passion destroying reason and deliberation.

Neither is it surprising to lawyers that in a few short years, when hot blood had cooled, and reason had its sway that Congress on its own volition would annual some of that legislation and that the United States Supreme Court would void portions of that legislation because of its manifest unconstitutionality.

It is not surprising to you that by 1875 the high-water mark of that era had reached its peak and that no further civil-rights legislation was enacted by Congress since the year 1875, and during many years following 1875 Congress set itself to the task of annulling some of that legislation and the United States Supreme Court rose to the occasion and struck down those portions that they agreed were offensive to our Constitution.

It is surprising to you and surprising to me that 50 or 60 years later, and after we had become a united nation, indeed, and as comrades in arms had fought to victory through two wars—one a world war—and with indications that we would be called upon to fight other world wars and, if so, the South would cover itself with glory and distinction upon the battlefield, that agitation again would rear its ugly head, and that groups would urge, yes demand, that the very legislation which was annulled by Congress and the very legislation which was struck down by our Supreme Court as being unconstitutional, together with other more offensive and stringent legislation completely at odds with our Constitution and our philosophies would be placed upon the back of our people, despite the fact that we had the same Constitution and despite the fact that every one admits that those so-called problems are disappearing year by year.

It is to that startling development that I ask you as lawyers to address yourselves today.

Just why have our principles of jurisprudence been so rudely upset? Why is it that at a time when reason should hold sway and hot blood should have long ago cooled, that the people of this country are being assaulted with fervor unparalleled in our country? We do not have to look far to find the answer. You need look no further than the 178th Georgia Supreme Court Report, pages 832-869, in the case of *Herndon* v. *the State*. There was unfolded the Communist conspiracy to agitate and to overthrow this country by force and violence.

The Georgia court did its duty, convicted Herndon, but the United States Supreme Court reversed that conviction, I believe, on the premise that the State failed to show that the defendant and his coconspirators intended presently to overthrow our Govern-

ment. Nevertheless, that Court was evidently not prepared to hold that the Federal Government had preempted the field as the present United States Supreme Court held in the Nelson case and thereby striking down the laws of the States punishing insurrection, or attempts.

It might be of interest to you to know that the Communist Party platform of 1928 set out its demands regarding social and racial equality, and that virtually all of those demands have been fully met by judicial, administrative, and executive decrees and that the proposed legislation is simply for the purpose of implementing them.

One of the most unfortunate decisions ever rendered by the United States Supreme Court was in the case of *Missouri* v. *Holland* in 1920. There the Court ruled that treaties overruled our Constitution.

In the report of President Truman's Committee on Civil Rights, issued in 1947, will be found the following:

"It is true that the Federal Government does not possess broad, clearly defined delegated powers to protect civil rights which it may exercise at its discretion. A detailed examination of the constitutional aspects of the civil-rights problem makes clear that very real difficulties lie in the way of Federal action in certain areas."

But, let's continue reading; they gleefully say:

"In its recent decision in *Missouri* v. *Holland* in 1920, the Supreme Court ruled that Congress may enact statutes that carry out treaty obligations, even where in the absence of a treaty, it has no other power to pass such a statute. This doctrine has an obvious importance as a possible basis for civil-rights legislation."

But, read on:

"The Human Rights Commission of the United Nations is at present working on a detailed international bill of rights designed to give more specific meaning to the general principle announced in article 55 of the charter. If this document is accepted by the United States as a member state, an even stronger basis for congressional action under the treaty power may be established."

In 1949, 81st Congress, the then Attorney General Tom Clark, now a Justice of the Supreme Court, made a statement before the House Committee on the Judiciary while advocating an omnibus bill encompassing civil-rights legislation or proposals in every field the human mind could conceive of, and his entire statement can now be found in hearings before subcommittee No. 5, 85th Congress 1st session, pages 325–347.

Mr. Clark made the following statements, among others:

"Following the Civil War, a number of civil-rights statutes were enacted, but over the years, through decisions of the Supreme Court and congressional action in 1894 and 1909, the laws implementing the 3 amendments (13th, 14th, and 15th) were reduced in number and scope," page 326.

Also the following:

"I am not unmindful, of course, that serious questions of constitutionality will be urged with regard to some of the provisions of this bill. But I am thoroughly satisfied that the bill, as drawn, is constitutional. It is true that there is a line of decisions holding that the 14th amendment relates to and is a limitation or prohibition upon State action and not upon acts of private individuals (*Civil Rights* cases (109 U. S. 3); *U. S.* v. *Harris* (106 U. S. 629); *U. S.* v. *Hodges* (203 U. S. 1).) * * * However, without entering here upon a discussion of whether or not these decisions are controlling or possess present-day validity in this connection, it may be pointed out that such a provision punishing persons as individuals need not rest solely upon the 14th amendment. Upon proper congressional findings of the nature set forth in H. R. 4683, the constitutional basis for this bill would include the power to protect all rights flowing from the Constitution and laws of the United States, the law of nations, the treaty powers under the United Nations Charter, the power to conduct foreign relations, and the power to secure to the States a republican form of government, as will as the 14th amendment" see page 347.

On page 329 Mr. Clark said that the legislation he was proposing would bring about a greater awareness of the obligations of this Nation as a member of the United Nations.

Page 334 shows that Mr. Clark pointed out that he was removing by his proposed legislation what appears to be an unnecessary technical limitation to citizens, and it may be properly urged, at this date, that the extension of coverage is in accordance with the general public policy of the United States, as subscribed to in the United Nations Charter, to promote respect for, and observance of, human right and fundamental freedoms for all.

On page 331 Mr. Clark said that his Civil Rights Department "has aided the Office of the Assistant Solicitor General in cooperating with the State Department in connection with United States participation in the preparation by the United Nations of the universal declaration of human rights and of a proposed covenant to enforce some of these rights." And, on that same page, Mr. Clark said that his Civil Rights Division assisted in the preparation of amicus curiae briefs submitted by his Department to the Supreme Court in the restrictive covenant cases. All of that is well known to the legal fraternity and the pity is that his successors have followed in his footsteps.

Alger Hiss contends that he was virtually the architect of the United Nations Charter. He may have been the inspiration, but he had lots of help. I have in my office a book entitled "Review of the United Nations Charter," published pursuant to Senate Resolution 126, 83d Congress, 1st session, presented by Senator WILEY and I believe you can obtain that work by ordering same from the United States Government Printing Office. That book ought to be in the library of every lawyer in our country. That charter was signed in San Francisco on June 26, 1945, by the United States and 49 other governments. It was ratified by the United States Senate in July 1945, and ratified by the President on August 8, 1945.

On July 2, 1945, President Truman submitted the charter to the Senate for approval and among other things said that the objectives were, among other things, "to achieve universal respect for, and observance of, human right and fundamental freedoms for all men and women without distinction as to race, language, or religion." Also, he said, "It seeks to remove the economic and social causes of international conflict and unrest."

On page 69 of that work, entitled "Purposes of Legislation," the committee said that "unless we are prepared to take all steps which are necessary to effectuate our membership in the United Nations, we will merely be defeating the hopes of the United States and humanity in ratifying the charter. The committee feels that the people and the Members of the Senate understand clearly the consequences and requirements of our membership in the United Nations and that they are prepared to undertake the responsibilities of membership in order to enjoy the privileges which that membership may ultimately bring in the form of world security."

Pages 247–251 show the universal declaration of human rights adopted by the General Assembly, United Nations, December 10, 1948. Page 251 shows the address of Mrs. Eleanor Roosevelt before the United Nations Committee 3, September 30, 1948. She identified herself as Chairman of the Human Rights Commission and as a delegate of the United States, charged with the responsibility of the subject of human rights. In her statements she said:

"The importance which my Government attaches to the promotion and preservation of human rights in general and to this declaration in particular has already been made amply clear by Secretary Marshall."

Also, she said:

"The United States looks forward to the approval of this declaration by the General Assembly as one of the great achievements of this session. The declaration will serve as a challenge to all nations and all peoples so they will all strive to achieve the standards set forth in the declaration. The declaration of human rights is of course only the first step in the implementation of the human-rights program called for by the Charter of the United Nations."

On page 253 she said:

"My Government is nevertheless prepared to accept the declaration as it stands and we will support its approval without amendment if other states are ready to follow that course."

I pause to say to you here that you will find the United Nations Charter and the universal declaration of human rights of great value in your attempts to reconcile any recent decisions of our United States Supreme Court, with our Constitution and the respect you have been taught to have for the rule of stare decisis.

Indeed, Thomas Jefferson said: "If the treaty power is unlimited, we have no Constitution."

If the *Missouri* v. *Holland* decision is correct, and I dispute it, or even if the United States Supreme Court thinks it is correct, then you may be willing as lawyers to concede that they had some basis for their rulings in the famous school case decisions. It may be that they were not ignorant of stare decisis, but were of the opinion that the ruling of *Plessy* v. *Ferguson* and other cases did not apply, because *Plessy* v. *Ferguson* was applicable to the Constitution only and was decided before the United Nations Charter overrode our Constitution.

This thought may be speculated upon with interest, inasmuch as in the recent football case (*Radovich* v. *National Football League*, February 25, 1957) the same court refused to disturb the decision rendered 25 or more years ago holding that baseball was not a business under the interstate commerce laws, recognizing the rule of stare decisis, and suggested that if Congress wished to legislate upon that subject Congress had the power.

Indeed, under the Universal Declaration of Human Rights, implementing the United Nations Charter, a lawyer can see some kind of basis for the rulings that the States exceeded their authority in denying admission to the bar of applicants confessing that they were once upon a time Communists. (Universal Declaration of Human Rights, art. 2, reading:

"Everyone is entitled to all the rights and freedoms set forth in this declaration, without distinction of any kind, such as race, color, sex, language, religion, political or other opinion, national or social origin, property, birth, or other status.")

Rulings that passports must be issued to suspected Communists might be understood under the Charter and the Declaration. (See Universal Declaration of Human Rights, art. 13 (2), reading:

"Everyone has the right to leave any country, including his own, and to return to his country.")

Even the upsetting of Stephen Girard's will might not be considered so heinous.

You are, of course, familiar with the Genocide Treaty, adopted by the United Nations, December 9, 1948. That was the proffered treaty that people, particularly lawyers, in the United States became highly interested in and opposition developed to

such an extent that the Bricker amendment was proposed. It was never ratified, true. Bear in mind, the universal declaration of human rights did not require ratification. They are enunciations of charter principles.

The book I have referred to as presented by Senator WILEY, page 262, shows a letter written by Secretary Dulles to Mrs. Lord, the United States Representative before the Human Rights Commission, United Nations, dated April 3, 1953, saying:

"The President and I are anxious that you carry a personal message to the Commission. We believe that the American people are determined to do all within their power to make the United Nations become an ever more effective agency for promoting, in the words of the charter, 'respect for human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion'."

On pages 263–264 Mr. Dulles tells Mrs. Lord to say to the Commission that the covenants will not be as widely accepted by United Nations members as initially anticipated and he recommended a change in approach, saying:

"We recognize that in presenting to the Commission a change in approach, extended discussion will be required in the Commission and later in the Economic and Social Council and General Assembly as well. By reason of the considerations referred to above, the United States Government has reached the conclusion that we should not at this time become a party to any multilateral treaty such as those contemplated in the draft covenant on human rights, and that we should now work toward the objectives of the declaration by other means."

What are the other means? Are they Executive orders, administrative orders, new interpretations of our Constitution? Certainly, they have had that deleterious effect. Also, can one of the ways be the recitals set out in an article entitled "A Reappraisal of the Constitutionality of Miscegenation Statutes," by Weinberger, Cornell Quarterly, volume 42, No. 2, Winter, 1957, pages 208–222, and particularly page 218, saying:

"Under the sponsorship of the United Nations Educational, Scientific, and Cultural Organization (UNESCO), 12 scientists representing physical anthropology and human genetics met in June 1951 to consider the preparation of a statement which would effect the crystallization of scientific theory and opinion on matters of race and race differences."

Also:

"The statement on the nature of race and race differences was released by UNESCO in September of 1952. The statement at article 7 said concerning pure races: 'There is no evidence for the existence of so-called pure races. Skeletal remains provide the basis of our limited knowledge about earlier races. In regard to race mixture, the evidence points to the fact that human hybridization has been going on for an indefinite but considerable time. Indeed, one of the processes of race formation and race extinction or absorption is by means of hybridization between races. As there is no reliable evidence that disadvantageous effects are produced thereby, no biological justification exists for prohibiting intermarriage between persons of different races.' "

In the footnotes Weinberger said that certain school boards had voted unanimously to discontinue use of textbooks containing un-American ideas on the origin of races.

Also, the UNESCO has distributed the statement in a variety of publications, and it is only one of several publications in the series.

I ask you: Was your conception of the United Nations Charter a mutual undertaking for mutual security, or was it for one-world government, and the wiping out of our philosophy? We all believe in mutual security, we believe in uniting for that protection, but we contend that only the people themselves have the right to destroy their Constitution.

Certainly, you view with interest and alarm the quotations of Justices Black and Douglas in *Oyama* v. *California* (332 U. S., pp. 633–689) and the expressions of Justices Murphy and Rutledge, same case, page 73. Those four Justices said that as additional reasons for striking down a law of the State of California is the United Nations Charter which this Nation had recently pledged itself to observe. You would doubtless like to read the case of *U. S.* v. *Pink* (315 U. S. 203), where the Supreme Court extended the treaty doctrine to executive agreements. Also, you might wish to read United States Reports (Cunard Steamship Co.) (262 U. S., p. 100), which involved a secret negotiation made by President Coolidge authorizing importation of prohibited liquors on British ships though the 18th amendment was in full effect.

In the 84th Congress there were introduced 51 so-called civil-rights bills. Many of those bills contained a declaration of public policy and as a part of that public policy recited:

"To promote and enforce universal respect for, and observance of, human rights and fundamental freedoms for all, without distinction as to race or religion in accordance with the undertaking of the United States under the United Nations Charter, and to further the national policy in that regard by securing to all persons under the jurisdiction of the United States effective recognition of certain rights and freedoms proclaimed by the General Assembly of the United Nations in the universal declaration of human rights."

These so-called civil-rights bills were introduced in the present 85th Congress, many of them containing the same recitals regarding a declaration of public policy. Last year, I called the committee's attention to the declaration and that all of this civil-rights legislation was predicated upon the United Nations Charter. Last year, when it became evident that H. R. 627, a bill by the gentleman from New York [Mr. CELLER], was going to be reported favorably by Subcommittee No. 2, with the recitation relating to the public policy aforesaid being stricken, Mr. Brownell hurriedly prepared and sent over to Republicans on our committee what is now known as the Brownell civil-rights legislation.

Mr. Brownell did not set out any declaration of public policy. You, as lawyers, know that it was not necessary. The United Nations Charter and the universal declaration of human rights are either the law of the land or not. That Mr. Brownell was depending upon the United Nations Charter and implementing declaration there can be no doubt when the language of his legislation is considered. "By their fruits ye shall know them" remains a true criterion.

The Brownell legislation was voted out of Subcommittee No. 2 by a vote of 6 to 1, I being the only dissenter. The legislation was rushed through the committee and upon the floor of the House, and was passed by the House in the waning days of the 84th Congress, but too late for the Senate to consider. At the beginning of the present session of Congress the Brownell civil-rights legislation was taken up in subcommittee upon the convening of Congress. In this connection, an NAACP official in Washington is quoted as of a week or two ago as saying: "To Republicans, civil-rights legislation is a happy hunting ground; to Democrats civil-rights legislation is a necessity."

The Brownell version consisted of four parts. I will attempt to discuss each of those parts with you briefly.

Part I provided a Commission, to be appointed by the President, to investigate allegations that certain citizens are being deprived of their right to vote, or are being subjected to unwarranted economic pressure by reason of their color, race, religion, or national origin; to study and collect information concerning economic, social, and legal developments constituting a denial of equal protection of the laws under the Constitution; appraise the laws and policies of the Federal Government with respect to equal protection of the laws under the Constitution.

Here, let me say that this year for the first time was the opposition permitted to appear and testify in opposition to civil rights legislation. I availed myself of that privilege and I called upon the Governor to furnish to me the attorney general and the Honorable Charles Bloch of Macon. The Governor complied—those gentlemen appeared. They performed magnificently. I can hear Charlie Bloch now saying: "Mr. Chairman, how can you legislate on religion? Is not the first amendment to our Constitution a complete bar? Mr. Chairman, does not that amendment provide for the free exercise of religion?"

You know that the free exercise of religion carries with it indubitably the right to discriminate. Were that not so, there would be no basis for religious groups such as Catholic, Episcopalian, Baptist, Methodist, Seventh-day Adventist, and so forth. That amendment was for the purpose of conferring upon each and every one the right to be different in his religious faith, so as to protect against the very tyrannies that churches in Europe had practiced upon our ancestors by requiring them to conform. The American Civil Liberties Union tipped its hand by saying: "Free censorship of books, magazines and motion pictures is rapidly disappearing," but criticized boycotts whereby religious and other groups not only exercise their right to guard their membership from material believed objectionable, but also may keep other people from exercising their judgment. Also: "That the Roman Catholic Church was one of the religious groups that had moved in that direction."

That first amendment guarantees to all churches, including the Catholic Church, a right to recommend to their congregations, their members, and the public the boycotting of theaters, picture shows, the reading of books and magazines, and any other recommendations they desire to make in the religious field. By the way, it preserves the right of the ministers of our faith and our churches to the same extent.

Frankly, it is my considered opinion that the fight made by the attorney general and Charles Bloch caused that subcommittee to strike the phrase "or being subjected to unwarranted economic pressures by reason of their color, religion, and so forth." and restricted such investigations to deprivation of the right to vote by reason of color, race, and so forth.

Pressure mounted, and the word religion was placed again in the legislation, so far as deprivation of the right to vote on account of religion was concerned. That is innocuous, but unwise. It is my personal opinion that the word religion should never appear in such legislation, and it would be salutary to adhere to the first amendment. To tamper with that amendment is unwise.

As that provision now stands, the only excuse for such a Commission can be on political grounds. Every lawyer knows that existing statutes are sufficient to protect anyone who has been unconstitutionally deprived of the right to vote.

The Justice Department in the past has administered that provision, and if the Justice Department, with its horde of assistants, and with the cooperation of all of the district attorneys in the United States, cannot protect those rights, then we need another Justice Department and another Attorney General.

As the bill now stands, we have stripped it of the phrase "unwarranted economic pressures" and the words "economic," "social," none of which can be identified in the Constitution, but which are words and phrases taken bodily from the United Nations Charter. Of course, attempts may be made to reinstate those provisions when we get upon the floor. Then, too, to establish such a Commission will mean an abdication on the part of Congress toward its responsibility.

If an investigation is going to be had, it ought to be a congressional investigation. I challenge them to rise up to their responsibility, hold such investigations as they think necessary, and accept my challenge to televise the proceedings, giving us the right to cross-examination and right to produce witnesses to testify. If we could have that kind of investigation I would be willing, for the good people of the United States, sitting in their homes or their offices, after hearing the truth and both sides, to bring in their verdict.

The Commission still has the right to have volunteer and uncompensated personnel, which, of course, will be the NAACP and other leftwing organizations, and, also, a waiver that persons otherwise disqualified because of service with the Government can be eligible. Of course, those provisions are completely political.

Part II appears to be an innocent provision, providing for an additional Assistant Attorney General. The trouble is, it does not tell how many assistants to the Assistant Attorney General will be required. We tried to get the Department to say, but they would never express themselves. Will Maslow, general counsel, American Jewish Congress, testified that it ought to have at least 50 lawyers in it. The cost of this Commission and the assistants to the Assistant Attorney General would probably be at least $2 million for the 2 years that the Commission is to operate, and a million dollars a year thereafter for the assistants to the Assistant Attorney General.

You, as lawyers, know that with this additional personnel there will be the requirement that we have additional judges to a number not even capable of envisioning.

Part III would amend section 1985, volume 42, United States Code, by adding 2 additional paragraphs. That, of course, is the conspiracy statute, and the one referred to as the Ku Klux Klan Act. One of the paragraphs to be added provides that whenever any persons have engaged or there is reasonable grounds to believe that they are about to engage in any acts giving rise to a cause of action under that section, the Attorney General may, in the name of the United States, institute a civil action for preventive relief, permanent or temporary injunction, or other order, without regard to the requirement that the aggrieved shall have exhausted the administrative or other State remedies, and without the consent of the alleged aggrieved.

The effect would be that in every imaginable conspiracy the United States, at the taxpayers' expense, will throw the entire Justice Department against our school officials, our registrars, and persons charged with the electoral process, free of cost to the alleged aggrieved, while the defendants will have such representation and assistance as their pocketbooks permit. What the phrase "about to engage" means, I do not know. No one else knew in the committee, including the authors of the legislation.

Part IV would amend section 1971, United States Code, so that "whenever any person has engaged or is about to engage in any act depriving any person of the right of any privilege secured by subsection A or B, the Attorney General, in the name of the United States, for the benefit of the real party, may institute a civil action or other proceeding for preventive relief, including permanent or temporary injunction, restraining order or other order; and that the district courts shall exercise jurisdiction without regard to whether the party aggrieved has exhausted any administrative or other remedies provided by law.

Make no mistake, the district courts would be required to entertain suits arising by virtue of any kind of election, general, special, and primaries, for the purpose of selecting candidates down to the lowest local levels including trustees of schools, justices of the peace, county surveyor, etc. The question is, does Congress want to approach this subject in such a general and blundering manner?

In view of the ruling in the Cloverleaf Butter case and the Steve Nelson case, to the effect that the Federal Government had preempted the field, and in view of the ruling in *U. S. v. Classic* (313 U. S. 299, 3) reading as follows:

"The right to vote for representatives in Congress is a right 'derived from the States' only in the sense that the States are authorized by the Constitution to legislate on the subject, as provided by section II of article I, to the extent that Congress has not restricted State action by the exercise of its powers to regulate elections under section 4 and its more general power, under article I, section 8, clause 18, to make all laws which shall be necessary and proper for carrying into execution the foregoing powers," and in view of the provision in this proposed legislation that all State judicial and administrative remedies shall be bypassed, it is my opinion that lawyers will seriously ponder whether or not the Supreme Court would hold that the Federal Government had preempted the field so far as the voting rights, the mode of holding our elections and primaries are concerned, and that these fields would hereafter be dominated from Washington.

Under parts III and IV of the proposed legislation, the district courts would have the right to grant ex parte injunctions upon the petition of an all-powerful government, with such an extensive staff that they could grind out over night thousands of affidavits, perjurous or not, and the judge then having established manmade law, whether right or wrong, could punish the defendant for contempt and sentence him to prison, the judge being the legislator, the prosecuting attorney, the judge, and the executioner. In other words, there is no provision for the right of trial by jury. The Attorney General has seen to that. He says that juries might not convict. You and I think that is why jury trials should be provided, because after all, there are some innocent defendants. By making the United States a party, the Attorney General has deliberately sidestepped the provision requiring that a suit be for at least $3,000 before the Federal court can entertain jurisdiction, that requirement not applying where the United States is the plaintiff. He has also proposed eliminating a jury trial in criminal contempt cases, realizing that jury trials are not permissible where the United States is the plaintiff, except in the one instance providing jury trials in labor disputes. The Attorney General knows full well that these exceptions applicable to the Government were for the purpose of preventing the defense of our country from being stymied. He well knows that it was not intended to make the Government a Frankenstein. Except where the Nation's defense is involved, the Government should be more than willing to go into court under the same terms and laws as the private individual.

When this bill gets upon the floor of the House, and it probably will on June 3, we certainly intend to offer an amendment for the purpose of deleting the provision that State judicial and administrative remedies can be bypassed and an amendment providing jury trials in all contempt cases. When we do that we will be asking only for the same privileges that Donald Richberg, Clarence Darrow, Easby-Smith, and other brilliant attorneys argued that labor should have and which Justices Taft, Hughes, Frankfurter, Cardozo, and others said labor should have.

We will be asking for exactly what the platforms of both the Republican and Democratic Parties in 1928 said labor should have. We will only be asking for what the House of Representatives said in 1932 that labor could have; 362 Congressmen voted for those rights for labor, while only 14 voted to deny those rights. We will be asking for those things which Gov. Al Smith said that labor should have. I have checked the CONGRESSIONAL RECORD, and southern Congressmen, including my distinguished predecessor, Hon. Charles Crisp, voted for labor to have those rights. It was a southern chairman of the House Committee on the Judiciary, Hon. Hatton Sumner, Texas, who stood upon the floor and fought for this legislation in behalf of labor. That legislation was designed to protect people, guilty or innocent, against the abuses knowingly practiced by some judges and from the ignorance of other judges. Also, for protection against the strong arm of the Attorney General, who reaches out over every Federal court district and who, it is said in Washington, tells every prosecuting attorney whether he can or cannot nolle pros a case.

The debate of this labor legislation I have referred to showed that Congressman LaGuardia charged Harry Daughterty, the Attorney General in the time of the Debbs case, with handpicking Judge Wilkerson to try that case and quoted from an article by Mr. Daugherty saying that he was most fortunate in getting Judge Wilkerson. "Judge Wilkerson listened to my argument with profound attention. He agreed with me on every point and granted the temporary injunction without a minute's delay."

It further developed that Judge Wilkerson was appointed, at the earnest solicitation of Mr. Daugherty, just a few weeks before.

I do not have time to go into it, but I am familiar with the ex parte injunction and the contempt proceedings arising out of the school desegregation issue in Clinton, Tenn. Without commenting upon the justice or injustice of the proceedings so far as the facts are concerned, but only from a lawyer's standpoint, interested in each and every defendant being tried according to law and having his rights accorded to him, that case standing alone, should cause legislators to provide the right of trial by jury.

I have talked too long and I know it. In a matter of a few days now the House will work its will. I can only assure you, that in my limited way, I will be upon that floor every minute of the time and I will do my best in an effort to defeat this legislation and at least try to preserve some of our constitutional concepts, the sovereignty of our States, the right to regulate and conduct our elections, and the right of trial by jury.

President Hays

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. TRIMBLE. Mr. Speaker, it was as a student at the University of Arkansas that I first met BROOKS HAYS. He was a freshman; I was a junior in the same

school. He was a 17-year-old boy then, but a man with all that—a leader in student affairs, a member of the university debating team, and a member of the YMCA cabinet. I have known him all the years since. He is today the same fine, clean, modest lad as of yesteryear. The world is better by having his like living in it. He cannot hate. He does not do mean and little things. He is one of God's princes.

Recently he has been honored by his church. The Arkansas Gazette of June 1 has this to say in its editorial of that date:

PRESIDENT HAYS

The election of BROOKS HAYS as president of the Southern Baptist Convention is a fitting tribute to the Arkansas Congressman who has served his denomination faithfully and well.

Mr. HAYS will be the first layman to head the convention in 12 years, and the second in all its long history. And it is significant that the fact that he is not an ordained clergyman was the only reason offered in opposition to his election in, as is usual for the Baptists, a spirited contest.

As a member of the Second Baptist Church in Little Rock, and as teacher of its Brooks Hays Bible Class when his duties in Washington permit, the Congressman has been active in church affairs since 1925. In recent years he has held important national posts with the denomination, as vice president of the convention in 1952 and as a member of its social service commission. In the latter role he has had a major influence in setting the convention on a moderate course in this time of racial tension.

It is singularly appropriate that a man who holds high Federal office should head the denomination which is perhaps most outspoken in its defense of the traditional American separation of church and state. Mr. Hays in his own career has made the necessary distinction between the things that are God's and the things that are Caesar's, and has demonstrated that religion can be mixed with public service without any suggestion of violence to the constitutional concept.

We congratulate Mr. HAYS on his fitting honor—and we congratulate the 8,700,000 members of the Southern Baptist Convention on their wise choice.

Resolution by the Croatian Fraternal Union of America

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution concerning Cardinal Stepinac unanimously adopted by the executive board of the Croatian Fraternal Union of America, a fraternal benefit society with a membership of over 108,000 in 34 States of the United States and in 6 Provinces of Canada. The resolution adopted at a meeting held on Wednesday, January 9, 1957, is as follows:

Whereas the Croatian Fraternal Union of America, whose membership is composed almost entirely of Roman Catholic citizens of Croatian descent, is dedicated to the principles of freedom of religion for all peoples throughout the world; and

Whereas the Croatian Fraternal Union of America, speaking for these freedom-loving peoples, feels very keenly that the continued restrictions on His Eminence Aloysius Cardinal Stepinac, of Zagreb, Croatia, Yugoslavia, from enjoying the rights and privileges of his high office in the Roman Catholic Church, violate the principles of religious freedom in which we firmly believe: Now, therefore, be it

Resolved by the executive board of the Croatian Fraternal Union of America, That the Secretary of State and the State Department of the United States of America inform the government and peoples of Yugoslavia of the desire and wish of the membership of the Croatian Fraternal Union of America that the rights and privileges of the high office of Cardinal Stepinac as a primate of the Roman Catholic Church be recognized and that his eminence be permitted to exercise the duties and to assume the responsibilities of a prince of the Roman Catholic Church in Yugoslavia.

Dated this 9th day of January A. D. 1957, at Pittsburgh, Pa., under the seal of the Croatian Fraternal Union of America.

For the executive board:

V. I. MANDICH,
Supreme President.
JOSEPH BELLA,
Supreme Secretary.

The Right Reverend Monsignor Francis A. Costello, V. F.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre (Pa.) Times-Leader of June 1, 1957:

TWO MILESTONES FOR PASTOR

Tempus fugit. It is difficult to believe 10 years have elapsed since the Right Reverend Monsignor Francis A. Costello, V. F., succeeded the Most Reverend Martin J. O'Connor, D. D., as pastor of St. Mary's Church of the Immaculate Conception in Wilkes-Barre. Memory is refreshed by the announcement that a reception will be held at the Catholic youth center on Sunday afternoon to mark this milestone and the 30th anniversary of his ordination as well.

On the occasion of his appointment, this newspaper observed editorially:

"For a man who has been in the priesthood just 20 years, Father Costello has made amazing progress. His advancement from a rural charge to the cathedral (St. Peter's in Scranton) parish was unusual recognition for a young clergyman and his transfer to the mother church of Wilkes-Barre, now in its second century, is equally impressive evidence of the confidence of his superior and proof of the success he achieved at the seat of the diocese of Scranton."

On the occasion of his installation, Monsignor Costello had this to say:

"Your pastor promises to pray all the days of his tenure, through the patron of this church, the Immaculate Mother of God, and his own patrons, Sts. Francis of Assisi and Anthony of Padua, for the help of God to do the will of God. In his prayers, he will be most mindful of the spiritual needs of his people."

Monsignor Costello not only has kept that pledge, but he has supplemented it with service far beyond the call of duty, as a citizen as well as a clergyman. The community shares the sentiments of the congregation in sponsoring tomorrow's testimonial.

Representative Glenn Cunningham, of Nebraska, Shows How Matching Funds Penalize Industrious States and Cities

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. HARRISON of Nebraska. Mr. Speaker, my colleague from Nebraska, Representative GLENN CUNNINGHAM, was given the 1957 outstanding alumnus award by the University of Omaha Alumni Association. Mr. CUNNINGHAM received this annual award in recognition of his work in civic and governmental affairs since his graduation from the university in 1935.

At the annual award banquet June 1 in Omaha, Mr. CUNNINGHAM spoke out sharply against certain matching funds of the Federal Government which allow reapportionment of unused State quotas. He pointed out that these programs are penalizing those States and cities which have gone ahead and done the job on their own, not waiting for or looking for a handout from Washington. His address follows:

ADDRESS BY THE HONORABLE GLENN CUNNINGHAM, MEMBER OF THE HOUSE OF REPRESENTATIVES FROM NEBRASKA, ON THE OCCASION OF THE 1957 ALUMNI ACHIEVEMENT DAY BANQUET, UNIVERSITY OF OMAHA, JUNE 1, 1957

Ladies and gentlemen, these past few months in Washington have been interesting—perhaps fascinating is a better word—but they have also been quite revealing. The manipulations of those in Government are interesting to follow, and the workings of our vast and complex Government sometimes leave you shaking your head.

Tonight I would like to take a few minutes to discuss an area of legislation which involves a sizable share of the 1958 budget. It is an area which promotes and fosters spending—not only by the Federal Government—but by States and cities as well.

It is an area that must be the delight of the free-spenders and big dealers * * * those implanted in Government during the days when it was so fashionable to outbid the fellow at the next desk in devising schemes to give away Federal money.

JUST ONE FACET

Let me briefly describe this activity that is costing all of us a lot of unnecessary money. And please bear in mind that this information is the result of a study I have undertaken of just one small facet of the huge budget which contains 1,150 pages in all. There are many other parts where great economies can be made, such as in the public works bill—better known as the pork barrel. Year after year, this bill includes some public works projects which have not been approved by the departments concerned. Fortunately, last year President

Eisenhower vetoed such a bill because of the unauthorized projects. But the good and approved projects get set back too. Senator ROMAN HRUSKA, a past recipient of the award given me tonight, made a valiant but futile fight on the floor of the Senate to strike out these unapproved projects this year, but the economy forces could not muster the needed strength, and the pork barrel rolled on.

But to return to my subject—matching fund programs. I am sure you are all familiar with matching fund projects, where Federal funds help pay for a State or local project, provided there is a certain share of the program paid by State or local contributions. In most projects of this type, State and local money is matched dollar for dollar by the Federal money.

TYPES OF PROGRAMS

There are three general types of matching programs. In the first, communities go to the Federal Government with their individual projects. If the plans meet certain standards and specifications set up by Congress or the administrator of the program, then the project is rated according to various criteria and placed on a waiting list. As Federal funds are available for the programs, the money is transferred to the communities. A program of this type is the watershed protection and flood-prevention program. Many Nebraska farm areas and cities are safer as a result of watershed protection and flood-prevention program.

Secondly, there are programs in which money provided by Congress is divided among the States on a quota basis, each State receiving a certain amount for its own use. If the State, or cities within the State, want Federal funds for the program, they apply to Washington, and the money is committed as long as it lasts. If there are not requests for all of one State's quota, the funds revert unspent to the Treasury. A program of this type is Federal aid for hospital construction, which has been of benefit to a number of Nebraska hospitals.

In the third type of program we find a real culprit. There is again a State quota of funds as in the second case mentioned. But if a State does not use all of its quota within a certain time, the unused Federal funds are made available to other States that have used their shares and still want more. A classic example of a program of this type is Federal aid to airports. Let me say now that using the airport program as an example does not mean I oppose the entire idea, but I was disturbed to find this certain section.

EXAMPLE CITED

Recently the Department of Commerce and the Civil Aeronautics Administration announced State quotas for $60 million worth of airport aid. Nebraska is scheduled to receive a little more than $750,000 of this money.

Now let's suppose that for some reason there is no interest in airport work in Nebraska, or that we have no need of additional airport facilities. There would be no applications to Washington, and none of the $750,000 would be spent in Nebraska.

After holding Nebraska's share for 2 years, the officials would then cancel our right to the funds, but the money does not revert to the Treasury in this case as it does with hospital construction funds. Instead it is reapportioned among the 48 States again. So let us assume now that Maine has spent all of its share of the original $60 million. But there are still some cities in Maine that would match Federal funds if they were available. As a result of Nebraska's lack of interest or need, the Nebraska funds are now available for cities in Maine, and in any other States that want the money.

So what happens is that Nebraska taxpayers contribute their share of this $60-million program through income taxes. After a small servicing charge by Washington administrators, a share of this money was reserved for us here in Nebraska to improve our airports. But we assumed nobody here wanted or needed airport improvements, so Nebraska loses its share of this money and it goes to Maine and other States to help them. The only way to get our own money back from this program is to spend more money on the local level. And if we don't, we find our taxes going to other States for their programs.

THE GRAB FOR FUNDS

Thus, in the cities and States of the country we find persons who can say of a certain matching fund program, "If we don't get the Federal money, somebody else will." I heard this said from time to time when I was mayor and interested parties made an effort to push a new local spending program through. In Washington I became interested in the matter again, and I have been able to do some research on the matter.

I was shocked to learn that there are several programs of this type which allow this Federal money, which is really your money and mine, to flow into those States which spend the most money themselves. Here in Nebraska our State government is trying to save money by reducing the budget and lowering taxes. How does such a policy affect these matching programs?

You know that answer yourself. If we don't have the State money to match a Federal fund, Nebraska's share goes to other States which then benefit from our taxes. So we end up with this ridiculous situation: States and cities increase their tax rates to raise money to match the Federal funds involved in these programs. The taxpayer is squeezed by the pressure from Federal income taxes and from State and local taxes. And remember this, so long as some States and cities match all this Federal money, the programs will roll on. For the sponsors who come back year after year for Federal money from Congress can show that all the previous year's appropriation has been gobbled up and more was wanted. So more Federal money is appropriated into matching funds of this type, and the people of the whole country keep paying their Federal taxes to support these programs.

NEARLY $2 BILLION

I said a few moments ago that I was shocked to learn that there are several programs which reapportion this matching money. And I think you will be equally shocked to learn that these few programs I have uncovered so far are listed in the 1958 budget to receive $1,870,575,000—nearly $2 billion, or more than 9 percent of the total domestic budget.

That's a lot of money flowing from State to State by way of Washington. It penalizes those States and cities that are sincerely interested in trying to save tax money. Worse yet, it penalizes those States and cities that have gone ahead and done the job on their own, not waiting for or looking for a handout from Washington. Such programs could very well destroy the initiative so vital in State and local affairs. And I can prove it.

I received a letter earlier this year from a school district that was going to build a new school building. The officials of this small school district wanted my opinion about building now with their own financing or waiting to see if there would be a handout from Washington. And while they would wait for some of this free money from Washington, the children would also be waiting—for schoolrooms. Needless to say, I wrote them to get going and not to count on Congress to act, because they could get 435 different views on Federal aid to schools in the House of Representatives alone.

I was happy to see this ridiculous reapportionment provision knocked out of one bill already this year. And as my research finishes in the next few weeks on other matching aid programs, I will enlist the support of other economy minded Congressmen in trying to make the necessary changes in the basic laws setting up these programs so that this spender's holiday can be slowed down, at least a little.

Perfidious Albion

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. DAGUE. Mr. Speaker, the caption to these remarks was prompted by an enlightening quotation embodied in the able article by Constantine Brown appearing in yesterday's Evening Star. Mr. Brown quotes Britain's Victorian slogan: "Britain knows neither friends nor enemies; it knows only interests" as her answer to this country's plea not to resume trade relations with Red China.

Mr. Brown points out that this action by Britain, for a mere $30 million a year in trade, may well imperil the entire western alliance, to say nothing of perhaps ultimately losing Hong Kong after the Reds have solidified their position economically. He then goes on to remind us of a bit of recent history, which should have prepared us for this latest move, by this observation:

It was the democratic concept which caused the British Government in the late fall of 1950 to prevail upon President Truman and Secretary of State Acheson to go easy on the Chinese who had joined the battle in Korea. It was only after Prime Minister Clement Attlee rushed to visit Mr. Truman in Washington that we ordered General MacArthur not to bomb the Chinese lines of communication from Manchuria to the Yalu River. It was Britain's Minister of Defense Shinwell who maneuvered skillfully in Washington to have MacArthur dismissed as supreme commander in the Far East. He modestly admitted this in a speech in the House of Commons 18 months later.

And while we are on the subject of our relations with Britain, where are those critics who so roundly scored President Eisenhower and Secretary Dulles when they refused to condone the British and French attack on Egypt last fall? It is now universally admitted that the Eisenhower position prevented war in the Middle East, but what is not so often recognized is the fact that in refusing to support their precipitate action—planned behind our backs—we thereby saved both France and England from the economic collapse which subsequent events have indicated their abortive military venture would have brought about.

I am not an isolationist, but it is becoming increasingly apparent that our principal allies are going to take unilateral action when it is to their selfish interest to do so, and I feel that the time is now here when our foreign policy must be formulated in Washington rather than in London and Paris, as has been the case so many times in the past.

Mr. Brown's fine statement is included in full with these remarks, as follows:

BRITAIN'S CHINA ACTION HURTS U. N.—RENEWAL OF TRADE RELATIONS DAMAGES WEST'S POSITION VIS-A-VIS THE COMMUNISTS

(By Constantine Brown)

There were creased brows and worried faces in Washington when London announced that it would renew trade relations with Communist China. Not only had the American representative at the Paris conference, where this matter was discussed, argued that such a position would seriously impair the West's position vis-a-vis the Communists, but Washington's highest officials had pleaded directly with the British Foreign Office not to give us a black eye by strengthening considerably Peiping's prestige in the Far East.

London's answer was a 20th century paraphrase of the famous Victorian era political slogan: "Britain knows neither friends nor enemies; it knows only interests."

It will take quite some time before either Britain or Communist China can feel any practical results from the decision of the Macmillan cabinet. But what worries our political leaders in the administration and in Congress is that Britain's selfish actions, under the guise that she follows a policy totally independent of that of the United States, will impair the effectiveness of the United Nations.

Communist China was branded as an aggressor by the U. N. soon after the Chinese legions began to pour into Korea, where British troops were fighting side by side with the Americans, Koreans, and other U. N. forces. At no time has the Peiping regime even vaguely attempted to purge itself. Quite the contrary, it is still holding some 450 American prisoners of war despite the terms of the armistice signed in 1953.

It is recognized here that Prime Minister Macmillan and Foreign Secretary Selwyn Lloyd felt compelled to take the trade step—even at the risk of further disrupting American-British relations—because of internal politics. The Conservative Party is slipping badly in popular esteem, and resumption of trade with China is popular not only with the British industrialists and bankers but also with the rank and file of labor. Thus, to our pleas to at least delay the move, we received the answer: "Sorry, indeed, but it must be done."

The decision of the British Government on China is worrying our policymakers not so much because the Peiping regime has obtained a political victory over us, but because it shows to the world that Western unity is breaking at the seams. This is inherent to the democratic system in which every unit of an alliance preserves the right to do whatever is best for its own interest. There is no teamwork in alliances between countries with democratic systems except possibly under actual war conditions. But when the guns are stilled even temporarily each wants to do exactly as it wishes and thinks best for its own interests.

It was the democratic concept which caused the British Government in the late fall of 1950 to prevail upon President Truman and Secretary of State Acheson to go easy on the Chinese who had joined the battle in Korea. It was only after Prime Minister Clement Attlee rushed to visit Mr. Truman in Washington that we ordered General MacArthur not to bomb the Chinese lines of communications from Manchuria to the Yalu River. It was Britain's Minister of Defense Shinwell who maneuvered skillfully in Washington to have MacArthur dismissed as Supreme Commander in the Far East. He modestly admitted this in a speech in the House of Commons 18 months later.

At the last meeting of President Eisenhower, Secretary Dulles, and Prime Minister Macmillan at Bermuda the American spokesmen urged the Briton to do nothing which might strengthen the Communist position in the Far East. It was pointed out to him that the amount of profit the British could expect from almost unrestricted trade with Red China was negligible compared to the damage to the free countries' position in the Far East. And, according to reports, when Macmillan pointed to the immense British interests in that area including the continued possession of Hong Kong, he was admonished that even that crown colony might be lost once the Peiping regime becomes stronger.

So long as trade between the Chinese Communists and the West was carried out in a bootleg manner, with Hong Kong as the center of distribution, it was in the interest of the Communists to have that territory in British hands. But as soon as Communist China is rehabilitated and slips with British help into the ranks of the law-abiding nations there is no reason to believe that Chou En-lai will not pull the same trick as President Nasser did with the Suez Canal.

All the arguments were of no avail. Our ally had decided that a potential $30 million worth of trade a year must take precedence even over Anglo-American relations.

The Last Bell

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. MINSHALL. Mr. Speaker, it is with deep regret that I learned of the recent death of my very good friend, Johnny Kilbane, the former featherweight champion of the world. A fighter and a warrior in the truest sense, Johnny finally lost his last battle after waging an uphill and courageous fight with cancer for the past several months.

At the time of his passing, Johnny was clerk of court of the city of Cleveland, and he served his post most ably and well. Johnny will be missed by us all, and I wish to express my deepest sympathies to his family.

Editorials which appeared in the June 3 edition of the Cleveland Plain Dealer and the Cleveland News follow:

[From the Cleveland Plain Dealer]

THE LAST BELL

Johnny Kilbane was more than a champion back in those days before radio and television when he became a whirlwind featherweight wonder. He was an idol for the city's young manhood and the young in heart, as they partook of his strength through following his deeds in the ring.

He was a symbol of a fast-moving David bringing fame to his hometown. He was a popular member of a popular race. It was no wonder then, though many may wonder at it now, that the whole town turned out for him when he returned as champion in 1912.

Though there was less than half the number of people in Cuyahoga County in those days, a tremendous gathering, variously estimated at 100,000 to 200,000, greeted him. We can't conceive of that sort of heartwarming welcome for a pugilist now; we are more sophisticated, many of us jaded, and television brings championship fights into the living room, if anyone wants to turn the thing on.

Johnny Kilbane, who rose from humble beginnings through wise use of his hands, gave Cleveland many a thrill and helped many bask in reflected glory. And Cleveland understood his ambitions and gave him political office when he asked. His death will not still oldtimers' recounting of his achievements.

[From the Cleveland News]

JOHNNY KILBANE, HIS WILL TO WIN

Johnny Kilbane's two greatest victories were scored in tough rings through sheer tenacity—the prizefight and the political arenas.

Back in 1912, in a brawling 20-round battle he wrested the world's featherweight title from savage Abe Attell, and he wore that crown until 1923.

Later, he went on to take a seat as an Ohio senator in 1941–42, and in 1951 he whipped William J. Reichle for the clerkship of municipal court, proving that there was still a punch in the Kilbane name.

This white-mained, ruddy-cheeked official was a target for the unorthodoxy of some of his methods in the clerk's office but his popularity rode high, and his friends stayed stanchly in his corner.

A champion who campaigned unceasingly for sports as a character builder, Kilbane fought his rocky way up from a grade-school education to positions of trust in government. He will hold a firm place in fistic history as one of the greats of the ring. He demonstrated convincingly that the will to win could be a valuable asset in the court of public opinion as well as in the prize ring.

More Views on the 22d Amendment

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. UDALL. Mr. Speaker, I am appending to these remarks three additional responses I have received from historians and political scientists whose views I have solicited on the wisdom of the 22d amendment.

I present today the opinions of Dr. M. R. Merrill, head of the political science department at Utah State College; Dr. James Hart, of the University of Virginia, political science department; and Dr. Lane W. Lancaster, of the political science department at the University of Nebraska. All three of these scholars favor the repeal of the 22d amendment.

Their replies follow:

STATEMENT BY DR. M. R. MERRILL, HEAD OF POLITICAL SCIENCE DEPARTMENT, UTAH STATE COLLEGE

There are sound arguments for a two-term tradition, but the incorporation of a tradition into the basic law of the land is both unwise and positively dangerous. The ill effects of the 22d amendment are already evident. They will become more acute with time and with the election of Presidents whose popular appeal is considerably less potent than that of the incumbent.

Foreign affairs have become of first importance in the mid-20th century, even for the United States. The proper conduct of foreign affairs demands presidential leadership. Anything that weakens that leadership, and obviously the 22d amendment is in that category, serves to undermine the

foreign policy of the country. Admittedly leadership in foreign affairs cannot be separated wholly from leadership in domestic affairs. In the light of our precarious position as a great world power in a violent world we should simply take the chance of strengthening the domestic power of the President in the grim necessity of maintaining the dominance of the executive in the foreign field. The normal clash of competing interests may serve to modify and even control the presidential power at home. Abroad the presidential power must not be curtailed. As the Bricker amendment with its numerous progeny is a menace which should be stifled because of its antiexecutive bias, so likewise should the last amendment be voided.

Emotional as we, the people, may be we can still be trusted on fundamentals, and were the amendment abolished no President would serve more than two terms unless we ourselves decided that a crisis or major threat demanded the continuance in office of the incumbent. That is a decision for the majority of any given time, and should not be denied by our own assumption of superior judgment.

CHARLOTTESVILLE, VA., *May 5, 1957.*

Hon. STEWART L. UDALL,
House of Representatives,
Congress of the United States,
Washington, D. C.

DEAR MR. UDALL: I am happy to reply to your letter asking me to comment upon your joint resolution proposing an amendment to repeal the 22d amendment to the Constitution.

I

Let me first quote from my volume on The American Presidency in Action: 1789: A Study in Constitutional History (1948), which at pages 2–3 reproduces an opinion on the reeligibility of the President which George Washington expressed in a letter to Lafayette under the date of April 28, 1788:

"There are other points on which opinions would be more likely to vary. As for instance, on the ineligibility of the same person for President, after he should have served a certain course of years. Guarded so effectually as the proposed Constitution is, in respect to the prevention of bribery and undue influence in the choice of President: I confess, I differ widely myself from Mr. Jefferson and you, as to the necessity or expediency of rotation in that appointment. The matter was fairly discussed in the Convention, and to my full convictions; though I cannot have time or room to sum up the argument in this letter. There cannot, in my judgment, be the least danger that the President will by any practicable intrigue ever be able to continue himself one moment in office, much less perpetuate himself in it; but in the last stage of corrupted morals and political depravity, and even then there is as much danger that any other species of domination would prevail. Though, when a people shall have become incapable of governing themselves and fit for a master, it is of little consequence from what quarter he comes. Under an extended view of this part of the subject, I can see no propriety in precluding ourselves from the services of any man, who on some great emergency shall be deemed universally, most capable of serving the public."

II

The issue is not whether it is ordinarily a good thing for a man to be reelected indefinitely to the Presidency. For several reasons, 8 or, at the most, 10 years should normally be as long as a man should serve. By that time the American people usually tire of the President's personality and lag in their response to his leadership. So great a load has the Office become that the limit of the President's mental and physical endurance may well be reached before then, unless we start choosing young and unseasoned politicians. So artificial is the life the Office creates for the incumbent that he may well lose his perspective after a decade in the White House. These are powerful reasons for an anti-third-term tradition and for thinking twice before making an exception to it.

The issue, however, is whether it is the part of wisdom to preclude the making of any exceptions to a generally wholesome rule that two terms is enough. It will be useful to weigh the merits of the three main arguments against doing so.

The first argument is that it is undemocratic to save the people from themselves by forbidding them in advance to reelect any man for a third term. To call something undemocratic is a sound argument if it limits the responsibility of the governors to the community, but is unsound if it merely prevents the people from doing what they have no moral right to do or are patently unqualified to do. The first amendment freedoms are so fundamental to a scheme of ordered liberty that most Americans are happily prepared to have them set limits to what the people may do. Again, it is one thing for the people to choose in a presidential election between candidates nominated by national party conventions and quite another thing for them in national presidential primaries to select the nominees. The 22d amendment seems undemocratic in the sound sense of that objection, for it prescribes in advance that even a leader of the people against special interests may never, even if he could win his party's nomination for a third term, be among those from whom the people may choose the next President.

The second argument is that the President will be weakened in his second term if it is certain that he cannot take issues to the people by running again. So important for national welfare is strong presidential leadership that the present experiment of seeing whether this is the case is a dangerous one. Of course the third term tradition, which I should like to see continued as a presumption, may have weakened the President in his second term. But if so, the effect will be greater now. For there was always the possibility that a President might feel constrained to ask the people for a third term to carry through his policies over strong opposition in Congress and among certain powerful groups; and it has generally been assumed that Theodore Roosevelt did not show his wonted political shrewdness and weakened himself politically when, as soon as it was clear that he had defeated Judge Parker in 1904, he issued a statement which made it impossible for him to run in 1908 without stultifying himself. It is now being debated whether President Eisenhower is being opposed more openly by those who dislike his program because of their knowledge that his days in office are legally numbered. These matters are too subtle to be measured or even surely understood even after the event. I for one prefer not to run the risk which the 22d amendment makes all too probable.

The third argument is that situations may readily be imagined in which the national safety may demand continuation in this key office of the incumbent, both because any crisis creates a presumption in favor of continuity and because in the given case the man in the White House seems decidedly superior in capacity and experience to the alternatives who are actually available. Now of course, it is in some circumstances highly advantageous to change horses while crossing a stream. Great Britain did well to exchange Asquith for Lloyd George and Chamberlain for Churchill after the two world wars broke out. It is, however, enough to cause one to be opposed to making a change compulsory that it might in some grave emergency involve great risk to the Nation. Herein lies the chief objection to the 22d amendment; and it should be conclusive.

Respectfully submitted.

JAMES HART.

THE UNIVERSITY OF NEBRASKA,
Lincoln, Nebr., May 7, 1957.

Hon. STEWART L. UDALL,
House Office Building,
Washington, D. C.

DEAR MR. UDALL: The pressure of work here has prevented an earlier reply to your letter asking my opinion of the proposed repeal of the 22d amendment. Even now, I am not far enough out of the woods to send you the sort of reply that your proposal deserves.

If my memory serves me correctly, the amendment was based not so much upon any principle as upon hostility to the late Franklin D. Roosevelt. Since it was at the time a matter of record that Mr. Roosevelt had been dead for some time, that fact must have been known to those who proposed and ratified the amendment. It is to be hoped that in time it may be known even more generally.

As to the substance of the amendment: It is no doubt true that long tenure of power is undesirable in any branch of government, but it seems to me unwise thus to make it impossible for the people to use any available political or administrative talent. I did not myself approve of all that was done during Mr. Roosevelt's administration, but I do think the situation was unusual. I am inclined further to believe that most of what was done during those years would have been done under administrations bearing a different party label. In any case I look in vain for any reversal of those policies under the present administration. As matters stand in this country at present it seems to me that less is to be feared when the Executive has real power than when he is weakened by the general knowledge that he is without political authority. The 22d amendment seems to me to be designed to deprive him of legitimate authority.

Sincerely yours,

LANE W. LANCASTER,
Department of Political Science.

Eisenhower Administration Gift to Idaho Power Co.

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the June 2, 1957, issue of the St. Louis Post-Dispatch. The editorial entitled "Taxpayers' Bill at Hells Canyon," follows:

TAXPAYERS' BILL AT HELLS CANYON

The whole financial basis of the rationale through which the Eisenhower Administration forfeited the rich Hells Canyon stretch of the Snake River to the Idaho Power Co. has now been brought into question.

The chief accountant of the Federal Power Commission, Russell C. Rainwater, estimates the Federal tax subsidy to the utility on its projected dams there will cost the Treasury about $83,500,000. He estimates that compounded at 6 percent over the 50-year period involved, the saving to Idaho Power will amount to $339 million.

The cost of the two dams is estimated at approximately $103 million. Accordingly, the taxpayers will in the final picture have put up some 80 percent of their cost. And the Idaho Power Co. will have received the dams virtually as a gift, plus their value twice over from the tax subsidy—plus a third sum equal to their total value in profits from the sale of power.

Yet the announced reason of the then Secretary of Interior, Douglas McKay, for withdrawing from the projected Federal dam at Hells Canyon 4 years ago, was economy.

"The cost of the Hells Canyon project is not small, and bears examination in the light of present efforts to balance the national budget," said Mr. McKay. He estimated the cost of the dam and power plant at $357 million.

The question that rises larger and larger is: Would it be preferable for the people of the United States to spend $357 million to own a dam that would pay for itself and produce valuable byproducts of flood control, irrigation and phosphate fertilizer while doing so?

Or would it be better for the taxpayers to pay four-fifths of the cost of building dams for a private company—inferior in power production, in power cost and in flood control—and have nothing to show for it in the end?

Democrats Can't Have It Both Ways

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. BOSCH. Mr. Speaker, I have consistently held that we should refrain from spending billions of dollars all over the world in an endeavor to buy friends and buy peace. I am a firm believer in maintaining the strongest military forces as a deterrent and bulwark against Communist aggression. During the past week an earnest effort was made to restore essential funds in the Defense Department appropriation. Surprisingly, we found advocates of large expenditures during the last fiscal year now urging a deep cutback. They were either right then or they are right now—it cannot be that they were right on both occasions.

Under leave to extend my remarks, I include the column of Roscoe Drummond on this subject:

DEMOCRATS CAN'T HAVE IT BOTH WAYS

(By Roscoe Drummond)

WASHINGTON.—In cutting the administration's defense budget the Democrats in Congress are putting themselves in a morally, politically, and intellectually indefensible position from which slick argument will not extricate them.

The voters will catch up with them sooner or later.

It is difficult to believe that a donkey, even with only one ear to the ground, could get itself into this distorted posture; but it has, and you can see what's happened if you look at it from these three angles:

1. One year ago this month the Democrats in Congress forced the administration to accept a $900 million higher defense appropriation than President Eisenhower and Secretary of Defense Wilson felt necessary or could be economically expended.

2. During the presidential campaign last fall and regularly now for several months from the floor of Congress the Democrats have been telling the country—and telling themselves—that the Eisenhower foreign policy is badly conceived, badly managed, is falling to pieces, that the world situation is deteriorating, that the danger of war grows.

3. In the House of Representatives this past week the Democrats voted against restoring even a modest 25 percent of the recent severe cuts in defense by 203 to 11; the Republicans in favor of restoring the cuts by 140 to 39.

The Democrats can't have it both ways. You can fool some of the people some of the time, and so forth. But they can't count on confusing the public indefinitely.

If the Democrats were right a year ago in forcing the President to increase defense spending and are right in contending that the world situation is worse than ever, then their action in voting last week to cut the defense budget below the administration's request is illogical, inconsistent, reckless, and partisan politics of the most irresponsible kind.

On the other hand, if the Democrats are wise and right in thinking it is not dangerous to cut the defense budget right now, then by all reason and honor they ought to admit that they erred grievously in pushing it up $900 million a year ago and ought to retract their assertions that the free world is worse off and admit that prospects for a better peace are improving.

Giving the Democrats their own premises and only one conclusion is possible: either their words are unsupportable or their actions are unsupportable because they are inconsistent with each other.

It is not necessary to accept as rational the Democratic premise that the free world is losing the cold war or as wise the Democratic action that now is the time to cut back our defenses.

It seems to me that the developments of the last 6 months indicate that the West is improving its position vis-a-vis Russia and that the initiative in the cold war is either within our hands or within our reach. I refer to these developments:

Khrushchev has been unable to woo Tito back into the Soviet fold.

As illustrated by what has happened in Poland, the Soviets have lost much of their control of the Eastern Europe satellite world.

Eastern Europe's 1 million satellite troops are today a source of weakness, not a source of strength, to Moscow.

The position in the Middle East is more stable.

The reorganization of Soviet industry was necessary not because things were going as planned but because they were not going as planned.

For the first time since the end of World War II the Kremlin is making signs of being seriously interested in a disarmament agreement.

To cut the President's defense recommendations on the Democratic theory that the Eisenhower foreign policy is weakening the West just doesn't make sense.

To cut the President's defense budget and the means of waging the peace at the very time when the initiative in the cold war is moving our way doesn't even make good nonsense.

Minnesota Republicans Support Budget Proposed by President Eisenhower

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution:

Whereas President Eisenhower's proposed 1958 Federal budget "guided by national objectives" including:

"1. Peace, justice, and freedom for our own and other peoples;

"2. Powerful Armed Forces to deter and, if need be, to defeat aggression;

"3. A healthy and growing economy with prosperity widely shared"; the following resolution is submitted.

Whereas the $71.8 billion estimated Federal budget is 19 percent of the gross national income, which represents a smaller percent of expenditure than any Federal budget in the preceding three decades; and

Whereas this will be the third consecutive balanced budget under the Eisenhower administration; and

Whereas, the President's budget proposes that the Federal Government spend $1.8 billion less than its estimated revenue; and

Whereas, President Eisenhower will continue to bring economies into the Federal Government as recommended by the Hoover Commission report: Now, therefore, be it

Resolved, That the Ramsey County Republican Committee go on record supporting President Eisenhower's proposed 1958 Federal budget; be it further

Resolved, That a copy of this resolution be sent to President Eisenhower, Republican members of Minnesota's congressional delegation and the Republican State Central Committee.

(NOTE.—The above resolution was passed unanimously by the Ramsey County Republican Committee at their regular monthly meeting Wednesday, May 22, 1957, St. Paul, Minn.)

All Funds Disclosed by ILGWU

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. FARBSTEIN. Mr. Speaker, in these days when so much is being heard of dishonesty and corruption in labor unions and on the past of labor's leaders, it is refreshing and enheartening to learn that at least one international union continues to make public to its members and to the world at large a report on its finances. The International Ladies' Garment Workers, under the guidance of its president, David Dubinsky, has for many years published annual financial reports to its members through the medium of its own publication Justice. Now the ILGWU has released a unique financial report presenting in detail the receipts and disbursements of the health, welfare, and retirement funds of its local unions. President Dubinsky is to be commended upon his actions.

Under leave to extend my remarks, I wish to include an article which appeared in Labor's Daily which summarizes the contents of this financial statement:

ALL FUNDS DISCLOSED BY ILGWU

NEW YORK.—David Dubinsky, president of of the International Ladies' Garment Workers' Union, has released a unique financial report, which presents in detail the receipts and disbursements of 134 funds of affiliates of the union. Of these, 87 are health and welfare funds, and 47 are retirement funds.

The report, covering 1956, and making comparison with 1955, is the only report by

an international union which covers comprehensively the health and welfare and retirement funds of all its affiliates. Prepared by the union's welfare and health benefits department of which Adolph Held is director, the report shows that receipts by the funds of employer contributions plus interest totaled more than $64,844,000 in 1956, while disbursements for the year totaled $44,732,638. The membership of ILGWU totals 450,000.

ILGWU funds are employer contributed, and contributions are calculated as percentages of payroll. The women's garment industry lacks national labor agreements, and the funds have been established through collective bargaining in individual markets and trades.

ILGWU is the only union in the Nation in the position to make such a report. Each of the separate funds audits employers' records to insure full contributions as provided by the collective agreements. In return, a staff of 40 accountants of the international union's general office audits the books and records of these funds of the affiliates.

EIGHTY PERCENT DISBURSED

Among other things, the report indicates that in 1956 80 percent of fund income was disbursed. A table of receipts and disbursements of health and welfare funds lists for each of the 87 health and welfare funds the rate of employer contribution and its amount, how much is collected per member, total disbursements in dollars and as a percent of receipts, then the amount and percent of receipts distributed in benefits. A final figure shows actual administration costs of each fund and the percentage of receipts this constitutes.

The administrative cost of all health and welfare funds is 5.61 percent of receipts. Approximately half of this is the cost of periodic audits of firms' books to prevent any losses in funds.

The President's Case Against Foreign Aid

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. BURDICK. Mr. Speaker, in the Wall Street Journal of Thursday, May 23, 1957, there appeared the following article by Mr. Loren M. Berry, of Dayton, Ohio, under Review and Outlook.

In view of the discussions presently being carried on concerning the highly important subject of foreign aid, I commend this article to the attention of my colleagues. The text follows:

Let us assume for a moment that President Eisenhower is correct when he says that to cut even a dollar out of the foreign aid program would be reckless, would weaken the Nation, and could lose both peace and freedom. What does that actually mean?

Mr. Eisenhower contends that without our military help overseas, we would have to spend "many billions of dollars more" on our own defense, put more men in uniform, and keep them there longer. If that is so, it plainly means that but for our aid the 42 nations with which we are associated in defense treaties would do little or nothing in their own defense.

And if that is true, it means in turn that these 42 nations have no real determination to oppose communism; they are building up their own defenses mainly because the United States helps them. If that is the case, they are highly unreliable allies.

If all this, moreover, is the real significance of foreign and, it clearly indicates we can never stop. To do so, ever, would be to bring the whole anti-Communist defense structure toppling down, since it presumably rests on nothing more substantial than handouts from Washington.

The President, in fact, offers no hope that foreign aid will ever end. On the contrary, he seeks to establish the principle of permanance, first by proposing to make military aid a direct charge against the Defense Department budget, and second by recommending to Congress a long-range revolving loan fund for some types of economic aid. The program that was originally to last 4 short years is now to be a program in perpetuity.

It is thus the bleakest kind of picture the President paints. For ourselves, we do not believe the outlook is all that bad.

We doubt very much that the alternative to military aid is going it alone. We think a good many of our allies would make considerable defense efforts in their own self-interest and would remain allies, without any dollars from us. A nation like Britain has never been unaware of the need for military preparedness, or allergic to its national interest. Even now the British Government is glad to show, by developing its own hydrogen bomb, how much it can defend itself.

Many other allies have powerful defense capabilities with which to deter the Communists. What's more, they would still come under the protective shield of the United States even without American military aid. The greatest deterrent to Communist aggression is not the number of jets in Europe or Formosa but the United States treaty obligations to assist its allies should they be attacked.

But if that is somehow not the case—if the allies are so crass and so blind that they will do little or nothing without our help and the assurance of our help forever—then God help us. Such allies would not be worth having in a showdown.

In making this kind of argument, the administration is not making an argument for foreign aid. It is unwittingly making the strongest possible case against foreign aid.

I appeal to you and your colleagues to concentrate on putting an end to our excessive spending and the outright waste of the American taxpayer's money.

LOREN M. BERRY.

Atomic Energy Commission Press Release Tends To Give False Sense of Security From Civil Defense Standpoint

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I include herewith a statement made by the Honorable CHET HOLIFIELD, chairman of a special subcommittee of the Joint Committee on Atomic Energy to study radiation problems:

MR. HOLIFIELD'S STATEMENT

"I have just read the press release issued by the Atomic Energy Commission for before noon release Wednesday, May 29, 1957, announcing progress in their so-called clean weapon program," it was stated today by Representative CHET HOLIFIELD, Democrat, of California, chairman of the Subcommittee on Radiation of the Joint Committee on Atomic Energy. Mr. HOLIFIELD says:

"In view of the fact that this press release has been made in the midst of our hearings which have been trying in an objective way to find something out about the nature of radioactive fallout from nuclear explosions, I have the following comments to make:

"1. The AEC's issuance of this release violated their own rules of informing the joint committee at least 24 hours in advance of a press release. It was received at the joint committee's office at 5:59 p. m. last evening, May 28, under circumstances which would make it difficult for the committee members to be informed or to prepare comment. The release bears a curious parallel to the original 'clean bomb' press release last July 19 (1956), in which the committee was given even less notice of the AEC statement.

"2. Testimony before the joint committee during the current fallout hearings and in prior executive sessions has indicated that the AEC statement that 'the success thus far achieved (in developing cleaner weapons) has convinced us that widespread hazard from fallout is not a necessary complement to the employment of large nuclear weapons' is misleading for the following reasons:

"(a) It tends to give a false sense of security from a civil-defense standpoint. We can be certain that the Soviet Communists will use the dirtiest bombs which they can devise when and if they make the mistake of attacking this country or any other country.

"(b) It may give the wrong impression to our friends and allies that the use of large-scale megaton bombs under the cleanliness program will not entail widespread radioactive fallout. It is true that fallout is being reduced. But there is and at present cannot be such a thing as an absolutely clean bomb, i. e., no fallout. Moreover, in any large-scale war, it would seem inevitable that weapons of varying degrees of cleanliness will be used, and the inevitable result will be large-scale fallout.

"(c) It tends to give the impression that weapons tests from so-called clean bombs have little fallout. This is a subject which these hearings will explore further. So far we have been provided with no evidence to prove the Commission's assertion. We have no assurance that Russian or British tests are or will be free of substantial radioactive fallout.

"3. This statement ignores the alternative suggestion of Commissioner Thomes E. Murray that rather than rely solely on large-scale thermonuclear bombs we develop and produce numbers of small-yield nuclear weapons which can be widely dispersed and used on a selective and limited basis in brush fire wars.

"Senator ANDERSON has asked me to add that he fully endorses this statement."

Policy With a Broken Back

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. UDALL. Mr. Speaker, last week in a syndicated column entitled "Policy With a Broken Back," Walter Lippmann made a major contribution to the cur-

rent reappraisal of our China policy. This column follows:

POLICY WITH A BROKEN BACK

(By Walter Lippmann)

There can be few left among us who do not have serious doubts about our China policy. For it is not possible to shrug off the anti-American riots in Formosa as if they were an unfortunate accident which has nothing to do with anything significant. Whether or not there was official complicity, the indubitable fact is that whoever incited, organized, equipped, and directed the rioters knew he could count upon a deep and widespread popular resentment against Americans. This resentment shows that our China policy is not working well even among the Chinese whom we are protecting and subsidizing.

It is often supposed that the President is by no means an unqualified believer in our China policy but that for the sake of peace with Congress and inside the administration he has put the issues on ice. Thus in public at least, he has avoided a reappraisal which might be very agonizing to many of his friends.

There is, however, no way of postponing the reappraisal much longer. For it is becoming very evident indeed that our China policy has no future, that time is running out, and that the real question is whether there is still time and opportunity to save the things that matter the most.

What is our China policy? A good way to get at the inner principle of it is to ask and to answer the question, why are we uncompromising in our boycott of Red China and so much less uncompromising in our relations with Red Russia? The key to our policy is the fact that besides the Chinese in Formosa, there are some 10 million Chinese in southeast Asia. In Singapore, they are three-quarters of the population. In Malaya, they are two-fifths of the population.

In those countries which have diplomatic relations with Red China (Burma, Indonesia, and Cambodia), the Chinese tend to look to Red China for guidance. In the countries recognizing the Nationalists, such as South Vietnam, Thailand, and the Philippines, the Chinese tend to look for guidance to Formosa.

The object of our China policy is to keep the overseas Chinese separated from the Red Chinese government, and thus to prevent it from ruling and from representing all the Chinese.

Some years back, when the Nationalist Chinese had been driven off the mainland and were first installed in Formosa, the overseas Chinese were entitled to believe that eventually, with American help, the Chinese Government in Formosa would fight its way back to the mainland and become again the Government of all China. Thus there was hope for the anti-Communists that they would go home triumphantly. For the neutrals there was some good reason to remain sitting on the fence. As long as the Red Chinese were weak and distracted by the problems of the revolution, while the United States, which then had a monopoly of nuclear weapons, was so strong, the China policy had a credible foundation.

It no longer has a credible foundation. When in 1955, President Eisenhower asked Congress for a guaranty of Formosa and the nearby islands, he also took the necessary measures to prevent Chiang from making warlike moves against the mainland. Indeed, the President put an end to the idea that the United States would back an invasion of the mainland. He went even further and made it clear that the United States would not permit Chiang to attempt an invasion. All this was, no doubt, a sound and prudent diplomatic action to prevent dangerous and foolish adventures.

But it broke the back of our China policy. It deprived the Chinese in Formosa of any hope that they could return to the mainland except by coming to terms with Red China. Ever since then, our China policy has had no future, and has been no more than a holding operation, designed to put off as long as possible a deal among the Chinese themselves.

Our attitude toward trade with China and our attitude toward letting American newspapermen go to China are part of this holding operation. They are a rather desperate and forlorn attempt to keep the Chinese in Formosa from coming to terms with the Chinese on the mainland. Thus we are trying to induce Britain, Germany, and Japan, as well as Western Europe, to restrict trade with Red China more severely than they restrict trade with Red Russia. As this means merely that Russia becomes the broker through which China trades with the rest of the world, the restrictions are not substantial. They are psychological. The purpose of the restriction is to make the overseas Chinese feel that all the world, outside of Russia, is the enemy of Red China. For the same kind of psychological reason, Mr. Dulles and Mr. Robertson do not want to let American newspapermen go to Red China. They are afraid it would discourage the overseas Chinese and reduce their determination to oppose Red China.

The rational solution would have been what is called the two-China policy—to establish Formosa as an independent and neutralized state under the protection of the United Nations as part of the bargain which admitted Red China to the United Nations. Both Chinese governments are on record against such a solution. But it is still the best and indeed the only solution which corresponds to the whole reality of the Chinese situation—to the fact that there is a Chinese community which is opposed to placing itself under Communist rule, and that there is on the mainland of China a powerful government which cannot be ignored.

The question is whether it is too late to deal with the situation by a negotiated compromise, like the two-China policy. If it is too late, then, unless the improbable happens and there is a counterrevolution on the Chinese mainland, we must look forward—with the Formosa riots as a warning sign—to the disintegration of our China policy.

Another Crisis Ahead for Lead-Zinc Mines?

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. METCALF. Mr. Speaker, on May 29 I introduced a bill to maintain the price of domestically produced lead at 18 cents a pound and that of zinc at 15 cents.

I did so after the administration had brought in its so-called long-range minerals program, which was 2 years in the making. A complicated combination of higher tariffs and excise taxes on imports, it would put a floor of 17 cents a pound under lead and one of 14½ cents under zinc.

That program is slow death for our lead and zinc miners and the business communities which serve them. The average production cost in this country is close to 17 cents for lead and just under 15 cents for zinc.

Under my bill, whenever the domestic price, averaged over 1 calendar month, fell below 18 cents for lead and 15 cents for zinc, an import tax of 6 cents a pound would automatically replace the existing tariff upon imported lead and zinc. The President would suspend the special tax after the domestic market price averaged at least the minimum price for 2 consecutive months.

The need for prompt action in this crisis is emphasized in the following editorial from the Spokesman-Review, of Spokane, Wash.:

ANOTHER CRISIS AHEAD FOR LEAD-ZINC MINES?

The people in Washington, D. C., who seem to think that if you close your eyes long enough the lead-zinc problem will go away are about to get another rude shock.

Congressmen from the mining States are worked up again. They have been aware that foreign metal, generally produced cheaper than at domestic plants, is taking over an increasing share of the United States market. In 1950, zinc imports were equal to 70 percent of United States output; in 1956 imports were estimated at 137 percent of domestic production. Lead imports were 179,000 tons in 1951, 262,000 tons in 1956.

Latest development was the announcement by the big Eagle-Picher Lead & Zinc Mining Co. that it was closing mines, mills, and smelters in Oklahoma, Kansas, and Missouri indefinitely because of flooded market conditions.

All this has come about because in this day many diplomats regard "tariff" as a nasty word. And it is true that tariffs can cause resentment overseas at a time when the United States is strengthening alliances. But what is the alternative? Stockpiling of metals for an indefinite period is simply too costly. And besides, our stockpiles are getting huge, augmented recently with foreign lead and zinc bartered for foodstuffs by the Agriculture Department.

The mining industry at one time pushed a solution with considerable appeal—a tariff which would operate only when domestic metals prices fell below a level necessary to keep the industry going. But United States companies were not unanimous in their support of this proposal, since some have big plants overseas.

Meanwhile, the administration has been considering a long-term minerals policy, though progress has been exasperatingly slow.

It's the old story—everybody in Government is the friend of the miners in times of emergency, when metals are vital and overseas supplies uncertain. But where can the miners, whose congressional sympathizers are in the minority, turn during peace? The industry obviously, has not yet found that answer.

Invasion From Washington

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. ABBITT. Mr. Speaker, there is published at Winchester, Va., one of the outstanding evening daily papers in Virginia, the Winchester Evening Star.

Hon. Harry Flood Byrd, Jr., a member of the State Senate of Virginia, is the editor of this paper.

Senator Byrd is one of the outstanding young statesmen of Virginia. He understands the problems confronting our people. He has the ability to recognize the needs and desires of the people of the Commonwealth of Virginia.

On Friday, May 31, 1957, there appeared in the Winchester Evening Star an editorial entitled "Invasion From Washington." The editorial points out very clearly the attitude of the people of the Commonwealth of Virginia and their resentment to certain outside newspapers attempting to unduly influence the course of action in Virginia and particularly the Washington Post, which has been so outspoken in its efforts to hoodwink the American people into believing that integration has worked in the public schools of Washington. The situation in the Washington schools is deplorable, but the people of the country have been deprived of the facts surrounding the school problem due to the suppression of the news by the Post.

The editorial is as follows:

INVASION FROM WASHINGTON

The Washington Post is upset about school segregation in Virginia. The Post was an early advocate of integrated schools for the District of Columbia and is worried because the Virginia people feel that integration should be resisted instead of embraced. One of its columnists writes about the subject each week and says very harsh things about Virginia's leaders. Indeed, he gets so worked up that we fear he may suffer apoplexy.

But not content with turning its columnists loose on the Old Dominion, the Washington newspaper uses its editorial columns as well. The Post feels the problems of desegregation have been magnified and it has mean words for the congressional committee which pointed out that the Washington school system has sharply deteriorated since integration came to that community. The Washington school population is now 65 percent Negro, many white parents having moved across the river.

The Virginia people are not attempting to tell Washington how to run its schools. The Washington Post favors desegregation and if it wishes to use its newspaper columns to expand the integration process in the District of Columbia then, of course, it has a perfect right to do so. But the Washington newspaper is not content with integrating Washington. Whether on the theory that misery loves company, or on some other theory, it has turned its guns on Virginia in an effort to bring about desegregation here. Here again we do not protest the Post's right to explode over the issue if it wishes. But we are inclined to the view that the Virginia people and their leaders have a little better knowledge of conditions in Virginia, and the desire of the Virginia people, than does the Washington newspaper.

Perhaps the most interesting aspect about the Post's explosive attitude toward Virginia and Virginia's No. 1 problem is this comment from a recent Post editorial: "For 3 years this faction (Virginia leaders) has been screaming about the Supreme Court decision without accomplishing a solitary thing about the problem it raises."

What has Virginia accomplished? Virginia has accomplished precisely what it seeks to accomplish—it has maintained segregated schools. The Virginia people feel that there is no advantage to either the Negro race or the white race in mixing the two in the classrooms. Under the leadership of "this faction," as the Post calls the State's political leadership, segregation has remained intact throughout the State. Not one Virginia school has been integrated and not one Virginia school has been closed. That is what the people of Virginia have sought to accomplish during the past 3 years and this is exactly what the people of Virginia have accomplished.

A Federal court of nine men rendered what the Virginia Legislature, by an almost unanimous vote, declared to be an "illegal" decision. The Federal court decision, if complied with, would destroy Virginia's public school system. Virginia's Legislature and her Governor have been attempting to prevent the destruction of the public schools. The mission to date has been accomplished and as a result Virginia's public schools have been spared the deterioration that has been forced, with the help of the Washington Post, on the public schools of the District of Columbia.

Dean Pike's Realism

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. DINGELL. Mr. Speaker, an article which appeared in the May 31, 1957, issue of the Detroit Jewish News authored by my close personal friend, Mr. Philip Slomovitz, is worthy of reading and insertion in the CONGRESSIONAL RECORD.

In spite of what appears to be a temporary cessation of the fighting in the troublesome Middle East, we must recognize that no true peace has been achieved and that the real causes of unrest remain to plague the people of the Middle East and of the world. Mr. Slomovitz quotes from the remarks of the Very Reverend James A. Pike, dean of New York's Cathedral of St. John the Divine, a prominent Protestant churchman who has come up with some ideas which we hope may become a guide in the difficult problem of securing peace to this troubled area of the world:

DEAN PIKE'S REALISM

There is far greater realism in the program proposed by the Very Reverend James A. Pike, dean of New York's Cathedral of St. John the Divine and adjunct professor of religion and law at Columbia University, in a special article in the New York Times Sunday magazine. We were saddened to read the reiteration of his view that, as a non-Zionist, he was unconvinced by the arguments for the establishment of Israel in the first place. He is a remarkable person, he has inspired us with his fiery speeches in which he has defended Israel, and we would have assumed that he would be among leaders in an effort to assure justice for Jewry through an Israeli state. But he is fair in recognizing Israel's existence and in the need to protect the state, and we are not unappreciative.

In his tackling of the refugee problem, he is realistic in recognizing the existence of tragic factors. For instance, he makes use of a statement, already quoted on an earlier occasion by your commentator, made by Ralph Galloway, until recently head of United Nations relief in Jordan, who said: "The Arab States do not want to solve the refugee problem. They want to keep it an open sore, as an affront to the United Nations and as a weapon against Israel. Arab leaders don't give a damn whether the refugees live or die."

Dr. Pike points to the Arab aim to foster in the refugees the notion that return to their former homes is the only desideratum, and he hastens to discredit such an idea. He thus describes the danger and the real possibility:

"Assume that there is a minimum of 800,000 refugees (it is hard to get a firm figure; there were probably 500,000 to 600,000 to start with). The population of Israel today is 1,900,000. No nation, regardless of past rights and wrongs, could contemplate taking in a fifth column of such size. And fifth column it would be—people nurtured for 10 years in hatred of Israel and totally dedicated to its destruction * * *. For an analogy we must think of this: the scrupulosity with which the United States examines the views of each potential immigrant does not encourage us to imagine that we would be willing to take in nearly 71 million sworn enemies of the Nation, which is what the proportionate figure would be."

Dr. Pike anxiously searches for a solution. He recognizes that the clock of history can't be turned back; that the Israel territory, literally, is not the same that was abandoned by the refugees; that there are barriers in the path of the refugee problem. But he believes there is a solution, involving these elements:

"A permanent peace treaty," he declares, would acknowledge Israel's existence and would remove trigger-happy anxieties.

"Mutual development, with outside aid, of water projects," he believes, would contribute toward an increase of the arable land of both Jordan and Israel.

"Economic union and mutual planning," he asserts, would increase employment opportunities.

Then he tackles the question of the refugees' resettlement, suggests that Israel, "her borders secure, her existence recognized by her neighbors," should admit a proportionate number of refugees—he mentions the number of perhaps 100,000, "which back in 1949 Israel offered to take, though the offer was declined."

Dr. Pike recognizes that not too many of the refugees may be willing to go back to Israel, a land that is now strange to them. "This quota filled," he suggests, "let the rest be settled in Arab nations on new arable lands made available by new water and in the new industry and service trades that will follow."

There is realism in the eminent clergyman's plan when he points out:

"The pattern for this has already been set by Israel in its resettlement of some 400,000 Jews from Arab lands in western Asia and north Africa who abandoned their property and whatever wealth they had and arrived penniless in Israel. There have been refugee camps in Israel all along—but with this difference: they have been temporary reception centers, because Israel really wanted to settle the newcomers."

To finance the plan, Dr. Pike suggests the use of large sums available from the refugee relief fund and by Israel's adding to it "the value of the Arab property which it now utilizes for others. Then let the Arab countries add to the account the value of the property of the 40,000 Jews who fled Arab lands into Israel." He also suggests help from the United States.

At last, we have an equitable proposal that takes into consideration not only the lands evacuated by Arabs but also those confiscated from Jews by Arab countries where they had lived, in many instances, for thou-

sands of years before they were compelled to flee for their lives.

Can Arabs and Jews live together? Dr. Pike doesn't believe the enmity is undying. He relates:

"Maybe it was just a straw in the wind, but when I visited with a class at the new University of Tel Aviv, I observed that an Arab student seemed to be well received and he was friendly enough to the others. And at the Mandelbaum gate, at the Jordan-Israel border in Jerusalem, we observed something that is a foretaste of what could be.

"On the Israeli side I saw a pile of new Arab picture magazines. 'Where did you get them?' I asked the guard. 'From the guards on the Jordan side,' he answered. 'We trade them.' I pressed further. 'When you do that, do you smile at each other?' 'Of course,' he retorted. 'We're friends; we have coffee together.' Individuals can always get along with each other—or at least can judge each other for what each one is—once the official tensions are relaxed.

"Among the narrow, winding streets of old Jerusalem [in Jordan], shared as they are by native Arabs, tourists, and donkeys, is a tiny side street surmounted by a large sign which reads, 'For People Only.' This provides a good slogan for any plan for the resettlement of the Arab refugees and the consequent chance of peace for all in the Middle East—not pro-Israel, not pro-Arab, but for the sake of people."

These are heartening statements, and it is high time they were uttered.

Ike's House Finances

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. MULTER. Mr. Speaker, the following article by Drew Pearson, which appeared in the New York Mirror of May 31, 1957, makes most interesting reading:

WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

IKE'S HOUSE FINANCES

WASHINGTON, May 30.—There's been a lot in the papers about different departmental budgets, not much about the President's own White House.

During the 1952 campaign, Ike used to stand on the rear platform of his special train and tell how, when he was a boy in Kansas, he and his brothers dropped a nickel. It slipped through the cracks of the porch, and they got down on hands and knees to fish it out.

General Eisenhower told the story over and over again—until newsmen knew it by heart—as an illustration of how he would save every nickel if elected.

The year that Ike was elected—1952, the last year under Truman—the cost of running the White House was $1,883,000. This year Ike is asking $2,051,000 for servants, gardeners, food, and other housekeeping expenses.

The cost of his office has increased even more.

The last year of Truman, the executive office cost $8,166,000. Eisenhower's first year it was $8,725,000. This year, 1957, it is $10,715,000, and for next year the President is asking $12,047,000.

This does not include his two helicopters which are charged to the Defense Department, his private plane which is charged to the Air Force, his military aides and staffs which are charged to the Pentagon, nor his chauffeurs which are charged to the Army. The telegraphers and code room cryptographers were civilians under FDR and Truman but were put under the Army, by Ike. It now takes double the number of Army personnel to do what civilians once did.

Figures on the total White House staff are not available. But it's estimated that the overall figure has about doubled, though this does not show in the budget, because so much personnel is borrowed from other departments.

The White House has grown under each succeeding President to that it now occupies the building which once housed the entire State, War, and Navy Departments, adjacent to the White House. Plans are even under discussion to tear this building down and replace it with a modern office building in order to house the evergrowing White House offices.

Farm Program in the Spotlight

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a radio talk given by R. K. Bliss, of Iowa State College, on May 24, 1957:

FARM PROGRAM IN THE SPOTLIGHT

(Radio talk by R. K. Bliss, May 24, 1957, extension service, Iowa State College)

A suitable farm program is still the unsolved legislative enigma confronting Congress. After a quarter of a century of debate Congress appears to be no closer to an agreement than at the beginning. We have recently had a remarkable illustration of congressional uncertainty as to what to do and how to do it in regard to the farm program. For example, a year ago Congress passed the soil-bank plan too late in the crop year to be given a fair trial. A few days ago the House of Representatives voted to junk the acreage reserve of the soil-bank plan even before giving it a real trial.

Let us take a look at the legislative record.

President Eisenhower sent a detailed message to Congress on January 9, 1956, recommending the soil-bank plan and urging prompt action on the part of Congress so that the plan could go into effect in 1956. The soil-bank phase of the President's recommendation had almost universal support. The Farm Bureau was strongly for it, other farm organizations were friendly, the Izaac Walton League and other conservation groups approved. It appeared that at last a plan had been developed that could be generally supported.

Prior to receiving the President's recommendations, congressional committees had been working for months in developing a program. It was however, in April about 3 months after receiving the President's proposal before a farm bill was passed. The bill endorsed the soil-bank plan but it included a multiple price plan for wheat which would have subsidized feed-grain competition for Corn Belt livestock farmers. It also provided mandatory rigid support prices for feed grains in addition to corn, thus further encouraging the production of more feed grains at a time when there was already a big surplus of such feeds on hand. An increase in feed grains would encourage more livestock production. President Eisenhower's veto of the bill was a good thing for Iowa and Corn Belt livestock farmers.

Then Congress passed another bill which the President signed but which came into law after the corn had been planted and too late to be effective in 1956. This law was a step forward in farm legislation although it had a gimmick in it that later permitted a minority of the corn farmers to determine how an important part of the corn program would be conducted.

SOIL BANK USED IN DROUGHT RELIEF

In view of the lateness of the passage of the act, the Department of Agriculture expressed doubts as to whether the soil bank could be put into operation in time to be of any real value in 1956. However, because of a widespread drought and the urging of Congress the attempt was made. In Iowa the program was in fact converted into a drought-relief program.

Everyone apparently approved this action at the time. Iowa's State ASC committee and county committees deserve credit for the quick and efficient way in which the program was put into effect. Iowa received the most money in soil-bank payments of any State. I believe Iowans generally were very glad to see farmers in the drought areas get some return out of the year's work through soil-bank payments.

Now, however, there is grumbling in Congress and elsewhere about the money paid out on the program. It was paid, however, with congressional urging and approval. In Iowa it was paid in a good cause and carried through efficiently by farm committees.

It is hoped that the Senate will not concur in the action of the House in nullifying the soil-bank plan before it has had a fair trial. The soil bank had great support on the part of farmers and conservation agencies generally at the time of passage. It still has large support. It should be given a trial.

SOIL BANK: REALISTIC PLAN TO ADJUST PRODUCTION TO DEMAND

The soil bank is the first realistic plan to actually decrease production in an effort to adjust production to demand. The soil bank takes land out of production completely for the time of the contract. Heretofore, we have had diversion of production, not necessarily reduced production. In Iowa farmers largely switched from corn to beans and some more recently to milo maize. In regions growing one crop such as cotton or wheat, the switch was generally to corn, milo maize, forage, and grass crops. This diversion in production in all probability increased the total production of farm products particularly in the cotton area. The extra production of feed grains and forages had to be fed to livestock in order to be profitable and thus brought the cotton farmer into direct competition with Iowa and other Corn Belt livestock producers.

One thing seems sure, the only practicable way to reduce production is to take land out of production. Land is the basis of production. I have heard the argument advanced that the soil bank, that is taking land out of production, will not reduce production. One might as well argue that cutting down a quarter or half of the Ford automobile plant would not reduce the number of cars manufactured. If reduced production is what is wanted, land must be taken out of production for land is the factory on which and in which farm products are produced.

Why do we have so much difficulty relative to specific farm programs. One reason is that farmers constantly cope with uncontrollable conditions such as drought, floods, hails, blizzards, insect pests, etc. When an Iowa farmer lays his corn by in June he doesn't know whether it will yield 30 or 40 or 80 or even 100 bushels to the acre more or less. The crop is temporarily out of his hands. Farmers cannot control production in the way manufacturers control it.

CENSUS LISTING OF FARMS MISLEADING

However, it seems to me that we have also added man-made difficulties to the farm situation. For example: The 1950 census lists as farmers all those who have 3 or more acres of ground and the value of whose products exclusive of the home garden have amounted to $150. The $150 worth of products produced could either be sold or consumed by the farm family. Places of less than 3 acres were counted as farms if the value of the farm products in 1949 amounted to $150 or more. Think of it, the absurdity of counting anyone a farmer who produces only $150 worth of products and which includes what the family may have consumed in the home.

Let us make a few comparisons on the basis of this classification.

Gross farm income in Iowa for 1956 and which includes all farms of all sizes, little and big, is estimated by the United States Department of Agriculture at $11,685 per farm. It would take approximately 78 of these $150 farms to equal the gross income of one average Iowa farm.

Let us take another comparison. Reports are now being summarized from 955 farms which in 1956 cooperated with the college in keeping farm records. These farms are mostly family sized farms but are above average in management. The average gross returns from these farms less purchase of feed and livestock was $15,789 per farm which is more than 100 times as much as the lowest census classification of farms.

The trouble with the census classification is that a small farm figures in the statistics as the equal of a large farm. Thus, statistically the per capita income of farmers appears much lower than would be the case if none but real farmers were included in the computation. These so-called very low-income farmers, who are really not farmers, figured in general averages and make good statistical fodder for people who do not understand or who want to keep the agricultural political pot boiling.

LOW-INCOME FAMILIES IN IOWA GROUPED AROUND TOWNS AND CITIES

Low-income families classed as farmers are quite generally grouped around our cities and towns. They may not have gotten along too well financially in town or city and have moved to the suburbs or on land near the town to raise a garden and farm a few acres while earning extra money on town and city jobs. City people generally are glad to have them go out on these little holdings. Many of these families appear to like this kind of life. If they are a problem, they are a community and social problem and not a farm problem. They are, in fact, mostly a city or town problem. Agriculture has enough worries with drought, floods, etc., without taking on these low-income families living mostly around cities and towns.

Agriculture is going through a great technological change, almost a revolution. A farm family today, with modern machinery, gas, and electrical power can operate twice as much land and do it easier than the same family could have done it in the horse-and-buggy days, when farm power was furnished by horses working on small implements and machines. We have to adjust our farm programs to this new situation. The family farm that is a farm that occupies the time of the family is much larger than it was 40 years ago.

Why does land keep going up in price? Why is most of it being bought by family farmers? The answer is because the farmer considers it a good investment. He knows that with modern machinery he can farm more land with his present help and thus add to his income. The urge of the family farmer for more land is an economic one.

In the meantime, the sensible way to reduce production is to reduce the size of the plant, that is the land under cultivation, and that is what the soil bank is designed to do. Let's give it a fair trial.

American Policy in the Middle East

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, at his own expense Mr. Garland Evans Hopkins, a resident of Virginia and a student of early colonial history, has had excerpts printed from the farewell address of George Washington. His statements at that time seem especially applicable to American-Middle Eastern policy in this day and age.

Mr. Speaker, I am including as part of my remarks a brief foreword by Mr. Hopkins and the excerpts referred to:

[George] Washington is a well-known authority on American foreign policy. Some years ago, on the occasion of his retirement from Government service, he addressed a farewell message to his fellow citizens. The address, highly regarded at the time, seems more recently to have been lost sight of. Because of its pertinence as regards the developing American policy in the Middle East, certain excerpts seem worth of reprinting in this connection.

Some older readers will remember that Mr. Washington, now deceased, served for several years in the American Army, after which he was selected for important civil responsibilities in the American Government. Younger readers in areas where certain special interest propaganda has not penetrated too deeply may well remember hearing their parents refer to the wisdom of his farewell message and be glad of an opportunity to read for themselves some of the things he said. Indeed, even in New York City and along the eastern seaboard, the present generation may, if only to compare how far advanced its own ideas are, find the excerpts interesting. Some may possibly desire to call this reprint to the attention of Mr. Washington's successors in the city that bears his name.

WORDS OF ADVICE,[1] ESPECIALLY APPLICABLE TO AMERICAN-MIDDLE EASTERN POLICY

Friends and fellow citizens, * * * a solicitude for your welfare, which cannot end but with my life, and the apprehension of danger, natural to that solicitude, urge me on an occasion like the present to offer to your solemn contemplation and to recommend to your frequent review some sentiments which are the result of much reflection, of no inconsiderable observation, and which appear to me all important to the permanency of your felicity as a people. These will be offered to you with the more freedom, as you can only see in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel.

* * * Observe good faith and justice toward all nations. Cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great Nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt that in the course of time and things the fruits of such a plan would richly repay any temporary advantages which might be lost by a steady adherence to it? Can it be that Providence has not connected the permanent felicity of a nation with its virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature. Alas, is it rendered impossible by its vices?

In the execution of such a plan nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others should be excluded; and that in place of them just and amicable feelings toward all should be cultivated. The nation, which indulges toward another an habitual hatred, or an habitual fondness, is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest. Antipathy in one nation against another, disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable, when accidental or trifling occasions of dispute occur. Hence frequent collisions, obstinate envenomed and bloody contests. The nation, prompted by ill will and resentment sometimes impels to war the government, contrary to the best calculations of policy. The government sometimes participates in the national propensity, and adopts through passion what reason would reject; at other times, it makes the animosity of the nation subservient to projects of hostility instigated by pride, ambition, and other sinister and pernicious motives. The peace often, sometimes perhaps the liberty, of nations has been the victim.

So likewise, a passionate attachment of one nation for another produces a variety of evils. Sympathy for the favorite nation, facilitating the illusion of an imaginary common interest, in cases where no real common interest exists, and infusing into one the enmities of the other, betrays the former into a participation in the quarrels and wars of the latter, without adequate inducement or justification. It leads also to concessions to the favorite nation of privileges denied to others, which is apt doubly to injure the nation making the concessions, by unnecessarily parting with what ought to have been retained, and by exciting jealousy, ill will, and a disposition to retaliate, in the parties from whom equal privileges are withheld. And it gives to ambitious, corrupted, or deluded citizens (who devote themselves to the favorite nation) facility to betray, or sacrifice the interests of their own country, without odium, sometimes even with popularity; gilding with the appearances of a virtuous sense of obligation to commendable deference for public opinion, or a laudable zeal for public good, the base or foolish compliances of ambition, corruption, or infatuation.

As avenues to foreign influence in innumerable ways, such attachments are particularly alarming to the truly enlightened and independent patriot. How many opportunities do they afford to tamper with domestic factions, to practice the arts of seduction, to mislead public opinion, to influence or awe the public councils * * *.

Against the insidious wiles of foreign influence (I conjure you to believe me fellow citizens) the jealousy of a free people ought to be constantly awake; since history and experience prove that foreign influence is one of the most baneful foes of Republican government. But that jealousy to be useful must be impartial: else it becomes the instrument of the very influence to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike of another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests.

* * * Harmony, liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our com-

[1] Excerpts from the Farewell Address of G. Washington.

mercial policy should hold an equal and impartial hand: neither seeking nor granting exclusive favors or preferences; consulting the natural course of things; diffusing and diversifying by gentle means the streams of commerce, but forcing nothing; establishing with powers so disposed; in order to give to trade a stable course, to define the rights of our merchants, and to enable the government to support them; conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary, and liable to be from time to time abandoned or varied, as experience and circumstances shall dictate; constantly keeping in view, that 'tis folly in one nation to look for disinterested favors from another; that it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favors and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect, or calculate upon real favors from nation to nation. 'Tis an illusion which experience must cure, which a just pride ought to discard.

In offering to you, my countrymen, these counsels, of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our Nation from running the course which has hitherto marked the destiny of nations: But if I may even flatter myself, that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude for your welfare, by which they have been dictated.

G. WASHINGTON.

Philippine Memorial Hospital

SPEECH
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

(Mrs. ROGERS of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. ROGERS of Massachusetts. Mr. Speaker, I wish to call attention to the very fine editorial which appeared in the New York Times today regarding the importance of expanding the Veterans' Memorial Hospital in the Philippines. It might become a great research center for the entire eastern part of the world. I visualize the importance and far reaching value of such a project in many ways.

The people of the Philippines have expressed deep gratitude for the hospital. I instantly think of their great contribution to us in loyalty and fighting men—we owe them much—they have been our best friends.

The editorial follows:

A PHILIPPINE MEMORIAL

There is now an opportunity greatly to expand the functions and scope of the Veterans' Memorial Hospital in Manila. Thus far, operating in a sense as an adjunct of the United States Veterans' Administration inasmuch as its costs have been reimbursed, the hospital has been obliged to work in a limited field. This can be modified as the Philippines take over complete responsibility for the service, which under present law will take place by 1960.

Meanwhile, modest amendments to existing legislation and perhaps some new authorization can make it possible to embark on a much more ambitious program. What has been suggested in the Philippines and what will probably be discussed at this session of Congress is the creation of a great Asian medical center with the Veterans' Memorial Hospital as its nucleus. Its primary service for veterans would not be changed, but it could be enlarged and thrown open to others.

Most important, it could be made an invaluable place for research and training in the field of tropical medicine. The possibilities presented are enormous and the hospital and medical center could become the greatest and most useful memorial to the fruitful Philippine-American association. The background for such a project is almost ideal. The Philippines have been a magnificent laboratory in the field of tropical medicine for almost three generations. In addition to this scientific background, however, is the geographical background. Manila could become a training point for young men from Thailand, Vietnam, Cambodia, Laos, and even Indonesia and Malaya. It could become a truly "Asian" health center. This is not an idle dream. It is a practical possibility.

Agricultural Trade Development and Assistance Act of 1954

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. HOFFMAN. Mr. Speaker, will whoever is in charge of this bill on the Democratic side tell me, is this an Eisenhower program?

Mr. O'NEILL. I do not know; apparently it is an Eisenhower program.

Mr. HOFFMAN. Does the leadership on the Republican side agree that this is an Eisenhower measure?

Mr. MARTIN. It is a measure that has been submitted by the Department of Agriculture; yes.

Mr. HOFFMAN. That will be helpful. I hope the Congressional Quarterly will take notice, if someone is not here and does not vote; that it will not do as it has been doing in the past, charge it up against that Member as a vote against the administration. That has been a fraudulent practice on the part of the Congressional Quarterly.

It has not been my effort to have anything to do with what it publishes or does not publish. The point that I have been urging against that publication is that it is sailing under a false flag. It is just like a pirate ship; it does not tell the truth about how a man votes. That is all I want it to do.

Now back to this program. As I understand, this bill adds $1,200,000,000 of authorization; is that right? May I ask that question of some gentleman on the Democratic side?

Mr. COOLEY. One billion three hundred million dollars.

Mr. HOFFMAN. That goes, part of it, for the purchase of cotton, does it not, if I may ask the gentleman again?

Mr. COOLEY. Certainly not.

Mr. HOFFMAN. Is not cotton in surplus?

Mr. COOLEY. Yes; but it is not restricted to cotton.

Mr. HOFFMAN. I know, but cotton is in it, is it not?

Mr. COOLEY. Absolutely; yes.

Mr. HOFFMAN. I notice that in 1955 and 1956 one former Member of Congress from the South, a Democratic Member, got $230,734.68 under that cotton program. That same provision is in the law today, for the cotton grower and the wheat grower, is it not?

Mr. COOLEY. The gentleman says that some Member of Congress got that much?

Mr. HOFFMAN. A former Member of Congress. But I say that that provision, enabling a cotton grower to get a subsidy of that amount in 1 year, is still in the law; all he has to do is to grow enough cotton.

Mr. COOLEY. Yes; but Mr. Benson has not advocated the repeal of the law to which the gentleman refers.

Mr. HOFFMAN. He has not?

Mr. COOLEY. No.

Mr. HOFFMAN. Would the gentleman support it if he did?

Mr. COOLEY. I am not sure that I would.

Mr. HOFFMAN. No; I guess not. Of course the gentleman would not.

Here is the thing that bothers me a little bit. The President said in his state of the Union message that if we did not watch our step we were going to ruin ourselves by spending too much money.

Then he said the other day, if I got it right, that if we did not go along with this defense appropriation, if we cut that any substantial amount, we were in danger of losing our freedom, that our national security was in danger.

Of course, we all know that somewhere there is a ceiling on the number of tax dollars we can collect. I want to go along with the President. I want to support the Eisenhower program if I can. But what puzzles me is, if there is a ceiling on the number of dollars and if we cannot take any away from defense, is it wise for the administration to come up here with another $1,300,000,000 to take care of the farmers' surplus? That is a question I have been thinking about. I do not know whether anyone else has or not.

Can I follow a President, keeping in mind his state of the Union message, who says we must watch our step about appropriations but that we cannot cut defense? Of course, I think we can. We can squeeze enough water out of, cut enough fat off, our defense appropriations.

About this bill, is someone else going to tell us where we are going to get that extra $1,300,000,000 and take in payment foreign currencies? I can understand how that is helpful to Congressmen who

go abroad and get these counterpart funds.

Mr. JUDD. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN. I yield to the gentleman from Minnesota.

Mr. JUDD. This bill does not authorize the appropriation of an additional $1,300,000,000, it authorizes the sale for foreign currencies of a billion dollars' worth of surplus commodities that have already been bought and paid for——

Mr. HOFFMAN. By us.

Mr. JUDD. And the grant for relief purposes of $300 million worth which has already been bought and paid for by the taxpayers. It does not authorize or appropriate additional money.

Mr. HOFFMAN. Of course, we could use that money to replace some of these other expenditures.

Mr. JUDD. Yes; if we abandon the program of agricultural price supports. But the money has already been appropriated and spent by the Commodity Credit Corporation when it bought the surplus commodities. When we can use these commodities in our foreign-aid program, the dollars appropriated for foreign aid are used to repay the Commodity Credit Corporation. It requires just that much less to restore the capital or purchasing capacity of the CCC.

Mr. HOFFMAN. Does the gentleman mean that we take the foreign currency, counterpart funds, instead of getting it in dollars?

Mr. JUDD. If the countries are unable to pay in dollars, yes, we get foreign currencies instead of dollars.

Mr. HOFFMAN. When the gentleman and I go across we get it.

Mr. JUDD. Otherwise we get nothing.

Possible Solution of Problems of Federal-State Relations

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SIKES. Mr. Speaker, I wish to have inserted in the CONGRESSIONAL RECORD the following Senate Concurrent Resolution 116 and Senate Memorial 530, which have been passed by the Florida State Legislature during its 1957 session. These documents have been called to my attention by Hon. Richard W. Ervin, attorney general of the State of Florida, and I am glad to place in the RECORD his letter of May 30, 1957, transmitting the documents to me.

I feel that both the resolution and memorial from the Florida State Legislature deserve the fullest cooperation by the Congress:

STATE OF FLORIDA,
Tallahassee, May 30, 1957.

Hon. BOB SIKES,
Congressman, Washington, D. C.

DEAR BOB: I am enclosing herewith copy of Senate Concurrent Resolution 116 and Senate Memorial 530, which have been passed by the 1957 Florida Legislature.

You will note these two resolutions deal with the important subject of States rights, and I will appreciate you and the other members of our Florida delegation doing everything possible to bring about their serious consideration by the Congress as a possible solution to the ever-growing problem of Federal-State relations.

With kind personal regards, I am,

Sincerely,

RICHARD W. ERVIN,
Attorney General.

Senate Concurrent Resolution 116

Concurrent resolution memoralizing Congress to call a convention for the purpose of considering an amendment to the Constitution of the United States relative to appeals from decisions of the Supreme Court of the United States involving States rights to the Senate of the United States

Be it resolved by the Senate of the State of Florida (the House of Representatives concurring), That the Florida State Legislature does hereby make application to the Congress of the United States to call a convention for the purpose of proposing the following article as an amendment to the Constitution of the United States, to wit:

"ARTICLE —

"SECTION 1. Jurisdiction of Senate as an appellate court: The Senate of the United States shall comprise a court with final appellate jurisdiction to review decisions and judgments of the Supreme Court of the United States, where questions of the powers reserved to the States, or the people, are either directly or indirectly involved and decided, and a State is a party or anywise interested in such question involved and decided. The Senate's exercise of such final appellate jurisdiction shall be under such rules and regulations as may be provided by the Senate, including the time within which appeals shall be taken. The decision of the Senate affirming, modifying or reversing the decision or judgment of the Supreme Court of the United States shall be final; be it further

"*Resolved*, That the Congress of the United States be, and it is hereby requested to provide as the mode of ratification that said amendment shall be valid to all intents and purposes, as part of the Constitution of the United States, when ratified by the legislature of three-fourths of the several States; and be it further

"*Resolved*, That a duly attested copy of this resolution be immediately transmitted to the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States and to each Member of Congress from this State."

Senate Memorial 530

Memorial to the Congress of the United States of America proposing an amendment to the 10th amendment of the Constitution of the United States by enumerating certain of the reserve powers of the States in respect to the exercise of State police power and providing means to safeguard such powers from encroachment

Whereas it is imperative to maintain an equilibrium of power in a federated system of government that contemplates a division of responsibility between the National or Central Government and the respective sovereign States;

Whereas it appears that unless the States' residual power is at least broadly delineated and safeguarded to some appreciable degree the Central Government will continue by lack of definitive guidelines and checks to encroach upon the powers of the respective States: Now, therefore, be it

Resolved by the Legislature of the State of Florida, That the Congress of the United States is hereby memorialized and respectfully urged to propose such amendment to the 10th amendment to the Constitution of the United States to provide that among the rights and powers reserved to each State are the police powers to enact regulations to promote the public peace, safety, and welfare of the State and to provide for good order, education, and harmonious race relations therein. In these enumerated fields except where the Congress of the United States by legislation provides expressly to the contrary the laws and regulations of the State shall govern.

Agricultural Trade Development and Assistance Act of 1954

SPEECH
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6974) to extend the Agricultural Trade Development and Assistance Act of 1954, and for other purposes.

Mr. HILL. Mr. Chairman, I yield myself such time as I may require.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield at this point?

Mr. HILL. I yield for a question.

Mr. WHITTEN. I would like to announce, with the gentleman's permission, that I have sent an amendment to the desk, because for 2 or 3 years we have sold under Public Law 280 and we have refused to sell for dollars. That has since been corrected, and we are selling those commodities for dollars now. For several years this bill was used in substitution for normal sales. I am simply calling attention to an amendment which I expect to offer at the bottom of page 1. Add the following proviso:

Provided, That no commodity of which the Commodity Credit Corporation has a supply, and which commodity is not being offered for sale in world trade through normal channels at competitive prices for dollars shall be eligible for sale to foreign countries under the provisions of this act.

That means you have to offer them for dollars first. History has proven that we should have that proviso here, because for several years that course was not required.

Mr. HILL. I thank the gentleman. In my remarks I shall attempt to cover that subject.

Mr. Chairman, 3 years ago the Congress enacted Public Law 480 as a temporary measure to "expand international trade among the United States and friendly nations, to facilitate the convertibility of currency, to promote the economic stability of American agriculture and the national welfare, to make maximum efficient use of surplus agricultural commodities in furtherance of the foreign policy of the United States, and to stimulate and facilitate the expansion of foreign trade in agricultural commodities produced in the United States by providing a means whereby surplus agricultural commodities in excess of the usual marketings of such

commodities may be sold through private trade channels and foreign currencies accepted in payment therefor."

To accomplish these objectives the legislation provided that surplus commodities could be sold at competitive prices in foreign markets for local currency, could be bartered for strategic materials needed by the United States, and could be given as outright grants for emergency assistance to friendly peoples of other nations to meet famine or other disasters. The legislation also expanded the availability of surplus food for needy persons in the United States and the school-lunch program.

Under our agricultural programs, we are producing vast quantities of food and fiber that is in excess of our domestic market needs. These surpluses are being stored and warehoused at tremendous expense to the taxpayer while we continue to increase the production of the same commodities.

Public Law 480 was designed to help eliminate these surpluses so as to restore to a more normal condition our domestic markets. With the surpluses hanging over the heads of the farmer, he is subject to a depressed market that has not kept pace with the general rise in other segments of our economy.

The program has been successful, as far as it has gone, and all this bill does is extend it for another year. Each year under its operation the disposal program has accelerated until in the last 12 months we have reduced the holdings of the Commodity Credit Corporation by approximately $1,300,000,000 from its peak $8,900,000,000 in February of 1956.

At the same time, our export trade in agricultural commodities is higher than it has been at any time except for the Korean war year of 1952–53.

Further reductions of Commodity Credit holdings are likely as a result of the combined effects of continued surplus disposals if this program is continued.

The bulk of our disposal has been under title I, and the foreign currency accumulated therefrom may be used for our Government expenses abroad. Part of the money is being spent to develop new markets for our surplus products throughout the world. Continued success of the program will assist in eliminating surplus Government stocks and, at the same time, increase the demand for commodities in foreign markets. Properly controlled and directed, much of this foreign market will be directed into actual dollar sales.

Although we all are gratified with the quantity of surplus farm products which has been sold for foreign currency under title I of Public Law 480, we must never lose sight of the fact that our primary goal is developing foreign markets is to develop dollar markets for our products which will be moved through regular commercial channels.

For example, title I sales have been made to certain west European countries which have generated local currencies that are now available for market development purposes. Such funds can of course be used to develop markets for commodities other than those which are sold to generate the funds in the first place. Moreover, the funds can be used for market development purposes over a period longer than the 1 year in which the Public Law 480 commodities were moved into the country. In this way, the funds can be and should be used to promote the expansion of dollar markets through commercial channels. It is my understanding that this is what is meant, for example, by the language on page 13 of the Report No. 432 dealing with the extension of Public Law 480, where the report makes specific reference to the poultry program which was started in Germany last year. Using this case as an illustration, I understand that local currency funds are available for continued market program activities this year. If those activities can be directed to expansion of a dollar market for United States poultry in West Germany, for example, then this kind of program will have accomplished one of the primary purposes that Congress had in mind when we enacted Public Law 480 during the 83d Congress.

Mr. SPRINGER. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield.

Mr. SPRINGER. Is it not fair to say, to bring this down to a realization of its effect upon the farm population of this country that if this bill had not been in operation during the calendar years 1955 and 1956, that meats, particularly pork; cotton, soy beans, wheat, rice, and 1 or 2 other commodities would have been selling on the local market at very substantially lower prices than they did during those 2 calendar years?

Mr. HILL. The gentleman is exactly correct.

Mr. SPRINGER. May I just make one addition statement: It is estimated that in my congressional district—and this will be true I think in every district where soy beans are raised—that if it had not been for the 65 million bushels that were sold overseas in the calendar year 1956, soy beans would have been selling in the open market from 50 to 75 cents a bushel lower than they did.

Mr. HILL. I thank the gentleman.

I would like to turn for one moment to the testimony given before our committee on this bill, then I will be glad to yield. I think we get tangled up in our thinking as to what this bill is supposed to do. First of all, it is a bill to dispose of surplus products that we already own. It is not a purchase program, in any sense of the word. We are trying to dispose of the surpluses that are now in the bins, bought, paid for, and under the control of the Commodity Credit Corporation.

Mr. BROWN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Missouri.

Mr. BROWN of Missouri. In view of the gentleman's statement that here we have something we do not need, something that is costing us money to store, and, further, it is depressing the value of some things we have that could be more valuable if it were not for the surpluses, it would look to a country boy that if we got nothing but a pocketknife or an airplane trip for Secretary Dulles out of it we have gained by cutting down on the surplus storage expenses.

Mr. HILL. There is no question about that statement because of the fact that we already own this product.

Now, Mr. Chairman, here is something that most of us forget. We are paying storage every day amounting to hundreds of thousands of dollars. Now, let us take corn. In my area we have from 500,000 to 1 million head of stock on feed. Not a single feeder would look at corn that was over 4 years old. You are going to take that loss. Everyone in the United States is going to take that loss.

Let me make another statement about wheat. How many in this room know that after you have had wheat from 10 to 14 years in storage you would not get a single copper per bushel for it? You are going to lose that. This program takes the top off of the surpluses that we have paid for and that are now in storage.

Mr. O'NEILL. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Massachusetts.

Mr. O'NEILL. The truth of the matter is if you take off the surpluses and send them overseas, as soon as you get more storage space in the bins you buy more surpluses, and the storage bins are always full.

Mr. HILL. Does the gentleman believe that?

Mr. O'NEILL. I do; yes.

Mr. HILL. The gentleman thinks that because he does not know the figures. These are true and the gentleman can check them if he wants to. A year ago we had more than $600 million worth of wheat stored. That is your wheat, that is my wheat. It is already paid for. Does the gentleman know what we have today? He will be surprised. A little over $325 million. That is a wonderful record. I do not think we are going to do what the gentleman said.

Mr. O'NEILL. But you are asking for an additional billion dollars this year, is that so?

Mr. HILL. Yes.

Mr. O'NEILL. In the report there is shown that of the money in the various nations overseas, for example we spent $7,500,000 for the purchase of strategic materials, and also for military procurement.

Mr. HILL. Do not quote strategic material figures to me because that is not what I am talking about.

Mr. O'NEILL. I want to ask this question: The Defense Department spends money for the military program or it spends money for the purchase of strategic materials. Now do they in turn pay that money back to the Commodity Credit Corporation?

Mr. HILL. The gentleman asks a double barreled question. Of course, they do to a certain extent. In Spain alone they are using these counterpart funds up to 25 to 30 percent. In country after country they are using these funds that we have purchased in other countries. We are using them for the purchase of, let us just make it plain, air-

plane strips or let us say they are for buildings that we must have, not only to house our military men but to house some of our other personnel.

Mr. O'NEILL. I appreciate the problem of farm surpluses, make no mistake about that. I realize it is a terrific problem. Whether this is the correct way I doubt very, very much, when I see all of this money piled up over there the way it is in the various nations of the world.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Oklahoma.

Mr. ALBERT. On the question of buying additional commodities, the law fixes the requirement for the purchase of commodities under the price-support program, and the Commodity Credit Corporation will purchase those commodities or take them under loan regardless of any Public Law 480 program, so it will not add at all to the number of purchases made by the Commodity Credit Corporation.

Mr. HILL. Of course, there is no question about that. There is no one against this program if they understand it. I make that statement without fear of contradiction.

Mrs. KELLEY of New York. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentlewoman from New York.

Mrs. KELLEY of New York. Since we have the surpluses which we cannot use here in the United States to a greater degree, would it not be better to give these surpluses to these nations abroad who are on the borderline of diverting or defecting from Communist control? In that way we would have the right to distribute them, thereby making sure that the people of that nation received our aid.

Mr. HILL. Using the old TV gag, I am glad the lady asked that question. Nothing could be more true than what she said. But, we are doing that, and I have always felt in my own heart if we had done the thing the lady suggests in the beginning with surpluses and put no strings onto any hungry people, whoever they were or wherever we could find them, and gotten the surpluses to them, I think we would have been money ahead. But, we did not. Now, we have a complex program. It is working excellently not only in the way I suggest, but it is the very thing that the gentlewoman suggested. Time after time in disasters in foreign countries the Secretary of Agriculture has done a magnificent job in seeing that these surpluses get into the area that is in distress. And, he has done the same thing in these United States. Now, that answers the gentlewoman's question completely.

Mrs. KELLEY of New York. It has been a good program, I agree, and I would vote for it, but I cannot see selling it to governments and thereby relieving the necessity of the Soviet regime in bearing the responsibility for the failure of their economic theory.

Mr. HILL. That is a fine suggestion, and I wish we would have started out on it, but we did not. We are not going back; we are going forward, and I am glad the gentle lady said she would support it.

Mr. PELLY. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Washington.

Mr. PELLY. I would like to ask the gentleman if these agricultural commodities must go, at least up to 50 percent of them, on American ships.

Mr. HILL. As I understand, that is legislation that passed in this House and it is still on the books. I would have to ask the chairman of our committee: Are half of these supplies shipped in our own bottoms?

Mr. COOLEY. Donation supplies go 50–50.

Mr. PELLY. Anything financed by our Government must go at least 50 percent in American ships?

Mr. HILL. I think that is correct.

Mr. PELLY. Does the gentleman know of any effort that has been made in connection with the legislation to eliminate that 50–50 provision?

Mr. COOLEY. We have eliminated it a few times, and if I had my way, I would eliminate it again. But, they have put it back each time.

Mr. PELLY. Some of us would like to know if there will be any amendment offered to that effect.

Mr. COOLEY. I do not know.

Mr. HILL. I doubt if we could eliminate it on the floor of this House.

Mr. NEAL. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from West Virginia.

Mr. NEAL. I would like to get a little more clarity on this question of where the United States comes out on this thing. I understand that before these commodities can be distributed, the Government must purchase those things from the Commodity Credit Corporation. Is that true?

Mr. HILL. Let me read the gentleman a paragraph that will answer his question fully. I was just going to read it and I am glad the gentleman asked the question. This is testimony delivered before our committee. I believe these 10 or 12 lines will answer the gentleman's question:

> Title I agreements are reached through the coordinated efforts of several Government agencies affected by the sale. Although the Secretary of Agriculture is authorized to determine the countries with whom agreements shall be negotiated and the commodities and quantities which may be included in these negotiations programs are developed in consultation with such agencies as the Department of State, the International Cooperation Administration, the Bureau of the Budget, the Department of Defense and other departments and agencies. This coordination is necessary because Public Law 480 is a complex act. It combines many purposes which affect domestic and foreign economic policies and involves activities of several departments and agencies.

I think the report will show how many agreements we have made with these countries. I hear some of our friends talking about this and one would think that this was a free, open, dumping program. It is nothing of the kind. A foreign country makes an agreement, signs up saying that it will do a certain thing. We make a contract that we will furnish the surplus commodity that we own, to which we have title—you and I and the taxpayers of America.

Have I answered the gentleman's question?

Mr. NEAL. When the agency makes that contract it does not own that commodity. It belongs to the Commodity Credit Corporation; is that right?

Mr. HILL. That is right. It never passes out of the control of the Commodity Credit Corporation until it passes through the Export-Import Bank, if I recall the testimony that was given to our committee. They are the financial agency for this activity. I am sure I am right on that.

Mr. NEAL. As the financial agent——

Mr. HILL. Our financial agent.

Mr. NEAL. As our financial agent do they repay to the Commodity Credit Corporation the cost of these commodities?

Mr. HILL. Any dollars they get back, yes. Sometimes they do not get dollars back. That is all right, because in the course of the next 2 or 3 or 5 years we will be able to use those funds in the trades that we are making with that country. In other words, we will get back at least 25 percent or 50 percent in dollars, which dollars we would have had to provide if we did not have the currencies of those nations.

Mr. NEAL. Insofar as we are able to use the currencies of the foreign nations to our advantage we will benefit by that much, by not having to appropriate dollars to take care of certain things?

Mr. HILL. That is right.

Mr. NEAL. The difference between the actual cost to the Government of the commodities it purchased and stored and the amount of money we receive, represents the loss that the Government takes which it has to pay to the Commodity Credit Corporation.

Mr. HILL. You are putting money back into the Commodity Credit Corporation right in this bill to make up for some of those losses. And you will never spend money to any greater advantage than in that effort, in my own personal opinion.

Mr. HIESTAND. Mr. Chairman, will the gentleman yield on that very question?

Mr. HILL. I yield to the gentleman.

Mr. HIESTAND. Do I understand that the appropriations for such expenditures are to come from other subcommittees, such as the subcommittee handling foreign aid, or the subcommittee handling domestic aid, or whatever the subcommittee may be? Or will the appropriation have to come from the Subcommittee on Agriculture, because this is an agricultural bill?

Mr. HILL. The gentleman is talking about what kind of an appropriation now? I do not quite understand the gentleman.

Mr. HIESTAND. This authorizes expenditures, as I understand it.

Mr. HILL. This authorizes the sale of surplus commodities up to a definite amount.

Mr. HIESTAND. That is correct. Can the gentleman assure me that there will

be no additional expenditures necessary because of the passage of this bill?

Mr. HILL. The gentleman means there will be no money taken out of the Treasury; yes. There will be no additional cost or funds expended for the surpluses.

Mr. HIESTAND. I thank the gentleman.

Mr. OSTERTAG. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from New York.

Mr. OSTERTAG. I should like to return to the question raised by the gentleman from Massachusetts in regard to what happens when these commodities are sold or bartered or given away to foreign countries.

Mr. HILL. The gentleman does not mean to say "given away" because these are not given away, unless the gentleman assumes that the currency is no good; and the gentleman is not making that assumption.

Mr. OSTERTAG. There are provisions in this bill for donations.

Mr. HILL. That is right.

Mr. OSTERTAG. To me, "donation" means "give away."

Mr. HILL. For disaster; that is right.

Mr. OSTERTAG. The gentleman from Massachusetts referred to the fact that as fast as you sell these commodities or barter or trade or give them away, the bins and the storehouses of America are continuously filled. That is true. We all agree about that, except that unless this bill passes and this program goes forward we will not have storeroom enough to take care of the surplus that is continuing to develop and exist.

Mr. HILL. Of course the gentleman is correct. If we are going to carry on that type of program, which I do not think we will, the bins in our country will be too small to hold what we are going to produce. As a unit, our entire farm program needs overhauling. But that is no reason why we should not pass a bill like this that will help us in our immediate need. We are now searching for a better agricultural program. I think it will come in time.

Mr. OSTERTAG. In other words, it will cost us more for storage than it does today if something like this program is not passed?

Mr. HILL. Of course.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Ohio.

Mr. BOW. The gentleman said a few minutes ago there is confusion about this bill. I admit there is some, and I am confused somewhat.

The gentleman said this is to get rid of surplus property. I notice it is said in the report, among other things, that Spain has received canned hams. I assume from that that we are in surplus in canned hams. At the same time, we can go into our markets and buy Polish ham, Holland ham, and other ham shipped in here. Can the gentleman explain that confusion to me, why we have the surplus we are sending out under this, yet these Polish, Holland, and other hams are coming into the country?

Mr. HILL. In order to answer the gentleman intelligently I would have to know why the Federal Government through its operations, and I include all the departments, sold hams to Spain, and I would naturally assume that we may not have been short, but the Department of Agriculture feels and I feel this very day that the price of pork is on a fairly stable level at this time. If they could use more ham shipped into Spain, where we are spending plenty of hard dollars, it might have been a good business deal regardless of what the gentleman says.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Pennsylvania.

Mr. FULTON. For the purposes of our own defense we are building tremendous bases in Spain, putting millions and millions of dollars in there for United States security so of course there are many transactions back and forth. Under this bill the International Cooperation Administration has the power to make the grants and set up loans under State Department policies. So that is part of our foreign policy, a part of our United States security.

Mr. HILL. I would say to the gentleman from Ohio [Mr. Bow], and I think he is entitled to the information, and I know I am entitled to it, that we shall ask the Department to give him, with a copy to me, a full and complete report, because I have the feeling that this is a legitimate deal, and probably the gentleman would be happy that the Department made it.

Mr. BROWN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield.

Mr. BROWN of Missouri. I believe the distinguished gentleman's point was, Why are we still importing hams from foreign nations when we have it in surplus enough to include it in the agricultural disposition of surplus act?

Mr. HILL. We have talked that over in our committee time on time. So far as I know we have never had it answered. The truth of the matter is that the amount of pork produced in this country compared with what little ham you have shipped in from other countries is so small that really and truly, it has never made any imprint. It is just something to talk about, but it is something that so far as having any effect on our agricultural economy is concerned, amounts to nothing. I think I can prove that by the amount of pork that we produce and use.

Mr. BROWN of Missouri. I thank the gentleman.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield.

Mr. GROSS. Would it be possible for Poland under the terms of this bill to buy feed grains at bargain prices from the United States?

Mr. HILL. Well, No. 1: Do you know what feed grain is in surplus?

Mr. GROSS. What feed grains are in surplus? Why, wheat and corn are in surplus.

Mr. HILL. How much?

Mr. GROSS. A good many bushels, I am sure.

Mr. HILL. Just because corn is in storage in American storehouses in the United States is no reason to come to the conclusion that corn is in surplus. I am of the opinion that you do not have too large a surplus of corn—although I could be wrong.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman if he has the answer to that question.

Mr. COOLEY. I think our committee was advised that the surplus in corn amounted to about 120 days supply.

Mr. HILL. I think you will find there is no surplus there so really corn is out. Let us get on to something else.

Mr. GROSS. May I ask the gentleman this question then. Are we exporting any corn under this surplus program?

Mr. HILL. Very little corn is being exported. I did not read the record, but I have it here. Very little corn, as I recall it, was exported. Corn does not lend itself, and this is a strange statement to make, to exportation. Why?

First. They are not used to feeding it. Corn was an Indian food and it has never been able to work its way into European consumption.

Second. It does not ship as well—it draws moisture a little more than wheat does.

Mr. GROSS. Of course, I am talking about corn for feed purposes and I based my question to you originally along that line.

Mr. HILL. For feed? Do you mean people?

Mr. GROSS. I mean feed for livestock.

Mr. HILL. I did not see, when I visited Europe, any corn being fed to livestock.

Mr. GROSS. I assume that hogs in Europe will eat corn, will they not?

Mr. HILL. My guess would be that they do not feed too much corn to hogs anywhere in Europe.

Mr. GROSS. They could eat it and they would eat it, if they could get it at bargain prices.

Mr. HILL. But, corn is not in great surplus and would not fit much into this program.

Mr. GROSS. I do not know what you mean by much.

Mr. HILL. There is not a surplus of corn in the world market, let us put it that way.

Mr. GROSS. I will get some time on my own tomorrow and try to get the answer to my question.

Mr. HILL. I am sure the gentleman will find just exactly what I said is true.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield.

Mr. FULTON. Under title I of this program, 75 million bushels of feed grains were shipped so the answer to the gentleman from Iowa is that there were feed grains shipped under this program, but not any large amount.

Mr. HILL. We would have to break that down and see what was corn and what was maize and how much was in

other types of grains. We could get that for the gentleman from Iowa, and I can get him the actual number of bushels.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield.

Mr. JUDD. I do not know whether this answer applies to the question raised about the Polish and Dutch hams and why we are importing these hams when we have our own American canned hams in surplus, and with reference to certain other commodities. The reason is that there are Americans who will pay their money to buy from the channels of private trade certain foreign products which they prefer to our American products. We think Minnesota cheese is the best blue cheese in the world, but we have people in Minnesota—Danes who will buy blue cheese from Denmark even though we have cheese stored here in caves which we have bought under the surplus commodity program and it could well be that there are people who like Polish and Holland hams enough that they will buy them. Unless we are going to regiment our economy, we cannot forbid them from buying them through the ordinary process of international trade.

That leaves us sometimes with such wonderful hams cured by our American packers, which we must dispose of before they spoil.

Mr. HILL. There is also the possibility that by selling hams we might be able to sell other products that are in tremendous surplus, which would be a good deal as far as the United States is concerned.

Statement of Hon. Kenneth B. Keating, of New York, To Extend the Refugee Relief Act of 1953

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. KEATING. Mr. Speaker, today I have introduced a bill to extend the Refugee Relief Act of 1953 for some 58,000 immigrants cut off by termination of the act.

Under terms of the bill, special nonquota immigration visas would be issued to spouses and minor unmarried children who for various reasons were left behind, when their breadwinner came to the United States under the Refugee Relief Act of 1953.

Another section of the bill would grant special nonquota visas to "pipeline" cases—those people and their spouses and unmarried minor children whose assurances had been received and whose applications for entrance into the United States had begun to be processed, but who were unable to come to this country due to the expiration of the act, or the shortage of visas.

Under both sections of the bill, the immigrant involved wolud be required to file an application, have assurances from American sponsors submitted and verified by State Department officials, and undergo investigations as provided in the Refuge Relief Act. An exception to this rule would be in cases involving immigrants for whom assurances had been submitted and verified under the old act. They would merely be required to have their original assurances reverified. If the old assurance were found to be no longer valid, however, a new assurance would have to be submitted and verified.

All safeguards of the Refugee Relief Act, including thorough investigatory provisions are retained in the proposed act, which would terminate 2 years after the date of its enactment.

The plight of families separated by expiration of the Refugee Relief Act is stark in the extreme. Many families sent their breadwinner on ahead to America, in full expectation the dependents could follow, only to be thwarted by the end of the act, a dearth of visas, or the complexities of the immigration laws.

Today, those from countries with heavily oversubscribed quotas face years and years of separation from their loved ones while awaiting visas. We must end these heart-rending separations.

This country should also permit entrance to those pipeline cases whose hopes for coming to America were raised only to be crushed when quotas became filled. After having earned the privilege of a visa, they now face the prospect of waiting for years for such authorization. We should grant these people special nonquota immigration visas.

According to estimates supplied by the Department of State, the following is a list of pipeline applicants who failed to obtain visas:

Belgium	1,601
France	2,001
Germany	368
Great Britain	1,563
Greece	11,323
Italy	24,175
Netherlands	362
Norway	24
Sweden	402
Jordan	367
Kuwait	36
Lebanon	495
Turkey	20
Burma	2
China	694
Hong Kong	13,357
Japan	1,865
Korea	175
Singapore	29
Australia	6
Costa Rica	1
Spain	2
Total	58,868

Passage of this legislation could strike a telling blow for America at a time when we are the target of so much worldwide criticism because of the stringency and inflexibility of our immigration laws. By enacting this bill into law, we can thus help ourselves abroad by raising our prestige, and can help ourselves at home by enriching our national blood with new and worthy citizens.

It is my hope that early hearings can be held on this legislation, as well as all other legislative proposals which have been made to amend our immigration statutes.

Mental Health Services Could Deprive Citizens of Constitutional Rights

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. BURDICK. Mr. Speaker, all over the country there seems to be a movement designed to take away from persons designated as mentally ill, their individual rights guaranteed to all citizens under the Constitution. The right to trial by jury, to legal representation, and to habeas corpus, are all being bypassed in what appears to be a determination to "railroad" more and more people into mental institutions.

As one example of this, I should like to commend to the attention of the Congress a letter to the editor, published in the May 16, 1957, issue of the Modesto Journal, of Modesto, Calif.:

To the EDITOR.

DEAR SIR: Introduced in the 1957 session of the California Legislature are a number of mental health bills that could be used to suppress individual rights, if the power fell into the wrong hands. These bills refer constantly to the mentally ill. Just who is a mentally ill person? Is he an insane person? Or is he a person whose beliefs and opinions are abnormal or different to those of the psychiatrist or whoever it is that examines him?

Farfetched? What about the Finn twins, who were sent to a mental institution when they became obnoxious in resisting the Government? What about the case of young Ron Ramsey, of Compton, Calif., who wrote some letters to the editor that were strongly anti-U. N.? After his committal as a mental case, he was paroled on the provision that he not write any more letters to newspapers.

Senate bill 244 (or assembly bill 630) would proyide for a vast and expensive network of community mental health services. Under this act, each county, and each city of over 50,000 population, may establish a mental health service. These services are to augment and promote the improvement and if necessary, the expansion of already existing psychiatric services in general hospitals or clinics that help to conserve the mental health of the people.

Senate bill 244 has been passed by the senate on May 9, 1957, with only four no votes. They were Desmond, Dilworth, Donnelly, and Berry. However, before passing, the bill was amended to eliminate any bed care, to eliminate the requirement of issuing propaganda to schools, etc., on mental health. Another amendment excludes alien doctors from the program. It is now before the assembly.

Assembly bill 3787 appears to have the purpose of eliminating the right of trial by jury to those charged with being mentally ill: "Any person committed to the care and custody of the counselor in mental health under the provisions of section 5076, may make application, by petition duly verified, for an order adjudging that such person is competent. The hearing shall be conducted by the court, without a jury, in the same manner as civil cases."

(This bill deletes the present words: "and on demand, by the petitioner, shall be tried by a jury," and substitutes the words: "without a jury.")

The danger of assembly bill 2496 could leave the person charged with being mentally ill virtually friendless before the judge. It pro-

vides: "All persons not necessary for the conduct of the hearing may be excluded if it appears to the judge, or the commissioner, if one has been appointed, that his best interests will thereby be served; provided, the judge, or the commissioner, if one has been appointed, together with the two medical examiners shall examine the alleged mentally ill person in or out of court."

Once committed, assembly bill 968 would allow confiscation of the individual's property: "In all cases where a patient is committed to the care and custody of the counselor in mental health for placement in a county or licensed private institution, the counselor shall be authorized to receive, hold, and disburse for the necessary care and expenses of said patient, money and cash income, including but not limited to old-age security payments, and social security retirement payments, and pension payments, up to a total of $1,000 at any one time. The counselor shall also be authorized to sign applications, affirmations, and reaffirmations for old-age security and to endorse and cash any checks, warrants, drafts, and other evidences of indebtedness payable to such patients."

Contrast the above with the provisions of the proposed senate bill 609 which states, "If in a criminal prosecution a defendant pleads not guilty by reason of insanity, and it is found that such person was insane at the time the committed the offense, but has recovered his sanity, and he is committed to a State hospital because of his insanity at the time of commission of the offense, neither such person, nor his estate, nor his relatives shall be held liable for such person's care, support, or maintenance in such State hospital."

Unbelievable? Here is one that eliminates the fourth amendment to the Constitution of the United States. If enacted, S. 1299 would allow: "Any peace officer may, at any time of the day or night, in the execution of any of the provisions of this article, enter any dwelling or other building if the patient is therein or if the officer has reasonable cause to believe the patient to be therein, and, if the officer is not admitted after his authority and purpose have been made known, he may, at any time of day or night, break open any outer or inner door or window of such dwelling or other building or any part thereof in order to make entry for the execution of any of the provisions of this article."

Now, let us go back to the question of just who might be considered mentally ill, and be subject to some of the above. Perhaps the following quotations from an article of March 16, 1956, attributed to Dr. William Menninger will help: "At the latest count, there are 750,000 persons in our mental hospitals—as many as in all other kinds of hospitals combined. Outside of hospitals more than 10 times that number are suffering from severe mental or emotional disturbances; the alcoholic and the addicted, the delinquent and the criminal, the suicidal, the incompetent, the chronically unhappy—the 1 in every 16 Americans whose personality problems keep them from enjoying useful, effective, satisfying lives."

Well, 1 out of 16 are not too bad, as odds go. But let us read further: "As a matter of fact, this figure is too low. We have known for years that about 50 percent of the general practitioners' patients are actually suffering primarily from emotional disorders."

Still leaves you out? Read further: "All of us are at some times and in some degree affected by mental health. We may be persistent worriers or have difficulty in controlling our tempers; we may be sleepless in our beds or lonely in a crowd—mental ill health affects 1 out of 1."

ONE OUT OF ONE.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Memorial Day Address by Hon. Richard L. Neuberger, of Oregon, at Hyde Park, N. Y.

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. HILL. Mr. President, our colleague, the junior Senator from Oregon [Mr. NEUBERGER], delivered the commemorative address at the annual Memorial Day ceremonies held on May 30 at Hyde Park, N. Y., in memory of Franklin D. Roosevelt. The junior Senator from Oregon is a Senate member of the Franklin D. Roosevelt Memorial Commission, and he spoke on the conservation ideals and programs of Franklin D. Roosevelt.

No man in the Nation has given more of his thought and of his time to the conservation of our great natural resources or has used his able pen more in this vital cause than has the junior Senator from Oregon. He truly speaks with authority and is a devoted and valiant disciple of Franklin D. Roosevelt in waging the never-ending struggle for the conservation of America's God-given resources.

The address delivered by the junior Senator from Oregon is most timely, informative, and challenging, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONSERVATION IDEALS AND PROGRAM OF FRANKLIN DELANO ROOSEVELT ARE HERALDED AT HYDE PARK CEREMONIES BY SENATOR RICHARD L. NEUBERGER

(Excerpts from the address delivered at the grave of Franklin D. Roosevelt on Memorial Day by RICHARD L. NEUBERGER, junior Senator from Oregon and Senate member of the Franklin D. Roosevelt Memorial Commission)

Like Antaeus of old, Franklin Roosevelt gained strength just by touching the goodness of earth. He treasured the land and all its kindred—water, trees, wildlife, soil, flowers, shrubs, and the air above. He had a feeling about America which stemmed from Jefferson and Thoreau and Gifford Pinchot. He believed that resources were a gift from the Almighty, and that we all are under a sacred duty to hand them on to the next generation—undefiled and untrammeled. He was the greatest conservationist of our era.

Perhaps some of Franklin Roosevelt's philosophy in this respect originated on the shores of the Hudson River, where he was born and raised, and where he today lies at eternal rest.

The quiet majesty of this spot may have helped to inspire the governmental policy which did so much to assist the American people in laying renewed claim to their natural resources in every distant corner of the land. It may be that, at Hyde Park, there was begun the idea which had a far-off fruition in the great canyons of the Columbia and the Colorado, on the uplands of the Yellowstone and the Sierras, and along the forested seacoast of the Olympic Peninsula.

The first time I ever saw Franklin D. Roosevelt was in the municipal auditorium of the city where I was born—Portland, Oreg. He stood there, on September 21, 1932, and promised that the next great hydroelectric-power development to be undertaken by the Federal Government would be along the surging river where lurked more than 40 percent of all the latent hydroelectricity in the Nation.

CAMPAIGN PROMISE KEPT

No promise during a political campaign was ever kept with greater fidelity, rectitude, and with greater benefits.

From that promise came the biggest water-power system ever built anywhere in the world, a system which included Grand Coulee Dam, the most massive single edifice yet reared by man on our planet.

I am glad my wife Maurine is here with me today. I think she could tell something about the tangible benefits to humanity from that one deed initiated by Franklin Roosevelt.

Maurine's widowed mother runs a dairy farm which lies about 10 or 12 miles from the banks of the Columbia. It is one among thousands of farms in the Northwest which had no electricity prior to the arrival in the White House of Franklin D. Roosevelt. The farm was a short distance from the greatest source of hydroelectric power on our continent—but Maurine's mother cooked with kindling, she had no refrigeration, she carried a kerosene lamp from room to room at night, the dairy barn could not be fitted with milking machines or floodlights because there was no power to operate such equipment. In the midst of potential plenty, countless American farm families lived like this—in frontier conditions despite the presence of the electrical age.

Franklin Roosevelt brought about the construction of Grand Coulee and Bonneville Dams. He innovated the Rural Electrification Administration. Today, the farm of my wife's mother—and innumerable other farms—enjoy the blessings of electricity, and at substantially lower rates than are paid in the major cities of this State, for example.

RURAL ELECTRIFICATION INCREASED

When Franklin D. Roosevelt entered the White House in 1933, less than 10 percent of America's farms had central station electric service. When he died approximately 12 years later, 50 percent of our farms had such service.

This single statistic tells a story of natural resources put to work for the benefit of humanity. It tells the story of farm wives and mothers spared the aches and indignity of drudgery; it tells the story of life made more comfortable and bearable; it tells the story of a President who cared about the personal happiness of his people.

I have chosen today to discuss Franklin Roosevelt as a conservationist for two reasons which seem to me to be important. To begin with, few nations have looted their natural resources as profligately and in so short a period as the United States, and we need to be reminded of an era when a great man and his associates dedicated themselves to a program of genuine respect and protection for this legacy which we have received from the Almighty.

And, secondly, as we stand here in this hallowed and historic spot at Hyde Park, an administration reigns in Washington which has surrendered surging rivers, valuable forests, rare wildlife preserves and immense mineral deposits to private groups for piecemeal exploitation. It is well, I think, that the contrast in this vital domain of government between the present administration and that of Franklin Delano Roosevelt should be emphasized on this Memorial Day of the year 1957.

CCC PROVIDED MANY BENEFITS

I wish many of you could go with me into the national forests of the Western States. Today, a quarter of a century after Franklin D. Roosevelt swore the oath of the Presidential office for the first time, we still can trudge trails and camp at picnic grounds in those magnificent outdoor realms which were built by the Civilian Conservation Corps. The CCC may be merely a bygone set of governmental initials now. But, in 1933, it was a program inaugurated by Franklin D. Roosevelt which achieved a dual purpose. It got off the streets and alleys of eastern cities thousands of boys who came from broken homes, who were potential inmates of prison cells and who had no economic chance in life. These boys not only were rehabilitated personally in the scenic arena of our western mountain ranges, but they also helped to restore watersheds, to fight erosion and to provide the finest recreational facilities ever furnished in our marvelous national-forest system.

The program of conservation implemented through the CCC has probably never been matched. Not only did this program help make good citizens of 2½ million American youths, but it resulted in the planting or seeding of over 2½ million acres of trees, the development of 10,000 acres of public campgrounds, construction of nearly 32,000 wildlife shelters, the building of over 6 million check dams to halt soil depletion, plus numerous other conservation and recreation structural improvements which continue to benefit our country today. Yet this great public works project cost less than $3 billion, only a fraction of the value it represents in the protection and maximum development of natural resources.

RIVER VALLEY RESTORED

I wish there were time during this brief ceremony to describe all the achievements in the field of conservation of Franklin D. Roosevelt. I wish time afforded me the opportunity to discuss in detail the Tennessee Valley Authority, which restored perhaps the most worn-out river valley of our Nation and made it a haven for prosperous industries, for modern farms, for growing cities. The dams of the TVA have attracted payrolls with cheap power, they have electrified farms and homesteads, they have retarded and prevented floods, they have provided recreation and boating on vast artificial lakes.

The vision of Franklin Delano Roosevelt is perhaps no better evidenced than in his policies regarding water and power resources development. He saw the problem and the particular projects, not as something isolated and apart, but as a springboard for comprehensive development. In many ways the

TVA serves to illustrate. In his message of April 10, 1933, to the Congress proposing TVA, he said in part:

"It is clear that the Muscle Shoals development is but a small part of the potential usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends more power development; it enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry. In short, this power development leads logically to national planning for a complete river watershed involving many States and the future lives and welfare of millions. It touches and gives life to all forms of human concerns."

At the dedication of Grand Coulee Dam in my own great Northwest, the President declared:

ROOSEVELT'S VISION CONFIRMED

"We are going to see, I believe, with our own eyes electricity and power made so cheap that they will become a standard article of use, not only for agriculture and manufacturing, but also for every home within reach of an electric light line."

Today's electrified rural America confirms this vision.

As a native of the Pacific Northwest, I feel a particular sense of appreciation to Franklin Delano Roosevelt that he made certain the great hydroelectric resources of our region would be widely distributed to all the people through a so-called postage stamp rate. It is somewhat distressing now to see certain people in Franklin Roosevelt's home State who are taking the leadership in violating this principle. Franklin Roosevelt believed that rivers belonged to everybody, to all the people. We only can hope and trust that his political descendants in the great State of New York will return to this ideal.

The realm of nuclear fission represented an even more adventurous deed by Franklin D. Roosevelt. After the genius Albert Einstein had told President Roosevelt that it might be possible to end World War II with a prodigious weapon produced from the atom, the President staked $2 billion of the American people's funds on the mysterious Manhattan project, a project which never could have been feasible without the immense quantities of waterpower available from Grand Coulee Dam and the TVA. It was a success. It attained its cosmic and unfathomable purpose. But can we imagine the outraged howls which would have gone up from Franklin Roosevelt's political foes, from those who never gave him credit for the Manhattan project, if that colossal undertaking had failed?

F. D. R. ADVOCATED COMPREHENSIVE DEVELOPMENT

I believe it might be fitting to reduce to specific terms exactly what the philosophy of Franklin Roosevelt meant, when applied to natural resources, as compared with some of the attitudes which prevail in high levels of Government today.

Within a few weeks the United States Senate will vote probably for the last time, on the fate of the finest hydroelectric-power site remaining in our country. The choice is decisive. Either the Federal Government will construct at Hells Canyon, in a mile-deep chasm, a dam capable of storing nearly 4 million acre-feet of water for flood control and of making possible 1 million kilowatts of power. Or, as an alternative, a private utility company will impound some 1 million feet of water and produce approximately half the quantity of firm year-around power of the Government dam. Furthermore, the Government dam would sell energy at a cheaper rate and over a far wider geographic area than the private project.

The present administration has used its utmost influence to favor the private project. While he was President of the United States, Franklin Roosevelt employed his prestige, authority, and influence to bring about authorization of water-conservation projects which would combine maximum development of resources with a sharing of the benefits of this development among the entire population. Should a great river be the property of a single absentee-dominated corporation or should it be the possession of all the people, developed in their interest and welfare by their Government—with power revenues used to finance such benefits as flood control and irrigation of land? This is a crucial question.

In such a clash of philosophies, the views of Franklin D. Roosevelt stand in direct contrast to those of his present successor in the highest elective office of the free world.

PRESIDENT INSPIRED CONSERVATION EFFORTS

I never knew Franklin Roosevelt intimately. Through the kindness of Mrs. Roosevelt and others, I was privileged to talk with him occasionally. I was then a young journalist specializing in books and articles about conservation and related matters. I always found in the President a source of inspiration to press forward harder and more tirelessly on this vital frontier. Others have told me of similar experiences. Senator LYNDON B. JOHNSON has said that Franklin Roosevelt instilled in him an awareness of the vital importance of water to his arid State of Texas. I have heard from Tom Corcoran, Judge Rosenman, and Ben Cohen of FDR's constant insistence upon the benefits of natural resources being widespread among all the population, instead of narrowed to a powerful few. Oregon's Senator Charles L. McNary, although the Republican leader in the Senate for many years, once remarked to me, "You know, President Roosevelt is a whole lot more familiar with what needs to be done on the Columbia River than are a lot of our own folks right here in the Northwest."

F. D. R. had read his history, his geography, and his economics well. From an observation-car platform in Pendleton, Oreg., or at Boise, Idaho, he could talk more conversantly than some of the local people about the condition of the upland grazing range in that area or how the water table was faring in a year of limited snowfall.

ROOSEVELT CONSIDERED CONSERVATION NONPARTISAN

Although Franklin Roosevelt's faith in conservation was in sharp contrast to some of the exploitation tolerated today by those in charge of our Government conservation was never to him a partisan issue. Under his aegis the United States Fish and Wildlife Service was originated, thus consolidating in one agency all governmental efforts directed toward a safeguarding of our big-game animals, of our migratory water birds, and of our fisheries.

Franklin D. Roosevelt's first appointment as the new Director of this great Agency was of a lifelong Republican—Dr. Ira N. Gabrielson, one of the Nation's most noted biologists in this field. F. D. R. wanted the best man available to be in charge of our animals and wild creatures. As F. D. R. realized, the man's political party had nothing to do with his knowledge of elk, his familiarity with the seals of the Probilofs, his ability to detect the safest nesting ground for ducks and geese. But we need only compare F. D. R.'s nonpartisanship in this respect with the fact that the present administration discharged the then head of the United States Fish and Wildlife Service when it entered office—not because of any incompetence upon the part of a faithful career servant, but merely because he happened to be registered as a Democrat.

For more than two decades prior to 1933, conservation enjoyed what some have called obscure respectability. The problems of resource use had not been forgotten, but adequate solutions had not yet been applied and many of these problems were becoming increasingly and painfully noticeable to more and more people. In philosophy and experience Franklin Delano Roosevelt was ideally equipped to spark what has since become known as the Roosevelt era in conservation.

CONSERVATION RECORD REVIEWED

I would like to review briefly just a few of his many other accomplishments while he held public office in New York State and during his historic tenure as President of the United States.

Between 1910 and 1914, Franklin Roosevelt was a State senator in the New York State Legislature and served as chairman of the senate committee on forestry. In 1912 he secured the enactment of two laws creating a yield tax provision for small forest owners. When we remember that forestry was just in swaddling clothes at that time, we can see how far Franklin Roosevelt was looking ahead in his effort to recognize the problems of the small timberland owner.

He did not return to State government until 1928 when he became Governor. Conservation was an important part of his legislative program. Governor Roosevelt supported continuation of a monumental study to determine what should be done about the submarginal farmlands of New York State, and under his leadership a constitutional amendment was adopted which provided for the acquisition of lands for timber-growing purposes outside of the Adirondack and Catskill preserves. This farsighted program resulted in New York State acquiring several hundred thousand acres of land better suited for forestry purposes than for farming or dairying. The State is dotted with these forests which are now producing timber and which also serve as demonstration forests, lighting the way toward better forest practices in the Empire State. While there are many people associated with that great effort, full credit must go to Franklin Roosevelt for the interest he showed in solving a critical problem. The land-management concept that was involved later came to be a Federal program when, under his leadership as President of the United States, the Bankhead-Jones Act was enacted.

There were other forward steps in conservation that Franklin Roosevelt took while Governor. Tree nurseries in the State were expanded in 1929. The activities of the conservation department were enlarged to provide for better information to the public on conservation and recreation. In 1931 the area in the Adirondack Park was increased from 3 million to 4.6 million acres. He also lent his support to a constitutional amendment, which was adopted by a vote of 3 to 1 by the people of the State, which allowed the State to incur debts to fight forest fires.

These are just a few of Franklin D. Roosevelt's many accomplishments for conservation in his 8 years in the State government. Because he practiced conservation principles in the management of his own forest lands here at Hyde Park, he knew intimately the problems involved in preservation of this natural resource. He successfully applied these principles through the machinery of State government. The additional training and experience that he received in these 8 full years enabled him to provide this Nation with his tremendous conservation leadership in his 12 years as President.

That the long-standing interest of Franklin Delano Roosevelt in conseravtion was not quickly devitalized by the far reaches of new political horizons, soon had abundant testimony.

Although much major forestry conservation legislation was already on the books before 1933, a major untouched field of development was land purchase for reforestation. In 1933, the first year of Franklin Roosevelt's administration, land purchase for this purpose

jumped from 83,086 acres to 667,314 acres and in 1934 the figure was 4,206,817 acres. These amounts represent more than cold statistics. They are ample evidence of President Roosevelt's desire to protect our God-given resources.

In addition to this massive reforestation project, some 78 primitive wilderness areas, in total area about 14 million acres, were set aside by the Forest Service, thus permitting millions of Americans in future generations to enjoy the beauty of our great outdoors in its pure and undefiled original state.

RESOURCES PLANNING BOARD ESTABLISHED

Though planning is not in itself action, it may well be the basis of more effective action. The recognition of this truth by President Roosevelt was expressed in his continuing interest in the National Resources Planning Board, an organization established by the President in July 1934, to prepare plans of procedure "dealing with all aspects of the problem of development and use of land, water, and other national resources in their physical, social, governmental, and economic aspects."

In January 1935 the President was able to report to the Congress: "For the first time in our national history we have made an inventory of our national assets and the problems relating to them." And the President outlined the direction in which he hoped that the Nation would move in utilizing these resources:

"We think of our land and water and human resources not as static and sterile possessions but as life-giving assets to be administered by wise provision for future days. We seek to use our natural resources not as a thing apart but as something that is interwoven with industry, labor, finance, taxation, agriculture, homes, recreation, good citizenship."

This study represented a milestone in resource planning. Some of the fundamental studies are even now very nearly the only comprehensive factual surveys of parts of the field. In its entirely, it was a great influence in the promotion of integrated thinking and planning with respect to the interrelationships between all natural resources and between difference parts of larger regions.

In April 1935 the Soil Conservation Service came into being. During the 1930's, for the first time in our history, the Nation became thoroughly soil-conscious. The Roosevelt period provided much of the foundation of engineering design, conserving practices and grassroots growth of the program which had by the mid-1950's included nearly a half-billion of our acres and more than 1½ million farmer participants. This handwork of Franklin Delano Roosevelt and Hugh H. Bennett is on our land, with us and our grandchildren, for scores of years, if not for centuries in the future.

SHELTER BELT PROGRAM INITIATED

Allied with the soil conservation efforts were the immediately acute problems of the Great Plains, especially during and following the major drought years of 1934 and 1936. In 1936, the President allocated to the Forest Service an initial $1 million of emergency funds for large-scale shelter-belt planting. As of June 1942, when the project was transferred to the Soil Conservation Service, some 18,600 miles of shelter belts had been planted with 30,000 farmers cooperating. Today the magnificent success of this program is widely acknowledged.

A major milestone in the development of public land policy for those areas chiefly suited for grazing was accomplished with enactment of the Taylor Grazing Act of 1934, a measure which permitted Federal regulation of grazing on public domain in the interests of national conservation.

Under Franklin D. Roosevelt's administration, a national flood-control policy and program were created and the groundwork was laid for the water pollution legislation enacted after his death.

America's national park system was greatly expanded during President Roosevelt's administration, a conservation achievemet of marked significance today for millions of peripatetic reaction-seeking Americans. The President's words at the dedication of Shenandoah National Park illustrate his belief in the value of our national park system: "This park, therefore, together with its many sisters which are coming to completion in every part of our land is in the largest sense a work of conservation. Through all of them we are preserving the beauty and the wealth of the hills, and the mountains and the plains and the trees and the streams. Through all of them we are maintaining useful work for our young men. Through all of them we are enriching the character and the happiness of our people."

Under Franklin Roosevelt's leadership, further protection was extended to our wildlife through enactment of the duck-stamp bill, creation of game sanctuaries on all public properties, and conclusion of the Migratory Bird Treaty with Mexico supplementing a similar treaty with Canada.

INTERNATIONAL RECOGNITION ACCORDED

In January 1935 the President was awarded the Sir William Schlich Memorial Medal, which is made in rotation to five English-speaking countries in commemoration of a world-renowned British forester. In response to this international recognition of his effective work for forest conservation, he said in part: "A forest is not solely so many thousand board feet of lumber to be logged when market conditions make it profitable. It is an integral part of our natural land covering, the most potent factor in maintaining nature's delicate balance in the organic and inorganic worlds. In his struggle for selfish gain, man has often needlessly tipped the scales so that nature's balance has been destroyed, and the public welfare has usually been on the short-weighted side. Such public necessities, therefore, must not be destroyed because there is profit for someone in their destruction. The preservation of the forests must be lifted above mere dollars and cents considerations."

Like Thomas Jefferson, who was his idol, Franklin Roosevelt had a feeling for our land. It stirred him deeply. He once said, in a little speech in the Northwest, that every American lad should go out to the coast by train on the southern route and back by train on the northern route. This, continued Mr. Roosevelt, would afford that lad some appreciation of the vast dimensions and scope of the American Continent. Tales of the pathfinders of old fascinated Mr. Roosevelt—of Lewis and Clark and Fremont and Bonneville and Kit Carson. He knew about our Indians, and his keen sense of injustice was prodded by his historic awareness of the injustices committed by the white invaders against that sublime and noble race. This was why men with real social consciences, men like John Collier and others, served as Commissioners of Indian Affairs when Mr. Roosevelt was President.

"O beautiful for spacious skies, for amber waves of grain—for purple mountain majesty above the fruited plain": these were more than mere words to Franklin Roosevelt. Exactly 20 years ago, back in 1937, I rode with him on a special Great Northern railroad train over the Washington State uplands which led to the settlement of Ephrata, where he would disembark for an automobile ride with Senators Bone and Schwellenbach to the site of Grand Coulee. The President pointed to the snow-tinted pinnacles of the Cascades at our back, to the gaunt swales of sagebrush billowing all about the railroad right-of-way.

ROOSEVELT SERVED AS EDUCATOR

"Just imagine," said he, "water can make this desert bloom like the Garden of Eden. Orchards and alfalfa and row crops can grow here, if only we use water wisely. That is what I am trying to do, if the people of this country will help me to accomplish it."

He went as fast as the people would let him—occasionally a little faster. He served as an educator, too, and he constantly related to his fellow Americans of what had happened to civilizations which had wasted water, plundered forests, and slaughtered wildlife. He had a respect for government. He did not deride it, as some in our time are prone to do. He saw the wisdom lurking in John Muir's famous remark that "while only God can grow a tree, only Uncle Sam can save a tree." And Franklin Roosevelt did not want Uncle Sam to get into the hands of the wrong people. He knew that no trees, or other parts of our heritage, would be saved then.

He is gone now, and his task has become ours. In this quiet grave of stately trees—trees which saw him grow to manhood and which will be growing when we, too, are gone—let us join with Mrs. Roosevelt in pledging ourselves to a preservation of his ideals. This, of course, will mean a preservation of the resources which are our legacy and those of the future generations who will come after us. Our chief obligation to Franklin Roosevelt is not to eulogize him in words but to perpetuate his program in deeds. Perpetuation of his program, in time, will perpetuate in wise and careful custodianship the water and scenery and forests and animals of this magnificent domain we are privileged to inhabit.

Texas Water Problem: Drought and Flood

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. JOHNSON of Texas. Mr. President, the Fort Worth (Tex.) Star-Telegram, one of the outstanding newspapers of the entire Nation, recently published an editorial in which the basic nature of the Texas water problem was set forth lucidly and realistically.

The floods in Texas this spring, comments the Star-Telegram, have shown the need for more dams, and the newspaper calls for engineering studies to determine the number of dams which are needed and where they should be built.

I ask unanimous consent that this thoughtful editorial to be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR WATER PROBLEM: SCARCITY, FLOOD

The torrential rains of the last few weeks, pouring an immense volume of water over the spillways of storage reservoirs and inundating hundreds of downstream homes, have demonstrated beyond question that water is a two-sided problem in Tarrant County. It is a problem of too little water at some times and too much at others. It is a problem both of safeguarding against scarcity and shielding against floods. The problem not only is to save a precious asset but to

prevent that asset from turning into a damaging liability.

In some respects the control of floods and the storage of water for municipal and other uses appear incompatible. Obviously a reservoir standing near to spillway level has little capacity to contain additional waters that might result in flood. But as Tarrant County residents were acutely aware, the lakes above Fort Worth stood nowhere near the maximum level at the beginning of the current rainy season. They were in condition to make their utmost contribution to holding back the heavy runoff that otherwise would have caused even greater floods. Just as obviously, the contribution would have been greater if there had been greater capacity—either in the present reservoirs or in the existence of more dams. So the functions of preventing water scarcity and preventing floods do combine.

Another dam, or series of dams, on the Trinity River above Fort Worth or on principal tributaries could not have been expected to contain the tremendous runoff resulting from the recent unprecedented rainfall. But any such dams would have helped to regulate the flow and lessen its damaging effect and would have been a valuable addition to the capacity to catch and hold water for future use. In more than one way the people of the county, and particularly those whose homes have been under water, would have been thankful for their existence.

More than incidentally, to the Corps of Engineers the people of the hard-hit watersheds of Texas owe a vote of commendation for the judicious way in which the dams under its control have been operated. The coordinated release of water from all dams on a watershed, and the timing of this release in accordance with an overall view of conditions, has done much to prevent and reduce flooding and flood damage. Though the engineers control only one dam above Fort Worth—that at Benbrook Lake on the Clear Fork—it is operated in close coordination with those of the Tarrant County Water Control and Improvement District No. 1 on the West Fork.

That one lake built and controlled by the Army engineers on the city's immediate watershed is important. It is a major addition to the area's flood protection system and a sizable emergency water supply reserve. Along with the new Arlington Lake, it is an essential element in harnessing the water resources of the upper Trinity watershed and in any adequate system for control of floods.

The experience of the last few weeks suggests that there should be more such dams. How many and where is a matter for engineering study to determine. During the anxious years of drought there has been a natural tendency to discount the watersheds of the Clear Fork and the West Fork as producers of water. In light of recent conditions, it seems clear that thinking in this regard must undergo some revision.

In the inseparable planning for water supply and flood control, what has happened in April and May of 1957 will have to be taken into account. The conditions of the present are without exact previous parallel. But there have been periods of excessive runoff in the past—as in 1922, 1932, 1941–42, 1945–46 and 1949–50—and these can be expected to recur in the future. The need of the countywide area for water, and the need of built-up lowland areas for protection, demand attention to efforts to save as much of the water yield as possible and to guard against flood as far as is reasonably possible. This applies not only to the main forks of the river but to such principal tributaries as Mary's Creek and Big Fossil Creek. In the minds of many at the moment, flood protection may even take precedence over considerations of future water supply.

Tarrant County's problem is one of water scarcity followed by devastating flood. It is plain that the two parts of the problem must be solved together.

The Human Approach to Foreign Relations

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. HUMPHREY. Mr. President, it was my privilege to speak to the American Pharmaceutical Advertising Clubs of New York, the Middle West, and Montreal, Canada, in joint session on the noon of June 3, 1957, in New York City. Also in attendance at this meeting were members and officers of the American Medical Association; the AMA is now holding its convention in New York City.

The subject matter of my address was entitled "The Human Approach to Foreign Relations." I ask unanimous consent that the text be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HEALTH, HAPPINESS, HOPE—THE HUMAN APPROACH TO FOREIGN RELATIONS

(Address by Senator HUBERT H. HUMPHREY, American Pharmaceutical Advertising Club luncheon, Waldorf-Astoria, New York, June 3, 1957)

It is indeed an honor to be speaking before this great assembly of representatives of many pharmaceutical firms and of the professions of pharmacy and medicine today, on the opening day of the American Medical Association annual convention.

I am even more pleased because there is a special personal element in my appearance before you. As many of you know, I am still a registered pharmacist and a part owner of our family drugstore in Huron, S. Dak.

My dad was a pharmacist and pharmacy was my first love. I studied it and worked behind the prescription counter. So this setting is warm to my heart.

How true to our national tradition are you research and manufacturing pharmacists. Less than 20 years ago, the United States was dependent on our European cultural parents, hanging on to the skirts of their pharmaceutical chemistry and industry, just as we were in several other scientific and industrial fields.

With the Second World War we learned we had to produce not planes and tanks alone, but new medicines. And we did it. We produced a stream of fantastic new chemicals and biological armaments against infection.

And it is heartening to report that our creativity in biotherapy and chemotherapy has never left us. Right through the sulfas, broadspectrum antibiotics, hormones, poliomyelitis vaccine, a series of breathtaking developments have taken place which I hardly need to mention here. We can take pride that these developments have enabled our physicians and people to face courageously the problems of degeneration, disease, and death.

To the practicing pharmacist, what a difference the last few years have made. He has to know and keep up with all the potent and specific new agents. Comparisons are odious, but sometimes interesting. For instance, in 1929, our pharmacists filled 166 million prescriptions. Today the figure, I am told, is beyond half a billion.

And the pharmaceutical industry has grown immensely. From a scientific industry of two or three hundred million dollars a year, it has grown to almost a billion and one-half dollars.

If you like to play around with averages, as I do, you might be interested to know that since 1947 alone a new compound has been made available to physicians every day.

Among the people working together in fields associated with you, are more than 188,000 practicing physicians, 50,000 pharmacists, 500 pharmaceutical firms, 9,000 hospitals, 600 distributors of ethical preparations, 300 leading medical and pharmacy journals, and 15,000 "detail" men who help to inform physicians.

This biochemical confederation has helped to save almost a million lives in recent years through the use of pharmaceuticals that were unknown a generation ago. Our pharmaceutical industry is not taking a back seat and gloating over past achievements. It continues to pour more and more of its financial and scientific resources into research. From a research expenditure of $10 million two decades ago, the amount has increased to $100 million a year. This is one of the most intensive research programs throughout American industry. I am proud to be associated with this whole intensive pharmaceutical endeavor, however small my contribution may be.

But while there is this personal element, I want to speak to you as a United States Senator who is concerned with the problems of world health and how they influence our foreign relations. I know that you—the pharmacists, the physicians, the drug manufacturers, the pharmaceutical chemists and the students of medicine—that you are as vitally concerned as I.

Living here in the United States—in this prosperous country of ours and in light of our technical accomplishments—it is difficult for us to believe that more than two-thirds of the world is sick. There are those who would say the figure is closer to 4 persons out of every 5. This is serious food for thought.

Millions of suffering people are bound by the oppressive chains of disease. In large sections of the world, malnutrition, illiteracy, and inadequate shelter are still part of the everyday life of many millions of our fellow men.

Drugs are playing a major role in freeing these people.

For example, the World Health Organization reports that there are still 10 to 12 million lepers in the world. In Nigeria alone, the estimate for 1956 was 195,000. But this high incidence has a new outlook. Lepers are no longer ashamed as they have been for thousands of years. They report to health authorities. And they report largely because of the growing confidence in new drugs to treat this old scourge.

In many parts of the world, trachoma has been a terrible, disheartening enemy of the people. As an American travels, he is deeply affected to see children blinded by this eye disease. Now, many countries are organizing their people against it. In one effort in Egypt, for example, an antibiotic ointment was used to treat 2,500 school children twice a day for 60 days. Five thousand preschool children received sulfa drugs. One can see how drugs enable and inspire society to organize itself against disease. More needs to be done—these are but beginnings.

There are an estimated 300 million annual cases of malaria. There are an estimated 50 million cases of tuberculosis. There are, as well, an unestimated number of cases of other preventable disease, running into additional hundreds of millions. These are dis-

eases which strike in the productive years of life—or before life has barely begun.

I am happy to say there seems unanimous support in Congress this year for President Eisenhower's proposal to fight malaria. The United States under the President's program would pay one-fifth of the $500 million that would eradicate the disease. The antimalaria project has engendered much good will for America.

A vigorous, peaceful, happy, productive world can arise from abundant health and vitality of men and women * * * it can never grow under the existing burden of sickness, malnutrition, and poverty. No amount of diplomacy or armament can bring peace where the bodies and minds of men are sick.

I have seen how communism thrives on misery. Recently the Soviets have moved into the Middle East and the Far East. There on my recent factfinding mission for the Foreign Relations Committee, I saw poverty and misery provide the fertile ground for the very dissatisfactions that so often make communism acceptable.

Faced as we are with a new Soviet approach in those areas where the greatest doubt and misunderstandings as to our way of life exist, we are now, more than ever, challenged to help the starving and disease-ridden people of the world to raise themselves up out of their misery.

Had Karl Marx never lived, and Lenin and Stalin never come to power in the Soviet Union—had communism never been heard of—there would still be great social challenges that we cannot afford to ignore. We ought not to need, as our motivation for doing what we ought to do anyway, the wicked and evil philosophy of communism. Sick people ought to be healed even if a Communist never lived. Illiterate people ought to be educated without ever having to receive the inspiration for this noble work out of fear of Communist infiltration.

What we Americans need to do is to be ourselves. Just do what comes naturally—to be the generous humanitarian and compassionate people that have endeared us in the past to our neighbors and has become the hallmark of our tradition and heritage.

But I know that the American people have never needed prodding to help others who needed our help. One of the proudest and most cherished traditions in our history is to help those who are suffering or are afflicted.

By helping suffering people to rid themselves of disease, we can place those people on a firmer foundation. It is up to us, a people with tremendous technical ability and know-how, to supply the way for people everywhere to achieve freedom from preventable disease.

There is a growing awareness of the fact that disease-ridden populations are unproductive and therefore a drain upon national economies and upon the world economy. This in turn becomes a drain on our own economy.

The promotion of international health is one of the best means of promoting international cooperation and understanding. Whatever we can do to promote health will also promote peace and will reap for us tremendous dividends in friendship and appreciation of our way of life.

Just as it is right for us to share our blessing of abundance with victims of hunger, so it is also right for us to share our medical skills, supplies, and technical equipment with the victims of disease and ill health. May I assure you, the sharing of our abundance of food and fiber can be a powerful factor in our foreign policy. We need to look upon our great agricultural production and productive capacity as a source of strength in the world scene.

Health is intimately associated with man's cultural, emotional, social, and economic problems. And I recognize, as you do, that pharmaceuticals of both chemical and biological types are fundamental factors in the health field. So I feel I can talk to you and make suggestions for the usefulness of your particular specialty in this battle.

Now all this is not to say that nothing is being done. Far from it. In fact the record is quite impressive.

One of the leaders in the field is the World Health Organization. WHO is participating in 700 health projects in 102 countries. It is this invaluable work which is paying off in terms of a lowered mortality rate throughout the world. This organization is certainly to be commended for its tremendous achievements.

It was my privilege in the last session of Congress to sponsor the joint resolution which authorized an appropriation to enable the United States to extend an invitation to the World Health Organization to hold the 11th World Health Assembly in the United States in 1958. The Assembly will afford another invaluable opportunity for nations of the world to pool their knowledge and line up forces in the fight against ill health in the world.

The World Health Organization, with a membership of 88 nations, was established shortly after World War II as one of the organs of the United Nations. It has the responsibility to serve governments in building up the health and vitality of their people. As you know, WHO welcomes the interests of private and voluntary agencies who want to help humanity everywhere.

In recent years, more and more voluntary agencies have given material help and have cooperated with the World Health Organization in establishing hospitals and clinics.

There are 43 nongovernmental organizations with whom WHO maintains official relations. The World Medical Association, which stemmed from the American Medical Association, is among these. Among others is the International Pharmaceutical Federation, the International Council of Nurses, and the League of Red Cross Societies.

WHO is collaborating with 1,800 scientific institutions in the world, including laboratories research units and scientific studies. Most of these institutions are devoting time and energy on a voluntary basis in the interest of the advancement of science. I understand that only 40 of the 1,800 organizations get any funds from WHO at all. Research is being coordinated in more than 50 laboratories in the field of influenza. Another large number are busy in polio research.

Projects approved by the United Nations Children's Fund, known as UNICEF, bring food, medical care, and other aid to more than 32 million children, annually. Impressive as these figures are, they represent only a small proportion of the critical needs of so many children. How many will forget the heartwarming television presentation by Danny Kaye earlier this year in which the dramatic role played by UNICEF in children's health was so well depicted?

Work on the treatment of leprosy in French Equatorial Africa and Gambia and Thailand; on yaws in the Gold Coast and Nigeria among others; on trachoma control in Morocco and Indonesia; on tuberculosis to children in Cambodia, Ceylon, and Vietnam—these are the dramatic attacks on ancient diseases still prevalent in the 20th century. UNICEF is out to eradicate these ancient enmeies of mankind.

Keep in mind that UNICEF is a voluntary, cooperative program of self-help. Each country desiring assistance must first request aid and must be able to give satisfactory evidence that it will be able to develop and continue the program on its own initiative after the UNICEF part of the work has been terminated. In addition, each assisted country must agree in advance to contribute in goods or services an amount equal to the UNICEF contribution. Being the only program devoted solely to children, this work supplements the broad objectives of United States assistance.

Under the Fulbright Act, the United States currently has 27 students, lecturers, and specialists in the field of medicine, including 1 pharmacist, in Europe in post-graduate study. There are 166 foreign students, lecturers, and speicalists, including 13 pharmacists, in the United States for study on the graduate level.

The United States Public Health Service is in the field of international activity, cooperating with other nations in tackling world health problems of concern to us and to others. It also participates in programs in which we give a helping hand to friendly naitons on a country-to-country basis to remove disease and build national strength.

At the National Institute of Health, there is at all times a small group of research projects which require that individual scienists conduct research in foreign countries or that they work in close formal collaboration with foreign investigators.

The Voice of America and the Public Health Service cooperate closely in preparing broadcasts on international health activities. The Voice interviews trainees from abroad who come to the United States under ICA fellowships. The Voice also broadcasts programs on the activities of the World Health Organization and on United States participation in WHO.

I cannot stress too strongly the cooperation which exists between the various Government agencies and private interests in combatting world health problems. Permit me to cite only a single example of scores that can be made.

A number of agencies were jointly concerned with helping the Greek Government in its malaria-eradication program. The Rockefeller Foundation came in first, and later the United Nations Recovery and Rehabilitation Administration came in, followed by the assistance given by the World Health Organization and the United States bilateral program. At one time or another these agencies all worked hand in hand to help Greece tackle various aspects of the malaria problem.

There is cooperation between governmental groups. Tuberculosis, for instance, is still a serious world problem though virtually licked in the United States. WHO and UNICEF continue to cooperate with governments on mass-vaccination campaigns, and on studies of diagnostic and control procedures that might be usefully adopted for antituberculosis programs under primitive conditions. As a result of pilot projects administered by UNICEF and WHO in the field of trachoma, it is now clear that mass treatment with antibiotics has given hope of eventually controlling this serious eye disease which often leads to complete blindness.

The more I have visited various places in the world, the more I have witnessed what we have done in our aid programs, the more I am convinced that it isn't only the money, but rather the people who really count. It is the people * * * their attitudes * * * all over the world that are important in putting across a program. Among the best instruments of this method are the American voluntary agencies, including those supported by the three great faiths. They have been active in 78 countries and areas of the world giving not only first aid, but planful care to the most dispossessed of humanity.

I could relate for hours the work these organizations have done in the field of health, but time will permit me to only give you an idea of their work.

The Jewish American Joint Distribution Committee gives generous support to medical institutions, schools, and children's institutions not only in Israel, but throughout north Africa. * * * In cooperation with an advisory committee of both French and American doctors, the Unitarian Service

Committee assisted in the placement of nine French interns in United States hospitals. Also under sponsorship of the Unitarian Service Committee, five American medical scientists shared their knowledge of anesthesiology with Japanese physicians. The American Friends Service Committee runs a surgery and pathology wing in the Kunsan, Korea, provincial hospital and has hope that during this year medical specialists will be sent to Kunsan to give special training to Korean doctors. Incidentally, under this scheme a gynecologist already has been sent.

The American Bureau for Medical Aid to China's overseas program is conducted along various lines—training personnel for all branches of medicine and surgery, providing financial support, medical supplies, and supervisory services for a nurses' training program, supporting nine medical and nursing fellowships for training in America.

My friends, in breaking the vicious circle of poor health, low productivity, and low-living standards leading again to poor health, these voluntary groups, the world organizations, our Government, and some private interests, are helping to eradicate the social and economic causes of war. The goals are not beyond reach: in those places where project goals have been reached, complete cooperation has been assumed by local governments.

Yet despite these recent improvements in health conditions, there are major problems still to be solved. It will be many, many years before the incidence of malaria, sleeping sickness, yaws and the numerous parasitic infections are reduced to minor proportions.

Forward-looking groups such as yours can and should perform a service in advancing ideas and establishing a favorable climate for a new world health leadership. Science has given us the tools with which to wipe away disease from the face of the earth. What we need is the personnel and research to carry out the work and the funds with which to operate.

There is a need in the world today for a nonpublic, international, professional medical group or foundation whose aim would be to lift the burden of disease from the shoulders of mankind through research, study, assistance, and information exchange.

This foundation could be composed of representatives of medical and pharmaceutical professions and the pharmaceutical industry from all parts of the world. As I have tried to indicate, there are many areas of world health where private enterprises are much more effective than governmental units. And we must keep in mind that the more we can do on a private scale, the less a government is required to do.

The aims of such an interprofessional organization can be generally outlined as follows:

First, to bring the great benefits of American advances in chemotherapy to more people everywhere.

Many countries are extremely backward when it comes to new drugs. If all peoples everywhere were made aware of all the antibiotics, insecticides and new vaccines which are available, it would be possible, not only to control disease, but to eradicate it in many areas. Work with these drugs could be the inspiration for new discoveries, new applications.

A second aim, to encourage the development of pharmaceutical research and other research facilities in countries less advanced than the United States, always with the help of professional, scientific, and industrial experts from other countries with modern technology.

This could be achieved through agreements between a needy country's government and American pharmaceutical firms or those in other countries. Here we see the possibilities of a program designed around private group to government—a relatively new concept.

As we move into countries with preventative medicines, we should realize that this is the only type of health program which is reaching mass populations. In many instances, it is the first contact of modern medical attention these people have had. This mass preventative program lays the foundation for acceptance of curative drugs. Pharmaceutical research could be a vital link in this chain.

A third aim would be to encourage the appreciation, adaptation, and application of our medical and pharmaceutical institutions in other countries.

Many countries and their professional organizations have already shown their interest in studying American institutions and methods such as the Food and Drug Administration, the United States Pharmacopeia, the educational curriculums and many others.

These suggestions and recommendations could be made acceptable through a broader application of person-to-person contact through exchange, hence—

A fourth aim, to encourage many more contacts among physicians, pharmacists, pharmaceutical scientists and industrialists, hospital people and other medical specialists.

Let me give you an example:

Recently a representative of Israeli pharmacy was in the United States seeking assistance for pharmacy colleges there. Through the new group I have suggested, young men and women from pharmacy colleges in Ceylon, Israel, Chile, if they wanted to, could come here. They could become acquainted with our colleges, our pharmacies, our pharmaceutical laboratories, our physicians.

On the other hand, American pharmaceutical firms might organize teams of research chemists, pharmacologists, clinical investigators, to visit other countries to help in problem analysis and the establishment of professional schools.

It is hardly surprising that person-to-person contacts are coming to play a still larger role in international affairs than they have in the past. Experience has indicated the desirability of this expansion, and the ease of arranging international travel in recent years has made it possible.

The opportunities are readily apparent: a growth in understanding on the part of visitor and visited alike, and deeper insights and more lasting impressions than other means of communication usually permit.

We should remember that numerous governments and hundreds of private groups already are supporting programs to exchange students, teachers, and scholars between this and other countries. A few also are enabling persons who are leaders in other walks of life to travel for study or observation. I already have mentioned the Fulbright program. The World Health Organization has 1,000 grants a year in its fellowship program. Foreign governments have invited our doctors to their hospitals, and we have reciprocated. However, there still exists a need for expansion if the people of the United States and other nations are to understand each other better and work together for world health and understanding.

A fifth aim, to help alleviate the shortage of trained pharmacists, chemists, and other related specialists in many coutnries, including ours, by encouraging students through scholarships to enter the various fields, and by subsidizing the professional institutions either directly or through research projects.

A final, and sixth aim might well be for the private foundations to focus the attention of all governments on such related questions as the status of pharmaceutical development and the standards of education in medicine and pharmacy, through close liaison with such organizations as WHO and UNICEF.

It is my relief that this objective can be more readily obtained if we integrate with the Federal Government's efforts, the potential of the Nation's private economy—the professional people, investors, civil, religious, and educational establishments.

Sometimes any kind of intervention—whether to alleviate hunger or to alleviate ill health—may be misunderstood or resented. People who may be wary of accepting aid from the United States will more readily accept the assistance of an international organization to which they themselves belong. The world professional foundation, of which I have talked, could be one such organization through which professional and industrial members can work to help each other and to help themselves.

Permit me to summarize the aims of this plan once again: They are to bring the great benefits of American advances in chemotherapy to more people everywhere; to encourage the development of pharmaceutical research and other facilities in countries less advanced than ours; to encourage the adaptation and application of our medical and pharmaceutical institutions in other countries; to encourage more person-to-person exchanges; to help alleviate shortages of trained personnel and to focus attention of all governments on aspects of the medical field as developed by the plan.

Through official and private channels, the foundation could offer help with public health education, distributing visual and literal aids.

Meetings could be held in major cities of the world to discuss the pharmaceutical challenges in relation to world health problems. The group could encourage the dissemination of knowledge through publications and, as I have said, person-to-person contact.

Unless I have overlooked limitations of a highly resistant nature, I think the American pharmaceutical industry will not shirk its humanitarian obligations. Again and again it has demonstrated that it cares by shipping needed drugs abroad to help their fellows overcome emergency.

Yours is an industry that has thrived on the challenge and the excitement of creating new medicines. You sometimes even "live dangerously" as business goes, by making a maximum financial effort to find an elusive aid against a disease, with no assurance of success and return to your stockholders.

Such a plan as I have outlined, cannot and should not be achieved solely by the efforts of governments working either independently or together. We need the coordination of private interests and private investments—we need the sharing of skill and experience—we need the helping of the weak by the strong.

The underdeveloped countries, especially those in Asia and Africa have acquired a new importance to the United States and the free world. No one privileged to serve on our American delegation to the United Nations, as I have been at the current session, can fail to grasp that these new and developing nations of Asia and Africa, now numbering 27, control more than a third of the votes in the General Assembly. Almost all future additions to the family of free nations will likely be in Asia and Africa. The outcome o fthe great struggle between freedom and communism will unquestionably be decided by the turn of events in these countries. Our future is tied in with theirs.

People can only start thinking of freedom and the rights of the individual when they are freed from the day-to-day concern of trying to eke out a bare survival and are in good enough health to turn their attention to matters other than sheer subsistence. In helping others to help themselves, we are

achieving in a practical way a means for these people to live fuller lives.

It is through an increasing coordination of endeavor within nations and between nations—on a people-to-people basis—that the modern need of worldwide health can, will, and is being transformed from a hope into a reality * * * resulting in happy relationships between people. This sort of security can be the basis for a lasting world peace.

But the requirements of a just and enduring peace are exacting and difficult.

Clearly we cannot expect to live peacefully in a world slum overflowing with disease, tension, and hate. Nor can we impose peace by bombs and tanks.

As former President Truman said: "The only kind of war we seek is the good old fight against man's ancient enemies * * * poverty, disease, hunger, and illiteracy."

We must join in this all-out attack on poverty, disease, hunger, and illiteracy. We must share our technical assistance—the scientific know-how—in food production, industrial development, health services, and education. Such a program will increase the wealth and welfare of the underdeveloped countries and bring greater opportunities to their people.

All of us—through consistent practical, concrete action, must demonstrate in unmistakable terms our genuine concern for the rank and file of humanity, and our willingness to help them build a better life.

Such a program will take time. The poverty and insecurity that beset the majority of the world's people were centuries in the making, and they will not be erased overnight. But delay cannot be tolerated. We must march ahead with confidence, hope, imagination, and boldness.

Commencement Address by Hon. Lister Hill, of Alabama, at the University of Kentucky

---

EXTENSION OF REMARKS
OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. COOPER. Mr. President, on May 27, 1957, the senior Senator from Alabama [Mr. HILL] delivered an address at the commencement exercises of the University of Kentucky, at Lexington. The senior Senator from Alabama is held in high regard in Kentucky, and the people of my State were glad to welcome him.

I ask unanimous consent that the text of the very aspiring address he delivered be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. LISTER HILL, UNITED STATES SENATOR FROM ALABAMA, COMMENCEMENT EXERCISES, THE UNIVERSITY OF KENTUCKY, LEXINGTON, KY., MAY 27, 1957

May I express my deep appreciation for the honor that Dr. Dickey has done me in asking that I speak to you today. It is always a privilege to speak in Kentucky, so glorious in her history and so rich in her contributions to our Nation. But this is a particularly auspicious day—auspicious because you, our young friends of the graduating class, go forth to launch your careers and to begin your life's work; auspicious because the University pays tribute to a great son of Kentucky and of the Nation, my cherished friend, the late Alben W. Barkley. Today you receive his personal papers—intimate and priceless record of so much of the history of our time. Here these papers will be preserved and studied for our benefit and the benefit of future generations.

Alben Barkley was truly a citizen of this century. His political life began literally in the horse and buggy days. It ended in the nuclear age.

Alben Barkley's time overlapped four historic periods in the development of our Nation:

First, America's coming of age with Woodrow Wilson, when a people became conscious of their destiny and their leadership in the family of nations.

Second, the days of the great depression, when it was demonstrated that in time of domestic crisis a vigorous, determined Government can act to protect the people from stagnation, and despair, and needless suffering.

Third were the years of World War II and after, when America used her might to beat down the totalitarian enemies of the free world and then to hold back those who sought world domination by infiltration, subversion and cold war.

And finally, he lived into the age of nuclear energy, of flight faster than sound, of man's first tentative thrust into outer space with the building of the earth satellite.

Alben Barkley was at home in all these times. He retained always the resilience of youth, the zest for new things, the willingness to try uncharted paths. He looked always to the future.

This man lived for us in our time the sturdiest, the most romantic tradition of American political life—the rise from humble and unlovely beginnings to power and international fame. He was born in a log cabin. He worked long and hard on the farm. As he said, he "did man's work at a boy's age." He put himself through college. He became successively county prosecutor, county judge, Congressman, Senator, and Vice President. Like that other immortal Kentuckian, Henry Clay, his name outshines many of those who have held the office of President of the United States.

Alben Barkley had his moments of disappointment and sorrow. But he knew that only the stream impeded has a song. To him, the test was not that he always should win, but that he should carry on. When he lost, he never complained. He met disappointment with determination, and defeat with renewed vigor. His sense of justice, of the eternal fitness of things, never failed him.

In his autobiography, Alben Barkley declares:

"For my part, every time I get to taking myself too seriously, I remind myself of several stories.

"One was told me by a prominent Englishman, who was explaining to me why governmental problems are more complex in the United States than in his country. 'There are at least 57 varieties—like those famous pickles—of you Americans, and every one of you has different ideas,' he said. 'In my country there are only 4 kinds of people with 4 ideas. There are the Scots, who won't wear rubber heels because they give. There are the Welsh, who pray on their knees—and prey on everyone else. There are the Irish, who don't know what they want and are willing to fight for it. And finally, there are the English, who are self-made and worship their creator.'

"The moral, so far as I am concerned, is that every time I get to thinking of myself as a self-made man, I remember not to get too enthusiastic about my 'creator.'"

Thus did Alben Barkley laugh at himself. But he did not laugh at other men. He was too sensitive of the feelings of others, too understanding of human nature, too loving of his fellow man. He laughed with people. He broke their tensions. With his rich fund of stories and his inimitable humor he brought joy and delight to their hearts.

Sir James Barrie tells us that courage is the lovely virtue—the rib of Himself that God has sent down to His children.

Of all the great qualities of Alben Barkley, perhaps the most notable were his courage and his integrity. Throughout his life there runs the shining thread of his courage, his deep sense of personal integrity.

Alben Barkley's courage carried him to a place among the leaders of our Nation. And where he felt his integrity was at stake, Alben Barkley with courage put aside all personal considerations.

During much of his life in Washington, Alben Barkley was the staunch ally and confidant of Franklin D. Roosevelt. In his autobiography he tells the story of his break with President Roosevelt over the tax bill in the spring of 1944. He tells of the President's veto of the tax bill. And of his stinging reply on the floor of the Senate to the veto message, which he felt was a calculated assault upon the legislative integrity of the Members of Congress.

Alben Barkley's courage led him into the break with Franklin Roosevelt. His integrity led him to follow it through, whatever the cost.

In his reply to the veto message, Alben Barkley declared: "There is something more precious to me than any honor. This is the approval of my own conscience and my own self-respect. That self-respect and the rectitude of that conscience I propose to maintain."

The speech may well have cost Alben Barkley the Presidency of the United States. For these words were spoken a few short weeks before the 1944 Democratic National Convention. Alben Barkley knew that the time was too short to heal a breach and open the way for his nomination as the Vice President, the nomination which led to the Presidency. Above this honor he placed his integrity, his self-respect.

But Alben Barkley did not have it in his heart to harbor ill will toward any man. The old friendship for President Roosevelt was still in his heart, and throughout the war years and up to the time of Roosevelt's death he continued to be the President's strong right arm on Capitol Hill.

The lessons we learn from the life, the character and the service of Alben Barkley are many. But one central fact stands out.

In a sophisticated age, he was not afraid to be himself. He treasured the homely virtues of truth and honesty, of courage and forthrightness, of humility and love of his fellow man. Because of his belief in these old and homely virtues, Alben Barkley was at home in any time and any place. Seated on a rock for Thanksgiving dinner with the GI's in Korea, in the company of princes and heads of state, in the bosom of his family, this man bore always the sterling stamp of his pioneer Kentucky folk.

We know that Alben Barkley left the company of living men while addressing the students of Washington and Lee University. This was most fitting. He loved young people, for he was ever young in mind and spirit. He saw in the young the hope and promise of the future. As a true patriot, he went to that great source of patriotism—the enthusiastic spirit and idealism of young men and young women.

As you young people today go out into the great adventure—life—you feel, perhaps, like many other young people that you have missed something exciting by being born in the 20th century. The frontiers, you feel, have disappeared and with them—adventure.

True, there is scarcely a spot on the globe that has not been discovered and charted. But the days of adventure are not past. Never has there been a time in our history

when the Nation so greatly needed the pioneer.

Ever present, ever more challenging, is the intellectual frontier. For as we seek new raw materials and new sources of energy, we must delve deeper into the earth's crust and ever outward into space; we must look deeper into the heart of matter and its nuclear secrets. And, as we seek within man himself greater understanding of his being, we must search relentlessly into the human mind.

Bold new adventures lie before us—in the field of medicine, in scientific advancement and engineering, in teaching, in business, in industry and agriculture, in politics and public affairs, and in the building of the peace of the world.

We stand today at the threshold of a golden age of medicine. I predict that within a few short years the world will see a tremendous breakthrough of medical knowledge that will enable us to overcome the dread diseases that have plagued and baffled mankind through the ages. There is reason for confidence that this breakthrough will yield the answer to heart disease, cancer, mental illness, the virus diseases, and the many other crippling and degenerative ailments.

The Salk vaccine has given at last the means for wiping out poliomyelitis in its dread forms. We have radioactive isotopes, antibiotics, multiple vaccines, new drugs and chemicals, and diagnostic tests. Dramatic new tools are now in use or near practical application.

With these tools the hopes and dreams of today can become the realities of tomorrow.

The breakthrough of knowledge will not come from any one discovery. It will be the accumulation of many discoveries. And from you who go forward in the study of medicine—or in chemistry, physics, biology, engineering—from you may come the overlooked fact, the vital unnoticed clue, that causes a host of other facts to fall into place. And brings another sensational step forward.

It has been said that science has compressed into the past 50 years more advances than the previous sum of all man's scientific achievement.

The advance of science and technology unfolds new wonders to this world of ours. It holds out new opportunity and new adventure for you.

Today science and technology serve us in almost every phase of daily living. They produce the food we eat and the fiber we wear, purify the water we drink, and in some localities even cleanse the air we breathe. They are present in industry with new materials, automation, and new equipment for productivity. They form the foundation stone of national defense and our international relations.

Before us lie further developments in nucleonics, electronics, aerodynamics, and other fields. Even as we seek full knowledge of atomic energy and its constructive uses, man turns to renewed study of solar energy, and the life-giving effects of the light as well as the heat of the sun.

The march of science, the amazing economic growth, the needs of national defense, the increasing complexity of the world we live in have combined to generate a rising demand for trained and skilled people in the United States.

World disorder has forced us to adopt a radically different and a higher concept of defense, employing the most terrible and costly weapons that man can devise, yet we have been willing to limp along on an educational system that is wholly inadequate to turn out sufficient numbers of highly trained citizens and to meet the multiplied demands for moral discipline and for wisdom in great affairs.

The hour demands a radically different and higher concept of education, and a far greater support for our schools, colleges, and universities.

To attract workers industry is spending millions of dollars in newspaper advertisements and sending swarms of recruiters to the campuses of our colleges and universities.

Behind this need for trained manpower lies a more fundamental need—the need for more teachers.

Record school enrollments, and college enrollments which are expected to double by 1970, further accentuate this need.

Teachers are our seed corn of knowledge. We are told that to assure the succeeding harvests of trained young men and women 1 out of every 12 trained persons must be retained for teaching.

In recent years we have been in danger of consuming our seed corn. The shortage of trained people has drawn many teachers out of education and into business and industry.

I have worked with and for teachers for many years. I know the fulfillment that comes with the giving of themselves for the knowledge, the guidance, the inspiration they impart to others. But the teacher, like the rest of us, is human. He has human wants and needs that must be met.

The teacher, in this era of remarkable contrasts and swift change, must be assured of opportunity for continued study and educational growth. Salaries must be high enough to enable the teacher and his family to enjoy a good standard of living, know recreation and travel, and look forward to security in later years.

The Nation must recognize the essential worth and dignity of the teacher. The Nation must realize it is the teacher who nurtures our national destiny.

Here in Kentucky, we see a new day of industrial growth and diversification. This new day gives encouragement to business initiative. It offers opportunity to young men and women in commerce, in production, in distribution, in business management.

You know Kentucky's natural resources. In the production of coal your State is third in the Nation; in production of fluorspar second only to Illinois; it is well endowed with natural gas, petroleum, lead, zinc, and refractory clays. Nearly half of Kentucky's land area—11 million acres—is covered with rich hardwood timberland, a resource that replenishes itself year after year through the selective cutting of your lumber industries. Kentucky burley tobacco is famous and is enjoyed throughout the world.

Upon the foundation of these God-given resources, Kentucky is now building a mighty structure of business, industry, and agriculture. At Paducah the billion dollar atomic energy installation with TVA power has brought new jobs for Kentucky workers and new markets for Kentucky coal and other products.

Kentucky has seen a phenomenal growth in new and expanded industries. Aluminum, steel, chemicals, plastics, electronics, synthetic rubber, glass fiber—these and many more have strengthened and prospered your economy.

Kentucky's splendid growth is an inspiration to all the South. But the very magnificence of her achievement presents a challenge, and particularly a challenge to you young graduates.

With all her progress, Kentucky ranks 43d in per capita income. The South's per capita income is still only 70 percent of the national average. The leading southern State in per capita income ranks only 24th among all the States.

This is a challenge you cannot refuse. Kentucky's proud record of progress demonstrates to you what can be done. The South's young people no longer need migrate to other States to find opportunity and success. Kentucky has cradled you, reared you, educated you—here in Kentucky you can find endless opportunity to use your knowledge, your skills, your training to serve her, while you build your own future.

Today, my friends, we look upon a world, ever new, ever changing, ever bright with opportunity and challenge. In this world one task compels us all, the building of a lasting peace.

We have fought two world wars to bring peace. We have poured out our blood and our treasure. We have shared our wealth, our goods, our resources to rebuild our allies shattered by war. We have stood guard for the free world to preseve an uneasy peace.

Now, new compulsions for men to live without war press upon both sides of the Iron Curtain. The United States and Russia have the atomic means to destroy each other. War within the next decade will mean guided missiles that can travel into space at 16,000 miles an hour and plummet to the other side of the earth, blasting the largest city to atomic dust—or worse, spreading death from bacteriological warheads.

There are signs that even the masters of the Kremlin shrink from bringing such searing, deadly war to this planet. But we must not be misled into false security. The end to danger is not in sight. America must stand strong—flexible in her ability to meet massive attack or the corrosion of minor conflicts. America must hold fast to her historic allies. America must continue to strengthen her friends among the newly independent nations.

Let us look with the eye of history on the events of the past decade. The problems of world politics in this period are the birth pangs of a new world community that must—of necessity—be born. The shape of this world community will depend so much upon the courage and determination, the leadership and vision that we of our Nation give. We are the leader among nations. We must measure up to the demands and responsibilities of leadership.

My young friends of the graduating class, this hour I bid you—whatever may be your life's work—go forward, play your part in public affairs, be leaders in the building of the peace of the world. Go forward with the qualities that were ever Alben Barkley's. Go forward with his untiring dedication to duty, his understanding and sympathy, his skill at bringing agreement among men, his steadfast courage to fight for the right, his love of country.

Go forward, not with the sickly complaint of Hamlet, "The time is out of joint. O cursed spite, that ever I was born to set it right." But rather in the spirit of Rupert Brooke, the Christian Crusader, who gave his life to set men free, and who declared, "Now God be thanked who has matched me with His hour."

Sovereignty of the Canal Zone

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. SILER. Mr. Speaker, on the 18th instant, my wife and I were guests of the Panama Canal Society of Washington, D. C., at its 22d annual meeting—with luncheon—at the Sheraton-Carlton Hotel in this city. The subject discussed was Suez and Panama. The principal speaker was former Congressman Maurice H. Thatcher, of Kentucky, the only surviving member of the Isthmian Canal

Commission, which had charge of the actual construction of the Panama Canal. Other speakers were Capt. Miles P. DuVal, United States Navy, retired, and Prof. Charles S. Collier, of the George Washington University faculty. The addresses were informative and interesting and made very clear, indeed, the basis for the authority and control of the canal and the Canal Zone, in perpetuity, by the United States. On the 24th instant, my esteemed colleague, Representative BROOKS HAYS, of Arkansas, also in attendance at the meeting, placed in the CONGRESSIONAL RECORD the indicated addresses, together with his own comments, with respect to the occasion.

Subsequent to the indicated meeting—that is to say, on the 21st instant—there appeared in the Christian Science Monitor a very interesting article by Gen. William E. Potter, present Governor of the Canal Zone and President of the Panama Canal Company, dealing with the question of United States authority at Panama. The views were identical with those of the speakers at the indicated Panama Canal Society meeting. His contribution to the subject was opportune and he speaks with authority. It should, therefore, be of value in combating the wave of propaganda that is being put forth as regards the rights, power, and authority of the United States with respect to the Panama Canal and the Canal Zone. Therefore, under leave accorded, I am including Governor Potter's article as a part of these remarks:

PANAMA CANAL PLAYS VITAL ROLE IN WORLD'S INDUSTRIAL AFFAIRS—UNITED STATES IS SOLE AUTHORITY IN STRIP ACROSS ISTHMUS

(By W. E. Potter, Governor, Panama Canal Zone; President, Panama Canal Company)

(EDITOR'S NOTE.—All previous records for traffic through the Panama Canal were broken recently when 808 oceangoing commercial vessels, plus 32 United States Government ships, transited the waterway during March. In response to an invitation from the Christian Science Monitor, W. E. Potter, Governor of the Panama Canal and president of the Panama Canal Company, discusses in a series of four articles the unique status of the United States Government-owned canal in international law, the necessity of the existing form of government in the zone area, how essential the canal is to world trade, and the canal's future in the new world of supertankers that has developed in the present decade. This is the first article.)

BALBOA HEIGHTS, C. Z.

With the great forces of nationalism, self-determination, and revolution taking over the world's headlines in recent years, we Americans, perhaps, have too easily tended to overlook the vital role played by the Panama Canal in the world and United States industrial complex.

For more than 40 years the canal has operated in what once was a jungle pest hole with clean, quiet efficiency that ever ceases to amaze visitors.

A treaty that perhaps is unique in world history—between one of the world's greatest powers and one of the smallest—made the canal possible.

Recent world conditions, however, have turned the spotlight on the strategic 50-mile-long waterway cut through the heart of Panama and connecting the Pacific and Atlantic Oceans.

RETURNS TO LIMELIGHT

Before the Suez crisis, the Panama Canal had dropped from the world's limelight. The exceptions were occasional headlines involving the sea-level versus lock-type canal controversy, when an increase in shipping tolls was hinted, when there was a threatened rock slide as in 1954, or an anniversary such as last December when the one-billionth ton of goods moved through the canal.

But the Suez crisis focused the attention of the world on the Panama Canal—not to question its operating efficiency, but its legal status.

In short, not because of its exemplary service to world shipping and national defense for four decades, but because of the seizure of a great waterway on the other side of the world, the Panama Canal was thrust into the news.

The key question raised, of course, was, Could this happen to the "Big Ditch"?

Without attempting to forecast the course of world events in future decades, my answer would have to be, "No, this could not happen to the Panama Canal."

UNIQUE LEGAL STATUS

I say this without equivocation because nowhere else in the world is there an area of land or water with the same legal status as the 10-mile-wide strip of land known as the Canal Zone.

There is a wide misbelief that the canal is leased from Panama for an annual rental. We neither lease it nor pay rent for it.

In the 1903 convention which conveyed the use of the Canal Zone to the United States, there is used the word "grant" (not "lease") and the grant is "in perpetuity."

For this grant, the United States paid Panama $10 million outright and established an annuity of $250,000 a year effective 10 years after ratification. This annuity has since been increased to $1,930,000 annually.

The United States at the time of the 1903 convention also compensated individual landowners in the Canal Zone for the rights and titles of their property.

DUAL PAYMENTS MADE

In effect, the United States paid for the right and also bought the land.

The 1903 treaty was ratified by the two governments and has not been basically altered by subsequent agreements between them.

Thus we see that the Canal Zone is territory under the jurisdiction of the United States, a jurisdiction which admittedly has been modified by subsequent treaties, and that it can be regarded as a possession for purposes of applying United States statutes.

To clear up any misconceptions, I would like to discuss further the treaties between the United States and Panama regarding the Canal Zone.

Article II of the 1903 treaty says, "The Republic of Panama grants to the United States in perpetuity the use, occupation, and control of a zone of land and land under water for the construction, maintenance, operation, sanitation, and protection of said canal * * * extending to the distance of 5 miles on each side of the center line of the canal to be constructed."

FULL AUTHORITY GRANTED

Under article III, "The Republic of Panama grants to the United States all the rights, power, and authority within the zone mentioned and described in article II of this agreement and within the limits of all auxiliary lands and waters mentioned and described in article II which the United States would possess and exercise if it were sovereign of the territory within which lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

It was for this grant that the United States gave the newly founded Republic of Panama a $10-million grant and established a $250,000-a-year annuity.

A 1936 treaty with Panama increased the annuity to $430,000 to offset the potential monetary loss to Panama after the United States abandoned the gold standard. In 1955, another treaty increased the annuity to $1,930,000. But neither of these two treaties changed the basic legal status of the Canal Zone.

I think it is interesting to note at this point that although many Panama politicians have suggested internationalization of the canal, the Panamanian Government never has. And in view of the clarity of the existing treaty, I do not consider it likely that any such suggestion will be made officially.

DIFFERENCE IN STATUS

I hope I have made it clear there is no analogy between the status of the Panama and Suez Canals. The Suez was under private ownership on a concession basis with a very definite time limit.

In addition, Egypt retained reversionary rights in the Suez concession, whereas the grants by Panama to the United States were in perpetuity.

A number of other points were involved in the 1936 and 1955 treaties which I would like to mention briefly because they will have a bearing on future articles.

Under the 1936 treaty, the United States agreed to limit the exercise of its rights in the zone by defining and limiting those entitled to conduct private business enterprises in the zone and those entitled to purchase and free-entry privileges. In the 1955 agreement, limitations also were placed on the sales of merchandise to vessels in canal waters.

These restrictions are of considerable importance to the zone resident since they remove any ability to engage in private business. They also make necessary the engaging in such small normal private-enterprise activities as may be necessary by the United States entity operating the canal.

TRADE GOES TO PANAMA

The main effect has been to cause a large amount of trade to cross into Panama. In future years this trade will grow with the good result of lessening the need for large activities of Government in business.

Not only did the 1955 treaty increase the annuity to $1,930,000, but it promised that properties owned by the United States within the Republic of Panama and valued at $25 million would be transferred to Panama.

Furthermore, it promised that we would build a bridge which will cost around $20 million over the Pacific end of the canal, and as of January 1 this year barred from the zone's commissaries Panamanian employees of the zone living in Panama, retired United States citizen and noncitizen zone employees living in Panama, and others.

This has cut the zone's commissary business almost $14 million a year, business which ostensibly has been taken over by Panamanian business establishments.

The 1955 treaty also permitted Panama to tax its citizens employed by United States Government agencies in the zone and nationals of third countries employed by such agencies but residing in Panama.

Knowledge of these basic controls is necessary to understand not only the way of life in the zone, but also the restrictions on free enterprise which usually is inherent in the democratic way of life.

Resolutions of National Society of New England Women

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. BRIDGES. Mr. President, the National Society of New England Women has furnished me with a copy of the resolutions adopted at its 44th annual congress, held in Swampscott, Mass., May 22, 1957.

The positions this organization has taken on a great many issues of national and international importance to the United States should be of interest, and I ask unanimous consent that these resolutions be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

NATIONAL SOCIETY OF NEW ENGLAND WOMEN, RESOLUTIONS ADOPTED BY THE 44TH ANNUAL CONGRESS, MAY 22, 1957, NEW OCEAN HOUSE, SWAMPSCOTT, MASS.

I. REDEDICATION

Whereas the 44th annual congress of the National Society of New England Women comes at a critical period unparalleled in socialistic threats and communistic dangers to the Republic and to Christianity; and

Whereas the society's fundamental principles are more sorely needed today than ever before for constitutional government and individual freedom under God:

Resolved, That the National Society of New England Women rededicate itself to the emulation of the spirit and service of the forefathers and reconsecrate its best efforts to their crusading zeal for the perpetuation of their courage and faith.

II. REAFFIRMATION

(See resolutions of 1951, 1952, 1953, 1954, 1955, 1956.)

A. Dedications

1. Principles of the Declaration of Independence and the Constitution of the United States.
2. Sovereignty and integrity of the United States.
3. Appreciation of our heritage.

B. Preserve the Constitution

1. Expose world government and Atlantic Union.
2. Restrict the United Nations, UNESCO, Red China.
3. Oppose the Status of Forces Treaty, the Genocide Convention, International Labor Organization, Organization for Trade Cooperation, General Agreement on Tariffs and Trade, Reciprocal Trade Agreements, Covenant on Human Rights.
4. Support the Bricker amendment on the treatymaking power; the Reed-Dirksen (now Dirksen-Gwinn) amendment on the taxing power; the Byrd-Bridges amendment on expenditures and receipts; the Mundt-Coudert amendment to reform the electoral college; the Reed-Walter (now Gwinn) amendment to give States full power to originate amendments to the Constitution.

C. National defense and foreign policy

1. For superior air power and adequate Army and Navy.
2. Sever diplomatic relations with the U. S. S. R.
3. Outlaw the Communist Party.
4. Curtail foreign spending.
5. Oppose drafting of women for military service.
6. Release of American soldiers held in Communist prisons.
7. Oppose pooling atomic information and resources.

D. Domestic security

1. Preservation of McCarran-Walter Immigration and Nationality Act.
(a) Oppose influx of additional refugees.
2. Oppose Federal aid to education with inevitable control.
(a) Urge a recognition of divine guidance in school programs.
(b) Urge study of American history.
3. Support Sons of the American Revolution bill of grievances.
4. Urge oath of allegiance for candidates for public office.
5. Question membership of public officials in world government promoting groups.
6. Oppose socialized medicine.
7. Caution on fluoridating water.
8. Support of right-to-work laws, forbidding compulsory unionism.
9. Resumption of its constitutional obligations by the Congress.
10. Gold redemption.
11. Economy in government.

E. Endorse investigations

1. Tax-exempt foundations.
2. Congressional committees of investigation.

F. Endorse patriotic programs

1. Alexander Hamilton bicentennial celebration.
2. Amendment to flag code requiring display of United States flag when U. N. flag is displayed.
3. Flag protection and flag on graves of war dead in Korea.
4. Urge General MacArthur's counsel on Japanese Peace Treaty.

III. CURRENT RESOLUTIONS

1. Atoms for peace

Whereas a statute of the International Atomic Energy Agency has been submitted to the Senate for advice and consent to its ratification as a treaty; and

Whereas the United States has already concluded more than 40 bilateral agreements with selected countries looking to cooperation in atomic research; and

Whereas the United States is expected to contribute its knowledge, materials, and money to said international agency in which it is outvoted by nations, most of which are unable to contribute anything; and

Whereas by majority vote Red China can be admitted and there is nothing to prevent shipping uranium, etc., to the U. S. S. R., Red China, or Soviet satellites;

Resolved, That the 44th annual congress of the National Society of New England Women urge the Senate of the United States to refuse to give its advice and consent to the ratification of the statute of the International Atomic Energy Agency as a treaty.

2. United Nations emergency force

Whereas the control of the people over their Armed Forces is one of the vital elements of sovereignty; and

Whereas the lesson of the Korean "police action" is that the United States, while bearing 90 percent of the cost in lives and dollars, was denied victory by the political considerations of the United Nations;

Resolved, That the 44th annual congress of the National Society of New England Women urge the President of the United States not to transfer any of our United States Armed Forces to the United Nations or any international command under "treaty obligations" or otherwise.

3. United States aid to satellite governments

Whereas the Union of Soviet Socialist Republics has drained the satellite countries of their resources; and

Whereas it is proposed to give money and materials to the Governments of Poland, Hungary, and other satellites of the U. S. S. R. which enslave their people;

Resolved, That the 44th annual congress of the National Society of New England Women oppose financial and material aid to the satellite governments of the U. S. S. R. which make it possible for these oppressors of their people to stay in power.

4. Reduce the $71.8 billion budget

Whereas the budget of fiscal year 1955 was $64.6 billion and has increased to nearly $72 billion, the larger part of the increase being in domestic civilian expenditures and not in the military; and

Whereas to curb inflation, reduce taxes, and prevent the triumph of socialism by spending ourselves into destruction;

Resolved, That the 44th annual congress of the National Society of New England Women support the bi-partisan leaders of both Houses of Congress who are determined to cut this largest peacetime budget in history.

5. Proposed legislation on civil rights

Whereas so-called civil-rights legislation would sacrifice liberties guaranteed to all citizens by the bill of rights of the Constitution of the United States and wipe out States' rights for government by commission and police state methods of enforcement;

Resolved, That the 44th annual congress of the National Society of New England Women oppose all so-called civil rights legislation now pending in the Congress of the United States.

6. Senate cloture rule

Whereas civil-rights agitators are working to change the Senate rule on the closing of debate in that body in order to make easier the passage of civil-rights legislation; and

Whereas seven bills before a subcommittee of the Senate Rules and Administration Committee propose (1) to change the presently required affirmative vote of two-thirds of the Senators duly chosen and sworn to (2) to two-thirds of those present and voting, or (3) to a simple majority vote; and

Whereas traditionally the Senate is a curb upon hasty action by the House and is now the only free parliamentary body left in the world:

Resolved, That the 44th annual congress of the National Society of New England Women urge the Rules Committee and the Senate of the United States not to stifle freedom of speech on the Senate floor, but to maintain its present rule requiring an affirmative vote of "two-thirds of Senators duly chosen and sworn" as this country's greatest protection against adoption of harmful legislation promoted by special interest groups for selfish ends.

7. Federal aid to school construction

Whereas professional educators have lobbied for Federal aid to schools for 30 years under any pretext and now are the chief advocates of Federal aid for school construction; and

Whereas the evidence is overwhelming that the States do not need or want more Federal aid to school construction:

Resolved, That the 44th annual congress of the National Society of New England Women reaffirm its opposition to more Federal aid to education, in whatever guise, and urge continued faith in the ability of crossroads America to best know and meet local school needs, without the risk of control, inevitable with so-called Federal aid.

8. Socialism in the churches

Whereas socialism is fruit of the same tree as communism; and

Whereas church social action programs in the name of "peace" and "brotherhood" make socialism respectable:

Resolved, That the 44th annual congress of the National Society of New England

Women recognize the fallacy and danger of promoting measures which can lead only to world socialism and the autocratic state and protest using our churches and our money for such political purposes.

9. Courtesy resolution

Mrs. ERNEST H. PERKINS,
Mrs. FRANK PARCELLS,
Mrs. FLOYD WOOLSEY,
Mrs. GERALD O. INMAN,
Mrs. WM. D. LEETCH, *Chairman,*
Resolutions Committee.

The South's Progress Prospects

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. HILL. Mr. President, on Saturday, June 1, 1957, an excellent editorial entitled, "People of Nation Are Impressed by South's Progress Prospects," appeared in the Birmingham News, one of the Nation's finest daily newspapers. The editorial forcefully points up the growing realization by all our people of the advantages of the South and its economic prospects. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEOPLE OF NATION ARE IMPRESSED BY SOUTH'S PROGRESS PROSPECTS

In recent years it has been widely evident that the people of this country have been specially impressed by advantages of the South and its economic proposals. Much comment to that effect has been backed up by the coming of many new citizens from other sections to this region and by the marked growth of business and industry that already has occurred.

The advantages of this area in manpower, natural resources, climate have, of course, been major factors in this advance. But fundamentally what has counted most has been the growing recognition by the people of the South and of the rest of the Nation of the opportunities there advantages afford. Whatever stimulates and extends such recognition contributes to the expantion of the opportunities these advantages

It is highly gratifying, then, that the results of a poll announced yesterday by the American Institute of Public Opinion emphasize anew the recognition by the people of the Nation as a whole of this region's potentialities for continuing advance.

Dr. Gallup's interviewers put this question to a carefully balanced cross-section of adults: "Which section of the country—East, Middle West, South, or West—do you think will go ahead most rapidly in the next 20 years?"

The West led in the replies but only by a small margin over the South. Thirty-five percent named the West, 31 percent the South, 19 percent the Middle West and 16 percent the East.

As was to be expected, sectional loyalty influences judgment on such a question, the survey indicated. Naturally many are strongly inclined to think well of the prospects of the region in which they live. But despite such feelings, objective considerations obviously entered very importantly into the formation of answers. For instance, more people in New England put the prospects of the West and South above those of the East than put their own section first.

Clearly the high regard for the South's future shown over the country is a widespread and effective influence that can make for more newcomers, more activity, more investment in this region. The survey indicated a high degree of confidence also among the people of the South, with 65 percent of those interviewed in this area putting its prospects first.

Whatever southerners can do to expand sound realization of this region's opportunities and advantages will contribute toward new progress. What we certainly can do is to strive to see our many continuing problems as comprehensively and as realistically as possible and to press on to the utmost with our efforts toward constructive solutions. Effective endeavor of that kind makes both for growing realization of our advantages and potentialities elsewhere and for soundly increasing confidence among ourselves.

Let's find fresh impetus in the appreciation of this region's possibilities in other parts of the country and get on with our many tasks. And may Americans in other areas achieve more and more understanding of our special problems and of the key importance of our own efforts in striving to work them out and of the need for adequate latitude and responsibility in doing so.

Meat Inspection

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. HUMPHREY. Mr. President, among the activities we too often take for granted are those of the Meat Inspection Division of the Department of Agriculture. An article recently appeared in the St. Paul Pioneer Press for Saturday, May 25, 1957, which discloses just how important this operation can be. The article is written by Alfred D. Stedman and is entitled "United States Meat Sleuths Halt Beef Parasite."

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES MEAT SLEUTHS HALT BEEF PARASITE

(By Alfred D. Stedman)

Coming home from his hitch in Europe, an American GI brought back in his body a parasite called cysticercus bovis, or, in lay language, a tapeworm.

As a hired farmhand in Marshall County, he unknowingly infected a herd of cattle with it. Ten of the animals, when shipped to South St. Paul for slaughter, were in condition to spread tapeworm to people who like beef rare.

But the whole story has now come to a happy conclusion, with a cure for the GI and avoidance of infection to others. This is because the beef cattle shipment was sent to a federally inspected meat plant staffed with United States Government inspectors who detected the trouble.

The story came Friday to attention of the Pioneer Press. This newspaper was informed that Federal condemnation of the 10 head of infected cattle cost a South St. Paul meat packer more than $2,200. But the packer gave the Government full cooperation in running down the facts, and was happy to do it. He gets his money back in public confidence in his meats that are stamped with the round U. S. inspection stamp.

The story's moral was described as being that, if the cattle had been shipped to a non-Federal plant lacking an efficient meat inspection service, their infection could have gone undetected with resulting risks of spreading to beef eaters. A bill providing voluntary State inspection to any of the State-licensed plants in Minnesota wishing to pay the costs was introduced in the last legislature with veterinary backing. But it didn't pass.

The parasite cysticercus bovis is described as one that must spent one cycle of its life in the body of man and the other in the body of cattle. Instances of the ailment have been sporadic in Minnesota for years.

INFECTION TRACED

Main facts in the case were obtained from Jacob Brand, Federal meat inspector, and Dr. C. A. Ward, inspector in charge of the USDA Meat Inspection Branch at South St. Paul. In all, some degree of infection was found in 22 animals, but only 10 were of a nature to require condemnation. Dr. Harold L. Geick and Dr. J. V. Shannon of the United States Meat Inspection Branch detected the infection.

With cooperation of the South St. Paul packer, the infection was traced back to the farm in Marshall County. Dr. Joe R. Held of the Minnesota Public Health Service, with cooperation of the local physician, traced the infection to the hired hand. He is now undergoing treatment for tapeworm. No infection has been found thus far in the farmer's family. Failure of the hired hand to use modern sanitary facilities was blamed for spreading infection to the cattle herd. That failure, too, the case record states, has now been corrected.

Commencement Address by Hon. Sherman Adams at Centre College, Kentucky

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. COOPER. Mr. President, on June 2, 1957, the Honorable Sherman Adams delivered the commencement address before the graduating class of Centre College, Danville, Ky.

I ask unanimous consent to have printed in the Appendix of the RECORD the excellent address delivered by Governor Adams on that occasion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SHERMAN ADAMS, THE ASSISTANT TO THE PRESIDENT, AT THE COMMENCEMENT EXERCISES OF CENTRE COLLEGE OF KENTUCKY, DANVILLE, KY., JUNE 2, 1957

This is a wholly unexpected and indeed a surprising privilege. Few Vermonters consider themselves permitted in Kentucky, let alone entitled to address a fine old college such as this. Lest my dialect confuse you, written translations of these remarks are available for home perusal, should you care to have them.

I need not be reminded before such a convocation to beware of political subjects. I do think that, in our political loyalties, too many have become disciples of terms rather than of principles. Whatever our political labels may be, they ought to be affixed to no chauvinistic creed but to something that is vital, understood, and meaningful.

You have claims here both to soundness and distinction. The fact that, as an independent institution, Centre College continues to exist is a testimonial in itself to its vigor and resourcefulness. You will, as alumni, devote some of your time and talents to keep this institution a vital and effective force in American higher education. The small college, the mother of much of the brains and energy that motivate the free competitive system in America, must now seek sustaining support from its legatees, its sons and daughters. To whatever extent your lot in life gives you the opportunity, you will find the sharing of yourself and your means gives a fuller satisfaction to your own accomplishments.

Among the products of my small world of New England is a poet. To some of you these verses are familiar, to others reminiscent.

"Two roads diverged in a yellow wood,
And sorry I could not travel both
And be one traveler, long I stood
And looked down one as far as I could
To where it bent in the undergrowth;

"Then took the other, as just as fair,
And having perhaps the better claim,
Because it was grassy and wanted wear;
Though as for that the passing there
Had worn them really about the same,

"I shall be telling this with a sigh
Somewhere ages and ages hence:
Two roads diverged in a wood, and I—
I took the one less traveled by,
And that has made all the difference."

As Robert Frost so eloquently says, a privilege we share in America is that of choice. The decisions about the ways we take may now seem trivial, but the choice you make will presently commence to make all the difference. What a man does with himself and his talents is pretty much his own business. The college gives him horizons and helps him focus his sights. His country confronts him with an opportunity. The capacity to capitalize on that opportunity never comes in full measure to the man who uses his leisure to camp in front of a TV screen or to indulge himself in the whims of life at a dog track or at a drinking club. No one ever needed a college education to be able to interpret Confidential magazine, or the romanticisms of the comic strips.

College education offers an introduction to the interesting experience of exploring worlds that to the casual traveler are foreclosed. I matriculated in the year 1916, in the first year that Ernest Martin Hopkins became president of my college. Some years later he had something to say about what he called the aristocracy of brains. He did not mean that opportunities for intellectual accomplishment ought to be arbitrarily reserved to the few, but rather that those who were willing to join intellectual capacity and self-discipline could belong thereby to a distinguished company. An educated man, said Dr. Hopkins, is a disciplined man. Indeed, a prerequisite of holding responsibility is learning how to hold yourself, which leads to a very old legend.

You students of ancient history may remember that Alexander the Great, during his conquest of India in 325 B. C., once stormed a great fortress. As the king went over the wall his side was pierced by an arrow, which settled in the bone under his heart. His aids being unable to remove it, the physician, Critodemus, found the arrowhead so firmly embedded that it had to be cut out. He told Alexander, and called upon several of his aids to hold him during the operation. Alexander stayed them, saying: "the man who has learned how to hold himself needs no one else to hold him."

Perhaps the first task in this business of taking on the weight of things is to do a little reasoning about the future. Right off, let us admit it is a different kind of world—and that has its bearing upon you, your job, your family, and your future. You can figure things out for yourself on the same basis as your father or grandfather did if you want to. But some of you will have to put yourselves to different tasks, for there is different work which confronts the educated man and woman in this age, and there is no escape from it.

For one thing, you are lucky that you are at the beginning of things, and that is an exciting place to be. The proof of the ominous change that demands the attention of some of you, needs only a statistic. It is called simply, the explosive index, the measure of the relative destructive power of weapons in the hands of men.

This explosive index increased from a factor of 1 in the Middle Ages to a factor of 8 on the eve of Hiroshima. Next day it jumped to 10,000. With the firing of the H-bomb at Eniwetok the index of destructiveness jumped to 10 million. In just over 10 years the capacity of man to devastate the world has increased more than a million times.

There is no graduate of Centre College but who knows this fact if no other, that the best that is in us, in brains, ingenuity, devotion, and selflessness must be devoted to preserving a peaceful world. Toward this end there are many roads that a young man, and indeed a young woman, may travel.

For myself, concerned, as I have been, among other things, with the staffing of government, I know whereof I speak when I say that there are not only opportunities but great responsibilities that must fall upon those who have the talents that fit them for public service.

To those determined aristocrats with the vision and determination to be willing to undertake it, let me direct some remarks. There are fields of human service which still have the promise of taking a fearful, frustrated world out of its exasperation and hopelessness. These fields are far from wholly explored.

I speak not of science, which by its ingenious devices lightens more and more of the drudge of life, and lifts so much of our routine out of the sordid and the ordinary. While scientists have performed with great brilliance, they have brought humanity to the precipice of its own downfall. Much of the best brains of the world are now devoted to the connivance of machines of destruction. At this grim task they have literally wrought miracles. But with each diabolical discovery, more anxiety and uncertainty are added to the daily living of every citizen, and, to the young person the significance of this has the maximum emphasis.

The philosophers have tried as best they could to rationalize for us a moral code, but we have seen few acceptable theories beyond those based in faith that make much sense out of things. There have been no theorems that have commenced to solve the mysteries of the Soviet mind, nor have they been able to furnish acceptable common denominators for the ideological differences that divide the world.

What I have to suggest is the worthiness of engaging your heads and hearts in the solution of the riddles which lie at the roots of political and economic questions which are the world issues of this age. This is no task for the scientist nor the abstractionist. It calls for tremendous human understanding. It is one of today's highest callings.

If you had lived in the time of Webster or Clay and were intelligent and ambitious, there were three occupations to which you would probably have aspired. They were the ministry, the law, and the profession of teaching.

In the vernacular, lawyers are today a dime a dozen; we have almost relegated teaching by our treatment and paltry pay to a second-class profession; great success in the ministry demands extraordinary talents, which, unfortunately, are much better rewarded in other fields of activity. For all these professions I have the profound respect, never having, apparently, the aptitude for any of them.

But if it is frontiers that you want and a challenge to face, take a long look at the political and economic complexes faced by this Nation in the world today. As every one of you know, we are diligently in quest of a peaceful world. This is what the President calls waging the peace.

How we get along with England and France is of great importance.

But it is no longer unimportant how we get along with Vietnam and Pakistan, Saudi Arabia and Morocco, Indonesia, and Ghana, and the host of small nations all over the world. They have all become important. Each one presents a separate and a unique problem. Each possesses national characteristics, a national personality, and each reflects the particular aspirations of its own people.

Some of these nations have become newly independent, some are weak in resources, others wracked by disease. Most of them lie along the perimeters of the Soviet world, from the Baltic to the Adriatic and the Aegean Seas, past the Red Sea, the Arabian and China Seas, to the Yellow Sea and the sea of Japan. They are a chain of nations which are the objects of Soviet aggression and subversion and are literally battlegrounds upon which we wage peace today.

The Soviet vary their efforts; some have been military, some are economic, others political or diplomatic. Some of these areas are now quiet. Others are still active. Not one of these can be regarded as finally lost, nor as finally won, although these people are slowly and surely edging toward freedom's cause.

Most of these small countries have problems of survival, of obtaining enough to eat, something to wear, the bare necessities of shelter, of schooling, even the rudimentary conveniences of this modern age. Their people have little interest in the doctrinaire debate between communism and democracy. Their primary problem is existence.

The remedies to these weaknesses they must find if they survive. These weaknesses are not going to be removed simply by our dollars or by our foodstuffs or by modern machinery, or wholly by new techniques or modern methodology. All these help, but there is another critical need. It is hope, incentive, the will to survive.

In such hope lies the strength which they need. What is of the utmost importance to you and your future is that such strength is about as indispensable to us as it is to them.

All of this complex problem, every aspect of it, calls urgently for our understanding and best efforts. As in most worthwhile accomplishments, to have an understanding of what this is all about takes long apprenticeship, a kind of internship, but it is the important world's work, whether it be in diplomacy, foreign economic policy, administration of economic aid programs, or whatever activity you choose.

Diplomacy is the politics of international affairs, so I suppose it could be said that diplomacy is the politics of peace, and the diplomat the architect of stability and freedom. Modern diplomacy demands skills of many kinds—it demands political scientists, economists, linguists, administrators, historians, lawyers, and, not least, it demands salesmen—salesmen of freedom.

Foreign service nowadays includes a good deal more than conventional diplomacy. The mutual-security program, so-called foreign aid, requires agricultural, industrial, and technical specialists by scores. These people are more than teachers and demonstrators. They are truly missionaries for our values and way of doing things. All of these have the task of spreading the truth about freedom to oppose the propaganda of slavery. Foreign service includes as well certain forms of informational work, requiring diverse abilities of high order.

Never in American history has there been a time when you could serve your Nation in so many places and in so many ways.

In this world of change, forms of government change, problems of government change, policies change, and, above all, people change. With the diversity of personalities, of heritages, interests, and needs, the problems of foreign representation become far more intricate and demanding than they were in the old days of royal succession and social diplomacy.

If I have any explicit hope to express about the future of any one of you, it would be that among you, there might come to a few an unquenchable urge to put your talents to the test of such service. Centre College could bequeath no more precious heritage.

In any event, I hope one thing will remain always clear in your minds. If out of this discussion there is but one recollection, never forget this. Whether you ever enter any one of these pursuits; whether you ever serve a day in public service; everyone has the citizen responsibility to take time enough from his daily duties to know what is going on, to form an opinion, and to keep his point of view both current and decisive.

It is his privilege and responsibility to express a conviction.

An educated person can do no less than to speak and to vote with current knowledge of the overwhelming responsibilities to which our Republic has fallen heir. A sure death for freedom, an inevitable loss of every real privilege to which an individual here in America is today the inheritor, can result from visionless, ignorant citizenry, national leaders, and policies.

So let us tend to the business of knowing what we are talking about. If today's apparent conflict is one of economic theories, or forms of government, the underlying struggle deals with the nature of man. It is a struggle that goes to the roots of human spirit, and its lights and shadows fall across the whole sweep of man's destiny.

Not long before this present college was founded, this Nation was itself struggling for its own independence. Today we are a great nation in a world that is ideologically divided against itself. What power lies in man to resolve the philosophical conflicts of the human mind must now be directed to find the means whereby human beings can live together on the same planet.

To this elusive purpose the ingenuity of man must be relentlessly dedicated. Each of you must assume his share, his place, and his duty.

In this great adventure (and a great adventure it is) the dependable ally is not the thing seen, the argument or the weapon, the stratagem or the invective; but rather the unseen, the conviction, and the faith. The new horizons are the concepts still unborn in man's mind to which dissident mankind can turn, in the confidence of his soul, that in them lies an acceptable human common denominator. This task is never done while there is a mind left to be persuaded or a peace to be won. And in all this life your work is the bread—and fun is the leavener.

And so let us say "So long" to each other and to Centre College. Along the way may luck and laughter reward your labor and lighten the burdens on whatever road you undertake to travel.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. JOHNSON of Texas. Mr. President, we are meeting today on the 10th anniversary of one of history's most important dates—the origin of the Marshall plan. It was on June 5, 1947, that former Secretary of State George C. Marshall unveiled the program at Harvard University. It was a daring, imaginative plan, adapted to the needs of the times.

The Marshall plan has passed into history. There are new situations and new problems which call for new concepts. But it met a basic crisis of history, and should be commemorated.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Ten Years After," from this morning's Washington Post and Times Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEN YEARS AFTER

When George C. Marshall, then Secretary of State, rose to accept an honorary degree from Harvard University on June 5, 1947, the course of world affairs was at one of those fateful turning points seldom identifiable except in retrospect. The hopeful vision of lasting world peace and restored prosperity which had emerged toward the end of World War II was not coming to pass. Except in Moscow, general fear, frustration, and uncertainty seemed to have paralyzed policy here and abroad.

Russian and Chinese Communist expansionism had shattered the dream of East-West political harmony and cooperation. The fond expectations of Bretton Woods days that Europe could quickly rebuild and modernize its shattered industry had proved to be wrong. Britain, rationing even potatoes, was unable longer to sustain Greece and Turkey, beset by Communist subversion and outright Russian threats. The severe European winter of 1946–47, hard on a season of bad harvests, had added to the Continent's economic woes and all but killed its spirit.

In the first two postwar years the United States had distributed some $8 billion in emergency relief and rehabilitation assistance, designed to tide over war-battered European countries until they could get on their feet. But enormous problems remained. And so the Marshall plan was born—really no plan at all, but a refashioning of foreign-aid policy to meet the needs of reconstruction. The policy bears the name of a great soldier and an outstanding Secretary of State. But it was developed and carried out with a unanimity of purpose and method by Congress, the executive branch, the American people generally, and the participating European nations that would have been remarkable even in wartime.

This 3-year $12 billion program has long since more than paid for itself in terms of economic recovery and stability. It continues to bear fruit in the steady movement toward European economic and political unity. The unhappy measure of the Marshall plan's success was the desperate turn in Russian policy which followed Stalin's refusal to join in the program. But a revived Western Europe, joined with America in NATO, survived these Communist thrusts, too—the Berlin blockade, disruptive tactics in Italy, France, and elsewhere, and the coup in Czechoslovakia.

Since Korea, American foreign aid has been largely military. Now, in consequence of the Russian-American atomic stalemate, the active East-West struggle has shifted to new ground: the continents of Asia and Africa where a third of mankind freshly emerged from colonialism is seeking a way to economic development and political stability. And so a decade after Secretary Marshall urged American aid to assist in the return of normal economic health in the world, a new kind of challenge calling for new assistance concepts faces America. President Eisenhower has proposed the kind of program that is needed—long-term economic development assistance, free of political and military strings. If Congress will respond, as it did to the challenge in Europe, the rewards may be even greater than those which flowed from George Marshall's historic policy.

The Organ as the Voice of a Greater Patriotism

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. REVERCOMB. Mr. President, one of our splendid American cities, Montclair, N. J., has recently set an example which it is hoped will influence the entire Nation. Under the leadership of one of its leading citizens, who was a distinguished member of this body, Hon. Albert W. Hawkes, of New Jersey, the people of that community have been planning for a revitalization of the deep meaning of Memorial Day in the hearts of the people. In the beautiful new auditorium of the State Teachers College in Montclair, the citizens of the city and vicinity are installing one of the greatest pipe organs in the country as the voice of a greater patriotism. For this purpose a large sum of money has been raised. With that organ as an inspiring center their aim is to rally Americans everywhere to a more vivid realization of the cost of our heritage.

On the eve of Memorial Day, at a meeting attended by several hundred, addresses were delivered by former Senator Hawkes and by our own Senate chaplain, Dr. Frederick Brown Harris. This event may have such salutatory influence on the entire Nation's future observance of this day of memory that I ask that portions of these two addresses be printed in the Appendix of the RECORD.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

FREEDOM IS NOT FREE

(By the Honorable Albert W. Hawkes)

My only reason for being on the program tonight is to tell you why I have a real interest in the installation of the memorial organ in the new, beautiful memorial auditorium of the New Jersey State Teachers College at Montclair. There is much that I could say in praise of our forefathers, including those who made the supreme sacrifice or

offered to make it during the centuries when our form of liberty was born and almost handed to us on a silver platter. I say almost because since 1917 we have participated in the fighting of two Great Wars in the defense of liberty and freemen. We have carried a tremendous part of the burden of the whole world and we must be careful not to go the same way as all nations of the world who have preceded us have gone through assuming more than their abilities, powers, and finances could stand. The world has not changed much since the time of Pericles in the 5th century before Christ. Even today the Athenians or Greeks look to the government to support them rather than following a policy wherein the citizens support the government.

Many years ago I realized that the reason the United States of America was moving toward world leadership was because our whole philosophy of life was founded on the freedom of the individual under God. That freedom involves the voluntary cooperation of our citizens in accomplishing important things in the interest of the human individual both singly and collectively. I came to realize that the day we called Decoration Day was slipping away from the people and if it slipped away too far we could not expect to have in the future valiant, voluntary soldiers to defend us. Compulsion of law can only make a slave army and a slave army is always a failure in ultimately defending the liberties of man.

During my term in the United States Senate I listened attentively to the debates on the draft law. It became apparent that no nation through the power and force of government can legislate a true soldier to defend freemen. The kind of an army that this Nation needs to defend the principles of freemen must develop from the better impulses of men and women in voluntarily defending things in which they believe to the point where, if necessary, they are willing, yes, even anxious, to make the supreme sacrifice, or at least put themselves in jeopardy where the supreme sacrifice can easily be the result unless fate decrees otherwise. The point I make is that we cannot have that voluntary group of defenders of liberty if the people do not show the oncoming generation that liberty was born of voluntary action and further, and quite as important, that those of us who have profited by the sacrifices of others in the cause of liberty are grateful enough to voluntarily give up a few hours of our time once a year in a memorial service to express our deep respect and gratitude to the men and women who died or who were willing to die on the battlefield in defense of these precious privileges which are the most valuable things in life. Liberty is freedom but freedom is not free. It is the most precious thing in life; therefore, it is the most costly thing, involving the willingness to make the supreme sacrifice and the willingness of our citizens to put themselves in jeopardy and if fate decrees to be maimed in battle and perhaps incapacitated for life.

I have flown pretty much around the world and have visited the hospitals where our maimed and injured have been treated and were convalescing. I have visited American cemeteries where thousands of little white markers testified to the fact that our men prized liberty and opportunity for the human family higher than they prize life itself. I have wondered as I looked at the headstones and saw the little white markers whether our people back home realized that under each marker lies a human being who died for his country and was just as precious to his family as any member of our family who had served in the same great cause was to us.

This organ which we plan to install is tied in the hearts and minds of those whose gifts make it possible to the past sacrifices which have bought our freedom. Nothing touches the soul or consciousness of a human being more than beautiful organ music. Somehow something from the soul of the organ enters into ours in a way that often surpasses the greatest sermon that could possibly be preached. We hope that our accomplishment here in Montclair may be used as a pattern to revitalize our citizens throughout the country to observe Memorial Day in the spirit which was intended as our forefathers set aside this day of remembrance. Without a proper observance of Memorial Day, at which once a year music and speech inspire our young people, we will greatly lessen the voluntary response to the call of duty in times of vital need and peril to defend ourselves.

THE LOST CHORD

(By Dr. Frederick Brown Harris, Chaplain, U. S. Senate)

I count it a privilege and an honor to share with you this significant hour on the eve of our National Memorial Day. If the vision splendid which flames in the heart of your fellow citizen, my good friend, that great American, Senator Hawkes, come to fruition, then Memorial Day will be hallowed in all America with a deeper meaning than its present observance suggests.

Because of its possibilities, this gathering here tonight may be memorable. The torch of a genuine remembrance and the expression of a heartfelt gratitude lighted here may indeed be carried by kindred hands across the land from sea to shining sea. For surely one cannot be justly charged with being a killjoy and a prophet of gloom if he calls anxious attention to the evident fact that what we call Memorial Day is being given almost entirely to today rather than to the yesterdays. It is predominantly a day for pleasure and travel. Instead of any part of it being devoted to contemplation of the past, it is devoured by transportation on fast cushioned tires over the roads of the present.

Jesus said to those who had made religion a racket that His Father's house, which was meant as a place of prayer, had been made into a den of thieves. With equal concern we might say to unthinking Americans by the million that the day designed as a cathedral of grateful remembrance, ye have made into a picnic of selfish and trivial indulgence.

Now this is not a plea that the 30th of May be turned into a day to be dreaded by those anxious to escape from the routine of ordinary days or by youngsters tingling with the wild joy of living—not at all.

* * * * * *

There is no thought on Senator Hawk's part or in the minds of those who share his radiant hope that Memorial Day be shut off from the unfettered delights of a holiday, but certainly any patriotic American who becomes at all conscious of the desecration of the day in the light of its hallowed purpose will gladly agree that on the morning of that day for at least 1 hour, millions, millions of Americans ought to throng their common places of assemblage in their various communities to actually make the day a holy day as well as a holiday. Certainly that is not too much to ask, and the beneficial effects of such a custom would be beyond calculation in fostering patriotism pure and undefiled.

No matter what else the day may hold, if in all minds top priority is given to remembrance, if on that day a nation really gathers around an altar of gratitude under the spell of stirring music and of words fitly spoken, then year by year there will be left in a multitude of receptive hearts rich deposits of understanding and appreciation that can be found only in a contemplation of the exploits of other days and hours.

How quickly we forget the sacrifices of tense days of conflict which tried men's souls. More than once I have seen the spires of Oxford against the sky in an English twilight—somehow the sacrifice of other days always is very vivid in my mind as I read again those stirring lines.

"I saw the spires of Oxford
As I was passing by
My heart was with the Oxford men
Who went abroad to die
They left the peaceful river
The cricket field—the Quad
The shaven laws of Oxford
To seek a bloody sod
The gave their merry youth away
For country and for God."

The hearts of Senator HAWKES and myself were welded together in the fires of World War II when as Chaplain of the Senate I was with him in that body and came to know something of his keen thinking with regard to those troubled days and of his deep spiritual insights. When it was over over there his boy came not back, he gave the years that would have been as part of the price of our freedom. My own son-in-law did not return. We loved him as a son. Both of them sleep now in storied Arlington. The Senator and I comforted each other in our grief and our hearts were knit together as with bands of steel.

An air pilot was killed in aerial combat. In the midst of the poignancy of their grief the family put a death notice in their hometown paper. In it was printed just the boy's name, the date of his supreme sacrifice, and then the eloquent sentence, he gave his life for a grand country. In those tragic days when the precious things we hold nearest our hearts were being preserved by boys like his and mine, while Senator Hawkes was in the Senate, one morning I used as a Senate prayer lines that I had written at Christmastime—to bring back perhaps something of the feeling of those dread days. May I quote them:

"Our father, God, who stooped so nigh
When love flamed in the Bethlehem sky
With face uplifted seeking light
We peer with hope on Christmas night
Above earth's gloom and hate of men
Hang in the heavens thy sign again
If in the window where we kneel
A flag tells price of nation's weal
Calm anxious hearts
If blue the star
God bless and keep the one afar
Oh, kindly light with love enfold
The weeping heart whose star is gold."

Memorial Day keeps those gold stars forever in our firmament. Memorial Day points to our heritage.

We need to stop in the midst of the rush and roar of our acquisitive day with achievement as the badge of success and remind ourselves at least one sacramental day a year that the biggest part of our lives is our heritage. For, after all, what have we that we have not received. We choose our attitude to our heritage—we can be grateful for it, live up to it, rejoice in it, and be worthy of it—or, we can take it for granted, we can forget it, be irreverent concerning it, or unappreciative of it. It has been well said that a man's spiritual quality in part is tested by his possession of a past tense, his grateful recollection of the sacrifices that have purchased his liberties.

And so Memorial Day is the time for making out anew our I O U for unpaid and unpayable bills. Not to do that is to reveal ourselves as ingrates. When we try to compute the plied up opulence whose symbol is the Star Spangled Banner, in all decency about the only thing we can do is to make out our I O U.

When we come to deal with the things that cost most, that are worth most, our only recourse is to acknowledge our debt. For every one of us there are enough unpaid bills recorded on the debit side of life's books to

dynamite the smug complacency of anyone tempted to strut and boast that he is self-made. It will help keep our feet on the ground of humility and save us from an inflated sense of self-sufficiency if frequently we recall that we are eating at vineyards that we did not plant and drinking at cisterns that we did not dig, and that we are beggers and borrowers. We can do so much and see so far because we are standing on other men's shoulders. In our hands are bills made out in crimson by other hands now dust. Surely out of that realization will come an humble Memorial Day I O U for America, the beautiful.

Turning to one who seemed so bent on selfish personal concerns that he did not even go through the motions of making out his I O U one of the great patriots of our generation said to him scornfully, "You act as though it were a negligible matter that for innumerable generations forward-looking men paying a price in sacrifice which no imagination can compute, have been building up the decencies, the securities, and the opportunities of civilized life."

And so Memorial Day is a time of sacred remembrance that America is a thing not of the earth but of the heart. It is a way of thinking and a way of acting. It is not bound by oceans, rivers, and degrees of latitude, but by principles, ideas, and attitudes more precious than life itself.

Memorial Day is a time to rejoice that America is an unbarred thoroughfare for freedom. It is the stairway of opportunity, open from the first step to the top to those who would climb. It is a classless society whose aristocracy is based not on pedestals but on personalities, not on birth but on worth, not on who you are but what you are.

And so as a salute to the past, as a pledge for the present and a guaranty of the future, may this movement begun in Montclair with its voice and symbol a glorious organ with its swelling notes heard across the land thus make a vital contribution in sounding once more in our national symphony the lost chord of a great amen as a nation gratefully remembers its past.

The Five Outstanding Senators

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Connecticut Society of the Sons of the American Revolution at a meeting of its board of managers in Greenwich on May 4, 1957, concerning the selection of the five outstanding Senators.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

THE CONNECTICUT SOCIETY OF THE SONS OF THE AMERICAN REVOLUTION,
Waterbury, Conn., May 17, 1957.

The Honorable JOHN F. KENNEDY,
The United States Senate,
Washington, D. C.

MY DEAR SENATOR: The Connecticut Society of the Sons of the American Revolution, at a meeting of its board of managers, in Greenwich, May 4, 1957, through its officers agreed on the following resolution to be sent to the Committee of Selection of Outstanding Senators, of which you are chairman.

"Be it resolved, That the Connecticut Society of the Sons of the American Revolution hereby offers its congratulations to the Selection Committee for its commendable judgment exercised in its selection of the five outstanding Senators to be recommended for approval by the Senate. We recognize the difficult and delicate task imposed on the committee to make a choice among such an extensive field of distinguished men who have served their Nation so nobly. We hereby express our wholehearted approval of the results of its labors. We note that of the 5 Senators selected, 3 were trained in colleges of New England; be it further

"Resolved, That a copy of this resolution be sent to Senator KENNEDY, as chairman, and that a copy also be spread on the records of the Connecticut Society of the Sons of the American Revolution."

Very truly yours,

THE CONNECTICUT SOCIETY OF THE SONS OF THE AMERICAN REVOLUTION,
HOWARD E. COE, *Secretary.*

Position of America in World Affairs

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a commencement address entitled "America Can't Enjoy Permanent Peace and Well-Being by Itself," delivered by John Cowles, publisher of the Minneapolis Star Tribune. This is a most excellent address regarding the world situation. It is informative, and therefore I am asking to have it printed in the Appendix of the RECORD, so that it may be available.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA CAN'T ENJOY PERMANENT PEACE AND WELL-BEING BY ITSELF

(By John Cowles)

We are living in a revolutionary age—perhaps the most revolutionary in recorded history. The world has changed more in the last 40 years than in the previous 400, much more in the last decade than in the previous century.

Technological progress is taking place at a rapidly accelerating pace. Each new scientific discovery stiffens the technological competition in which the great powers of the world are now engaged. If this country fails to keep ahead of Russia, or at least stay abreast of it, the penalty may be national disaster. It may even be national extinction.

In our lifetime, most of the world's people have radically changed their forms of government. Since the end of World War II, 19 countries have won their independence. Throughout the world there has occurred what someone has well called "The Revolution of Rising Expectations." In this revolution, more than half the peoples of the world have rebelled against the social and racial discriminations and low living standards to which they had submitted for centuries.

Most of the new nations which have recently won their independence do not have a sufficient number of educated and trained leaders to staff their governments. While many have retained the revolutionary fervor that produced their freedom, they often lack the wisdom and perspective to act in their own long-range best interest. The situation is further complicated by the skillful exploitation by the Russian and Chinese Communists, for their own selfish ends, of the aspirations and grievances of the earth's uneducated and underprivileged peoples.

It is, in fact, almost impossible to exaggerate the importance of American foreign policy in this revolutionary period.

Our foreign policy is a thousand times more important now than when I was a boy. Then, we felt secure in the protection of the two oceans and behind the friendly shield of the British Navy. Today the two oceans no longer offer such protection and the friendly shield no longer functions.

WHY THE AMERICAN BUDGET IS BIG

The current fight over the Federal Budget is only one indication of the immense importance of our foreign-policy decisions. The budget inspires controversy because it is big, and it is big because the great bulk of our total Federal expenditures relates to national defense and foreign policy.

International affairs have become so complicated that the Secretary of State today with the single exception of the President, has the most difficult job in the world. Secretary Dulles is an indefatigable worker and a superb international lawyer. Perhaps he knows more about world diplomatic history than any other living American. Nevertheless, I believe that some important aspects of our current foreign policy, particularly those relating to Asia, should be dispassionately reviewed and then basically modified.

First of all, we cannot have a sound foreign policy unless the public is well informed. Secretary Dulles made a serious error. I believe, when he ruled that American newspaper correspondents could not go to Red China. Mr. Dulles has since offered a variety of different reasons to justify his decision, but his arguments, in my opinion, will not stand analysis.

Basically, Mr. Dulles simply fails to comprehend that the function of our foreign correspondents is to inform the American people of what is happening in other parts of the world, not to act as agents of the Government. Whether or not we officially recognize a foreign government is completely irrelevant as to whether our newsmen should be permitted to report what is happening in that country. American press correspondents should be permitted to gather the news wherever they can in the interest of our having a well informed American public.

Wholly apart from Mr. Dulles' ruling with respect to newspapermen, there is also the question of the wisdom of our overall policy toward Red China.

PROGRESS AND SUFFERING IN RED CHINA

Some people seem to regard it as tantamount to treason to suggest a reexamination of our China policy. I disagree sharply with that attitude. I believe that our China policy should be objectively reviewed, because I fear that if we continue the present policy we shall probably suffer a futile and humiliating diplomatic defeat.

Regardless of how ruthless the present Communist government of Red China may be, most Asians believe that Mao has accomplished many creditable things of a distinctively Asian kind in China. There is, to be sure, much suffering and starvation in China, but there always has been. We must not blind ourselves to the evidence that the Communist Chinese Government has made, and is still making, significant economic progress. It is, furthermore, steadily con-

solidating its control over all mainland China.

The notion that Chiang Kaishek's nationalist forces on Formosa will ever be able to invade and reconquer the Chinese mainland seems to me absurd.

Equally unrealistic, in the eyes of most Asians, is our State Department's contention that Chiang Kai-shek's Formosa government constitutes the true blood-stream of Chinese history.

At the last meeting of the United Nations General Assembly, the United States had extreme difficulty in lining up enough votes to prevent the recognition of Red China, instead of Nationalist Formosa China, as the Chinese U. N. member. Most informed observers think it is unlikely that we shall be able to block Red China's admission to the United Nations for more than one more General Assembly at the most.

If we adopted a more flexible and realistic policy toward Red China, we might be able to secure important concessions in return for our acquiescing in its admission to the U. N. But our present policy is a sterile one. We are walking down a blind alley that will end in nothing but a humiliating diplomatic defeat.

Let us shift from China to South Asia and to Africa and Latin America. In these areas I believe that the United States needs a much bolder and more imaginative national policy relating to world economic development than we now have.

ECONOMIC ASSISTANCE IS NOT A WASTE

It is quite impossible for America to disassociate itself from the economic welfare of other countries. It is clearly in our national self-interest that the whole world experience a sound economic growth and increase in wealth. For one thing, such economic growth tends to promote political stability and therefore world stability. For another, the United States needs dependable supplies of raw materials from all parts of the globe.

Therefore we should, I believe, substantially increase the amount of funds we are currently providing for foreign technical assistance and economic development. Contrary to the widely held misconception, we are not wasting billions on giveaway programs of foreign economic aid. Aside from our foreign military aid and defense support, we are spending only between $400 and $500 million a year for genuine technical assistance and economic development aid.

This is the total for the whole globe. It amounts to less than $3 per year per American citizen. I think we would be wise to double or triple that amount.

The relationship between a giver of financial aid and the recipient is always a sensitive one. We should recognize this psychological fact by revising our foreign-aid policy to encourage the recipient nations to give us something in return for the dollar aid that we extend them.

These underdeveloped countries would feel a sense of pride and satisfaction, I believe, if we made it clear to them that we believe they have in their cultures and civilizations things that we lack and want. We might ask them, for example, to provide us with teachers in their languages and their history and culture. These teachers would then come to the United States and serve in our educational institutions. We could learn much, too, from extended visits to our colleges by Asian philosophers.

Many of the economically underdeveloped countries of Asia and Africa would be happy, I believe, if we asked them to give us some of their art objects to enrich our museums, in partial return for our dollar aid.

Other countries might, for example, give us animals for our public zoos. In countless way we could make our foreign-aid programs more truly reciprocal, with resulting psychological, cultural, and financial benefits to everybody.

To those of you who may be inclined to feel that foreign economic aid should be reduced because taxes are already too high, I would suggest that there are other things in our governmental setup to which your attention could more profitably be devoted.

Perhaps the need that is of paramount importance is to redefine the roles and missions of our own Army, Navy, and Air Force so as to reduce the present enormous waste resulting from duplication or triplication.

Under the existing military setup, our Army, Navy, and Air Force constitute three largely independent defense establishments. Because of nuclear weapons and long-range guided missiles, the traditional definitions of the roles and missions of the three services are now meaningless. Whenever a new technological invention comes along, each of the three services tries to develop it without regard for the other two services.

MILITARY PROGRAM NEEDS REDEFINITION

While I lay no claim whatsoever to possessing any personal expert military knowledge, I have talked with enough military and scientific people of high competence to have reached the conclusion that we should probably completely redefine existing military roles and missions to produce two new complementary forces:

One of them should be a strategic force built around SAC's long-range bombers and intermediate and long-range guided missiles. This strategic force should probably also include many more atomic submarines than we now have, to serve as mobile platforms for launching guided atomic missiles.

The second major element should be a tactical force equipped with atomic weapons and the essential supplemental conventional weapons for fighting so-called brush fire wars. This second, or tactical, force should possess an airborne capability far surpassing anything we now have, so that we could quickly fly a couple of ground divisions to any part of the world and supply them by air.

If we redefined roles and missions along these lines, we would be greatly minimizing, if not completely eliminating, the separate, semi-independent entities of the present army, navy and air force. The generals and admirals would henceforth have to think of themselves solely as officers of the United States defense establishment, not as officers of simply one of three separate—and frequently jealous and conflicting—services.

But even if we reorganized our military establishment along these lines, and eliminated several billions of dollars a year of overlapping expenditure and waste, I doubt that we could safely cut our total defense expenditures below their present levels. This is because the new weapons are fantastically expensive.

If we do not fundamentally reorganize our over-all defense establishment, I think we are going to have to increase our defense expenditures unless we are willing, which I for one am not, to gamble with our national security.

We cannot safely make any enormous savings in our defense spending until we have achieved a foolproof, airtight, enforceable system of universal international disarmament.

WHY TAXES WILL CONTINUE HIGH

Our taxes are high, extremely high. Much as I favor governmental economy and hope for the elimination of every possible dollar of waste, I believe our taxes will have to stay high for years to come. It might be well for us to recall what Oliver Wendell Holmes said—"Taxes are what we pay for civilization."

And speaking of civilization, let us not forget that the great British historian, Arnold Toynbee, recently suggested that the 20th century would be remembered not as the age of the atomic bomb but as the first time when man thought it practicable to distribute all the benefits of civilization to all people.

We in the United States constitute only 6 percent of the world's population. The majority of the people of the world live in Asia. One-third of all the babies being born in the whole world today are Chinese. If one adds the other Asian countries, far more than half of all the babies born today are Asian.

We Americans must comprehend the fact that the concept of permanent peace and well-being for the United States has become indistinguishable from the concept of peace and well-being in the whole world.

A few weeks ago Dr. Edward Teller, one of the world's most distinguished nuclear scientists, told me his definition of an optimist. "An optimist," he said, "is someone who believes that the future is uncertain."

Well, I am an optimist. I believe the future is uncertain. But I also have a deep conviction that if the American people become sufficiently well informed on what is happening throughout the whole world today, we will support the right policies and do the right things.

In that way we will avoid a devastating world war III that might destroy what we call civilization, and instead help produce a new era of freedom and well-being—a richer, fuller life for all the peoples of the world than any of them has ever previously known.

You Can Help Cut Federal Spending

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by George E. Stringfellow, vice president of Thomas A. Edison Industries, McGraw-Edison Co., West Orange, N. J., and past president of the New Jersey Taxpayers Association, before the annual spring luncheon of the Missouri public expenditure survey which was held in St. Louis, Mo., on May 22, 1957.

This address by Mr. Stringfellow contains a penetrating analysis of Federal spending.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

YOU CAN HELP CUT FEDERAL SPENDING

(Address by George E. Stringfellow)

Mr. President, executive director, officers, distinguished guests, and members of the Missouri Public Expenditure Survey, in reading your organization's 17th annual report and noting its long list of accomplishments in the direction of better and more economical government, I was interested in the title of one of your publications, "You Can Help Cut Federal Spending."

I have chosen the same title for my discussion today and I propose to discuss the subject with particular reference to the pending Federal budget of approximately $72 billion for the fiscal year ending June 30, 1958. Its enormous size—the largest in the peacetime history of the United States—has raised questions as to whether we may be seeing the fulfillment of the comment made 150 years ago by John Marshall, Chief Justice

of the Supreme court, that "the power to tax is the power to destroy" and of the boast made 35 years ago by Nicolai Lenin, patron saint of communism, that "Sooner or later we hope to force America to spend her way to destruction."

Gen. Douglas MacArthur, a wise, patriotic citizen, who places the welfare of his country above that of himself or his political affiliation and who lives in the rarefied atmosphere of the philosophy of George Washington, gave clear warning of what can happen when he said, "If this Nation is ever destroyed, I unhesitatingly predict it will not be from external force." Our own internal hazards, the spontaneous combustion from the accelerating complextions of modern life in an ever-multiplying community, are the ones which give rise to anxiety. They are too numerous for me to attempt to enumerate, but surely one of the most dangerous of these is excessive taxation and its sinister by-product and offspring, inflation.

There is little wonder that these questions should arise—little wonder that there is a flood of congressional mail from the grassroots of the country demanding reductions in the Eisenhower luxury budget. This budget brings to a climax a 44-year history of rising Federal expenditures and taxes that thoughtful Americans regard with dismay and apprehension.

By the terms of the 16th amendment, the Federal Government was first authorized to levy income taxes 44 years ago and in that year—1913—the Government collected $80 million, a per capita tax of 82 cents. In 1946 the income tax brought the Government $55 billion which was about $328 per capita.

In 1913 per capita income was around $358; in 1946 it was around $1,647. So, during these 44 years, dollar income increased 4½ times and income tax increased 400 times. Rates in 1913 were 1 to 6 percent; now they are from 20 to 91 percent.

During the 1952 presidential campaign, Gen. Dwight D. Eisenhower said: "I pledge that the full resources of our new administration will be thrown into the battle against inflation. * * * I pledge an elimination of waste, inefficiency, and duplication in Government. Expenditures and consequently taxes are too high. We must take steps that will make a reduction possible."

The record shows that when it came into office in 1953, the Eisenhower administration cut the Truman budget for fiscal year 1954 by nearly $12 billion, due largely to the ending of the Korean war. For fiscal year 1955 a further cut of nearly $3 billion was made. But in fiscal year 1956 there was an increase of $2 billion dollars and in fiscal year 1957 a further increase of $3.6 billion, while the pending 1958 budget proposes still another increase of $3.5 billion.

From 1940 to 1953 inflation had cut the value of the dollar about half. This depreciation stopped during the reduced spending in 1953 to 1955, but was resumed when spending increased in 1956. The cost of living increased in each of the last 7 months and is now at an all-time high.

During 20 of the past 26 years, of which 13 were peacetime years, spending exceeded income and resulted in deficits from which a large part of the present Federal debt of $275 billion was accumulated. The interest on this debt amounts to more than $7 billion annually and is increasing as a result of the higher rates which the Treasury Department must pay when maturing obligations are refunded.

In addition to the direct Federal debts, the Federal Government has liabilities amounting to approximately $250 billion for insuring bank deposits, deposits of savings and loan associations, Federal housing programs, and other similar purposes.

The magnitude of these obligations alone is sufficient to give every thoughtful American profound misgivings.

The Honorable HARRY FLOOD BYRD, senior Senator from Virginia, and one of the ablest and one of the most patriotic statesmen in the history of our Republic, has called attention to the fact that, during the past 2 years, in spite of increasing prosperity and correspondingly rising tax revenues, the margin by which total receipts exceeded expenditures was so narrow that, without the increasing revenue or even with a very small decrease in revenue, substantial deficits would have resulted. He then said, referring to the budget for fiscal year 1956:

"The present budget is in precarious balance. A surplus of only $1.8 billion is estimated when the year ends June 30, 1958. This surplus which amounts to about 2 percent, is based upon 2 unpredictables. It contemplates an increase of approximately $700 million from higher postal rates, which have not yet been approved by Congress. The second unpredictable lies in the fact that the budget for 1958 anticipates a 6-percent increase in tax revenue from existing sources. This, of course, anticipates more inflation. The Government plans in advance to spend this revenue from inflation. The fact is, however, that no one can safely predict that such revenue will develop."

Based on this slender margin, tied to two unpredictables, it is very possible that we may have a deficit in the coming year instead of a surplus.

Compared to the pending $72 billion budget it is interesting to recall that the highest Roosevelt peacetime budget was $13.3 billion in 1941, and the highest Truman peacetime budget was $39.6 billion in 1950.

Many Americans are asking these simple questions: If we can't reduce expenses, debt, and taxes during a period of peak prosperity like the present, how and when will we ever do it? If expenses continue upward, what might happen in event of a recession? Suppose the recession were to reduce the income of the people available for tax revenues? Or were to require the Federal Government to pay some part of its $250 billion of contingent liabilities? To what extent might its very solvency be impaired?

There is nothing in this world more important than the preservation of the financial integrity of our Federal Government, except the salvation of the soul.

One of the most disturbing features of the pending budget is that it proposes 18 new State-aid programs. It is disturbing because the record shows that most new programs for the expenditure of Federal funds, once begun, tend to become permanent and to grow far beyond their original size.

State aid programs serve as a good example of how new spending programs snow ball. In 1932 expenditures for State aid programs amounted to $250 million. These expenditures are now running in excess of $2½ billion annually, an increase of 1,400 percent.

Another example is foreign aid, which began as the so-called Marshall plan and which originally was proposed as a program to continue for 4 years and cost $17 billion. Instead of ending after 4 years, it is now in its 11th year and has cost more than $62 billion, as shown in a special report submitted by the Department of Commerce on May 5, 1957. This $62 billion has been added to the debt of the United States which is now 2½ times as large as the combined debt of 12 European nations that have received aid. All have a smaller per capita debt than we have. Norway and Sweden were given $400 million which both applied to reducing their own debts—just two of many examples of funds that do not contribute to mutual defense.

I now read an excerpt from an article in the Kansas City Star of August 22, 1955, which was sent to me by Mr. Edward Staples, your executive director: "A veterans' bonus proposal has been introduced at every session of the Missouri Legislature since 1946. Every one would be financed by new taxes in one form or another. The survey analyzed each proposal and in ensuing educational campaigns showed most of the veterans would have to substantially finance their own bonuses. As a result Missouri veterans the past two sessions haven't been very active for a bonus plan."

I cite this accomplishment of yours because the taxes the Missouri veterans would have to pay to finance their own bonuses is exactly the same, in principle, as the taxes all citizens must pay in order to finance the Federal grants to States which, in the pending budget, represent an expenditure of nearly $9 billion.

Of course this item is not the only one in the pending budget that needs to be cut. But the kind of educational work your organization has been doing is what is needed now on a nationwide scale.

One of the Roosevelt campaign promises in 1932 was to cut expenditures 25 percent. But before the end of his first year in office, the New Deal reversed from a policy of economy to a philosophy of spending.

As recently as June 22, 1954, in his remarks to the National Editorial Association convention at the Shoreham Hotel in Washington, President Eisenhower said: "The United States cannot be an Atlas. It cannot carry all other nations of the world on its own shoulders and we should stop giveaway programs." Since then his modern Republican administration has changed its thinking and has adopted the philosophy of the New Deal.

To sum up, unless the course of this modern Republican administration is reversed, both major parties will be spending parties. Big spending, more inflation, higher taxes, higher debt, and insolvency will be the result.

Unless the people increase their protests to their Congressmen and Senators against the modern Republican spending spree, they may find they missed their last opportunity to do so.

The Government will be as efficient as we demand and as wasteful as we permit. The time has arrived, I think, when we taxpayers, if we are to preserve our way of life, must speak out.

Joseph P. Healey, State Tax Commissioner of Massachusetts

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the May 16 issue of the Globe, Boston, Mass., in connection with the selection of Joseph P. Healey as State tax commissioner, which I believe was an outstanding appointment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD SELECTION

Governor Furcolo's choice of Belmont Attorney Joseph P. Healey for the important position of State tax commissioner is consistent with his determination to bring order out of chaos in the Commonwealth's revenue structure.

An honor graduate of Harvard College and Business and Law Schools, Mr. Healey served

with distinction for 5 years as chairman of the State's special commission on taxation.

This excellent background of education, experience, and training should serve him and us advantageously in his new and arduous job.

Address by Harold B. Wess Before the Institute of Appliance Manufacturers

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "What Is Past Is Prolog," delivered by Harold B. Wess, professor of business administration and marketing, School of Business Administration, the American University, at Cincinanti, Ohio, on Tuesday, June 4, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT IS PAST IS PROLOG

(By Harold B. Wess, professor of business administration and marketing, School of Business Administration, the American University, Washington, D. C., former vice president of R. H. Macy & Co.)

If the major trends in our country of the last 25 years are not reversed, we will end up in the same plight as Great Britain and France now find themselves—or perhaps in an even worse condition. It is a great pity that the only true free enterprise system today, which saved the world from tyranny in World War I, from nazism and fascism in World War II, and the only power capable of saving the rest of the world from enslavement, has allowed itself to bleed to death because of failure to face the facts as they exist and to take appropriate action.

A trend can only be stopped or reversed if the underlying causes are discovered soon enough and eliminated. This, I submit, we have not done. We have preferred optimistic forecasts and pleasant prophecies.

Can we not agree that our recent years have been dominated by inflation? Why should we expect this trend to stop? We are now caught in a vicious circle; the more the Government spends, the more inflation; the more inflation, the higher the Government expenses. Another vicious circle is the continuing increase in labor costs. The higher the labor costs, the higher the prices, the more inflation; the more inflation, the higher the labor costs and prices until the bubble bursts, as it must.

Budgets, Federal, State, and local, have been rising and will continue to rise despite pious speeches made about cutting Government expenses. Consumer prices, which have doubled since 1939, will continue to go up as they have in recent years despite promises made by those who ought to know better. Confiscatory taxes of business firms and the individual will continue to go up despite talk of tax cuts and they will continue to go up at the Federal, State, and local level unless the underlying reasons for their rise are changed or eliminated. There is no indication that those who promise tax cuts are doing any more than wishful thinking. As a nation we seem to prefer dealing with symptoms rather than the disease itself.

Featherbedding and restrictive practices by labor unions sap the great productive power of our country and will continue to do so unless this trend is reversed. Restrictive practices are reducing employee productivity and potential productivity, soaking up the benefits that should be derived from automation and better tools and machines.

It is predicted that by 1975 we will have a population of 220 million and that 12 to 15 percent of that population will be over 65 years of age, with fixed incomes steadily purchasing less as the value of the dollar is reduced. This inflationary squeeze will make it exceedingly difficult for this group to exist except at the lowest living standard. Further, in 1975, despite increased automation and greater productive know-how, the labor force to support a population of 220 million will be inadequate because of the higher proportion of those under 21 years of age and those over 65 years of age.

Unless labor statesmanship reverses its present type of leadership—which still behaves as if we were living in the depressed thirties instead of the prosperous fifties—the present trend of giving less and less work for more and more money will so reduce our productive power that we may achieve full employment in a decaying economy. If the average worker knew where this process will lead him and our country, I am certain that he would stop, look, and listen, for the inevitable results of continuing these policies will be the complete elimination of the profit incentive resulting in socialism and slave labor. Russia is a good example of a country with full employment, bureaucratic mismanagement (as evidenced by recent proposals for reorganization), captive unions, and a very, very low standard of living.

It is significant that a person of the economic persuasion of writer John Dos Passos says that the best way to put a man in the frame of mind to learn is to give him a good scare. His scare follows: "One of our problems today is how to control and direct our own American type of socialism. If we don't, socialism will run mad as it has in Russia and China." Dos Passos is calling a spade a spade and correctly characterizing the present trend of our economy.

Here is another scare which I hope will arouse the American people out of their lethargy before it is too late. Dr. Karl Fuerbringer (Viennese economist, translated by H. Howard Thurston) says, "If socialism, a scheme of mediocrities rather than men of proven ability, is financially unworkable, what happens when the United States is at last socialized by confiscatory income taxes and strangulation of industry in the British manner? Without a capitalist nation to produce wealth, civilization may expect chaos."

What good will it do labor to get higher and higher wages, shorter and shorter hours, more and more restrictive and featherbedding practices if in the end union members become the victims of labor dictators, or find themselves paid with a dollar that is almost worthless? Somehow we must get across to the workingman in this country that the ideas contained in a letter sent by Walter P. Reuther to President Eisenhower on November 28, 1956, apply to labor as they do to the other segments of our economy. Mr. Reuther stated:

"Ours is the challenge of achieving the delicate economic balance within the framework of our free economy in which we encourage maximum voluntary economic decisions, with a minimum of governmental economic directives. The degree of Government interference into our economic life will be determined in a large measure by the degree of social and moral responsibility and concern for the general welfare that free economic groups demonstrate in making their voluntary economic decisions. When free economic groups fail to carry out their basic social and moral responsibilities to the community as a whole, the vacuum created by such failure will inevitably be filled by greater Government intervention into the economic sphere and the area of voluntary economic decisions will be narrowed in like proportion."

I would like to go back and quote again one sentence from this letter:

"The degree of Government interference into our economic life will be determined in a large measure by the degree of social and moral responsibility and concern for the general welfare that free economic groups demonstrate in making their voluntary economic decisions."

Mr. Reuther, by his actions, seems to think that the social and moral responsibility and concern for the general welfare applies to every segment of our society except labor unions. I insist, on the other hand, that labor unions have a decided moral and social responsibility for the general welfare of our economy and society and that with very few exceptions present labor leadership is not supplying it. The moral and social responsibility of labor unions to the general welfare of our economy may in the end be the determining factor of our whole way of life because of the great strength of labor unions both in numbers and accumulated wealth. I suggest also that political parties may give in to the demands of labor unions to win support of their members although such friends may prove labor's worst enemy.

We have heard a great deal about labor's productivity but the fact is that labor's productivity is the result of better tools, better machines, and innovations in production know-how. We must not forget also that in past years there has been a shift of workers from the farm to industry, from low productivity on the farm to very high output in industry, thus accounting for part of the increase in labor productivity. How long these factors will be able to counterbalance featherbedding and restrictive practices artificially forcing a low output per man-hour is a crucial question.

The Congress of the United States should at the earliest possible opportunity make a thorough investigation into the featherbedding and restrictive practices which will ultimately strangle our economy if unchecked. It must protect labor against itself as it is now protecting labor's rights and pension and welfare funds which apparently the labor unions were unable to do for themselves.

An investigation into the building industry, for example, will show that it is riddled with featherbedding and restrictive practices. In the April issue of Fortune magazine, there is a statement which I know to be true from my own experience as a builder of branch stores for a large department store.

"The building industry has done nothing to end labor practices that demand a day's pay for an engineer to press a button starting a cement mixer at the beginning of the workday, press the button once again at the day's end."

This is not an isolated example. I remember having to discard about $25,000 worth of metal shelving and substitute wooden shelving because two labor unions insisted that each had the right to make the installation and each threatened to strike if the other did the job. If one union struck, all the other unions on the job—and there are many on a building project—would walk off, too.

I remember one man sitting on the roof of the building under construction, day after day, doing absolutely nothing, but he had to be there to represent his union because of some restrictive and featherbedding interpretation union leaders made for the particular job.

The high cost of building, which practically makes it impossible to produce housing at

prices the general public can afford to pay, will continue so long as we permit restrictive featherbedding practices to exist in the building industry today. In this connection, Fortune quotes a pertinent excerpt from House and Garden:

"Costs hardly seem to matter if you could just get FHA to cover them in its appraisal. • • • We learned to hide increased costs under easier terms. What difference did it make if your price went up from $10,000 to $12,000 if extending the mortgage from 15 to 20 years made the monthly payment lower on the higher price. The truth is that it made virtually no difference at all to the builder, so long as the easy mortgage money lasted, and so long, of course, as climbing costs has not too drastically narrowed his market."

Mr. Peter Drucker, in his recent book, the Next Twenty Years, has this to say: "Housing will be a major political issue, nationally as well as locally. We are at present building in the new industrial areas some of the worst slums this country has ever seen. • • • These new slums are expensive, but the fact that a tar-paper shack costs $14,000 does not make it any less of a shack."

Those who keep agitating for cheap Government money as the answer to building more and more houses, and, of course, at higher and higher prices, are following the dangerous pattern of the times. Getting a Government subsidy has become a matter of each for himself rather than a matter of ethics and the well-being of our total society. Something is happening to the moral fiber of our society. The so-called robber barons of the past would be shocked at the kind of invisible robbery we tolerate today.

The tragedy slowly unfolding for us is the more serious because the big companies are no longer in the hands of the owners but in the hands of professional managers. Inevitably there must be a difference, and there is, between an owner and a paid manager. I believe it is not unfair to say that it is easier and safer for professional management to give in to union demands, no matter how unreasonable, and then pass the increased costs on to the consumer. In my humble opinion, I think that is exactly what has been happening. Once that pattern has been set, the small-business man is completely helpless and must accept higher costs whether he can afford them or not. As a matter of fact in many cases, such as the building industry, for example, the contractor works under the authority of the labor unions rather than vice versa.

If what I have said thus far prompts someone to suggest that I am antiunion, I must state very emphatically that I believe in labor unions. I believe they could be and have been in many ways an asset to our economy. I believe in the rights of labor to bargain collectively but I also believe that labor must voluntarily give of itself freely to raise production to even a higher level and make its moral contribution to our total social structure. I believe in higher wages when tied to increased productivity. I believe the workingman is first a citizen of the United States and only secondly a member of a labor union and labor leaders must not be allowed to behave as though a worker is first a member of a union and only secondly, a citizen of the United States.

These are the reasons why I chose the title, "What Is Past Is Prologue" and these are the issues we are facing today. The prologue must be judged by what has been done in recent years and on that basis we should not be surprised that the great economist, Joseph Schumpeter, just before his death in 1949, stated that he was pessimistic about America's ability to survive because he felt that the American public does not understand the danger of inflation and that inflation is destroying our society.

This is a very serious indictment of the leadership of both our political parties because they know that to prevent inflation we must resort to unpleasant and uncomfortable measures. They know that those measures, for a time, may be even more unpleasant than those which were taken to combat depressions. But they have been reluctant to educate the public to the fact that it is not a depression that threatens our economy but that the imminent danger is inflation and the destruction of the middle class. Historically, inflation has usually destroyed the middle class.

The recent political campaign is a clear example of the lack of public interest in issues that so vitally affect the future of our country but were not debated. The public's lethargy to the basic economic problem and the failure of courageous leadership to wake them up is a very serious threat to our country.

In the face of what has been happening in the past, can those who glibly talk about any significant reduction in Federal, State, and local expenditures or significant reduction in Federal, State, and local taxes be serious? Our people must not be misled by false promises and prophecies. As a matter of fact, the people who talk about reduction in government expenditures must know, for example, that at least 30 percent of the increase in defense procurement expenditures in the last 10 years is due to the fact that prices have risen. Inflation accounts for at least 20 percent of all increased government spending in the last 10 years. How can anyone promise significant cuts when month after month prices go up and the value of the dollar is eroding?

The Economist, the noted British weekly, in a recent issue presented the Parkinson Law which states that British Government employees multiply by about 5 percent a year even though their total output does not increase in proportion. This should have a familiar ring for us too.

The National Bureau of Economic Research found that in the United States between 1900 and 1950 that labor rose about 125 percent while the number of government employees increased almost 500 percent. In 1900 1 employee in 25 worked for the Federal, State, or local government. Now it is 1 employee in every 8. In this connection the First National Bank of New York concludes that, "if these trends are projected into the future, one finds that in the year 2069 we will all be working for the government."

I started with the statement that unless the trend of the last 25 years is reversed we will end up in the same plight as Great Britain and France or perhaps even worse. There, featherbedding on the part of labor, restrictive practices and confiscatory taxes have almost destroyed the economy and put them on the brink of, if not into, socialism. The incentive to expand and to reinvest earnings into better and more productive machinery has been lost in these countries, knowing as they do, that increased productiveness of machines will be soaked up by labor and any better profit will be consumed by taxes.

If the trend here is not changed or stopped, it must inevitably bring us also to the brink, if not directly into, socialism and an economic system abhorrent to freedom-loving Americans. The real danger is that we are rapidly approaching the hour of decision and it will take many courageous men of stature who would rather be right than President to turn this tide.

I sincerely believe that if the American people, all the American people, understand the real meaning of recent trends and where they are leading us, they will face up to the situation. It will not be necessary to feed them political tranquilizers in order to keep them ignorantly happy.

I have great faith in the commonsense of the American people and therefore I cannot help but believe that the right kind of leaders will emerge from labor, from Government, and from industry, in time to save us from losing the social and economic system which has proved to be the bulwark against communism, nazism, and fascism and is the only strong social system left that the rest of the world can count on to keep it free.

Opinion Poll Report

EXTENSION OF REMARKS
OF
HON. F. JAY NIMTZ
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. NIMTZ. Mr. Speaker, for the past several weeks I have been conducting an opinion poll among my constituents in the Third Congressional District of Indiana on eight important issues currently confronting the Congress.

Starting late in April and continuing through most of May, questionnaires were mailed from my office in Washington to approximately 100,000 voters in the 4 northern Indiana counties I represent, St. Joseph, Elkhart, La Porte, and Marshall. Ballot forms also were printed as a public service by several daily and weekly newspapers in the district, and readers were invited to mail them directly to me.

Questionnaires were sent to practically every household in the district. Wherever possible, mailing lists of registered voters were used, particularly in the South Bend-Mishawaka area. In cities such as Elkhart, Goshen, La Porte, Michigan City, and Plymouth, telephone directories were employed. Ballots also were mailed to every rural and post-office boxholder in the four counties.

The response has been most gratifying. A total of 12,356 ballots have been received and tabulated to date, and they are still coming in.

A great many voters who took part in the poll added comments to their ballots or wrote separate letters explaining or qualifying their replies. Others expressed views on issues not covered in the poll.

These comments have been carefully studied by me and have been most helpful in determining the sentiment of my constituents on current problems.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release reporting the results of my 1957 opinion poll:

BUDGET AND TAX CUTS FAVORED IN NIMTZ POLL

Congressman F. JAY NIMTZ, South Bend Republican, today reported the results of an opinion poll among his northern Indiana constituents showing overwhelming support for a cut in Federal spending and a general reduction in taxes.

More than 12,000 voters in St. Joseph, Elkhart, La Porte, and Marshall Counties returned question forms in the poll, which has been underway for more than a month, Congressman NIMTZ reported.

The closest division of opinion was on the question of Federal aid for school construction, NIMTZ said. The vote in favor was 46 percent, with 45 percent opposing and 9 percent expressing no opinion.

A limited program of Federal grants for new school buildings has been proposed by

President Eisenhower but is opposed by Indiana Gov. Harold W. Handley.

Eighty-nine percent of those questions favored legislation to regulate and safeguard labor union welfare funds, with only 6 percent opposed.

Greatest opposition in the poll was shown to proposals for a more liberal immigration policy, with 76 percent voting against a change in the law and only 14 percent in favor.

Two key programs of the Eisenhower administration were endorsed by votes of nearly 2 to 1 in the poll. They were the foreign-aid program and the Federal program of flexible farm price supports.

Voters also endorsed Postmaster General Summerfield's request for an increase in postal rates by a margin of 72 to 21 percent.

The vote in favor of a tax reduction was better than 10 to 1, while cuts in the Federal budget were advocated by 65 percent of the voters.

The Nimtz survey got replies from 12,356 voters who either returned question forms sent out by the Congressman or clipped out ballots from newspapers. Here is the final breakdown of the voting:

	Percent		
	Yes	No	No opinion
Do you favor—			
1. Reducing the budget even if it means cutting out programs of direct benefit to you?	65	25	10
2. Legislation to regulate and safeguard labor union welfare funds?	89	6	5
3. A general tax reduction if cuts can be made without leaving the budget out of balance?	89	8	3
4. Increasing postal rates on all classes of mail to help reduce the postal deficit?	72	21	7
5. Direct Federal grants to States to help build more schools?	46	45	9
6. Foreign military and economic aid as a means of resisting Communist expansion?	54	31	15
7. Changing our immigration laws to admit more people to this country?	14	76	10
8. A flexible program of Federal price supports for basic farm products?	52	28	20

The Arthur MacArthur Army Reserve Training Center at Springfield Mass.

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a message from General of the Army Douglas MacArthur and the speech made by Lt. Gen. Thomas W. Herron concerning the dedication of the Springfield Army Reserve Training Center in honor of Lt. Gen. Arthur MacArthur.

There being no objection, the letter and address were ordered to be printed in the RECORD, as follows:

As a native of Chicopee Falls and a loyal and lifelong admirer of Massachusetts, my father would be greatly moved by this dedication. He was an ardent believer in the citizen soldier. He felt that from this category comes the very essence of our success in war; that they provide that invincible will for victory which results from the combination of leadership, training, and discipline which such centers as this produce.

DOUGLAS MACARTHUR.

ADDRESS BY LT. GEN. THOMAS W. HERRON

Colonel Foley, Mayor Brunton, Mayor Grocki, distinguished guests, ladies and gentlemen, it is a privilege to be with you today to represent the MacArthur family in the ceremony dedicating this Army Reserve Training Center to the memory of one of its distinguished members, Lt. Gen. Arthur MacArthur.

I bring you greetings and warm good wishes from his son, General of the Army Douglas MacArthur, who regrets that he is unable to be present.

In acting for General MacArthur, I am in the enviable position of being able to do what he could not have done. I can point out some of the striking parallels in his character and that of his father.

The history of this region is interwoven with that of the MacArthur family. The paternal forebears of Arthur MacArthur were scottish highlanders and had established themselves here in the early days of the Republic. His mother's family, the Belchers, were distinguished citizens of Springfield and Chicopee and Chicopee Falls for generations. It was Arthur MacArthur's maternal great grandmother, Sara Barney, who numbers among her descendants not only two great generals named MacArthur, but through the Delanos, a President of the United States named Franklin Roosevelt, and through the Jeromes, a distinguished Briton named Winston Churchill. General Arthur MacArthur's father himself was an author and essayist of note and an Associate Justice of the Supreme Court of the District of Columbia, now the United States District Court in Washington.

Historians disagree as to whether Arthur MacArthur was 16 or 17 years old when he finally persuaded his father, Justice MacArthur, to allow him to enlist in the Army. It is a known fact, however, that he won the Congressional Medal of Honor before he was 19. He and General of the Army Douglas MacArthur are the only father and son in American history who have won our highest military decoration. As a young officer, Arthur MacArthur was several times wounded, as was his son in later wars, because of an utter disregard for his own safety in combat.

Later, in the Spanish-American War, Gen. Arthur MacArthur became Military Governor of the Philippines, a position his son was to hold later in Japan. His rule there has been described as having combined a stern sense of justice and magnanimity. He introduced into the system of justice in the Philippines the right of habeas corpus, as his son was to do years later in Japan. Father and son demonstrated in every act patriotism and integrity of the highest order.

And so it is particularly appropriate that this training center should memorialize the name of Gen. Arthur MacArthur, native of Springfield and Chicopee and Chicopee Falls, and a distinguished and brilliant officer of the United States Army. The real meaning of this dedication only begins in the brief ceremonies held here today.

It will become increasingly significant as the years pass, and the MacArthur name takes its proper place on the pages of history as an inspiration to the young men who train here.

The MacArthurs leave a heritage of love of country and devotion to duty unsurpassed in our military history. Without such men no nation can survive.

Acting for the MacArthur family, I accept the honor conferred upon Lt. Gen. Arthur MacArthur by the dedication of this important United States Army Reserve training center to his memory. I express the hope that the young men who are trained in this center will be prepared to defend this Nation in war and to serve her in peace as did this outstanding American in whose honor it is dedicated.

Thank you.

Radioactivity in the Columbia River

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exchange of correspondence between myself and the Atomic Energy Commission relative to the health and safety aspects of using the Columbia River as a coolant for the Hanford Atomic Works.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

MAY 21, 1957.

Mr. LEWIS L. STRAUSS,
Chairman, Atomic Energy Commission,
Washington, D. C.

DEAR MR. STRAUSS: In Albert Schweitzer's Declaration of Conscience, given upon receiving the Nobel prize, and reprinted in the CONGRESSIONAL RECORD for May 15, 1957, there is the following paragraph:

"What this storing of radioactive material implies is clearly demonstrated by the observations made when, on one occasion, the radioactivity of the Columbia River in North America was analyzed. The radioactivity was caused by the atomic plants at Hanford, which produce plutonium for atomic bombs, and which empty their waste water into the river. The radioactivity of the river water was insignificant. But the radioactivity of the river plankton was 2,000 times higher, that of the ducks eating plankton 40,000 times higher, that of the fish 15,000 times higher. In young swallows fed on insects caught by their parents in the river the radioactivity was 500,000 times higher, and in the egg yolks of water birds more than 1 million times higher."

I would appreciate hearing from the Commission any comments it might care to make concerning this statement, and concerning the health and safety aspects of using the Columbia River as a coolant for the Hanford plant.

Sincerely yours,

HENRY M. JACKSON,
United States Senator.

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C., May 24, 1957.

Hon. HENRY M. JACKSON,
United States Senate.

DEAR SENATOR JACKSON: Thank you for your letter of May 21, 1957 in which you ask for our comments on a part of Dr. Albert

Schweitzer's declaration of conscience, and also on the health and safety aspects of using the Columbia River as a coolant for the Hanford plant.

The data cited by Dr. Schweitzer are essentially those presented by Hanford employees of the General Electric Co. at the International Conference on the Peaceful Uses of Atomic Energy. These data were published in 2 papers in volume 13 of the proceedings of this conference. They are:

Paper 280: pages 364–367, The Accumulation of Radioactive Substances in Aquatic Forms, by R. F. Foster and J. J. Davis.

Paper 281: pages 385–388, Radioactivity in Terrestrial Animals Near an Atomic Energy Site, by W. C. Hanson and H. A. Kornberg.

It is important to understand that the figures which appear in the tables in the papers referred to above, and from which Dr. Schweitzer apparently obtained the figures which appear in the paragraph quoted in your letter, represent ratios, that is, the relative increase in concentrations of of radioactivity from water to plankton and on down the plant-animal food chain. These ratios are not meaningful from the standpoint of health unless the concentrations are converted into amounts of radioactivity and a comparison is made with permissible concentrations of radioactivity in food consumed by humans. In other words, it is necessary to distinguish between rate of concentration and amount of radioactivity. In this connection, it is also important to take into account the normal process of radioactive decay.

The radioisotope of primary concern which enters the food chain in the Columbia River is phosphorus 32. It has a 14.3 day half-life and has a maximum permissible concentration in water of 2×10^{-4} microcuries per cubic milliliter. Its concentration below the Hanford site is a small fraction of that level, namely, 0.02×10^{-4} to 0.2×10^{-4}. At such levels in the water people could eat fish every day in the year without exceeding the conservative standards for exposure to the general population.

The manner in which Dr. Schweitzer presents the ratios implies that there is a progressive increase in the concentrations of radioactivity through the plant-animal food chain. This is not generally true. If one refers to the table from which Dr. Schweitzer took his values for birds (table 1, p. 385, vol. XIII of the proceedings of the International Conference on the Peaceful Uses of Atomic Energy) it will be found that the last column of the same table gives ratios of concentrations of P–32 in the bird to P–32 in its food. In only one case is the concentration in the bird higher than in its food.

Another problem is that Dr. Schweitzer takes his figures from two different tables. The value of 2000 which he uses for plankton is for gross activity. The other higher values in the paragraph quoted are for the specific isotope, P–32. Since the P–32 activity in the water is less than 1 percent of the total activity in water, the concentration from of P–32 from water to plankton is 200,000. Hence, the increases in concentrations from water to ducks, of 40,000, and from water to fish, of 15,000, should be compared to the value for plankton of 200,000, not the 2,000 figure which Dr. Schweitzer apparently obtained from another table. Therefore, as a general proposition there is not a progressive increase in the concentration of P–32 throughout the plant-animal food chain as implied by Dr. Schweitzer.

The fish in the Columbia River are monitored through the seasons the year around. The average concentration in whitefish (the species in which the highest concentrations have been measured) has been about 10^{-4} microcuries per gram (the unit of weight comparable to volume as measured in milliliters). At that concentration one could eat 7 pounds of fish a week, year in and year out, and still be within permissible levels.

As you know, the AEC has a substantial health research program at the Hanford site and at all other major AEC industrial sites, and at the Nevada and Pacific test areas. These programs include not only precise monitoring of radioactivity in air, water, and soil, but follow radioactive products as they pass along the plant-animal food chain. Special emphasis is given to consideration of the levels of radioactivity required to produce detectable injury in individuals and in population groups. A conservative estimate of the Commission's expenditures in environmental health research at AEC sites and at universities throughout the Nation, is about $1.8 million a year. This estimate does not include a substantial amount of laboratory support at AEC sites, nor does it include a vast amount of related research, such as, for example, the metabolism of fission products and instrumentation.

Should you desire additional information on the program at Hanford or on the broad environmental health program of the Commission, we shall be pleased to provide it.

Sincerely yours,

LEWIS L. STRAUSS, *Chairman.*

Taxpayer Comment on Battle of the Federal Budget

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. BYRD. Mr. President, on February 4 the Conference of State Taxpayer Executives, comprised of organizations in three-fourths of the States, met in Washington to discuss the 1958 Federal budget. They decided that taxpayers and citizens must help both the executive branch and Congress to reach an expenditure-reduction goal which will permit tax and debt reduction. With the slogan, "I'll take less from Government, if Government takes less from me," these groups have presented the issue of Federal budget reduction constantly and specifically to the people of their States.

Recently, Tax Foundation asked the executive directors of these State organizations to wire their comments on the reactions they observed to the "battle of the budget."

I ask unanimous consent to have printed in the Appendix of the RECORD the replies from 21 States.

There being no objection, the replies were ordered to be printed in the RECORD, as follows:

ROUNDUP OF TAXPAYER COMMENT ON THE BATTLE OF THE FEDERAL BUDGET

Eisenhower budget was shock to all Nebraskans. Economy is watchword here. Our people, press, legislature, and public officials demand budget cuts up to $5 billion. Drastic curbs on Federal aid, defeat of school aid, and control of expenditures. Then debt reduction and tax cuts in proportion, although our Senators and Congressmen are all completely in accord. Mail and press editorials pour in from all corners of the State. (Robert M. Armstrong, executive director, Nebraska Citizens Council, Inc.)

Never before in all our 25 years have the people, members of lower house, industry, business in general, farm organizations, the professions, and individual citizens, been so enthusiastically united in support of Congress making substantial cuts in pending budget bills to the very limit without imperiling security of America and its upstanding allies. (William R. Pouder, executive secretary, Tennessee Taxpayers Association, Inc.)

Grassroots response in Ohio for reductions in nonessential Federal budget expenditures has been most gratifying. The "I'll Take Less" campaign has active support of many community organizations interested in reducing Federal budget. Vote of Ohio congressional delegation on Federal appropriation measures thus far considered accurately reflects voter opinion in their home districts. (D. H. Sutton, executive director, Ohio Public Expenditure Council.)

Newspapers are cooperating. People recognize "I'll Take Less" buttons. Congressman DEMPSEY comments in his weekly newsletter, "In all my years in Washington representing the people of New Mexico, I have never before seen such unanimity and insistence in demanding a cut in Government spending and in taxes." Letters must be flowing. (Albert K. Nohl, director, Taxpayers Association of New Mexico.)

There has been no organized campaign as such in Utah against the budget. There has rather been a spontaneous outpouring of protest by newspapers, bulletins, chamber of commerce boards, groups, and individuals. Seldom have we seen such intense feeling and resentment against a proposed budget as is now taking place. (M. H. Harris, executive secretary, Utah Taxpayers Association.)

Members of our congressional delegation say they are receiving more mail re Federal budget than any other subject. Being voluntary it is effective. Our people are very Federal budget conscious. (Lloyd Griffin, executive vice president, North Carolina Citizens Association.)

News coverage and editorial comment has been good. Too early to measure full effect as it will be several weeks before impact is felt. Believe Eisenhower's speech will cause more "I'll Take Less" letters to flow to Washington. Individuals are wearing buttons. No adverse reaction noted. (Fred W. Bennion, executive director, Wyoming Taxpayers Association.)

Increasing concern in Wisconsin over the Federal budget as well as on high State and local governmental spending. Local taxpayer association action demanded a rolling back of big governmental spending reflects ground swell for economy. Strong opposition to Federal aid for school construction. (Arch Ely, executive director, Public Expenditure Survey of Wisconsin.)

Newspaper cooperation on "I'll Take Less" campaign has been excellent. We have reason to believe that more Nevadans than ever before are writing to Congressmen urging Federal economy. Senator BIBLE'S office reported nearly 1,000 letters received by May 3. NTA members have welcomed this campaign enthusiastically whereas previous Federal projects coolly received. (Neil D. Humphrey, executive secretary, Nevada Taxpayers Association.)

The high Federal taxes continued by the 1957–58 Federal budget has sparked a taxpayers' uprising in New York State. With State and local taxes to be paid out of what the taxpayer has left after Federal taxes, the tax squeeze has created awareness of the need to reduce the total tax load. That awareness presently is being manifested by the formation of school district taxpayer organizations which are bringing about rejection of swollen school budgets and building bond issues throughout the State. This striking out initially against the spending of tax money in the government unit closest to the people is a warning which their elected representatives in the overlying levels of government would do well to heed.

(James E. Finke, Citizens Public Expenditure Survey, Inc.)

The 1957 Montana Legislature adopted the highest general fund budget in the history of the State resulting in tax increases in almost every area. This coupled with the proposed $71.8 billion Federal budget is bringing widespread protest from taxpayers throughout the State to the effect that an economy move for all levels of government is far past due. (S. Keith Anderson, executive secretary, Montana Taxpayers' Association.)

Public opinion in favor reduction in Federal budget started immediately high figures released. Developed to strongest opinion in recent years. Newspaper support economy widespread and likewise unusually strong. (Carter W. Atkins, executive director, Connecticut Public Expenditure Council.)

Heavy press support with favorable articles and editorials throughout Minnesota, also urban press excellent coverage with favorable comment. Citizen action widespread. Growing sentiment favoring Federal tax reduction. (Norman A. Borgen, secretary-treasurer, Minnesota Taxpayers Association.)

Three new county taxpayer groups officially chartered past few months in Colorado as direct result general taxpayer concern about local, State, and Federal tax burdens. Regarding the proposed Federal budget common statement here is "I've never written my Congressman (or Senator) before but I certainly have on this issue." (Raymond A. Kimball, executive director, Colorado Public Expenditure Council.)

Strong citizen demand for less Government spending, for debt reduction, and for lower taxes in all parts of California with widespread support for Byrd and Hoover Commission recommendations and widespread denunciation of Federal giveaway programs, particularly Federal aid to education. Many local proposals also being turned down. (S. J. Arnold, general manager, California Taxpayers' Association.)

Budget cutting sentiment strong and growing. State senate passed bipartisan-sponsored resolution for reduced Federal spending. Citizens' groups sponsored full-page ad in newspapers and sent shirts to Washington. Budget reduction urged in widespread newspaper comment and editorials. The Governor and other influential leaders have spoken out against Federal aid to schools. (Edward Staples, executive director, Missouri Public Expenditure Survey.)

There is much wider demand by Idahoans for reduction of Federal budget than in previous years. A demand which is being carried to the congressional delegation. To be effective, however, the expression must be continued until the last appropriation measure has become law. (Max Yost, executive manager, Associated Taxpayers of Idaho.)

We have had action that we've never had before. Even local newspapers which usually in the past ignored the Federal budget have jumped into the fight. People who were never interested before are writing their Congressmen and working hard to cut the budget. (Maurice W. Scott, executive secretary, Taxpayers' Federation of Illinois.)

Economy-mindedness is at an alltime peak, not only Federal but State and local. Our Members of Congress are getting more mail than ever before. (Raymond E. Edwards, executive secretary, Iowa Taxpayers Association.)

I have stressed in my talks before various service organizations, in the New Hampshire Taxpayer and in numerous press releases that it is the duty of every citizen to write to our representatives in Washington insisting upon economy in Government and reduction of the gargantuan 1958 budget. As a result, our representatives have been flooded with mail, to such an extent, that most of them have had to resort to form letters in replying. (Barry T. Mines, executive director, New Hampshire Taxpayers Federation.)

Here in New Jersey, with its historic background of independence, we are encouraged by the response of Congress to the continuing grassroots demand for less governmental spending. We are hopeful that this renewed taxpayer interest will not only achieve the immediate objective of lowering the fantastic cost of Government, but help bring about reversal in the trend toward increased Federal aid which costs far more than its worth and begets more centralized government. (Carlton W. Tillinghast, executive director, New Jersey Taxpayers Association.)

The Accomplishments of Resistance

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. TUCK. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include an editorial from the Richmond News Leader of Monday, June 3, 1957, commenting favorably upon an excellent editorial which appeared in the Winchester Star on Friday, May 31, entitled "Invasion From Washington."

These two editorials in a very forthright and capable manner reply to the criticism directed by the Washington Post at the manner in which we conduct our school affairs in the Commonwealth of Virginia.

The editor of the Winchester Star, State Senator HARRY F. BYRD, Jr., enjoys in an unusually high degree the confidence, esteem, and personal affections of many thousands of Virginians. His editorial comments shed considerable light on the present situation in Virginia and I am in wholehearted accord with the views he has expressed. The editor of the Washington Post had asked "What has Virginia accomplished?" and Senator BYRD very effectively answers that "Virginia has accomplished precisely what it seeks to accomplish—it has maintained segregated schools," and we shall steadfastly adhere to that course.

The editorial from the Richmond News Leader, to which I have referred, is as follows:

THE ACCOMPLISHMENTS OF RESISTANCE

The Winchester Star (circulation 8,913) recently teed off on the Washington Post (circulation 382,456), with some comments on Virginia's school segregation policy that merit a wide reading. For the past 3 years, the rabidly prointegration Post has been complaining loudly against Virginia's insistence upon maintaining segregation in public schools. In the eyes of the Washington Post, all is sweetness and light in the District's race-mixed schools, and the Post's editors are terribly distressed at Virginia's inability to see the advantages of compulsory integration.

"For 3 years," said the Washington Post bitterly, Virginia's political leaders "have been screaming about the Supreme Court decision without accomplishing a solitary thing about the problem it raises."

It was to that sentence that the Winchester Star, owned by Harry F. Byrd, Jr., provided a succinct reply:

"What has Virginia accomplished? Virginia has accomplished precisely what it seeks to accomplish—it has maintained segregated schools. * * * Under the leadership of 'this faction,' as the Post calls the State's political leadership, segregation has remained intact throughout the State. Not one Virginia school has been integrated and not one Virginia school has been closed."

In that brief paragraph, it seems to us, lies the proof of the pudding. So far as the public schools themselves are concerned, the demonstrable fact is that Virginia's schools are still operating; they are still operating on a basis of race separation. During the 3 years that have brought chaos to Washington's school system—3 years marked by an exodus of young white parents from the District and by frantic efforts to cover up the deficiencies of Negro students—during these 3 years, students of both races in Virginia have continued their own relatively tranquil progress in their own separate schools.

Now, if State senator Ted Dalton had had his way, this would not have been true. The Radford Republican is agreeable to just a little integration. He would abandon a State policy of unyielding resistance in favor of a fragmented nonpolicy of local surrender. Mr. Dalton must know that a little integration in one county would lead inexorably to more integration in the next county, and swiftly to massive integration in every county and city in the State. That is where his vaunted policy would take us.

Those who want to follow Mr. Dalton and the Washington Post are of course entitled to do so. But on the record, Virginia's policy of massive resistance has resulted in two significant accomplishments: It has preserved segregation in our schools, and it has focused attention dramatically upon the Supreme Court's rape of the Constitution of the United States.

In the eyes of the Washington Post, such accomplishments are deplorable. In our own view, these accomplishments merit grateful applause.

Mail Service

EXTENSION OF REMARKS
OF
HON. RALPH. W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that an editorial entitled "Low Pay, Low Rates Handicap Mail Service," from the Fort Worth (Tex.) Star-Telegram of June 2, 1957, be printed in the Appendix of the RECORD.

The editorial is self-explanatory. It is an examination of the callously low-pay rates, completely out of touch with the actual cost of living, received by our postal workers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOW PAY, LOW RATES HANDICAP MAIL SERVICE

Though the House Post Office Committee at Washington has recommended a rate increase that would cut heavily into the annual postal deficit, passage of legislation to put the higher rates into effect would solve only half of the Post Office Department's serious financial problem. The other half involves pay of the postal workers.

The plight of these workers is not one that callously can be ignored. The one pay raise these workers have received in the

last 6 years has left them lagging far behind the rise in living costs and far behind the wage advances that most workers in private industry have enjoyed. Pay-raise legislation passed by Congress in 1954 and 1955 was killed by presidential veto. While these pay rates remain static, the cost-of-living index is creeping upward.

Recent testimony before the Senate Civil Service Committee has emphasized the effect of the situation on efficiency of postal operations and quality of the service. Low worker morale and the loss of experienced employees to higher-paying jobs cannot help but cause deterioration in the postal service. On the human side, there was figure-buttressed testimony that a topheavy percentage of postal employees manage to maintain themselves and their families only by holding extra jobs.

The problem, of course, is one of revenues. On the basis of present costs, the Post Office Department is expected to show a deficit during the next fiscal year of more than $650 million. The proposed increase in rates would do no more than lower this deficit by $462 million even if there is no raise in employees' salaries. Too, Congress probably would not feel justified in increasing postal pay without increasing the pay of other Federal workers at the same time.

Congress is reaping the result of maintaining so long a postal rate structure made obsolete by economic conditions. The problem is a difficult one to solve, but postal service workers cannot be expected forever to bear the brunt of failure to come realistically to grips with it.

Postal Workers Say Better Pay Improves Service

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the guest editorial appearing in the Portland (Oreg.) Journal, May 23, 1957. This editorial is entitled "Postal Workers Say Better Pay Improves Service," and was written by Richard F. Robedeau, president of Local No. 128, National Federation of Post Office Clerks.

Mr. Robedeau recently testified ably at the hearings of the Subcommittee on Federal Employee Compensation. His guest editorial focuses attention on a problem that should concern every citizen; his testimony before the subcommittee was equally cogent.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL WORKERS SAY BETTER PAY IMPROVES SERVICE

(By Richard F. Robedeau)

Why are postal employees made the scapegoats of every economy drive that hits the Government? This question in one form or another is being asked by postal workers throughout the Nation. They know that a letter still can be mailed in 1957 for 3 cents, the same rate as in 1935, because Congress considers it the postal service and not the postal business. They have compared the postal deficit with the deficit of other Government agencies and have noted that in 1956, in spite of low postal rates and of the many public services performed with little or no compensation, the postal deficit added only a fraction over one-half of 1 percent (0.6) to the Federal budget.

In 1956, the deficit of the Department of Defense (military functions) added 53.8 percent to the Federal budget; that of the Department of Agriculture, 7.8 percent; of the Veterans' Administration, 7.1 percent; mutual security (loans and gifts abroad), 6.3 percent; Health, Education, and Welfare, 3.1 percent; Department of Commerce, 1.9 percent; and of the Post Office Department, 0.6 percent.

Among the agencies listed, the Post Office stands at the bottom in the amount its deficit increased the Federal budget. Serving all citizens of our country and not just one special group, it is one of our most essential services. Why then, should the postal deficit be singled out for so much attention by the budget cutters?

Constant and threatened curtailment of postal service also is puzzling postal people. On April 8, 1957, a group including the secretaries of the National Association of Postmasters, the National League of Postmasters, and the National Association of Postal Supervisors presented at the White House to Jack Anderson, administrative assistant to President Eisenhower, a joint statement. It expressed the official concern of these organizations of postal management over a proposed temporary layoff of some postal employees. Here is an excerpt from this statement:

"We feel that, if any of the present employees are released temporarily, they will procure positions in private industry. Knowing how difficult it is, even now, to attract additional personnel on account of the comparatively low salaries offered, we feel that a large number of the postal people would not return to the service when they find the many additional benefits offered by private industry, such as hospitalization, insurance, better working hours (very little nightwork, if any) and many of the other so-called fringe benefits."

Postal clerks and carriers, even though they did not help formulate this statement, know that it is true. They know that the beginning base wage of $3,660 per-year gross is terribly inadequate; that the take-home base pay of a first-year regular clerk or carrier with a wife and two children, deducting Federal and State taxes and 6½ percent for retirement, leaves only $60.50 per week to support his family. They know that in the Portland post office in 1956, 298 new employees were hired and 282 left the postal service.

They know that good postal service can only be maintained by a permanent work force of career employees paid wages adequate to support their families.

With the salaries of State employees raised this year and the Portland city council's action in raising city employees' wages, postal employees are hopeful that Congress will recognize the best way to maintain efficient and economical postal service is to provide adequate postal salaries. This will make it possible for career employees to make a lifework of better postal operations.

Public Education Is a Community Project

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Public Education Is a Community Project," from the Anderson (S. C.) Free Press of May 30, 1957. The Free Press is one of the Nation's outstanding weekly newspapers, and it is ably edited by Mrs. Beth Klosky.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUBLIC EDUCATION IS A COMMUNITY PROJECT

During its 38th annual convention last year, the American Legion adopted a resolution opposing Federal interference, control, or direction of the Nation's public schools and taking the stand that State and local government should take care of primary and secondary school needs. This resolution was adopted without a dissenting vote by the 3,158 accredited delegates to the convention—representing every State in the Union.

Recently, the United States Chamber of Commerce issued a leaflet containing excerpts from testimony on school construction legislation presented by Richard C. Cadawallader, member of the national Americanism commission of the American Legion, before the General Education Subcommittee of the House Committee on Education and Labor. We believe that the points emphasized by Mr. Cadawallader combine to form a strong argument against Federal aid to education.

Among other things, Cadawallader pointed out that Federal aid is not the way to get good schools. Under any moderate program of aid, the amount going to individual States would not be large enough to be effective, he said, and Federal aid in an amount sufficient to mitigate the problem significantly could result in such an undermining of State and local responsibility as to seriously endanger the kind of educational system that has served us so well.

Cadawallader declared that the respective States have the financial capacity to meet their educational requirements if they wish to do so. He pointed out that local and State ability and willingness to deal with school problems would be impaired by injecting a third level of government. Administrative differences with respect to controls or agreements as to division of funds would result in delays and inequalities.

There are about 62,000 separate public-school districts or systems in the United States. If the National Government dealt directly with these local school organizations, it would seriously conflict with State educational responsibility and control. If the program were administered through the States, it could not achieve the objective sought by Federal grants or funds without imposing important and unwanted conditions.

If Federal aid is predicated on the determination of necessity of local school districts or systems, who will establish the criteria of need and formulas of distribution, Cadwallader asked. What weight will be given to the relationship between those districts which have for years taxed themselves to the bone to meet their requirements and those which have the resources but do not choose to impose adequate local taxes?

Federal funds for general public education could place in the hands of those in political authority the power to transform our whole way of life. The opportunity which would be opened up for the imposition of requirements as to what would be taught is frightening, Mr. Cadwallader asserted. Federal aid to education, even with an initial limitation on Federal control, invites the danger that in time the Federal administrative agencies will want to prescribe the curricula, textbooks, other instructional materials, teacher qualifications, methods and standards of instruction and accounting and fiscal procedures.

Once the United States Government enters this field of activity, it can never stop nor turn back. The history of other Federal legislation for education demonstrates this conclusively.

Pointing out that the current rate of school construction is steadily rising and is virtually at the point where a majority of the local school districts will have caught up with legitimate classroom shortages, Cadwallader declared that this demonstrates that local school districts are not waiting for the Federal Government and do not need Federal intervention or compulsion.

Under our system of Government, public education is basically a community function which has been and is being effectively discharged by local leaders. Planning for school construction should remain at the local school district level, Cadawallader concluded. This is not the kind of Governmental function which has to be performed by the National Government or which it can do best. In fact, efficiency, economy, opportunity for differences of approach and educational pioneering will be sacrificed if the Congress should embark the National Government upon a program of regimented aid to education.

"Americans Have Been Rediscovering That the Most Important Thing in the World Is Ideas With Ideals,' Says Mrs. R. I. C. Prout, President of the General Federation of Women's Clubs, Which Heralds a Significant New Trend

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, a very important meeting is being held at this time in Asheville, N. C., by the General Federation of Women's Clubs which is holding its 66th annual convention there.

I was very interested to find the first vice president of this fine organization, Chloe Gifford, of Lexington, Ky., saying in her annual report:

Let us, I beg of you, no longer eye the educated with suspicion or refer to the intelligent individual as an egghead or a highbrow.

She keyed her remarks to this year's convention theme, "Knowledge Is Power," and warned the delegates that one of America's paramount dangers is "the growing loss of individualism." She declared "Let us outgrow our lust for the mediocre."

Mrs. R. I. C. Prout, president of the General Federation of Women's Clubs, told the representatives of the Nation's clubwomen:

Americans have been rediscovering that the most important thing in the world is, ideas with ideals.

It will be recalled that the terms "egghead" and "highbrow" became terms of derision and ridicule only in recent years, mainly in the 1952 political campaign when the Republicans made this the major point of their attack upon the Democrats and Democratic standard-bearer Gov. Adlai E. Stevenson.

At a breakfast in Los Angeles, on September 24, 1954, President Eisenhower said:

We had so many wisecracking so-called intellectuals going around and showing how wrong everybody is who doesn't happen to agree with them. By the way, I heard a definition of an intellectual that I thought was very interesting: A man who takes more words than are necessary to tell more than he knows. I hope that no one is going to get up and wisecrack to me and say, "You've already done it."

If you were to seek the deep psychological reason for the low estate of the schoolteacher, the college professor, the learned in the society of our time I think you will find it not only in their scandalously low salaries, but in this contempt that seems to have seeped from the top into our thinking about the people among us who can state a cause, a principle, a position without doing violence to vocabulary and to syntax.

I hope I am sorely mistaken if I hold the conviction that one of the reasons for at least the extent of the defeat of Governor Stevenson for the Presidency of the United States in the elections of 1952 and 1956 was the fact that he spoke good English.

It must, I think, go down in the history of elections that at least one quite important segment of the voting public did not understand the Democratic candidate. Yet, if we read his speeches in those campaigns, we would be hard put to it to find anything in them that was either esoteric or highfalutin, or too polysyllabic. His sentences were most simple and declarative, with flashes of wit, and while thoughtful and even profound, they were hardly a tax on the intellect.

Yet they were complained of—of all things—for reasons of style and for the respect which the candidate manifestly had for the intelligence of the American people. The complaint was that the speeches were over the heads of the voters. This complaint when summed up seems to mean that Adlai Stevenson's speeches failed to hit a sufficiently low level of maudlin simplicity.

I believed then, and I believe now, that these criticisms were as false and as distorted as that leveled in editorial and cartoon against Woodrow Wilson because of his professorial past.

Now that the captains and the kings of the era that was Wilson's have departed, who will deny him his place as one of the most brilliantly articulate Americans of our history? And one of the most wisely intellectual and learned? Should that be regarded a shortcoming?

In fact, in our time, what seems to commend a candidate for political office, to some portions of his audience at least, is precisely his inability to complete a sentence.

This is presumed to convey the relaxed attitude and the air of casualness that grafts onto politics and debate the television techniques of presentation.

It is as if a philosophy had been sedulously cultivated that the wrong way of doing things brings us closer to being our free and uninhibited selves.

In fact, I take it there is presumed to be some special sales advantage in being offhandishly ungrammatical. Thus there is this new advertising syntax which tells us that a certain cigarette tastes good like a cigarette should.

I include here as a part of my remarks a report in the Washington Post and Times Herald regarding the 66th annual convention of the General Federation of Women's Clubs.

GENERAL FEDERATION OF WOMEN'S CLUB DELEGATES TOLD: "DON'T CRACK AT EGGHEADS"

(By Eileen Summers)

ASHEVILLE, N. C., June 4.—The much abused "egghead" found a public defender here today at the opening session of the 66th annual convention of the General Federation of Womens Clubs, where some 3,000 delegates met amid the blue banners of their clubs. Chloe Gifford of Lexington, Ky., first vice president of the General Federation of Womens Club, in her annual report said:

"Let us, I beg of you, no longer eye the educated with suspicion or refer to the intelligent individual as an egghead or a highbrow."

She keyed her remarks to this year's convention theme, "Knowledge Is Power" and warned the delegates that one of America's paramount dangers is "the growing loss of indiyidualism." She urged them:

"Let us outgrow our lust for the mediocre."

The Federation's national president, Mrs. R. I. C. Prout, told the representatives of the Nation's clubwomen:

"Americans have been rediscovering that the most important thing in the world is—ideas with ideals."

To aid the Nation's clubwomen to reach a clearer understanding of current political and economic events, Mrs. Prout announced that a 2-day world affairs conference has been planned for members of the Federation's national board in October, following their meetings, October 10–11.

President Eisenhower sent his greetings to the Federation. The message said in part:

"Advancing toward common objectives of mutual benefit, your membership combines many talents with notable success. Congratulations as you continue your leadership in public service.

"DWIGHT D. EISENHOWER."

We Can't Buy Friends

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of Monday, May 27, 1957:

WE CAN'T BUY FRIENDS

One of the weakest aspects of American foreign policy is the idea that we can buy friends abroad.

We do have a lot of money and have been generous with it since the war. Therefore, it is argued, everyone should be fond of us.

Neither human nature nor nations work that way. The anti-American riots on Formosa are the latest example—a rude awakening for those still indulging in myths.

The well-founded suspicion that they were organized riots doesn't change the fundamental significance of them.

Few places in the world have had more American dollar aid and political support than Formosa. Had it not been for the United States, Formosa would long ago have been part of Red China. Yet the American embassy is sacked.

It would be as ridiculous to belittle the Formosa events as it would be to abandon American operations there. But it is important to try to discover how and why such an anti-American mood could develop because the potential for similar outbreaks exists all over the Far East—indeed everywhere in the world.

No one ever likes foreign troops stationed in his country—whether friendly or enemy troops. This can't be changed and we will have to live with it.

But it seems to us there are three areas in which the animosity created by our necessary operations abroad could be diminished.

The United States has too many people stationed abroad. On Formosa, an island only the size of Maryland, there are between 8,000 and 10,000 Americans—military, civilian, and dependents. The job could be done with half that many.

Americans stationed abroad—by comparison with local peoples, especially in Asia—live in luxury. Our representatives should make the gap between our wealth and local poverty less conspicuous.

Too often Americans abroad demand and get special privileges which are only the old evil extraterritorial rights the United States did so much to end in China when such rights applied primarily to other countries. How and by whom our GI's in Asiatic countries will be tried when they get into trouble is the spark that has set off waves of anti-Americanism in Korea, Japan, and Formosa. We can't insist upon the old-fashioned colonial-type rights without asking for more trouble.

There is much argument here in Washington these days over how much money the Government should spend abroad next year on foreign aid, information services, and military programs. The Formosa incident may have its fortunate side. It should convince even the most extreme skeptic that our foreign operations are not suffering so much from lack of money or personnel. They are suffering from lack of know-how.

A New Approach to the Farm Problem

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from Time magazine of May 27, 1957, entitled "Agricultural Research—A New Approach to the Farm Problem."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AGRICULTURAL RESEARCH—A NEW APPROACH TO THE FARM PROBLEM

One of the basic causes of the American farm problem is the failure of agriculture to keep abreast of industry in research and development. Farmers have concentrated on learning how to increase their yields, leaving it up to the Government to worry about their surpluses, while hundreds of new industrial discoveries have pushed the farmer out of much of his market. Synthetics, for example, have taken over 45 percent of the market for natural fibers, 62 percent of the market for leather shoe soles, and two-thirds of the market for household soap. Last week, prompted by the recent report of the President's Commission on Increased Industrial Use of Agricultural Products, Congress was considering a handful of bills to authorize a concentrated attack on the problem. Main point of the report: while industry is spending some $3 billion a year on developing new consumer products and improving old ones, combined governmental and private agricultural research totals only $375 million—most of it to grow larger crops.

As a start toward making agriculture competitive with industry in research, the Commission recommended that the present $16 million utilization research budget of the Agriculture Department be tripled, with much of the money being used to farm out promising research projects to private laboratories. The Commission also recommended Federal incentives, such as fast tax write-offs, to encourage investment in industries using farm products.

But farm experts consider the Commission's plan only a beginning, urge a crash program costing 4 or 5 times what the Commission recommended. The Commission itself listed $211 million worth of agricultural research projects now underway that could be pushed through immediately. Among them: (1) Development of powdered whole milk that tastes like fresh; (2) a method to make newsprint from southern hardwoods, which would make up income small farmers have lost in cotton; (3) a process to extract fertilizer from chicken feathers; (4) a way to get rice from hulls 750,000 pounds a year of special wax, now imported; (5) development of a host of new drugs, such as antibiotics from tomato leaves and hormones from hay.

There is plenty of evidence that research can solve many farm-surplus problems. Powdered eggs have been so improved that they have hatched a new line of cake and cookie mixes. Only a few years ago surplus-ridden citrus growers in Florida were destroying tons of oranges in an effort to bolster prices; now about 50 percent of their crop is being turned into frozen orange juice and many growers are expanding. A new process, developed by the Agriculture Department, to dehydrate cooked potatoes has proved so successful that several manufacturers have put the product on the market. Predicts Dr. G. Edward Hilbert, research director of the President's Commission: "This development will do for the potato industry what frozen concentrated orange juice has done for the citrus industry."

The biggest, most stubborn surplus problem facing the Nation is corn. This year's estimated corn carryover will be more than 1.4 billion bushels, an alltime record, and the Government owns more than 900 million bushels of corn, for which there is no market. But the utilization laboratories of the Agriculture Department are working on processes for using corn in plastics, paper, oil-drilling mud, glue, heat-proof lacquer, tanning agents, and a host of other industrial needs. Anticipating a major industrial market for corn, the American Maize-Products Co. and Iowa State College of Agriculture and Mechanic Arts have set up a program for Midwest farmers to grow 30,000 acres of a special variety of corn tailored to industry's needs. Farmers will be guaranteed a price at least 12 percent above the regular corn market. Floyd J. Hosking, executive vice president of the privately financed Corn Industries Research Foundation, estimates a potential industrial need for up to 1.3 billion bushels of corn each year, more than last year's corn carryover, with $4 billion in new plants built to process it. But first there must be more basic research. The Federal Government recently increased from 3 to 12 the team of scientists working on a crucial phase of corn chemistry. Says Dr. Hilbert: "If a team of 50 could be put to work we could clean it up in 2 or 3 years."

Not even the research enthusiasts expect the farm problem to be solved quickly. But they argue that it makes more sense to spend $200 million or $300 million a year on research that will provide permanent solutions than to spend $3.7 billion a year on support plans that only make the farm problem worse. Says Purdue University Biochemist Roy L. Whistler: "The experimental stations at the universities are waking up to the fact that it isn't enough to tell farmers how to grow more. They have to be told what to do with the crops they've grown."

Seattle Postmaster Says Low Pay Keeps Staff Below Needed Strength

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1957

Mr. PELLY. Mr. Speaker, under previous granted unanimous consent I include for printing in the Appendix of the RECORD a newspaper article which appeared in the May 26, 1957, edition of the Post-Intelligencer.

This points up a bad situation which results from the increasingly high cost of living in my congressional district. Certainly there is need for a Federal employee wage increase and I very much hope legislation will be forthcoming in the very near future.

PAY POLICY CAUSES POST OFFICE HELP SHORTAGE

All work and no play make jack. But all work and no pay is a different formula.

It's not quite all work and no pay at the post office. It's just plenty of work and too little pay to keep men around to do the work.

Because of the pay situation, Postmaster George Morry says, his Seattle Post Office is operating 100 persons below its needed strength of about 2,500. The post office is having to use substitutes and work many employees overtime to keep the mails rolling here.

Also it's having to recruit like mad.

In the 4 months ending April 15, Morry says, the post office hired 194 regular and temporary workers here—and lost 299.

Men just won't go to work and stay at work for the wages the post office can pay. Not with the Boeing Airplane Co. and other private industry bidding against Uncle Sam, Morry says:

"Boeing is a great—a good—let's say, a successful—competitor of ours."

Most postal wages range from $3,700 to $4,400 a year, Morry says.

Eddie Beals, the Terminal Annex clerk who took a survey of annex morale for his union recently, thinks he's average. He earns $170 to $175 every 2 weeks. After deductions, he takes home a little better than $130.

A big deduction for postal workers, as for other Federal employees, is the 6½-percent pension bite. That pension may be welcome 30 years from now. The 6½ percent, though, looks big today to the man who's trying to keep the family in bread and beans.

And the post office is having a hard time today "selling" its jobs to applicants. With

no regional differentials, the postal wage scale may be attractive to men in some parts of the country. Here in the booming high-cost Pacific Northwest, it doesn't pull the sort of applicants who used to come in when a post-office job stood out as comparatively good thing.

Fewer people are taking the tests these days, a smaller percentage are passing, and many who pass don't find it worthwhile to show up for work.

The past half year the Civil Service Commission has been running off postal clerk-carrier examinations here at the rate of about one a month. In that time, 1,608 have applied for the examinations, 916 have taken them, 338 have passed, and 144 have accepted work.

You may have wondered what the payoff was some time ago when postmen dropped invitations into Seattle mailboxes for people to apply for work.

After that campaign, 1,000 applied, 450 took the examination, 75 passed, and 35 came to work. The post office probably put more man-hours into the project than it got out of it in new employees.

Women can do only a certain share of postal work. With 30 percent female help, the Seattle post office has about as great a percentage of women employees as any post office in the country. It needs men now—male employees who can qualify for regular jobs in spots where they have to toss mail pouches around.

The plain, unvarnished fact is that post-office wages here aren't attracting enough men with the minimum education and intelligence it takes to pass the reasonable simple postal examination and handle the mails properly.

Eddie Beals gives one explanation when he says:

"It's impossible these days for a postal employee with a family to keep up with the cost of living unless his wife's got a job or he's got an extra job."

Morry says sadly:

"Our wages are low. But the only place we can get the money is Washington, D. C."

The Budget

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Budget Cuts Are Largely Illusory," from the Greenville (S. C.) News of June 2, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUDGET CUTS ARE LARGELY ILLUSORY

Warnings continue to come from well-posted sources that the budget cuts being voted in Congress may not be nearly so big nor so real as they appear.

The Government's financial operations, in fact, have become so complicated that the average citizen can hardly be blamed for being badly confused in his attempts to keep track of what is going on in the way of income and outgo of public funds.

This is illustrated in an editorial in the Wall Street Journal discussing the illusory character of various "cuts" that are being made. The article is entitled, aptly enough, "Bookkeeping Bewilderment."

A more comprehensive analysis of the current goings-on in this financial maze is provided in an article in U. S. News & World Report. This undertakes to reveal the "jokers" in the budget cuts. On paper it would appear that reductions of over $4 billion have been made.

But on close examination it is seen that about $1.7 billion of this will not affect budget programs in the coming year. Some cuts merely postpone spending, and others may have to be restored later.

The biggest joker in the budget dispute "is that actions in Congress give the impression of sharp cuts in 'spending,' when they actually are cuts in 'appropriations' and are aimed largely at future spending."

That distinction must be kept in mind in attempting to evaluate congressional budget actions. Our Government is in the habit of authorizing large expenditures over years in the future. A present reduction in appropriations for future spending doesn't necessarily affect the spending for the ensuing fiscal year.

It might seem that continuing reductions in "appropriations" ultimately will force lower spending. But actually, such "cuts" can be, and often are restored before the time comes for actual spending of the money.

It appears that Congress still has a long way to go if it is to bring about any real reduction in spending and, thus, pave the way for tax reductions about which many taxpayers are so wistfully dreaming and some Congressmen are so promisingly talking.

As they say of losing ball teams, "Maybe next year."

People Deserve the Facts of Hazards From Fallout

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Nashville Tennessean, commenting upon the necessity of the people having the facts about atomic fallout, and of the very fine efforts of the Joint Committee on Atomic Energy, through its present hearings, to bring those facts to light. The editorial notes how efforts were made to cover up these facts when Adlai Stevenson sought to bring them to light during the last campaign.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEOPLE DESERVE THE FACTS OF HAZARDS FROM FALLOUT

Congressmen are now engaged in hearings aimed at pinpointing the dangers to mankind from radioactive elements which are sprayed into the atmosphere from atomic weapons tests.

Certainly, there is no better time to try to unwrap some of the confusion that has gathered about the subject since Mr. Adlai Stevenson brought it up during the last political campaign. At that time, Mr. Eisenhower, Mr. Dulles, and the head of the Atomic Energy Commission joined voices with a host of learned Republicans to cry that Mr. Stevenson was a visionary, a maker of false issues and a gross distorter of facts.

But in the intervening months many new voices have repeated Mr. Stevenson's warning, among them Pope Pius, Dr. Albert Schweitzer, top German nuclear scientists and the members of the British Atomic Scientists Association.

Mr. Dulles, having set his course during the campaign, is loathe to depart from it. So are Admiral Strauss and Dr. Libby of the AEC.

In an interview given to the Washington news magazine, U. S. News & World Report, recently, Dr. Libby commented on the fact that many reputable scientists agreed with Mr. Stevenson and disagreed with the AEC. He noted that the AEC is always gathering information, weighing new data and publishing new reports on atomic dangers. Part of the disagreement "was due to the fact that the information was so new that, in many cases, it wasn't known to all," he said.

But much more information is known today, and the warnings of reputable men—not politicians—are still being given.

Mr. Libby would pooh-pooh this on the basis that the United States is making "cleaner" bombs; that the vast reservoir of the stratosphere holds much of the fallout of nuclear explosions, and this fallout later drifts to earth in minute quantities and is spread uniformly about the world.

But Los Alamos atomic scientist Alvin C. Graves told the joint Senate-House Atomic Committee there is no such thing as a completely clean hydrogen bomb, free of radiation fallout.

And Weather Bureau scientists have some data to put before the committee which further undercuts the theories advanced by the AEC. This data would seem to indicate that strontium 90 fallout patterns are more complex than the AEC believes, being related to wind, rain, and other meteorological factors not previously taken into account.

The findings indicate that some areas of the United States—particularly the northern tier—have received and will receive 2 or 3 times more strontium 90 fallout than the Southern States.

Strontium 90 can cause bone cancer or leukemia after passing through the food chain, being absorbed by plants from the soil and then passing on to humans. Radioactivity can have its effect on mankind immediately in the form of cancer or shortened life span, or in the future in the form of genetic changes.

Certainly there is validity in former President Harry Truman's warning that to be panicked by fear at this stage would serve only the enemies of freedom and democracy; that the awesome implications of fallout can cause a more dangerous reaction than fallout itself.

The American people are entitled to as much clear knowledge of the situation as is available, they are entitled to have their national leadership stop riding the fallout horse in all directions. Such has been the case since Mr. Stevenson broached the subject, such is the case now.

In a recent appearance on a television program, Admiral Strauss, who heads the AEC, first said he was not prepared to say there was "no danger in anyway to human beings from fallout." But later, asked the direct question: "Is there any danger?" he replied, "I don't think so."

If meteorological factors influence fallout to any marked degree, some areas of the earth may be getting large amounts unknowingly. The Eisenhower administration and its AEC leadership does the world no good by continued hesitation in laying their facts on the line. A better course would be to say: "This much we know, and every effort will be bent, short of endangering national security, to end this deadly rain from the sky."

The hope of accomplishing this seemingly lies in the present congressional hearings. Confusion is the source of panic, for informed people can meet a problem squarely. And in this case the people deserve the facts.

Income Tax Exemption for Alaska

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. PELLY. Mr. Speaker, legislation which would enable Alaska to become the 49th State of the Union will come to the floor of the House in the near future.

The argument of those of us who had indicated it would be in the best interests of the people of Alaska to delay statehood and for a period allow Alaska, like Puerto Rico, an income-tax exemption apparently was not given sympathetic consideration by the House Interior Committee.

The reason the moratorium plan failed to win friends, I am informed, was due to the statement of former Governor Gruening that income-tax exemption for citizens residing in the Territory was unconstitutional. On this point, an editorial which appeared in the Ketchikan Alaska News indicates the former Governor has misled the people.

Alaska has the resources, but high costs of doing business have discouraged venture capital from establishing industries to increase employment in the Territory, so much so that right now the Commissioner of Employment Security is actually begging workers to avoid Alaska. There were 6,000 unemployed registered for work in mid-April in the Territory.

It seems unfortunate that no real consideration has been given to the Commonwealth idea which along with income-tax exemption would give Alaskans full self-government including an elected Governor; in fact, everything except a vote in Congress.

Here is the text of the editorial referred to:

GUEST EDITORIAL—INCOME TAX EXEMPTION FOR ALASKA

(By Emery F. Tobin, chairman, publicity committee, Ketchikan Commonwealth Club)

In his letter to the editor of the Ketchikan Daily News yesterday "Senator" Ernest Gruening has tried to make the point that income-tax exemption for citizens residing in Alaska is unconstitutional. But is it?

The former Governor quotes for his authority article I, second section, of the United States Constitution adopted September 17, 1787. It says, "all duties, imposts and excises shall be uniform throughout the United States."

However, Gruening fails to reveal that the "duties, imposts, and excises" do not include income taxes. Income taxes were illegal.

A provision for a Federal income tax was incorporated in the tariff bill of 1894. But most of it was declared unconstitutional by the Supreme Court of the United States the very next year.

In order to legally collect income taxes, Congress found it necessary to go to the various States and ask them to ratify an amendment to the Constitution. Congress did not ask the Territories, naturally, to ratify the amendment; hence Alaska had no voice in it.

The necessary number of States ratified the amendment by 1913 and it then became a part of the Constitution. It says:

"Article 16. The Congress shall have power to lay and collect taxes on income from whatever sources derived, without apportionment among the several States, and without regard to any census or enumeration."

That is all. It does not say that Congress shall have the power to lay and collect taxes on incomes in the Territories.

Congress has ample historical and moral justification for not collecting income taxes from the Territories. Territories, incorporated or not, do not have representation in Congress. Patriots of this country long ago declared that "taxation without representation is tyranny." The Declaration of Independence listed as one of its reasons for dissolving the bands which had therefore connected the colonies to England, "imposing taxes on us without our consent."

OTHER TERRITORIES DID NOT PAY

None of the present States paid income taxes while territories, because the present income tax law was not enacted until 1913 and as territories they were not burdened with them.

The Supreme Court has never been asked to rule on the constitutionality of the income taxes now being collected in Alaska and Hawaii.

There therefore seems to be no reason why Congress could not give us a moratorium on income taxes while we are a Territory or a Commonwealth. Federal employees in Alaska and Hawaii are exempted from paying income taxes on part of their income. Is this unconstitutional?

One thing is sure—we cannot be exempted from income taxes after we become a State. Congress should exempt us from income taxes now so that we can attract industries and grow so that eventually we may be able to support a State without having taxes throttle us.

William Prescott Allen, publisher of the Daily Alaska Empire at Juneau, will be in Ketchikan Friday night to discuss the matter of a proposed 20-year moratorium on taxes for Alaska. He will speak at the main school auditorium at 8 o'clock. Everyone is invited to attend. Let's go.

Statement of the Cabinet of the United Christian Youth Movement

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. FULTON. Mr. Speaker, the United Christian Youth Movement is the cooperative expression of the youth movements of 27 denominations serving 10 million young people in the churches of this country.

On Wednesday, June 5, 1957, there appeared two fine young people representing this organization, before the House Foreign Affairs Committee. These two young people, Miss Florence Fray, chairman, Commission on Christian Outreach, and Charles H. Boyles, national chairman, made fine statements on behalf of the United Christian Youth movement, and submitted themselves as excellent witnesses to questioning by the House Foreign Affairs Committee members.

This participation of our young people in the development of United States foreign policy is an inspiring thing to those of us in Congress who have the heavy responsibility of assisting in the implementation of our United States foreign policy and security in this deeply troubled world.

As I was impressed with the thought and development of policies by the officers and members of the United Christian Youth Movement I am submitting the statement of the cabinet of the United Christian Youth Movement adopted in its meeting at Cincinnati, Ohio, on February 18, 1957:

Consistent with our historic Christian concern for the establishment of closer fellowship and more complete understanding among peoples of all lands and cultures, the United Christian Youth Movement has frequently recorded its support for an increased program of economic aid and technical assistance. At this time, when the entire foreign aid program is under review in both the Congress and the executive branch of our Government, we would restate some of the guiding principles which are essential considerations in the making of wise, forward-looking decisions in this area:

1. In an interdependent world, our well-being, economically as well as politically, cannot be guaranteed without insuring the well-being of people everywhere.

2. Assistance should be rendered, not alone as a matter of enlightened self-interest, but out of a deep sense of stewardship and concern for the plight of all God's children.

3. Such aid must not be used to destroy the self-respect or national dignity of the recipients. Programs of foreign economic aid or technical assistance must be seen as good in their own right. To think of them as tools of national foreign policy, weapons in a fight against communism, or lures in a web of military alliances is to decrease their effectiveness and destroy their worth.

4. Therefore, such programs should be administered through an agency independent of either Defense or State Department control, with a staff of competent personnel recruited on a career basis, and operating under a long-range mandate from both the Congress and the President that would guarantee stability to the agency's operations.

5. Without denying the value of bilateral aid arrangements, it seems clear that the ultimate goals of a foreign economic policy conceived as outlined above, could best be served through expanded channels of multilateral, cooperative programs of assistance. The channels for these would be most logically found in the structure and scope of the United Nations.

6. Facing the claim that expanded appropriations for such programs are to some extent dependent on reductions in staggering military budgets, it would seem our Government, and indeed all governments, have a clear and present responsibility earnestly and sincerely to undertake the development of a program of worldwide reduction in armaments with effective inspection and controls.

7. In the absence of such agreement, however, the wisdom of the centuries indicates that money appropriated for such constructive ends as have been undertaken through the foreign economic program will do far more to win lasting peace than all our massive expenditures for armaments

which never ameliorate the social, economic, political, and ideological tensions making for distrust and hostility.

In keeping with these principles, and out of conviction that the foreign economic program, properly administered, is a vital step toward world peace, we call upon the Congress, the President, and the administration to work for an improved and expanded program of economic aid and technical assistance commensurate with the needs of the hour, consistent with our national heritage of concern for the rights of all peoples, removed from the realm of diplomatic or military policy, and coordinated through an independent, continuing governmental agency working in the closest possible relationship with the United Nations. We authorize our officers and staff to make these concerns and principles known when and where they may be most effective in helping our Nation to move towards such a policy and program.

Breach Over China

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mrs. BOLTON. Mr. Speaker, with so much discussion of trade with China, I am including herewith an article that appeared in the Manchester Guardian Weekly of May 30:

BREACH OVER CHINA

A breach with the United States over the embargoes on trade with China now seems almost certain. The Government has made it clear that if no agreement is reached in the current talks in Paris it will have to decide what action to take on its own. The latest word is that the committee in Paris, at the end of its second week of meetings, has advanced no nearer to a compromise. A further meeting is being held and great efforts have been made to reach an agreement. But the distance separating the two sides is so great that the chances that it will be bridged must be reckoned slim. The consequences of this failure are likely to be that Britain, together with the other European countries in NATO and with Japan, will decide to place their trade with China on the same footing as trade with the rest of the Soviet block. As the United States is determined to maintain its own restrictions, the whole machinery that controls the export of strategic goods to Communist countries will be in danger of breaking down. Though one may doubt if the military effects of this will be at all important, politically the breach is regrettable. It will come at an awkward moment when Anglo-American relations have still not fully recovered from the wounds implanted by Suez. And it will add to the embarrassment of the Eisenhower administration, which is trying to steer a large foreign aid program past a hostile Congress.

This unfortunate timing apart, America's allies can scarcely be blamed for wishing to remove the severe restrictions on Chinese trade. The list of prohibited exports was drawn up when United Nations troops were fighting in Korea. Though some small concessions were made last year, substantially the list has remained the same. Morally, there is no longer the same case for treating China more harshly than the other Communist countries. (Some people might argue that, after Hungary, Russia is the one that ought to be punished.) And what is more to the point, the controls have long since ceased to be effective. China still gets those goods from the West that she is denied but the other countries of the Soviet bloc can buy. All that happens is that they are transshipped to her from Eastern Europe. From the West's point of view, the controls may therefore be having the worest effect: China, in order to buy what she needs, is made increasingly dependent on Russian good will. This is the chief reason why the special embargoes should be brought to an end. Probably there will be some increase in trade between China and the West, though the extent to which this is likely has generally been exaggerated. Britain should benefit because she has applied the controls more rigorously than some European countries. But these are not decisive reasons why a change should be made. The point is that American objections, based sincerely though they are on moral grounds, are almost certainly bringing about the reverse effect from that intended.

More Than Enough

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of Tuesday, May 28, 1957:

MORE THAN ENOUGH

A truthful, accurate program for disseminating official American Government information overseas is necessary.

We've found we cannot buy friends. The best we can hope for is that the truth about our Government and people, our aims and aspirations, our foreign policies, will, with our military and economic aid, help keep the free world free.

There must be another ingredient in such a program. It must be economically operated, without waste on useless and nonsensical projects.

It was because of this waste, poor planning, and sometimes downright silly tactics, that we supported the Senate's decision to cut next year's appropriation for the United States Information Agency back to $90,200,000, as against the $144 million the President asked.

Now, a joint House-Senate conference committee has decided to give USIA $96,200,000. This is a compromise between the Senate total and the $106 million voted by the House.

We don't believe the testimony of Arthur Larson and his assistants before House and Senate committees justified letting them have so much. But we recognize that compromises sometimes must be made—and that there has been a lot of pressure from the White House in recent days to boost the appropriations.

USIA officials have been complaining that their program would be crippled by any cut below $106 million. We remind them of these facts, brought out in recent hearings:

USIA maintains a library in Paris, at an annual cost of about $85,000, employing 21 persons, with 22,300 books; but there is in Paris already the American Library with 95,000 books.

In Formosa, USIA spent $286,942 in 1956 and it wants to spend $536,168 next year, and this is to be considered against the fact that one of the places attacked last week by the Formosan mob was the USIA information center.

USIA has scheduled $30,000 for television in India although India has no operating TV station now.

It plans to spend $9,000 in Egypt and $4,000 in Lebanon for TV, but in neither country is there now a TV station in operation.

In the Near East area, USIA is making free presentations of 1,360 subscriptions to the New York Times and Herald Tribune at a cost of $118,704.

The total cost to USIA of presentation subscriptions to the Times and the Herald Tribune was $359,369 last year, is $386,246 this year, and is estimated to be $400,194 next year.

USIA subsidized a movie to be shown in American theaters.

When USIA eliminates this and a great deal of other waste from its operations, it will have more than enough to spend under the compromise appropriation of $96,200,000.

Floods and Tornados in Texas

EXTENSION OF REMARKS
OF
HON. RALPH. W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. YARBOROUGH. Mr. President, I have been informed by the Corps of Engineers and the region 5 office of the Federal Civil Defense Administration that the cost of the physical damage caused by the floods which have ravaged my home State of Texas will exceed $100 million.

Existing flood-control projects in Texas, according to estimates of the Corps of Engineers and others, prevented damage in the amount exceeding $100 million. And at least another $50 million in damage could have been prevented, I am informed, if presently authorized but as yet unbuilt projects were in operation.

An untold amount of damage was prevented on the Colorado River watershed alone, to my home city of Austin, Tex., and to all the cities, towns, villages, and farms and ranches on the Colorado below Austin, by the dams of the Lower Colorado River Authority.

And so there is a lesson to be learned from this long-lasting and continuing state of disaster. The lesson is that flood control pays its way and is worth every cent it costs.

Additionally, for those of us whose home areas are subject to alternating periods of drought and flood, as is my home State, there is another lesson. About 80 percent of the floodwaters now roaring down the rivers of Texas are pouring into the Gulf of Mexico, wasted, when if multipurpose dams were in operation on these rivers, this water might be used to generate electric power and might be saved for use in time of drought.

I have no report yet as to the amount of precious topsoil scoured from the face of Texas by these devastating floodwaters, but it is certain to be tens of thousands of tons. This can never be replaced.

I have spoken only of physical damage. There has been another kind of damage—the impact of disaster on human beings. This, of course, cannot be determined in dollars. Some measure of what disaster means to people is contained in a new report just issued at Austin, Texas, by the American Red Cross.

This Red Cross report has been summarized in an article printed in the June 1 editions of the Austin American. I ask unanimous consent that the text of this article be printed in the RECORD at the conclusion of these remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Austin American of June 1, 1957]

FLOODS, TWISTERS LEAVE IMPACT ON 9,000 TEXANS

Floods and tornadoes the last 2 months in Texas left their impact on 9,000 families and damaged or destroyed thousands of homes and buildings, according to a new report issued in Austin Friday by the American Red Cross.

Summarizing its disaster operations during April and May, the Red Cross said more than 36,000 persons felt the force of the State's turbulent weather.

Of these, 8,080 received mass care from the Red Cross—food, clothing, and shelter in the emergency phases of disasters.

Tremendous property loss is revealed in the report's figures on destruction and damage to houses, farm buildings, and other structures.

Floods and tornadoes, according to the Red Cross, destroyed 745 homes, 284 farm buildings, and 197 other buildings. There has been major damage to 1,636 houses, 334 farm buildings, and 665 buildings of other types. Minor damage was found at 5,623 houses, 638 farm buildings, and 665 buildings other than homes or farm structures.

The report also says that 3,738 families have applied to the Red Cross for assistance during rehabilitation phases of the Texas disasters of April and May. This assistance has been for repair or rebuilding of homes, replacing of household furnishings, clothing, food and medical care for the injured, and occupational supplies.

In addition, the Red Cross says it has fed 5,894 rescue workers in disaster areas.

"The Red Cross rehabilitation program for disaster sufferers in Texas for the months of April and May will cost $1,250,000," the report adds.

"Red Cross policy is to assist people affected by disaster in reestablishing themselves in the community * * *. This assistance is given on the basis of the need of the individual and not on the basis of his loss.

"The money spent by Red Cross for families will also help to restore the economic welfare of the disaster-stricken community. The families take Red Cross disbursing orders to local merchants * * * to buy their building materials, household furnishings, etc. In this manner Red Cross dollars in the normal trade channels of the community help to rehabilitate the entire community."

Drive Urged on Farm Surplus Issue

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitle "Drive Urged on Farm Surplus Issue," which appeared in the Washington Post and Times Herald on Monday, June 3, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRIVE URGED ON FARM SURPLUS ISSUE

A National Planning Association report said yesterday there is little chance that the problem of overproduction by the Nation's farmers can be solved within the next 10 years.

The association's agriculture committee made the statement in urging the Agriculture Department and land-grant colleges to concentrate on problems associated with farm surpluses. It said present research is devoted to projects which tend to increase the surpluses.

The association is a nonprofit, nonpolitical organization devoted to planning in agriculture, business, labor, and the professions.

The committee said research is needed in four related fields, agricultural adjustment, distribution, family adjustment, and community adjustment. It said such study might find an answer to the No. 1 problem of American agriculture—production which persistently outruns markets."

In the field of agricultural adjustment, it said research could help answer the question: "How can farm output be adjusted and brought into line with the slowly rising demand for food and other farm commodities?"

Or, "How can land, labor, machinery, livestock, and even our stock of technology be used more extensively and less intensively?"

It said both the consumer and farmer would benefit from greater research into distribution.

It suggsted greater public aid in finding and developing economic opportunities for those forced out of farming.

Lauren K. Soth, editor of the editorial page of the Des Moines Register and Tribune, is chairman of the committee that prepared the study.

Extraordinary Scenic Features of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an editorial from the Oregon Journal of May 28, 1957, describing the views of Lyle F. Watts, former Chief Forester of the United States, with respect to several of the extraordinary scenic features of the State of Oregon.

Mr. Watts, one of the most illustrious conservationists in the land, emphasizes that Oregon is fortunate in having both the Columbia River Gorge and a magnificent coastline of sweeping vistas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT REALLY MAKES OREGON UNIQUE

Lyle F. Watts, retired Chief Forester of the United States Forest Service, who now makes Portland his home, has probably seen as much of the United States as most living Americans.

His appraisal of what is distinctive about Oregon is therefore meaningful. He told a Portland Chamber of Commerce committee the other day that other States have mountains equal to or surpassing our own, so they are not the things that have the greatest appeal for visitors.

The two features which make us unique, he said, are the Columbia River Gorge, with a transcontinental highway running through it, and our superb coastline. No other river canyon anywhere in the Nation is both so magnificent and so accessible. And no coastline in America is comparable to ours.

It is of transcendent importance, he said, that we protect these assets for posterity through bold and long-range planning. He wrote similar thoughts in a recent issue of the Oregon Democrat.

The gorge is on the way to being protected through activities of the Columbia River Gorge Commission, which has just received an assist for the legislature with a modest appropriation to help carry on its program of land exchanges.

Oregon's Highway Commission is building fine parks along the coast and the beaches themselves are protected by law, but already the parks are overtaxed, and it takes but little imagination to envision what the demand will be for recreational use of our coastal areas 25 to 50 years from now.

Watts thinks more land will have to be acquired by the State on a scale which few are now willing to contemplate. He foresees the payoff in a $1 billion recreational industry.

Watts, we are sure, did not intend to demean our mountains, which are certainly among our finest of assets, but we go along with him on the need to look with farseeing eyes at our unique gorge and coastline and to make sure they are properly protected and developed for the sake of ourselves and our visitors.

Flowers for the Living

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Flowers for the Living," published in the Knoxville News-Sentinel of June 2, 1957. The editorial comments on the 50 years that Edward J. Meeman, editor of the Memphis Press-Scimitar, has served with the Scripps-Howard newspapers. I know from personal experience of the courage and perseverence that Mr. Meeman has shown in serving, through his chosen profession, the best interests of his community. He is the kind of editor who follows a policy that he believes to be right, and who does not stop to calculate the odds against him. He has the courage of his convictions.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FLOWERS FOR THE LIVING

Fifty years ago Edward J. Meeman, then young and inexperienced, went to work in the editorial rooms of the Evansville (Ind.) Press.

Today, mature and full of the skill of his chosen profession, with a great record of journalistic accomplishments to his credit, Ed Meeman—now editor of the Memphis Press-Scimitar—celebrates his 50th year with the Scripps-Howard Newspapers.

One of our most beloved colleagues, one of the best editors in the business, Ed Meeman's enthusiasm has never diminished for the proposition that his newspaper should give light so the people could find their own way.

As editor of the Knoxville News-Sentinel, he was a controlling factor in helping preserve for all America the unspoiled scenic resources of the Great Smoky Mountains National Park.

As editor in Memphis, he bucked the local political machine, and won.

There, too, he has fought for the conservation of forest and soil resources.

His whole record has been one of fighting for good government, for the basic human values, for the advancement and security of his community, his State, and his country.

When we congratulate you, Ed, we congratulate, also, Memphis and the State of Tennessee and the Scripps-Howard Newspapers.

May these flowers for the living brighten your day of celebration.

A Georgia Minister Offers a Solution for the South

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. ROOSEVELT. Mr. Speaker, a recent issue of Look magazine carried a most interesting article by the Reverend Robert E. McNeill, pastor of the First Presbyterian Church at Columbus, Ga. Reverend McNeill's comments offer such a fresh point of view and present such thoughtful ideas that all those who are interested in finding a reasonable and proper solution for this difficult problem will, I am sure, find it profitable to read. I therefore am happy to include it in the RECORD.

A GEORGIA MINISTER OFFERS A SOLUTION FOR THE SOUTH

(By the Reverend Robert B. McNeill, pastor, First Presbyterian Church, Columbus, Ga.)

On the outskirts of Columbus, Ga., on the Macon Highway, the traveler is greeted with an unusual sight. At a crossroads, a one-time grocery is painted a gleaming white with large green letters reading, "Welcome to Columbus, Knights of KKK, Unit 21."

The outsider remarks, "Can this be America?" The southerner observes, "See there, the Supreme Court put the Klan back in business."

What is the real situation? Recently, an abortive effort was made to have a four-State rally of klansmen at the local baseball park. A scrappy newspaper editor turned the meeting into a fiasco for the hooded knights. Permission to use city property was rescinded at the last moment, and in the confusion that followed, the klansmen were chased over town by public officials, law-enforcement officers and spectators, accompanied by horns and catcalls. The Klan was made to look ridiculous—a most effective weapon.

Their next sally was a motorcade through Carver Heights, a Negro residential area, and a stop in front of the newly organized Carver Heights Presbyterian Church, served by a white minister until a Negro minister could be called. From there, they went downtown and paraded on the street where recently a white man had been killed, presumably to avenge his gunning of an NAACP leader a year before. These fellows are masters of symbolism, implying a link between an integrated church and racial murder. A note was found at the church, written on an old Christmas card, charred around the edges: "White man, get yourself another congregation. This is your last warning."

The white minister is still there and so are the Negro members. Nothing has happened—yet. The white congregation of the First Presbyterian Church has been trying to help the Carver Church to find a capable Negro minister for a long time; it has not slowed its efforts, but neither has it intensified them because of the Klan's insistence.

The fact is that the Klan today is not so fearsome as it once was. I attended one of the public initiations one night in Alabama. Hardly could one believe this was the mystic order that once paralyzed Negroes and carpetbaggers with fright and established order again in the South. These white-robed people were no more awesome than a high-school graduating class. There were women in the Klan—imagine, a ladies' auxiliary. There wasn't a Carrie Nation among them—most of them were in socks and loafers. After some labored speeches on the sacredness of southern womanhood and white supremacy, they adjourned and rode the merry-go-round in the park.

Stopping at a steak house later, I recognized six Klan members chatting good-naturedly in another booth. "Those are the Ku Klux," I said to a woman sitting nearby, "Aren't you scared to death?" "Huh, they're just like anybody else," she replied, "and that fellow that calls himself a preacher tried to date one of my girls a while ago, and him with a wife and kids." "Yes, I know," I said. "I just heard them making big speeches on the sacredness of southern womanhood."

There was a time when the Klan was potent. I grew up in Birmingham on a ridge of charred ruins and racial hate. Negroes had settled the undesirable flats on either side of the hill and had consolidated along the railroad that cut through the ridge. They had no way to expand except in the direction of the established residences on either side of them. There seemed to be no legal way of stopping them, as the zoning line was in a constant state of flux. But there was the extralegal way, for which there was good southern precedent.

The neighbors strapped on their guns at night, and, the next day, a Negro family would have moved out of a house on the wrong side of the line. The Klan revived in those days right after World War I and took charge of our racial problems. These neighbors may or may not have been members of the Klan, but, if not, they used klannish tactics of that era to administer justice as they saw it.

To me, then, klansmen were heroes, I gave full and fierce consent to their midnight raids. They were still vindicating the stand of the old South and rectifying the wrongs of reconstruction. But the years have passed—an era of radical transition.

In 1939, I switched from law school to the theological seminary in Richmond, Va., where I had experiences that began to break down my bias. As a member of the basketball team, I refused to play against Virginia Union, a Negro college in Richmond. At an interseminary conference held on our campus, I rebelled at the idea of sitting at table with Negro delegates. I did sit with them, due to moral pressure, and got through undefiled—the first crack in my dike. I remarked at the time, however, that I would never do such a thing in the Deep South. It would destroy my influence with the people.

I then went to a Lexington, Ky., church to work with University of Kentucky students. Playing on a softball team that won the campus championship, I was again influenced by moral force and I played an international series against a good Negro team. As first baseman, I took a peg from the catcher in a pickoff play and jabbed it at the runner as he came back in. But he came back head first. I literally put the ball in his mouth. I thought I had a race riot on my hands, but the Negro's teammates rolled on the ground and roared with laughter. The crack in the dike widened—they were better sports than I would have been.

At the University of Texas, where I went to do similar church work, the students asked to have a Negro college choir give them a program on Sunday evening. I outlined the ways they could do it and predicted the consequences, but required them to make the choice. They chose to treat the Negroes in every respect like themselves. The reaction among the regular church members was strong. I had not been enthusiastic about the program, but I found myself strenuously defending the right of the students to conduct this experiment in race relations. Maybe I was just convincing myself.

THE REBELLION WITHIN THE MIND IS OVER

Later, in a small college-town pastorate in Alabama, a 14-year-old Negro boy was stabbed by a town roughneck who boasted later in the poolroom, "I stuck a nigger and he squealed like a hawg." A South Carolina sociology professor persuaded me to help find witnesses who would bring the assailant to justice.

Even a southerner can't hold out forever against the irrefutable testimony of his own experience, especially as it is tempered with the relentless persuasion of the Bible. Now, I can say without reservation that I am for these people, these God-loved, rich-in-pathos people. I shall never earn my own freedom until they have realized theirs.

This is not to say that my southern-bred emotions do not at times struggle against my mind, which has consented to the right precepts. But the rebellion within the mind is over, the civil strife in the spirit has ceased.

Most southern clergymen, I think, came by their conversion through the conviction of experience rather than the persuasion of logic. We try to remember this in our relationship with our people.

Few do we find of the middle and older generation who will take our word for it. Their racial feeling prevents their submission to experience, and their lack of experience prevents a change of racial feeling. The cycle must be broken somewhere.

Stubbornly, we cling to the conviction that if the Christian faith is soundly and bravely taught, there will be a breakthrough eventually. Ours is hack work; we are the plodders. We carry the burden of racial justice in the larger bundle of other issues, trying to do credit to them all, attempting to hold each in perspective and our congregation in some semblance of concord.

We seldom approach the racial issue directly unless some current event thrusts it upon us. We try to include it in the context of other pronouncements, to get the point across without goading the irrational side of people.

The southerner is acutely sensitive these days. He will accuse you of dragging in the race issue when you honestly meant no such implication. The matter weighs heavily on his mind, rankles in his subconscious. The issue is in every phase of his life, the kind of wage scale he will establish, to whom he will sell his merchandise, whom he will support for public office, where he buys his house, what he thinks about education, what preacher he will listen to, who will be his companions, how far he will go in public welfare.

Actually, he is not spiritually and intellectually free. There are few issues he can isolate from the race issue and think through

on their own merits. He can't make judgments about fundamentals like freedom, democracy, and justice on an absolute standard of right and wrong, because of the presence of a people for whom he must always make an exception. His constant practice in this relative morality affects all his decisions, major and minor.

He will make confessions like: "It's got to come someday" or "They are just as much people as we are." But back in his interlocking social and business relationships, he reverts to: "The overwhelming majority of the people feel * * *" and "You can't shove this thing down people's throats." In his moral judgments, he does not want independence, for independence can mean ostracism. Therefore, the southern mind will never be free until it grants freedom.

We who are bold enough, or fools enough, to face this issue are not understood by our people. In our soberer moments, we really don't expect them to understand. Then, why break our hearts on it? We don't know why, maybe divine compulsion is the only answer. Pushing from one experience to another, we think we have found a mode of operation that is workable. It is neither segregation nor integration.

Segregation on the basis of color alone implies inferiority, with the further implication that inferiority of nature permits inferiority of treatment. Segregation also legislates on the basis of group identification rather than individual accountability. This is at odds with regular democratic procedure.

The term integration has been weighted with meaning that did not originally belong to it. Now it implies the unnatural displacement of persons, abnormal gatherings of uncongenial people, awkward relationships, despoiling one group's culture by the encroachment of the other, sexual irregularities, and intermarriage. If integration means this, then no one recommends it.

The term that best describes our mode of operation is creative contact. It means that even while the State and Federal laws are in contention, there should be points of contact between the white and Negro people that are creative. This means representation of both groups on city councils, grand juries, school boards, medical societies, ministerial associations, and other public agencies. We have striven to reach a solution without even consulting the one around whom the controversy centers. We no longer understand him, his wishes, and his needs. We have presumed to speak in his behalf on the basis of our knowledge of him as he was a generation ago, or as he is represented to be by a household servant.

Our contact with the Negro people can become creative if we will sit with their leaders at the council table, listen to them with respect, and share with them the responsibilities as well as the privileges of living together. Then, they will take the initiative in preventing those contacts that are not creative but, rather, are destructive. At least, they will join us in meeting crises before they arise.

It is inevitable that laws of racial reference will be abolished. If we now establish this free enterprise in human relations at the leadership level, a just, orderly, and contented society should result.

It is at this point that we clergymen are most misunderstood. Our policy is taken to mean the first fatal step to total integration in the worst sense of that word. We have discovered two sentiments in the nature of the Negroes themselves that counsel otherwise. The servile class of Negro has made peace with segregation and discourages his white friends from pressing his case at all. He shudders at the thought of his white employers' being offended with him because of his race's rebelliousness.

THE NEGRO COMMANDS RESPECT

The leader class, coming to the fore during nearly a century of segregation, naturally has a sense of pride in both personal accomplishment and social progress. These leaders are not inviting us in to level off their social and economic structure, nor have they any desire to move in against the whites and start over against new and formidable competition.

I would not take anything for my experience as a member of the board of directors for the Negro YMCA. These Negro directors are business and professional men, highly respected and most capable in the conduct of their meetings. I am the rookie of the board, with little to offer in the way of money or advice. But I know what I am there for: I am a symbol, a mute symbol that says, "The white man has profound respect for the dignity of your personality and the integrity of your character, not because he thinks he ought to have, but because you command it." Perhaps, later, I can offer some counsel, for a Negro minister told me once, "In our struggle for advancement, don't let our efforts die from inbreeding."

Essentially, the Negro's struggle is for human dignity. The signs and the demeanor that bespeak his subordination oppress his soul. If, tomorrow, he were given equal opportunities in all areas of life, he might not take advantage of them immediately, but victory would be his—an ungrudging salute to his human dignity.

The strongest show of resistance in the South occurred 80 miles from Columbus at Montgomery. The issue was not rights but respect. The rear of a bus is as good as the front. But indignities resulted from keeping the races separate. Actually, separation was impossible, it was a symbol of separation that the whites tried to preserve. The symbol was indignity.

A Negro leader, in summing up the incidents in which his people have resorted to the courts, said this: "Tell our people that they can't, and we will show you that we can." Negroes will continue their drive to strike down the signposts of their inferiority. They neither demand nor desire to be invited to the white ladies' lawn parties, but they do feel that they have a right to a dignified use of those public properties and privileges which all citizens hold in common—a use without any symbols of humiliation.

The school problem is most vexing because legal force has intervened. Yet it is not too late for moral force to be used. The Negro is fully aware of the complications involved in mixed schools. The teaching standards and qualifications would have to be brought quickly into line, with disrupting effect. The positions of his teachers and principals would be jeopardized; the symbols of indignity removed could reappear in the demeanor of the children.

As it is now, we are in tension because the 2 races have pitted 2 legal forces against each other, State against Federal. To the winner, there will be no sweetness of victory and no peace—only an uneasy armistice. While these forces are in conflict, many forms of pressure are being used: physical, economic, political. And nobody wins.

Each precinct will have to rely upon the moral force that Christianity and American democracy have generated. This requires close communication between the races, with the council table as the anvil and mutual good will as the hammer. We cannot predict where this creative contact will take us or what sort of racial pattern it will form. But right methods inevitably produce right results. And we have learned, even from present international affairs, a lesson we memorized but never really practiced, that the only effective force left in the world is moral force.

As for the klansmen and their threats of violence, we do not fear them, we only pity them. God pity anyone who has to spread fear to be rid of fear, whose self-esteem is so low that he has to flatten someone else to feel that he is upright.

The White Citizens Councils are more formidable. They are smart enough to know that physical force will backfire against them. They resort to political and economic pressure to attain their ends. But they, too, will run their course.

Our greatest concern is with good citizens who create the climate of opinion, in their service clubs, in their coffee-break talks, in business transactions, in political decisions, in church affairs, in the management of the home. The heavy pressure we ministers feel comes from them. They elect the State officials who vie with each other in proposing bizarre methods for strengthening segregation. They furnish a Stars-and-Bars backdrop against which we have to speak cross-centered words of reconciliation. They lay upon us the pressures they feel all the time, everywhere, in the regular concourse of life, as though we were the real disturbers of the peace. There is little indignation expressed over the klan or racial violence, just silence, cold, sweaty silence. The klan is the impassioned tip of the community's refined prejudice.

Why do we stay with it, why not leave the South that resists us? Well, we happen to love this land and we love the people who are offended with us. We are called to the section that nurtured us, knowing that only the southern accent can speak intimately on the issue.

If the minister loses his sense of calling, he has nothing left to sustain him. The true prophet stays behind with his people, pleading, cajoling, lashing, soothing their wounded spirits, praying out their prejudices, taking their blows of resentment upon his own back, loving and forgiving them. Having spoken, he must remain to bear the brunt of his own words. The profoundest lesson God ever taught us is that the evil of a sin is never abated until it spends itself upon the innocent and is absorbed by a heart of infinite understanding.

A further question is: Why do we stay with the church when the strongest resistance seems to come from our own people? If we expended the same effort and ingenuity in some other work, we would make an ample living. If we expressed our convictions through some special society organized to speak on this problem, we would receive the plaudits rather than the complaints of our constituency.

Here is our answer: Of all the existing institutions, the church, even with its humanistic accretions, is the true means of a redemptive society and happiness among the races. Society's points of tension will find no permanent ease from those agencies that have no consciousness of a providential pattern or a divine concern for human conflict. With all our concentration upon making or altering our laws so that they are just, there must be some social organism that toils without ceasing at the task of making or altering men. Some consecrated body of men must start this ethical ground swell that will initiate and defend the statutes of civil justice.

The race problem will endure as long as there are races, and it requires the devoted attention of a permanent institution. Of all the institutions we know—economic, political, and social—the church, whose prime function is the revealing of Christ, is the only one that possesses the seeds of its own regeneration. The others, from their inception, produce the seeds of their own destruction.

The church's weakness is caused by its human composition, but its permanence is be-

cause it is God's. Paradoxically, it toughens under persecution, reverts to strength when it becomes weakest, waxes greater when it becomes smaller, grows militant when it loves peace, profits as it sacrifices, wanes under the excesses of success, but lives again as it dies. It is as inevitable as change, enduring as sin, as everlasting as God. There can be no destruction of it from within or without. The church will always be as strong as it is self-critical.

Happily, the ebb of complacency produces the flow of prophecy, the dry rot of sophistication invigorates the seeds of simplicity, the lull of contentment incites the outcries of dissatisfaction. The church is the conscience of society, the intangible controlling and quickening force of it. God willing, there I choose to remain.

Indiana Has New School Construction Plan

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Sunday Star, Washington, D. C., on May 26, 1957, entitled "Indiana Has New School Construction Plan."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIANA HAS NEW SCHOOL CONSTRUCTION PLAN

(By Phil Yeager)

Indiana has a notion that it can get the schools it needs without any particular help from Uncle Sam.

At least the Hoosiers have come up with an alternative to the Federal aid concept—an alternative which, if it works, might set a pattern other States will want to follow.

A lot of ingredients are mixed up in the Indiana formula, but the major ones are:

A system of private financing designed to get around the sluggish bond market and avoid the need for immediate big cash outlays.

A slashing of the legal redtape which hamstrings many States in contracting for new schools.

Unique teamwork between designers and builders in providing, at low cost, the flexible, modern schools demanded by the future.

Legislation begun by the Indiana General Assembly in 1955 and completed at the current session a few weeks ago laid the groundwork for the Indiana plan.

Under the old system, a locality wanting a new school first acquired the necessary site. Then an architect drew plans for the school on speculation. If plans were approved by the school board, construction bids were asked. If and when bids were submitted within the desired financial limits, bonds were issued to finance the building. If the bonds sold, construction began.

Many States today operate in that fashion.

A PACKAGE DEAL

Under the new Indiana plan, a district wanting a new school advertises its intention to build with a description of what it wants. Bidders submit design and a construction bid combined, which cuts fees as well as costly construction corners. A single contract is let with a company which finances and builds the school, even providing the site if necessary. Component parts of the school are made, and sometimes partially assembled, at the builder's plant and shipped to the site where the school is erected.

Construction time under the new system is likely to be half, or even a third, that of conventional schedules. When the building is finished it is leased by the builder to the school board for a period of years, at the end of which time title passes to the appropriate school authority.

Here is what the State Assembly did to get its plan set up.

To cut school costs without sacrificing quality, it passed an "offsite construction" act which permits the acquisition, assembly and construction of schools away from the eventual site. The act takes advantage of the economies allowed by prefabrication, but gets around the inflexibility of function often associated with prefabrication by providing for use of "component parts" which may be assembled according to need, location, size, etc. The parts can be made cheaply but meshed with any plans the school district may have in mind.

The law also authorizes the acquisition of plans, parts and construction in a "single package" contract.

To ease financing problems, the Assembly passed a "profit-and-lease" act which authorizes private financing of new schools by permitting school boards to lease sites and buildings through private corporationsforprofit.

Under this law, school boards contract with private groups to provide the site and school and, at the same time, arrange for their long-term lease. A "fair and reasonable" rental is allowed such groups, the rental being paid by local taxes. Leases may run anywhere up to 50 years, but when they expire the school becomes the property of the community School boards have the option of purchasing the facilities outright at any time, nominal penalties attaching only during the first 10 years of the lease if the purchase takes place then.

Four other States—Maine, Pennsylvania, Georgia and Wisconsin—are also authorized to make use of the lease-purchase principle. But none of them has advanced to the stage set by Indiana and, apparently, no other State has ventured into this kind of financing.

NEW STYLES IN SCHOOLS

A critical element in the success of the Indiana plan is the development of more economical, more flexible schools. In this respect, parallel endeavors by two of the Nation's industrial giants, Republic Steel and United States Steel, are held highly significant.

During the past few years the steel companies have been working with designers to create flexible prefabricated components which will permit quality construction of the cheaper schools desired.

Republic has developed a pattern based structually on 3-, 6-, and 9-foot component modules; it is a flexible scheme, and it permits a choice of different building materials such as tile, brick, concrete block, and porcelain panel to suit the needs and financial limitations of the builder. A United States Steel system is based on all-steel room units; it emphasizes more rapid construction and is somewhat cheaper to build.

Republic is completing the first of its modular schools at Hymera, Ind. United States Steel has finished two, one at Gary and the other a parochial school at Emmitsburg, Md.

In both systems costs range between $18,000 and $22,000 per room, whereas the national norm is around $30,000 or more.

This kind of saving, added to the economy of construction time, is expected to more than compensate for whatever cost increase, if any, comes out of Indiana's new private financing system.

THERE ARE QUESTION MARKS

The Indiana plan is not without its question marks.

First, how would the system benefit the poorer areas of the country where need is greatest and the tax base lowest?

Protagonists say that the actual cost to the community of the new component part type of school is markedly below going rates in any part of the country—an absolute saving factor.

Meanwhile, the financing scheme puts a practical alternative at the disposal of small communities which cannot borrow the money or which do not have it on hand. Even in the larger communities it may make new schools financially possible. This is because in many areas (Indiana is one of them) the market is glutted with low-interest obligation bonds, or because the community has reached the legal limit of its borrowing power.

The system involves no big lump requisition of cash which major building programs usually require through a bond issue. Costs can be distributed among a number of financiers.

Finally, backers say, the Indiana plan may offer a lower and more flexible amortization schedule.

Second, would the plan conform to the laws of other States?

The answer is that in some places it undoubtedly would not. Some State constitutions, for example, do not permit title to facilities used for public schools to be in the hands of any owner but a governmental agency.

However, legislation sometimes can solve the problem. In Wisconsin recently the State supreme court declared a school-lease plan invalid. Subsequent legislation smoothed the legal wrinkles.

Third, will financiers be willing to get involved without Government insurance to minimimize the risks of having the school community's tax base depleted, impaired, or withdrawn?

On this point there appears to be a difference of opinion. Some think it is unnecessary or undesirable. Others, however, think that a kind of Federal insurance, similar to the guaranty provided on FHA or VA loans, will be needed to induce private lessor corporations to put up the money. The idea is to guard against recession, in which case tax revenues to support lease payments might dwindle, and to guard against political changes which might find a school board reluctant to continue arrangements made by its predecessor.

It is reported that a delegation of interested businessmen will be meeting with Members of Congress in the weeks ahead to draft legislation that would authorize Federal insurance for such purposes.

Among those who feel that a Federal insurance plan is needed, there seems to be a companion belief that if it can be obtained Indiana's plan might well go over on a national scale.

Why Pick on Dixie?

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article

entitled "Why Pick on Dixie?" by Harold Lord Varney, published in the July 1957 issue of American Mercury magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY PICK ON DIXIE?

(By Harold Lord Varney)

A new and wonder formula for quick literary success is now emerging. The formula is a simple one—easily within the reach of the most uninspired plodder in American letters. Expressed in a single sentence it is this: Damn the South.

So rapidly has this new literary fashion fastened itself upon us that there is now scarcely a publishing house or a national magazine which does not have a dreary stable of hacks grinding out anti-South treatises or fiction. The theme assails our ears nightly on the airwaves via both radio and television. It comes to us cloyingly in the dignified columns of the New York Times or in the more tobasco pages of Mr. Luce's Time. It is becoming a literary occupation. We are all becoming South-baiters.

An incredible example of this new literary genre was displayed a short time ago on the mass audience TV Climax show, sponsored by one of the "big three" auto makers. Probably 30 million TV viewers saw an implausible political story, "Stain of Honor," confected by Adrian Spies. No TV fan could rise from this performance without the ineluctable impression that Southern politicians as a breed were a thoroughly bad lot, with unmistakable overtones of insanity. Whether intended or not, the fact remains that every Southern character in the play with the exception of the hero, who had repudiated his Southern heritage, was unsympathetic. The only role of nobility in the play was assigned to a Negro character.

Such a play—and it is only a sample of the dreadful tripe which is now on display—is vicious and malevolent. It attempts to place the Claghorn stamp on all Southern political leaders. Its effect is to fan hate between Northern and Southern Americans. The fact that the message is not spelled out—that it is conveyed by innuendo and through the heavy lines of caricature—makes it all the more deadly in its impact on the mass mind.

Going the rounds of the second-run movie house circuit at this time are three hit pictures stressing southern themes. These are Giant, Baby Doll, and Written on the Wind.

Of Giant, which is based upon the Edna Ferber book of the same name, Time declares that the book from which the screenplay was confected, "bellowed from the bookstalls that Texas in modern times is a microcosm of materialism, a noisome social compost of everything that is crass and sick and cruel in American life."

Although not as wholehearted in its malice as the Ferber original, the story which George Stevens directed for the movies is one continuous preachment against Texans. They are pilloried as cruel and inhuman in their treatment of the Mexicans. They are shown as vulgar and devoid of the human sympathies which characterize Northern Americans. A mounting atmosphere of disdain pervades the whole screenplay.

Although nowhere stated bluntly, the message comes through in every scene of the play, and particularly in the pumped-up overwrought finale. That message is that Texans aren't on the same emotional wavelength with the rest of us. It is a technique which Hollywood perfected in its depictment of Germans and Japanese during the late war. The vast Giant audience rises from its plush seats with the inevitable stereotype that Texans simply aren't good Americans.

In another picture, Written on the Wind, the unpleasant southerner stereotype is not quite so clear. Some sympathetic southern characters are allowed to enter the cast. The main action is in New York rather than in the Deep South. But in the central story line, the neurotic, wastrel protagonist who snatches Lauren Bacall from the clean-cut boy of the plot is—you have guessed it—the inevitable Texas oilman. Audiences all over the United States are now engaged in a collective emotional wallow, hating the Texan.

But the most malicious caricature of the South is given by Baby Doll, which Cardinal Spellman described as "revolting" and "morally repellent."

Baby Doll is slanted cynically at the Tobacco Road northern theater-going public. Its action takes place in Mississippi among a weird collection of unbelievable "Deep South" whites. The heroine, Baby Doll, is a near-cretin and a slut. Her middle-aged husband is a creep. They live together in one of the most nauseous situations ever depicted on the American screen. The most nearly normal character in the picture (all of the cast are fugitives from Krafft-Ebbing) is, of course, the northern outsider to whose obscene arms Baby Doll flees.

The whole story leaves a sickening savor in the viewer's mouth.

These three unpleasant examples are cited, not because they are any worse than other treatments of the South which Hollywood has ground out. What is noteworthy in them is that they represent a trend which seems to be dominating large areas of the communications media of the country. It is the trend to defame and defoul the composite picture of the southern American which is in the people's mind. It is the trend to libel 46 million Americans who happen to live south of Mason and Dixon's line, and to hold them up to national contempt.

This lynch spirit against the South is evident throughout the public opinion field, as registered by the various media. It is evident in book publishing houses which have discovered that a novel, such as Lettie Hamlett Rogers' Birthright, which draws a horrifying likeness of the best families of the South while sobbing tearfully over the wrongs of the Negro, will sensationally outsell any book about the South which presents white southern characters as ordinary, decent-spirited Americans.

It is evident in magazine publishing offices which, with a uniformity now becoming almost compulsive, invariably give their assignments of stories about the South to race-obscessed foreigners like Gunnar Myrdal or Alan Paton, or to unrepresentative southerners like Hodding Carter, Harry S. Ashmore, Lillian Smith, Robert P. Warren, Mark F. Ethridge—men and women who have achieved a quick, synthetic popularity among northern South-haters by affecting the pose of the "reasonable southerner." True experts on the South, such as Virginius Dabney, James J. Kilpatrick, Clifford Dowdey, James G. Stahlman, Jonathan Daniels, James F. Byrnes, Luther H. Hodges, are seldom if ever published in the mass circulation northern slicks. It is evident that most northern editors are little interested in the southern state of mind, but only in its denunciation.

When the brightest star in the southern literary constellation, Nobel prize winner William Faulkner, wrote a 2-page letter to a national weekly defending the attitude of the South, a deep stunned silence engulfed him. He has been invited to write no more articles on the South for the northern magazines.

Television is another medium which appears to have joined wholeheartedly in the anti-South brainwashing. Occasionally, a spokesman for the southern attitude is reluctantly included in a panel program or a discussion or interview show. When this is done, the announcer or interviewer is certain to make it plain, directly or indirectly, that the station disassociates itself completely from the views of the speaker. The bias of the station is so obvious as to nullify any gain in understanding which might result from the presentation of a southerner. The staffs of the network news interpreters, headed by such left-leaners as Edward R. Murrow and Chet Huntley, are unanimously anti-South.

The only time when an influential network discussion program attempted to give a fair break to the South was during the late lamented career of the Facts Forum. The Forum was continually harassed during its life by liberal pressure before the FCC to have it thrown off the air. It was smeared in exposés charging rightism in such leftist magazines as the Reporter, etc. It was cited before the Internal Revenue Bureau. Instead of welcoming this opportunity, in the American tradition of fair play, to hear this dissenting voice, the South baiters thought only in terms of suppression.

The climate of opinion in the North is similarly saturated against the South by most of the effective and well-financed organizational molders of public opinion. All the foundations stand in solid ranks, with their billions, in determined opposition to the traditional southern viewpoint. Instead of providing a forum for the honest discussion of southern issues, the foundations have underwritten a controversial organization in the South, the Southern Regional Council, which is staffed by southerners who have unreservedly accepted northern opinion patterns. The council, in a dignified way, is the clearinghouse of most of the indoctrination of the South which is now in furious progress by northern agencies.

In the last 3 years, the council has received a total of $445,000 from the Fund for the Republic of the Ford Foundation. The council has also been on the receiving end of sizable funds from the William C. Whitney Foundation, the Field Foundation, the Doris Duke Foundation, the Marion Ascoli Fund, the Sidney Hillman Foundation, and others. More militant organizations in the field of South baiting which have received Fund of the Republic money are the legal defense fund of the National Association for the Advancement of Colored People ($50,000), the Urban League ($50,000), the Commission on Race and Housing ($118,954).

All of these agencies are engaged in the determined task of discrediting in national public opinion the recognized leaders and spokesmen of the South.

The great national organizations which represent important occupational and religious belief blocs are, to an appalling extent, also enlisted in this indiscriminate "damn the South" drive. The South's right to observe its own folkways is being assailed on platform and in print by such potent national groups as the National Education Association, the National Parent-Teachers Association, the AFL–CIO, the League of Women Voters, the Americans for Democratic Action, the American Civil Liberties Union, and the clearinghouse of affiliated civil liberties organization, the National Council of Churches, the denominational secretariat of most of the church bodies, and many others. Even the national spokesmen of the Republican and Democratic National Committees make discreet political noises directed against the South on appropriate occasions.

Under this high-level prompting, indoctrination against the South is slowly blanketing most of the opinion-influencing agencies of the North. It is being taught openly in the classrooms of the public schools, and in many of the private ones. It permeates the newer textbooks and teaching aids which are given to the teacher. It is slipped slyly into the children's books and the comic strips. It is the theme of impressive seminars in the colleges and universities. It is being preached from the pulpits of religious liberals, proclaimed from the lecture platform and the women's club stage, re-

iterated ad nauseum at Rotary, Kiwanis, Lions, and other business-club luncheons. It saturates the northern press. The fair-minded American, seeking honest light on the southern question, finds himself asphyxiated in a suffocating fog of indoctrination and propaganda.

No such private war of spite and calumny has been directed against a minority of fellow Americans since the days of the Mormon persecutions.

It is inevitable, in such an atmosphere of all-pervading malice, that the people of the South are beginning to feel themselves outsiders in the national family. Thanks to seniority southerners still wield a potent influence over the committees of the Senate and House, but there their influence ends. They have lost the battle of national public opinion. Under this bludgeoning, the Deep South has become a sort of American Sudetenland—a deep fault of explosive political unhappiness and humiliation threatening our national unity.

Who has done this to the South? Certainly, this recrudescence of antisouthern animosity is not something which has just happened spontaneously in the North. The average northerner has no particular dislike of the southern American, although he may be conscious of certain surface differences. If, today, he is supporting movements and leaders which are engaged in all-out anti-southernism, it is because he is reacting unthinkingly to the propaganda that is filling the airwaves and the public prints. This propaganda emanates from a relatively small group of northern liberals. This group is willing to revive all of the sectional hates and passions which were buried almost a hundred years ago in the Civil War, in order to serve their own ignoble purposes of power.

Briefly stated, the men and women who are behind the anti-South drive are the familiar figures who, in other fields, have been trying since the days of Roosevelt to remake America in the image of their one-world, one-race ideology. It is the same inglorious crowd which has committed the United States to the United Nations, and to UNESCO and to the Mrs. Roosevelt-written Covenant of Human Rights. It is the same crowd which hounded Bob Taft to his grave, which humiliated MacArthur, which has declared political vendettas against Jenner and McCarthy and Knowland, and which is still unconvinced of the guilt of Alger Hiss.

To these resourceful schemers, the South, with its deep-running conservationism and with its unshaken Anglo-Saxon traditions, was an obstacle which had to be removed. Its leaders must be discredited as political pariahs, its way of life must be held up to public detestation and ridicule.

What better instrument was there to direct against the South than the Negro question? Americans, both northerners and southerners alike, have long felt a sense of national guilt over the Negro, and there has been general agreement that inherited discriminations must be gradually abolished. The fact that the South was doing something about it made little difference to the doctrinaire liberals whose book called for a political jehad against southern conservatism. It was determined to use the Negro issue as a smashing club against the South, to compel immediate compliance with the blueprints of "one world" liberalism.

What assured liberal success in this undertaking was the political potency of the northern Negro vote. An organization such as the National Association for the Advancement of Colored People which has always been under left liberal (before World War II, even Communist) influence, offered itself as a ready-made instrument for this purpose. The NAACP could direct terrific influence upon northern politicians, both Republican and Democratic, by threatening reprisals by the Negro voters. The 6 million northern Negro voters, acting as a bullet bloc, could easily decide the outcome of a Presidential election. They meant the difference between victory and defeat in the hairline outcome of many a House or even Senate election in the North. No ambitious politician, who wanted to stay alive, would willingly affront such a balance of power.

Commencing sometime in the early 1940's and taking on accelerated speed as the years passed, we have seen the spectacle of an almost bandwagon rush of northern politicians to the NAACP side in local and national elections. The pressure of the local politicians, who get out the vote, upon individual Senators and Congressmen in Washington, became terrific. From a dominant place in the legislative picture, which they had enjoyed in coalition with conservative Republicans throughout the Taft-Wherry period of Republican leadership, the southern legislators have now sunk into a sad status of isolation. Through their control of committees they can exercise some restraining influence upon the speed of the antisouthern measures. But they can no longer check them. Republicanism under Eisenhower, and Democracy under Adlai Stevenson and Walter Reuther, are sternly against them.

In a period in which the South is no longer feared politically, it has ceased to be respected intellectually or socially. It has become the butt of mediocrity in literature, in journalism, on the screen and over the air waves. It has become the whipping boy of every political and journalistic demagogue who is seeking an easy road to quick success. Enlistment in the anti-South hate campaign is the surest pathway for the unscrupulous to win the great cinque of liberalism to further his career.

It is a shameful episode in the history of our times. It is also a disastrous experience for Americans. At an historic juncture when the hostility of the American people should be channeled exclusively against our enemies at home and abroad, liberalism has detoured us into a hate drive against other Americans. At a time when tolerance has become almost a national religion, the tolerance high priesthood is itself launched on one of the most intolerant smear campaigns in the annals of propaganda.

America, in releasing the antisouthern hate waves, is weakening our most precious possession—the unity of the American people. It will not be easy to recapture it after the present dementia is past.

States Protest Substitution of Personal Ideas for Laws

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorial correspondence entitled "States Protest Substitution of Personal Ideas for Laws," written by W. D. Workman, Jr., one of South Carolina's most able and respected newsmen, and published in the Greenville (S. C.) News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATES PROTEST SUBSTITUTION OF PERSONAL IDEAS FOR LAWS

(By W. D. Workman, Jr.)

COLUMBIA, June 1.—Bit by bit, the States of the South are making out a bill of particulars against the present thinking of the United States Supreme Court in fields which go far beyond questions of race relations.

Three States already have documented their grievances against the Court with detailed statements, and other Southern States have similar charges under legislative consideration. Florida was the first State to make out a general case against the pattern of recent Supreme Court decisions, and it did so by way of a concurrent resolution adopted last August and signed by Gov. LeRoy Collins.

Then came the Georgia Legislature with a resolution which likewise enumerated the grievances against the Court and went to the extreme of proposing the impeachment of those Supreme Court Justices who had taken part in decisions which, in the eyes of Georgia legislators, subverted the Constitution of the United States. (A similar resolution has been introduced in the South Carolina General Assembly and is under study by the judicial committee of the house of representatives.)

Now comes the Legislature of Alabama, with a second "nullification" resolution which this time is not restricted to the school desegregation issue, but which specifies other instances of alleged impropriety by the Supreme Court.

It may be significant that most of the Supreme Court decisions objected to by these Southern States arose outside the South (except for the school segregation cases). Perhaps the strategy of this procedure incorporates the hope that non-Southern States will see their own sovereignty at stake and rally to the cause of States' rights on grounds other than racial.

In any event, a serious indictment is gradually shaping up against the high Court, as evidenced by these representative excerpts from the Florida resolution:

"(1) By decisions rendered May 17, 1954 (in the school segregation cases), the Supreme Court of the United States denied to the sovereign States of the American Union the power to regulate public education by the use of practices first declared constitutional by the State of Massachusetts, adopted by the Congress, approved by the Executive, affirmed and reaffirmed by the Supreme Court of the United States and practiced by States for more than a century."

"(2) In a decision rendered May 21, 1956, in Railway Employees Department, *AFL et al* v. *Robert L. Hanson*, the Supreme Court of the United States held that a union-shop agreement negotiated between certain railroads and certain organizations of employees of such railroads which had been authorized by an act of the Congress superseded the right-to-work provisions of the Constitution of the State of Nebraska and the State statutes enacted pursuant thereto."

"(3) By a decision rendered January 16, 1956, *Danton George Rea* v. *United States of America*, the Supreme Court of the United States held that it was within the power of the Federal Courts to enjoin an officer of the executive department of the Federal Government from testifying in the courts of the State of New Mexico in a criminal prosecution of one charged with a violation of a statute of that State prohibiting the possession of marihuana."

"(4) By a decision rendered April 2, 1956, in *Commonwealth of Pennsylvania* v. *Steve Nelson*, the Supreme Court of the United States has declared that, so long as the present Federal law providing punishment for sedition exists, the sovereign State of Pennsylvania and those 41 of her sister States who have enacted laws against sedition, are

without power to enforce their statutes enacted for the purpose of preserving the lives and safety of their citizens from those who would by force and violence overthrow the Government of the United States, the States themselves, or any of their political subdivisions."

"(5) In a decision rendered April 23, 1956, in *Judson Griffin et al.* v. *People of the State of Illinois*, the Supreme Court of the United States held that the due process and equal protection clauses of the Constitution of the United States rendered illegal the imprisonment of one charged with armed robbery and duly convicted in the trial court of Illinois, unless the State of Illinois provided the defendant, free of charge, a transcript of the proceedings to be used in an appeal of his conviction."

"(6) By a decision rendered April 9, 1956, in *Harry Slochower* v. *Board of Higher Education of the City of New York*, the Supreme Court of the United States held that the city of New York had violated the Constitution of the United States by the summary discharge of a public employee who had refused to answer questions relative to his communistic activities and claimed the benefit of the fifth amendment to the Constitution in so doing."

In the light of those decisions said the Legislature of Florida, it is evident that the Supreme Court "has entered upon a policy of substituting the personal and individual ideas of the members of the Court as to what the Constitution of the United States should be. * * * The personal, social, economic and political ideas of the members of the Supreme Court of the United States do not constitute the proper criterion for the admeasurement of States rights or the powers of the several departments of the Federal Government or the rights of individual citizens."

To those observations, the Florida Legislature added this sentiment:

"If wise and beneficient men may make changes in the Constitution that are beneficial in the light of changing conditions, others may, with equal propriety, make changes which will destroy the rights of the people * * * while disobedience to constituted authority is the mother of anarchy, it is the history of freemen that they will not supinely permit government to become the master of the people, and will never yield unrestrained authority to any group of public officers."

The Nonsense About Depreciation

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, which appeared in the Journal of Commerce and Commercial of New York on Monday, May 27, 1957, entitled "Let's Stop the Nonsense About Depreciation."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S STOP THE NONSENSE ABOUT DEPRECIATION

(By Eric Ridder, publisher)

The time has come to take depreciation out of politics.

Entirely too much nonsense has been written and spoken on this subject. Reformers of various shades have joined hands with unionists in a campaign to malign the business drive for a modernization of depreciation practices as an attempted raid on the Treasury; as a grab; as a thinly veiled quest for subsidies by big business; or worse.

Ignorance reached a new peak during the recent congressional hearings on accelerated depreciation, which is merely one phase of the problem—and not even the most important one.

Business wants greater freedom on depreciation. Business has a right to such greater freedom, particularly since nobody has to get hurt as a result.

This is not a fight for continuance of the wartime system of accelerated 5-year amortization for defense or defense-supporting facilities.

It is a fight for a system of true flexibility in the determination of depreciation schedules. These determinations are not a tax collector's job; they are one of top management's major responsibilities and, as such, have a direct and important bearing on the continuance of prosperity.

Let us not forget that the current tax treatment of depreciation was "invented" in 1934 because the administration then in power needed extra revenue. It was strictly an emergency baby—and should never have been permitted to linger on after the big depression was over.

Depreciation is just as much a cost of doing business as meeting the weekly payroll.

It is nonsense to claim that the taxpayer is being robbed if industry is allowed to decide how quickly it wants to write off such capital expenditures. As long as it can be safely presumed that even 5, 10, or 20 years from now, 100 still will equal 100—and not 110 or 90—it is obvious that no businessman gets a "gift" if he decides to write certain capital items off faster than the tax collector thinks he ought to.

To be sure, there will be "lags" in tax collections—but in the end, the Government receives the same amount of taxes, barring changes in the tax rate, regardless of whether an item is written off faster or more slowly.

Secretary of the Treasury Humphrey, in his recent appearance before a Senate committee, admitted frankly that the lag in tax revenues created by faster writeoffs really is nothing to worry about. I agree with Mr. Humphrey on this 100 percent.

The only argument of any validity against flexible depreciation is that the Government may have to borrow money temporarily that otherwise would have come in the form of higher corporate taxes. Of course, it has to pay interest for such money—under current conditions at a rate of about 3½ percent.

Secretary Humphrey has figured out that wartime accelerated depreciation since 1950 has cost the administration some $3 billion in interest charges which will not be recovered at a later date. I believe his figure probably is too high, but that does not really matter here. He does not like such interest charges—and we can't really blame him for this attitude. As a businessman—and one of the ablest in the country at that—it irks Mr. Humphrey not to be able to recover such "cost" items. That is why he objects to anything but the application of accelerated depreciation to strictly military projects.

Again I find myself in perfect agreement with Mr. Humphrey. But, at the same time, I have news for him: Actually, this is one time when he can have his cake and eat it too.

There is no cause to throw out the sound principle of flexible depreciation for this reason: Such a system does not have to cost the Government anything at all—in interest charges.

It is actually quite simple to adjust depreciation practices to the requirements of an expanding economy, instead of clinging to the archaic concept of a mature economy that pervaded our thinking in the thirties.

If there is a genuine desire to modernize depreciation in the interest—not of a few businessmen—but in the interest of the whole economy, there are at least two ways in which this can be done without costing the Government a single dime in interest costs.

If there is no such desire, then, by all means, let's call a spade a shovel and use it to bury the principles of our economic system.

It is easy enough to determine, in each individual case, the tax lag that will arise when a company wants to speed up the amortization of capital assets.

Approximately half the difference between the old slow depreciation and the desired faster writeoff represents the tax lag which presumably would have to be financed through borrowing if collection is delayed.

This could be done—cost free for the Government—through the issuance of non-interest-bearing, negotiable Government bonds to be purchased and paid for by the companies taking faster depreciation in the amounts involved from year to year.

Or, even more simply, it could be done by applying a 3½ percent higher tax rate on that part of a company's earnings that would be taxed away under the old depreciation setup but becomes an allowable deduction claimed as depreciation in any particular year.

To be sure, some technical problems may arise, particularly if the first alternative is used. But they would be minor.

The big point I want to make is that such a system would be of great benefit to the whole economy. And here is why: Capital thus freed for immediate employment by private industry can earn perhaps 3 times as much as the 3½ percent extra tax or the cost of a non-interest-bearing Government bond on a discount basis.

Assistant Postmaster Charles J. Eginton Retires From Brooklyn, N. Y., Post Office

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. DORN of New York. Mr. Speaker, a loyal and valued employee of the post office in Brooklyn has just retired, and I should like to pay tribute to him by including this announcement of the retirement of Assistant Postmaster Charles J. Eginton.

ASSISTANT POSTMASTER CHARLES J. EGINTON RETIRES FROM BROOKLYN, N. Y., POST OFFICE

Postmaster Edward J. Quigley, of Brooklyn, N. Y., today announced the retirement of his assistant, Charles J. Eginton, after completion of over 44 years of postal service.

Mr. Eginton, a lifetime resident of the Flatbush section of Brooklyn, entered the postal service when he was 19 years of age as a subcarrier in 1913. He served in many capacities including that of distributing mail on the old horse-drawn trolley cars of Brooklyn. In 1924 he was promoted from a clerk to his first supervisory position. Thereafter he served in varied supervisory assignments under the direction of nine postmasters. In 1955 Postmaster Quigley selected Mr. Eginton from his staff, to become his operational assistant. During his term of office he engineered and placed into operation many

innovations which produced an improved and expanding service.

Charlie, as he was known to his host of postal friends, remarked at a luncheon given in his tribute, "that the greatest honor an American can have, besides serving in the Armed Forces, is to assist in the operation of his country's business." Mr. and Mrs. Eginton have long awaited this retirement, and will move to a cottage in Greenwood Lake, N. J., which was purchased 20 years ago in anticipation of this event.

Postmaster Edward J. Quigley in saying farewell to his assistant, remarked that "Charlie represents the career officials in Government service who are energetic, capable, and dedicated servants." The opportunities under civil service to date can match, and in many instances exceed, private industry.

Constitution Makers

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Constitution Makers," from the Anderson (S. C.) Free Press of May 30, 1957. The editorial deals with the subject of the Supreme Court altering the Constitution.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSTITUTION MAKERS

Former Governor James F. Byrnes' statement that "if the Supreme Court can alter the Constitution by its decisions, then five men—a majority of the Court—can make the Court a constitution maker instead of a constitution defender" should have, and we believe must have, aroused the members of the Ohio Bar Association to the danger confronting this country now.

As he usually does, Mr. Byrnes gave solid reasons for making his statement. He cited instances to show where the Court is exercising new powers without the public knowing that they are new. These new powers, he said, "are being exercised to destroy local governments."

One of the cases cited by Mr. Byrnes was the Slochower case in New York City. The board of education of New York City had dismissed Slochower from a college faculty in the city of New York for claiming the fifth amendment when called before a congressional committee investigating national security to answer questions regarding past membership in the Communist Party. The dismissal was affirmed by the highest court of New York State but reversed by the United States Supreme Court.

"How long," Mr. Byrnes asked the Ohio bar members, "can local government survive in the State of Ohio if, by State statute, you cannot declare that your children shall not be taught by a Communist or by a man who refuses to tell whether he is or is not a Communist?" That's a good question.

Mr. Byrnes said that a teacher has the right to claim the protection of the fifth amendment if he fears his answers will incriminate him "but the people of Ohio and every other State have the right to say that such a man is unfit to teach their children."

Another case cited by Mr. Byrnes was the Nelson case, which the Camden News has discussed on several occasions. In this case the Supreme Court held invalid a Pennsylvania State law which prohibits the knowing advocacy of the overthrow of the United States Government by force and violence.

He also discussed the decisions in segregation cases and in dealing with them he spoke most forcefully.

"When the Court included such great Justices as Taft, Holmes, Brandeis, and Stone," said Mr. Byrnes, "it declared in *Gong Lim* v. *Rice* (275 U. S. 78), in a unanimous opinion, written by Chief Justice Taft, that segregation in public schools had been 'many times decided to be within the constitutional power of the State legislatures to settle without interference of the Federal courts under the Federal Constitution.'"

He also said that the Court, speaking through the great Chief Justice Hughes, had said in another case that the question could "no longer be considered an open one."

"The doctrine of stare decises," said Mr. Byrnes, "is not a sacred one; but when a case involving an interpretation of the Constitution was decided in 1896 and that interpretation is sustained by the Court's decisions over a period of 60 years, we should be able to rely upon it as the law."

While Mr. Byrnes did not say so, he could have said that the former decisions were made by great Justices, men learned in the law who were not appointed to the Court because of their political beliefs, but because they were of the judicial stature.

Mr. Byrnes has rendered great service to the people in the past, and he is rendering it now in getting the South's viewpoint heard in high places over the Nation. Some weeks back he spoke before the Vermont Bar Association, and then last week before the Ohio Bar Association. We hope he has many more engagements of this nature, because we believe that these appearances are helping to awaken the people of this country to the danger that confronts them in the recent trend of the Supreme Court. (Camden News.)

(EDITOR'S NOTE.—Although it was not mentioned in the above editorial, Mr. Byrnes also spoke before the Illinois Bar Association's Lincoln Day dinner earlier this year. The Illinois and Ohio Bar Associations are two of the largest such organizations in the Nation, and in addressing these groups Byrnes reached many hundreds of the best informed legal minds in the country, including State supreme court judges and possibly some of the judges of the United States Supreme Court.)

Jury Trials in Civil Rights Cases

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

JURY TRIALS IN CIVIL RIGHTS CASES—AMENDING OF SENATE BILL LAUDED AS STEP TOWARD INJECTING REASON INTO CONFLICT

(By David Lawrence)

It was a wise move on the part of the Senate Judiciary Committee this week to recommend that jury trials be provided by law in contempt cases arising out of the enforcement of civil rights. It will do more to help the cause of public understanding on the integration-segregation issue and similar questions than anything the Congress or the courts have done thus far.

This is because the action by the Senate committee comes at a time when emotion has been substituted for reason in many parts of both the North and the South in dealing with matters of law and constitutional rights.

A dramatic example was the case last week in Montgomery, Ala., when a white jury acquitted two white men who were defendants in a case involving the dynamiting of a Negro church. No one was injured, but property was damaged. It was apparent from the way the case was summed up by the prosecuting attorney and defense counsel that the issues were presented in the background of current antagonisms. Although the defendants had signed a confession, the claim was made later that it had been irregularly processed—that it wasn't made at police headquarters but in a hotel room under circumstances which led to the expression of many doubts.

This correspondent spent the weekend in Alabama and talked to many people about the integration question. Notwithstanding the individual beliefs of citizens generally, it is fair to say that many people who are on the antisegregation side were shocked by the verdict of the jury at Montgomery. Yet, in some respects the verdict wasn't surprising. As one man in the South put it, "Why should not 12 men in Alabama express their feelings in a verdict, when 9 sociologists on the Supreme Court do the same thing?"

Reference was made specifically to some of the recent cases of rape committed by Negroes against white women, cases in which confessions were duly recorded and guilt plainly established, only to have the Supreme Court of the United States reverse such verdicts on technicalities and allow the defendants to go free.

Emotionalism has brought a state of tension that is not going to be cured by any provision of law denying jury trials merely because the privilege has been or might be abused. While contempt committed inside a courtroom has always been punishable by a judge without a jury trial, and attempts to violate directly the terms of an injunction are ordinarily within the power of a judge alone to punish, the real issue is whether the judge's injunctions can be stretched to cover crimes committed outside the courtroom itself that normally are tried by juries.

It is better, therefore, for Congress to err on the side of caution and to put faith and trust in the people in all sections of the country, rather than to assume in advance that they cannot be trusted in the jury box. To apply such faith is to follow the path of reason as against emotionalism.

For the racial questions are far from settled, and those persons who think that, by the order of any court, the people of the South or of any other section will approve an edict which they honestly believe is not constitutional just do not understand the workings of human nature. The crusade, for instance, against the 18th amendment on prohibition—the willful disregard of the provisions of the law by millions of people—showed clearly that a reform which isn't sold to the people in advance by thorough understanding isn't accepted just because it is solemnly proclaimed as the law of the land.

It's a condition rather than a theory which confronts the Nation in dealing with the racial question which now has begun to present problems in all parts of the country, and not just in the South. Violence will not solve it, nor will coercion by broad injunctive orders of the courts. An adjusted society has to come voluntarily out of the processes of reason.

The amendment to the law which would grant jury trials in contempt cases involving alleged crimes is bound to assist the cause of reason. It puts the responsibility squarely upon the people to see to it that

jury trials are fairly conducted and fairly resolved.

There are, of course, extremists on both sides. Their number will diminish, however, only as a sense of fairness develops through the application of reason instead of violence. That's why the grant of a jury trial in criminal contempt cases would be a progressive step toward a better understanding of the responsibilities of citizenship. But if Congress, on the other hand, does deny jury trials, far more ground will be lost than gained in the emotionally complicated, if not presently unsolved, problem of sociology and Government.

The Lessons of Formosa

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mrs. BOLTON. Mr. Speaker, to see ourselves as others see us is not always the most pleasant experience. Yet it would seem the better part of wisdom for us to be aware of some, at least, outside reactions.

Under leave to extend my remarks I include herewith an article from the Manchester Guardian Weekly of May 30 by Alistair Cooke entitled "The Lessons of Formosa."

THE LESSONS OF FORMOSA
(By Alistair Cooke)

NEW YORK, May 27.—The American press and Congress have been stung by Friday's riot in T'ai-pei to consider the worth of foreign aid, the unloved lot of the proconsul, and the precarious relations of the American soldier with the peoples of the many countries in which he stands on guard.

Of them all, Formosa was thought to be the most unshakable of America's allies, if only because, 100 miles from the Chinese Communist empire, she can least afford a show of independence. Chiang Kai-shek's Nationalist Government is shored up there. The helpless Formosans have been braced by 600,000 troops trained by 2,000 American officers and men. One billion dollars worth of American aid has revived the island's economy, and every anxious Formosan has visible proof of Uncle Sam's protection in the floating patrol of the United States 7th Fleet.

Now that the panic of the first dispatches has cooled off, the facts that emerge are clear and forbidding. No fewer than 33,000 of Chiang's troops were required to suppress a riot that began with one complaining widow and a placard, and ended with the destruction of the United States Embassy, the damaging of the United States Information Center, the stoning of the Nationalist Foreign Minister and the United States Ambassador, and the flight of the American colony to safe hiding.

The sequence of events that led to these disorders is deceptively simple. But the prompting of them is not. On the evening of March 20 an American master sergeant, living 8 miles outside T'ai-pei, was warned by his wife that a Chinese was watching her take a shower. The sergeant loaded a pistol and went outside. The man came at him with a metal rod and the sergeant fired. The man stumbled, and the sergeant told his wife to call the Formosan police and the American Army police. When the man came on again the sergeant fired and killed him. This account was accepted by the court-martial, and the sergeant was released.

It was an American court-martial, and in itself this could have been the first humiliation. Occupied countries are always jealous of the jurisdiction of their courts, and in most of them "status of forces" treaties acknowledge the right of the native courts to try all cases of crime or misdemeanor committed by occupying troops outside the limits of their compound. The Japanese have such a treaty with the United States, and only in the past fortnight there has been a bitter protest in Japan against the American Army's claim that it should try a soldier who, while off duty, accidentally shot a Japanese woman on a target range.

Unfortunately, the United States is still dickering with the Formosans about a "status of forces" agreement. Nothing could have suited the Chinese Communists better than to keep the jurisdictional quarrels boiling until some incident seemed to prove their point that the Formosans are the prisoners of the United States Army and that Formosa is not the most loyal, but merely the most abject, of American allies. The incident happened. And the thought was bound to occur here, in news columns and radio commentaries, that the Communists could have provoked the incident and the protest of a widow who carried signs written in English and Mandarin, neither of which she could write or speak.

At any rate the widow appeared outside the Embassy on Friday and waved her accusation that the Americans had killed her husband and freed his murderer. A radio reporter broadcast by loudspeaker at the Embassy gates a recorded interview with the widow. That was the cue for the crowd to swell from 3,000 to 30,000, and go berserk for 6 hours. Radio Peiping has spent the weekend bombarding its satellites and neighbors with the news.

No doubt congressional committees will leap to full-dress inquiries into the relations of American troops and local populations everywhere from Britain to Japan: the reports of colonial highhandedness in Korea; of Japan's distaste for her security agreements; of complaints in Okinawa and the Philippines that the American armies pitch their camps where they choose; of the universal grumble that Americans live high among lean populations.

But before these sociological surveys get under way, Congress will be pressed to ask more practical questions. The answers may reveal whether Formosa is as loyal as everyone supposes, whether massive foreign aid can secure dependable alliances, and whether the T'ai-pei rebellion was contrived to explode 1 week before Britain, Japan, and Western Germany are to announce their resumption of strategic trade with Communist China. If it was all an accident, it was providentially timed to set Western Europe and the United States at each other's throats.

America's Wasted Human Resource: The Older Worker

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. JAVITS. Mr. President, much has been said, and much needs to be done, about one of America's prime human resources, the older worker. An article from the May 1957 issue of the Industrial Bulletin, the official news magazine of the New York State Department of Labor, points up not only the business wisdom of utilizing the full potential of the older worker, but also his vital role in fulfilling our Nation's manpower needs. As the article concludes, "Finding enough people to fill growing job needs just isn't possible without making fuller utilization of America's older workers."

Together with three of my colleagues, the Senator from New York [Mr. IVES], the Senator from Kentucky [Mr. MORTON], and the Senator from Maine [Mr. PAYNE], I am the sponsor of the national act against age discrimination in employment, S. 1073, which would make unlawful discrimination against an individual with respect to employment because of age, when the reasonable demands of the position do not merit such an age distinction. While the whole problem of employment for those 45 or over cannot be solved by law alone, a suitable basis for solution, when coupled with negotiation, mediation, and technical assistance, can be brought about by law. It is such an affirmative approach which S. 1073 contemplates.

I ask unanimous consent that the article in the Industrial Bulletin, to which I have made reference, be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MYTHS ABOUT THE OLDER WORKER

A good many myths and half-myths about the economic feasibility of taking on older workers persist in the minds of those at the hiring line of many companies. A recent United States Labor Department survey of labor markets in 7 major cities, for instance, showed that 41 percent of the 21,386 job orders placed with employment service offices in 1 month specified age limits of under 45. For clerical occupations, 57 percent of the job orders included "Don't bother to apply" signs for those who had reached their 45th birthday.

Of course, employer reluctance to hire older workers is not always based entirely upon fancy. Unquestionably, in some instances there are certain obstacles which rationally militate against such applicants. Often, too, some adjustments are called for in company personnel programs. The experience of employers who are hiring older applicants demonstrates beyond any doubt, however, that by using a little imagination these so-called obstacles and difficulties prove more illusory than real.

MYTH NO. 1: HE IS LESS PRODUCTIVE

This has consistently been one of the most frequent reasons cited by employers for failing to hire older applicants. Such facts as are available simply do not bear this out.

For instance, a 1954 University of Illinois opinion survey of the supervisors of 3,077 workers in the plus-60 age category (in a wide variety of occupations) found that, compared with their younger brethren, 56 percent produced roughly the same quantity of work, 24 percent produced more, only 20 percent turned out less. As to quality of work, the sexagenarians showed up even better: 34 percent did superior work, 59 percent the same, 7 percent were subpar, compared with those under 60. On overall job performance 80 percent of the senior employees were rated as good, very good, or excellent; only 2 percent were judged poor.

In 1951 the National Association of Manufacturers pooled 3,000 employers with 2½ million people on the payroll. The work performance of older workers was rated as equal or superior to younger employees by 93 percent of the respondents.

A 1956 United States Labor Department pilot study of the relationship between job performance and age among production workers in the footwear and men's clothing industries produced similar findings. Output per man-hour showed little significant variation among the age groups studied.

MYTH NO. 2: HE IS ABSENT MORE OFTEN

A 1956 United States Labor Department study of 16,500 male employees working in 109 manufacturing plants, showed older workers to have a 20 percent better attendance record than younger employees. The University of Illinois study of 60-plus workers showed that only 9 percent were absent more often than those under 60, while 66 percent were absent less often.

MYTH NO. 3: HE HAS MORE ACCIDENTS

A 1956 United States Labor Department study of 18,700 employees in a variety of industries shows that here again just the opposite is true. Workers 45 and over had 2.5 percent fewer disabling injuries and 25.0 percent fewer nondisabling injuries than those under 45.

This lower incidence of injury among older workers may or may not be due to a proclivity for caution. Indications are that lower accident rates may hinge at least in part on the fact that such workers are frequently placed in less hazardous jobs.

Also, there is a paucity of data comparing the severity of injuries of younger and older workers. One unpublished study of 466 employees in a New York firm (conducted by the New York State Department of Labor in 1950) indicates, however, that once injured, the older worker does stay out of work somewhat longer than younger workers. This study also indicated that where older and younger workers are performing equally hazardous work the frequency of injuries to older workers is higher.

MYTH NO. 4: HE WILL NOT STAY ON THE PAYROLL LONG ENOUGH TO JUSTIFY HIRING EXPENSES

An argument frequently advanced by some employers against hiring older applicants is that because of their age they cannot possibly stay on the payroll long enough to justify the hiring, orientation, training, and administrative expenses involved. The trouble with this proposition is that it assumes the average younger hiree will stay on the payroll for a longer period. The facts simply do not bear this out.

The seven-city study demonstrated clearly that separation rates are much lower for older than for younger workers. While workers 45 and over held about 35 percent of the jobs among the 2,000 employers surveyed, during the survey year they accounted for less than 25 percent of the separations which occurred and quit their jobs less than half as often as under-45 workers. Furthermore, in examining the work histories of 160,000 job hunters, the Federal Labor Department found that for the 3 years from 1953 through 1955, almost half of those in the 45–64 age group had held only one job, while only 35 percent of those under 45 could claim such a singular record. Simply put: older employees are not "job hoppers."

The fact remains that a greater loyalty, a greater maturity, a greater stability, a greater understanding that little is to be gained by changing jobs late in his employable life, and a reluctance to go through the rigmarole of getting used to a new job environment, together make the older applicant a particularly good bet for employers who find themselves plagued with turnover problems.

MYTH NO. 5: IT IS TOO COSTLY TO PROVIDE HIM AN ADEQUATE PENSION

This is an easy—and popular—generalization, high on the list of reasons cited for refusing to remove the age barrier. Rarely is it based on a careful scrutiny of the company pension plan to see just what the impact would be.

Whether or not a private pension plan is a legitimate barrier to hiring older workers depends, of course, upon the terms of the particular plan. If benefits are geared to length of service—and they usually are—the plan need not be a major cost obstacle. If the plan contains age limits on eligibility for participation, it will exclude new hires in the older age brackets and present no cost problem. If the plan provides for vesting of employee rights to benefits after a comparatively short period of years, little or no "saving" is realized by hiring only young employees in the expectation they will have left the company for greener pastures before retiring.

A somewhat more subtle, and self-conscious basis for the pension obstacle exists, however. Not infrequently an older job applicant, when told he cannot be considered because of the pension plan, will state flatly "I don't want any part of your pension. I want a job." Or, it may be that under the plan he will only be eligible to receive very nominal benefits upon retirement, or will be excluded altogether. In any of these circumstances it is pretty hard to see how continued employer reluctance to hire can be based on anything more than a kind of nebulous feeling that some sort of unsavory community relations problem may be created a few years later when the applicant in question must retire. This is the moral equivalent of saying "I won't provide you the opportunity of a livelihood now, because I may not be able to afford to later." Such a view contains just about as much logic as morality. For one thing, the public has not yet come to expect all employers to provide substantial pension benefits to all retirees. Even more important, the generally employed community is rightly subject to a good deal more public opprobrium for refusing to hire older job seekers than particular employers ever will be for hiring with a minimal pension workers whom they have hired only a few years earlier.

MYTH NO. 6: HE WILL CAUSE MAJOR INCREASES IN EMPLOYEE GROUP INSURANCE COSTS

Here, as in the case of pensions, it all depends on the nature of the plans involved. Unquestionably, for instance, if the company provides a flat amount of life insurance to every employee, the cost will rise somewhat as more and more older workers are hired. Generally, however, a modest number of older applicants can be brought into the group without substantially increasing such costs. Also, actual total dollar outlay by employers for group life insurance is so modest, when compared with pension costs for instance, that it is unrealistic to believe these costs should seriously militate against older applicants.

Likewise, group health insurance plans, at least where coverage does not continue after retirement, do not pose a major cost headache as long as the company does not become overloaded with older employees. In fact, where dependents are covered and maternity benefits allowed to the whole group, the per-employee cost may actually be lowered as more older employees are brought into the plan.

MYTH NO. 7: HE DOESN'T HAVE NEEDED JOB SKILLS

To the contrary, except possibly for certain unusual specialties, he is more likely to possess more skills, training, and job know-how than younger jobhunters. While 40 percent of the 160,000 jobhunters included in the 7-city study were 45 or over, this group contained 58 percent of all the skilled persons looking for work.

MYTH NO. 8: HE IS INFLEXIBLE, UNIMAGINATIVE, AND WILL HAVE TROUBLE GETTING ALONG WITH YOUNGER WORKERS

This objection to the older worker is essentially an attack on his personality—and presumably applies just as much to those on the payroll as to those who wish they were. Its validity cannot be proven, or disproven, by scientific measurement or statistics. And it is hard to imagine a generalization more susceptible to contradiction by the individual case. The practical experience of many companies indicates that this factor is seriously overrated.

Inflexible? One pretty good measure of this is the extent to which older applicants are willing to take new kinds of jobs in new industries. In the 7-city study, 57 percent of the older workers placed by State employment service offices accepted jobs in industries other than the ones to which they had previously been attached. Thirty-nine percent took jobs in occupations other than the ones in which they had previously been engaged.

Get along with others? The University of Illinois study of plus-60 employees found that, in the opinion of their supervisors, 32 percent of the oldsters got along better with their fellow employees than did younger workers. Another 59 percent got along with others just as well; while only 9 percent were comparatively less gemütlich.

More positively, older workers often possess a number of personality traits, often found lacking among less mature employees, which can pay big dividends in the office and on the production line. Many employers include stability, loyalty, reliability, will to work and work steadily, sense of responsibility, less off-the-job problems and distractions, stabilizing influence on younger workers, serious attitude toward the job, among the special "plus" characteristics found more frequently among older workers.

Such are the more common myths about older workers. There are, of course, other factors which properly should be considered in any impartial analysis of the employability of older workers. Some, if not all, of these "minus" factors can be sharply reduced or eliminated with a little imaginative planning.

Studies show, for instance, that the typical plus-40 job applicant is (1) more likely to suffer physical handicaps; (2) less likely to meet company educational requirements; (3) more likely to raise certain social insurance costs (such as unemployment insurance tax rates where, if laid off, he is likely to remain unemployed longer than a younger worker); (4) more likely to be limited insofar as performing work involving substantial physical exertion is concerned; (5) more likely to create problems vis-a-vis company policies of promotion from within; (6) more likely to have personality difficulties which manifest in the actual process of seeking work (such as being self-conscious, defensive, overaggressive, unrealistic about job demands, unrealistic about personal limitations and strengths, etc.), although these usually disappear once he is employed.

Furthermore, in many companies, hiring a more substantial proportion of older applicants creates certain internal administrative problems which must be faced squarely, and for which there are not always easy answers. If the employees affected are represented by a union it is essential that officers of that union have a basic sympathy for the idea of hiring older workers, and cooperate with management in working out mutually satisfactory solutions to problems involving compensation, the seniority sys-

tem, promotion from within, application of certain fringe benefits to older workers on a financially sound basis, and the like.

Also, certain morale problems among younger employees with longer service may crop up. The compulsory retirement plan may need reexamination. Special training of the supervisors of older new hires may be in order.

More research is needed into these and related problems by individual employers, their associations, and unions, as well as by governmental and nonprofit agencies. Some of the major frontiers for research on the older worker question are:

1. Productivity and work performance: Do older workers, collectively and in individual companies, actually do as good a job as younger workers? In all jobs? In which jobs?

2. Job design: How can jobs be redesigned to achieve maximum utilization of older workers' skills and abilities and to suffer minimum interference from their limitations. Can a practical set of criteria be developed for use in determining when, as to each employee, job transfer, job redesign, or retirement is called for?

3. Private costs: What are the actual cost differences, if any, on a company-to-company basis, respecting private insurance and pension plans? How, in practice, can these plans be accommodated to hiring more older workers?

4. Public costs: What is the actual impact of hiring more older workers on unemployment insurance, workmen's compensation, and related costs? Are there ways of altering these statutes to remove penalties, if any, which may accrue to the employer who hires the older applicant? Should positive incentives to hire older workers be written into these laws?

Nevertheless, on balance, and even in the absence of the new data which additional research might glean, there can be little question that it is the better part of business wisdom to give plus-40 applicants a fair shake in the employment office and a fair chance on the payroll.

Is hiring older workers a matter of business wisdom? A commonsense look at the facts shows the answer is most assuredly, yes. But perhaps even more significant than statistical persuasion about the capabilities of older workers, is the simple fact that hiring such workers is fast becoming a business necessity. About this there is no guesswork.

The total population and the working population of America is growing rapidly in two directions—larger and older. United States Bureau of Census estimates show the following startling comparisons in the percentage changes of the total adult population in various age groups:

Ages 25 to 44: 1945 to 1955, up 10 percent; 1955 to 1965, down 1½ percent.

Ages 45 to 64: 1946 to 1955, up 17 percent; 1955 to 1965, up 17 percent.

Ages over 64: 1945 to 1955, up 35 percent; 1955 to 1965, up 23½ percent.

While estimating changes in the size and nature of the labor force which are likely to occur by 1965 is a hazardous business, depending as it does on many factors which cannot be precisely measured, some educated guesses have been made recently by the United States Department of Labor. On the basis of projecting relevant current trends, and assuming a prosperous peacetime economy, our country can reasonably expect to have a total labor force of 79.2 million by 1965 (an increase of 10.3 million over 1955).

The point of fundamental significance to employers is that while the total labor force is expected to increase by 10.3 million from 1955 to 1965, only 900,000 of this increase will occur in the 25 to 44 age group. On the other hand, those 45 and over will rise by almost 5 million. That is, for every increase of 2 workers in the age group traditionally considered the most eligible for employment, there will be 11 new workers in the 45 plus age group.

Incidentally, the expected 10.3 million increase will include 5.4 million women. Among men only, it appears that a slight decrease in the 25 through 44 age category is in the offing.

Will employers need these additions to America's manpower? If our economy continues to show anything like the growth of recent years, the answer is clear. The gross national product (total value of all goods and services rendered throughout the United States) in 1955 stood at $391 billion—the equivalent of $2,370 for each our our then 165 million people. In recent years the per capita GNP has been increasing about 2.3 percent each year. If this rate of increase is to continue through 1965, and assuming the validity of expected population increases by that time, the gross national product will then have to stand at about $560 billion.

What size labor force will be needed to produce all these goods and services? This depends importantly on increases in productivity and possible shortening of hours of work per employee per year. Now in 1955, with an average of 63 million in the labor force, $391 billion gross national product was rendered—or $6,190 per worker. Over the past 25 years output per worker (calculated on this basis) has increased 2.8 percent per year. It is not unreasonable, therefore, to expect that from 1955 to 1965 the per worker output per hour will rise 28 to 30 percent. After taking into account a possible 6 percent decrease by 1965 in the average annual hours worked, the average output per worker should be about $7,500 by that time.

It would take about 74 million members of the labor force (11 million more than in 1955) producing at this average rate, to produce a desired gross national product in 1965 of $560 billion. When 2.8 million members of the Armed Forces (roughly the present level) and 2.4 million unemployed (about the same percent of the total labor force as at present) are added to the 74 million essential to produce the desirable gross national product, the total anticipated labor force of 79.2 million will be totally absorbed.

These facts about the Nation's manpower needs merely prove what every alert employer already knows: Finding enough people to fill growing job needs just isn't possible without making fuller utilization of America's older workers.

Textiles

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. PHILBIN. Mr. Speaker, we have been told many times that in the operation of the trade treaties the escape clause would cope with hardship conditions, but this promise has not eventuated except in a very limited way.

Under the trade agreements law with its complicated procedure required for invoking the escape clause, long hearings must be held following which the Tariff Commission must make recommendations to the President. In turn, the President must approve these recommendations. However, there are very few cases in which the President has followed the recommendations of the Commission. Moreover, whenever we avail ourselves of the escape clause, we have to offset this action by agreeing with other member countries to offer compensatory duty reductions on other selected products.

In a recent case the President listed 11 different products on which hearings were to be held to determine the ones slated for compensatory duty reductions, so-called. Our trade-agreement office seems at times almost to be straining at the leash to initiate action looking toward reductions of duty on various products. So far as I have been able to ascertain, no investigation is made to determine whether other countries have offset their reciprocal concessions to us, by various technical devices available to them, or by unilateral process such as import licenses, exchange controls, import quotas, devaluation of currency and other methods.

The President of the United States acting in these matters is bound only by the Trade Agreements Act of the United States, and cannot be vested with authority or directed to act by any international body. However, the Office of the General Agreement on Tariffs and Trade makes a practice of issuing notices of hearings to its members including our own country in proceedings looking toward some form of compensatory redress for nations alleged to be aggrieved by our own exercise of the escape clause.

I have had a sorry case in point on this question right in my own district and while I am most appreciative of the President's acceptance and approval of the Tariff Commission's action recommending an increase in duty for this industry, I must say that I never believed that it would entail compensatory contributions by other American industries yet that seems to be the interpretation and practice under the trade agreement laws. We are now faced with a threat to the book industry which has units in my district because certain products of that industry have been classified for possible duty reductions as a result of the increase in duty on linen toweling under the escape clause.

On this list are "unbound books of all kinds, bound books of all kinds except those bound wholly or in part in leather, sheets or printed pages of books bound wholly or in part of leather, if other than of bona fide foreign authorship." It is significant that throughout the years there has been a steady rise in imports of listed book items and the duty on such books has already been reduced from 25 to 10 percent under a trade agreement program.

I am at a complete loss to understand either the authority, the wisdom, the fairness or equity of the so-called policy of compensatory concession. So far as I can ascertain there is no authority for it in the act, and I believe that it goes far afield of anything that was intended by the Congress. It is another example of the pyramiding effects and unintended scope and method of some of our foreign programs which are presently under fire by the American people who are insistent that they be reshaped and

changed to bring some semblance of justice, equity, economy, and efficiency into these far-flung operations.

The recent statement of the able Chairman O. R. Strackbein, of the Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy, is very revealing on this question, and I am inserting it as part of these remarks:

COMPENSATORY CONCESSIONS TO MEMBERS OF GATT FOR THE INCREASE IN DUTY ON LINEN TOWELING IMPOSED BY THE UNITED STATES UNDER AN ESCAPE-CLAUSE ACTION

(Statement of O. R. Strackbein, chairman, the nationwide committee of industry, agriculture, and labor on import-export policy, before the Committee for Reciprocity Information, April 17, 1957)

This is a statement in response to the notice of United States intention to negotiate concessions to compensate members of GATT for the increase in duty proclaimed by the United States in pursuance of an escape clause action before the Tariff Commission on linen toweling.

It is the purpose of this brief to challenge the proposed negotiations on the grounds that they have no standing in the laws of the United States.

The notice of hearings states that "the action to increase the duty was taken under the escape-clause provision of the General Agreement on Tariffs and Trade after a finding by the United States Tariff Commission that domestic industry was being seriously injured as a result of increased imports caused at least in part by a tariff concession which was initially negotiated with the United Kingdom in the agreement."

The President, who made the proclamation of an increase in duty, has never been authorized by law to act under the escape clause of the general agreement on tariffs and trade. He acts, if he acts at all, under the statutory escape clause of the Trade Agreements Act; and he did in fact so act.

Whether the notice of hearing was merely in error in ascribing the President's action to the escape clause of the general agreement on tariffs and trade is, however, immaterial. He can act only under the Trade Agreements Act of the United States. GATT cannot clothe him with any authority of any description under any existing circumstances. The President can derive no authority from a source outside the Constitution or the Congress of the United States.

Where then is the source of the authority for the presently proposed negotiations? Provision is made for such action in GATT; but GATT confers no authority on the President.

Nowhere in the Trade Agreements Act is the President authorized to reduce a duty for reasons other than those set forth in the act. The act says nothing about compensating other countries by reducing the duty on other items when a duty reduction on one item is increased. This is like drawing lots to determine who is to be shot. It is devoid of equity. It calls on innocent bystanders to be sacrificed in compensation of a previous error in judgment of the State Department representatives in granting an excessive tariff reduction. The proposed negotiations are no part of the trade agreements negotiations carried on under the provisions of the Trade Agreements Act.

That act requires a finding to be made that "existing duties or other import restrictions" are "unduly burdening and restricting the foreign trade of the United States."

The present purpose, however, is very different. It is to make a compensatory reduction in duty—not because the existing duties on the listed items are unduly burdening and restricting the foreign trade of the United States, but because we must buy the rectification of the previous error.

This would perhaps not be inequitable if those responsible for the error in judgment were called upon to foot the compensation bill. But that is, of course, not the case. Not at all. People who had nothing to do with the original trade negotiations are called upon to foot the bill.

To compensate for a duty increase on a minor item of trade, i. e., linen toweling, we find products classified under 11 tariff paragraphs listed for possible duty reductions. The sins of the United States negotiating team who reduced the duty on linen toweling from 40 percent to 10 percent in bargaining with the United Kingdom and Belgium are now to be visited upon the various domestic industries that produce the articles appearing on the list.

Among the list are "unbound books of all kinds, bound books of all kinds except those bound wholly or in part in leather, sheets or printed pages of books bound wholly or in part of leather * * * if other than of bona fide foreign authorship." This means of American authorship.

In 1952, imports of the listed book items were $267,000 plus, in 1953 they rose to $338,000 plus, in 1954 to $415,000 plus, and in 1956 to $570,000 plus.

The duty on such books has already been reduced from 25 percent to 10 percent under the trade agreements program.

Considering the doubling of imports in the past 5 years, how can a finding be made that the 10 percent rate of existing duty unduly burdens the commerce of the United States?

Apparently any such consideration is to be brushed aside.

Another question arises: Why producers of so many different products should be forced into this lineup. Will some of them simply be frisked and then let go? Will others be held without bond, so to speak, until their guilt is determined?

What are they guilty of?

Why should not the Government defray their expenses involved in preparing for these proceedings plus transportation and other expenses?

Is one answer to the high ratio of domestic products to the one foreign product (linen toweling) to be found in the limitation placed by the Trade Agreements Extension Act of 1955 on the extent of reductions that might be made in the duty of any one product? This limitation was 5 percent per year for 3 years. One of those years has expired and the second one is about to expire. Therefore only a 5 percent reduction would presumably be possible with respect to any one product.

Otherwise why the one-sided ratio? Imports of the listed products far exceed the imports of linen toweling.

The foregoing considerations lead to yet another question. Assuming that as a result of any compensatory tariff reduction under the proposed negotiations, another escape clause action resulted in a restoration of the duty. Would it then be in order to institute another dragnet operation to bring in another 10 or 12 presumed culprits?

The whole operation of such compensatory concessions is obviously unsound, inequitable and irresponsible. There is nothing in the Trade Agreements Act that even foreshadows such an operation; and the President could derive his authority to proceed in such negotiations from no other source.

These proceedings should therefore be stopped.

Poles Starved for Knowledge of the West

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. WILEY. Mr. President, a variety of reports have been coming out on Poland's desire to establish new contacts with the western world. Already, we see the need to help reinforce the liberties recently won by the Poles. Our extension of surplus goods and sales of machinery to Poland can help the Poles "shore up their gains."

On another front, however, the Poles are starved for knowledge of what has happened in the world in the past 20 years. History, literature, and technical progress over this period have been more or less dark spots for them.

Now that the door to "new contacts" has been opened by the Gomulka government, is not it to our self-interest to partake in furthering truth in the fields of scholarship and the arts and sciences?

I would like to point up a series of provocative articles in the Washington Post, by Delia and Ferdinand Kuhn describing the Poland of today.

In particular, the authors state the need for books in English or French and many more thousands in Polish translations. Yet, they also maintain that Polish publishers cannot obtain translation rights from American publishers.

It seems to me that if the "window of truth" is ever to open for Poland, we should take a sympathetic look at our policy of promoting increased contacts, not only through distribution of books and publications, but through exchanges of cultural and technical specialists.

I am pleased indeed that both the Ford and the Rockefeller Foundations have acted to help fill the deep needs of Polish scholarship—the hunger for more knowledge of the West.

Incidentally, there has been much concern expressed over the effectiveness of any organized charity program for Poland. What assurances would we have that charity packages really reached the people? As I have previously indicated, CARE is now concluding negotiations with Poland to distribute packets. Richard Reuter, executive director, informs me that "CARE's standing operating procedure in every country provides safeguards and controls including a signed receipt from the beneficiary. CARE packages are delivered direct to the recipient with no duty or other charges being levied against the packages."

I ask unanimous consent that the Kuhns' article be printed in the RECORD. I also append the texts of a New York Times editorial of May 28, entitled "Helping Poland's Scholars," and a Milwaukee Journal editorial of April 27, along the same lines.

I ask unanimous consent that all three of these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of June 2, 1957]

AID CAN'T SAVE POLES BUT CAN SHORE UP GAINS

(By Delia and Ferdinand Kuhn)

BERLIN.—For Americans traveling around Poland today, the experience is like meeting an old acquaintance who has suffered a terrible illness and a long prison term.

He seems to be the same genial fellow with the same glint in his eye, though battered by life. But however he may try to explain what he has been through, you cannot really understand. You and he have traveled so far in different directions that the gulf cannot be bridged by shaking hands and talking frankly together.

For one thing, the Poles have not yet recovered from the shock and the wounds of war. The Russians did not let them join the Marshall Plan. So they have hung onto life without the massive blood transfusion which helped Western Europe work its way back to lusty health.

LIKE DIFFERENT CONTINENT

The best way to feel the contrast between Poland's anemia and Western Europe's energy is to fly as we did from Warsaw to Copenhagen and then on to Western Germany. We felt as if we had crossed to a different continent.

During their years of isolation in a Communist prison, the Poles have lost touch with European—and American—life and thought, to which they had given so much in generations past. Now the police terror has ended; the Poles crave new friends, new contacts with the world they used to belong to.

In view of the internal reforms since last October, should the United States give credits to the Communist government of Poland? Our answer would be yes, realizing that a loan to such a government would be a gamble rather than an investment. Dollars cannot save Poland from the realities of Soviet power. Dollars might, if honestly and wisely administered, help the Poles to hang onto the considerable liberties they have recently won.

Gomulka is seeking credits from many quarters, Communist and non-Communist alike. With each success he will be stronger in his people's eyes, and he is their best hope at the moment of keeping at least a degree of freedom.

MACHINERY, NOT FOOD

What kind of help do the Poles need? They need raw materials like cotton, and machinery to modernize their mines, mills, and farms—in short, the means to work and produce more. They do not need food; every Pole will tell you that where there are spotty shortages in cities of things like butter and meat, it is because distribution is poor and demand is rising.

Should Americans organize to send packages and other kinds of charity to Poland? Whoever sends a package should know that its contents probably will go to commission shops or to open-air markets. In this way, the recipient of a package gets a little money, the few rich Poles get luxuries—all American goods are luxuries in Poland—the middleman gets a fat profit, and the government gets a commission.

What the Poles need and cannot get are medicines and medical supplies. Every day on Warsaw's main street you can see a long queue of anxious people outside a commission shop waiting to buy or sell tiny boxes of aureomycin and other antibiotics. The Polish radio regularly broadcasts appeals for these precious drugs to save a dying child. Bulk shipments of medicines by private American foundations would crack the vicious black market which has sprung up.

STARVED FOR KNOWLEDGE

A different sort of need in present-day Poland is books dealing with what has happened in the world in the past 20 years. The Poles have been starved first by the Nazis and then by their Communist government, of the history, literature, and technical progress of this period.

They could use a few thousand books in English or French and many more thousands in Polish translations. Yet when Polish publishers write to America for translation rights, they do not get even the courtesy of a reply.

The windows are open now, with Gomulka's permission. Only now are Polish schoolchildren learning that Poles fought at Narvik, Tobruk, and Monte Cassino as well as on the Russian front—but the teachers haven't a single truthful textbook. In the fields of scholarship, entertainment, the arts and sciences, the Poles want what the West can give. The best thing America can do is to use the newly opened window into what has been a darkened room.

THREE DANGER SIGNALS

Whether this would affect political realities is another question. The Polish barometer is not easy to read, but whoever wants to discover whether storms are brewing should watch for three warning signs. The first is the reappearance of secret policy; the second is renewed persecution of the Catholic Church; the third is another drive to force the farmers into collectives.

Gomulka has just vowed that he will do none of these things. But he and his friends are only a handful among the conservatives and Stalinists on the Communist Central Committee. If he loses, the window will bang shut on Poland again and the people may react with violence to the prospect of another prison term.

[From the New York Times of May 28, 1957]

HELPING POLAND'S SCHOLARS

From Copernicus to Madame Curie the contributions of Polish scientists and scholars to the fund of world knowledge and culture have been substantial. Over the past 18 years, however, Poland's opportunity to continue to make such contributions has been hampered, first by the human losses and physical destruction of World War II, then by the breaking of old ties which Polish scholars had maintained with the West.

It is to both these problems that the Rockefeller Foundation's grant of $475,000 to Poland is addressed. Most of the money will be used to purchase equipment and materials needed by Polish universities and research institutions. The rest will finance renewed contacts between Polish scholars and their Western colleagues. If experience is any guide, these expenditures should prove well worthwhile in the years to come. Meanwhile, the Rockefeller Foundation's action, like the similar step by the Ford Foundation, gives evidence of the desire to reknit the ties of Polish-American friendship, ties which go back to the founding days of our Nation almost 200 years ago.

[From the Milwaukee Journal of April 27, 1957]

MORE CONTACTS WITH POLAND

The Ford Foundation has taken a bold new step forward in announcing a grant of $500,000 for projects related to Poland.

The Polish program is the first the foundation has made directly for an east European country. It will allow a two-way exchange between Polish and American and European teachers, students, writers, architects, and others for study and work purposes, and will provide American and European books and periodicals for leading Polish libraries, institutions, and individuals.

The west can only benefit from this sort of activity. Certainly the Poles will benefit. Developments in Poland indicate that the nation, although under a Communist government, is ready to increase its western contacts. Henry T. Heald, president of the foundation, said in announcing the new program:

"For the first time in many years, the Polish people seem to feel free to establish relationships with the west. The Polish Government has been carrying on negotiations to develop economic and other relations with the countries of Western Europe and the United States. The universities and scholars and students of Poland have given strong evidence of their desire to renew relations with the free institutions of Europe and the United States."

New barbs probably now will be aimed at the foundation for its action. Some congressional and other critics in the past have charged that it gave money to groups and institutions that furthered left wing and socialist aims. But foundation spokesmen when they presented its annual report earlier this month, said it would not be deterred by controversy. Their Polish program proves they meant it.

The foundation acknowledges that there is a certain amount of risk involved in the Polish program. Heald says the foundation recognizes that there are "many uncertainties in and around Poland," and that it has "full knowledge that reverses are possible."

But the stated reasons for going ahead comprise an excellent creed for those who believe in free government. Here it is:

"We are convinced that the western countries have nothing to fear from intellectual and scholarly contacts with individuals from the Communist dominated sphere. We are confident that philosophically and practically, the exponents of democracy and of a free society carry the future with them."

Good Government Is the Issue

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. BOW. Mr. Speaker, in our concern with the immediate problem of effecting economies in the appropriations bills, we should not overlook the long-range benefits to be gained by adopting the recommendations of the Hoover Commission. Our able colleague, the gentleman from Ohio [Mr. BROWN], who was one of the sponsors of the legislation establishing the two Commissions on Reorganization of the Executive Branch of the Government, and who served with distinction on both Commissions, delivered an excellent address on the subject at the Third National Reorganization Conference, sponsored by the Citizens Committee for the Hoover Report. Under leave to extend, I offer Good Government Is the Issue by our colleague:

GOOD GOVERNMENT IS THE ISSUE

(By the Honorable CLARENCE J. BROWN)

I want to congratulate, first of all, the Citizens Committee for the Hoover report for

the splendid work it has done throughout the last few years. You have done a grand job. You have alerted a great many people to the fact that there has been a commisison or two commissions operating in Washington to look into the affairs of government and to attempt to obtain greater economy and efficiency in the conduct of public business.

Yet, sometimes, I cannot help but wonder just how well the people have been educated by your efforts. I receive a great many letters in my office as a Member of Congress relative to the Hoover Commission reports; letters which indicate the writers do not know much about the Commission's recommendations, except that they favor them, because they think their tax money may be saved.

I even get some such letters once in a while that hurt me just a bit—letters, even from my district, which demand to know just where I stand on Hoover Commission recommendations. When I reply, I always include a form paragraph which reads something like this:

Inasmuch as I originated the idea of the two Hoover Commissions, personally wrote, sponsored, and guided through Congress the legislation which created both Hoover Commissions; served as a member of both, helped prepare and write all of the recommendations made by both, and now sit on the committee in Congress which must pass upon most of such recommendations when they come before Congress—I can assure you that I do have some little interest in the Hoover reports and the recommendations contained therein.

It is just over 10 years ago—10 years this month—that I introduced in the House of Representatives, and then later Senator Lodge introduced the same bill in the Senate, the bill which created the first Hoover Commission.

I am rather proud of the structure of that Commission and the ideas behind it. It was like nothing ever created, or which ever existed in the past. No other commission had ever been established like the Commission on Organization of the Executive Branch of the Government. It was a bipartisan Commission, 12 members, resembling the jury system which we value so highly in this country. Six members were from private life and six from public life. Four were selected by the Speaker of the House; four by the President of the Senate; and four by the President of the United States. So no one controlled the Commission.

That Commission, like the second one, labored hard and long in a nonpartisan way to make a series of recommendations for obtaining the greater economy and efficiency in government which we sought.

I would like to say here, if I may digress for a moment, that there was never a single division within the Commission along partisan lines, with the Democrats on one side and the Republicans on the other. Never was there a division between the civilian representatives on the one hand and those of us who were in public office on the other.

There were great differences, I think you should bear in mind, between the objectives and authorities of the two Commissions. The first Commission was authorized and directed to serve as an arm of Congress, not of the President, to chart better organization in the executive branch.

President Hoover was elected as Chairman of both Commissions by the Commissions themselves. He was not appointed by anyone. Those of us who were members of each Commission agreed unanimously that Mr. Hoover was the one man best qualified to head the Commissions, and to give to them his great prestige, wisdom, and leadership.

As I have said, we were confined, in the first Commission, to going into matters of organization only, to determine how to achieve a better organization, and a more efficient and economical organization, in the executive branch of the Government.

The second Commission was authorized not only to go into matters of organization, but also into questions of policy. There is a great difference between the two. We found out in the first Commission that it was not enough just to go into the matter of organization, but that we should also look into the factors that made an organization bad—in other words, some wrong or foolish policy that had been put into effect in the past.

To explain it another way, if the first Commission found the Government operating a barber shop somewhere, our group was limited to giving its suggestions as to how best the Government could operate a more efficient, more economical barber shop. But the second Commission had the authority to say: "You should close this barber shop; the Government ought not to be in the barbering business."

I have learned in my rather long and busy career in public life that you must always seek and know the facts. Let me say to you now, that I am not happy at all with the progress that has been made, and is being made, in effectuating the various recommendations of the Hoover Commission.

True, about 75 percent of the recommendations of the first Commission has been made effective, with savings estimated at from 2 to 3 billion dollars a year.

But the potential savings, if the recommendations of the second Commission are effectuated, are beyond the power of any of us to comprehend. The estimates—depending on the way matters are handled and how many recommendations are adopted—run anywhere from $5 billion to as high as $15 billion annually, and that is a lot of money.

We have saved 2 or 3 billion dollars a year as a result of the work of the first Commission. We are saving several hundred million annually now from effectuating the recommendations of the second Hoover Commission. Yet I wonder where the money we have saved has gone, because we are faced today with a Federal budget that is the highest in all our peacetime history. Virtually every year we have watched the cost of Government going up, notwithstanding, and regardless of, the Hoover Commission recommendations. Sometimes I become a bit frustrated, and just a little provoked—if I may use such words—with the fact that somehow or other the spenders seem to be able to get rid of the taxpayers' money faster than we can save it. There is something for all of us to think about.

Now I want to bring up to date what has been done in connection with the second Commission's recommendations. The Commission made 314 or 306 recommendations, according to the way you figure. According to the executive branch of the Government, we made some 479 recommendations, and I understand that since I obtained this information they have broken down the recommendations further to 491.

Of the 479 recommendations that were considered as dealing with the executive branch of the Government, as of last week only 189—or 39 percent—have been, and I quote, "accepted wholly or with minor modification" by the administration and the departments and agencies within the executive branch. Thus far, approximately one and a half years after the reports were issued, only 59—or 31 percent of those recommendations adopted by the agencies—have been implemented. Another 71—or 38 percent—are reported to be what they call, and I quote, "in process of implementation."

Some of us who are veterans on Capitol Hill have had a lot of experience with this process of implementation. It is a long, drawn-out, endless procedure that somehow never gets completed.

The departments and agencies have accepted, and again I quote, "partially or as to objective" the remaining 290 recommendations.

Personally, I do not believe it should take anybody over 2 minutes to accept as an objective the idea that we should have greater economy and efficiency in the conduct of public business. I cannot give much credit for that great decision, since only 11 of these recommendations have actually been put into effect—with an additional 52 reportedly "in process of implementation."

Stating it another way, the executive branch has adopted a total of 70 recommendations and is in the process of activating 123 additional recommendations in whole or in part. Assuming 100 percent completion of this endeavor, a total of 193 recommendations, representing 40 percent of the Commission's work, will have been placed in effect. Our job concerns the balance of 286 recommendations which seem to have fallen by the wayside.

Let us examine the record in more detail. If we assume for the moment that a 40-percent accomplishment is the record to date, let us see if this points to the way in which further progress may be accomplished. The greatest numerical progress has been achieved in accepting the reports on depot utilization and research and development, both of which are more than four-fifths completed. I must add, however, that both of these topics have been the subject of extensive hearings in Congress.

The paperwork recommendations fall next in line. I am told the agencies are making very comfortable progress in this field. Next we find that consideration of the food and clothing report is 73 percent completed. I need not remind you of the impetus given the acceptance of these recommendations by the famous "hamburger hearings," in which I had the great pleasure of being the chief cross-examiner. A great many faces became redder than the hamburger or the catsup involved before we finished.

Consideration of the budget and accounting report is 65 percent complete, after some very fine work by the committees of the 84th Congress. I was a member of the committee which considered the series of bills implementing the recommendations of this report. We did not get all we wanted, but we came out with a bill that at least is a good start toward forming sound budgeting and accounting practices in the Federal Government. Our hearings indicated that it will take several years to fully implement this splendid legislation.

But we at this conference are principally interested in areas where little or nothing has been accomplished. I was sorely disappointed to learn that 11 recommendations of the overseas economic operations report are still under review.

Only meager progress is reported on the findings of the task force on legal services and procedure, and the devoted work done by the water resources and power groups. Only 20 percent completion is reported on the suggestions for reducing expenditures in the field of medical services. The report on business enterprises relating to Government competition with private industry—about which we have heard so much—shows an acceptance factor of only 20 percent, not 100 percent as it should be.

Even more surprising, since it represents probably the greatest potential money saver of all, is the fact that only one-fourth of the recommendations on the business organization of the Defense Department has been put into effect. This report was compiled by a committee headed by Mr. Charles R. Hook, of Middletown, Ohio. No man has contributed more to his Government, or to the efforts of the Hoover Commission, than Mr. Hook. He is not only a great business-

man; he is a great leader and a great American.

Most of us know that a great many recommendations by the Hoover Commission can be put into effect through executive or administrative order. Others require legislative action. Some require both executive and administrative orders and legislative action.

The President, in my opinion, has endeavored and attempted in every way possible to cooperate with the Hoover Commission and to put into effect the recommendations which we have made that are subject to executive or administrative order. However—and I am speaking very frankly; for some people may not like it, but I do not particularly care—I am certain there are many within the administration who are only giving lip service to these recommendations.

These people may tell us, "Oh, yes, we are working on it; we are very interested," but they actually are attempting to submarine these recommendations because it disturbs the status quo and the way things have always been done. It remains for Congress and its various committees, and for organizations such as the Citizens Committee for the Hoover Report, to put what we sometimes describe in rough parlance as the "heat" on some of these agencies to see that they do what they are supposed to do.

There are many dedicated men and women in Congress who have set as their goal the introduction, sponsorship, and passage of legislation that will meet the legislative responsibility in connection with these recommendations. It is a big job. It is going to take a lot of time. But inasmuch as the second Commission deals with matters of policy, we have found that when you get into the field of policy, you also enter the field of controversy.

I think we should consistently bear in mind that there is nothing sacred or sacrosanct about the recommendations of the Hoover Commission. If the Congress or the President or the head of any executive agency can come up with some idea, some plan or program, that will better accomplish the desires and objectives of the Hoover Commission, and do a better job than the Commission's recommendations, in obtaining greater economy and efficiency in the Government, then we can only say, "God bless you."

Those of us who served on the Commission for 4 long years—as I did—and others who served for only 2 years, realize that all of the wisdom in the world was not incorporated in our particular group. After all, what we tried to do was set goals which we should strive to reach as a self-governing people.

If there are better ways, or shorter ways, to reach these goals let us hear of them. Otherwise let us get behind these recommendations of the Hoover Commission and, to the best of our ability, see to it that the Congress and the departments and agencies of the executive branch put them into effect.

The Opinions of Youth

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting compilation of opinions gathered from college students' essays on What's Wrong With Democracy, prepared by Mr. John Norman, professor of history and government at Fairfield University in Fairfield, Conn.

Like myself, I am sure that my colleagues in the Congress will find many of the expressed opinions tempered with impetuosity, idealism, and here and there we may recognize slogans and clichés which I am sure we all have come across at one time or another in our lives in public service.

The chief value in the compilation, a cross-section of thinking of young men and women possessed of various points of view, lies in the fact that it is discernible that the young people have strong feelings on what, in their opinions, are the weak points in our democratic form of government. Also discernible is the effectiveness on the minds of youngsters of oft-repeated political clichés such as one-party press, and so forth, which have in some instances been accepted as gospel.

Following is a letter from Mr. Norman and Mr. Norman's article:

DEAR CONGRESSMAN MORANO: Over the past 4 years of my stay at Fairfield University, I assigned to my various political science classes, among other things, the listing of undemocratic or inefficient features of United States Government and politics and what alert citizens could or should do about them. The attached brief résumé by me is the result of my informal survey. Since the students represent a cross section of opinion, it is, of course, not to be supposed that any of them agreed with all the items in the attached list. Indeed, though I think highly of the list, I am not in accord with all the defects presented, and I doubt very much that you are.

Many of the students whose ideas are here listed were addressed kindly and eloquently by you about 2 years ago in my United States Government classroom. These and other students would be proud, as in fact I would be, to see their list embodied in the CONGRESSIONAL RECORD, where they would probably do more good than on a campus. I hope this additional presumption on your kindness will not inconvenience you too much. Thank you.

Most sincerely,

JOHN NORMAN.

WE NEED MORE DEMOCRACY

(By John Norman, professor of history and government, Fairfield University)

President Eisenhower's recent request that Congress grant him the item veto should indeed be favorably considered, but it will not be. Such a reform would provide, in the President's words, "one simple way to save a lot of money," for then he could veto any objectionable item in an appropriation bill without rejecting the bill in toto. Many governors enjoy this power.

This is one of the many reforms advocated by Fairfield University students in political science. Asked over a period of 4 years to list those features of United States Government and politics at the Federal, State, and local levels which should be reformed or abolished in order to promote more effective democracy, the Fairfield students presented many lengthy lists. It must be emphasized at the outset that they are all justly proud of our American government—faults and all, and that they are not necessarily agreed on every suggestion advanced by their colleagues. Nor are they confident that all these faults can be rectified simply by legislation or amendment. Long range reeducation in the democratic spirit is frequently indicated. The following list of shortcomings is composite and incomplete owing to limitations of space.

FEDERAL

1. At present it is unlikely that any Catholic, Jew, or Negro could become President.
2. The electoral college system is considered palpably unfair and undemocratic since a minority of popular votes together with a majority of electoral votes could make a man President.
3. Both the primary and convention methods of nominationg a Presidential candidate are faulty, because the clumsy and circus-like conventions ignore the choices made by primaries.
4. The President is overworked. He should be divested of his role as party leader and relieved of his many functions as chief of state, so that he could devote more time to his duties as chief of government.
5. The 22d amendment curtails the people's right to reelect a President for a third term.
6. Vice Presidential nominations are all too often made without sufficient care.
7. Undue centralization of government in Washington.
8. Bureaucratic inefficiency, redtape, duplication, and waste.
9. Abuse of patronage.
10. Abuses in our loyalty-security system.
11. Inadequate Presidential and congressional check on the nonelected Supreme Court to match the latter's check on the President and Congress.
12. The process of amending the Constitution is considered too cumbersome.
13. The House of Representatives is much too large in membership for efficient operation.
14. Congressional operation of the District of Columbia. Congress has too many national and global problems before it to be acting as a city council.
15. Abuse of congressional investigation.
16. Abuse of congressional immunity.
17. Congressional pennypinching with reference to Ambassadors to the various great capitals abroad.
18. Filibustering.
19. "Pork barrel" politics and logrolling.
20. Promotion to chairmanships of congressional committees on the basis of seniority instead of ability.
21. Parts of the Taft-Hartley Act are unfair to labor.
22. Unfair immigration law, which practices racial discrimination.
23. Unfair treatment of Indians.
24. Unfair riders on bills.
25. Unfair tariff laws.
26. Inequitable tax laws; for example, depletion allowances.
27. Lack of sufficient party discipline.
28. Abuses in lobbying activities.
29. Abuses in activities of pressure groups.
30. The "one-party press."

State

31. The "one-party South."
32. Continued segregation despite Supreme Court decision against it.
33. Poll tax.
34. Inadequate absentee ballot.
35. Not enough people vote. (Yet most Fairfield students oppose compulsory voting laws or giving votes to 18-year-olds.)
36. Failure to redistrict after a census.
37. Gerrymandering.
38. Overrepresentation of rural areas in the legislatures (and in Congress) as against the inadequately represented urban centers with large populations.
39. State constitutions too long and involved, and full of material that should properly be in statutes.
40. Unreasonably long ballot with too many candidates for anyone to keep up with intelligently.

41. Out-of-date and inefficient bicameral legislatures in contrast to the only unicameral legislature of Nebraska which has been highly satisfactory.

42. Governors' powers are too narrowly limited.

43. Popular election of judges tends to make them too politically conscious. Most students favor executive appointments as having produced the best results.

44. The "law's delay" because of our out-of-date and inefficient State and local court systems.

LOCAL

45. Out-of-date jury system. (Some suggest professional jurors versed in law, sociology, and psychology.)

46. Third degree police methods.

47. Wiretapping.

48. Out-of-date and inefficient county government duplicating much of the work of municipalities.

49. Bossism and machine politics.

50. Lack of sufficient home rule for our municipalities.

Most of the students are agreed that, if by some miracle all the foregoing shortcomings could be corrected at one stroke, it would avail us little unless we were always keenly vigilant of our common rights and genuinely motivated by democratic ideals. Mechanical readjustments alone would not suffice.

Constitutional Integrity and Foreign Trade

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. PHILBIN. Mr. Speaker, I have had occasion in the past to express my protests and state of alarm concerning the impact of our reciprocal trade treaties policies and practices. I am fearful that the dire predictions I have made in the past concerning the distressing results that would ensue from opening the floodgates of foreign competition have been realized in our economy to an even greater extent than I had feared.

The textile industry, badgered and plagued by foreign imports over a period of years, has suffered major losses with numerous textile units liquidated and very many others brought into a state of depression. The new plastic and electronic industries are now facing similar conditions because of imports, and many other industries are gravely threatened.

And yet the end of these disastrous developments does not seem to be in sight. Instead of reversing the harmful practices that have produced these economically and socially destructive conditions, this Government has stepped up the tempo, so to speak, and we have proceeded further down the road of free trade under the guise of abortive "internationalism, giveaway, and do-gooder" policies that in the last analysis do not result in much good for anyone concerned, but visit great harm and danger upon American industries as well as upon the economies of some other nations.

In this process facts have been distorted, the evidence has been twisted, speeches and arguments predicated on so-called commendable humanitarian motives have dominated the scene and have succeeded in blinding the eyes of a great many people to the great danger that is being done to our American economy. It is time for us to pause and ask ourselves whether the American Congress, acting under its historic constitutional mandate, or international agencies in which we are badly outvoted, will dominate policymaking for American trade relations and tariffs. I do not want to belabor this point because it has been very broadly discussed in this body by able Members of Congress, but we should never lose sight of the fact that under the Constitution, it is not only our right, but our duty, at all times to retain control of tariffs and imports, and we should never under any circumstances allocate this vital function which, depending upon the way it is exercised, could mean life or death for American industries, to be transferred to any international agency.

Every strategem has been used to throw dust in the eyes of the American people regarding trade and tariff policies, and to try to make them believe that, short of being harmful, present policies are beneficial, when the actual facts clearly indicate that the contrary is the case. We are asked not only to permit foreign agencies, in effect, to make our tariff laws, but also to allow foreign nations to pay for American exports by deluging this country with a flood of foreign imports manufactured and produced abroad at only a fraction of the domestic cost of similar competitive items.

Efforts have been made to amend certain of these internationalistic proposed controls to make them look innocuous and harmless and hence a more palatable dose, but nothing that is done can possibly conceal two facts: first, that these proposals look to placing American tariffs under international control, and, secondly, that the application of present trade policies is resulting in stagnation and threatening ruin to many American industries.

If these policies are continued this stagnation and ruin will spread and grow until it will encompass virtually every segment and every industry in the Nation. We should never forget that American methods of mass production, technology, machinery, and know-how have been, like American money, deliberately migrated to almost every nation in the world. But that is not all. In addition to technical advice and assistance, machinery, scientific methods, and know-how, we have also put up the money under our foreign-aid program by which foreign nations can build factories, powerplants, develop raw materials, and do other things necessary to set themselves up in competitive business with our own country and in increasingly wider, broader fields of activity. If present trends continue, this movement is bound to have fresh and steadily encroaching, damaging effects upon the whole American economy and its component parts, and subsequently upon the employment and well-being of millions of Americans.

It is undeniably true that this Nation must and should encourage world trade. This is in accordance with our historic practice which we have followed for many years. We realize that there are mutual advantages in this trade and that in this era particularly it is designed to strengthen the free world. The trouble with present programs is that they seek to go beyond the mere encouragement of trade and the mere exchange of goods and dealings on the basis of mutual advantage. Present programs, by affirmative provisions and methods, put all or most of the advantages in the hands of foreign nations. Thus, what is supposedly world trade is tending to become a one-way street. Foreign nations financially supported by our money enjoy marked trade expansion and great prosperity at the expense of the American businessman and workers.

It is time for the American Government to recognize that it exists to promote the welfare of the American people and not the welfare of other peoples. Our own Government exists under free institutions to support and defend the United States and to strengthen its way of life and to advance and improve the welfare of the people and that must continue to be the primary aim of this Government.

It is certainly not a crime, but rather a duty, to protect American interests first. When that has been accomplished, it may then be appropriate to render such help to other nations and peoples that we reasonably can, not only with humanitarian motives which are so compelling to all Americans, but also in our own plain interest to unify and strengthen the free world. But in these efforts we should never pursue policies that will result in weakening our own country. Yet that is what it seems we are doing when we allow foreign competition ruthlessly to assail one American industry after another.

No number of boards and commissions, hand picked usually to reflect extreme international views, is qualified to cope with these questions. It is only through study and action by the American Congress and its committees that appropriate solutions can be found and a proper balance struck between legitimate world trade, and imprudent, profligate, giveaway programs that threaten our very existence. We must remember too, that the American Executive, under our Government, exists to execute the laws, and not to make them. The regulation of foreign commerce and the imposition of tariff duties are duties which the Constitution specifically and definitely imposes upon the Congress, and these are duties which this Congress must discharge fearlessly and courageously and without being dragooned and wheedled by international propagandists and extreme internationalists into abdicating powers and duties which repose solely in the Congress.

It is our province and our obligation to listen to the voice of the American people, and not to the voices of foreign propagandists. We must listen to the men and women who till our soil, who produce and develop our natural re-

sources to sustain the Nation, the workers in our factories and our shops and their families, our professional people, white-collar workers and small-business men, the managers of our great industries, and all those whose livelihood and future destiny is so gravely threatened by foreign competition.

We should ponder well before we authorize any international body in any respect to control our commerce and our tariffs, and we should recognize that we can never permit that result. Foreign control of American constitutional functions is a gross breach of our Constitution and our traditions.

I realize that there are those who say no legislation is necessary to transfer these vast powers over our trade and commerce and imports and tariff to international agencies. I am not in accord with that view, because I do not think it reflects either the law or the facts of our present situation. It certainly does not accord with the public interest of this Nation, and to my mind there is no way by which these organic proposals could possibly be amended which would make them acceptable to the people or compatible with our constitutional provisions.

In a word, we have come too far along the road of allowing foreign nations to determine American policy regarding these matters. It is time, not for extension of these policies, it is a time for further restriction. It is time to revise these policies and the best thing that could possibly happen in the interests of the American economy and the American working man and woman would be if the Congress would reestablish its full power over foreign trade and provide for panels of scientists, educators, businessmen, commerce, trade, and monetary experts, and other highly qualified men and women who know their business to join with the Tariff Commission in regulating tariffs where necessary.

If this step were taken, it would put the Nation back on the original track of its historic policy. It would in the first instance protect our farmers, our workers, our businessmen, and our people. In the second place, it would result in fair treatment of foreign nations and in development of a sound policy whereby free, economic intercourse would be encouraged and a free flow of international trade assured, on a basis that would not be harmful to this country, or to any other country, but that would move in the direction of developing truly, mutually advantageous trade and commercial relations between our Nation and other nations of the world.

I realize we will always have Pollyannas in our midst who can see nothing ahead for future generations but milk and honey, and doubtless we have human ostriches who in the presence of danger and their enemies will hide their heads in the sand. But Members of this body are elected by the people. They are under a direct mandate to protect the Nation and to provide those policies in Government which will develop the economic and social well-being of the Nation. There is no place within the confines of this great land where there are so many able, experienced, patriotic men gathered trying to serve the Nation as in this body. We well know the problems of the moment, and I think most of us full well realize the ominous problems of the future. It may be, in fact, later than people think, but, in any event, it is not a time for glossing over these great problems. We must face them and we must face them soon and realistically, if we desire to carry on our great constitutional mandate and make sure that we have done our best, not only to protect the Nation against its enemies, but to insure the future well-being and development of its economy, its prosperity, and the happiness, safety, and security of its people.

Employment of the Handicapped Is a Community Responsibility

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an essay entitled "Employment of the Handicapped, a Community Responsibility" by Mr. Bill Manasco, of the Carbon Hill High School, Carbon Hill, Ala. The essay won first place in Walker County, Ala., in a contest sponsored by the Governor's Committee on Physically Handicapped.

Mr. Manasco is one of Alabama's outstanding high-school graduates of 1957. He has made an excellent record at Carbon Hill High School and plans to enter college this year. I predict a bright future for him.

I commend to my colleagues this fine essay which points out the responsibility of a community to its handicapped citizens.

EMPLOYMENT OF THE HANDICAPPED, A COMMUNITY RESPONSIBILITY

Employment of the handicapped is a community responsibility because an unemployed person is a waste to the public. A handicapped person can be a self-supporting person if trained in a job he or she can do. For example a man who has lost a leg or an arm or both legs or arms can be trained to repair shoes, inspect clothing in factories, repair watches or many other things that do not require a person to move around too much or stand up long at a time.

Many times a person that is handicapped can do a better job than a person who is not handicapped. For instance a person who is handicapped takes more pride in his work and is more careful on the job than a person who is normal. A handicapped person does not have as many accidents on the job and does not miss as many days out of the year as a normal person. A handicapped person is not likely to be late getting to work as much as a nonhandicapped person.

The handicapped have a right to a normal life. Many handicapped persons are born handicapped, but many have received injuries while fighting for you and me in the wars that we have had in the past. These people should be allowed to work or should be trained for jobs. We all owe the handicapped a chance, for they know that no one would want to trade places with any handicapped person.

There are about 7 million people in this country that are handicapped. With such a large number of handicapped persons in this country we will have to make provisions for the training which will assure them of a chance to support themselves, and by so doing relieve the Government of enormous sums of money now used for their relief. This in-service-training is being done by certain companies and factories that will hire the handicapped and train them for the job. Some companies hire only the handicapped because the product they produce can be made as well or better by a handicapped person.

The State and the Federal Governments are helping the handicapped also, by setting up rehabilitation centers where the handicapped are skilled for a job that they can do best. The Government is also training people to work in the rehabilitation centers. There has been a shortage of workers in the last few years and the Government requires a person to be trained in that work before he can begin to help the handicapped.

Most of the handicapped had much rather earn their own living than have it given to them. The country needs every one it can get to work, for at anytime we may be in another world war. We need people that are trained well and know their job, and can do that job well. Many times the handicapped are the answer to this need. Many handicapped people worked during the last war to help their country, and proved that the handicapped can turn out a creditable job.

The handicapped person must feel needed in order to have the inspiration to push forward against odds. These people in many cases can recover and resume their normal lives, but without the help of many people and the understanding of a trained person many times this handicapped person will never recover completely. A handicapped person that was not born in that condition is different from one that was born in that condition. He or she feels that they are of no use to the world and there is no use for them to try to get well or try to get a job. If the people can be convinced that they are needed by their friends and their country they will surely make a much better person on the job that they take up.

The people who were born handicapped need help also. A person that was born, for instance, deaf needs help to carry on a normal life. This person will never be able to hear, but he can be taught to read and write and to read sign language. This person can also be trained to work at a job where people that can hear couldn't work at long periods of time. It may be that the noise is too great on this job for a normal person to work. So you can see that in many cases a handicapped person can be well adjusted to do work that other people could not do satisfactorily.

Employment of the handicapped is for the good of the community, for everyone knows if a person cannot support himself someone will have to support him. If his own people do not support him, then the State and the Federal Government will have to do it.

This means an increase in our taxation system, as each person will receive money from some Government agency, dedicated to help the needy. The money that is spent on the handicapped people could be used to improve schools, roads, and take care of other important needs of our country.

Employment of the handicapped is a community responsibility. We must shoulder that responsibility. We must help make them self-sustaining, by mutual friendship and understanding. We must accept them as they are and not look upon them as

freaks of nature. They are human beings and as such are our most valuable resource. Let us all then help conserve them, respect them and find a place for them in our society.

The Wise Use of Federal Money

EXTENSION OF REMARKS
OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Senator MARGARET CHASE SMITH:

THE WISE USE OF FEDERAL MONEY

(By Senator MARGARET CHASE SMITH, United States Senator from Maine, senior Republican, Senate Subcommittee on Reorganization)

I am, indeed, pleased to have this opportunity to speak to this distinguished audience upon a subject of such vital importance to each of us: The Wise Use of Federal Money.

In my opinion, no problem of greater significance faces us today than that of restoring this Nation to the sound financial foundations upon which its strength, its integrity, and its greatness have been forged—and which have made it the mightiest Republic upon the face of the earth.

For, surely, it is obvious that we cannot hope to keep our economy strong, maintain the posture of military strength that we must, and move forward into what we fervently hope will be the Atomic Age of Peace, except upon a foundation of national solvency.

Today, many events, many forces, imperil our economic stability and our national security. World War II, the seething caldrons of Hungary, the Middle East, and Asia, the ever-present threat of another, perhaps final, global war, make it imperative that we maintain our military might at the hilt, with resultant imbalances in our own domestic economy and fantastic expenditures which threaten inflationary disaster.

As you are aware, the President on January 16, last, presented the Congress with a $71.8 billion budget for fiscal 1958—the largest peacetime budget in history. It is the fifth largest in the history of this Nation—only 3, in 1943, 1944, and 1945, the peak years of World War II, and 1, in fiscal 1953, after Korea, have been higher.

And, as each of us knows, the national debt, although reduced slightly in recent years, still amounted to a staggering $272.8 billion last July 1; with the grave danger, despite high Government receipts in 1953, that, if some curb is not placed upon expenditures, we could witness additional increases in the future.

Interest on the national debt, I might remind you, even with reductions in the amount of the debt, it is estimated will reach the alltime high-water mark of $7.3 billion for fiscal 1958—because of higher interest charges in the current "tight money" market.

To me it is almost a frightening comparison that the Federal Government today pays more in interest on its national debt than it paid for all governmental expenditures in fiscal 1938—just 19 years ago.

In addition to our fantastic budget—in addition to our "Frankenstein" of a national debt—the Federal Government has more than $450 billion in loans, commitments, obligations and guarantees outstanding—commitments which this Government must some day meet—debts which future generations some day must pay.

These are some of the forces which threaten our financial solvency—forces which, if not controlled, could set a torch to inflation, which, like a prairie fire sweeping across the plains, could wreck the financial stability of this Government—and this Nation.

In relation to this, it is a harrowing thought to consider that the Government today has outstanding in unexpended appropriation balances the tremendous sum of $74 billion hanging over the head of the Secretary of the Treasury like a dark ominous cloud—more in unexpended balances than the total Government budget for fiscal 1958.

I ask you, how can we have any semblance of sound financial policy when the Government has more money outstanding in unexpended appropriations, some dating back as many as 5 years, than it takes in either annually in tax receipts or appropriates annually for its operations.

How could any business firm or corporation operate in the black in such a Wizard-of-Oz atmosphere?

I think our commendations should go to those officials of the Government who have held Federal spending down, who have held the line against inflation and who have balanced the budget. I refer, among others, to the Honorable George H. Humphrey, the Secretary of the Treasury, who has steadfastly combatted tremendous pressures for more Government spending—the near ruinous policies of the 20 years between 1932 and 1952 which largely are responsible for the dangerous predicament we find ourselves in today.

Parenthetically, I would inform you that on the morning of January 17, 1957, immediately after reading in the papers that Secretary Humphrey had stated that there are a lot of places in this budget that can be cut I wrote him a letter stating that as a member of the Appropriations Committee charged with the responsibility of passing on the budget spending requests, and as one who has been rated by the Council of State Chambers of Commerce as being champion of economy in the Senate, that I would greatly appreciate such information and identification as to those places in the President's budget he felt could be cut. I could have stated that I am equally interested in this in my capacity on the Government Operations Committee, as ranking Republican and former chairman of the Reorganization Subcommittee and as a sponsor of legislation I shall mention later in my remarks.

I sincerely believe that Secretary Humphrey has a solemn obligation and responsibility to the American people and to Congress to specify where he feels the budget can be cut. It is not enough to say that the budget can be cut in several places. Such a public statement carries with it the serious obligation to specify those places instead of placing Congress in the position of guessing as to what those places are.

At this point in my remarks I must digress somewhat from the original text of my speech in the advance release that I made of it last Tuesday. The digression is caused by the fact that on February 1, 2 days after giving the advance release, I received a reply from Secretary Humphrey to my letter. I now read that letter to you:

"MY DEAR SENATOR SMITH: Thanks for your letter regarding my comments on the budget. As I have said publicly several times, as well as to the full House Appropriations Committee, I felt that the budget as presented was the best that we could do at that particular time, and I could point to no specific items which should be eliminated. I do believe, however, that in the next 18 months, before spending under this budget is ended, we should be able on a day-to-day, case-by-case basis to find savings that can be made without hurting our security or necessary services. To do this effectively will require the most earnest cooperation of the public, the Congress, and all the departments and agencies of the Government in searching out not only things which are no longer needed, but make sure that the things we have to do are done in the most efficient manner.

"The President in his state of the Union message asked that everyone in the executive branch continue to search out ways to save money and urged the cooperation of the Congress as well. The President has also expressed publicly the firm belief that if the Congress can find ways to cut spending without impairing security and services that it would be the duty of the Congress to do so.

"If we can achieve more effective control of our spending we will have brought about a desirable restraint on inflationary pressures which can open the way to lower taxes, greater incentive, and the making of more and better jobs for the long-run well-being of our Nation.

"Sincerely,

"G. M. HUMPHREY"

I note with interest that Secretary Humphrey replies that he "could point to no specific items which should be eliminated." Apparently the press statement attributed to him that "there are a lot of places in this budget that can be cut" was in error and he was misquoted. I gather from his reply that he feels the President's budget is fat free.

At this point, I depart from my text since I have received reports that some members of the press are unhappy about this next to last sentence of mine. I made the observation that in view of Secretary Humphrey's letter to me, apparently—and I stress the word "apparently"—he has been misquoted and the press report I read was in error. Representatives of the press complain about this saying that they have the verbatim transcript of the Secretary's press conference to prove otherwise.

If there is any difference on this it is between the press and the Secretary. However, I have never been shown or given the transcript of the press conference and all the proof in this matter that I have is the signed letter of Secretary Humphrey—and my conclusion is based upon the Humphrey letter.

I say here, with all respect to those in high position in the Nation's financial councils, that balancing the budget by taking more money from the people in taxes as their personal income rises or by taking more money from corporate industry as business actively expands is not the way to national solvency—as good as it might look in the newspaper headlines. Balancing the budget by reducing governmental expenditures is.

Time does not permit, nor am I a seer who can prophesy all the steps that must be taken by responsible authorities to bring to halt this trend toward increasing expenditures, toward financial irresponsibility, and, eventually, toward insolvency, but I do wish to mention what I consider to be one of the most significant developments toward financial responsibility of the last decade.

I refer to the Hoover Commission's recommendation to the Congress that appropriations be determined on an annual accrued expenditure basis—recommendation No. 7 in its budgeting and accounting report.

The Senate last June 20 acted favorably upon the Hoover Commission's recommendation when it approved Senate bill 3897, which incorporated all the Commission's recommendations on budgeting and accounting.

However, as you may recall, the all-important section relating to preparing appropriation estimates on an expenditures basis was stricken in conference between the two Houses of the Congress when it became obvious because of the objections of the House of Representatives that we could not get a

bill through the Congress implementing the other Hoover Commission recommendations, with the aforementioned appropriations provision in it.

As I stated on the Senate floor when the conference report was filed on July 25, 1956, deletion of the Hoover Commission's highly recommended revision of our appropriations procedures struck at the very heart of the objective we seek: Namely (1) improving financial management within the executive branch, and (2) restoring control of the public purse to the Congress.

A few days after that, and again on January 7, last, in the first days of the present 85th Congress, I introduced legislation to write the Hoover Commission's recommendation into law. I was joined this year in the introduction of this measure by Senator FREDERICK G. PAYNE, of Maine, and Senator JOHN F. KENNEDY, of Massachusetts, on Senate bill 316.

I am confident you will agree that there is no more important legislation pending before the Congress than that which would provide for strengthening the financial foundation upon which this Government rests. The amount of money that the Federal Government spends is controlled when it is appropriated by the Congress—not when it is expended by the executive agencies, although improved fiscal management within the agencies can produce economies in operation which should have sizable sums.

The bill I have introduced would place the entire governmental financial structure on an annual accrued expenditures basis. In other words, the Congress would appropriate for each fiscal year upon the budget estimates of Government expenditures actually to be made or to be accrued during that fiscal year.

The executive agencies would present their estimates for the forthcoming fiscal year, their expenditures for the preceding fiscal year and their justification for new appropriations on the basis of the current fiscal year only—not on the confused, complicated "obligation" system presently in effect which frequently covers 3 or 4 fiscal years, thereby completely clouding any intelligent grasp of the current state of our finances.

To obtain firm command of Government finances there must be a direct correlation between tax receipts and expenditures for each fiscal year—because the annual budget surplus or budget deficit is measured by the difference between the two—and not the difference between appropriations and expenditures, as many people believe.

By establishing this direct correlation between annual appropriations and annual expenditures as the Hoover Commission wisely recommended, we vest not only in the Congress, but in the President as well, much greater opportunity to control the level of Government operations during the budget year on the basis of actual conditions existing that year.

Moreover, this would eventually mean the elimination of the vast carryover balances to which I have previously referred now available for expenditure some time in the distant future at the discretion of the executive agencies, with little or no control over their spending by the Congress, which is responsible in the final analysis to the people for the use of their money.

I conclude, therefore, with this thought upon the subject assigned to me, The Wise Use of Federal Money—I say without hesitation that I can think of no more important legislation to bring about the wise use of Federal money than the implementation of the Hoover Commission's recommendaton toward that goal.

In concluding, I would be remiss were I not to pay tribute to President Hoover for his leadership of the two Reorganization Commissions which bear his name.

The former President not only made a great contribution in heading up these two crusades for better government, but he did something else. He practiced what he preached.

At the expiration of both the Commissions he headed he returned to the Treasury of the United States a surplus. In other words, he took the apppropriation the Congress gave him, did the job Congress asked him to, and then had something left over. A rarity, indeed, in bureaucratic Washington, where the emphasis seems to be to spend, not save.

I am glad to say that I can join President Hoover's exclusive company. As chairman of the Subcommittee on Reorganization of the Senate Committee on Government Operations in the 83d Congress, I, too, returned to the Treasury a surplus, using less money than the Congress appropriated to get the job done.

So, my friends, I, too, practice what I preach.

Thank you.

Address Delivered by H. Stewart Potter, of Arlington, Va., at the Memorial Day Exercises at Hershey, Pa., Thursday, May 30, 1957

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. MUMMA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Commander Chubb, honored guests, ladies and gentlemen, I am deeply honored and privileged to be invited here as your speaker on this occasion. My memory takes me back to the year 1917—40 years ago—when I was elected as county president of the Patriotic Order Sons of America in convention in your town. I am proud to still hold membership in that great patriotic organization. Two years ago I was the Memorial Day speaker in Hummelstown.

I am a native Pennsylvanian, having been born at Newport, Perry County. Mrs. Potter and I have been residents of the State of Virginia since 1920, but still retain our legal voting residence in Halifax, this county.

On this Memorial Day we join with millions of our fellow Americans in reverent remembrance of our honored dead. This day of memory has become throughout the years more than a patriotic occasion. Rather it has become a spiritual celebration, a time for quiet contemplation and dedication to the divine political principles our forefathers proclaimed nearly 2 centuries ago and for which more than 1 million of our fighting sons and daughters have sacrificed their lives upon the altar of their country's need.

Let us never forget the mighty acts of unselfish devotion and willing sacrifice by these American patriots of yesteryear. These were men imbued and ennobled by a sublime cause—the protection and preservation of Americanism—of the American way of life.

What is Americanism?

Americanism is the sum total of nearly 200 years of struggle by the American people to effectively promote, practice, protect, preserve, and perpetuate these fundamental and divine principles of liberty, equality, and justice to the end that no American need ever know fear of any man, nor envy of any man, but shall instead enjoy peace and righteousness under God.

We Americans can be justly proud of our mighty achievements.

For nearly 200 years we have maintained a representative form of government based upon the divine rights of man.

We have created and preserved a capitalistic, economic system which has been fostered and perpetuated by the fundamental principle of the greatest good for the greatest number.

We have carved out of an unfriendly wilderness the most palatial national abode, with the highest standard of living ever dreamed of or enjoyed by any people in history.

We have proved that men of goodwill, regardless of their race, religion, or national origin can live together in peace and prosperity.

We have provided a social climate that offers unlimited opportunity for success and wealth to the fit and protection and security to the unfit.

We have fought seven bloody wars, not for territorial acquisition or aggrandizement, but for the noble ideals of freedom and world peace. And we have done something more. When the guns were silenced, we sacrificed our substance to succor and rehabilitate our vanquished foe.

We have declared, as our national policy, the inalienable right of all men to be free and self-governing, and furthermore have practiced what we preached by granting independence to the people of our former possessions.

We are a Christian Nation. America was conceived and created by godly men. Our jurisprudence is out of the Old Testament. On the coin of the Republic we boldly declared "In God We Trust." America has achieved her greatness, not primarily because of her natural wealth—many others have such physical resources—but because the foundation of our form of government and the way of life is firmly embedded in the rugged rock of our Christian spiritual heritage.

For too many years past there has been a determined effort on the part of the so-called intelligentsia—and in more recent years, the disciples of dialectical materialism—to decry and condemn the teaching of orthodox history, which instills love of country and patriotism in the youth of our Nation.

The debunkers of our national heroes have told us that it is passé and that we are immature to eulogize our great men; that we are provincial and nationalistic when we revere our flag; that we are foolish and infantile to be willing to fight and even die in defense of our native land.

Yet it has been our heritage of heroes and their glorious example of unselfish devotion to God and country that has inspired many a boy born in humble circumstances to achieve greatness.

Memorial Day is not a tribute to war. It is a day of memory to our heroic dead who gave their last full measure of devotion that liberty, justice, and human rights might be protected and preserved for all posterity in a world of peace and brotherhood.

Today is one of the most significant days of the year. It is Memorial Day. We have gathered here to pay tribute to our honored dead who have made the supreme sacrifice that this Republic may live, and to honor those still among us who have borne the strife of battle for the glory of our country. By appropriate ceremonies which are being held in almost every community of this great free land, we commemorate the valor and the sacrifice of the veterans of all of our wars, from the Revolution to the conflict in Korea.

The formal observance of Memorial Day, or Decoration Day, as it was popularly called for many years, dates back to 1868. The graves of the soldiers killed in the Civil War were decorated with flowers before that year. It was the women of those war years who initiated this expression of sentiment. The

date of May 30 was no doubt selected because nature is so full of life at this season of the year.

We in America are still looked to as the world's best hope for freedom. Our own history of freedom, dating from our war of independence, has earned us a reputation of dedication to liberty wherever men of good faith assemble. Our ready granting of citizenship to all who come to our shores for most of our history gave proof that we are respectful of free people everywhere. Our traditions of anticolonialism are recognized throughout the world.

It is America, indeed, who must provide the hope and inspiration to all people who are, for the moment, under the heel of tyranny.

We must certainly keep ourselves strong to combat the threats of Communist imperialism. If we do not see to the defense of freedom where it still reigns, the people who have temporarily been deprived of theirs will have no hope.

We must recognize that economic stability and self-assurance is necessary to preserve national self-respect and international balance—that peace is inspired by international hope and contentment.

It is a well-known trait of human character that all of us want to be remembered. However, primitive or advanced may be the man and of whatever race or color, we all have the same universal longing to be remembered. So today, we remember yesterday and remember their glory forever—all war heroes who have made contributions to keep this country free. Inspired by their example of sacrifice and patriotism, we pray in words and deeds "God Save America." God bless America, that has been made safe for us since the beginning of glorious America. Let us rededicate ourselves anew to keep faith with the brave men who have gone before, and pledge ourselves to keep America strong, four-square with the winds that blow, and faithful to all, while we do our best to make it better. Will you join in honoring all great heroes? May the memories that rise before us in this solemn hour banish indifference and lethargy from our souls, and let us go forth in the spirit of our soldier dead to finish the task they have left for us to do.

At this season of the year, we commemorate the valiant deeds of our fallen heroes by placing American flags above their graves, by heaping floral tributes on their last resting places, by Memorial Day parades, by statements and speeches apropos to this occasion, and by religious services and affairs such as these in which we are participating. How feeble our attempts to do them honor when what they did and what they have accomplished speaks far more eloquently than anything in which may be said on this Memorial Day in the year 1957.

Not only is this a day of doing honor and paying tribute; not only is this a day when we recall with ever-deepening pride the many valorous acts performed by so many patriotic Americans on the battlefields throughout the world. Actually this is a day of dedication. We dedicate our minds, our hearts, and our lives to the cause for which so much has been sacrificed.

Americans everywhere around the world gather reverently, as we do here at Hershey, today, to honor the Nation's dead. Their dust remains an inspiration to their countrymen.

Because of their sacrifice, on the Capitol Building at Washington—kissed by the sun of day and watched by the stars at night—waves the unconquered flag of your country and mine.

The struggle for freedom never ends. It was purchased with blood. It must be preserved by devotion. So Memorial Day is a day of honor, a day of remembrance, a day of reckoning, a day of accounting, and above all, a day of high resolve. We resolve anew today "that these dead shall not have died in vain" and with the help of God, who has never forsaken this favored land, we shall maintain our high resolve through future generations.

If the time should ever come when we no longer remember what brave men and women, living and dead, have done for us, in that day our Republic will no longer deserve preservation.

Our observance of Memorial Day is now a tradition of American life. It is right that this should be so. For today we honor the dead—men and women who died that you and I might live.

These men and women are legion—men and women of all races and creeds, and faiths. Their history, their deeds, roll down through the ages. They were there at Valley Forge, at Yorktown, at New Orleans. Years later they carried that flag with its ever-growing stars into the battle at Antietam, at Gettysburg, through the bloody slaughter of the wilderness, and to the final victory at Appomattox. Years later the thunder of their guns were heard in the Argonne and Chateau Thierry. And only a short decade ago, on land, on sea, and in the air, these men scattered over the five continents of the globe, fought once again that we might live.

What names those are: Kasserine Pass, Anzio, Omaha Beach, the Bulge, Okinawa, and Inchon—there is music in them—the music of battle, fierce, raucous, thundering, dying to a dirge as the smoke slowly clears. There is pain and homesickness in that music; and the sudden, quick, sharp stab of death.

Yes; they have died. We live. The Star-Spangled Banner still waves. It is grief, of course, that we feel, but also pride—pride both in their achievements and in the country they have left us as their heritage.

Because of our fighting men, we have a heritage that is our dream, our promise of American life. True, America is dogwood and the greenery of spring; it is rolling prairies and the cornfields of the West, and our own fertile Pennsylvania fields in all of their beauty. But the men we honor today did not fight for a town, or a region, or a State. Whether they went out from the State of Virginia or the county of Dauphin, they fought equally as valiantly, equally as bravely, for the cause that is America.

In some respects Memorial Day means more than the Fourth of July, or the birthdays of great men of the past whom we honor from time to time. It commemorates in our hearts the sacrifices of our grandfathers and our great-grandfathers who fought through 4 long years of bloody civil conflict. They died that our country as a united nation of freemen might endure. But Memorial Day is also a day of homage to all those men and women of all religions, race, and creed, who have made the supreme sacrifice. The sun never sets on the white crosses that mark the graves of our departed heroes scattered over the 5 continents, the islands, and the 7 seas of the world.

To me, Memorial Day is also one of reverent respectfulness and honor to the memory of those whom each of us may hold dear.

Across the length and breadth of our land—Alaska, Puerto Rico, Hawaii, the Virgin Islands, and wherever the Stars and Stripes greet the morning sun—Americans are gathered just as we are here today, not in a spirit of glorification of the victory of the North over the South, nor of rejoicing over the pyrrhic victories of World War I and World War II, but rather to lay a symbolic rose on the collective grave of more than a million men and women who have died in all of our wars since 1861; and in placing that rose, to collectively rededicate ourselves, reconsecrate our hearts, and requicken our minds to the solemn purpose for which they died. Whether it was Bull Run or Antietam, Gettysburg or Atlanta, the blood they gave welded the unbreakable bond that now binds together the 48 States of our Union—insoluble, inseparable, invincible. Their sons and their grandsons in even greater numbers gave their lives for a much broader cause—that the people of all countries over the entire world might have an opportunity to live out their lives in peace and freedom.

I am more than a little saddened as I reflect on Memorial Day and think: How short is the memory of man?

I can recall as if it were yesterday, and I am sure many of you can too, the tremendous surge of gratitude toward our veterans that swept over the Nation immediately after World War I, World War II, and the Korean conflict. Americans were stirred with deep emotions of praise, of thanksgiving, of a sense of eternal debt to the veteran. I am wondering if that spirit is as strong today as it was then?

Certainly we cannot, and we do not, expect a feeling of gratitude to remain at an abnormally high pitch through the years. We do not expect it, and our veterans would not want it.

But you do get a feeling that the pendulum has swung too far in the other direction.

Today I hear statements, and you probably have heard them as well, to the effect that bearing arms to defend your country in time of war is merely one more duty of citizenship; that it ranks no higher than paying your taxes, or exercising your franchise of voting.

Of course, we must never forget that every citizen in our land has the right to speak his mind on these things. But I wonder if they have reasoned matters out in the light of fact?

Many of these men entered service and took the same risks as all the rest. Yet fate decreed that theirs should be the supreme sacrifice. Military service to country in time of peril is something more than a normal duty of citizenship.

Veterans have done all that their fellow citizens have done, plus something more. They served in the Armed Forces in time of desperate peril for this Nation. It is immaterial that others might, could, or would have served, had things been otherwise.

The fact remains that veterans did serve—that, by virtue of their service, they are deserving of extra considerations as veterans.

Let us never forget it. Even though war fades further and further into the distance of history, even the first flush of joy of peace becomes but a vague memory.

Let us always keep faith with our veterans—the living and the dead.

Let us keep faith in another way, by doing all within our power to maintain peace upon this troubled earth. For the sacrifices, the tragedies, the loss of life would lose all meaning were our Nation plunged into another war.

Peace—peace with honor—does not come by wishing for it. It must be forged by intelligence, by realism, by sacrifice, by the will to see it achieved.

Our war dead have already shown us the cost of war. By their death they have made it possible for us to strive for peace that may banish war.

To give anything other than our full share in the achievement of this peace is to break the faith we hold with them.

Let us make a solemn pledge—within our hearts—each one of us—that we will not break the faith.

Let us remember our dead forever, and what their sacrifice has meant to us, the living.

For their sake and for ours, let us this day, under God, dedicate ourselves anew to building a world in which men may live in freedom without fear.

It is no difficult task to recount the splendid victories won by our service men and women in the several major conflicts in which our Nation has been engaged. But what about the conflicts of the average American citizen? Has he been adroitly

lulled into focusing his attention on foreign propaganda and thereby failed to witness the planned undermining of our Government? Is he content to listen to the lullabies of the intellectuals who are far more concerned about the rights of traitors than the preservation of this freedom-loving land?

But today we are primarily gathered here to pay our homage to our service men and women who have passed to the Great Beyond. What a flood of thoughts come to each of us when this subject is mentioned? Each one of them had encountered more dangers and risks in a few hours than a civilian would experience through a lifetime. Try to think of the change brought into the life of these young Americans. Called to the service of their country, abandoning their way of life, their families, their business, they do not have time to ask: "What of the future?"

On this Memorial Day in the year 1957, we should all thank Almighty God that we are citizens of the greatest country in the world. Though you might lose all your earthly possessions—even your health—you still will possess this priceless distinction. You should always be thankful and deeply grateful to those who brought these countless blessings to you.

This America of ours is the finest heritage ever handed down to a people. America's position in the world did not just happen; it was attained through toil and privation; the talent and genius, yes, the sweat and blood of thousands of men and women who were determined to prove that human agencies through divine guidance could create and maintain a form of government which would provide free institutions for a whole continent.

America, under divine guidance, has enjoyed a glorious past; and we, its present trustees for the future, though the trail be somewhat dimmed and uneven, and in the face of difficulties which appear to be almost insurmountable, now pledge that the freedom for which generations of our forebears have toiled and sacrificed, will not perish, but will blossom forth to reestablish free thought and free action among men.

We are not unmindful of the black pall of slavery which hangs over many nations; and the fear of insecurity which envelops all lands, yet, there has always been a silver lining in the midst of this worldwide misery.

The spirit of America, with her free institutions, must be the light that never fails.

May I close with this poem?

"God bless America,
Land that I love;
Stand beside her and guide her
Through the night with a light from above;
From the mountains to the prairies,
To the oceans white with foam,
God bless America,
My home sweet home."

I thank you.

Dr. Curtis Retires

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Nashville Tennessean concerning the retirement of Dr. Harry A. Curtis, Director of the Tennessee Valley Authority. The editorial is a tribute to the outstanding service Dr. Curtis has given the TVA and to his integrity in fighting for what he believed to be the best interests of the Nation, in spite of personal cost. Dr. Curtis is deserving of this tribute to his fine service and loyal devotion to the TVA.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DR. CURTIS: A CHAMPION IS LOST

Last midnight, the term of Dr. Harry A. Curtis as Director of the Tennessee Valley Authority came to a close, and with it, perhaps, the end of an era in TVA history.

For with Dr. Curtis' retirement, a majority membership on the board—for the first time since it was created in 1933—will owe its allegiance to a Republican administration which appears, at worst, bent upon destruction of this valuable national asset, and at best, completely uncharitable toward it.

And while it is too early to make an appraisal of Dr. Curtis' possible successor, it is noteworthy that the man reported to have the inside track, Mr. Adolph G. Ackerman, has served as an executive of a private power holding company.

Whatever the fate of TVA may be under such a directorship, though, Dr. Curtis is entitled to the deepest appreciation of this region and of the Nation. He has served well.

It is always to an individual's credit when he is able to change his philosophy and viewpoint, once honestly convinced that an opposite view is best for his country. Such has been the stature of Dr. Curtis, who began his adult life as a conservative Republican, but who retired last night a champion of a liberal concept which saw a near-impoverished region blossom under imaginative development.

The pressures upon Dr. Curtis these past few years have undoubtedly been heavy. He has refused to bend. When a fight was demanded, he entered it hammer-and-tongs.

Dr. Curtis came to TVA as a chemical and agriculture expert, interested secondarily in the power aspects of the agency. But forced, as a board member, into the midst of the private-versus-public power fight, he stood firm in what he believed to be the best interests of the Nation. That, for him, was the side of public power.

Regretfully, we bid him godspeed as he leaves a position he could have retained had he bowed to the pressures and expediently cast aside his convictions.

Refusal to sacrifice principles in the face of certain loss of position is the measure of a man. And Dr. Harry A. Curtis has met that measure.

Though there be scant reason to encourage it, our best hope is that President Eisenhower will appoint such a man to succeed him.

Resolutions Adopted by 16th Annual Convention of the Brooklyn Diocesan Council of Catholic Women

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. DORN of New York. Mr. Speaker, I should like to submit to the House the resolutions adopted at the 16th annual convention of the Brooklyn Diocesan Council of Catholic Women, May 18, 1957:

We, the resolutions committee of the Brooklyn Diocesan Council of Catholic Women, have received, studied, revised, and amended all proposals submitted for our consideration. We have endeavored, to the best of our ability, to so perform our duty that it would not add a burden to the task of our spiritual director, Rt. Rev. Msgr. J. Jerome Reddy, whose approval is required by our rules.

In many instances proposals were received from more than one person or group on the same topic; and we have tried to take the best from each in an endeavor to meet the aims of our organization.

We have received items which have been the subject of resolutions in past years, and in the interest of brevity, have not resubmitted such resolutions; but rather believe that our members are doing all within their power to fulfill the resolutions adopted in prior years in convention.

We thank our members for the items submitted; and if any have been omitted in our resolutions, recommendations or commendations, it is no indication that such items did not receive consideration. Everything has been considered, and we are trying to follow our policy of persuasion through quality rather than quantity.

We renew our pledge as Catholic women to further the religious and material programs recommended to us by the board of Catholic bishops of the United States, by our own diocesan authorities, and by the National Council of Catholic Women.

RESOLUTIONS

I. PROTEST AID TO AND RECOGNITION OF COMMUNIST-CONTROLLED GOVERNMENTS

A. Whereas in his encyclical letter, divini redemptoris, of 1937, Pope Pius XI declared that "communism is intrinsically wrong and no one who would preserve Christian civilization may collaborate with it in any undertaking whatsoever"; and

Whereas the Catholic bishops of the United States, in their annual meeting of 1953, deplored the continued persecution of the Catholic Church, which, they stated, "rages from Korea to China and to Indochina; from Russia to the Baltic lands; from Poland and Lithuania to Yugoslavia; from the Ukraine to Albania; from Czechoslovakia to Hungary, to Rumania and Bulgaria"; and

Whereas contrary to these clear and righteous indictments, American funds have been diverted to the support of atheistic communism in Yugoslavia; and

Whereas Communist Poland has recently petitioned for similar financial assistance from the United States of America in order to support and continue the existence of atheistic communism in Poland: Therefore be it

Resolved, That the members of the Brooklyn Diocesan Council of Catholic Women call upon all county and diocesan councils of the National Council of Catholic Women to urge their members to write to the representatives in the United States Senate and the House of Representatives and protest against this evil misuse of American funds for the continuance of atheistic communism by the Governments of Yugoslavia, Poland, and any other Communist nation; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, to the Secretary of State, to all Members of the United States Senate and House of Representatives, and to the secular and religious press of America.

B. Whereas Communist China has been declared an aggressor by the United Nations; and

Whereas Communist China has persecuted the church—killing, mistreating, torturing

publicly, imprisoning many bishops, missionaries of all denominations, nuns, and devoted laity; and

Whereas American citizens are still being held prisoners by Communist China in violation of the Korean Truce: Be it therefore

Resolved, That the members of the Brooklyn Diocesan Council of Catholic Women oppose recognition of Communist China by the United States, and further oppose the admission of Communist China to the United Nations.

C. Whereas the bishops of the United States, in their 1956 annual statement, said that foremost in our thinking are the heroic peoples of Hungary; and

Whereas our holy father, Pope Pius XII, has urged that every licit means be tried to restore dignity and freedom to the people of Hungary: Be it therefore

Resolved, That the members of the Brooklyn Diocesan Council of Catholic Women urge the President of the United States to withhold recognition of the present Soviet-dominated Hungarian government ,and urge the United States Ambassador to the United Nations, Hon. Henry Cabot Lodge, to take action in the United Nations Assembly to help the peoples of Hungary to regain their freedom by their liberation from the communistic violation of their civil rights.

II. EDUCATION IN AMERICAN HISTORY AND PROMOTING INTEREST IN UNITED STATES WEEK

Whereas the proponents of atheistic communism and of subversive ideologies recognize that the youth who are pupils in our school system are malleable material for their propaganda; and

Whereas such propagandists have made and are continuing to make determined efforts to devaluate the glorious American heritage of our American history and of the patriotic traditions of our country;

Now, therefore, we, the members of the Brooklyn Diocesan Council of Catholic Women, mindful of our duties as parents and citizens to protect our youth and to pass on to them the inheritance of the background of American freedom which we enjoy, do hereby resolve that we will take every opportunity to increase interest in the patriotic education of our youth by recommending and supporting laws looking to the teaching of American history and study of the science of Government in our schools, and by closer supervision of supplementary reading material distributed and recommended through the schools; and

The Brooklyn Diocesan Council of Catholic Women further resolves that it will promote interest in United States Week, the 7-day period beginning October 19 in each year, as a means of instilling in the youth of our Nation a deeper appreciation of the magnificent heritage of the United States and a stimulation to a greater interest in the study of the traditions and history of the United States.

III. THE SALE AND DISSEMINATION OF OBSCENE PRINTED AND AUDIOVISUAL MATERIALS

Whereas Catholic citizens have an obligation and responsibility to safeguard the moral welfare of all their fellow citizens in the State of New York, regardless of race, color, creed, or national origin, by ensuring the strict enforcement of those laws which curb the sale and dissemination of all types of obscene, lascivious and lewd printed and audiovisual materials; and

Whereas in 1954 two statutes were enacted into New York State laws which were designed to curb the sale of such indecent and disgusting materials; and

Whereas in 1957 one of these laws was amended to include the sale and dissemination of indecent, obscene cards with other items in the first statute; and

Whereas in 1957 the second law was amended in relation to tie-in sales of publications in order to include allocation and consignment as well as delivery, and to make it a penal offense to threaten to impose any penalty on the person who refuses to resell obscene publications; and

Whereas these amended statutes become effective on July 1, 1957; and

Whereas we are aware that experience proves and the press publicizes the evil results of obscene literature, and regardless of the legalistic definitions of what constitutes obscene literature, we, as a federation of Catholic women hope to reduce the dissemination of the sources of this evil to a minimum if unable to suppress the dissemination entirely: Therefore be it

Resolved, That the Brooklyn Diocesan Council of Catholic Women, a federation of 240 organizations representing over 300,000 Catholic women in the 4 counties of Long Island, commend Hon. W. Averell Harriman, Governor of the State of New York, for placing these laws on the statute books of the State, and petition him to insure their enforcement; and be it further

Resolved, That the Brooklyn Diocesan Council of Catholic Women commend the leaders in each county of Long Island who have been untiringly foremost in the valiant drive against the sale and dissemination of obscene printed and audio-visual materials, and urge them to help in the enforcement of these statutes of 1957.

IV. COOPERATING WITH CIVIL DEFENSE

Whereas His Excellency Archbishop Thomas E. Molloy (deceased), bishop of Brooklyn, supported civil defense and urged full cooperation of all Catholics in the diocese of Brooklyn; and

Whereas this resolutions committee is cognizant of the deterrent force to an enemy of a citizenry organized in its own defense: It is therefore

Resolved, That this committee urge all Catholics to enroll in civil defense or to take an active part, either spiritually or by attending courses provided by civil defense, and to be informed as to the approved methods of survival in the event of a disaster.

V. DR. ALLEN'S RULING ON COMMUNIST TEACHERS

Whereas Dr. James E. Allen, State commissioner of education, released to the press on August 8, 1956, his decision that boards of education may not require admitted former Communist teachers to name other teachers they know or have known to be Communists; and

Whereas this decision holds that the board of education "may not properly utilize" the power to compel teachers to answer questions about individuals who were associated with them in Communist activities within the public schools; and

Whereas Dr. Allen has ignored the basic point at issue which is the necessity to safeguard the common good and the welfare of all the children in the public schools of our State against the disastrous influence resulting from the presence of even one Communist teacher in the classroom as a superior and an instructor; and

Whereas the primary function of our public schools, being State-run, must give first place to public interests and public security; and

Whereas the welfare of the children is synonymous in this problem with the common good; and

Whereas the good of the children takes precedence over confidential information; and

Whereas no secret can prevail against the right of children to be protected against atheistic communism by those entrusted with the responsibility for their well-being: Therefore be it

Resolved, That the Brooklyn Diocesan Council of Catholic Women, representing over 300,000 women in the counties of Kings, Queens, Nassau, and Suffolk, in the State of New York, protest the decision of Dr. James E. Allen released to the press on August 8, 1956, and urge Dr. Allen to come to a more considered judgment in this case.

RECOMMENDATIONS

The resolutions committee recommends:

1. That the members of the Brooklyn Diocesan Council of Catholic Women study the problem of the aging and cooperate with the Catholic Charities program for the aging, which includes friendly visiting of the aging, finding foster homes for them, supporting parish recreation centers, and other corporal and spiritual works of mercy.

2. That the members ofthe Brooklyn Diocesan Council of Catholic Women participate in a crusade of prayer in answer to the call of the bishops of the United States who in their annual statement of 1956 said, "As the bishop of the United States we solemnly call upon the faithful throughout the land to pledge themselves to a veritable crusade of prayer. Let it be for the specific ends that international sanity will triumph over war; that justice may be vindicated by the nations united under law; and that our own beloved country, under God, may lead the way to that better hope for all mankind. Nor let us forget those who have suffered and suffer now; that out of the crucible of their sacrifice may come the milted gold of freedom. We stand with the Vicar of Christ, and our prayer is for peace for our country and all the world—a peace with justice and charity."

3. That the members of the Brooklyn Diocesan Council of Catholic Women send letters of commendation to the following: The Honorable Henry Cabot Lodge, United States representative in the United Nations, the Honorable FRANK J. BECKER, Congressman from New York, Washington, D. C., the Honorable THOMAS S. GORDON, Chairman, House Foreign Affairs Committee, Washington, D. C., for their continued efforts to have each day's session in the U. N. opened with a prayer.

It is further recommended that each of these statesmen be sent a copy of the Brooklyn Diocesan Council of Catholic Women 1956 resolutions which include a resolution to the above effort.

Committee: Mrs. Gerald Rigney, chairman.

Ex-officio: Mrs. Arthur C. Reilly, diocesan president; Miss Marie F. Berry, Kings County Council president; Mrs. John Paul Fitzpatrick, Queens County Council president; Mrs. Albert H. Trageser, Nassau County Council president; Mrs. Robert B. Howell, Suffolk County Council president.

Committee members: Miss Mary L. Riley and Mrs. Andrew P. Backus, Kings; Miss Mary Moran and Mrs. Percy Bailey, Queens; Mrs. Thomas Fitzgerald and Mrs. J. D. Nicholas, Nassau; Mrs. Charles Hafeli, Suffolk.

An Adequate Juvenile Court for the Nation's Capital

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, June 5, 1957

Mr. JAVITS. Mr. President, when the Congress created the present juvenile court in the District of Columbia, its caseload was approximately 2,500 annually. By 1948 the court was hearing 3,000 cases a year, by 1953 the load had risen to 10,000, and presently this 1-judge court is handling more than 16,000

eases a year. Of these some 2,000 are felony type cases. The United States District Court for the District of Columbia uses a minimum of 3 justices to handle its annual felony caseload of 1,500; the District of Columbia juvenile court must rely on 1 judge.

The Bar Association of the District of Columbia, the Law Enforcement Council of the District of Columbia, the Washington Criminal Justice Association, the Metropolitan Washington Chapter of the National Association of Social Workers, and other civic groups, have joined the District of Columbia Commissioners in their recommendation for a second judge in this most important court. Legislation to this effect, S. 2154, is presently pending before the Senate Committee on the District of Columbia.

As attorney general of the State of New York, I was deeply concerned with crime by youths, and juvenile delinquency, and so my interest as a member of the Committee on the District of Columbia is attracted to that problem in the city of Washington. We find the juvenile court in the District of Columbia heavily overloaded, and a grave need for an additional judge in that court. It is for that reason that I call attention to this matter.

The District of Columbia Council on Law Enforcement asserts that a real emergency exists; and, as the Washington Post, in its editorial of May 25, 1957, emphasizes: "The emergency concerns essential human rights and the welfare of children. It should be met by Congress just as speedily as possible."

I ask unanimous consent that the full text of the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OVERLOADED COURT

It would be hard to point to a community need more clearly demonstrated than the need for an additional judge for the District's juvenile court. The court has a load of more than 16,000 cases a year. No single judge, no matter how dedicated and industrious, could handle such a load with the attention to individual problems which is peculiarly requisite to juvenile court. Judge Orman W. Ketcham, who began service on the court only last week, managed to dispose of 192 cases during his first 3 days on the bench by sitting for a 9- or 10-hour day; even so, he acknowledged, he had a distinct feeling that many persons felt they had not had their proper day in court. In urging the creation of a second judgeship, the District's Council on Law Enforcement was amply justified in asserting that a real emergency exists. The emergency concerns essential human rights and the welfare of children. It should be met by Congress just as speedily as possible.

Going Against the Grange

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks I would like to protest what I belive to be unfair treatment of the National Grange regarding seizure by the Government of National Grange headquarters.

The Government has issued an order of taking on this property, an 8-story building located in the heart of downtown Washington. The property is to be used for landscaping and for a corner of the seventh in a series of Government office buildings.

As I have previously stated, I am opposed to the seizure of this property, which for more than a decade has been the headquarters of one of our outstanding farm organizations. The plans for the new building have been drawn with absolutely no consideration for the special site involved. I am particularly displeased with the fact that the major portion of this property is going to be used for a garden. This may be esthetic, but it is highly impractical for an area which has a limited amount of property that should be put to maximum use. Monumental structures with palatial gardents are not necessary for the efficient conduct of Government business, and their contemplation is testimony to the visionary type of castle building that will cost the American taxpayers millions of dollars to satisfy the whims of a few master planners.

There is no reason why a nice-looking, functional office building could not be erected on the remainder of the block harmonizing with the Grange building, which in itself is an attractive structure. However, since Congress already has alloted funds over which the General Services Administration has sole control, it is evident that seizure of the building is almost inevitable.

My objection to the method being used by the Government is that the Grange will be forced to pay rent on this property, yet the General Services Administration has not signified when it intends to use the site for the new building.

Franklin G. Floete, Administrator of the General Services Administration, in a recent release said that since building costs are at present so high, it would be advisable for the Government to postpone indefinitely its lease-purchase building program because the costs of new buildings would be out of line. Since the order of taking has already been issued, the law says the Grange must start to pay rent on its property until the Government gets ready to use it.

I do not believe that this is fair. This organization will be faced with the problem of seeking another site, a task that borders on the impossible as far as getting a convenient location similar to the present headquarters. The Grange is being offered about a third of the $1 million price of the property. Moving the headquarters will be expensive.

I believe that the proposal by National Grange Master Herschel Newsom that the title be restored to the Grange until the Government definitely gets ready to use the property has merit. If restoration of title is not possible, I believe it only fair that the General Services Administration should assist this organization in its process of being transplanted by canceling out the rent payments. Somehow it seems rather un-American to me to seize an organization's property today with no particular date in mind for use of this property, and then to force the organization to pay rent until the Government decides what it is going to do with the building and land.

Since the Government's lease-purchase program has wisely been postponed to save the taxpayer the burden of excessive building costs, it appears only logical to me that actions instituted under the old schedule should be subject to review and that amelioration of unjust and onerous burdens which the postponement would impose on groups such as the Grange would be in order.

Soaring Exports Uphold Economy

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Times of Sunday, June 2, 1957, entitled "Soaring Exports Uphold Economy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOARING EXPORTS UPHOLD ECONOMY—FOREIGN SALES, UP 28 PERCENT, ARE A BRIGHT SPOT IN A CLOUDY BUSINESS PICTURE—FARMS, INDUSTRY AIDED—COTTON SUBSIDIES A FACTOR—IMPORTS ONLY MARK TIME AS PROTECTIONISM GAINS

(By Brendan M. Jones)

Foreign trade has been giving a timely lift to the Nation's economy.

While the domestic business climate in recent months has been overcast with uncertainty, exporters have found the weather abroad highly stimulating. So much so that exports made a heady leap of 28 percent in the first 4 months of the year.

The Department of Commerce's preliminary estimate of April exports last week indicated a 4-month total of more than $7,280,000,000. This compares with $5,739,000,000 in the first 4 months of 1956.

The 28-percent gain is highly unusual for peacetime. And it follows the exceptional 18-percent rise in exports in 1956 to a new high of $19 billion.

Effects of the accelerated exports in bolstering the economy would be difficult to pinpoint at the moment. Detailed data not yet available would be necessary. But there can be little doubt that a considerable amount of production has been sustained by strong foreign demand for American crops, fuels, materials, and manufactures.

UP TO 25 PERCENT OF SALES

Exports of cotton, coal, machinery, and farm produce are notable in a wide range of commodities figuring in the export boom. Foreign sales now take 20 to 25 percent of this country's output of wheat, rice, cotton, and tobacco, more than 10 percent of its coal, 15 to 20 percent of its heavy machinery and vehicles.

One recent instance of the influence of foreign trade on the business cycle has been recognized among economists. It was noted during the recession period of 1953–54. While the gross national product (the total nominal value of all goods and services sold) declined 1 percent, exports rose 2 percent.

Afterward, economists of the Department of Commerce termed the trade gain a "significant factor supporting the economy over the past 2 years." The percentage changes noted may seem small, but they represented billions of dollars.

Occuring when it did, the export rise evidently helped to check the downtrend. The dip would have been more pronounced in terms of production, jobs and business if exports had gone down instead.

Present trends of United States trade also give some insight into the vigor of world economic development. They present less reassuring prospects on the other side of the trade coin—imports. These rose 10 percent last year to a record total of $1,200,000,000.

The early months of this year, however, have not brought any appreciable gains. With exports forging ahead, the spread between them and imports will tend to grow even wider than presently. If so, the principle of two-way trade, involving foreign nations' need to sell if they are to go on buying, promises an eventual check to exports.

This does not necessarily mean exports will nosedive. It means simply that a limit to one-sided trade will make itself felt.

There is a sustained movement through most of the world for economic betterment. It is most dramatically evident in the newer nations of the Far East and Africa.

Highly industrialized Western Europe is seeking closer economic and trade ties to fill its special need for greater proficiency. Europe, with its dense population and growing import needs, must advance technologically if its renewed gains in living standards are to continue.

Indirectly, the strength of these varied movements has been illustrated in the relatively slight impact of the Suez crisis. While the important waterway was blocked, nations affected were able to draw on financial resources, such as the International Monetary Fund. Europe filled its oil needs from reserves and from United States supplies, although a mild winter helped materially.

With crisis conditions under relative control, the free world has quickly gotten back to the business of economic progress. Britain's trade is recovering; France has come up against inevitable financial difficulties, but help is available. Other parts of the free world wonder about more business with Communist countries, but still look to the United States for what they need right now.

All of this makes a pleasant, prosperous picture of progress for everybody, except that it is still quite utopian.

In efforts to solve the farm surplus problem, exports have offered a natural outlet.

The heavy cotton surplus, for example, is being moved abroad with substantial subsidies, which some nations regard as dumping. Cotton textiles are also being exported with the aid of subsidies as a result of the campaign that brought restriction of low-priced Japanese exports to this market.

Samuel C. Waugh, president of the Export-Import Bank, predicted last week that subsidized cotton exports would hit a quarter-century record of 5 million bales this year.

But restrictive moves against imports continue vigorously. For example, wood fabrics, hit only last fall by a tariff-quota limitation, were threatened with further restriction on grounds of national security. The Office of Defense Mobilization will open hearings in Washington tomorrow on the domestic industry's plea for more protection.

The nub of the issue will be the industry's essentiality in supplying military woolens. Under a new administration order, no more than 14 million pounds of woolens this year may enter at a liberal tariff rate. Any excess will be subject to old statutory rates, which importers consider prohibitive. The quota nominally represents 5 percent of domestic output. The Office of Defense Mobilization must decide if this is detrimental to national defense.

Last week Britain, most seriously affected by the woolens curb, decided against continuing the strict controls on trade with Communist China favored by the United States. There was no apparent connection, except that the new move against woolens came while American representatives were still trying to talk the British out of more China trade. Last Friday, Britain formally protested the quota action.

The United States is not alone in restricting trade. Last week Canada, which has been sharply critical of this country's protectionist trend, was embarrassed by the need to embargo imports of cheddar cheese. Price supports have produced a mounting Canadian surplus.

This business of economic cooperation is still a new one. Slowly, more practical methods are evolving, such as "loans, not gifts" to go with "trade, not aid." Trade for this and other countries, meanwhile, continues to suggest new potentialities for progress.

New Jersey's Debt to Paul Troast

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
OF
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. CANFIELD. Mr. Speaker, following the recent announcement of Mr. Paul Troast, of Clifton, N. J., that he had declined reappointment as chairman of the New Jersey Turnpike Authority, Gov. Robert B. Meyner and both houses of the New Jersey State Legislature have expressed regrets and officially lauded the services of Mr. Troast, which have earned him national fame as the prime builders of the fabulous New Jersey Turnpike.

It is now reported from Trenton that the legislature is proceeding with plans to provide a State award for Mr. Troast which will be presented him at a testimonial dinner at the Essex House, Newark, on Tuesday, July 2, next.

In a recent editorial captioned, "New Jersey's Debt to Paul Troast," the Passaic, N. J., Herald-News, paid the following tribute to Mr. Troast:

NEW JERSEY'S DEBT TO PAUL TROAST

To serve the people of New Jersey is every citizen's duty. Normally, service merits no special commendation. The State has a right to expect that any person it calls will serve and that he will give his best efforts.

Yet it seems that the services performed by Paul L. Troast, of Clifton, deserve more than perfunctory thanks and praise. They have been of surpassing excellence and beyond the call of duty. He took the highway dream of former Gov. Alfred E. Driscoll, and by business sense, know-how, foresight, and long hours of hard work, transformed it in the fabulous New Jersey Turnpike.

He did not do it alone. He had the help of one of the best public commissioners ever appointed in New Jersey, and of a band of devoted engineers and executives. However, his was the driving force that produced the road in record time and his was the "savvy" that enabled the authority to avoid political entanglements and scandal in an operation involving almost half a billion dollars.

To the State, the turnpike has meant many things. Without it, the State's north-south through roads would, by now, have been impassable. It has saved business millions of dollars in time, wear, and tear. It has been an invaluable factor in inducing expansion of industry. And, if the powers that be decide to continue to operate it as a toll road, a not impossible decision in view of the fact that two-thirds of its traffic is made up of out-of-State vehicles, it may eventually provide the State with an annual income of about $35 million.

The turnpike has won Mr. Troast national attention. That fame earned him, in 1953, the Republican nomination for governor. It is evidence of the character of the man that he was able to put aside any bitterness the unsuccessful campaign may have engendered in him and to cooperate, to the fullest extent, with the man who defeated him. It speaks volumes of both men that Governor Meyner offered Mr. Troast reappointment as chairman of the authority.

For 8 years, Mr. Troast has served at considerable sacrifice to his business and to his family. His position was unsalaried, but he has frequently spent 4 or 5 days a week on it without expense to the State.

Mr. Troast's imminent retirement from public life deserves more than a passing notice.

Recognition by the Governor and legislature is in order.

Meade Alcorn Proves His Worth

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave granted I am inserting in the RECORD a column written by Gould Lincoln which appeared in the Washington Evening Star. Those of us who know Chairman Meade Alcorn certainly agree with Mr. Lincoln that he is proving to be a real asset to the Republican Party.

MEADE ALCORN PROVES HIS WORTH

(By Gould Lincoln)

Meade Alcorn, new chairman of the Republican National Committee, has already proved his worth to the GOP. Traveling almost constantly to all parts of the country, in six regional party conferences he has provided a safety valve for party leaders to blow off steam. He has answered successfully many of the complaints by Republican business and financial men who have been angered because they did not get a reduced budget and tax cuts from the Eisenhower administration this year. Indeed, Mr. Alcorn has done a good job, and the atmosphere of hostility to the President and his policies has begun to evaporate.

He has stressed to the business people the probable alternative to a Republican administration similar to the Eisenhower administration following 1960. He has asked how they would feel if the Democrats should take over with Gov. G. Mennen Williams, of Michigan (with Walter Reuther as a likely mentor), or some other liberal Democrat in the White House. He has argued that to split the Republican Party will result in almost certain defeat in the congressional

elections of 1958 and in making the Republican presidential nomination practically valueless in 1960.

Furthermore, he has pointed to the necessity of running a congressional or presidential campaign on the record made by a Republican administration in the White House. Candidates for office who buck the record of their own party President are not likely to be successful.

PARTY FEELS PINCH IN FUNDS

There is no doubt about the fact that Republican businessmen have been engaged in a financial squeeze, which has made it difficult for the Republican National Committee to collect the funds needed to keep the committee working effectively and needed to get the campaign for the election of a Republican Congress fully underway. Too many who have been large contributors in the past have been saying: "Don't ask me for anything this year; I don't like what has been going on in Washington."

It is not the small contributors of $10, $25, or $50 who have failed to kick in. It is those who in the past have contributed $500, $1,000, or more. This financial stringency is an immediate cause of worry. It is one, however, that is likely to be overcome.

An example is found in Massachusetts where today the Republican Party organization is literally confronted with the possibility of having to close down its operation. John S. Ames, the party's harried chief fund raiser in Massachusetts, is quoted by the Boston Globe as saying: "I am trying desperately, with my back against the wall, to keep the Republican organization in business. I simply feel that Republicans couldn't care less.

"This is purely a party problem. Its own friends may feel they are spanking the party by failing to contribute, but if they look at the situation realistically, they will recognize they are destroying their own political friend."

Mr. Ames' problem is the necessity of raising about $282,000 and as of today he has managed only $75,000.

RISING COSTS POINTED UP

Chairman Alcorn, sitting down with Republicans across the country, has listened to many complaints. One Midwest manufacturer who insisted he would not contribute as he has in the past, blamed the President's budget. Mr. Alcorn finally obtained an admission from him that the cost of operation of his own business had increased about 7 percent in a year, and the national chairman pointed out that Eisenhower's budget really provided for an increase in cost of Government of approximately 3 percent.

Mr. Alcorn has called a meeting of the Republican National Committee in Washington June 6-7. At that time the problems, financial and otherwise, which confront the GOP are expected to be thoroughly aired. Both President Eisenhower and Vice President Nixon will meet with the Republicans who will include, in addition to the members of the committee, all those participants in the six regional conferences. At one session Vice President NIXON not only will speak, but will answer questions directed to him by any of the participating Republicans.

Members of the Republican National Finance Committee will be in Washington at the same time as the national committee. Mr. Alcorn hopes to appoint a new chairman of the finance committee before the meeting of the national committee. Since J. Clifford Folger, the national finance chairman during the 1956 campaign, resigned to become Ambassador to Belgium there has been no finance chairman. This in itself has slowed down the campaign for funds.

ALCORN TO REPORT TO PRESIDENT

Mr. Alcorn will report to President Eisenhower on the regional conferences and the party's problems within the next few days. He himself found the party leaders confident they would be able to make a good showing in the congressional elections next year, notwithstanding the protests and complaints which have been made against the Eisenhower budget and the Eisenhower program, which some of the conservative Republicans have criticized as another New Deal.

It is no secret that he feels the election of a Republican majority in the House next year is a sine qua non. He believes, too, after his travels that such a victory is entirely possible and even probable. Admittedly, the election of a Republican majority in the Senate will be a little difficult due to the fact that only one-third of the Senate comes up for reelection next year, and a large majority of the seats in jeopardy are Republican.

Robert Crosser

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. VANIK. Mr. Speaker, on Monday it was my sad duty to inform the Members of the House of the death of Hon. Robert Crosser, my predecessor, who represented the 21st District of Ohio for 38 years. Every Member of this body remembers his courageous and devoted work as a Member of Congress, as a member of the Interstate and Foreign Commerce Committee of this House, and as chairman of that committee in the 81st and 82d Congress. His legacy is a record of a vigilant struggle for human betterment. His record will live long in the memories of our people, who regret the passing of this devoted public servant.

Following are two editorials on the life and work of Robert Crosser which appeared in the Cleveland Press and the Cleveland Plain Dealer on Tuesday, June 4:

ROBERT CROSSER

Robert Crosser, who served the people of Cleveland in Congress for 38 years, was a man of wisdom, courage, and stubborn independence.

He had the wisdom to pioneer in great fields of legislation. The railroad labor bills which he framed and pushed into law almost three decades ago still serve today.

He had the courage to vote the way his conscience and principles dictated, even at the risk of political suicide.

His vote against the draft in World War I led to two political defeats. But this was a decision which he never retracted, and never regretted.

His stubborn independence was best typified by his reluctance to take outside advice. He steered his own course, and it was a ccurse which, over the years, was good for his city and for his country.

Mr. Crosser's skill won him the respect of his colleagues, and his determination to continue his service, even after physical disabilities had begun to overtake him, generated great admiration.

His defeat 3 years ago was in no sense a rejection of his political philosophies.

Rather, large numbers of voters simply thought he had earned a retirement which he himself was overly reluctant to accept.

The people of Cleveland were proud of Robert Crosser, a man who served them long, and served them well.

His death at 83 closes a distinguished and immensely useful career.

The story is told of the Cleveland political leader who in the early days of the Franklin D. Roosevelt administration went to Washington to get action he considered absolutely vital. He saw two close friends of F. D. R., one an elected official and the other a top appointee, who said they would see what they could do. Nothing happened.

Disheartened, he happened to meet one of Cleveland's Congressmen in the House restaurant, and he unburdened himself. Half an hour and a telephone call or two later, the Congressman announced that the matter had been taken care of. And it was.

The only party in this incident whom we'll name was Robert Crosser, the 21st district's representative for 38 years, whose power in Washington was shown in the way he got quick action.

Once he was elected to Congress in 1912, Mr. Crosser was beaten by only three things: the reaction to his voting, as a matter of firm principle, against the World War I draft, which led to his defeat in 1918; old age, contributing to his losing at the primaries in 1954 to his successor, Representative CHARLES VANIK; and, finally death, which came yesterday, 4 days before his 83d birthday.

He had conquered many times; in working his way through college and law school; in forging a liberal philosophy for himself which sustained him in doing what he thought was right, regardless of what others did; in winning elections often; in battling or ignoring the county Democratic organization when he disagreed with it; in championing labor legislation, particularly for railroad employes, and in refusing to let crippling arthritis get him down. He suffered from this affliction for more than 20 years and a lesser man would have given in to it many years before.

Mr. Crosser was another of those fine examples of immigrant boys who worked their way to positions of power and trust in this country. He was born in Scotland and came here when 7 years old.

Though we sometimes disagreed with his views, we respected his abilities and his courage. His long life was a useful one, and he contributed the best he had to a country he loved for its people and the opportunity it gave him.

Highway Horror Show

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. HALE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of May 29, 1957:

HIGHWAY HORROR SHOW

The Senate Public Roads Subcommittee has at last reported favorably on a moderate proposal to prevent the new 41,000-mile Federal interstate highway from becoming an ugly, billboard-rimmed scar cutting through the countryside. Yet time is short, the billboard lobby powerful, and many in Congress shamefully indifferent. This indifference is not shared by any driver who has been offended by a roadway packed with hot dog stands, billboards, and honky-tonks; nor is it shared by the Federal Highway Administration and most highway engineers, automobile clubs, and conservation groups. From all outward appearances, the main group op-

posing Federal controls are the outdoor advertisers, who are understandably interested in the vast captive audience on the new highway.

The Senate bill is a compromise between the views of Senators NEUBERGER and GORE, the administration, and others on the subcommittee. It does not ban billboards outright as Representative ROBERT HALE of Maine and others have urged. However, it does provide the carrot of a three-fourths of 1 percent addition in Federal funds to States which agree to comply with Federal billboard standards; it also encourages the States to eliminate unsightly junkyards and other eyesores on the roadway.

But inexplicably the Senate subcommittee has linked the billboard-control measure to a second title which some feel may weaken the chances of the bill. The subcommittee bill incorporates a proposal by Senator CASE of South Dakota to add 7,000 miles to the Federal system, extend the construction period from 13 to 20 years, and add $17 billion in costs. This proposal is completely unrelated and ought to be divorced from the billboard-control measure when the parent Public Works Committee meets next week. The billboard bill provides the very least that American motorists have a right to expect on a highway system supported 90 percent by Federal funds. Congress ought to vote on this proposal on its own merits, unencumbered by any unrelated hitchhiker.

Key West Doctrine

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks I wish to insert an article concerning close ground support which appeared in the Army-Navy-Air Force Journal of June 1, 1957.

KEY WEST DOCTRINE

The longstanding dispute over military roles and missions erupted anew this week with charges that current Armed Forces doctrine has undermined the Army and caused it to lose both power and prestige.

The charges—growing out of a House Armed Services Committee member's concern about close air support for Army ground troops—are made by one of the Army's senior retired officers.

In a letter to Representative LEON H. GAVIN, Republican, Pennsylvania, the top-ranking retired general declares that a fatal weakness in the Key West agreement gives the Air Force and Navy complete independence but forces the Army to rely on her sister services for needed tools to fight the ground war.

Congressman GAVIN, who has been waging a battle for the development of techniques to give the ground soldier better air cover, made the letter available to the Journal, but asked that the author's identity not be revealed.

Representative GAVIN said, "It is essential that the conflicting views on the subject be aired in order to place the problem in its proper perspective.

"We need to be assured that our infantrymen, who are on the ground in the cold, heat, filth, fatigue, misery, and mud of mechanized warfare, are given every tool they require to see them through combat. If that means integral tactical air units for every Army division, then I say they should be given every opportunity to develop such a program."

Congressman GAVIN advocates at least a token training force to gain the air-ground know-how which characterizes Marine Corps training and operations.

The letter addressed to Mr. GAVIN notes that present battle doctrine places the Army infantry commander in the unhappy dependent role of a suppliant with hat in hand. In the Pacific during World War II, Air Force tactical support for the Army was pitifully small and grossly inept, the letter states.

The Air Force, in reply to an earlier inquiry from the House Armed Services Committee (the Journal, March 23) said recent policy decisions at the top level in the Pentagon tend to move the Air Force out of the ground battle zone. As for Marine Corps close air support, the Air Force said such lavish use of airpower may be desirable in highly specialized operations such as amphibious landings but not in large scale, extended-time ground operations.

Mr. GAVIN's correspondent notes that of the 61 major amphibious landings in World War II, the Army participated in 58 and the Marines in 14.

The Army has been asked by the House Armed Services Committee to give its views on the Air Force statement. Mr. GAVIN said he is anxiously awaiting this study and added that he understands it is now nearing completion.

Here is the complete text of the letter which Congressman GAVIN has received from one of the Army's top general officers, now retired:

"DEAR MR. GAVIN: Thanks for your letter of March 29 enclosing the Air Force explanation of their tactical air support doctrine.

"May I say this is the same old Air Force line.

"The roles and missions assigned to the three services under the so-called Key West agreement, 1948, contained a fatal weakness for one of the services—the Army—which, I think, fundamentally undermined the Army and is the cause of the succession of losses of its power and prestige over the last 10 years, as well as currently."

FUNDAMENTAL WEAKNESS

"This fundamental weakness lies in the fact that both the Air Force and the Navy are assigned missions which serve as a basis for organization, bases, equipment, and weapons which make each service entirely independent and self-contained for carrying out those missions. The Army, on the other hand, is dependent on the Air Force for tactical air support and air transportation; and upon the Navy for tactical air support, gunfire support, and sea transport.

"Thus when the chips are down in war (and during peacetime due to budgetary limitations) and men or equipment are in short supply, it is only natural that the independent services (i. e., Air Force and Navy) give priority to their own respective missions and the Army is left holding the proverbial empty bag. Worse than that, the Air Force by way of its bases in the United States and the Western Hemisphere and its growing air police for defense of overseas bases, as in north Africa; and the Navy by way of the Marine Corps, are actually independent of the Army and can do their own ground fighting. That is, as far as they need—or at least as far as they think they need—they can perform within themselves the ground fighting mission assigned the Army under the Key West Agreement."

HAT IN HAND

"So when the Air Force, as on page 530 of the report, states that 'it is natural for a (Army) division commander to feel that his job is of primary importance but he must realize that there are other commanders who feel the same way,' their collective tongues must be protruding through their collective cheeks. No doubt the division commander (Army) does realize that there are Air Force and Navy commanders who feel the same way—and that's the hell of it. For in a pinch, when they are in short supply of means, they are going to follow these feelings and use these means to accomplish their own missions surely and primarily. So the Air Force commander, with what he requires available to him, is just not in the same spot as the infantry division commander who fills the unhappy dependent role of a suppliant with hat in hand.

"In fact it was the Air Force's feeling of frustration, due to the intolerability of dependence on the Army, that led, more than any other factor, to the establishment of the Army Air Force as more or less a self-contained unit in 1940, and later to its complete independence as another service in 1947. Therefore, that part of their reply which parallels their commanders to the Army's division commanders may well be regarded as a new high in hypocrisy."

FLEXIBILITY ESSENTIAL

"I quite agree with their theory that there must be a centrally controlled tactical reserve, but the point is that each division commander must have under his own control a basic minimum support which he can count on to use; otherwise he has virtually no flexibility to stem a sudden attack or to take advantage of the all important element of surprise. However, this is a basic principle of all military doctrine. For instance, the infantry division has a minimum force of engineers and artillery; when they need more the corps has organic artillery and engineers to support such of the divisions that need it; so with the next higher unit, the field army. And so on. If tactical air is a weapon, why shouldn't the same principle hold true? I don't think our division commanders necessarily feel their jobs are of the greatest importance, but I do think they question, and are concerned that they do not have a reasonable minimum of air support under their own control as do the Marines.

"In this latter connection relative to the Air Force argument sidestepping the need of a wing because of the 'special nature' of amphibious operations, the speciousness of the Air Force position can be illustrated by the fact that of the 61 major amphibious landings in World War II, the Army participated in 58, and the Marines in 14. Of the number of divisions participating in major landings the Army had 143 and the Marines 21. Of the 61 major operations the Army commanded 45 and the Navy 16, and I take it none by the Marines, that is, overall commanders.

"Another significant figure is shore-to-shore operations which usually take place after the Navy with their landing boats pull out and are undertaken by the commander of troops ashore to capture some off-lying island or strong point on the mainland some distance from the original landing beach. There were 324 such landings made by the Army against 20 for the Marines."

ROUGH ON THE DOUGHBOY

"Our tactical support by the 5th and 13th Air Forces in southwest Pacific was pitifully small and grossly inept until March 1945 when the Jap air was pulled back for defense of the home empire. Whereas the naval support from escort carriers at Leyte (we had no carriers for the first 2 years, 1942–44 in New Guinea) was superb; and the Marine wing that supported us in the Luzon campaign was a wonderful experience for all of us.

"The Air Force position was just that described in their statement, namely that the greatest threat was the Jap air and they

couldn't take care of both. As long as the Army has no organic air support it will always be the same, but it is a little rough on the doughboy who sees his Marine colleague getting the best support on earth."

Memorial Day Address by Larry H. McWane

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ABBITT. Mr. Speaker, on Sunday, June 2, Mr. Larry H. McWane, executive secretary of the Lynchburg, Va., Chamber of Commerce, made a splendid Memorial Day address at Appomattox, Va. Mr. McWane has devoted considerable study to Virginia history, and he draws from this in his fine address.

I commend his speech to the reading of the Members of the House, and I take pleasure in inserting this in the CONGRESSIONAL RECORD. The speech follows:

Ladies and gentlemen, it is a privilege to be here on this occasion. You have honored me with your invitation.

As we stand on this ground we confine our thoughts to the year 1865 when on April 9 Gen. Robert E. Lee and Gen. U. S. Grant came to terms thus bringing to an end the 4 most devastating years of war in United States history. However, I want to go beyond those years, back to the time this country was founded.

In 1607, the Susan Constant, the Godspeed, and the Discovery landed at Jamestown, in Virginia. It was to be the beginning of a new nation. The closing words of the detailed instructions given to those Englishmen of that colony were as follows:

"Lastly and chiefly, the way to prosper is to make yourselves all of one mind for the good of your country and your own, and to serve and fear God, the giver of all goodness, for every plantation which our Heavenly Father hath not planted shall be rooted out."

Lets repeat those first few words, "the way to prosper is to make yourselves all of one mind for the good of your country and your own." Certainly if we are divided into various and sundry groups who are working to destroy each other, we not only cannot prosper, but we do not deserve to prosper.

But lets go back again to 1607. When each colony in America was settled, adventurers and soldiers and priests stood side by side in their joint efforts. Some came just for the adventure, others because they wanted to start life all over again, and still others because they wanted complete freedom of their lives, including the freedom to worship as they pleased.

It was from that sort of beginning that this Nation was born. Back in Jamestown, in 1619—1 year before the Mayflower landed—representative government was established in Virginia. We read that the first House of Burgesses met in the log church at Jamestown, and with their hats on their heads the members were led in the opening prayer by Master Buck, the village minister. From that day it has been the custom for legislative bodies in America to invoke the guidance of almighty God as the first step of their deliberations.

Ironically, too, that same year 1619 that saw the first legislative body meet in America, also saw a Dutch man-of-war land at Jamestown and sell 20 Negro men—N-e-g-a-r-s, as early history spelled it—as slaves to the new colony. Human slavery and democracy were both instituted here the same year, the two opposites in human relationships.

This new country was to have a rocky road to travel. Perhaps it was that rocky road that made it a success. It might not have been so under different conditions. If England had read the signs reasonably well, and had interpreted the temper of the people here, there probably would never have been a War of the Revolution, and never would have been a free United States of America. We would probably have been a dominion of the United Kingdom, as Canada is and has remained.

But the British Government refused to see the American situation as it was. It imposed laws and rules on its own people in America that it would never have accepted if they had been imposed on them at home. The policy of England prior to and during the War of the Revolution was utterly stupid, and that stupidity lost England her chance to continue as the greatest Nation on earth.

This new country was settled by every race on the globe, yet grew into power as one people. It contained groups of every denomination and every church, yet it has only one religion. That is the way it began, without much else except the determination to be a land of the free and to grow in that freedom.

No price was too great to pay for that freedom. When Patrick Henry pronounced his famous words in St. John's Church in Richmond, "Give me liberty or give me death," it was not just the dramatic utterance of one man. It was the echoing of a general sentiment of many thousands of patriots who made an army of too great strength for any nation to withstand.

Look at Valley Forge, there where Washington's soldiers were hungry, were cold, and almost naked in ragged uniforms. Where, when they walked they left blood in their tracks in the snow. Soldiers who stay to fight under those conditions cannot lose.

It was in that campaign, on the night before the battle of Trenton, that General Washington issued his famous order to "put only Americans on guard tonight." It was a confidential order issued to his department commanders on the whole front. The liberty of a whole nation depended on a victory in that battle. A defeated army would lose everything.

That same Army under George Washington, at Yorktown, only a few miles from the Jamestown that had set the pattern of American courage accepted the sword of Lord Cornwallis in token of the victory for American arms. At that moment, the greatest Nation the world has ever known was born. Because those people made themselves all of one mind for the good of their country and their own.

Many truly American customs have since been developed. From the beginning of the making of American money we have put "In God We Trust" on every coin produced by our Government. Even our games are typical of our sort of folks. Baseball, with its hardhitting brand of good sportsmanship where we admire the winner but will not countenance his winning by unfair means. And football, simple and rugged sport that teaches the value of team work to both players and spectators alike; where only a few men carry the ball, but most must block and tackle and run interference. Those seldom get the applause of the crowd, but they know the game could never be won without their good playing.

Then there are the American homes, where little children are taught—or should I say were taught—to get down on their knees at night and say their little, "Now I lay me down to sleep," in recognition of the protection of a heavenly Father while they are asleep.

Yes, and those early Americans learned that there is dignity and honor in hard work, even if it be in the splitting of rails. They established a sort of code among Government officials, that insisted that public money and property belonged to all the people, and must be protected, not just from thieves, but in a manner to get the best possible results and public services at the least possible cost. That is one way American governments at all levels have been able to keep the confidence of the people, and one way, if violated for long, the people will lose that confidence.

Those people back yonder believed in personal integrity in self-reliance, a proper ambition, a pride in personal independence, and a bit of jealousy of personal rights but a wholesome respect for the accomplishments of others. The Nation made up of people who held those beliefs led the world further in the last 100 years than the world had progressed in the previous ten hundred years.

American ingenuity made that progress. It was the spirit that inspired men to do things for themselves rather than accept things done for them. They wanted to experience the pride of their own accomplishments. And they wanted the individual rewards that come from doing those things well. We have come to call that spirit the system of free enterprise.

In this Southland of the United States we had no Marshall plan, no ECA, ninety-odd years ago. I don't say that is not best for today's problem in Europe because I am not sure I know conditions well enough there. But I do say that doing for themselves brought out the best that we had in the South after the War Between the States, and no chapter in human history is brighter than the accomplishments of what was a devastated land nearly 100 years ago, and through their own development by a people still determined to remain free.

It was that sort of American who was put on guard the night before the Battle of Trenton. It was that sort of American who made themselves all of one mind for the good of their country and their own, and who served and feared God. It is that sort of American that we must look to today, with the same sort of spirit as shown by our fathers, and put him on guard of our defenses of liberty today.

For today we are facing a menace that will tear down every good thing our fathers have built up, and will place this whole Nation in slavery if we are not alert. We are not all of one mind for the good of our country today. We do not have only Americans on guard tonight.

We have seen many insiduous things develop here that tend to destroy us. Men are now encouraged to drift with the current rather than fight to get ahead. The competitive spirit, instead of being used to bring out the good in productive enterprise, has been directed to set labor against capital, the farmer against the city man, the white man against the colored man, the Christian against the Jew. A Nation founded upon the principle that all men are equal under the law cannot long endure when such class distinctions are deliberately created and one group attempts to destroy another. It is not the American way.

But it is the Russian way, the Soviet way to cause its enemies to disintegrate while it gets ready to take over later at a small cost. Whether those who today lead movements that cause hatred among us realize it or not, they are faithful allies of the wishes of communism.

We concern ourselves most with things here at home. While strikes, and riots, and quarreling in high places in our government take up our interest here, we have little time or inclination to think whether Russia's atomic bomb is ready for war with us. Besides, we look upon that as somebody else's business even though all of us will suffer.

We have just been through another horrible war, and peace is supposed to follow war. But today there is no peace. The minds of men are troubled today, and because of a Nation that was an ally in the war just ended. There is no real happiness where there are troubled minds.

We cannot look now toward England as a real barrier against any European menace. In that same England where stupidity lost the American colonies almost 200 years ago, we see state socialism now in control. We see production of essential goods and services limited by the mandates of men who are not concerned with the development of a great people, but only for power for themselves. Stalwart England that could not be beaten by two devastating wars, has now succumbed to alien philosophies while the minds of its people were turned to the problems of reconstruction.

We look toward France and Italy. There we see the long arm of communism reach out to control the labor unions through their Communist leaders, and when any worthwhile movements are begun there, strikes in essential industries and services are called to hinder.

You have heard the principles I am going to recite here, but they cannot be repeated enough to an American audience. Listen again:

1. You cannot bring about prosperity by discouraging production;

2. You cannot strengthen the weak by weakening the strong;

3. You cannot help small men by tearing down big men;

4. You cannot help the poor by destroying the rich;

5. You cannot lift the wage earner by pulling down the wage payer;

6. You cannot further the brotherhood of man by inciting class hatred;

7. You cannot establish character and courage by taking away a man's initiative and independence; and

8. You cannot help men permanently by doing for them what they could and should do for themselves.

Of course, I don't approve the acts of men who make money unjustly off other men's labors. There has been too much of that sort of thing all over the world and all down the pages of history. The labor union movement would never have come into being if there had not been too many abuses of the power of employers. The right sort of labor union, in which its members know the facts that concern them and have the opportunity to express their free wills, is a necessity in the world of today.

But that necessity does not justify a situation where one man can, by a nod of his head, create a shutdown of all coal mines while a nation may freeze and starve, because a few other men do not behave as he wants them to behave.

Real success in America has required only ability and integrity. That is why 85 percent of our outstanding leaders in American history have risen from humble beginnings. They rose because they did their own individual thinking and because their diligence made or discovered their own opportunities. Has that system that gave those humble boys their chance proved a failure? It could not happen anywhere else than in America. For God's sake, lets keep it here.

There can be no real progress of mankind without truth and justice guiding the way. No one has to tell us what is truth, nor what is justice. We know because this Nation was built upon them. We learned those principles at our mother's knee. We know that when we lose truth and justice in our high places, we will have lost something very precious indeed. We will then have begun to decay.

Liberty does not die from direct attack. No man ever rose in America and cried out, "Down with liberty." And no man ever will. When liberty dies in America, it will die from decay of the principles that give it life. And those principles can only be maintained by men who are determined to be free.

These are grave problems we face today. Because our national differences have generated so much hatred we are inclined to be blinded by our emotions. We may not see the real picture clearly. Remember the old adage "Whom the gods would destroy, they first make mad."

Will we remain a free people? Will we hand to our children the same torch of freedom that was handed to us? Will it have been undimmed by our use, and untarnished by our hands? Or will we stand by, each of us, waiting for someone else to come along and do the things we know must be done to maintain our integrity as a free people?

We are terribly busy with our individual affairs. We are so terribly busy that we haven't time to study what our duties ought to be. We know that government has a great part, but we leave it to the other fellow to take care of that. We don't want to be bothered with this thing called politics, anyway.

Will history record, 200 years from now, that America was lost because of the same sort of stupidity that lost us to England just about 200 years ago? England gave up only one of her colonies then, but it was one that was populated by her own people, most of whom would have stayed loyal to the mother country if conditions had not become unbearable. In our case, we stand to lose all we have—our own selves—either to a system of state socialism or to be a vassal to communism with its headquarters at Moscow. England's former stupidity will be small compared with what may happen to us.

There are those who have been terribly afraid since it was announced that Russia has the atomic bomb. This is no time for cowards in places of leadership. Nor is it a time for men who do not believe in the American way to stand guard over the interests of American citizens. This is a time of opportunity for brave men, for capable and loyal American men, an opportunity to help bring about a condition of all of one mind for the good of our country and our own.

I want to read to you a few lines from Sir Owen Seaman which I think are appropriate to the situation of today:

"Ye that have faith to look with fearless eyes
Beyond the tragedy of a world at strife,
And trust that out of night and death shall rise
The dawn of ampler life;
Rejoice, whatever anguish round your heart,
That God has given you for a priceless dower,
To live in these great times and have your part
In freedom's crowning hour;
That you may tell your sons who see the light
High in the heavens—their heritage to take—
'I saw the powers of darkness put to flight,
I saw the morning break.'"

It seems only yesterday that our boys were on the battlefronts, willing to die, if need be, that we might live. Those boys would never have put a Frenchman, or a Russian, or even an Englishman, on guard on their firing lines there, even when they were their allies.

The boys who came back have again taken their places here. We owe those who did not come back, the obligation to maintain the principles for which they died. They were of all races, and colors, and creeds, but they were Americans all, dedicated to the cause of freedom.

At this late hour—and it may be later than we think—as we see the dark clouds rise again on our Nation's horizon, let us determine that we, too, will follow General Washington's order issued at the Battle of Trenton—that we, too, will "Put only Americans on guard tonight." If we do not, we cannot be certain to maintain those good things that our fathers handed down to us. If we do, we may be sure that our children will enjoy the liberty that has been ours.

Ladies and gentlemen, it is just as simple as that.

Let's Dedicate Ourselves to America

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. VAN ZANDT. Mr. Speaker, in observance of Memorial Day, the editorial of the Family Weekly, a magazine supplement distributed by over 150 daily newspapers in the United States, featured in the May 26, 1957, issue a portion of my Memorial Day message under the title, "Let's Dedicate Ourselves to America."

The article follows:

Memorial Day is a day of memories and a day of rededication.

We Americans know that the man who dies in the service of our country makes this sacrifice in order that the hopes and ambitions of our Founding Fathers might be realized, and that our Constitution may continue to stand as the bulwark of our Nation.

Those whom we honor were adequate to the challenges before them. Now is the time for the living to resolve that we will be adequate to the challenges before us. This is the greatest honor we can give those who have gone before.

We Americans write and speak and think freely. We worship God as we please. We are protected from unlawful searches and seizures. We enjoy the freedom to elect those who administer and legislate for us, and we fix conditions and limitations on their authority. We are secure in our property rights and in living our lives as we wish.

These great privileges, far from being a matter of course, were never enjoyed by any nation until 170 years ago. Are the fortunate and happy conditions in which we live entirely of our own making? They are not.

They are gifts from the dead, not conquests of the living.

Let us not only acknowledge our debt, but let us try to pay it. There is one way in which we can make some small payment. These men gave their lives for our Nation and the principles upon which it was founded. We can honor America's dead by understanding our heritage and, further, by preserving unity among the living.

If our honored dead could tell us what reward they would wish us, they would, I believe, say, "Continue the fight for the great cause for which we gave our lives."

These heroes know that our Nation may be destroyed as ruthlessly in times of peace as by ruthless enemies in time of war. In peace, it may be destroyed by subversive doctrine, by abandonment of fundamental prin-

ciples, by surrender of the rights and privileges of the citizens, by an economy which denies to men their political freedom, or by a vicious and wasteful fiscal system which destroys individual initiative.

Against the armed enemy we rush forward to do our part in defense of our country. Often peacetime undermining of our civic structures comes in such pleasing disguise it leads many to welcome and encourage it.

We are apt to forget history's lesson that government by the people is not eternal and that such governments have fallen victim to internal decay. In paying our debt to the heroes to whom Memorial Day is dedicated, let us be as vigilant in guarding against our own apathy as again foreign foes.

The American form of government is only for those who appreciate it, who deserve it, and who are willing to defend it against all enemies at home or abroad. Let us resolve that, no matter what the cost, we will deserve our form of government, we will protect it, and we will pass it on unimpaired to those who follow.

Today, tomorrow, next week, next month, let us take time to recall in grateful appreciation the services and sacrifices of those who have made possible these blessings which we enjoy.

Let us make Memorial Day truly a day of renewed dedication to all the ideals for which America stands.

Robert Crosser: A Tribute

SPEECH
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. McCORMACK. Mr. Speaker, it is with unfeigned sorrow that I have to announce to the House the death, on Monday last, at Suburban Hospital, Bethesda, of my dear and honored friend, Robert Crosser, late representative from Ohio. To you also, Mr. Speaker, I know the news brings especial grief, as it must at the same time evoke many memories across the years, for you both became Members of this House on the same day, March 4, 1913, the day which saw the first inauguration of Woodrow Wilson as President of the United States. How far away and long ago that must seem to you.

Robert Crosser was born June 7, 1874, the son of a Scotch physician, Dr. James Crosser, of Holytown, Lanarkshire. We are told in a biographical sketch which appeared some years ago that the first book Robert ever owned was awarded him by the headmaster of the Glengowan School for learning to read well. The book was entitled "Being Afraid," a singularly inappropriate title, it would seem, for one who was never to be afraid of anything. In that same year, 1881, the family immigrated to America, settling first in Cleveland, Ohio, and later in the little town of Salineville, in Columbiana County of the same State. Here the boy grew to manhood.

As Dr. Crosser's income as a country physician was not large, Robert was obliged to fend largely for himself. His grit and ambition were early manifested. During summers he worked on farms or as a bricklayer's tender. He won a scholarship to Kenyon College from which he was graduated in 1897 with a fine record both as student and athlete.

So far back as his high-school years he set his heart upon becoming a lawyer. In the autumn following his graduation he entered Columbia University Law School, but for financial reasons was unable to complete the first year's attendance. He found temporary employment in Allegheny, Pa., and in the fall of 1898 entered the Cincinnati Law School where one of his professors was a future President and Chief Justice of the United States, William Howard Taft. After a 3-year course at the Cincinnati Law School he received his bachelor of laws degree and was admitted to the bar of the Ohio supreme court as attorney and counselor at law, solicitor in chancery, and proctor in admiralty. The Scotch lad was now ready to face the world, and as the first step of his career he began the practice of his profession in the office of Ford, Snyder, Henry & McGraw in Cleveland.

After 2½ years in the Cleveland firm, Crosser was appointed professor of the law of torts in Baldwin-Wallace University Law School. In 1907 he formed a partnership in Cleveland with Clyde M. White, which lasted until Crosser's first election to Congress.

Crosser had early manifested keen interest in politics. There appears to be some element in the soil and air of the Buckeye State that predisposes one to such a calling, as I am sure my distinguished colleagues from Ohio on both sides of the aisle will agree. So the presidential campaign year of 1908 found Crosser energetically stumping the State for the Democratic candidate, William Jennings Bryan and against Crosser's old professor, Taft. Two years later Crosser himself won his first public office by his election in November 1910, to the Ohio Legislature for the term 1911–12.

An indication of the rapidity of his rise in popular esteem, both in the practice of his profession and as legislator, was seen in his election to the Fourth Constitutional Convention of Ohio—a very great honor for so young a man who had been in the public eye for so brief a time. The judgment of Crosser's friends and constituents was immediately confirmed by his election by the convention as chairman of the initiative and referendum committee. It was this committee which reported those provisions of the present constitution of Ohio which are embodied in the initiative and referendum amendments. The chairman himself contributed a scholarly discussion of the committee's work to the Annals of the American Academy of Social and Political Science for September 1912.

With his interest in public affairs and the prestige he had acquired as a member of the constitutional convention, it was inevitable that Crosser should be a contender for a seat in the National Legislature, and in the elections of November 1912, which witnessed the overturn of the Republican administration, Crosser was elected as Democratic Representative at Large from Ohio to the 63d Congress.

I sought a seat in Congress—

He remarked at this time—

because I believe the best place for a man who has a philosophy of things is in the law-making body where he may speak openly, and freely advocate principles believed by him to be right.

Two years later Crosser was reelected, this time as Representative of the 21st Ohio District, covering several wards of the city of Cleveland. He quickly made himself felt in this House. During his first term he had attracted considerable attention by sponsoring a resolution to instruct the House Commerce Committee to report on a bill for Government ownership of the railroads which, he declared, had been "operated in a manner prejudicial to the country." Two years later, in 1916, Crosser was instrumental in bringing about passage of the Adamson Act limiting working hours of railroad employees to 8 hours a day; concomitantly, he advocated municipal ownership of public utilities. All this, at the time, was considered by many to be very drastic indeed, but Crosser never hesitated to sponsor radical measures when he thought radical measures were called for, and looking back we can see that in many respects he was ahead of his time. For instance, in his capacity as a member of the first Flood Control Committee, Crosser was "one of the first advocates of reforestation and system of tributary dams and reservoirs to control floods."

With the advent of the First World War Crosser's strongly marked traits, arising from deeply cherished convictions, came dramatically to the fore. Those of us, Mr. Speaker, who are old enough to hark back to that far-off period, can remember the irresistible wave of warlike enthusiasm, bordering at times on hysteria in certain quarters, which swept the country and did not leave this body unaffected. It has been true of every war: it has always been so, and it always will be so. Representative Crosser, along with his Ohio colleague, Representative William Gordon, could not accept the principle of conscription. To him, it was deeply repugnant: it attacked the sacred dignity of the individual—and if ever there was one who might truly be described as a symbol of rugged individualism that man was Robert Crosser, of Ohio. His conviction in this matter, it may be added, was shared by the then Speaker, Champ Clark. Crosser was one of 24 Congressmen who had the temerity to vote aaginst the President's conscription bill; more, he offered to Mr. Wilson's espionage bill an amendment "for the behoof and protection of philosophical anarchists," conscientious objectors; and, finally, for the purpose of financing the war, he proposed a national single tax. His course at the time was terribly unpopular, but, while men might deplore his judgment, they were compelled to admire his courage. It is never easy, at any time, to make a Scotchman's blood quail—and Crosser was born in Lanarkshire. The inevitable happened: Crosser lost the support of the Cleveland

Democratic organization and was defeated for renomination in the summer primaries of 1918 by the organization candidate. Two years later, in 1920, he ran again and was defeated by a single vote. This, considering the unpopularity of his war views, was really a great tribute: it demonstrated impressively that he still held the respect of his old constituents. Say what one will, men do respect courage.

This was presently confirmed by Crosser's reelection to the 58th Congress, and on March 4, 1923, he resumed his old place in the House. It is not the time or the place, Mr. Speaker, to review the brilliant and fruitful legislative career which followed Mr. Crosser's return to the House. In the 32 years which ensued until his retirement in 1955, Mr. Crosser achieved a record which, for constructiveness and fidelity to duty, was second to none in this Chamber. I could not hope, in a brief summary, to do it justice.

Always interested in the problems of tranportation, Mr. Crosser had the hearty support of the great railroad brotherhoods.. He introduced, as early as February 1932, a bill to encourage operation of American passenger airship lines between the United States, Europe, and the Orient by amending the Merchant Marine Act to enable the Postmaster General to make mail contracts with airlines similar to those of ocean liners. Six years later, the Air Line Pilots Association, an affiliate of the AFL, conferred upon Crosser honorary membership carrying the title "Chief Pilot—International" in recognition of meritorious and unselfish service repeatedly rendered to the airline pilots when their horizons were beclouded with trouble and uncertainty.

With the return of the Democratic Party to control of Congress in March 1933, Crosser was named to the new Democratic Steering Committee in the House; he became its first chairman and was again to serve in that capacity in the 78th Congress—1943–44. As a member of the House Committee on Interstate and Foreign Commerce, Crosser was instrumental in the passage, in 1934, of amendments to the Railroad Labor Act which, in the words of D. B. Robertson, president of the Brotherhood of Firemen and Enginemen, established the right of railroad workers to organize and bargain collectively.

Mr. Crosser's 25th anniversary was fittingly celebrated at a testimonial dinner in Cleveland upon which happy occasion the guest of honor and his fellow guests were fortunate enough to have you, Mr. Speaker, as the principal speaker. An editorial at this time, which appeared in the Cleveland Plain Dealer, hailed Mr. Crosser "an uncommon Congressman" who "with Caledonian tenacity sticks to his convictions, whether or not they are popular at the moment."

Illness forced him into a wheelchair in 1937, but he continued steadfastly to discharge his duties as a Member, and later chairman, of the Interstate and Foreign Commerce Committee. At last, as the end of his service in the 84th Congress approached, he felt it necessary to bow to the creeping infirmities against which he had battled so long and so bravely. In 1945 he had lost his wife, to whom he had been married for nearly 40 years. Two children and five grandchildren survive him. To them, I know the House extends its deep sympathy.

At the time of Mr. Crosser's retirement, Mr. Speaker, to pronounce his eulogy. You fittingly observed of Mr. Crosser that "he has performed a great service not only to the people of Ohio but to the country."

Let those words stand as his accolade as we bid our departed friend an affectionate farewell.

Address of Rear Adm. R. S. Clark

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. BROOKS of Louisiana, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of Rear Adm. R. S. Clark, United States Navy, commander, Naval Air Advanced Training Command, at Corpus Christi, Tex. This address was delivered on Friday, May 17, 1957, at Shreveport, La.

The address follows:

Gentlemen, Saturday, May 18, is the eighth observance of Armed Forces Day. On that occasion, we in the Armed Forces hold open houses, parades, demonstrations of new equipment, and try in many other ways to show the civilian members of our communities just what we are doing. It is an important and ambitious undertaking.

I say ambitious because in 1 day I wonder just how successful we can possibly be. Sometimes—I might almost say frequently—we professionals find something going on in one or the other of our services that is completely new and different and a big surprise to us. This points up a fact that everyone knows, but doesn't always fully appreciate—that the Defense Establishment today is big, complex, and forever changing.

Appropriately enough, the theme for Armed Forces Day is "Power for Peace." President Eisenhower in a special message to Congress in January stated, "It is well to remind ourselves that our basic national objective in international affairs remains peace—a world peace based on justice. Until a degree of success crowns our efforts that will assure to all nations peaceful existence, we must, in the interest of peace itself, remain vigilant, alert, and strong."

Summarized in this brief statement by the President is our present-day national policy, the philosophy which employs the thinking moments of the leaders of our Government and of our armed services. It is a philosophy defining our ultimate objective—peace—and the means by which for the present, the path to this goal must be approached—by remaining strong and secure. In this statement, we in the Armed Forces find the what and the why of our job—to build, develop, and train the best in men and materials to safeguard world peace.

On occasions such as today, a great temptation exists to dwell on the more spectacular aspects of our business—the big carriers launched, the electronic wizardry of our missile-guidance systems, or the performance of our newer jets in the fleet. But are bigness, complexity, and newness in themselves true measures of strength? Not always. We in the military services must repeatedly renew our investigation and sharpen our sense of practical values to be sure we aren't being carried away by the glamor of bigness, the awe of complexity, or the glitter of newness. Our Navy today, as a member of the national-defense team, is evolving into a service the shape and size of which would be unbelievable to the mariner of even a dozen years ago. We must be sure that this new Navy is more potent, more practical, and more efficient than it has ever been. A few basic principles cannot be forgotten if we are to master our evolution and not be mastered by it.

The need for mobility is the first of these principles.

In the present age, it is a startling fact that all targets, regardless of how tough or heavily defended, can be severely damaged or destroyed by nuclear weapons—provided they can be located prior to launching an attack. This puts an unusually high premium on the ability to move around—on the ability to prevent an enemy from knowing your whereabouts sufficiently in advance to plan on an attack against you. An enemy may know at any given moment where one or more of our ships is located, but he cannot predict where they will be several hours or days later. Reconnaissance planes which he sends out in an attempt to keep track of a fleet at sea could be quickly shot down. The mobility of our fleets gives them a very significant advantage in the nuclear-missile age.

Another important principle is flexibility, diversification, and openmindness in planning.

Let us review the nature of the success that our military policy has achieved over the past few years.

We have been confronted with a totalitarian-type opposition which has clearly demonstrated its readiness to resort to military force whenever the time was ripe to further its objectives. Against this type of enemy, only one attitude could be adopted—to be prepared for any eventuality.

The most obvious eventuality to prepare against has been, naturally, the surprise nuclear attack. As a defense, we have readied a potential counter-punch so powerful and so lethal as to prevent this initial act of aggression. This is our military policy of deterrence.

So far, our Army, Navy, Air Force, Marine team has won this phase of the struggle. But what happens as this faceoff continues. It seems reasonable to expect our enemy to examine other ways of furthering his interests—ways perhaps not so spectacular, but nevertheless ways which promise greater return for the risk involved.

Here is where the need for versatility arises. Planning for these other tricks which an enemy may have up his sleeve is considerably more complicated—and not nearly so glamorous—as readying a nuclear counter-punch. Our national weapons must not be frozen to the deterrent-force type of planning. They must be useful in all sorts of ways. It is unfortunately a fact that the development of weapons of warfare is cumulative, and just because a man may now be killed by radiation doesn't rule out the possibility that a clout over the head with a caveman's club won't still accomplish the same effect.

A government's freedom of action in international affairs depends largely on the ability and readiness of its military forces

to function effectively in any situation. If military capabilities are relatively few—in other words if flexibility is lacking—the number of courses of action open to our Government in any particular situation are also few.

Fortunately our country has avoided the pitfalls of restrictive military channelization. Our Government recognizes the danger of channelizing military capabilities to the point where we might be forced to choose between looking on helplessly and initiating all-out nuclear war. We have, therefore, developed our powerful and closely integrated team of Army, Navy, Marine, and Air Force components—a team with a wide range of military capabilities. Emphasis is on readiness for any eventuality—from cold war to nuclear conflict. And any development within the Armed Forces which at this time would institute a blind uniformity of thought, tactics, or weapons is not wise.

It may be interesting to note some of the advantages that from time to time accrue to a country possessing naval strength.

Long established custom permits ships of our fleets to move in and out of foreign ports, showing the United States flag, giving courage to our friends, giving pause to our enemies. No question of violating the sovereignty of another state is involved in such visits.

The ships of our Navy are sovereign United States territory wherever they may be. They are free from control or limitation by any foreign power. They are ready for use, by the United States, for the United States.

Our 6th and 7th Fleets are on the spot in overseas troubled areas, standing by for any eventuality, the 6th in the Mediterranean, and the 7th in the Far East. They are positive proof that the United States makes common cause with her allies in Europe and Asia. And yet, if they are needed elsewhere, they can move quickly and easily through international waters to the new trouble area.

The ability to deploy our fleets overseas and to keep them there indefinitely without political complications has other unique and significant advantages. Any conflict which develops between our fleets and enemy forces automatically establishes the principal areas of combat and devastation beyond our shores, between our fleets and the centers of military power in enemy territories. This means that a great portion of the destruction of combat, which, in a nuclear war, would be beyond our comprehension, takes place in enemy territory or on the high seas.

As you know, the world oceans cover over 100 million square miles. By comparison, our own country covers only some 3 million. The more a potential aggressor must worry about our wide-ranging carriers, about our jet fighters and attack planes, and about our guided missiles, all on the move around his extensive coastline, the less effort he can devote to our stationary military bases, our industries, and our cities.

Our overseas fleets have a significant nuclear delivery capability, and they constitute a very powerful deterrent to aggression. In addition, the offensive power of our Navy will soon include a complete family of successful missiles and will be augmented by jet-powered seaplanes. The fleet ballistic missile, which is under development, will add greatly to our offensive power, which means our deterrent and retaliatory power.

Since last we observed Armed Forces Day, a new carrier, the *Saratoga*, has joined the fleet, and the guided missile cruiser *Canberra* and the guided missile destroyer *Gyatt* serve with the cruiser *Boston* as the world's only guided-missile ships. The dramatic performance of the nuclear-powered *Nautilus* forecasts a Navy of the future with striking forces of unprecedented range and mobility. Already advance procurement has started of critical components for the propulsion plant for a large carrier with eight nuclear reactors. In our sister services, shock and firepower have been added by integration of guided missiles and atomic weapons. Helicopters enhance the mobility and flexibility of our ground forces, while supersonic Air Force bombers and fighters reach farther and faster for their targets. It has been a revolutionary year.

I have mentioned some of the requirements that must be observed if our Armed Forces are to do their job successfully. I have two more. They both concern people. The first is a need for men of ability, imagination, and dedication. The old proverb, "A short sword may be lengthened, by taking one step towards the enemy," is as valid today as centuries ago. Brave men and inspired leaders are always a necessity, no matter what the state of mechanization in our military services.

My last thought also concerns people—the citizens of the United States. Without your support, understanding, and cooperation, we are nothing, for I believe that an inspired, devoted, and effective armed services is not possible unless matched by an understanding and sympathetic public. I solicit your interest in our problems, and your support for our needs.

I consider it a distinct pleasure to have been invited to speak to you today. I sincerely hope that the next Armed Forces Day finds us measurably nearer the objective that our Commander in Chief has set for us—world peace based on justice.

On Right Road

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD at this point an editorial from the Lynden Tribune, a weekly newspaper published by Bill and Julian Lewis at Lynden, Wash., heart of the Northwest's dairy empire. Title of the editorial is "On Right Road."

The editorial comments on the recent findings of an independent research organization which conducted an impartial survey based on the simple question of whether or not the people of the Northwest like the partnership and cooperation program of power development now being employed in the Northwest.

This editorial stresses the fact that these findings are emphatic, and that they reveal the people of the Northwest are desirous that all agencies concerned with the production of power unite their forces and work together for the mutual benefit of their own future and the industrial development of the Pacific Northwest.

Text of the editorial is as follows:

ON RIGHT ROAD

That the Puget Sound Utilities Council is on the right road in its firm conviction that cooperation among electric utilities is the key to ample low-cost power and economic progress was proven in a recent survey.

The findings showed that support for the Puget Sound Utilities Council has risen to a margin of 17 to 1 as compared to 15 to 1, in 1956. The new power philosophy of partnership and cooperation in the power field has now reached overwhelming proportions. Tiring of Government controls entirely, citizens are demanding that the future of the Northwest be free of partisan politics and that the middle course on power is best suited to the maximum growth of the area.

This unique, cooperative endeavor was first undertaken in this country by Puget Power, the Seattle and Tacoma municipal systems and the Chelan and Snohomish Public Utility Districts. These electric utilities have played a major part in speeding the development of the Northwest, by working together instead of looking out only for their own interests.

Ambassador Romulo on Extraterritorial Rights

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. UDALL. Mr. Speaker, recent events have focused attention on problems created by the presence of our military personnel in Formosa, Japan, and other countries in the Far East. In one respect, these questions involve matters of high national policy. Under the circumstances it might be wise for us to heed the advice and counsel of our proven friends in that area. Such a counselor is the Philippine Ambassador, Gen. Carlos P. Romulo. I present herewith remarks on this vital question by General Romulo delivered in New York, May 26, 1957:

EXCERPTS OF ADDRESS DELIVERD BY GEN. CARLOS P. ROMULO, PHILIPPINE AMBASSADOR TO THE UNITED STATES AND REPRESENTATIVE ON THE U. N. SECURITY COUNCIL, AT THE ANNUAL BANQUET OF THE JEWISH THEOLOGICAL SEMINARY OF AMERICA, WALDORF-ASTORIA, MAY 26, 1957

The recent unfortunate developments in Japan, Korea, and Formosa are indeed most deplorable. Violence is unexcusable and must be condemned. However, while we must express our shock and dismay at such manifestations of mob rule, those of us who are friends of America and who come from that section of the world, must trace the cause of the outbursts because it is evident that they are not confined to one particular region but are spreading wherever the United States has military bases in the Far East.

We err when we attribute these disturbances to Communist agitation. While there is no doubt that it is welcome ammunition for the Communists and that they would aid and abet them whenever they are given the opportunity, the fact is that these disturbances are not Communist-inspired. They also err who say that they are an expression of a growing sentiment of anti-Americanism because of the large number of Americans employed in Korea and Formosa or because of these American's high standard of living which, it is claimed, has aroused envy on the part of the natives who are not as well circumstanced.

The truth is that in Japan as well as in Korea and Formosa, these recent outbursts were ignited by incidents resulting from the trial of American soldiers. The crimes for which these soldiers were accused did not arouse the indignation of the populace as much as the fact that the courts of the country where the crimes were committed were not allowed to try the accused. What

was resented was that the native civil courts were made to yield to the American military.

May I say in this connection that even in the Philippines—and I daresay you will not find anywhere a more friendly people, more appreciative of American friendship than my people—the recent Philippine-American negotiations on military bases have been stymied because of disagreement between the American and Filipino panels on the question of court jurisdiction, precisely the same question that is the root-cause of the troubles in Japan, Korea, and Formosa.

We in Asia recall with gratitude and admiration that it was the United States that pioneered in exposing, denouncing and opposing the extra-territoriality rights in China. It is therefore difficult for Asians to understand why America should now insist in denying court jurisdiction to civil authorities for its soldiers. To us, court jurisdiction is part and parcel of our national sovereignty, and especially to peoples newly liberated, national sovereignty is sacrosanct. Anything that violates it arouses the resentment.

Japan, Korea, and Nationalist China are unquestionably aware of the incontestable fact that they have no better friend than the United States. In the history of the world, there has not been as generous a victor in its treatment of a vanquished foe as the United States has been to Japan. Korea and Nationalist China do not have to be told that they owe their present security in large measure to American largesse and American protection.

It is certainly not ingratitude that has caused them to forget themselves. The Communists are mistaken in exploiting the riots as a sign of anti-Americanism. The Koreans and the Nationalist Chinese have not changed their loyalty to democracy and they remain true friends and allies of the United States.

But the events of the recent past can serve as a reminder that even among the closest of friends there must be at all times mutual respect for each other's rights, that only that friendship is worth having that is based on equality, that one nation cannot demand for itself what it denies to others, and that it is not anti-Americanism for the Japanese and the Koreans and the Nationalist Chinese to defend their national self-respect. A nation devoid of self-respect falls in the category of a puppet, and those of us who believe in America know that America wants no puppets but only equal allies and friends.

Why Disarm?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press, St. Marys, Pa., Wednesday, May 29, 1957:

WHY DISARM?

Harold E. Stassen, the man thoroughly repudiated by his own party last year when he tried to ditch Vice President NIXON in favor of Christian Herter, seems determined to work out some kind of a disarmament agreement with Russia and has been in almost constant conference with Soviet Union representatives on this matter the past several weeks.

He has been called a minister without portfolio, but that has not deterred him from trying to bind United States to another treaty with a nation that has already violated more than 30 treaties to which she was a signatory power.

Why any nation, much less United States, would put any trust in Russia, passes all human understanding. She stands out today as the sole menace to world peace, violator of every standard of human decency, has made prisoners of millions of her own people, has murdered other millions who have raised their voices in protest and has sent her murderous agents into every country on the globe in an effort to incite rebellion and overthrow other forms of government.

She has done nothing to earn the trust of other powers. She has walked on the most helpless of human being, as witness last year's outrages in Hungary where a freedom-loving people were machine-gunned to death. Today Russia has built a cordon of wire fencing around the escape corridors of Hungary to prevent others from leaving that land, pictured as so happy under Soviet domination.

Better toss Stassen to the dogs before he gets this country so deeply involved we'll be up to our neck in trouble.

Cadet John H. Vickers

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. SADLAK. Mr. Speaker, yesterday's graduation at the United States Military Academy at West Point was a remarkable day for those who attained their commissions after their strenuous but wonderful 4-year course of scholastic and military training.

I am sure all my colleagues in the House of Representatives join me in rejoicing in the outstanding success of Cadet John H. Vickers, my appointee from Fairfield, Conn., son of Mr. and Mrs. Irving H. Vickers, who graduated as No. 1 in his class and who received 12 of the 29 military and academic awards presented to the members of the first class. The awards to Cadet Vickers were:

A life membership in the National Geographic Society given by the American Legion for the highest rating in chemistry; a wristwatch by the Military Order of Foreign Wars of the United States for the highest average in social sciences; the Francis Vinton Greene memorial pistol for standing first in general order of merit for 4 years; a camera by the Veterans of Foreign Wars for the highest average in physics; and a wristwatch by the Steuben Society of America for the highest rating in foreign languages.

Also, a set of books from the American Bar Association for the highest rating in law; a pair of binoculars by the Ladies Auxiliary of the Veterans of Foreign Wars for the highest rating in mechanics of solids; the Robert E. Lee saber by the United Daughters of the Confederacy for the highest rating in mathematics; a set of books as a memorial to the late Brig. Gen. William A. Mitchell for the highest rating in military engineering and military history; a portable radio by the Armed Forces Communications and Electronics Association for the highest rating in electrical engineering; a portable typewriter by the Daughters of the American Revolution for the highest rating in mechanics of fluids; and a rifle by the American Ordnance Association for the highest rating in ordnance.

This is the largest number of prizes a cadet has won in recent years; in fact, it might be termed "quite a haul."

I am justly proud and pleased in the brilliant record achieved by this young man who should go far in his chosen career. Each of us entrusted with the privilege and responsibility in naming candidates to the Academies must rejoice with this outstanding example of an opportunity to attend one of those and the remarkable result attained through the application to his studies and using to the fullest his natural talents.

Bogus Jury Issue

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. DINGELL. Mr. Speaker, the issue of whether or not the right to jury trial should be attached to contempt proceedings under the civil rights laws has raged for some time. Traditional Anglo-Saxon common law and American jurisprudence, with very few special exceptions, has never provided for such a right, since contempt is not a crime in the meaning of the Constitution or the common law of England. The Washington (D. C.) Post of June 5, 1957, has a very illuminating editorial on this bogus issue and it would be well for all who consider this issue to read this explanation of why the jury trial in contempt procedures has rarely been allowed.

BOGUS JURY ISSUE

The addition of a jury-trial provision to the right-to-vote bill is undoubtedly a clever maneuver on the part of those who are determined to destroy it. They have taken their stand behind the popular concept of trial by jury, hoping that the public will not notice that the principle invoked is out of place in the enforcement of court orders in civil-rights cases. The only answer to such tactics is for an alert public to insist on getting the facts and to be guided by commonsense rather than misleading slogans.

Trial by jury is indeed a sacred right in all cases of criminal prosecution. State and local officials who administer voting laws in a discriminatory manner now have the right to a jury trial if they are prosecuted for that crime. Experience has shown, however, that criminal prosecutions after voting rights have been denied are an ineffective means of assuring the vote to all citizens. Consequently, the bill before the Senate committee would permit the Attorney General to

bring civil suits for preventive relief of the victims of discriminatory practices before an election takes place.

This would enable the courts to decide whether the law was being impartially administered, in accord with constitutional guaranties, and to issue orders to any official acting or threatening to act illegally. Orders of this kind are issued in many cases. For example, the Government now has power to seek enforcement of the Atomic Energy Act, the Fair Labor Standards Act, and many others in this way. The committee majority insists, however, that a jury shall determine whether or not the order of the court shall be enforced.

The traditional way of enforcing court orders is through the power of contempt. Judges rather than juries customarily pass on contempt charges for the very good reason that the issue at stake is enforcement of the court's orders or protection of its dignity. Congress made an exception to this rule in passing the Clayton Act in 1914. It extended the right of trial by jury to criminal contempt cases arising under that act where the alleged offense would also constitute a crime under Federal or local law. But it expressly exempted from this concession contempts arising out of disobedience to court orders in suits brought by the United States.

Congress also provided for jury trials in contempt proceedings arising under the Norris-LaGuardia Act of 1932, and that language has been written into the right-to-vote bill. In this case, however, there was a special reason for the action. Congress felt that crimes alleged to have been committed during enjoined strikes were being improperly punished as contempt. This seemed to be an evasion of the right to a jury trial that would have prevailed under ordinary criminal prosecutions.

This section of the Norris-LaGuardia Act was virtually nullified when Congress passed the Taft-Hartley Act. More important is the fact that crimes of violence committed during a strike have no similarity to the deliberate acts of discrimination on the part of local officials in some southern communities against Negro voters. Under an orderly legal system this is precisely the type of action that can be properly restrained through equity proceedings. And once court orders have been issued, their enforcement should not depend upon finding a local jury that would uphold the court against the local official in contempt.

Seen in this light, the trial by jury amendment is a bogus issue. The committee acted not to uphold a sacred right of accused citizens but to thwart reasonable enforcement of the law in the traditional American way—the only way in which effective enforcement is possible.

Robert Crosser

SPEECH
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. CELLER. Mr. Speaker, to have learned of the passing of one of our beloved former colleagues, Robert Crosser, is to learn again how life both enriches and deprives. These many years I have known Robert Crosser, and many the hour he spent with me in my office granting me the benefit of his wisdom, of his sentient observations, his grasp of essentials. I feel myself one of the beneficiaries of his wisdom, and I feel most keenly the deprivation of this friendship which I valued. He left his legacy of wisdom for all of us to share.

His passing moves me to pause and take note that it is a portion of the lot of those of us serving in the Congress to make many friends here and then suffer their loss. This is true, in a measure, of all people, but because we work in closer relationship with other Members of the Congress each departure carries with it a poignancy of personal loss.

His was an indomitable spirit, and for that, as well as for his sensitivity, his courage and his learning, we honor him. Along with his many, many friends I offer my sympathy to his beloved family.

Memorial Day Address of Col. William H. McIntyre

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. DAGUE. Mr. Speaker, I am pleased to include with these remarks a transcript of the address delivered by my very good friend, Col. William H. McIntyre of New York, on Memorial Day, last.

Colonel McIntyre has distinguished himself not only by his splendid military service but more particularly by his devotion to the care of his disabled comrades and their widows and orphans since the war has ended. A veteran of World War I, he was one of the original founders of the American Legion and has devoted himself to the welfare programs of our leading veterans organizations. During the period of World War II and throughout the years following that conflict, he rendered particular service in meeting every ship arriving at the port of New York carrying the bodies of those who were lost in battle.

I know of no one who has helped more to lighten the impact of the loss of our war dead than has Colonel McIntyre, and I believe very firmly that his outstanding services should be more fully recognized than they have been to date. His remarks on last Memorial Day reflect the character of the man and are commended to you for your careful perusal.

COMMEMORATIVE ADDRESS MADE BY WILLIAM H. MCINTYRE, MAY 1957

My fellow Americans, again we are observing a day of remembrance. Memorial Day has come once more with its silent but eloquent reminder to all of us—the living.

It is the reminder—coming like a voice from beyond thousands of graves—that the challenge of all the hero dead of all of our wars, who served and died for our ideal of freedom, still stands.

It is a recollection that the struggle for enduring peace with justice and liberty for all is a continuing one. It is just as necessary for us today—and every day—to give selfless devotion to this cause as it was for those legions of gallant patriots whose memory we honor.

We must establish in our minds and our hearts a new recognition and a greater awareness of the cost that has purchased and preserved our free insitutions and happy way of life. God forbid that the time shall ever come in this great land of ours when our people shall turn away from the patriotism of our forefathers as old fashioned. Our Memorial Day ceremonies at home and abroad, are a fitting and proper way to pay our respects to those who have fallen in battle that we might live as free men. These ceremonies are an essential part of the great American tradition of preserving and transmitting the torch of unity and liberty to succeeding generations.

Memorial Day is the sacred rallying day of this Republic. It is a clinging together bonded by precious memories of valor and of love of country that survived the test of death. Along with the tender remembrances of wreaths and prayers, there is an inspiration in Memorial Day ceremonies that posterity never swerve from our national ideals. Once we start discounting the supreme sacrifices of our hero dead, we shall be on the road that leads to the downfall of our society. Every great empire of the past that toppled, laid the groundwork for its fall when the people turned their backs on public service as civic virtue.

Memorial Day is the occasion on which we should honor our hero dead by rededicating ourselves to the emulation of that fierce loyalty to God and country which is the wellspring of our national strength. Without it we cannot hold onto our freedom and independence.

In April 1863, while the conflict between the States still raged, a group of ladies in Columbus, Miss., gave expression to their devotion by laying spring flowers at the graves of Confederate dead, as well as those of the Union forces who were buried in the same cemetery. Other communities followed this example.

For many years the GAR in the North and the Confederate veterans in the South—and their ladies—led in the annual observance of Memorial Day. Today the ranks of the Blue and of the Gray are gone. They belong to history now.

Recently, we celebrated the birthday of U. S. Grant, a great general and a President of the United States; he knew the ravages of war. On his tomb in New York City are inscribed the words "Let us have peace." In the White House we have another general who also knows the horrors of war and the suffering caused by it. He is also a lover of peace.

Today, it is the American Legion with its 17,000 posts in our great country which has taken over the responsibility for the leadership in Memorial Day observance everywhere. Legionnaires of three wars and their auxiliary ladies now march in the annual Memorial Day parades and gather around hallowed ground where their comrades-in-arms rest.

My presence here as a speaker is only incidental. You are here, not as observers or listeners, but as participants in a ritual of personal and national remembrance. My task has been to put in words some of the thoughts and feelings which I'm sure are common to all of us.

I salute each one of you who has been impelled through his own inner convictions to observe this Memorial Day in the way which seems most proper and fitting.

It is most important that we display our flag. It is the inspiration of our youth, the strength of our maturity, and the comfort of our old age. It symbolizes the free press, the right to think and to express our thoughts without fear. It guarantees religious freedom, the right of assembly, and the right to vote. It is the emblem which can be freely saluted by our citizens regardless of their race, creed, or color.

As the passing years inevitably lengthen the honored rolls of the post eternal, may

we continue to find peace and strength through this annually returning day of memorial. When at last other hands place the wreaths and other lips speak the time-honored sentiments, may this land which we love, continue free and strong, blessed in the memory of the countless thousands of her departed defenders. They will not pass this way again. But through the reverence paid them, new generations will be dedicated to the same high principles which we today attempt to honor.

Let us not forget that they who died did so not to be honored with tears, flags, and flowers. They died so that the future would be better than the past. The future is in our hands. America belongs to the living generation. Our dead have done their part, but the task they have discharged so faithfully is not yet finished. Freedom is never safe.

Let us, the living, rededicate our lives to support the truths for which those served and died, and may God in His wisdom help us accomplish that end.

This concludes my Memorial Day address.

New York State Junior Chamber of Commerce Opposes Kinzua Dam

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. OSTERTAG. Mr. Speaker, the pending proposal to build a $101 million dam on the Allegheny River at Kinzua, Pa., thereby completely flooding one Indian reservation and inundating most of the habitable land of a second, has shocked and dismayed the people of New York State. Many are shocked because of the moral wrong being done to the Indians, who were promised the use of their lands in perpetuity, by George Washington, and others are equally shocked by the economics of this project, which will supply only a minimum of flood control at a fantastic cost.

Under leave to extend my remarks, I include in the RECORD a resolution bearing on this subject from the New York State Junior Chamber of Commerce, and also a letter and resolution from the Seneca Nation of Indians, whose Allegany Reservation lands are threatened with inundation.

NEW YORK STATE
JUNIOR CHAMBER OF COMMERCE,
May 24, 1957.

Re Resolution, United States Government appropriation of the lands of the Seneca Nation of Indians.

To Congressmen, Senators of New York State:

This resolution was adopted by 500 delegates representing 102 junior chamber of commerce chapters throughout New York State assembled in convention May 18, 1957, at Lake Placid:

"Whereas the first President of the United States of America, George Washington, when he signed the Pickering Treaty in 1794, guaranteed to the Seneca Nation of Indians, their reservation lands along the Allegany River known as the Allegany Reservation and the right to live and occupy the same; and

"Whereas the Seneca Nations have peacefully lived thereon, cultivated its lands and made it their tribal homeland, to the exclusion of all others since that time; and

"Whereas certain and various industries downstream in the State of Pennsylvania have induced the Congress of the United States of America to propose and to appropriate funds for and have directed the United States Corps of Army Engineers to proceed to invade such reservation lands with the purpose in mind to appropriate between 9,000 and 10,000 acres of such lands under the right of eminent domain, to construct a giant dam in the Kinzua Valley for the purpose of storing water to provide the industries aforesaid with a constant supply of fresh water primarily, and secondly as a flood control measure (the lands flooded by this dam would cover much territory in the State of New York); and

"Whereas, the Seneca Nation of Indians have engaged competent engineers to study the situation and such engineers have made findings and suggestions that other means to alleviate flood conditions would be more practical and successful and would entail less taxpayers' money to construct; and

"Whereas, the New York State Junior Chamber of Commerce, proud to be a part of the land of the Senecas, is interested in seeing that these first Americans rights are protected, and that they are not deprived of their last homeland without having fair consideration in a congressional hearing; and we believe that the issues involved are more than matters of laws and precedent, but are matters of public responsibility and matters of governmental integrity; and

"Whereas, the New York State Junior Chamber of Commerce is vitally interested in the recommendations of the Hoover Commissions on economy in Government: Now, therefore, be it

"*Resolved*, That the New York State Junior Chamber of Commerce is opposed to the United States Government appropriation of the lands of the Seneca Nation of Indians on the pretext of eminent domain for the Kinzua Valley Dam; and that we request the Congress of the United States to allow the said Seneca Nation of Indians to have a congressional hearing on this matter, and that every consideration be given to other methods of flood control in this area which also would be much less expensive to the American taxpayer; and be it further

"*Resolved*, That the secretary of this organization be directed to send copies of this resolution to the President of the United States, Secretary of Interior, Governor of Pennsylvania, Governor of New York, Senators from Pennsylvania, Senators from New York, United States Corps of Army Engineers and the tribal chief of the Seneca Nation of Indians."

THE SENECA NATION OF INDIANS,
May 31, 1957.

Hon. HAROLD C. OSTERTAG,
United States House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: It is with great disappointment that this date my people received the news that the House Appropriations Subcommittee had approved the million-dollar appropriation to start the construction on the $101 million dam on the Allegheny River at Kinzua, Pa. When the Seneca Indians had been able to show that the construction of this proposed dam was not sound economic engineering, my people had confidence in Congress that their treaty rights would be respected and their homelands preserved. We can see no justification—either moral or economical—for this action of a subcommittee of the Congress of these United States to arbitrarily recommend the violation of a promise made 163 years ago to a minority people by George Washington, the Father of His Country.

If it is the feeling among the congressional delegation that the Seneca Indian's loss of his homelands can be displaced by a dollar payment, then that impression is erroneous. I have talked with my people on this matter and they are uniform in their demand that we carry this fight to preserve our homeland into the highest court if necessary, so that this entire record of utter disregard of a fundamental right shall be fully known to the public of these United States and of the world.

Respectfully,

CORNELIUS SENECA,
President, Seneca Nation of Indians.

Sitting at the courthouse, Allegany Indian Reservation, N. Y., June 3, 1957:

"*Resolved*, That the Council of the Seneca Nation of Indians instruct the president of said nation to take any and all court action as may be necessary to prevent the construction of the Kinzua Dam, and preserve our homelands to our children; and further

"That no settlement negotiations of any manner whatsoever are to be conducted with representatives of the United States Government and this action to preserve our homelands is to be carried unremittingly through all the courts of this country.

"Unamiously adopted."

I hereby certify the above to be a true copy of the Seneca Nation records.

JOHN VAN AERNAM,
Clerk, Seneca Nation of Indians.

Visitors From St. Mark's Methodist Church of Houston, Tex.

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. THOMAS. Mr. Speaker, this morning we were privileged to have present in the House gallery a fine representative group of young men and women of the St. Mark's Methodist Church, Houston, Tex., during the prayer given by one of their pastors and counselors, the Reverend John D. Davey. The prayer was a beautiful, inspirational one and well received by the Members. It is a good thing for the Nation for these young people to be brought to the Capitol under the tutelage of their patriotic church leaders. It is upon these young people and others like them that we must depend for the protection of our homes, our churches, and our country against the ever-present threat of communism.

I want to commend the Reverend C. T. Morris and Reverend Davey for their ingenuity and leadership. They are an inspiration to all. Their counselors, Mr. E. R. Beadle, Mrs. Ben E. Loeffler, Mrs. Joyce Thompson, and Mrs. Ruth Froehner also are deserving of much praise for their unselfish, important activities in behalf of this outstanding group, composed of Beverly Nixon, Anne Maresh, Karey Patterson, Marilyn Froehner, Arlie Moore, Bonnie Knepple, Bettye Marie Pfeffer, Verna Bertucci, Sylvia Hughes, Joan Castle, Carolyn Prince, Barbara Gail Kobs, Jeanne Broker, Carol Phillips, Virginia Massey, Jaunece Atteberry, Margaret Jane Nunez, Rhea Jean Brogdon, Thomas Morris, Jr., Johnny Klep-

per, Ritchie Atteberry, Ella Lee Campbell, Mary Pruett, Mary Standish, Carol Ann Keen, Allen Lee Norton, Richard Wagenhauser, Gary Lee Homburg, Jimmy Mooney, and Richard Gebhardt.

Fast Tax Writeoffs and Proposed Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 5, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the Record a letter I received from Mr. Wedding, of Bedford, Ind., dealing with the fast tax writeoff issue; a telegram I received from the Surprise Valley Electrification Corp., by C. P. Hunter, general manager, dealing with the problems of construction of Hells Canyon Dam; and a letter which I received from the Ten Mile Lakes Sportsmen's Association, signed by Norman Porritt, president, dealing with the problem of Hells Canyon Dam and proposals for the construction of other dams.

There being no objection, the letters and telegram were ordered to be printed in the RECORD, as follows:

BEDFORD, IND., *May 29, 1957.*

DEAR SENATOR MORSE: I wonder who pays the taxes that will be deducted from income tax of these power companies when they deduct it from their income tax. Why don't they tell about the free interest money given to Idaho Power Co.?

HARRY A. WEDDING.

ALTURAS, CALIF., *May 24, 1957.*

Hon. WAYNE MORRIS,
United States Senator, State of Oregon, United States Senate Office Building, Washington, D. C.

At its regular monthly meeting yesterday the board of directors of Surprise Valley Electrification Corp., representing approximately 2,000 member-consumers in Coby and nearly 600 member-consumers in Lake County, Oreg., passed a resolution commending you for your courage and convictions on pushing Government construction of the high Hells Canyon Dam. Also resolution respectfully requesting the support of the two California Senators were passed and have been forwarded to them. The board and the membership sincerely hope you will be successful in your efforts in this regard. All good wishes.

SURPRISE VALLEY ELECTRIFICATION CORP.,
C. J. HUNTER, *General Manager.*

TEN MILE LAKES
SPORTSMEN'S ASSOCIATION,
Lakeside, Oreg., May 20, 1957.

Re Senate bill S. 555.
Senator WAYNE MORSE,
The United States Senate,
Washington, D. C.

DEAR SIR: With reference to the above-mentioned Senate bill 555 I would like to notify you that the Ten Mile Lakes Sportsmen's Association, as a group, is definitely in favor of a high dam at Hells Canyon rather than the three smaller dams on that same stretch of the Snake River; which dams are to be built by the Idaho Power Co.

The building of the high dam at Hells Canyon will not damage, appreciably, the forests, farms, and game areas, whereas the three small dams will result in the construction of more small dams to compensate for the loss of water storage. The Bruces Eddy, Penny Cliffs, and Nez Perce Dams, which have been proposed, would do irreparable damage to the forest and farms, wilderness areas, spawning grounds of salmon and steelhead, and destroy some of the most magnificent elk range in the United States.

I know the State of Idaho very well and have hunted and fished over a large portion of that country and believe that these smaller dams would result in the loss of millions of dollars to the State of Idaho in recreational and hunting income alone. We think that the Federal Power Commission is very shortsighted in this particular instance.

If properly developed the Hells Canyon dam will cost no more than the Idaho Power Co.'s plan and we will still retain these wonderful natural resources.

We agree with Senator HARRY BYRD's statement that the tax-free subsidy to the Idaho Power Co. of $65 million is utterly indefensible. Why on earth should this company obtain a tax-free loan at the taxpayers' expense? Instead of giving away such a sizable chunk of the taxpayers' money; why not use it to help build the Hells Canyon dam and let us own it? We think such an interest-free loan is a blight upon our country and that in these days of high taxes every effort should be made to conserve our money or to use it in such a manner that our citizens may reap the greatest benefit from such expenditures.

We know that you have done your utmost toward obtaining the construction of the Hells Canyon Dam, but wish you to know that we are behind you in your efforts and sincerely hope that they will be crowned with success and that Senate bill 555 will pass.

Very truly yours,
NORMAN PORRITT,
President, Tenmile Lakes Sportsmen's Association.

(Copy has been sent to Senator NEUBERGER.)

Purpose of the Cuts

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. ABBITT. Mr. Speaker, in the current national discussion of the budget, there is a good deal of misunderstanding about the reasons for the economy effort.

I wish to include herewith an editorial entitled "Purpose of the Cuts," which appeared in the June 4 edition of the Lynchburg News, of Lynchburg, Va. Although this is a short commentary on the situation, it appropriately sets out the purpose of the economy drive. I feel that, if nothing else is accomplished this year, the important thing is that our people are beginning to awaken to the necessity for curbing excessive Federal spending and to turn the tide of Government control from Washington.

The editorial follows:

PURPOSE OF THE CUTS

The Council of State Chambers of Commerce announces as a result of a survey that even if the defense budget cuts in the House of Representatives are not restored but are increased there will not be enough reduction in Federal spending "to permit a worthwhile tax reduction."

There will be few to deny that. All hope of a tax reduction in the near future was abandoned some time ago. There is even growing doubt that there will be any substantial tax reduction until the world has reached that stage at which peaceful coexistence with the Communists is possible with safety, and, to understate the case, that time isn't near.

The real purpose of the fight to reduce the Eisenhower budget as much as possible, isn't after all, to permit a tax reduction now or next year. It is to halt the spending spree that has cursed this Nation for several decades. Unless that is not done now when the country is at the highest peak of its prosperity the hope that it ever will be done is dim.

USIA in Cuba

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. O'HARA of Illinois. Mr. Speaker, knowing from personal observation the splendid work the USIA is doing in Cuba under the brilliant direction of Richard G. Cushing, I am happy to have this occasion of extending my remarks by unanimous consent to include the following article from the Times of Habana of May 27, 1957:

THE USIS AND YOU—INFORMATION SERVICE DOING VITAL JOB IN CUBA

(By Milton Guss)

Congressmen who wield the economy ax over the appropriation of the United States Information Agency need travel no farther than Cuba to see Uncle Sam's overseas spokesmen doing an effective job.

For here, operating on a shoestring, the United States Information Service (as it's called abroad) is winning friends and influencing people in a way that could soften the attitude of USIA's toughest congressional critics.

Spending less than goes into a soap powder advertising campaign, the shirt-sleeve diplomats of USIS are carrying on a highly effective operation involving, among other things, news and commentaries for the Cuban press, radio, and television.

They are showing documentary films to 2 million Cubans a year, throughout the island. They are producing high-circulation pamphlets at the rate of a new one every 2 weeks. They are sending Cubans to the United States to observe and to study. They produce a monthly wall newspaper which is a valued poster for stores, schools, and labor halls.

Cubans pick up USIS reading matter from racks in bus stations and train depots, and they find it in the waiting rooms of doctors' offices and beauty shops. They see USIS films on television virtually every day of the week. They read USIS political commentaries and news items in their daily paper.

Editors use so many commentaries, articles, pictures, and photographic features on a regular basis that USIS feels a good

percentage is getting through to make a definite impression on the Cuban people.

USIS spends not a cent for newspaper space, nor for radio or television time. Its output is used because it is a quality and newsworthy product, and because USIS officers have built up friendly relations with the Cuban press, radio, and television over a period of years.

USIS is basically dedicated to the promotion among Cubans of a sympathetic understanding of the United States—its people, its policies, its ideals—and to help build a fuller appreciation of the aims of the United States toward insuring a peaceful world.

USIS pamphlets deal with such varied themes as atomic energy for peace, the Hungarian fight for freedom, the Communist threat to the Americas, the progress of the United States Negro, and people's capitalism. This latter is a project to show that the broad and solid base of the booming United States economy is the participation of all the people, from factory workers, with their savings accounts and stock-sharing plans, to the titans of Wall Street.

In the cultural field, besides the exchange-of-persons program, USIS distributes hundreds of books, and provides guidance to approximately 2,000 Cubans who visit the Embassy each year to obtain information on United States schools and colleges. The cultural section thus helps Cuban students chart their future academic course in the United States.

There are four American USIS officers here: Richard G. Cushing, Director of USIS, who is a veteran newspaperman with 15 years' experience with the Associated Press; Sherwin P. Helms, information officer, with an advertising and newspaper background; Francis J. Donahue, cultural officer who has a broad academic background in history and Latin American relations; and Robert S. Bryan, assistant information officer, who handles the films program and exhibits, including the big "Atoms for Peace" and "The Family of Man" exhibits which were such resounding successes at the Palace of Fine Arts here.

Five of the 26 USIS local employees are stationed in the interior. Two are based in Santiago, where USIS operates a downtown reading room known as the Maceo-Lincoln Library. Two are at Camagüey, running the Agramonte-Lincoln Library, and one motion picture operator works out of Santa Clara.

USIS in Cuba has become a vital part of the American mission here. Dealing in the truth, its output carries the impact of authenticity. USIS officers constitute one of the Embassy's chief contacts with Cubans of all social strata, and their success is measured by the mounting goodwill built up for Uncle Sam in this island so important, in all ways, to the United States.

On Hallowed Ground

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. ABBITT. Mr. Speaker, it is well for us from time to time to stop and cogitate about the great heritage we in this country have. We should pause often to think upon the great civilization we have in America and try to ascertain if we are going down the right road to maintain the heritage that was handed down to us.

On Wednesday, May 29, Red Hill, in Charlotte County, the last home of the great American patriot, Patrick Henry, was dedicated. On Tuesday, June 4, there appeared in the Farmville Herald, Farmville, Va., owned and published by J. B. Wall, a splendid editorial entitled "On Hallowed Ground." I wish every American would read and study this masterpiece. When we think about great patriots like Patrick Henry and realize the great sacrifices they made that we might be a free people and then realize the predicament that we are in today—great judicial tyranny in the highest court in the land and the anti-civil-rights bill up for consideration in the House of Representatives—it is enough to make us downhearted, discouraged and fearful for the future. But, like Patrick Henry of old, we must not, we cannot, we will not surrender, give up or stop fighting for the things we know are right, just and necessary if we are to continue our way of life.

J. B. Wall is a great example of the good that a consecrated, Christian editor can accomplish in his community for the betterment of the community, the State, and the Nation. I commend him for the great work he has done, is doing, and will continue to do in the future for the preservation of individual liberty, sovereignty of our States, and the preservation of Constitutional Government in America.

Mr. Speaker, the editorial follows:

ON HALLOWED GROUND

On hallowed ground we stood last Wednesday at the dedication of Red Hill, the last home of the great American patriot, Patrick Henry. Modern day orators paid tribute to the life and character of this first defender of the sovereignty of the States about to form a union. Along the paths, among the boxwood, before the fireplace in the modest house had walked a great American.

Viewing the fertile low grounds and the rolling fields from the promontory upon which was built the house, we were impressed as so often we have been, with the evident care and study the early settlers gave to the selection for an established home. Many beautiful homes along the Roanoke, Staunton, James, York and Appomattox rivers have such pleasing panoramas. Life was leisurely, if at times uncomfortable and exasperating. We have no preconceived ideas that plantation life was easy, or at all times abundant and comfortable, but it was free and leisurely allowing time for cogitation, for planning, for meditation. Surrounded by the beauties of nature, knowing the rigors of a despot's heel, the early settlers now free faced the future, reverently and confidently, with a determination ever to be free.

Patrick Henry, of all of the famous Virginians, loved his newly found freedom and he fought to protect it against all odds. He fought in the legislative halls, and we could imagine him even in conferences in the spacious yard under the virgin oaks, now an old man at 58, advising with his neighbors, resigned to plantation life, though not yet satisfied with the safeguards he had been able to write into the Constitution by his stanch stand and fiery oratory against tryranny.

Red Hill, Patrick Henry's last home and last resting place is not a local shrine, not a Virginia shrine, but a national shrine. We predict in the years to come it will be visited widely by those who now recognize him as an exponent and advocate of individual freedom, and more—the sovereignty of the States which form the Union. We were touched by the appropiateness of the floral design on his grave, with the simple inscription "The First Defender," placed there by the Charlotte Chapter, Defenders of State Sovereignty and Individual Liberties. What a heritage now calling for recognition, development, yea, we say reverently, defense. The spirit of Henry still lives in the hearts and minds of millions of Americans, who know and appreciate the fundamental principles upon which this great Nation was founded and has developed in the short space of less than 200 years. May the establishment of this shrine serve to rekindle interest in Patrick Henry, that those who still hold his high ideals and principles may emulate his example of fearless advocacy, undaunted determination and fiery oratory.

As we stood there, to hear Eugene B. Casey say that Patrick Henry had been his ideal through life, we could but thank God that he had prospered and had seen fit to use his material substance for such a noble purpose as to perpetuate the life and example of a great man by giving a replica of his last home to the Nation. Came to mind John D. Rockefeller, Jr., whose benefactions in revivifying and saving American heritage may be seen from the giant redwoods of California to the towering Palisades of the Hudson, but no where so vividly as the restoration of our own Williamsburg. These men with reverence and inspiration have controlled their benefactions personally, to the end that hey will forever serve a great people.

In contrast we meditated upon the abuse of funds, established to the memory of some early Americans, which have ben used, at least in part, by liberals, uninspired, possibly irreverently, to change, yea, to tear apart, fundamental concepts of our government and remake this great nation contrary to the principles of the Constitution, through studies and published treatises by sociologists of questionable ability and reverence for American principles. An example being the study of Gunnar Mydal, a Swedish political sociologist, whose study the United States Supreme Court has cited as a guiding post for the future of America despite the plain words of Patrick Henry in the first 10 amendments of the great American Constitution. God give us more men, like Eugene B. Casey and John D. Rockefeller, dedicated to the salvation of American heritage and all it now and forever will mean in shaping the progress of future human relationships.

Unassuming and modest was James S. Easley, chairman of the Patrick Henry Memorial Foundation, whose untiring work had brought fruition and Mrs. William P. Williams, whose dream had become a reality. To these two Virginians and their co-workers we, Americans, owe a debt of gratitude.

So long as there are people like these the spirit and the character of the patriot Patrick Henry will live.

Drew Pearson Makes Some Points About the Dominican Republic

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Drew Pearson published this morning

and an excerpt from yesterday's column by Mr. Pearson. The points he makes there indicate that the operations of Generalissimo Trujillo are not confined to personal vengeance against individuals such as my constituent, Gerry Murphy:

WASHINGTON.—This column was the first to reveal that ex-Congressman Franklin D. Roosevelt, Jr., had been hired by Dictator Trujillo of the Dominican Republic. It's only fair, therefore, to report on other relatives of those in high places who have been playing footsie with the caesar of the Caribbean.

The list includes:

1. The son-in-law of John Foster Dulles, Robert Hinshaw.

2. The brother-in-law of President Eisenhower, Col. Gordon Moore.

3. The ex-Assistant Secretary of State in charge of Latin American Affairs, Henry Holland.

The chief source of Dictator Trujillo's wealth is the Dominican sugar industry. He owns most of the sugar mills in his country. It was no accident, therefore, that Congress last year increased the quota of Dominican sugar admitted to the United States. It took this action despite opposing pressure of beet sugar growers in our Rocky Mountain States and cane growers in Louisiana.

Here is part of the backstage story of what happened:

In 1954, Dulles' son-in-law offered to help Trujillo get his sugar quota increased. The dictator then sent his personal plane, a luxurious flying yacht, the *San Cristobal*, to fly Dulles' daughter, Mrs. Robert Hinshaw, her husband, and children to the Dominican Republic.

For 3 months the Hinshaws stayed at the beautiful seashore Hotel Jaragua, running up a bill of no small proportions. Hinshaw tried to promote several deals with the dictator, finally overstayed his welcome. Trujillo paid his bills.

Hinshaw, when queried by this column as to why he had not registered as a foreign agent, as required if an American works for or accepts funds to represent a foreign government, said that he did not do any work for Trujillo.

Informed that some people registered if they received expenses from a foreign government, Hinshaw admitted that his expenses were paid, but did not agree that he should have registered.

Under the Foreign Registration Act there is nothing wrong about an American working for a foreign government, but it is specified that the American public has a right to know when someone is so working. The law firm of Secretary of State Dulles has been registered in the past as working for various foreign governments; also the law firm of ex-Secretary Dean Acheson. It is a criminal offense not to register.

NOTE.—The Justice Department recently indicted John Frank, an ex-FBI agent who wired Trujillo's palace for sound, for failing to register as a foreign agent.

EX-STATE DEPARTMENT OFFICIAL

One former high official who definitely helped put across Trujillo's sugar quota increase is able Henry Holland, former top official in the State Department for Latin American affairs. Holland scarcely got out of the State Department when he headed for the Dominican Republic. He not only made several trips, but got on the payroll of Trujillo's mining consultant, William Pawley, the former Ambassador to Brazil.

It can be argued that Holland gets his fees directly from Pawley, therefore doesn't have to register. Likewise Franklin Roosevelt, Jr., might have argued that he got his fees through Charles Patrick Clark, lobbyist for both Franco and Trujillo. However, Roosevelt registered.

IKE'S BROTHER-IN-LAW

The most highly connected of all Americans in Trujillo-land is Ike's brother-in-law, Col. Gordon Moore. The colonel, now retired from the Army, is a genial soul, frequently at the White House. His appearances in the background of the President's nationwide telecasts haven's hurt his prestige in Washington where much depends on influence.

Colonel Moore has made several trips to the tightly controlled island of the Caribbean; has sometimes taken his family along. During one of these trips he negotiated a highly complicated sugar deal with the American-owned but Trujillo-tolerated South Puerto Rican Sugar Co.

This involved 7,000 tons of "green sugar" which Moore got shipped into the United States of America as hog feed. This classification meant first, that the sugar was never counted against the Dominican quota.

Second, it passed through customs with a cheaper tariff rate. As blackstrap molasses for cattle or hog feed it paid a duty of 1.5 cents per hundred pounds instead of 66.5 cents per hundred charged for green sugar. Later the United States Customs Bureau reversed itself and demanded the 66.5-cent rate on Moore's shipment.

Later a considerate Congress passed a law exempting "green sugar" from the high tariff rate, though too late to affect Moore's shipment.

But even more considerate friends in Congress then introduced a bill which would give Colonel Moore's shipment special treatment. It would make the lower tariff rate retroactive to June 30, 1955. By happy coincidence this would apply chiefly to Colonel Moore, since his 7,000-ton import is the only major shipment affected.

* * * * *

NOTE.—Those connected with the green-sugar deal claim Moore merely acted as a broker, that the purchase was made by the Robert G. Lynch Co. However, Lynch is hired by Moore and occupies the same offices with him.

DOMINICAN-GO-ROUND

Representative BROOKS HAYS, of Arkansas, today begins closed-door hearings on the bloody operations of the bloody dictator of the Dominican Republic. Here are some tips he might probe regarding a country founded on terror which has had the blessing of certain high-placed Americans. The dictator himself is suave, charming, a master showman. He has beaten his daughter Angeleta so badly that she has required plastic surgery. His spies are everywhere. John Frank, the former FBI man now indicted by a Federal grand jury, wired Trujillo's palace for sound so the dictator could listen to every word spoken in every room.

General Espaillat, former Dominican Consul in New York, now on the lam, is the man the State Department wants returned to the United States for questioning in the murder of Columbia University Prof. Jesus de Galindez. Espaillat is one of the rising young men among Trujillo's conspirators.

The seven Dominicans who robbed the Royal Bank of Canada in Santiago could tell you how Espaillat operates—if they were alive to tell the story. Manuel de Moya, who has arrived here to become Ambassador to the United States, but whom the State Department doesn't want as Ambassador, has handled many of Trujillo's large investments in the United States. His pay is high and he earns it. Hector Trujillo, brother of the dictator, is official President of the Dominican Republic. His title is a paper one. He lives with his mother, is supposed to be very religious, has a 16-year acquaintance with the daughter of an ex-Marine sergeant who helps run the island. Rafael Trujillo, son of the dictator, is chief of staff of the air force, a handsome, conceited, unattractive playboy, a great disappointment to his father, but great admirer of the love-making of Rubirosa.

These are a few of the weird cast of characters who have made the Dominican so-called republic one of the most terror-ridden places in the world, and have extended part of their terror to the United States.

Protection for Eggs and the Human Brain

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. ROBERTS. Mr. Speaker, as chairman of the Special Subcommittee on Traffic Safety, I would like to state that while it is evident there are many, many factors which contribute to automobile accidents, it is also becoming evident through the subcommittee's investigation that a safe automobile can and must be manufactured.

The consumer knows that it is impossible for him to buy a car which does not have accidents but it should be possible for him to buy a car that is as safe as possible when in an accident. The fact remains that it is the interior and exterior design of the automobile which determines whether or not the occupant will be dead, severly injured, or not so severely injured as a result of the accident.

Under unanimous consent, I insert in the CONGRESSIONAL RECORD a statement entitled "Operation Egg Drop." An egg was dropped 115 feet, traveled at an estimated 55 miles an hour and did not break when it landed upon a newly developed padding. This is padding which can and should be used on the dash boards in automobiles. I can see no reason why such padding should not be a feature in the manufacture of every single car when science has shown that this new material can so strikingly reduce brain injury in an accident.

I personally hope that the automobile industry will act voluntarily, but if it does not, it will be mandatory upon Congress to act in behalf of all the people. This Nation is suffering an epidemic and we public servants cannot stand by idly watching 40,000 persons die on the Nation's highways when we are aware of injury prevention steps which can be taken to help save these very lives:

OPERATION EGG DROP

A joint project by the Colorado State Medical Society and the Denver Police Department demonstrated once again that designing the automobile for safety can bring rewards in the form of reduction in deaths and injuries. On the afternoon of Monday, May 13, 1957, these two organizations cooperated in "Operation Egg Drop," in which 5 fresh hen eggs were dropped from a height of 115 feet in the rotunda of the State capitol at Denver, down upon sheets of United States Rubber "Ensolite" (Type AL).

Mr. Hugh De Haven in Buffalo in 1946 first carried out these tests and demonstrated with the materials then available that excellent protection for the eggs (and the human

head) could be rather easily achieved. Over 10 years elapsed before practical application of these findings was made in the motorcars of America, and then, not as standard equipment.

The sheets of padding were only 1⅛ inches. While some skill was involved in dropping the eggs from this height (and under the circumstances involved) with accuracy upon the target, the eggs hit the mark each time. The bounces were 30 inches, 40 inches, 5 feet and 8 feet respectively on the basis of observation by several people. One of the eggs broke because it landed on the crack between the two adjacent sheets of padding. In the case of the four eggs that survived, the yolk in three of them was not broken, showing the remarkable energy absorption properties of this padding material. The other egg which did not break showed some darkening which indicated that the yolk had broken

The significance of this is that when the human head strikes an object the force may not be enough to fracture the skull, but brain damage may result unless the energy absorption is particularly efficient That the yolk of these three eggs had survived indicates that in comparable experiment with the human head, the brain likely would not be damaged. The diameter of the human skull is 7½ inches with a radius of about 3¾ inches, and the radius of these eggs which were dropped was about 1 inch. It indicates that a pad of this material 4 inches thick would prevent a skull fracture in a drop of this distance, 115 feet. It indicates further that brain damage would rarely occur. This has been shown experimentally by studies elsewhere in which plastic replicas of the human head were hurled by catapult at a speed of 70 miles an hour against heavy steel plates without injury because a pad of 4 inches had been interposed. The eggs in our demonstration were calculated to have reached a speed of over 55 miles per hour.

These studies were undertaken by the Colorado State Medical Society because many of its members have become convinced that injury prevention is equally important with, and probably more effective than, accident prevention. This demonstration proved, we think, that the human head can be protected from dangerous and fatal injuries in automobile crashes if pads 1 to 2 inches thick are placed on those spots within the automobile where the serious blows so often occur; that is, the instrument panel, the corner posts, the door frame, the windshield header, the roof, and the steering-wheel column.

James T. Fain: In Memoriam

EXTENSION OF REMARKS
OF
HON. GEORGE A. SHUFORD
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. SHUFORD. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an editorial of the Times-News, of Hendersonville, N. C., written in memory of Hon. James T. Fain, its former editor. This editorial expresses the sentiments of all who knew him, but I wish to add my personal tribute to his life.

Mr. Fain was a dedicated newspaperman. He might have been what could be called an old-fashioned editor, but only in that he possessed the old-fashioned virtues of his profession. He was tireless in his search for the truth, and throughout this search he maintained an intellectual honesty. He won the respect of those in his profession, as well as the people of North Carolina. Mr. Fain's personal integrity and devotion to duty were admired by all of us, and we sadly note his passing.

The editorial follows:

IN MEMORIAM

(By Noah Hollowell, editor of the Tribune)

The pen of Editor James T. Fain has run dry. His pencil has worn down to a stub. The clatter of his typewriter has hushed. The spirit of a fine citizen and courageous editor who loved his community has flown. A pall of gloom seems to hang over both the flat-top and roller-top desks in his office, but something of his fine spirit lives on.

When I heard of the death of Mr. Fain I went to the Times-News office prepared to render some service. I offered this and the proffer was received in the spirit given and "Jimmy" Fain said he had been thinking that it would be nice for me to write the editorial for today. It was a bigger task than I sought and an unexpected honor to write of a passing contemporary I very much admired.

Too often feeling has been tense among contemporaries, but relations between us for many years have always been so pleasant that this assignment is easy and an honor. The circumstances of our work might be related briefly in order to prepare you for my admiration of Mr. Fain, with whom my relations have been fine since he entered the newspaper field here something like a quarter of a century ago. We ran our newspapers less than a block apart. Relations were of the best. I sold him and his associates the Hendersonville News in 1927. About 8 years thereafter I was employed for about 3 years by the Times-News. Our relations were good and have continued so. Our newspapers have been on the best of working relations. When either needed a service or material possessed by the other, we didn't hesitate to ask for it. This situation with frequent contacts served to make life richer for both of us. Thereby we were enabled to know the spirits and motives of each other to best advantage.

A fine citizen has passed. He was a Christian of the highest order and service, and was loyal not only to his own church but to the better institutions of his community.

Mr. Fain was the head of a very, very fine family and each has contributed in various ways to its uplift and ongoing.

Editor Fain was a knowing man. He was a good student of State and National affairs. His duties led him to read and learn daily of these things. He wrote largely on a State and National rather than a local or provincial slant, yet he was not neglectful of local needs and situations.

Mr. Fain was unusually courageous. He spoke his convictions boldly when others would have been more timorous than he. He spoke when he knew it might not be good for his business, but he had honest convictions and he treated them honorably. He didn't mind lashing out at the high and the low if he thought circumstances warranted such, and he had many readers who cheered him on.

And so he wrote year in and year out. In late years his physical strength waned but a fighting spirit took him to his desk often when he most likely was not much in a working mood.

A good man, a Christian man, a community-loving man, and a successful newspaperman has written "30" to his career.

Thompson Rounds Out 25th Year

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. THORNBERRY. Mr. Speaker, yesterday was the 25th anniversary of Gen. Ernest O. Thompson's distinguished public service to the people not only of Texas but to our country and the world as a member of the railroad commission of Texas, among the many responsibilities of which is the important one of oil and gas regulation.

May I submit here an article by Mr. Max B. Skelton, Associated Press staff, apearing Sunday, June 2, 1957, in the American-Statesman, Austin, Tex., telling of General Thompson's great public service and of the fine tribute paid him by our Speaker, the Honorable SAM RAYBURN. General Thompson has a distinguished record not only in the service of his State and Nation in time of peace, but in his country's military service during time of war. To know General Thompson is to know a splendid gentleman and a great public official. All of us are proud of our fellow Texan:

THOMPSON ROUNDS OUT 25TH YEAR

(By MAX B. SKELTON)

The man House Speaker SAM RAYBURN says knows more about oil than any other man in the world observes on Tuesday his 25th anniversary as a member of the Texas Oil and Gas Regulatory Commission.

On June 4, 1932, Gov. Ross K. Sterling appointed Ernest O. Thompson, a redheaded fighting mayor of Amarillo, to the Texas Railroad Commission.

Thompson intended to stay only a short while, but one challenge and fight led to another. Today he holds an international reputation as an authority on oil- and gas-conservation statutes. His quick wit and sharp tongue are known to oil circles around the world.

In 25 years he has seen his State's oil proration statutes become models that have been studied and followed by many other States and several foreign countries.

Oil proration was brandnew when Thompson accepted the Sterling appointment. A few days after accepting, he took over a tough job in the fabulous east Texas oil field when the Supreme Court held that the National Guard could not be used in efforts to halt the flow of "hot oil."

GUARD CALLED

Discovery of the field in late 1930 led to the commission's receiving proration regulatory authority in 1931. Sterling had called out the guard after flush production from the huge field toppled crude-oil prices from $1.10 to from 5 to 10 cents a barrel.

Thompson won the battle of east Texas and stopped the flow of oil that was being produced in violation of the new proration statutes. By 1934 prices were relatively stable at about 95 cents a barrel. Procedures designed during the east Texas crisis to control the field's reservoir pressure have since been adapted to hundreds of other fields in the State.

At Thompson's urging, the State legislature in late 1932 authorized the commission to control crude output by limiting production to market demand.

The 65-year-old Thompson has seen the State's production grow from 740,000 barrels

a day in 1932 to a current rate that exceeds 7 million barrels daily.

A champion of state regulation as opposed to Federal control, Thompson probably holds a record for testimony on oil and gas matters before congressional committees.

RAYBURN, in an unprecedented procedure, earlier this year introduced Thompson before the House Interstate and Foreign Commerce Committee as the individual who "knows more about oil than any other man in the world."

Although frequently a critic of domestic companies which import foreign oil, Thompson has defended vigorously the commission's across-the-board proration policy that permits all producers, large and small, to receive a fair share of authorized production.

Last week the Texas Independent Producers and Royalty Owners Association (TIPRO) presented Thompson its annual "recognition award."

"The independent has thrived in Texas as nowhere else in large part because of the conservation measures inspired and defended by General Thompson," said the outgoing TIPRO president, A. E. Herrmann of Amarillo. "Texas is a stronghold of the small independent, largely because of his insistence upon equal treatment for all."

SECOND LARGEST

Thompson, a lieutenant general in the National Guard, told the TIPRO convention public service has been a source of great and lasting inner satisfaction.

Only one man has served longer on the commission than Thompson. A tenure of 26 years and 17 days for the late Allison Mayfield ended on January 23, 1923. Thompson can break this record on June 21, 1958.

"I'm not interested in breaking anybody's record but I'm willing to serve," Thompson said.

His fourth 6-year term expires January 1, 1961. He announced his candidacy for a third term in 1948 by releasing a statement of only 45 words.

After disposing of the formalities, Thompson concluded the statement by saying:

"I am thoroughly familiar with the work of the railroad commission and enjoy it."

Six Hundred Thousand Dollar Question: Do British Need Our Propaganda?

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. SHEEHAN. Mr. Speaker, during the past several weeks both the House and the Senate have considered the USIA appropriation bill and many instances have already been pointed out suggesting ways to improve this program.

Mr. Ernie Hill, a reporter for the Chicago Daily News foreign service, in his article of June 3, points out the attitude of the British people toward our attempt to sell the English on our American way of life.

Mr. Hill's article is as follows:

SIX HUNDRED THOUSAND DOLLAR QUESTION: DO BRITISH NEED OUR PROPAGANDA?—WE'RE WASTING OUR TIME, MOST IN LONDON AGREE

(By Ernie Hill)

LONDON.—The $1-million-a-year American information program in Britain is being hacked down to $600,000.

And the consensus among British and Americans alike is that another $400,000 might come off without our suffering any dire consequences or anybody missing it.

The pitch seems to be that even if President Eisenhower gets cuts restored to the budget, less will be spent here anyhow.

The British, it is felt, just don't need as much propagandizing as the uncommitted peoples of the Middle East, Asia, and Africa.

The United States Information Agency operation in England is regarded by many as a waste of money.

This is true because the British speak the language, read American press association reports in their papers, see American movies, read American magazines and books and usually have a relative or two in the United States writing frequent letters back.

In fact, many Britons feel resentful that we spend so much trying to sell ourselves to them when they often know as much about us as we know about ourselves.

W. Bradley Connors, public affairs officer, who runs the program, has fired 30 British employees. He is closing the Manchester and Edinburgh USIA offices.

He has marked eight American staff members for transfer to other parts of the world.

There can be no question that his small empire of high-salaried staff members would have an excellent chance to contribute more to the information cause if stationed in the Middle East, Asia, or Africa.

"I have decided tentatively," he said, "to cancel $60,000 a year worth of subscriptions to the European editions of the New York Times and Herald Tribune."

These newspapers are now presented daily with the compliments of the American taxpayer to all members of the House of Commons, House of Lords, foreign office employees, colonial office, and many libraries.

There has been feeling both here and in the United States that taxpayer Joe Blow might be just as happy if British Government officials bought their own newspapers.

The London USIA staff has included at least nine full-time staff members drawing upward of $12,000 per year, counting allowances, which comprises a pretty high-powered team.

I asked six Fleet Street newsmen whether they or their newspapers got much information out of the USIA.

They said they occasionally got a little free bourbon at cocktail parties but little hard news.

"The trouble is," said one of them, "that any time there is a really big issue—like the reign of the late Senator Joseph McCarthy or Secretary of State Dulles' foot-in-the-mouth diplomacy—the USIA becomes as silent as the tomb. It has to be."

Connors proposes to abandon the daily mimeographed news sheets that are distributed to newspapers playing up the brighter side of official Washington pronouncements. They generally duplicate news agency reports with all of the acrimony squeezed out.

The film lending library is to be abolished. Cultural reports on the United States are to be made quarterly instead of monthly.

The USIA's most effective activity—the presentation on television of a monthly "report from America"—also may go down the drain.

It is a documentary presented by the British Broadcasting Corp. and USIA dealing with current events such as the success of desegregation in Louisville schools and Pittsburgh's conquest of smog, soot, and factory smoke.

Many Americans feel that all we need here is Connors, plus one assistant, and two secretaries.

Connors lines up such events as meetings with Ambassador John Hay Whitney and briefing sessions with Harold Stassen, President Eisenhower's disarmament representative.

Announcement of a 40-percent cutback in USIA spending has failed to arouse the British press to a single protest.

Some very nice guys and their wives are going to be missed from London's diplomatic cocktail circuit but it won't make much difference in the average Englishman's attitude toward the United States.

A Judge Repents

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. LANHAM. Mr. Speaker, some 10 years ago I made a statement on the floor of the House condemning Judge Samuel A. Weiss, of Pennsylvania, for refusing to send James Moreland, a Negro, back to Georgia to finish a prison sentence there for assault with intent to kill. In the Atlanta Constitution for Friday, May 31, there appeared a story quoting Judge Weiss as admitting that he made a mistake in refusing to return Moreland to Georgia because of the fact that Moreland had amassed an impressive criminal record in Pennsylvania since the judge had refused to return him to Georgia.

In view of Judge Weiss' frank admission that he was wrong in his refusal to let Moreland be carried back to Georgia to serve his prison sentence, I must modify my opinion of Judge Weiss and say that he at least has the grace to admit his error and repent in "sackcloth and ashes."

With my own remarks, I submit the article I have just referred to:

JUDGE JAILS FUGITIVE HE ONCE SPARED

An embarrassed Pennsylvania judge who 10 years ago believed a Negro convicted of theft rather than Georgia's highest officials, Thursday had to eat humble pie as he sentenced the man he once had refused to extradite.

Judge Samuel A. Weiss, who back in 1947 refused to send James Moreland back to Georgia to finish a prison sentence here, imposed a 3½-to-7-year term on the Georgia escapee for assault with intent to kill after a knifing attack.

When he imposed the sentence, Weiss reminded Moreland that he had blocked his extradition 10 years ago.

RECALLS CLEMENCY

"Do you remember me?" the jurist asked Moreland. "Once before you stood before me as you are doing today. I wrote a 51-page opinion giving you a new chance and denying your extradition to Georgia."

Moreland, in 1947, had claimed that he had been sentenced to 12 years for a $20 burglary and had sworn that he had seen Negroes beaten, shot, and burned alive in Georgia chain gangs.

Georgia officials at the time refused to enter any court contest with the Negro, other than filing the usual extradition papers.

J. B. Hatchett, then assistant director of the State department of corrections, said at that time that Georgia was not on trial in the case, but the convicted man was.

HIT BY LANHAM

Congressman HENDERSON LANHAM said on the floor of Congress after Judge Weiss refused to extradite Moreland:

"If the State of Pennsylvania wants to harbor all the burglars, murderers, and rapists of Georgia, white and black, that is perfectly all right with me, but when this judge, or so-called judge, makes a statement that is absolutely without foundation in fact, I cannot refrain from speaking. I say that he disgraces the judicial robes he wears and is unworthy of the position he holds.

"The statement that James Moreland would suffer death by torture, lynching, or murder upon his return to Georgia, is entirely without foundation."

LONG RECORD

Georgia records show that Moreland, alias Jacob Head, first ran afoul of the law in 1938 after a burglary in Butts County. He was sentenced then to 3 to 5 years in prison, but was paroled after 3 months to take a job in Ohio. While in Ohio, he was sentenced to 2 to 30 years on conviction in a case of assault to rob and assault to kill. He served his minimum time there.

His Georgia parole was revoked and he was returned to this State. He was discharged in 1944, but was caught and convicted on 4 separate burglary charges in 1946 and given 3 years in each case. On May 17, 1946, he escaped from a hospital at the Grady County prison camp.

Since the kindhearted Pennsylvania judge refused to extradite him in 1947, Moreland has served an 18-month workhouse term in an assault and battery case, 11 to 23 months on a similar charge, a 12-month probationary term in an assault case, and 11½ to 23 months in a burglary case.

Rise of Russian Naval Power Should Cause Concern in West

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item from the San Diego Evening Tribune of May 23, 1957:

RISE OF RUSSIAN NAVAL POWER SHOULD CAUSE CONCERN IN WEST

One of the gravest oversights the free world could make would be to ignore or underestimate the rise of Russian seapower.

Yet, in the view of some military authorities, large sections of the non-Communist world are doing just that.

The disclaimer is sometimes heard, "Why do we need a Navy when Russia doesn't have one?"

Or, acknowledging the existence of a Red navy, others will pooh-pooh its effectiveness with the equally invalid statement that the Soviets have no naval tradition to draw upon.

Both of these attitudes are based on false assumptions—dangerous false assumptions.

Col. J. D. Hittle, writing in the Marine Corps Gazette, has performed a notable and needed service in dispelling these illusions.

Hittle calls the emergence of Russia as one of the great seapowers probably "the most fundamental and potentially dangerous Soviet development since World War II."

Continuing, he says, "Viewed in terms of its strategic implications, both with respect to Russian policy and United States national security, the rise of Russian seapower may well be the most important single development in the vast and continuing east-west conflict."

The world seapower picture has changed radically in just 10 years.

A decade ago, the United States easily was the world's first ranking seapower. Britain was second. Russia was seventh.

Today, the United States still is first. Russia numerically is second. England is third.

Russia's in-being naval strength is impressive in its own right. But of even greater significance is the rapid rate at which the present strength is being augmented. For example, the Soviet building program in cruisers and destroyers is larger than that of the combined Western navies, Hittle says.

In another important category—submarines—Russia has an estimated 450 underwater craft. This is more than triple the submarine strength of the United States Navy. And Hittle adds this ominous comment:

"There is much to ponder in the fact that the present Russian submarine fleet, the world's largest, is eight times as large as Germany's at the start of World War II."

Naval tradition is an intangible, but prime, component of a nation's naval might. England has it. The United States has it.

And, despite historical examples of debacles, disasters, and downright inefficiency, so does Russia, although not in the same measure as that of the English-speaking nations.

But it is perilous to dismiss Russia's seafaring history as inconsequential. Hittle quotes the naval historian, Fred T. Jane, on the early origin of the Russian navy:

"A century before Alfred built the first English warships, Russians had fought desperate sea fights, and a thousands years ago the foremost sailors of the time were Russians."

What are we to make of Russia's naval buildup?

Considering the emphasis on certain types of vessels—cruisers, destroyers, and submarines, with virtually no construction of carriers—the Red navy appears to have two major roles:

Destruction of enemy sea lanes and protecting the sea flank of land forces.

Such employment of naval forces appears peculiarly appropriate to the requirements of possible Russian aggression in the Baltic, the Black Sea, and along the Western Pacific littoral.

Russia's deficiencies—notably in carriers and amphibious forces—may be calculated.

Whatever the design, however, as long as the United States possesses balanced fleets based on strong carrier and landing forces, the balance of naval power should rest with this country.

But there can be no complacency or relaxing our guard.

Agricultural Trade Development and Assistance Act of 1954

SPEECH
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6974) to extend the Agricultural Trade Development and Assistance Act of 1954, and for other purposes.

Mr. COOLEY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I just want to say again it is unfortunate that the gentleman from Mississippi [Mr. WHITTEN] did not bring this amendment to the attention of our committee, when we could very thoroughly have considered it. I hope the Committee will vote it down because, as the gentleman from Texas [Mr. POAGE] pointed out, we do not know just what effect it will have on the program. I ask the House to vote down the Whitten amendment.

Mr. Chairman, I ask unanimous consent that all debate on the pending amendment and all amendments thereto do now close.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Ike Needs Nation's Support in His Striving for Peace

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. COLLIER. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the commentary of John S. Knight, editor of the Chicago Daily News, which appeared in his column, the Editor's Notebook, under date of Saturday, June 1, 1957:

THE EDITOR'S NOTEBOOK: IKE NEEDS NATION'S SUPPORT IN HIS STRIVING FOR PEACE

The observance of Memorial Day has a poignant meaning to those who have lost their dear ones in our Nation's defense.

The futility of war, the senseless sacrifice of our country's youth, the victories that fail to bring permanent peace—these realizations must weigh heavily upon the collective conscience of world statesmen.

Wars of the future will be even more fearsome, with the intercontinental ballistic missile aprpoaching an advanced stage of development.

There is no defense against this most terrible of all weapons. It will change all traditional concepts of the science of warfare.

Battleships, vast armies, submarines and jet aircraft will no longer be able to protect any nation's cities from the death and destruction that can be visited upon them by a missile attack.

It is appropriate, therefore, to give heed to President Eisenhower's words on disarmament as stated at his news conference on May 22.

"It seems to me," said the President, "that the more any intelligent man thinks about the possibilities of war today, the more he should understand you have got to work on this business of disarmament. * * * I think our first concern should be making certain that we are not ourselves being recalcitrant, we are not being picayunish about the thing."

The President's reference was to the discussions now being conducted in London, where the Russians have proposed:

1. That eastern Siberia, Alaska, the Western part of the United States and much of

Europe should be opened to aerial inspection.

2. Substantial cuts in the armed forces of Russia, Red China, Great Britain, and France.

3. Public renouncement of the use in war of nuclear weapons, including rocket missiles. Commencement of negotiations leading toward the abandonment of nuclear-weapons stockpiles.

4. A cut in defense budgets of 15 percent.

RUSSIA'S SINCERITY ALWAYS QUESTIONED

The initial reaction to these proposals ranged from the characteristic optimism expressed by Harold E. Stassen, the President's disarmament representative, to growls from Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, to the effect that the Russians cannot be trusted.

On the record, Admiral Radford is right. The Russians have broken promises, violated pledges, ignored treaties.

There is no certainty that the Russians are sincere. It is entirely likely that they are merely seeking temporary relief from the huge armament burden.

Nor has any supportable evidence been introduced to convince a skeptical world that Russia has abandoned her plans for global conquest.

Nevertheless, as our President has said: "We have got to reach honest understandings on these things, in which each can have confidence which is fair, and the world can see is fair. * * * We ought to have an open mind, and make it possible for others—if they are reasonable, logical men—to meet us halfway, so that we can make these agreements."

PEACEFUL AIM OF UNITED STATES MADE CLEAR TO WORLD

The difficulty in the past has been that any proposal advanced by Russia, no matter how reasonably it was couched, was immediately greeted in this country with scorn and derision.

This was the shrill "diplomacy" of Truman and Acheson, the curious paradox of constantly preaching peace while rejecting out of hand even the tiniest peaceful utterance from Moscow.

With Eisenhower, there can be no doubt of his sincerity and earnestness in pursuing the quest for peace. At the beginning of his first term, the President, in two magnificent addresses before the American Society of Newspaper Editors, and the United Nations, made it abundantly clear that failure of the world to disarm would spell its own destruction.

Again, at Geneva, the President effectively shaped world opinion to a new confidence in the peaceful aspirations of the United States.

His latest efforts to advance disarmament are in the same vein—consistent, realistic, and sincere.

SOVIET TRICKERY ADDS A HANDICAP

It may well be, as Admiral Radford and the other skeptics are saying, that the Russians can't be trusted.

Judging from the past, there is certainly no reason to believe that they can be trusted.

Should we conclude, therefore, that the gigantic arms race between the United States and Russia must go rushing madly on, and that war's terrible carnage and destruction are inevitable?

Or is it better to say, as Eisenhower is doing, that "we must * * * keep our minds open and keep exploring every field—every facet of this great field—to see if something can't be done?"

It seems to me that the choice is clear.

Obviously, we must not be so naive as to accept the Russian proposals on blind faith.

Soviet guile being what it is, they are probably booby-trapped to the full extent of the Kremlin's ingenuity.

And, personally, I would feel more comfortable if someone other than the idealistic but often misguided Harold Stassen were representing our country in these negotiations.

Still, there can be no serious quarrel with the view that the United States must explore every avenue to peace, even though we have traveled the same approaches before to a dead-end street.

THE CHOICE IS CLEAR: PEACE OR DESTRUCTION

Our choice is between a crushing and accelerating arms race with Russia, with war as its climax, which can only result in the destruction of much of the civilized world, and a sincere, persistent, and courageous effort to avert this catastrophe by ceaseless negotiations with the Soviet Union.

Admittedly, this is an oversimplification of the problem.

The discussions may get nowhere.

As in the past, agreements can prove meaningless.

We risk being tricked. But the hazards of negotiation are as nothing compared to the terrible consequences of failure to reach a mutually tolerable understanding with the Soviets.

The awful and futile tragedy of war is fresh in our minds from the honors we have paid on Memorial Day to the brave defenders of our land. Let us resolve that our youth must never be sacrificed again by the failure of our statesmen to exhaust all the resources of reason and humanity in their quest for peace.

JOHN S. KNIGHT.

Mr. Speaker, may I add that another global conflict might well result in a tragic end to modern civilization as we know it today. It is difficult to imagine the havoc, misery, and devastation of the next war. God forbid that the world will ever have to endure the suffering that it will impose upon humanity. In the face of the race in nuclear armament certainly there is nothing more important to this and future generations of the peoples of all nations than peace. Disarmament appears to be the solution to the impending destruction of war. It must be achieved in good faith and with the understanding of the peoples of all nations and not just their leaders. Achieving this final peace is not something that can be accomplished by treaties alone which rarely outlive those who create them and so frequently are not worth the paper upon which they are written. Yet we must all hope and pray that there is an answer and that it is the task of the peoples of all nations to seek and find it.

A Dangerous Thing

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. ABBITT. Mr. Speaker, I wish to insert herewith an editorial entitled "A Dangerous Thing," which appeared in the June 4 edition of the Lynchburg News, of Lynchburg, Va.

I feel that the comments contained in the editorial are extremely pertinent to the situation we have before us this week with reference to the civil-rights bill. The editorial follows:

A DANGEROUS THING

John Kasper, the notorious racial agitator and rabble rouser, has lost his appeal to a United States circuit court from conviction by a Federal judge of contempt of court, and if his appeal to the Supreme Court is disallowed, as he has every reason to fear, he will have to serve his time in prison.

There's no sympathy here for the man, and little, we believe, among the people of the South generally. He is a promoter of race hatred. He is a nuisance and an evil. He is better off behind bars.

There is, however, cause for apprehension and it is, we believe, widespread in the South and should be in other sections. Kasper was tried before a single judge appointed from Washington for what was in reality, whatever the legal fiction, a crime, and sentenced without benefit of jury as guaranteed by the supreme law of the land.

It is a dangerous thing that has happened, a threat to the constitutional rights of all of us. If a Federal court can make a criminal case into a civil case by an injunction and jail 1 man for 1 offense it can do the same thing in the case of a criminal case of any kind. If constitutional guaranties can be swept away by pretext in the case of one man they can be swept away in others. Not alone in the South which is immediately affected but in all sections of the country where the threat is potential there ought to be protest and a demand for future security against judicial tyranny.

Living on a Postal Employee's Pay

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the Members the following letter which I received several months ago from one of my constituents who is an employee of the Post Office Department, stationed in West Virginia. This letter, I feel, vividly illustrates the difficult problems encountered by our postal employees, the austere and barren existence demanded of their families, as these hard-working public servants struggle to make ends meet on their present inadequate salaries.

At the same time that our colleagues read what my constituent has written, I should like to remind them, Mr. Speaker, that discharge petition No. 2 on House Resolution 249 lies on the Speaker's desk awaiting their signatures to provide cost-of-living pay increases for postal and other deserving Federal employees:

BLUEFIELD, W. VA., *February 16, 1957.*

Mrs. ELIZABETH KEE,
Member of Congress, West Virginia Fifth District, New House Office Building, Washington, D. C.

DEAR MRS. KEE: I am writing you in connection with proposed, current postal legislation. I shall try to tell you briefly why it is so necessary that postal employees receive a substantial pay increase. I will mention only my own personal problems. I believe

they differ only in slight detail from thousands of other employees.

My take-home pay after all deductions, including $10 for savings bonds, is $141.33. On this I must maintain my home and two children in school. Fortunately, my home is paid for.

For the past 2 years I have been unable to save anything at all except in savings bonds. I had to cash some of these to pay for a paving assessment. Our 1941 model washing machine is making strange noises. Our stove and refrigerator were purchased the same year. I haven't owned a car since 1945. Doctors' and dentists' bills that I used to pay promptly now have to be paid on the installment plan in very small payments.

I have spent all my vacations at home the past several years—but not from choice. I would love to be able to make just a short trip somewhere to be able to show my wife what some other place besides Bluefield looks like.

My son, a junior in Beaver High School, has an I. Q. of 149. I should like to be of some help in getting him a higher education, but as matters stand now my help will be of little value.

The Postmaster General's 1955 Annual Report stated that during the past 2 years productivity had increased in excess of 10 percent. There has been no decrease, but a constant effort on the part of both the Department and employees to improve it. The U. S. News & World Report, on page 101 of its January 18 issue, lists 36 American industries where the average worker is now paid more than $5,000 per year. Four thousand seven hundred and ten dollars is the highest annual wage a letter carrier or postal clerk can earn and this only after many years of service.

Thanking you for your past support, I remain,

Sincerely yours,

OTHO DIXON.

Agricultural Trade Development and Assistance Act of 1954

SPEECH
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6974) to extend the Agricultural Trade Development and Assistance Act of 1954, and for other purposes.

The CHAIRMAN. Does the gentleman from North Carolina [Mr. COOLEY] desire to be heard?

Mr. COOLEY. Yes, Mr. Chairman; I do want to be heard very briefly.

Mr. Chairman, I think the Chair is aware of the fact that this legislation was originally reported by the House Committee on Agriculture. It came before the House some time in June or July of 1954. On July 10, 1954, it became a law. The bill is not in any sense of the word an appropriation bill. The original bill only authorized the President of the United States to negotiate certain contracts—sale contracts, if you please, under which we sought to sell or to barter or to give away these tremendous agricultural surpluses. The bill we now have before us extends that law and only increases the limitation. You cannot call it an appropriation. It merely changes one limitation from $3 billion to $4 billion and another from $500 million to $800 million limitations on the President's authority under this act. It authorizes the President to negotiate in a certain fashion and with reference to certain uses, the ultimate aim being two-fold. First, to rid ourselves of these surplus commodities, and second, to improve the internal economies of other countries, friendly nations with which we are dealing. It does not amount to any appropriation at all, and I submit that the point of order should be overruled. But, before concluding, I would like to say that when I have concluded, I intend to move that the Committee do rise for the one purpose, and that is to permit our committee to go before the Committee on Rules in the hope that we can obtain a rule waiving points of order. Assuming that we do secure a rule waiving points of order, the point of order raised by the gentleman from New York will prove to be only dilatory and will delay final action on the pending bill.

Mr. ROONEY. Mr. Chairman, a point of order. I do not believe the distinguished gentleman from North Carolina has the right at this time, in arguing a point of order, to refer to the gentleman from New York in the fashion that he does.

Mr. COOLEY. I am arguing the parliamentary situation. If it pleases the Chair, I certainly do not mean to reflect upon the gentleman from New York. The gentleman from New York has a perfect right to raise the point of order that he has. I am a little bit apprehensive that the point of order may be sustained, if the Chair is called upon to rule on it. But, I think it would be very unfortunate for us to delay final action on the bill, and in the circumstances we have no other alternative other than to move that the Committee do now rise, and so, Mr. Chairman, I make that motion.

Military Air Transport Service

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. MAHON. Mr. Speaker, on Wednesday, May 29, in connection with my remarks in the body of the RECORD, I inserted a statement in regard to the Military Air Transport Service. For some reason or other, the Government Printing Office failed to print my references to MATS in the May 29 RECORD. I am told that in the permanent copy of the RECORD proper corrections will be made and my statement will appear. Having received unanimous consent to do so, I wish to place in the RECORD at this time the statement which was omitted from the RECORD of the proceedings of May 29.

MILITARY AIR TRANSPORT SERVICE

Mr. Chairman, several hundred pages of the hearings were devoted to a consideration of the Military Air Transport Service, better known as MATS. The civil air carriers want to get a proper proportion of the business of the Department of Defense. For this attitude the civil air carriers are to be commended. This is a free-enterprise country, and we like to see free enterprise carry the load in the defense program to the extent that such a course may be proper and practical and in keeping with the best interests of national defense.

MATS is a terrifically big organization. There must be no disposition toward empire building. That course must be repelled, and the MATS program must not be permitted to mushroom beyond proper limits.

The committee has discussed all of the major problems involving MATS with the Secretary of the Air Force and with the big and little commercial air carriers of the Nation. I think our studies and investigations have been helpful. I would like to serve notice on the Department of Defense that the committee expects to continue to keep the MATS program under close observation with the hope that commercial air carriers can receive as much consideration as may be desirable in the transportation of personnel and cargo. We realize that MATS must be a large organization by reason of requirements which would be instantaneous in the event of war, but we do not want this program to get out of hand.

Last year we put quite a statement in the committee report on the defense bill in regard to MATS. We did not think it necessary to repeat the language in the report this year, but our concern and interest in this field have not diminished. I trust that the commercial air carriers and military officials will be able to work out an arrangement which will be reasonably fair to business, the Department of Defense, and the taxpayer.

Resolution Urging Grants of Money to Flood-Stricken Areas

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I should like to include enrolled house concurrent resolution 550, which was adopted by the Oklahoma State House of Representatives of the 26th Legislature on May 22, 1957, and by the Oklahoma State Senate of the 26th Legislature on May 23, 1957:

Enrolled House Concurrent Resolution 550

Concurrent resolution memorializing Congress to make direct grants of money to heads of flood-stricken city and rural households for the repair and refurnishing of flood-damaged homes; further urging that farmers be granted the right to pasture livestock on lands set aside by the soil bank wherever other pasturelands have been made unsuitable by floodwaters

Whereas recent unprecedented rains have adversely affected large areas of the State of Oklahoma by causing heavy flooding of creeks and rivers to the detriment of the inhabitants of these areas; and

Whereas such floods have resulted in over $25 million worth of damages to property,

livestock and growing crops, in addition to the tragic loss of lives; and

Whereas thousands of householders have witnessed destruction and severe damage to their homes; and

Whereas many farmers have suffered a heavy blow upon their economic livelihood through th loss of crops, livestock, and pastureland; and

Whereas initial surveys reveal that these disaster victims are in need of immediate economic assistance in order to restore the ravages of the flood: Now, therefore, be it

Resolved by the House of Representatives of the 26th Oklahoma Legislature (the Senate concurring therein):

SECTION 1. That the 85th United States Congress, 1st session be hereby officially memorialized to enact legislation making direct grants of money up to, but not exceeding $500 to the head of each flood-stricken city and rural household for the repair and refurnishing of flood-damaged homes.

SEC. 2. That Congress be urged to grant to farmers in flood-stricken areas the authority to pasture livestock on lands which have been set aside for soil-bank purposes wherever other pasturelands have been made unsuitable by flood waters.

SEC. 3. That a duly authenticated copy of this resolution be forwarded to each member of the Oklahoma congressional delegation.

Adopted by the house of representatives the 22d day of May 1957.

B. E. HARKEY,
Speaker of the house of representatives.

Adopted by the senate the 23d day of May 1957.

DON BALDWIN,
President of the senate.

Merited Recognition for Rear Adm. Husband E. Kimmel

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, pivotal events in history have often been accompanied by such overwhelming consequences as to impair perspective at the time. Nevertheless, with the passage of years, they tend to assume due proportion and key figures in them to emerge in true light. One such event was the battle of Pearl Harbor on December 7, 1941, when important portions of the United States Pacific Fleet, of which Adm. Husband E. Kimmel was commander in chief, was attacked by Japanese naval forces and very seriously damaged.

Long a subject of heated controversy and repeated investigations, the part of Admiral Kimmel in events prior to Pearl Harbor are now better understood. Voluminous records and a number of scholarly books portray them in vivid detail, with the result that Admiral Kimmel has gained greatly in stature.

The latest event in his unfolding story is election as president of his class of the United States Naval Academy, where he graduated in 1904. Chosen by professional associates, who, by training and education, are the best qualified to judge his case on the basis of its merits, this choice is an honor of historical significance.

Formal announcement of Admiral Kimmel's election was made in the June 1957 issue of Shipmate, the United States Naval Academy Alumni monthly, which featured in its alumni notes an illuminating article by Vice Adm. John F. Shafroth, United States Navy, retired, president of the United States Naval Academy Alumni Association and a vice president of the Naval Historical Foundation.

The suggestion of Admiral Shafroth that the wartime rank held by Admiral Kimmel on December 7, 1941, should be restored to him merits serious consideration by Department of the Navy, the Department of Defense, and by the Congress. Such action would not cost the American taxpayer a single cent.

To make Admiral Shafroth's article available to the Nation at large, I quote it full text:

HUSBAND E. KIMMEL 1904

(By Vice Adm. John F. Shafroth, United States Navy, retired, 1908)

The choice of a man to be the president of his class is an honor and an indication of the esteem in which he is held by his classmates. The choice of Rear Adm. Husband E. Kimmel to be president of the Naval Academy class of 1904, has a significance far beyond that in the normal election of a class president.

For more than 15 years Rear Admiral Kimmel has endured "the slings and arrows of outrageous fortune" while many who served under his command and those upon whom he relied for advice and help have been promoted to ranks far higher than has been granted him by his Government.

Under the above circumstances his selection to be president of the Naval Academy, class of 1904, is a mark of trust and an affirmation of faith by those who have known him well for more than 50 years, and who, by their education and professional experience, are among those of our country's citizens best qualified to judge the events before, on, and after that tragic 7th day of December 1941.

The basing of the Pacific fleet at Pearl Harbor was a matter of policy determined by the highest authorities of our Government. In the determination of that policy Admiral Kimmel had no part.

Such a policy imposed upon the authorities in Washington the obligation to make sure that all things necessary for the protection of the Pearl Harbor base were provided and that the naval and military commanders in the Hawaiian Islands were furnished the most complete information available as to our national policy and information gleaned from Japanese sources as to their probable intentions.

The tense situation in the Atlantic made it impossible to furnish either the Asiatic or the Pacific fleet with all the things that were needed. The men urgently requested by Admiral Kimmel could not be furnished him; ships were detached from his command and ordered to the Atlantic; of the 100 patrol planes authorized in the spring of 1941 for the 14th Naval District to permit efficient long-range scouting from Pearl Harbor, not one had arrived prior to December 7; of the 180 Army bombers (B–17's) authorized at the same time for the Army stationed in the Hawaiian Islands, only 12 had arrived and 6 of these were inoperative due to the fact that they had been stripped of parts required by aircraft of similar type en route to the Philippines; shore based antiaircraft weapons were seriously insufficient. While it may not have been possible for any agency to supply all the needs of the Pearl Harbor base, that was something far beyond the control or responsibility of Admiral Kimmel.

The basing of the Pacific fleet at Pearl Harbor also made it imperative that the naval and military commanders there be kept fully informed of the policy of the Government and the changes that were made in that policy as they occurred from day to day. Despite Admiral Kimmel's urgent request that he be furnished with all pertinent information with regard to the Japanese by the quickest safe means he was not furnished with vitally important information such as the so-called ultimatum note issued by our own Government nor with many intercepted and decoded messages which disclosed great interest in the berths occupied in Pearl Harbor and the movements of ships even from one berth to another. Nor did he receive many of the intercepted and decoded dispatches exchanged between the Japanese authorities in Tokyo and Washington. Admiral Kimmel was unable to decode these messages and was entirely dependent upon Washington for this very important material.

The dispatches that were sent him were based upon estimates of the situation as it appeared to the authorities in Washington, which indicated that if and when hostilities arose, the Japanese were expected to strike at the Kra Peninsula, the Philippines, Borneo, or even Guam. Through the dispatches that were received there were repeated admonitions that if hostilities could not be avoided the United States desired the Japanese to commit the first overt act.

These and many other facts were carefully considered and weighed by the naval court of inquiry ordered by the Secretary of the Navy on July 13, 1944, in compliance with a congressional resolution passed earlier that year.

The members of this court of inquiry were Adm. Orin G. Murfin, United States Navy (retired), former commander-in-chief Asiatic Fleet and Judge Advocate of the Navy; Adm. Edward C. Kalbfus, United States Navy (retired), former commander battle force (now the Pacific fleet) and president of the Naval War College; and Vice Adm. Adolphus Andrews, United States Navy (retired), former commander of the scouting force (now the Atlantic fleet). These eminent officers have all passed to the Great Beyond but the alumni of the earlier classes will long remember them as men of courage, competence, and integrity. They had all exercised high command afloat; they knew the capebilities of the Pacific fleet and also the limitations imposed upon it by logistical and operational factors.

At this court of inquiry in accordance with time-honored customs and regulations for naval justice, Admiral Kimmel was made an interested party with the right to be present at all proceedings of the court, to call witnesses and present evidence to the court, and to cross-examine witnesses.

After a careful and comprehensive investigation the court found certain facts established and formed certain opinions, and concluded with the following: "Finally, based upon the facts established, the court is of the opinion that no offenses have been committed nor serious blame incurred on the part of any person or persons in the naval service." Then followed the recommendation of the court which reads: "The court recommends that no further proceedings be had in the matter."

Half of the present alumni were not in the Navy when the Pearl Harbor tragedy occurred. Nevertheless, the above cited facts should never be forgotten by Naval Academy alumni.

Nothing can be done to erase the suffering that Admiral Kimmel has undergone in the

last 15 years but, to some extent, that suffering could be alleviated by the restoration to him of the rank of admiral which he held as commander-in-chief of the Pacific fleet. His classmates have not forgotten nor have they hesitated to take the stand that they felt was just and right. All honor to them and to their loyal, able, and devoted president.

Interstate and Intrastate Trade in Barbiturates and Amphetamines

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, the Subcommittee on Health and Science of the Committee on Interstate and Foreign Commerce, of which I am chairman, held hearings on April 18, 1957, on H. R. 503, introduced by Congressman BYRNES of Wisconsin; H. R. 504, introduced by Congress BOGGS of Louisiana; and H. R. 2498, introduced by Congressman SADLAK of Connecticut. These bills contain provisions with respect to interstate and intrastate trade in barbiturates and amphetamines.

In the course of the hearings on these bills, the subcommittee submitted to Mr. John L. Harvey, Deputy Commissioner, Food and Drug Administration, a number of questions and requested Mr. Harvey to answer these questions in writing. Mr. Harvey has submitted his replies and I feel that all those interested in this legislation will want to study both the questions and the replies before the subcommittee proceeds with the hearings. Therefore, I am making the questions and replies public at this time. The questions and answers are as follows:

QUESTIONS AND ANSWERS FOR CONGRESSMAN WILLIAMS ON H. R. 503, H. R. 504, AND H. R. 2498

1. What is the nature of the problem with respect to barbiturates?

(a) Is it the use of the drugs without knowing the consequences?

Answer. The use of barbiturates by persons under the care of a physician does not constitute a problem and is not likely to result in habituation. The use without medical supervision is a serious problem.

(b) Is it the purposeful abuse of the drugs?

Answer. The purposeful abuse of barbiturates is likely to result in habituation and addiction as well as death by suicide or accident. Since the result is a form of intoxication prolonged abuse leads to moral degeneration and offenses against society.

(c) Who is particularly involved? Young, old, male, female, city people, country people?

Answer. Our experience in encountering habituation and misuse in persons from early adolescence to the elderly shows there seems to be little distinction between male and female. Perhaps because of more ready access to sources of information in the urban areas the cases that we have investigated appear more in towns and cities than in country areas. However, the Subcommittee on Narcotics of the Ways and Means Committee found that the illicit traffic in barbiturates attacks small as well as large communities. We have encountered businessmen of previous god repute who have degenerated and lost their jobs resulting in broken homes and other tragedies. Similarly a comparable number of cases have been investigated involving reputable housewives in middle age who became addicted and neglected their families.

1. What is the nature of the problem with respect to amphetamines?

(a) Is it the use of the drugs without knowing the consequences?

Answer. The use of amphetamines to offset fatigue and loss of sleep leads to habituation perhaps without realization of the consequences. This has been observed among people in certain types of employment such as truckdrivers and others who work at night, jockeys who must keep weight down and energy up, entertainers, and the criminal elements who use the drugs for the false courage needed to commit crimes.

(b) Is it the purposeful abuse of the drugs?

Answer. The purposeful abuse of amphetamines leads to habituation and addiction. Their euphoric effect tends to produce a feeling of invincibility and leads habitual users to commit offenses such as crimes of violence while exhilarated.

(c) Who is particularly involved? Young, old, male, female, city people, country people?

Answer. The age and sex pattern of amphetamine abuse is comparable to that of the barbiturates. Again our cases investigated more often involve people living in urban areas, probably for the same reasons as mentioned in barbiturates. (However, the Subcommittee on Narcotics of the Ways and Means Committee found that the illicit traffic in amphetamines attacks small as well as large communities.)

2. What are the channels of distribution in cases of abuse?

(a) Usual channels which disregard present law (drug stores)?

Answer. The retail drug store has been the source of most of the drugs obtained by persons who have abused them. Where we have been able to locate the source of diversion of drugs sold through filling stations, beer parlors, and similar outlets, the trail has usually led back to a retail drug store. However, in many cases where amphetamines have been sold by filling-station operators, we have been unable to identify the persons who supplied the drugs to the filling-station operators.

We have had some cases in which doctors have been the source of supply, and other cases in which drug salesmen have diverted the drugs outside proper channels of sale.

(b) Unusual channels (filling stations, restaurants)?

Answer. Our facilities have enabled us to make only limited investigation of sale of drugs through filling stations, restaurants, beer parlors, poolrooms, etc. The cases we have developed have been the result of complaints made to us in which the filling station, restaurant, beer parlor, etc., was identified to us by the complainant. Where we have been able to initiate prosecution against filling station operators, etc., we have ordinarily not been able to establish from whom or where he purchased the amphetamines for sale. We have had to establish the fact that the drugs had previously been shipped interstate by microanalysis methods. The only organized investigation of sale of amphetamines in unusual channels was our recent investigation of sale of amphetamines to truck drivers, by filling stations located along major highways. That investigation, limited though it necessarily was, convinced us that there is a substantial problem in the sale of amphetamines through filling stations.

(c) What proof do you have?

Answer. The proof that we have is the evidence acquired in completing cases for prosecution under the law. During the past 5 years, since the effective date of the Durham-Humphrey amendment, prosecutions have been had against 434 drugstore outlets, 26 non-drug-store outlets, and 4 physicians who were peddling the drugs other than in the course of their professional practice. These figures apply only to illegal sales of barbiturates and amphetamines and do not include 91 cases of the sale of other prescription drugs illegally.

3. How does the problem of barbiturates and amphetamines differ from other dangerous drugs which are sold on prescription only?

Answer. The problem of the nonprescription sale of barbiturates and amphetamines differs from problems of other dangerous drugs in that while other dangerous drugs may constitute a significant source of harm to the individuals who purchase them they are not used for intoxication and abuse which results in social evils and danger to the public generally.

How does it different from tranquilizers?

Answer. The distribution of tranquilizers, all of which are subject to control under the new drug provisions and are limited to sale only on prescription, has not yet produced definite evidence of existing or potential abuse comparable to that involved in amphetamines and barbiturates. Whether the tranquilizing drugs may lead to habituation and evils to society resulting therefrom is as yet undetermined. This class of drugs is receiving careful study.

4. Is there any likelihood that if legislation is enacted for barbiturates and amphetamines, that similar legislation will be demanded for other dangerous drugs?

Answer. It is unlikely that if this legislation is enacted for barbiturates and amphetamines that similar legislation will be demanded for other dangerous drugs except as other drugs may be discovered which have the same potentiality for producing the social evils that are attendant upon the misuse of barbiturates and amphetamines. It is entirely possible that other drugs will be found which have similar effects but we cannot say that there is a clear and present danger from other groups of drugs of the same kind at this time.

5. What are the quantities of barbiturates and amphetamines involved in—

(a) legitimate use?

(b) illegitimate use?

Answer. It is not possible accurately to estimate the quantities of barbiturates and amphetamines as between legitimate use and illegitimate use. Figures we have obtained from the Department of Commerce and the Tariff Commission indicate that in 1955, 486,000 pounds of barbiturates and barbiturate derivatives were sold. This had a value of $2,800,000, and, on the basis of average dosages of one-half grains, would constitute 1,540,000,000 doses, or the equivalent of 10 doses for every man, woman, and child in the United States. Other figures indicate that 864,000 pounds of barbiturates and barbiturate derivatives were produced in 1955, but we are unable to account for the difference between production and sales figures. We do not believe, however, that this difference can be explained as a difference between legitimate and illegitimate use, and we are inclined to believe that the difference lies in more accurate reporting of production than sales.

During 1955 these figures show that 57,000 pounds of amphetamine base were produced, but there are no accurate figures as to the quantities of this that were converted into dosage form and sold.

Our investigations have convinced us that there have been illegitimate sales and abuses of these drugs in a very large number of cases; just how large the problem is remains to be seen when an adequate investigation effort is put into it.

6. Spell out how the bills, if enacted, will eliminate or curtail abuse.

Answer. The proposed legislation would do three important things. First, the bill requires all persons engaged in the production of dosage forms of barbiturates and amphetamines to identify themselves to the Government by registering their names and addresses, and it describes the legitimate channels of distribution from the manufacturer to the person who obtains the drugs for his own medical use. Second, it provides that the diversion of these drugs from the lawful channels of distribution is an offense and no proof is required that the drugs have been shipped in interstate commerce prior to the diversion from lawful channels. Third, the bill requires that records be kept and that they be available for inspection, so that unlawful diversions of the drugs can be discovered.

7. How many establishments would you have to control:

(a) Manufacturers?
(b) Wholesalers?
(c) Retailers?
(d) Others?

Answer. The present law already requires that amphetamines and barbiturates be dispensed only on prescription. It is a criminal offense for a retailer to sell the drugs without obtaining a lawful prescription. This gives us the responsibility for investigating the manufacture and wholesale and retail distribution of these drugs. Thus, the proposed bill does not add new responsibility of inspection and investigation in that field. What it does is to simplify and strengthen the control by requiring the manufacturers to identify themselves, thus facilitating the inspectional operation, and it writes into law the requirement now in regulations that the drugs be handled in authorized channels of distribution from the manufacturer to the retailer. At present we have no accurate figures as to the number of manufacturers and wholesalers, but on the basis of our best estimate, it is believed that there are approximately 500 manufacturers and perhaps as many as 800 repackagers, that there are about 500 wholesalers and between 55,000 and 56,000 retail drugstores. This bill would increase our operations against persons engaged in the bootleg traffic of these drugs. Heretofore, our operations against bootleggers have been predicated upon complaints, and we have made no organized effort to determine the precise size of the bootleg traffic.

8. How much personnel would you need for such control?

Answer. We have estimated that an additional force for investigation of this traffic of 50 man-years would be sufficient to constitute a sound beginning. This would be in addition to the 30 to 35 man-years which the Food and Drug Administration now is devoting to the unauthorized sale of prescription drugs.

9. What methods of examination would you use?

(a) Spot checks?
(b) Regular checks?

Answer. We would expect to continue investigations based upon complaints and definite leads that give us reason to believe that particular persons are diverting these drugs. We do not contemplate regular routine auditing of records and would expect to check the records only when our inspectors were engaged in the investigation of an unlawful diversion of drugs that had come to our attention by other means. The check of records would be used as supporting evidence after our inspector had learned of unlawful sales or other distribution to persons outside legitimate channels of distribution.

10. Would you work with or through State and local enforcement agencies? If so, how?

Answer. We would expect to continue our cooperation with State and local enforcement agencies to every extent possible, and to follow the policy we have frequently expressed that we are entirely willing to leave the investigation of purely local abuses of barbiturates and amphetamines to State and local officials where they are ready, willing, and able to act through the local courts. We would expect to encourage the State and local officials to do all they can to stamp out the abuse of these drugs. Where the State and local officials can and will do a good job, we can use our inspectors and facilities for other things. But wherever there is strong State enforcement, the problem many times is large enough to require the combined efforts of both State and Federal inspectors. And, as we have pointed out to the Committee, many States and local authorities have inadequate laws and in some instances either no personnel to do this job or wholly inadequate personnel.

11. Spell out in detail the obligations under the bills which are imposed on manufacturers and distributors.

Answer. Manufacturers, compounders, and processors of barbiturates and amphetamines would be required to list their names and places of business. Upon the effective date of the bills they would be required to submit a complete record of all stocks on hand and keep such records for 3 years. Thereafter there would be prepared and kept for not less than 3 years a record of the kind and quantity of barbiturates and amphetamines manufactured, compounded, and processed and the date of such manufacturing, compounding, or processing. They would be required to keep for not less than 3 years records that show the kind and quantity of any barbiturates and amphetamines received, sold, delivered, or otherwise disposed of and the names and addresses of the processors or firms from whom received or to whom delivered or otherwise disposed of and the date. They would be required to make such records available for examination and copying by duly authorized officials of this Department at reasonable times and to permit copying thereof. Distributors, whether at wholesale or retail level, would be required to keep for 3 years a record of all barbiturates and amphetamines received by kind, quantity, supplier, and date of receipt and records showing distribution, and to whom. Distributors are not required to list their names and places of business. They would have to make their records available for examination and copying as in the case of manufacturers.

12. How do these obligations differ from obligations imposed by laws which would license manufacturers and distributors?

Answer. The obligations covered in question 11 differ from the obligations imposed by laws which license manufacturers and distributors, in that they are not required to obtain a license or permit, and the Secretary does not control whether or not they engage in such business by granting, refusing, or revoking licenses. They are not required to employ special forms or to use records that are not now employed in the manufacture, distribution, and sale of these products. The proposed bills do not require any new obligations of physicians or impose upon them any changes such as the use of special prescription forms or a physician's permit number. No recordkeeping is imposed upon physicians.

13. How would enforcement differ in case of licensing laws?

Answer. Enforcement in the case of licensing laws would involve routine audit rather than special investigation where there is apparent need and would subject manufacturers and distributors to securing a license or permit and give the Department control over whether or not they engage in such business. Such licensing provisions would require a large staff of employes to act upon applications for licenses, to monitor requests for purchases, and to audit performance under the licensing provisions. In the case of narcotic laws the enforcement agency checks on office practices of physicians which are wholly outside the contemplation of these bills.

14. Could you de-list a violator?

Answer. These bills do not provide for delisting violators nor do they provide for any action against manufacturers or distributors of an administrative character but would require in each case of alleged violation that all the facts pertinent be presented in courts of law.

15. What do the bills provide with respect to unlawful possession without prescription?

Answer. Under the bills, unlawful possession, including possession without having obtained drugs on lawful prescription, would be classed as a misdemeanor and subject to the penalties provided under the Food, Drug, and Cosmetic Act.

16. How would you enforce the unlawful possession provision in the case of individuals?

Answer. The unlawful possession feature is in our view designed as an aid to enforcement against underground bootleg traffic and is intended to facilitate apprehension and prosecution of peddlers who make possible the abuse which arise from unauthorized use. It is not our view that the possession feature of the law should be applied in actual prosecution under the Federal act to an individual who has such drugs in his possession without intent to pass it on to others as a part of a chain of illegal distribution.

17. What do the bills provide in regard to enforcement with respect to individuals, and what does the Department suggest in this regard?

Answer. The bills provide that it is unlawful for a person to possess barbiturates and amphetamines unless he has lawfully obtained them on the prescription of a practitioner issued in the course of his professional practice. The person who obtained the drugs through a sale made in violation of the Durham-Humphrey amendment would be an illegal possessor. If the committee believes that possession of illegally obtained drugs by persons for their own personal use, and not for disposition to others, should not be an offense, the Department is prepared to go along with that idea. We do believe, however, that possession of barbiturates and amphetamines by an individual for illegal disposition to others, and not for his own personal use, must be made an offense if we are to cope with the bootleg traffic.

18. How would enforcement differ from the present law with respect to individuals?

Answer. Enforcement would differ from the present law only in that the unlawful possession of the drug by an individual, rather than dispensing without prescription by him, would be an offense. There would be no requirement that prior interstate shipment of the drug be established before the offense could be proved.

19. Does present law prohibit unlawful possession of any drugs?

Answer. The present law carries no prohibition against the possession of drugs.

20. Would you need a search warrant to search an individual for unlawful possession?

Answer. There is nothing in the bills that authorizes the search of any individual for unlawful possession. If we wanted to make a search, we would have to obtain a search warrant in accordance with the Federal Rules of Criminal Procedure.

21. Could your agents enter a home or a car to search for unlawfully held barbiturates and amphetamines?

Answer. There is nothing in the bills which gives our inspectors the authority to search any establishment, home, or automobile, or to arrest any person whatever. The bills would provide for the inspection of establishments and vehicles in which these drugs are manufactured, transported or held.

This inspectional authority would be the same limited authority that Congress approved a few years ago. We would not interpret that authority to authorize the inspection of a private home or a private automobile, but we would interpret it to authorize inspection of establishments and vehicles used in the chain of distribution of these drugs. As the committee knows, that inspection authority does not authorize the use of force or entry into an establishment or an automobile without the consent of the person in charge, but it does make the refusal to permit a reasonable inspection at reasonable times, and in a reasonable manner, a criminal offense.

22. Is the unlawful possession provision necessary? Why? Could it be eliminated without rendering the proposed law ineffectual?

Answer. Certainly, a provision penalizing unlawful possession for disposition to others, and not for personal use is necessary to reach peddlers and bootleggers. To require proof that possession was for the purpose of sale would, of course, make enforcement more difficult. On the other hand, it may well be that possession for personal use and not for disposition to others could be eliminated as an offense without greatly impairing the effectiveness of the law in actual practice.

23. Are there other ways in which distribution of barbiturates and amphetamines could be controlled without exposing individuals to Federal inspection for unlawful possession?

Answer. We know of no way that unlawful holding for sale can be effectively reached without making such possession for the purpose of sale unlawful.

24. How do these bills differ with respect to unlawful possession from narcotic laws?

Answer. It is our understanding that, under the Harrison Narcotic Act, possession of narcotics not bearing internal-revenue stamps and not obtained on a valid prescription constitutes sufficient evidence for conviction. In the case of the Narcotic Drugs Import-Export Act, the possessor is deemed guilty unless he explains his defense to the satisfaction of the jury.

25. What is meant by paragraph at top of page 3 of report? (Would not proposed legislation go way beyond present law, particularly with regard to unlawful possession?) (namely):

"We believe that the legislation proposed by these bills is necessary for the adequate enforcement of the present law in relation to these drugs and in order to protect the public health and safety. We therefore recommend its enactment, with certain amendments suggested at the end of this report."

Answer. The present law cannot be adequately enforced since although many drugs may in fact be interstate in origin it may be impossible to establish evidence to prove it.

United States Minerals Program: The Stress Is on Speed

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. DAWSON of Utah. Mr. Speaker, the Eisenhower administration recently announced its long-range program to afford domestic producers of lead and zinc some protection against low-wage foreign producers of these metals. The alternative to this program is to close the mines in this country, making the Nation entirely dependent upon the production and price whims of the rest of the world.

For the first time, it is not so much a question of what to do but a question of time. The need for immediate action is at hand. In this connection I am inserting at this point in the RECORD an article from the Salt Lake Tribune by Robert W. Bernick, its knowledgeable business editor.

The article follows:

UNITED STATES MINERALS PROGRAM: THE STRESS IS ON SPEED

(By Robert W. Bernick)

With only about 6 weeks remaining for Congress to act on the administration's long-range minerals program, it is plain that great speed and dexterity will be required to steer the plan, as amended, through the legislative halls to the President's desk.

The issues inherent in the tariff program might strain some ties within the lead-zinc industry, as they have in the past.

This should be of little importance to the congressional delegations from the mining States.

The 1 or 2 imports of these 2 metals, who for too long have had the ear and support of the United States State Department, are not voters. Jobs their imports would liquidate are held by voters however.

As for the operators, only by presenting a basic unity and refusing to compromise on the principles of tariff as laid down in the administration program, will the entire industry be able to survive on a rewarding basis the immediate years ahead.

There are those in the Utah segment of the business who believe that where opposition is presented by self-seeking foreign producers of these metals, then these interlopers to this domestic issue should be effectively exposed once and for all.

TIME HAS PASSED THEM BY

Time has long since passed these people by. Even during the halcyon days of Federal (taxpayers) support of the metals started by the administration as an alternative to the tariff principle now recommended, foreign producers did not abide by Mr. Eisenhower's request to voluntarily limit dumping of their metals on our shores.

They cannot now appear in Washington with clean hands.

The long-range minerals program is not being established for the benefit of low-wage cost foreign producers of metals.

Its necessity results from a final battle for survival for the remaining operating properties in the Western and Middle Western States.

Nor are we, as Americans and westerners, called upon to make any apologies to anyone, anywhere, for fighting to the last inch to protect and to expand the basis of our employment and our livelihood.

Salt Lake City is no different from mining areas such as Wallace, Idaho; Butte, Mont.; or Ely, Nev. It's only a bit bigger town. But it doesn't live on air, any more than do those other towns.

Close the mines down and every merchant on Main Street will feel the pinch.

Close the mines down and every school district will be hurt.

Close the mines down and limit the opportunity of our children.

Close the mines down and eventually you close us all down.

For lead and zinc are but a few of the metals that are in trouble. The long-range minerals program aims to aid by establishment of its principles of protection of all important metals.

To say otherwise is to say it is but half a loaf.

Tungsten, copper, mercury, fluorspar, manganese, potash, chromite—all face these selfsame issues in varying degree.

WITHOUT BASIC TARIFF OR IMPORT

Without basic tariff or import quota protection, mines, smelters, refineries, and concentrators producing these materials for American consumption must face: (1) Declining profits placing a squeeze on wage increases, (2) dropping production, which affects employment, (3) closure, which eliminates jobs, stockholders, and taxes paid to cities, counties, and States.

Today it is lead, zinc, tungsten, and other metals.

Tomorrow it may be copper, potash, iron, ore, oil.

Lateness of the hour by which the administration finally prepared its "bare bones specifics" as to the minerals program may pose problems.

By adhering to the tariff principle, many complaints can be downed.

A "dogfight" over commodity amendments can be avoided.

Consumer objections (generally raised, not by consumers, but by manufacturers desiring cheaper raw materials—can be faced resolutely and frankly.

Giving the lead producer the same sort of protection afforded fabricators of lead products in the United States of America against competing finished materials from abroad would add 30 cents on the dollar to import of raw lead.

Giving the tungsten producer like consideration with the domestic fabricator and processor of this metal would double the existing tariff on tungsten metal. (Not a bad idea.)

You can include other domestic metals in this same situation.

INCLUDE OTHER DOMESTIC METALS

Such actions will not "raise the price" to the consumer. The price is there now, on the finished goods.

Western raw-material producers seek only elimination of growing inequities in this relationship.

By any conceivable index, they too long have been denied a just share of our expanding economy.

For too long has the western economy been stilted by an injurious Federal policy now forcing our minerals industry to its knees.

A New Leader for the World's Nurses

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. SADLAK. Mr. Speaker, 3 years ago it was my privilege to congratulate one of Connecticut's outstanding "ladies in white" when she became the national president of the American Nurses Association. Again it is with pride that I and the citizens of Connecticut point to the well-deserved international recognition that has come to Miss Agnes Ohlson, of Hartford, for her splendid contribution to the profession to which she is profoundly dedicated. The following editorial from the June 1 issue of the Hartford (Conn.) Courant tells of her selection as president of the International Council of Nurses:

A NEW LEADER FOR THE WORLD'S NURSES

No one woman in Connecticut has done more to foster high professional standards of nursing than has Miss Agnes Ohlson. The State has benefited from her guidance as chief examiner for the Connecticut Board of Examiners for Nursing. And her influence nationally has been felt particularly as president of the American Nurses Association. Now the International Council of Nurses at its quadrennial congress in Rome has chosen Miss Ohlson as its president. Thus Connecticut, where Miss Ohlson was born and took some of her training, can be proud of this new stature for one of its citizens.

Improvements in the nursing field, whether they were sought before the State's own legislature or before Congress, always found Miss Ohlson as a leading advocate. It was inevitable that her zeal be given international notice. And certainly the 37 national nurses' associations which comprise the council will benefit under a leader dedicated to high nursing standards everywhere.

New Jersey State Federation of Labor Backs Single Federal Dam at Hells Canyon—Government Expert Says Tax Writeoff Granted Idaho Power Co. by Administration Would Cost the Government $83,595,827

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the top officers of the New Jersey State Federation of Labor, Vincent J. Murphy, secretary-treasurer, recently wrote:

The Federal Power Commission has already awarded a license to the Idaho Power Co. to build three small dams on the Snake River, despite a report by one of its own examiners that a single Federal dam would be a far more economical investment for the development of the Middle Snake. The Federal dam, according to our information, would produce more than twice the hydro power than the three low-level dams.

Moreover, this greater abundance of hydro power could be produced at less than half the cost of power from the three small dams. The Federal dam would also encourage the expansion of industry in the area, and would create about 70,000 new jobs in the district.

The single high dam would store about 3.8 times as much water as the small dams for flood control, navigation, and downstream power benefits. Construction of the Federal dam would aid development of a large natural playground for recreational purposes, protect fish and wildlife, and create a large amount of water for irrigation purposes.

The New Jersey State Federation of Labor antedates the American Federation of Labor. It is the oldest State labor federation in point of continuous existence. It has also achieved the reputation of being one of the most active labor groups in the Nation.

Louis P. Marciante, president of the New Jersey State Federation of Labor, recently declared that the organization has gained a record number of new affiliations during the last few years. It now has over 1,000 affiliants, inclusive of local unions, central labor bodies, State associations, and building trade councils.

Mr. Marciante has served as president of this important statewide body for 23 years. Mr. Vincent J. Murphy, former mayor of Newark, N. J., is now completing his 24th year as secretary-treasurer of this important organization.

Much of the activity of the New Jersey State Federation of Labor for many years past has centered on State and Federal legislation and each year it seeks to further a specific legislative program. Mr. Marciante and Mr. Murphy are the group's legislative agents and are assisted by Wesley A. Taylor, legislative committee chairman, and Thomas L. Parsonnet, legislative counsel.

I include here an article from the Newsletter of May 22, 1957, of the New Jersey State Federation of Labor on the Hells Canyon Dam, as well as a news story in the New York Times of June 1, 1957:

[From the New Jersey State Federation of Labor Newsletter of May 22, 1957]

DAM ISSUE HOT AT HELLS

WASHINGTON.—Those who wanted a Federal dam in Hells Canyon can cheer up: They're building two of them.

At least that's the interpretation some observers put on the fact that Uncle Sam is paying a huge chunk of the cost, while the Idaho Power Co. is taking the title.

This latest and strangest chapter in the story of Oregon's celebrated canyon began when the Eisenhower administration in April awarded the company a tax-amortization certificate. The paper gives Idaho Power an interest-free loan of $30.5 million repayable over half a century an excuses the company from income taxes for 5 years.

Public power advocates in and out of Congress are looking into the affair with amazement, and in some cases, anger. Several predict a scandal bigger than Dixon-Yates.

This seems doubtful because of the apparent absence of a dramatizing factor such as Adolphe Wenzell proved to be in the Dixon-Yates case. Wenzell was a vice president of the giant First Boston Corp., invited into the Government by the Director of the Budget. The investment banker worked out a plan to give four power companies a contract to supply power to TVA, which was prohibited from expanding its own generating facilities. The First Boston Corp. would have handled the financing, if the deal had gone through.

IT'S A LOAN

In the Idaho Power case, the nearest answer to the question, "Is there a Wenzell in the play?" is that the two men running the program in the Interior Department are former electric company officials temporarily in Government.

George H. English came from the Tennessee Power & Light Co., and Gardner George from the Niagara Mohawk Power Co. They handle tax-amortization matters in the office of Fred Aandahl, Assistant Secretary of the Interior for water and power, and a former Republican governor of North Dakota.

The $30.5 million interest-free Federal loan isn't called a loan. The technical name, "rapid amortization," has scared off public interest in the case. But it's a loan just the same, according to most impartial authorities.

It works this way: A company announces that it is building a dam, or several dams. If the Government classifies it as an emergency facility needed for national defense the company can deduct from its net earnings each year for 5 years one-fifth of a certain cost figure. For Idaho Power, this figure averages 62½ percent of construction cost of the 2 dams.

The yearly tax deduction for the 5 years is so great that no taxes need be paid.

The idea originally behind tax amortization was encouraging industrial facilities needed in a hurry for national security. But the Hells Canyon Dams hardly fall into this emergency category. Besides, other companies could certainly be found willing to build the dams without aid on the Nation's last remaining major dam site.

REPAID IN 50 YEARS

The amount of the forgiven tax—really a loan—will be repaid during the next 50 years, the usually accepted standard life of a dam.

The story goes further. The 5-year loss of Federal tax revenue means that the Government will have to borrow more money than it otherwise would to meet expenses.

The National Rural Electric Cooperative Association estimates that the loan to Idaho Power will cost the Government $329 million in 50 years. Of this amount, $97 million will be interest payments.

The tax subsidy to the Idaho Power Co. is apparently the last one to be given to an electric company. The award was announced on April 28 while Congress was in recess, although Defense Mobilizer Gordon Gray signed the papers on April 17.

PAPER CURTAIN

Many of the facts about how the certificate was granted are hidden behind a paper curtain.

It has been discovered that, whoever put the paper on Gray's desk for signature did not tell him that 10 Congressmen and 3 Senators had been led by Gray's predecessor to believe that amortization would stop until congressional committees could explore the issue.

Gray had been in office only about a month on April 17. He wasn't familiar with the background. He probably didn't know, for example, that the Idaho Power Co. had told the Federal Power Commission that it did not want Government help. Actually, the company had already applied for it.

Gray probably didn't realize that in approving the dams' construction the FPC said the license was granted on condition that the dams be built "at no cost to the United States."

Which subordinate laid the innocent-looking paper before Gray and told him it was routine, as Gray has reportedly described the event?

The subordinate surely knew that once Gray had signed, practically nothing could reverse the decision. And who told the subordinate to act?

The plot grows complicated. The responsibility of investigating and recommending action on tax amortizations rests with the Water and Power Division of the Department of the Interior. Final review and approval is the job of the Defense Mobilizer, whose Office is part of the White House.

A spokesman in Interior's Water and Power Division, said on the telephone that the Division "sought guidance from the electric industry" on the Idaho Power application. He declined to give his name.

George English, however, who heads the office, said that the Electric Industry Advisory Committee had been abolished in July 1953, a month before the Idaho Power application arrived. Since then, he said, the Division has "asked a few questions" of the power industry on pending matters, but not about the Idaho Power case.

Although the World War II tax amortization program was continued in 1950 only because of the Korean war, the Eisenhower administration let it go after the peace. On October 17 of last year the Government was actively considering amortizations totaling

about $4 billion. Many have already been granted and more are expected to be, although apparently no more for dams.

The law requires that electricity start flowing by the end of 1958. But Idaho Power statistics published in February by Barron's magazine show that this deadline won't be met, purposely. The probable reason: no demand for high-cost electricity. Construction on 1 of the 2 dams has not been begun.

WON'T BUILD THREE

Senator HARRY BYRD, who has introduced a bill to end amortizations, called the Government's action in this case "utterly indefensible." To Senator WAYNE MORSE, Democrat, of Oregon, it was "executive immorality."

MORSE has also pointed out that the company was granted the license to develop the canyon (prohibiting the high Federal dam recommended by the Army engineers) because it promised to build three dams. The third dam will not be built, MORSE charges, because the company threw it into the plans merely as an arguing point. The fact that there is no request for amortization of the third dam seems to bear out the charge. The dam site has not even been adequately surveyed.

[From the New York Times of June 1, 1957]

WRITEOFF LOSSES PUT AT $83 MILLION—EXPERT ESTIMATES COST TO UNITED STATES—WHITE HOUSE PRESSURE FOR IDAHO POWER DENIED

(By William M. Blair)

WASHINGTON, May 31.—A Federal Power Commission expert figured today that the fast tax writeoff granted to the Idaho Power Co. would cost the Government $83,595,827.

The estimate came from Russell C. Rainwater, chief accountant for the Commission, in testimony before the Senate Anti-Monopoly Subcommittee. Previous estimates had been between $17 million and $31 million.

Fred G. Seaton, Secretary of the Interior, told the subcommittee on Wednesday that he had been informed the cost to the Government had been exaggerated and that the best information he could get was $17 million.

USE OF INFLUENCE DENIED

The subcommittee also heard Jerome K. Kuykendall, Commission Chairman, testify that no influence had been applied by the White House or anyone else on him or any member of the Commission to license Idaho Power to construct two dams in the Hells Canyon stretch of the Snake River.

Mr. Kuykendall, under questioning, said that the Commission had not contemplated that the company needed a fast writeoff when the Commission granted the licenses in 1955. Nor had the Commission been informed by the Office of Defense Mobilization that that agency intended to authorize the tax concession announced on April 17, he said.

His testimony brought a suggestion by Senator ESTES KEFAUVER, Democrat of Tennessee and chairman of the subcommittee, that the company might be engaged in fraud and deception.

Senator KEFAUVER asserted that at the time the Power Commission was saying the dams would be constructed without cost to the Government, Idaho Power was prodding ODM to get the tax certificates.

KEFAUVER PRESSES ISSUE

Mr. Kuykendall replied that "I think I can see how Idaho Power can say that the two things they were doing were not inconsistent." But, he went on, the question was the concern of the subcommittee, not the Commission.

"Do you think you have a right to cancel licenses in cases of fraud or deception," Senator KEFAUVER asked.

"I think we would where there has been material fraud and deception," Mr. Kuykendall answered.

"It is not material when they're going to get $85 million from the Treasury by deception," Senator KEFAUVER continued.

Senator ALEXANDER WILEY, Republican of Wisconsin, interjected:

"You don't want to put him in the position, of disqualifying himself if this matter came to court."

EXPERT EXPLAINS VIEWS

Mr. Rainwater said he had based his estimate on the cost to the Government of the money it must borrow to make up for the postponed tax payments from Idaho Power.

Under the writeoff, the company is permitted to deduct almost two-thirds of its construction costs from its taxable income during the first 5 years the dams are in operation. This amounts to more than $65 million of the total construction of the approximately $104 million.

After the first 5 years, the company would pay above-normal taxes and in the end would pay the amount of taxes it should have.

Normally, the entire cost of the dams and their powerplants would be written off in smaller amounts over the 50-year life of the projects. The writeoffs are granted under a law designed to stimulate the expansion of the defense and defense-supporting industries.

COURT RULING CITED

Senator KEFAUVER also noted that the Commission had cited the "no cost to the Government" in briefs it presented to the Supreme Court, which upheld the Commission in its licensing of Idaho Power. The Court case stemmed from the long public versus private power controversy over the administration's decision to abandon high Federal dam in Hells Canyon and let the Power Commission decide whether private utilities should build smaller dams in the big canyon.

Mr. Kuykendall observed that he was certain Idaho Power officials had read the briefs closely. He also said he "conceded now that we made a mistake in saying there would be no cost to the Government." But, he added, "we didn't know what another agency would do."

He indicated he doubted knowledge of the tax benefits would have changed the Commission decision to license Idaho Power because the writeoff factor was not a major consideration for the Commission.

The hearings were recessed subject to the call of the chairman. The Senate is expected to consider next week a bill to authorize the construction of a high dam in Hells Canyon.

Salute to a Teacher

EXTENSION OF REMARKS

OF

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. HULL. Mr. Speaker, under permission to extend my remarks, I include an interesting and thought-provoking article written by Irving Ben Cooper, chief justice of the court of special sessions of New York City, and appearing in the June 1957, issue of the Reader's Digest magazine.

The article deals with the remarkable career of one of Missouri's most beloved individuals, Calla Varner, a former schoolteacher from St. Joseph, Mo., who mixed love with learning to mold her pupils into honest and responsible citizens.

Of my friend Calla Varner, it can accurately be said that she is more than a schoolteacher, more than an intelligent counsel, kindly guardian and good Christian. She is a wonderful way of life.

The article follows:

SALUTE TO A TEACHER

The skinny, undernourished 17-year-old boy stood in front of the bench waiting for me to sentence him. There was no doubt as to his guilt. But he was a first offender, and something made me hesitate. I told the bailiff to bring the boy to my chambers.

"We're alone now, son," I told him, "and what you say isn't testimony and can't be used against you. Let me ask you some questions."

Gradually he thawed. He talked of his dead father, of his mother who supported him and his three sisters by working at night as a waitress. I realized that this boy hungered for affection. He wasn't getting it at home from a tired overworked mother; nor at school, where his shabby clothes and shyness prevented him from belonging.

The boy's name was Johnny, but as I listened I was hearing a shy, poverty-stricken kid named Ben Cooper pouring out his heart. If a schoolteacher in St. Joseph, Mo., hadn't put a comforting arm around me one day and made me welcome in my little world, I might well have done something as foolish and as desperate as Johnny had done. I signed a paper suspending sentence, and Johnny walked out in the company of a kindly probation officer.

I could almost feel Calla Varner's presence there in my chambers, and see her nod of approval because I had just given a boy what she had once given me.

My childhood—like Johnny's—had been an ugly one. My father had brought his brood from the slums of London when I was 8. He was a tailor who worked 18 hours a day trying to support 5 hungry children. The desperate fight for existence somehow killed the love my parents had once had for each other. And any affection they had for us children they were either too tired or too inarticulate to express. I felt completely alone, growing up without anyone in whom I could confide.

I dreaded my first day at high school in St. Joseph. I still had a London accent; my shoes were reinforced with cardboard, and my patched pants were hand-me-downs. I was "different," and the neighborhood kids made me the butt of their pranks. At 13 I was on my way to becoming a withdrawn, wretched misfit.

I slipped into the classroom, and a tall woman came forward, put her arm around me, smiled, and said in the kindest voice I have ever heard, "You're Ben Cooper. Well, I'm glad you're going to be one of us. I know you'll like it here at Central, and I know we're going to like you."

No stranger had ever before given me the divine gift of a welcoming smile, and suddenly, for the first time in my life, I felt wanted. After that I was constantly sustained by the thought that tomorrow I would see Miss Varner again. She always stood by the classroom door as we filed out. Sometimes she would smile at me, sometimes merely pat my shoulder, but every day she gave me a message of faith: she believed in me.

In her classes, too, Miss Varner did something more for us than make us learn mere facts. Oh, she equipped the mind all right, but never to the neglect of the soul. She never made patriotic speeches, for example, yet somehow she made fervent patriots of us all. I had known nothing except poverty and spiritual starvation—yet she convinced me that this was the greatest country in the world and that I was a lucky boy to be part of it. I had never known kindness, but she

taught me that most people are kind and decent.

Through those years I thought that my experience with Miss Varner was unique. She was my personal mentor who inspired me through high school and on to college and law school. Then, summer before last, I learned that this remarkable woman—as teacher, vice principal and principal—had exercised the same influence over hundreds of pupils in Central High School, and that each one thought of her as his own personal mentor.

I was speaking in St. Louis before the judiciary of the State of Missouri on my theories of handling first offenders. Something prompted me to stray from my prepared speech. I said that my approach toward juvenile delinquency had stemmed in no small degree from the sympathetic and intelligent treatment given me by one of my teachers in St. Joseph. I didn't mention her name, but when the meeting was over Judge C. A. Leedy, chief justice of the supreme court of Missouri, came up to me, and said, "You obviously meant Miss Varner. You'll find that some of the judges here today have been deeply influenced by her."

A moment later Judge Laurance M. Hyde, one of the country's most respected jurists, smiled, and said, "You could only be talking about Miss Calla Varner, of St. Joseph. She was a wonderful teacher. She taught her students not to be satisfied at merely learning what was in a book, but to cross-examine the author, challenge statements, inquire further into the subject. That way they discover the joy of learning."

Four other judges came to discuss Miss Varner. All revered her.

Next day I went to St. Joseph to see Calla Varner. The woman who greeted me was as erect as the elmtrees that bordered the street outside her home. Her thick black hair showed only a touch of gray; her dark eyes were bright, and the lines around her eyes and mouth were lines formed by smiling. Her voice was strong, her handclasp steady. It was hard to believe that she was 81.

Born on a farm near Marysville, Mo., only 25 miles from St. Joseph, she had received her early education in the usual one-room rural schoolhouse. Farmers in 1890 were not enthusiastic about higher education for their daughters. But Stephen Varner saw something special in his youngest daughter, Calla, who devoured every book she could lay her hands on. So, when she was 16 he sent her to Cottey College in Nevada, Mo., a private school for girls.

It was there that she began to realize that her destiny was to teach. Later, after acquiring a bachelor of science degree, she taught for a year and became convinced that she needed more cultural background. So she returned to school, alternating teaching years with studies of history, literature, philosophy, at the Universities of Michigan and Missouri, and at Columbia, in New York, where she earned a master's degree. Then, in 1912, she settled down in St. Joseph and began her career at Central. The little farm girl had grown into a cultured, dedicated woman.

This was the Calla Edington Varner who greeted me 43 years later. Now retired, she was the first principal emeritus of Central High School, and had received about every civic honor St. Joseph and Missouri could give her.

As we chatted we were interrupted by a boy with a telegram. She read it and smiled. "I've been in the hospital with a bad back, and a lot of people have sent me wonderful messages. This is from one of our Missouri Senators, STUART SYMINGTON. A fine man."

She spoke of other former students then—of David Hopkins, for instance, who was her vice principal for several years. "Went to Congress later. Often he consulted me before making appointments to Annapolis or West Point. Incidentally, one of the boys I recommended is now a rear admiral, three are captains in the Navy, and two are generals."

As she talked, any remaining notion I held that I was something unique in her life was dispelled. Obviously, Miss Varner had influenced hundreds of lives.

* * * * *

Miss Varner, I realized, felt that her pupils were her charges and that her responsibility did not end when classes were dismissed. Woodrow Barnett, manager of the local cab company, said frankly that he had been one of those kids who had gone to high school just to play football. "During my senior year," he chuckled, "I took just enough courses to stay eligible—not enough to graduate. Miss Varner was home with a fractured ankle, but darned if she didn't find out what I was doing. She made me come to her house, and she put me through a tough few weeks making up work I had missed. Because of her, I graduated, and I've been glad ever since. Here at the company my boys have orders that every time she phones in for a cab I'm to drive her. Wouldn't trust her to anybody else. I guess everybody in this town loves her."

Generals, cab drivers, farmers, judges, all were beneficiaries of her warmth and devotion. But she was more than a great teacher. Ray Blomfield, secretary of the St. Joseph school system and formerly a teacher on Miss Varner's staff, said: "Occasionally there was a youngster whom the rest of us felt to be incorrigibly delinquent. 'There is no such thing,' she'd say firmly, and she'd take over. She'd give the youngster understanding and affection, and before our eyes we'd see that boy change."

Harry Crowell, chief of police, told me: "Many a time this department has taken youngsters, charged with petty but technically illegal acts, to Miss Varner. She'd talk to those kinds, and we'd never see them in trouble again."

Miss Varner retired as principal in 1944, but she never retired from civic responsibility. She helped organize St. Joseph's leading social agency, the Family and Children's Service. Its members work their miracles in private, just as Miss Varner always conducted her own good deeds. "I know how much of her income went to needy pupils," Miss Varner's secretary told me. "I know how many she helped through college. But she always disguised her help so the pupil wouldn't think he or she was receiving charity."

* * * * *

All of us whose lives in one way or another have been shaped by Miss Varner's personality seem to be joined in a common bond. All of us remember scraps of conversations we've had with her. "Poverty of mind and spirit is as awful as poverty of the body," she told us. "Serve with honor, not for honor * * *. Bring your religion into the thick of the world and put it to work there * * *. In our democracy, everyone counts. And above all, we must imbue everyone—especially every young person—with a sense of belonging."

I thought you'd like to meet Calla Edington Varner. You can meet her almost anywhere: at Oak Ridge, in the Pentagon, in Hollywood, in a dozen universities, in the office of the Mayor of Kansas City, in operating rooms in St. Louis hospitals. She is wherever there are men and women who had the privilege of having her as their teacher. Certainly she is always present in the chambers of the chief justice of the court of special sessions of the city of New York.

Land-Procurement Practices of the Corps of Army Engineers in the Oolagah Dam Area on the Verdigris River in Northern Oklahoma

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I should like to include Enrolled House Resolution 571, which was adopted by the Oklahoma House of Representatives of the 26th Legislature on May 27, 1957:

Enrolled House Resolution 571

Resolution memorializing the Congress of the United States and the Appropriation Committees thereof; to direct special attension to the land-procurement practices of the Corps of Army Engineers in the Oolagah Dam area on the Verdigris River in northeast Oklahoma

Whereas the Oolagah Dam on the Verdigris River in northeastern Oklahoma is in the very early initial phases of construction, with work proceeding on only the first stage embankment contract on one side of the river, under the direction of the Corps of Army Engineers; and

Whereas only a few hundred acres of land actually has been acquired for the project and with condemnation proceedings now in progress on an additional few hundreds of acres of land; and

Whereas this $37 million project will finally take more than 70,00 acres of land in a well-developed and productive agricultural and ranching area, resulting in the dislocation of several hundred farm homes and related schools, churches, cemeteries, Federal and State highways, county roads, electric power lines, telephone lines, oil transportation pipelines and gas lines; and

Whereas the proposed lake will inundate and destroy the birthplace and home of the great Oklahoman, Will Rogers, which has become a national shrine and each year is visited by thousands of Americans who have come to love the simple and homely virtues of this great man; and

Whereas on the lands to be taken for the Oolagah Dam project is located a sizable portion of the world's greatest shallow oil field, which has been producing oil continuously since its discovery before the turn of the century, and which today is recognized as having been the birthplace of the oil business in Oklahoma, the laboratory where secondary recovery was first tried and proven in Oklahoma and the field which has produced more oil by the water flood repressuring method of secondary recovery of oil than in any other field in Oklahoma; and

Whereas the United States Bureau of Mines, in a report dated August 1, 1951, stated that a recoverable reserve of more than 50 million barrels of oil could be produced by today's known methods from the more than 25,000 acres of proven productive, but undeveloped, lands that are to be taken for the Oolagah Dam project; and

Whereas a portion of the lands to be covered by Oolagah Lake have now been developed for the production of oil and this developed area is now producing several thousand barrels of oil each day; and

Whereas the developed oil lands to be inundated by Oolagah Lake now give employment to hundreds of oilfield workers,

pay tens of thousands of dollars each year in taxes to the State of Oklahoma and to the United States, and produce millions of dollars worth of economic wealth annually; and

Whereas the oilfield is served by a crude oil purchasing company whose storage tanks, pump stations, gathering lines, and pipeline transportation system is located on lands to be inundated by the Oolagah Lake; and

Whereas the same crude oil purchasing system, tank farms, pump stations, and transportation lines, that will be inundated by Oolagah Lake, also, serves other oil productive acres located on lands adjacent to the proposed lake; and

Whereas the engineering difficulties that will result for the pipeline operation following the building of Oolagah Dam and the loss of business to the pipeline as a result of abandonment of that part of the oilfield that will be inundated by Oolagah Lake, could make it unprofitable and economically impossible to operate the pipeline oil gathering system to serve the remainder of the oilfield, and with the resulting loss of a pipeline market for that part of the oilfield adjacent to the lake, the entire oilfield could be forced to shut down with a further economic loss to the entire section of the State; and

Whereas congressional appropriations for the Oolagah project, which is a very minor part of the Arkansas Basin development program, were first made last year after almost 20 years of being seriously questioned as to the economic feasibility and the doubtful advisability of destroying a great known recoverable reserve of oil and a tremendously rich agricultural area; and

Whereas the farmers and ranchers and oil producers of the Verdigris River area repeatedly through the years have voiced their objections to this project in personal and delegation appearances before the Congressional Appropriations Committees of both the House and Senate; and

Whereas proponents of the project residing in other parts of Oklahoma, and other States, have envisioned great economic gains to groups of people, cities and towns, transportation users and great industrial organizations as a result of the construction of Oolagah Dam, it was also recognized that a great displacement of people and business operations in the Oolagah Dam area must occur if the project was to be built, and, therefore, solemn assurances were repeatedly given to the people and business concerns to be displaced by said Oolagah Dam, both by the congressional committees and the personnel of the Corps of Army Engineers that, in the event of the construction of the project, every effort would be made to see that the people in the affected area would not be forced to bear unjust and undue economic hardship and loss while others are reaping the great economic gains that proponents have promised would result from the building of Oolagah Dam; and

Whereas appraisals and purchases of land and residential properties in said Oolagah Dam area are in the process of being started at this time by the land procurement office of the Corps of Army Engineers; and

Whereas appraisement of property in the Oolagah Dam area is being made on the basis of assumed values in the present location with no consideration being given to replacement cost in kind in another location; and

Whereas appraisement of many properties in the Oolagah Dam area are being made without due recognition of the known mineral values in the form of valuable coal deposits, gas reservoirs, and oil; and

Whereas representatives of the Corps of Army Engineers procurement office in Tulsa, Okla., are quoted in newspapers of recent date as telling oil producers and mineral owners that "only in the dam site and construction area does the Government have definite plans for buying mineral holdings outright," but would seek only to acquire flowage easements on minerals and under the flowage easement agreements oil operators would be required to subordinate their operations to the basic functions of the dam and reservoir; and

Whereas the appraisement and procurement policies being followed by the Corps of Army Engineers in the Oolagah Dam area have met with the active and determined opposition of the landowners as is evidenced by the fact that the Corps of Army Engineers only recently has found it necessary to resort to condemnation action to acquire much of the initially needed lands in the dam site and construction area; and

Whereas in the condemnation actions pending as of this date against the landowners in the immediate vicinity of the Oolagah Dam itself, said actions covering more than 1,500 acres which is underlaid with valuable coal deposits, attorneys representing the Corps of Army Engineers have petitioned the court to take the surface land rights and reserve to the present owners all mineral rights and values, and to subordinate the reserved mineral rights and values to the prior rights of the United States to flood and submerge the land as may be necessary for the construction, operation, and maintenance of said project; and

Whereas under several hundred acres of said lands now being condemneed by the Corps of Army Engineers for the Oolagah Dam project, the school children of the State of Oklahoma own one-half of the mineral rights and values; and

Whereas the school children of the State of Oklahoma, through the trusteeship of the State school land commission, own thousands and thousands of acres of mineral rights under lands located in the remainder of the Oolagah Dam area, the Keystone Dam area, the Eufaula Dam area, and in other areas where such projects are planned; and

Whereas the mineral rights and values owned by the school children of the State of Oklahoma in the Oolagah Dam area now under condemnation will be forever inundated and the value of said rights will therefore be eternally lost to the school children of the State of Oklahoma; and

Whereas the schoolchildren of the State of Oklahoma will suffer great and irreparable loss of wealth if the Corps of Army Engineers continue, through the length and breadth of the Oolagah Dam area, the Keystone Dam area, the Eufaula Dam area, and in the other areas where like projects are planned, this policy of taking, without payment, the mineral rights and values belonging to the schoolchildren of the State of Oklahoma, and by force of condemnation then subordinating those mineral rights and values to the prior rights of the United States to flood and submerge said mineral rights and values: Now, therefore, be it

Resolved by the House of Representatives of the State of Oklahoma, That we respectively urge, request, and petition the Congress of the United States to make such inquiry into the land procurement procedures of the Corps of Army Engineers, issue such directives and take such action as may be necessary to insure the fulfillment of the intent of Congress in the protection of the rights of the people in the Oolagah Dam area and in safeguarding the mineral values and rights of the schoolchildren of the State of Oklahoma in accordance with the laws and Constitution of the United States; and be it further

Resolved, That the chief clerk of the House of Representatives of the State of Oklahoma be directed to send a copy of this resolution to the President of the United States, each member of the Oklahoma congressional delegation, the Director of the Bureau of the Budget of the United States, and to the Chief of the United States Corps of Army Engineers.

Adopted by the house of representatives the 27th day of May 1957.

B. E. HARKEY,
Speaker of the House of Representatives.

Ike Asked for It

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. ABBITT. Mr. Speaker, I have just had the opportunity of reading a very enlightening editorial which appeared in the Standard-Times, of New Bedford, Mass., on Tuesday, April 3, 1956. This editorial points out very cogently the disastrous consequences inflicted upon this country by the purely political decision of the Supreme Court of the United States made in the school-segregation case decided on May 17, 1954.

I am glad to know that some of the people in Massachusetts realize the dire consequences of the Supreme Court of our land departing from law and indulging in politics. I am equally glad to know that at least some of our people realize that the executive department of this Government aided and abetted the Court in this departure. It is a serious thing—yes; extremely dangerous—when the courts of our land, at the insistence of people high in the executive department, trifle with the rights of our people and make decisions upon purely political grounds rather than the established precedents and constitutional law of the land.

Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the editorial entitled "Ike Asked for It." I commend this editorial to all the Members of this body and to Americans everywhere who are interested in preserving constitutional government in our Nation:

IKE ASKED FOR IT

In two recent press conferences President Eisenhower discussed the school-segregation issue in the South, saying this is "a time when we must be patient" and try to avoid "a tremendous fight that is going to separate Americans and get ourselves into a nasty mess."

Unfortunately, the mess which the President deprecates already exists, and should have been foreseen when, under White House pressure, the Supreme Court reversed the law of 60 years' standing with reference to school segregation in the South.

Several cases involving alleged discrimination against Negroes in southern schools were pending in the Supreme Court when former Governor Warren became the new Chief Justice. The views of the President against segregation were well known, as may have been those of Chief Justice Warren. But to make doubly sure the Supreme Court made the right decision, the President instructed Attorney General Brownell to appear in the case, as a friend of the Court, urging desegregation.

Two important provisions of the Federal Constitution are involved in the desegregation decision. The 14th amendment, approved in 1868, forbids any State to "deny to any person within its jurisdiction the equal protection of the laws."

The other provision of the Constitution directly affecting the desegregation problem is that one which specifically says: "The powers not delegated to the United States, by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

Under the former provision of the 14th amendment, no State could discriminate between Negro citizens and whites with reference to schools or otherwise. Under the second provision, the 10th amendment, control of the schools was specifically reserved to the States, as not having been delegated to the Federal Government.

Obviously, under the 10th amendment, the South had the undisputed right to control its schools, unless its policies violated the 14th amendment forbidding discrimination between Negroes and whites. For 60 years the Supreme Court had ruled the 14th amendment requires equal school and other facilities, but not identical; in other words, schools and other facilities may be separate, but must be equal.

The Warren decision, which the President now faces with pleas for patient destroyed the school formula of the South, a formula under which admittedly the Negroes of the South and the South had made steady and peaceful progress for more than a half a century.

In a windy decision by Chief Justice Warren himself, the chief justice said in effect, "The very fact of segregation constitutes discrimination, gives the Negro a sense of inferiority, etc."

That this is untrue is evidenced by the fact many of the leaders of the Negroes in the South and the North, including many of the Negro schoolteachers of the South, not only feel no inferiority as a result of segregation, but object to attempts to force desegregation upon either Negroes or whites.

Though the President may not himself have been influenced by political considerations, the Warren decision was heavily weighted with politics.

Leaders close to the President undoubtedly told the President desegregation, if accomplished during his administration, would go a long way toward winning back the Negro vote of the North. This vote had been lost to the New Deal of the Roosevelt-Truman era.

Not only was such a purpose highly improper, but it has not and it will not work. For one thing, there is no segregation problem in the North—for there is no segregation. For another thing, the Negro vote, to whatever extent it was and is Democratic, is influenced by the New Deal philosophy, which only can be cured, if at all, by the process of education, a process which has been rudely struck down in the South by the recent Supreme Court decision.

Another equally improper consideration which is thought to have been influential in the Supreme Court's political decision is that there was thinking emanating from the State Department that desegregation would eliminate Communist-inspired criticism of the United States in India and others of the countries of the dark races.

Here again the administration did not see beyond its own nose. The antipathy of India does not spring from segregation in Southern schools, etc. It springs from the fact that India, while recipient of our generous bounty, is basically Communist in its sympathy and is interested in the segregation issue of this country only because it suits its own propaganda purposes.

We're sorry for the Southern whites and Southern Negroes to be pawns in this politicking of the Supreme Court. We're sorry for Ike now that he sees what he helped to procure and produce. It's going to take a lot more than patience to solve this one—on Ike's part as well as of those in the North and South whom he beseeches.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Nguyen Huu Hanh

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. ANDERSON. Mr. President, I have here a copy of an address delivered by Mr. Nguyen Huu Hanh, director general of the Banque Nationale du Vietnam, on April 1, 1957, before the Metropolitan Club in New York City.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows;

ADDRESS MADE BY NGUYEN HUU HANH, DIRECTOR GENERAL OF THE BANQUE NATIONALE DU VIETNAM, ON APRIL 1, 1957, AT THE METROPOLITAN CLUB, NEW YORK CITY

Mr. Foye, ladies, and gentlemen, now at long last Vietnam has achieved real independence with the establishment of a true democratic government of the people.

We owe this newly hard-won independence to the determination of our people, their love of freedom and democracy, and to the energy, courage, and leadership of our President, Ngo Dinh Diem.

I would like to emphasize the happy consequences of a complete state of security on our national economy and the efforts made by our Government during the last 2 years to solve the economic difficulties arising out of 15 years of devastating war.

Before attacking the problem of future development, let me review the present situation impartially and objectively. It would be naive to expect the economy of a country dominated for 80 years by a foreign power and ravaged by 15 years of continual warfare to become immediately established and stabilized. Although the economy needs considerable reforming and reorganizing it already is presenting many encouraging signs for us, as for the whole free world.

Our country is primarily an agricultural country, thus the efforts of our Government are directed to increasing our agricultural production, and reclaiming the abandoned lands. Our Government is fully aware of Communist tactics of infiltration and is attacking this problem with a double purpose: the development of the economy, and the improvement of internal security. Orientals have the habit of concentrating on the flat plains leaving virtually uninhabited the swamps and forests, generally the most fertile land. The Communist is trying to exploit this habit and infiltrate into these empty sections. Our President, quickly recognizing this threat, is taking advantage of the Communist slowdown (their internal problems are keeping them occupied) and has skillfully managed to move the refugees and idle population of the urban areas into the high lands thus filling the vacuum created by past generations. It is his hope that the resettlement of the refugees will convert our highlands, generally very fertile, into something comparable to the American West. These refugees possess a natural aptitude for achievement and conquest of the wilderness, and the pioneer spirit so characteristic of America in the past. Based on recognition of these factors the projects of Dong Thap Muoi, Cai San, and the highlands were initiated. Hundreds of thousands of refugees have been resettled into the local communities. The Cai San and Dong Thap Muoi projects, under the guidance and with the aid of the National Government, have attracted more than 40,000 refugees, with another 50,000 to come soon. The new crops are expected to be very good.

Our problems are threefold, economic, social, and military. The Highlands project is a typical example of our attempt at a solution with the least possible financial means.

The map of Vietnam indicates that the highland regions border Laos and Cambodia wherefrom Communist infiltration is most likely to come. These lands are inhabited by only lethargic mountain tribes.

Our President has effected the movement of some 20,000 militia whose duties include clearing the land and establishing their own farms, thereby creating an attractive and tempting place for the refugees. Once out of military service they will continue to keep local order and preserve the peace by themselves thus representing a manifestation of the true spirit of the pioneer. These 20,000 are the nucleus of a future settlement of perhaps 1 million persons, thereby easing the pressure of overpopulation in the cities and on the plains. The development of this vast and fertile territory, now lying waste, may close the western frontier to Communist infiltrations.

We concede the fact that our means are limited for the execution of these tremendous plans. We have at our disposal but a few bulldozers and a half-dozen tractors, but we have to our advantage the extraordinary quality of the land, the courage and dynamism of our Government to win the political economic battle.

Besides rice, our rubber plays the most important part in the improvement of our trade balance. With a complete state of security reestablished and an improvement of labor relations, the rubber plantations have regained their normal activity and we hope that, with the new trees being planted, our current production will be increased by 150,000 tons within the next 5 years.

As you can realize we do not want to specialize in 1 or 2 crops for fear that our economy may be hurt in time of crisis. We do not want, at least in the foreseeable future, to produce more than 500,000 tons of rice yearly for export. We will endeavor to induce our farmers and our plantation owners to plant such industrial crops as coffee, tea, and castor oil.

In the field of foreign trade many Vietnamese concerns have been recently established. Our Government is trying to help and encourage them, but, unfortunately, because of the lack of experience and capital, many of them have failed and their number is reduced from 15,000 in 1955, to 1,200 in 1957. Anyway we want to make a selection of them, as usually, the people who want to step into import business want to make a fast dollar but generally lack experience and financial means. We also try to reduce our imports and to encourage the introduction of mechanized equipment. We are doing this by influencing the demands for equipment goods on the part of the local firms rather than passing unworkable laws. Even with that our balance of trade has been unfavorable and the American aid has been particularly valuable during the last 2 years in helping us reduce that deficit. In 1957 we are planning to import $10 billion of goods, $8.5 billion of which will be financed by American aid. Our foreign-trade relations have been undergoing considerable changes. France, which used to occupy the first place, has now dropped to the third, from 76 percent in 1954 to 52 percent in 1955, and to 24 percent in 1956. The United States is now the most important supplier with 28 percent, followed by Japan which has 25 percent. But France still remains the most important buyer from Vietnam, taking 68 percent of our exports, followed by the United States with 19 percent.

In order to improve our balance of trade, we are making every effort to increase local production. Our businessmen with the help of our Government are now contemplating the establishment of a glass factory, a cement factory, a paper factory, and a textile factory. We do not have the unreasonable ambition of industrializing our Nation overnight. We are conscious of our lack of capital, lack of know-how, and the narrowness of our internal market. Also within the framework of our development of the country, our Government has conceived many public projects which will provide the basis for future development. We intend to build a hydroelectric center, to develop our railway system and to improve our highway network.

These achievements, during the past 2 years, have been made possible with the great amount of American aid that has been helping us fight inflation.

But many people have exaggerated the inflationary pressures in our economy and have described our finances to be absolutely insane. I do not wish to deny the inflationary pressures created by 15 years of warfare but I do not think it is as dangerous as one would tend to believe at first sight. It is true that we have inherited many serious problems from the French administration, but with 2 years of hard work we have succeeded in progressively solving part of these problems.

In 1954 when our president came into power, the financial situation in Vietnam was extremely dangerous, our national resources were exhausted after 15 years of uninterrupted war, and because of the lack of security and efficiency of the administration, taxes could not be collected and fiscal control was almost nonexistent. The national budget, burdened with a deficit of $2 million in 1953 and $3 billion in 1954, was bled white by extravagant expenses, by secret funds and multiple subsidies to different political groups and religious sects. After Geneva, the first objective of our president was to lay solid foundations for our finance, to fight against corruption and fraud, and to push forward the program of national reconstruction. Important efforts have been made during 1955–56 to balance our budget controlling the receipt and expenses, and to render more effective our tax collection. The results are so far satisfactory. Our 1956 budget is balanced not without difficulty however. But our efforts are not limited witin a series of decrees and laws, neither do we intend to impose heavier taxes. The best way toward increasing tax receipt is to increase the national income to help in the development of our economy and the reorganization of our finances. Our Government

has organized many different fiscal and financial institutions, such as the superior council of money and credit, the national bank, the state-owned commercial bank, and the national investment fund, etc.

On the field of international finance many measures have been taken to better utilize the American aid to encourage export, to stop the importation of luxury goods, and to improve our reserve in foreign exchange.

In order that our policy of austerity neither affects the development of the private enterprise nor the flow of foreign investment, we created a free exchange market in July 1956. Financial transfer can be effected through this free market for remittances of profits, foreigners' savings, and tourist expenses.

At the beginning of 1955, at the time of the creation of the national bank, we had at our disposal but 5 billion francs as reserve. At the end of 1955 our reserve was increased to 22 billion francs. In 1956 Vietnam detached itself from the franc zone and we started to accumulate our reserve in dollars, sterling, and other currencies. Our balance sheet shows that on December 31, 1956, the reserve in foreign currencies for our money was 29.11 percent, American-aid funds being included, or 14.01 percent, if we count our own reserve, as compared to 4 percent in June 1955.

Besides, from our effort in stabilizing our economy and reorganizing our finance, we also are looking ahead into the future and working toward improving the standard of living of our people and toward becoming less dependent on foreign aid. It may interest you to know that lately our President has released a declaration on foreign investment of agriculture and exploitation of nathe development and reconstruction of our country. In my opinion, our 5-year plan is very rational because it is not ambitious and because it deals primarily with the development of agricultural and exploitation of national resources. I will not come back to the agricultural projects which I talked about before. I will only deal with a few projects for the exploitation of industrial raw materials, which may be of some interest to you.

The coal mine of Nongson, abandoned by the French firms, was reopened in 1956. A study made by our engineers has given very satisfactory results. The production in 1956 was 2,200 tons. As for 1957, our projects include the opening of one section to bring the monthly production to about 2,000 tons which is about one-third of our coal import in 1956, therefore permitting us to save approximately $600,000 at the end of the year. We are also preparing for the opening of another section to bring the 1958 production to 4,000 tons monthly. We hope to reach the annual production of 150,000 tons in 1960.

Starting from May 1957, about 1,000 tons of puzzolane or baria will be introduced to be mixed with the imported cement. Plans have been made to put the cement factory Long-Tho, near Hue, under production again. This factory is expected to reach a monthly production of 2,400 tons by 1958. The possibility of installing another cement factory in south Vietnam capable of producing about 100,000 tons per year is being studied.

Concerning the glass industry plans have been made to utilize the sand of baria and of camranh. A glass factory will be opened for operation in Saigon in 1958 with an expected production of 8,000 tons annually.

The phosphate deposits on the Paracels Island will be exploited soon by a Vietnamese firm. The production, according to official estimates, will be 50,000 tons per year in 1958.

The final objective of our 5-year plan and of our project is to increase our national income by 25 percent after 5 years, and also to improve our trade balance by the elimination of our importation of coal, cement, glass, and chinaware within the next 4 years. Our 5-year plan also will permit us to create more jobs; millions of people will be resettled on our highland and 5,000 workers will be employed in the various industries.

In order to finance this 5-year plan we intend to encourage savings and the formation of local capital, by creating investment banks and national insurance companies. But we are well aware of the fact that our local capital is limited, and we intend to appeal for foreign investment in Vietnam. You already know of the terms of our President's declaration on foreign investment, I do not need to repeat them here. However, I would like to emphasize a few points which in my opinion seem to be very important. Our Government is following a policy of encouraging private enterprise within the framework of our plan and our law. Our policy is to foster close cooperation among all free nations. The aid which we solicit from our friends in the free world should not be in the form of free grant but could take the form of long-term loan with which we can buy our equipments, or could take the form of participation in our enterprises.

That is the summary of the financial and economic situation in Vietnam and the possibilities for future development which our government is contemplating to follow during the next 5 years.

You would certainly not forgive me if I ended my talk without saying a few words about the American aid which has been a tremendous help to us in the fight for our survival and which will continue to be of great assistance to us in this important task of building and maintaining our position as a free nation. As a banker, without any direct connection with the government, I can say with objectivity and impartiality that the American aid under the present form has already the maximum efficiency. Although some minor modifications in the procedure and a little more emphasis on economic aid are desirable, I sincerely think that any drastic changes either in the volume or in the implementation of it would immediately stop our progress and weaken our position as well as the position of the free world.

Silting of Lakes Points Up Need for Effective Soil-Conservation Program

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. JOHNSON of Texas. Mr. President, the problem of water is always with us in Texas. Sometimes it takes the form of drought. Sometimes, as this spring, it is manifested in disastrous floods.

One aspect of this overall problem, the siltation of the big reservoirs we have built in Texas, recently was the subject of a highly intelligent editorial discussion by the Paris News, an outstanding daily newspaper in North Texas. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SILTATION SITUATION CONTINUES BIG PROBLEM FOR LAKES OVER NATION

When the engineers completed the dam on Lake Texoma 13 years ago they made a prediction: that lake won't go over its spillway but once in every century.

The lake can rest for a century now, for this week it went over the spillway with plenty of water to spare.

Lake Texoma is the largest artificial lake in this part of the country. There are only six larger ones in the entire country and a seventh now under construction. The kingbee of America's reservoirs is Lake Mead, which piles up behind the Hoover Dam—almost 30 million acre-feet.

Lake Texoma is rated at 5,715,700 acre-feet. Next in size in Texas is the newest, Falcon, in Starr-Zapata Counties, with 4,096,000. Lake Travis, on the Colorado above Austin, holds 1,600,000 acre-feet and the older Lake Buchanan, 831,000. Lake Whitney on the Brazos above Waco is rated at 2 million acre-feet and Lake Possum Kingdom, also on the Brazos, at 750,000. Abilene's Lake Fort Phantom Hill holds 73,960 acre-feet, and Lake Brownwood 125,000.

In the fullness of time, however, the engineers' prediction that Texoma would go over its spillway only once in a century is destined to be nullified. As is characteristic of nearly all Texas streams, the siltation problem is bad, and the time will come when the capacity of Texoma will be gravely reduced.

That is true in greater or lesser degree of all our artificial lakes. The situation is not without a remedy, but the application of the remedy will take a lot of time and more money than the lakes originally cost.

It involves widespread soil conservation practices, religiously carried out and kept up. It involves the building of thousands of small upstream detention dams on the tributaries of our rivers. The problem is to hold as much water as possible in the area where it falls—on crop- and rangelands to prevent soil erosion, behind smaller dams on smaller streams so floodwater can be released gradually to avoid floods, to settle out some of the silt before it reaches the larger lakes.

All this will take, as noted, a lot of time and money, but it is absolutely essential to the continued well-being of the Nation. The alternative is a Chinafied America.

Assuring Fair Trial

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of June 5, 1957:

ASSURING FAIR TRIAL

The principle underlying the Supreme Court decision in the Jencks case is an elementary principle of fair play—that an accused person shall have every reasonable means of defending himself. The sole novelty of the decision lies in its application to confidential reports of the Federal Bureau of Investigation, hitherto considered sacrosanct. Indubitably, the decision raises problems for the FBI. But there seems no warrant whatever for Justice Clark's extravagant lament in a dissenting opinion that the Court has afforded criminals a Roman holiday for rummaging through confidential information as well as vital national secrets.

The Court has not authorized rummaging of any sort so far as the FBI's files are concerned. In prosecuting Clinton E. Jencks for filing an allegedly false non-Communist affidavit, the Government relied heavily on

two witnesses, Harvey Matusow and J. W. Ford, former Communist Party members and undercover agents for the Bureau. These men had made reports to the FBI. For the purpose of impeaching their credibility, the defense wanted to determine whether the contents of these reports were consistent with the testimony of the witnesses at the trial. All that the Supreme Court did was to declare that the defense was entitled to an order directing the Government to produce for inspection all reports of Matusow and Ford in its possession, written and, when orally made, as recorded by the FBI, touching the events and activities as to which they testified at the trial. This is narrowly and precisely limited. It gives a defendant no more than he genuinely needs to defend himself effectively.

In some situations, no doubt, the Government may feel that, in the interest of national security, confidential reports should not be disclosed. It may be necessary then to forgo prosecution. This is a choice which the Government must face frequently—in deciding whether to produce undercover informants as witnesses in court; in deciding, as in the Coplon case, whether to make pilfered documents public; in deciding whether to make available to the defense other relevant material which it considers privileged. As Judge Learned Hand observed some years ago, "The Government must choose; either it must leave the transactions in the obscurity from which a trial will draw them, or it must expose them fully. Nor does it seem to us possible to draw any line between documents whose contents bear directly upon the criminal transactions, and those which may be only indirectly relevant."

It is less important to a free people that, in some instances, a criminal may escape punishment than that he should have an untrammeled opportunity for self-defense. The frenzied bills which some Members of Congress have already introduced, in response to the Supreme Court decision, to protect the confidentiality of FBI reports tend to ignore the protection of individual rights which lie at the heart of the American system of justice. In the last analysis, the assurance of a fair trial is one of the first essentials to the security of the United States.

The Cancer War

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. NEUBERGER. Mr. President, I have expressed to the Senate my views that a vastly expanded cancer research program, under the direction of the National Cancer Institute, is needed for hastening urgent solution or amelioration of the malevolent threat of cancer. A long-range program, with assured financial support by the Federal Government, is necessary to lend stability and continuance to cancer research programs.

I ask unanimous consent to have printed in the Appendix of the RECORD an able editorial from the Denver Post of June 2, 1957, entitled "The Cancer War," supporting more intensified effort toward unlocking the riddle of cancer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CANCER WAR

Denver's annual cancer drive is nearing a highly successful conclusion, but the ravages of the Nation's No. 2 killer continue unabated. Every 2 minutes some American man, woman, or child dies of cancer.

Denverites will give about $185,000 this year to the American Cancer Society (compared with 163,000 in 1956), and Colorado's total contribution will amount to about $400,000 (compared with $306,000 last year).

Nationally, it seems assured that the goal of $30 million will be exceeded—but only one-fourth of this will go into research. The rest will be spent on public and professional education and service, and because the patient load is so great only a small number of teaching cases can hope for any financial assistance.

To fill the gaping research hole in the ranks of the Nation's dedicated cancer fighters, Senator NEUBERGER has proposed a $500 million cash program of Federal aid. If this seems like a lot of money, reflect a moment: We are spending nine times more to prepare for a war that may never be fought, while the cancer war is already upon us, imperiling 40 million now-living Americans and dooming 26 million.

President Eisenhower's record $72 billion peacetime budget actually cuts funds for cancer research by 3 percent. Including all Federal, State, and voluntary contributions, only $45 million was spent on cancer research last year, the cost of one atomic submarine.

Senator NEUBERGER's thesis is that no war can be won by a halfhearted, piecemeal, year-to-year attack. So he proposes unwavering, long-range medical research programs, resolute national offensives on all fronts to redouble basic investigation, to recruit, train and hold an army of scientists, and to expand laboratory facilities. The cost? Little more than 1 percent of the $45 billion defense budget.

Last year Senator MARGARET CHASE SMITH, in one of a series of bipartisan pleas for permanent medical research programs, pointed out that the Hoover Commission's medical task force criticized annual medical appropriations and recommended 5-year block grants so concerted long-range studies could be started without fear of an abrupt end to financial support.

Such men as Drs. Leonard A. Scheele, former United States Surgeon General, Sidney Farber, Harvard cancer specialist, and Cornelius P. Rhoads, director of the Sloan-Kettering Cancer Institute, all have voiced support for federally stabilized long-range cancer programs.

True, progress has been made in the war against cancer. But still only the few most promising leads can be pursued in the search for a preventive, a cure, or even a palliative, because of uncertainty about long-term funds, and the incidence of cancer continues to rise all over the world.

Americans have proved we can lick pneumonia and polio, influenza and tuberculosis. And we have the scientific potential to lick cancer, heart disease and mental illness, too. But, as Senator NEUBERGER laments, we still lack the necessary determination.

Communism

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. BEALL. Mr. President, last Saturday, at a banquet of the Maryland Forty and Eight, I had the honor of delivering an address on the subject of communism. Among those in attendance were Chef de Chemin de Fer Chester Naumowicz, of Silver Spring, Maryland's first national president of the Forty and Eight; Charles W. Ardery, national secretary; and many patriots from all areas of the great Free State of Maryland. I ask unanimous consent that my remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH DELIVERED BY UNITED STATES SENATOR J. GLENN BEALL, OF MARYLAND, AT BANQUET OF LA SOCIETE DES QUARANTE HOMMES ET HUIT CHEVAUX, LE GRANDE VOITURE DE MARYLAND, ON JUNE 1, 1957, IN THE SOUTHERN HOTEL, BALTIMORE

Although I am a charter member of the American Legion post in my hometown of Frostburg, I never had the honor of belonging to the legion's famous Forty and Eight.

I am, however, a member of another body in which forty and eight is a rather magical number.

The other group to which I refer is the United States Senate, where 48 Senators, plus the Vice President, can give political control to a party.

I might mention, in passing, that leaders of both parties have been known to settle for a forty and eight combination quite similar to the one your fine organization commemorates, that is: 40 men, who ordinarily would vote in accordance with their party's philosophy, and 8 others, who occasionally might act like mules or jackasses.

I shall now drop this particular subject before some of you try to classify your speaker.

Whenever the newspapers write about the Forty and Eight they describe it as the legion's fun-loving organization.

Never permit yourselves to lose that description.

As Joseph Addison, the English poet and essayist, once said:

"If we consider the frequent reliefs we receive from laughter, and how often it breaks the gloom which is apt to depress the mind, one would take care not to grow too wise for so great a pleasure of life."

On the other hand, the members of the Forty and Eight and all of their legionnaire associates have another essential attribute, the ability to recognize when not to laugh.

This has been demonstrated time and again, especially in your determined and continuing fight against communism.

I consider it a privilege to be able to discuss that issue with you this evening.

As all of us know, democracy found a home in America when a group of men and women decided that they wanted to be free individuals instead of unquestioning subjects of a domineering mother country.

Today, however, there is a false belief in many quarters that we must accept all philosophies in order to preserve the spirit of freedom we have fostered.

Nothing could be further from the truth.

If democracies are to preserve their health, they cannot permit the growth of systems dedicated to their destruction any more than healthy bodies can be allowed to have cancer spread through them.

That is why we in this country must never yield to the false propaganda that our four freedoms must embrace all doctrines, including communism.

Other nations have failed to see that communism, like a disease, destroys the very area in which it is allowed to thrive.

Some of those areas have died because of their mistake.

Others are desperately ill.

Despite this, there are still persons who refuse to believe that communism is a threat in this country.

Perhaps these people failed to read a report on the matter which a Senate subcommittee released about 18 months ago.

In their report, the Senate investigators said:

"Those who declare that the Communist Party is no menace, because its membership and voting strength constitute only a fraction of a percent of the total membership and voting strength of major political parties, are deluding themselves and others."

Here's the reason why, and again I quote:

"A party member or sympathizer may be an official of a labor union with thousands of members which can tie up a given community or industry.

"He may be an unpublicized Government official who prepares memorandums on policy affecting the entire Nation.

"He may be an atomic scientist with access to highly secret information vital to our security.

"He may be a writer, a preacher, or a radio commentator with a vast audience."

"He may be an actor or the descendent of some well-known family or the leader of a community organization.

"In each case the individual's influence radiates to ever-widening circles with an effect similar to that of a stone thrown into a pool."

That, in the words of men who have studied the issue closely, is why communism is a menace.

It is well to remember these points, and it is also extremely important to keep in mind that the Communist threat is not always pointed at the atomic-energy installation in Oak Ridge or at some testing grounds in the West.

In 1951, for instance, the Federal Bureau of Investigation estimated that Maryland alone had 250 Communists and our neighboring State to the north had 1,441.

But that was 6 years ago, and the Senate report from which I quoted is now a year and a half old.

What, then, about the present—now—today?

When the members of the House Un-American Activities Committee began their recent hearings in Baltimore I contacted Federal Bureau of Investigation Director J. Edgar Hoover to ask about the current situation.

Mr. Hoover stated, as he previously had done before a congressional committee, that there were 17,360 Communists in our country at the beginning of this year.

That is about 14,000 less than there were in 1951, but in the remaining group are the ones which Mr. Hoover described as the hard core.

These Communists, he emphasized, are as cruel and as merciless as their Russian masters.

Our problem, therefore, is twofold.

In the first place, we must decide what to do about the individuals who are accused of being Communists but who refuse to answer questions about their alleged connections with the party.

We must also determine how we can best continue our fight against subversion under today's laws.

Let us consider those points one at a time.

Less than a month ago, just several blocks from where we are now assembled, 22 persons invoked the first and fifth amendments in refusing to answer questions about their reported Communist activities.

One of them—a man accused of being the head of the Maryland-District of Columbia region of the Communist Party—was the same fellow who was one of my bitterest critics when I was in the House of Representatives and who later was sent to a Federal jail for violation of the Smith Anti-Communist Act.

I mention the fact that this man did everything he could to defeat me in order to show how an individual's personal feelings—in this case mine—can become involved in a matter such as this.

That is one reason why, despite our hatred of communism, despite our desire to protect our own free land, we must be extra careful not to allow ourselves to join a sort of "mental lynch mob" against those who employed the first and fifth amendments in their testimony.

Admittedly, this is an extremely delicate issue and the distinctions within it are quite narrow.

Therefore, before we proceed further, let us review the law and our philosophy of government.

First, we must remember that every person is presumed to be innocent until proven guilty.

Second, the Constitution specifically provides that a person is not obliged to testify against himself.

Third, there is no law which makes it a crime merely to be a member of the Communist Party in this country.

And finally, the courts are still testing laws passed to make it illegal for a person to participate in Communist activities if he has full knowledge of the aims of the organization.

Now, what does all of this mean?

It means, in the case of the persons named as Communists during the recent hearings, that these individuals are, at most, only suspected of something which itself might or might not be illegal.

The allegations have not been proven.

The illegality of their reported acts has not been established in the courts.

I am stressing—perhaps overstressing—these points because, in our constant fight against the menace of subversion, we must never inflict unintentional wounds on the philosophy of government we are trying so zealously to protect.

On the other hand, what should we do about men and women who use the first and fifth amendments to refuse comment on their alleged Communist connections.

We must, of course, try to find out what is behind the refusal of those individuals to cooperate in legitimate investigations, and I can assure you that this is being done most effectively by numerous experts of your Government and the patriotic citizens with whom they are working.

Then, however, we are faced with the dilemma which arises from our personal and business contacts with those who, in effect, have hidden behind the Constitution.

In most cases this becomes a matter of individual decision, and I would like to tell you how I, personally, feel.

Granted that it is the right of any person to protect himself from questions about his Communist connections by invoking the fifth amendment, it is also my right to hold such individuals in the utmost contempt, and I do so.

Yes, in keeping with the philosophy which underlies our democratic processes, it is our duty to respect the right which every man has to make certain decisions, even though those decisions might have originated within the walls of the Kremlin.

We are not obliged, however, to respect the decisions themselves or the persons who make them.

As I mentioned previously, the distinction is quite delicate, but on it rests the future of our form of government.

Before I change the subject, I would like to take this opportunity to commend publicly those employers who have taken direct action, which they sincerely felt to be justified, and have suspended those persons on their payroll who refused to cooperate with legitimate investigations affecting the security of our country.

Now, for a few minutes, I would like to discuss our day-by-day efforts to head off the ever continuing threat of communist infiltration.

I know full well that most persons feel that their lives on farms or in factories or in offices will never cross the paths of subversives.

That is exactly the attitude that the Communists want.

Then they can move in and work under the protective cover of public indifference.

Frequently, in such cases, their camouflage is built around the very idea I just mentioned, the false belief of many persons that they have far more chance of meeting a man from Mars than a Communist.

Preying on such mistaken attitudes, the men who would overthrow our democracy masquerade as respectable citizens and distribute their false philosophy through various front organizations.

Suppose, for a minute, that a well-dressed man with an honest smile circulated through your neighborhood seeking signatures for a petition being circulated by the Maryland Committee for Peace.

Or suppose a motherly individual requested the support of you and your neighbors for the Methodist Federation for Social Action.

What would be the result?

Some persons, I'd be willing to bet, would go along with the petitioners as readily as they would with a March of Dimes drive.

But those are just two of the many groups that a Senate subcommittee has listed as Communist-front organizations.

The Maryland Committee for Peace might have had a noble-sounding title, but the peace it sought was a Soviet-brand servitude.

Likewise, the Methodist Federation for Social Action had nothing to do with any religion, and particularly nothing to do with any of the fine churches of Maryland.

Its only connection with a religion, if that word can be used at this time, was its link with the godless creed that has been promoted by the rulers of the Soviet.

Nevertheless, good, sincere Americans, believing that Communist infiltration is conducted strictly on a cloak-and-dagger basis within the secret agencies of the Government, added their endorsements to both groups.

Our task, therefore, becomes clear.

We must maintain a strict, unrelenting vigilance.

We must guard against the men who pledge allegiance to our flag with their right hands while stealing the secrets of our security with their left.

Remember, the wall of defense installations which protects our shores cannot protect us from such conspirators.

They work within the walls.

Our most advanced weapons are ineffectual in these cases, for the enemy is looking over our shoulders as we prepare to fire.

I repeat, therefore, that our major defense is vigilance.

More than that, though, we must step up our offensive in the fight.

One of our Nation's greatest troubles today, I think, is that we are beginning to develop a listless attitude toward good old-fashioned patriotism.

Don't be ashamed of your feelings.

Wave the flag.

Sing the national anthem.

I know it seems unnecessary to say these things to Legionnaires, but I would rather repeat them too often than take a chance on missing one individual who might profit by my remarks.

Now, in closing, I would like to express my personal thanks to you fellow Marylanders, who, as good Americans and good Legionnaires, have been doing so much to guard the strength of our Nation.

Keep up the excellent work.

Commencement Day Address by Hon. Thos. E. Martin, of Iowa

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. MARTIN of Iowa. Mr. President, on Sunday, June 2, I was accorded the honor of delivering the commencement address at the commencement exercises of Parsons College, Fairfield, Iowa.

I ask unanimous consent that the address delivered by me be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FUTURE, OPPORTUNITY, AND RESPONSIBILITY OF THE EDUCATED AMERICAN

(Address by Senator THOMAS E. MARTIN at the commencement exercises, Parsons College, Fairfield, Iowa, June 2, 1957, 2 p. m.)

The educated American is up against everything the free world is up against in this second half of the 20th century, only more so.

This makes the role of the graduates of Parsons College and the role of the graduates of other institutions of learning everywhere in our country one that is touched with a proud but a fearful destiny.

There is a burden of responsibility upon your generation of Americans. This burden is balanced by the promise of a full and an ample life, rich in the realization—actually—of great dreams. No people in all the ages have ever had the state of wellbeing, the national and individual dignity, that cloak you as you leave this, your alma mater, for the great world in front of you.

And no previous generation in all the annals of history was ever confronted by a greater peril.

It is in this context that I ask you to evaluate your career that stands before you and relate these coming years to the story of man since the beginning of time.

Let us ask ourselves—Is this generation really unique in terms of the problems that face it? Or is this term, this word unique, merely the text that invests every commencement address?

As I see it the answer is that every age is of course unique in some form.

In the days of early Christianity the issue was between God and Caesar, an issue that has a strikingly identical parallel today.

In the days of Columbus there was the task of bringing whole new continents within the compass of contemporary civilization.

In the latter part of the 18th century there was the question of a small group of American Colonies seeking freedom and independence from an oppressive tyranny.

We are the immediate beneficiaries of the incredible success of these incredible ventures.

The Civil War raised the question—and answered it—whether this Nation or any nation conceived in liberty and dedicated to the proposition that all men are created equal * * * can long endure.

World War I and World War II presented supreme tests to mankind of certain fundamental tenets of civilization, and of government.

Today the issue I firmly believe is clearer than it ever has been, for the world of this generation stands clearly divided between the slave and the free. It is the collateral issues that are complex.

There is nothing unique in this primary issue—except possibly its greater clarity—since the days of the Old Testament.

But there is this about your generation that is unique—our age is more extraordinary than any comparable period of the past because what is done anywhere on earth engulfs the whole planet whether it is the development and use of penicillin, nuclear fission, or the question of what ships may or may not pass through the Suez Canal.

This time in which we live presents the whole race of man on this earth and everywhere in it with certain basic questions.

The first question is whether man, under God, wants to be governed by himself or whether, without God, he will submit to the tyranny of dictatorship and the erasure of his own personality and the elimination of the dignity of the individual

The second question is whether man has the intelligence to recognize that a democracy or a republic sincerely means government by consent of the governed, or whether he can indeed be deceived into believing that a Soviet despotism is a people's democracy, and whether he can be blinded to the omnipresent fact that communism is a dictatorship of deceit.

Unless this generation of graduates of Parsons College and kindred institutions knows, recognizes, and acts upon its role in this unique crystallization of the issue of the centuries, then this much of the victory is lost to the free world.

The Napoleonic wars were fought without our participation.

The Civil War was fought without Europe's participation.

We know now that wars like these can never again be localized, or isolated, or contained.

Thus, your generation of Americans is unique in that your horizons, as of this moment, cover this entire planet and may, before long, be obliged to reach into stellar space.

All this represents uniqueness indeed on a canvas so sweeping, so enormous, so total, it engulfs not only all of mankind, but it carries with it the question of whether there is to be a future at all, the question of whether man is so limited in his capacity to manage himself that he will use the power that is now his to destroy forever all life on this planet.

Your generation is unique because until this hour man has never been presented with so vast and so final a decision.

The burden of my message to you today is that you are the recipients of the richest fruits our civilization has within its gift, and that as the custodians of this intellectual and spiritual wealth there rests upon you precisely a certain concentration of responsibility.

All Americans are involved in the issues, the educated, the near-educated, and the uneducated, and all, in a democracy, have a voice. But democracy has never denied the principle of leadership under law. The educated men and women of America constitute certainly a selected fragment of mankind towards whom, in the first instance, the mass of Americans will look for guidance, so that when the decision is made by all of us, we shall have taken counsel properly and duly with those among us who are presumably, the better trained and the best informed.

What I plead for is not a priesthood of the educated. What I plead for is the service of the dedicated.

The United States has a right to expect that its educated citizens will serve as an echelon of enlightenment on all local, State, national, and international issues that confront a Government such as ours. This is not to be construed to mean that I expect that we shall have Government by college graduates per se. It is of the nature of the intellect to be controversial and probing. Men who think never conform to a single pattern. It is the contest of ideas that gives democracy its strength. But feeding the contest we want knowledge and not prejudice. It is at this juncture that education plays its most magnificent role.

Thomas Jefferson put it this way:

"I know of no safe depository of the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to inform their discretion by education."

Having quoted a distinguished Democrat, permit me to quote an equally distinguished American whose thinking constitutes, I believe, the foundation of the Republican Party of today. Alexander Hamilton put it this way:

"A representative democracy, where the right of election is well secured and regulated, and the exercise of the legislative, executive, and judiciary authorities is vested in selected persons, chosen really and not nominally by the people, will, in my opinion, be most likely to be happy, regular, and durable."

Here are two men, among the greatest political scientists this Nation has produced, political opposites, yet agreed on the basic tenet that the best democracy is, of cuorse, an informed democracy. Woodrow Wilson has insisted that "the informing function of Congress should be preferred even to its legislation function."

One of the dangers of our time, and therefore pregnant with threats to the republican form of government and the free world, is the weariness of the average voter with the problems of the day. This weariness may better be described as a boredom derived in the first instance from the complexity of the issues collateral to the struggle between the free and the Communist world. The weariness may have deep psychological roots in two World Wars and Korea. If so, it is the youth now coming up, and the educated youth more directly, to which I am now addressing myself, that, it seems to me, must take up the slack.

The workload of knowledge about public affairs with which a self-governing people must burden itself is more considerable and more complicated in detail than it ever has been in the life of nations. It goes to the very heart of representative government and the effectiveness of its operation. In a republican form of government like our own we must have representatives of the people, not delegates. When I speak in the Senate of the United States my voice is only as good as the constituency I represent. Once a Senator or a Representative is obliged to think of himself as a delegate whose thinking bears no relation to the thinking back home, or whose constituency is too wearied or preoccupied to think of public affairs, then we have arrived at the beginning of the end of free government.

If we are to persist successfully in this extraordinary phenomenon of government where 170 million people are actually governed by themselves (for civilization as we know it hangs upon our survival) then the duty for the electorate to be informed, to vote and act on their information and their convictions, is not only sacred in the most exalted meaning of the term, but it is indispensable. Either we know or we cease to be citizens. This means that the man in the street must have some understanding of a $71.8 billion budget? True, yesterday it was Korea, then Formosa, now the Middle East. But if we know, as we must, that civilization for a certainty, and perhaps all life on this planet rests in the balance, then how can we fail to participate in the government which must make the decision and which is

founded on the idea of the people's participation? It is not only up to us here in Iowa, to know the difference between fixed and flexible price support, but it is up to the agriculturally withdrawn folk in the canyons of Manhattan also to know their respective meanings. We are all citizens of the same nation, and again unless we recognize our close interrelationship we stand on the doorstep of doom. It is not enough that we know the Monroe Doctrine, like something learned by rote in grammar school.

We must know the Truman doctrine and what it did and we must know the Eisenhower doctrine in favor of which I voted. We should look to see what it is doing now to stop dead in its tracks a communism that has its Red tentacles over one-fourth of the world's surface and one-third of the earth's population.

Nor am I one of those who is altogether convinced that the brain of the electorate is too tired to be informed. We are gifted with an immense and an extremely competent system of private communication, instantaneous, free as communications have never been free in the history of civilization, and richly endowed not only with talent, but with resources and overwhelming technical proficiency. This communication comes to us by voice, in print, in pictorial form, and by television and recordings, newspapers, magazines, periodicals, trade journals, and radio. It is of the very heart-stuff that democracy and the republican form of government is made. Thus the educated men and women of today, the graduates of Parsons College, have at their hands, created for them, a vast arsenal of communication to be used by them as a tool for the dissemination of the ideas that make up the genius of America. If our regional arrangements, NATO or SEATO or the Baghdad Pact, call for clarification to the general public, is it too much to expect that, in the interest of representative government, you will help to inform your fellow citizens? Is it too much to expect that, your training having made you intellectually more accessible to understanding of the problems that shake the world, you will now serve as the interpreters and the explainers of the complex?

For we are living in an age when the function of the Congress to inform the people must have reenforcement. If the representative process is to work so that the liaison between the Members of the Senate and the House, and the people, is close and constant and fluidly informative, then our system of Government under its present burdens must look to you for participation. I argue that this participation must of necessity be far more intense from your group, the educated American, than from any other, short of the Members of Congress themselves. My faith in the electorate's eagerness to know, as distinguished from their alleged weariness with public affairs, has its concrete testimony in a questionnaire I have composed and mailed from Washington each year for the past 8 years to people in this State.

My purpose in sending out a list of some 36 highly significant questions about contemporaneous events and trends, legislative propositions and issues, was as much to widen the range of public interest in these issues, as to determine public reaction to them in Iowa. Out of more than 41,000 questionnaires this year, I got no less than 6,256 replies, many of them indicating the wealth of discussion the questionnaires precipitated among farmers, laboring people, businessmen, the professions, the white-collar category, women's groups, and others. More than half wrote me highly informative and illuminating letters along with their questionnaires. Nothing than I can recall in my public life has helped so much to establish the close contact I seek with the people of my State so that my action in Federal affairs may be invested with the thinking, the support, the cooperation of the people whose representative I am in the Senate of the United States.

That is how I see one function of my role in the Senate of the United States.

When I speak of the obligation of the educated American to the representative form of government, I am not speaking in merely ideological equations. I speak rather in terms of contractual commitments. Our universities and colleges are State supported, in many instances tax exempt, privately and publicly endowed. Parsons College, as you know, gets its financial backing from its endowment income, from gifts from the town of Fairfield, the alumni of the college, the Presbyterian Church of the United States, and the Presbyterian Synod of Iowa, the trustees of the college, corporations, and other friends of the institution. Campaigns are now afoot to augment the facilities of this institution, and I hope these efforts receive the wide and wholehearted support they certainly have earned for themselves. But my point is that all this combined communal effort to provide higher education for our youth must call forth a concomitant response wholly independent of one's concentration upon the advancement of one's own career.

I note, from a survey of the Council for Financial Aid to Education, that present private giving falls $600 million short of meeting the rockbottom annual needs of the Nation's nearly 1,900 colleges and universities during the next decade. It has been estimated that it will cost the average American college and university $1,000 a year in the near future to educate each student. It is possible that enrollments will reach well beyond 6 million in 1970. I am informed that this will bring the total annual educational bill to $10 billion or more. These figures do not take into account the need for additional buildings. It is not my point here to go into the situation of privately controlled as against publicly controlled institutions of learning. The products or graduates of both owe something to the community whose substance provides them their training and their learning. Certainly, in the case of Parsons College, it provides them the strengthening of their spiritual and moral background.

But consider what a force rests behind democratic and representative government in a republic like ours if we could depend for our first line of intellectual defense, of missionary effort, of communication of the problems and ideals that concern us, upon the more than 3 million students enrolled in 1956–57 in our institutions of higher education in Continental United States. Next year, 1957–58, this enrollment will be 3,450,000. By 1970 it will, as I said, be well over 6½ million. We are, incidentally, proud that standards today are higher than in the past.

Ten billion dollars for the cost of higher education in the United States is no criterion by which to evaluate the inspirational and moral values instilled in the minds and hearts of four, five, or six millions of American youth. But it does indicate in at least one concrete form the measure of the burden. There is the element of selection. Youth admitted to certain of our institutions of learning and receiving their benefits constitute a properly and correctly favored group in our society. Inherent in this fact is a reciprocal contract that has profound meaning both for the individual student and for the country. Here is the force upon which the Nation must depend to help overcome the appalling statistic that almost half of our citizens do not vote. In the light of the average the citizens of the State of Iowa emerge well ahead of the rest of the country in their sense of political responsibility. The figures show that while throughout the Nation the average of citizens of voting age who went to the polls in the 1956 presidential year was only 60.4 percent. In Iowa it was 74.1 percent.

Iowa was 6th among the 48 States. Our 74.1 percent was bested by Idaho with 77.3 percent, Connecticut with 76.6 percent, Utah with 76.1 percent, Massachusetts with 75.3 percent, and New Hampshire with 75.2 percent. What these figures prove is that Iowa might do better but it proves also that our State is well toward the top and this is something of which we may be reasonably proud. I like to think that the influence of institutions like Parsons College is a contributor to this exemplary record.

Finally, in seeking citizenship participation in representative government let us remember that election or appointment to office is perhaps the highest and the most direct of all forms of service. I do not hold the opinion by any manner of means that a college graduate is ipso facto an ideal legislator or the perfect public servant. But in a definitely preponderant number of cases it it surely an asset. Easily the heavier proportion of Members of Congress have been touched by the advantages of some kind of collegiate training. The technical age that confronts us with petrochemicals, plastics, antibiotics, radioisotopes, nuclear energy, electronics, nucleonics, and automation, is reaching out for the trained mind with an almost savage desperation.

The geopolitical age that confronts us demands a new dimension in statesmanship. It is possible to travel now between New York and Paris faster than it was possible 30 years ago to travel between Boston and New York by motor. Overall the issue before mankind—whether the immediate problem is civil rights or Taft-Hartley, or Suez, or Foreign aid, or aid to education, or Federal authority over the money structure—is a moral one. Your fellow citizens will, consciously or unconsciously, reevaluate you 5, 10, 20, 30 years from now. In the utlimate the tabulation of your contribution to yourself, your community, your Nation, your family, your alma mater, will be a moral tabulation.

If you take away with you from Parsons College the powerful Presbyterian precepts that do so much to mold character, you will be found in the coming years, to the limit of your capacity, performing services in every aspect of life, that will keep your country strong and free and that will put the underpinnings of moral might and righteousness beneath what is today a badly shaken world.

I give you my salute and I wish you Godspeed.

Freight Absorption

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. BENNETT. Mr. President, those of us who live in the West and Far West are keenly aware of the economic fact that our industry can neither prosper nor survive without the competitive opportunity of selling our manufactured goods in the consuming markets to the East. The right to absorb freight—that is, to meet the competitive lower prices of more favorably located sellers—is indispensable to our right to compete in the Eastern markets.

Necessarily, therefore, sugar-beet farmers in the West have been deeply

concerned over the possible impact on freight absorption of pending legislation to restrict the right of sellers to meet lower prices of their competitors.

I have received correspondence from the Executive Secretary of the National Beet Growers Federation, made up of 19 local associations, of sugar-beet farmers in the States of Washington, Oregon, Montana, Idaho, Utah, North Dakota, South Dakota, California, Kansas, Nebraska, and Wyoming. He expresses his deep concern and confusion over the application of S. 11 to freight absorption.

He asks my help in straightening out the conflicting views given him on this subject, and in my effort to do so I welcome any possible assistance. Particularly, I hope that any report of the Committee on the Judiciary will fully explain whether freight absorption is outside the provisions of S. 11 or whether it is not any different than any other price reduction.

I ask unanimous consent to insert in the Appendix of the RECORD a letter from Richard W. Blake to the chairman of the Judiciary Subcommittee on Antitrust and Monopoly, dated May 16, 1957, and the chairman's letter of April 8, 1957, to Mr. Blake, both of which letters were sent to me by Mr. Blake.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

APRIL 8, 1957.

Mr. RICHARD W. BLAKE,
Executive Secretary, National Beet Growers Federation, Greeley, Colo.

DEAR MR. BLAKE: I am very glad to have the opportunity of giving you my reaction to your statement with regard to S. 11.

I believe that I understand from what you and others have said that freight absorption is essential in selling beet sugar. The hearings on S. 11 have made it clear that freight absorption is but a name for lowering prices in a given area in order to be competitive in that area. Such being the case, S. 11 would effect freight absorption precisely in the same manner as it would any other lowering of price to meet competition, that is to say, in the absence of conspiracy, and when done on an individual basis, such lowering of prices could continue so long as there was not such a discrimination between competing customers as would probably lessen competition or tend to create a monopoly.

I have emphasized the words "between competing customers" because in the campaign conducted by some manufacturing interests it has been stated over and over again that the lower price would have to be made throughout the entire country or among all customers. Such is not the purpose or effect of S. 11.

It seemed to me as I read your statement that your opposition might have stemmed from the misconception of the purpose and effect of the bill which I have tried to correct above.

With kindest regards, I am,
Sincerely,

ESTES KEFAUVER,
Chairman, Antitrust and Monopoly Subcommittee.

MAY 16, 1957.

Hon. ESTES KEFAUVER,
Chairman, Antitrust and Monopoly Subcommittee, Committee on the Judiciary, Senate Office Building, Washington, D. C.

DEAR SENATOR KEFAUVER: I appreciate very much your letter of April 8, 1957, but I must say that it leaves me even more confused about S. 11 than I had been previously.

I assume you have now changed your mind about the application of this legislation to freight absorption. Your letter of April 8 says that freight absorption is but a name for lowering prices in a given area, and presumably S. 11 would affect freight absorption in the same way it affects any other pricing practice. However, during the hearings last year you said several times that freight absorption would not be in any way affected by the enactment of S. 11; see for example, page 7, first paragraph, and page 252 of the 1956 Senate hearings on S. 11.

Our concern is over the propriety of absorbing freight to distant markets in order to meet prices already lawfully available to customers in those markets from more favorably located buyers. You say that this would be lawful under your bill as long as it would not properly lessen competition; but we cannot understand when such a competitive pricing practice would ever lessen competition. It would seem to me that this practice merely permits additional sellers to compete in the market and, when it is done individually in order to meet prices already lawfully available to the buyer, it could never lessen competition. Therefore, I cannot understand what situations your bill is intended to make unlawful with regard to the competitive practice of freight absorption.

Your letter then underlines for emphasis "between competing customers" and suggests that price discrimination is unlawful only when it is between competing customers. After rereading your bill several times I do not find the phrase "between competing customers" in the bill; and even if it were included I do not see any indication of how we can ever determine when customers in Chicago are in competition with customers in, say, Kansas City.

There are many cases holding price discrimination is unlawful in the absence of injury to competing customers, and as you probably know in the Corn Products case the Commission found that candy manufacturers in Chicago were in competition with candy manufacturers in Kansas City.

Yours very truly,

RICHARD W. BLAKE,
Executive Secretary, National Beet Growers Federation.

Installment Sales Credit

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. BEALL. Mr. President, the National Automobile Dealers Association recently paid tribute to one of the Nation's outstanding sales finance institutions which, I am exceptionally pleased to say, has its home office in the great Free State of Maryland. The recipient of the National Automobile Dealers Association's honors was the Commercial Credit Co., which on last May 31 observed the 45th anniversary of its founding. Coincidental with this memorable occasion was the 10 millionth financing of a motor vehicle by Commercial Credit. In recognition of these events I ask unanimous consent to have printed in the appendix of the RECORD a statement on behalf of myself and my colleague from Maryland [Mr. BUTLER].

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INSTALLMENT SALES CREDIT

Installment sales credit has been a large factor in the growth of the American economy during the last two generations. In recognition of the accomplishments which this section of American business has made I wish to commend those who contributed toward its development.

One of the institutions which played a major part in the growth and development of installment sales credit was founded on May 31, 1912, by Alexander E. Duncan, an industrious and foresighted young man from the State of Kentucky, who knew that American business was ready to expand with great growth. To assist in bringing about this development a new kind of financing was necessary. Accordingly he founded Commercial Credit Co. in Baltimore, Md., with a total invested capital of $300,000. This beginning marked a new era in financing manufacturers and wholesalers which was to demonstrate its utility to the American economy so that today this financing plan has broadened its services and its applications to the point where it is now internationally accepted and represents billions of dollars in advances.

Until 1916 this company confined its business to this commercial financing. However, in that year it expanded its operations and became one of the first companies to finance the retail purchase of an automobile for a customer. In 1922 Commercial Credit acquired the majority of the capital stock of Continental Guaranty Corp., of New York, formerly Guaranty Securities Corp., the granddaddy of all the automobile finance companies.

Acquisition of this company broadened Commercial Credit Co.'s operations to where it became national inscope. Commercial Credit was now handling both the retail and wholesale financing of new cars for the motor dealers throughout the United States and Canada. The manufacturers of household appliances, machinery, and equipment, having studied the merchandising success of this installment plan, requested from Commercial Credit Co. and received, a similar program to finance the distribution and sale of such articles through distributors and dealers.

Commercial Credit Co. grew rapidly and in 1929 its business had skyrocketed to almost 50 times the amount of business done in its first year. But even during the depression years that followed the company sought to expand its facilities to better service American industry. In 1933 it acquired one of the best known and oldest of the factoring houses, Textile Banking Co., Inc., of New York. In 1935, it acquired a second factoring company, Edmund Wright Ginsberg Coporation of New York.

In 1936 the company purchased American Credit Indemnity Company of New York thereby broadening the services of New York industry through the issuance of credit insurance to protect manufacturers and wholesalers against losses on open accounts.

From the beginning of installment sales of automobiles it had been the custom of the industry to require that cars be insured against the hazards of fire and theft and, as traffic hazards increased, also against damage from collision. Commercial Credit Co. experienced endless difficulties maintaining a mutually satisfactory connection with independent insurance companies in connection with the protection of and service to its customers. The company came to the conclusion that only by ownership of the insurance

company could continuous and satisfactory service be rendered. Accordingly, in 1939, the company ventured further into the insurance field by creating Calvert Fire Insurance Co. to write physical damage insurance on automobiles and other articles usually sold on the timepayment basis. In 1946, it further broadened the insurance facilities it offered by creating American Health Insurance Co. to write group health and accident insurance.

During 1941 the gross volume of receivables acquired by this company for the first time amounted to over a billion dollars. Certainly an indication of its service to American industry and the American consumer.

The war years that followed thrust upon the company new problems. First, how could a finance company make a contribution to the war effort? Second, how could it employ its available resources so that when victory was achieved the company could resume its role as one of the Nation's great financing houses, prepared once more to contribute its strength to the resumption of our way of life. The management, therefore, prepared a program looking to the purchase of manufacturing companies where its capital could increase their productivity and thus it acquired a number of manufacturing companies which produced bombs, shells, pyrotechnics, gun mounts and special purpose machinery. This was an extraordinary departure for a finance company, but the fact is that these manufacturing companies made a notable contribution to America's productive efforts during the war.

Today Commercial Credit Co. is one of the largest sales financing institutions in the world with capital and surplus in excess of $200 million and a broad financing program that serves all elements of our national economy. Today the company and its subsidiaries employ more than 13,000 employees in over 400 offices and plants throughout North America.

Commercial Credit Co. now has over $1,400 million in total resources and it has paid out to its preferred and common stockholders an excess of $220 million in dividends. The annual volume of its finance subsidiaries exceeds $3 billion, net sales of its manufacturing affiliates are in excess of $100 million, and the earned premiums of its insurance subsidiaries exceed $30 million.

The National Automobile Dealers Association in recognition of the 45th anniversary of the founding of Commercial Credit Co. directed the following statement to E. C. Wareheim, chairman of the board:

"In expressing congratulations to Commercial Credit Co. upon occasion of its 45th anniversary as a sales finance institution, the National Automobile Dealers Association pays sincere tribute to the important contribution made to the retail automobile industry and to the car buying public by finance companies.

"Probably no single factor has been so vital to the mass production and sale of automobiles as has been the development of installment credit as it is made available to purchasers of automobiles. Commercial Credit Co.'s important role in automobile financing is pointed up dramatically at this time by its financing of the 10 millionth motor vehicle.

"On behalf of franchised new car dealers, through whom your sales financing service is carried on exclusively, National Automobile Dealers Association extends to Commercial Credit Co. its best wishes for continued growth and progress."

I feel that these remarks are most appropriate because they briefly summarize the contribution which this organization has made to the betterment of the American way of life.

Address by Ngo Dinh Diem, President of the Republic of Vietnam

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, June 6, 1957

Mr. ANDERSON. Mr. President, I have received a copy of an address which His Excellency Ngo Dinh Diem, President of the Republic of Vietnam, delivered before the Far East-America Council of Commerce and Industry in New York City on May 14. The address deals primarily with economic conditions in Vietnam.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HIS EXCELLENCY NGO DINH DIEM, PRESIDENT OF THE REPUBLIC OF VIETNAM, BEFORE THE FAR EAST-AMERICA COUNCIL OF COMMERCE AND INDUSTRY, WALDORF-ASTORIA HOTEL, MAY 14, 1957

Ladies and gentlemen, during the last few days I have had many occasions to talk about the political problems that have plagued Vietnam in the recent past, and of the progress we have made in solving them. I am happy to be able to speak today of our economic problems which are of such great importance for our future. I am particularly pleased that I can talk about these problems to you, who, by virtue of your position in the world of business, are best able to understand why we must solve these problems if we are to survive.

In the Asia of today, no major question of politics can be solved unless the inherited economic and social conditions are overcome. We must raise the living standard of the masses. To enable the masses to buy more and live better is for us not only an end in itself; it is also a means to spark the industrialization of our country, and thus to enable Vietnam to remain both independent and free.

During my stay in your country as a political exile a few years ago, I was constantly reminded by friends and well-wishers that Americans—and particularly you American businessmen—are practical people. I was told that if I wanted to be of use to my people, I should talk to Americans from a commonsense, practical point of view.

Now I have come back to do just that. And I believe that it comes easily to me as a Vietnamese. My Vietnamese ancestors were practical and constructive people. They were never under the compulsion of their rulers to build the wasteful, gigantic monuments that have so often been the economic ruin of great peoples. Historically, there was never an excessive centralization of power in our country to enable conscription of labor-power for such monuments. Thus, my people remain what they have been since the dawn of recorded history, hard-working, productive, always tilling their rice fields, and harnessing the rivers.

I wanted to make this point because it explains why I shall not present you today with any grandiose program for rapid economic progress based on dogmatic and theoretical views. Our people have had, in the short time since the Geneva agreements surrendered half of our country to the Communists, a revealing display of what Communist dogmatism can mean. Vietnam above the 17th parallel has witnessed starvation, exploitation, and misery. The Communists have created such suffering and chaos that our fellow countrymen in the north have openly rebelled.

But exploitation and economic misery were known to Vietnam long and before the Indochina War. The 10 years of war between the French colonial government and the Communist-led Viet Minh further impoverished the country. In the north, the Communist leadership adopted a scorched earth policy. Between their destruction and the havoc wrought by the actual fighting, industrial plants were demolished, the handicrafts deteriorated, communications were wrecked, rice mills were dismantled, our livestock reduced, and even the irrigation systems were allowed to fall into disuse. Only 20 percent of the prewar river transport, so important to marketing our rice crop, remained, when the fighting finally ended.

Another great economic problem, one that resulted from the insecurity in the countryside was the movement of masses of rice farmers into the cities. There they ceased to be producers in the economy, becoming instead part of the swollen layer of middlemen which lived off the artificial economy that grew up during the war and around the French expeditionary force.

For the south, partition brought innumerable extra difficulties. Vietnam's coal is located north of the 17th parallel, as are most of its mineral resources, such as iron, copper, tin, zinc, and manganese. What was left of our little-developed industry—cement, glass, paper, and textiles—also remained mostly in Communist hands. Our problems were intensified when fear of Communist tyranny forced almost 1 million refugees to flee their ancestral homes in the north and seek the protection of our Government in the south.

During the first year after the Geneva Conference, the economic picture was dark, but the political crisis was even worse. We had to fight the defeatism engendered by the fact that we were threatened by the powerful army of the north, ready to engulf us. In the south itself we were threatened by the petty local tyrannies that had grown up during the 10 years of war, the so-called sects. The supression of these states-within-the-state was as necessary for economic progress as for political stability.

It took over 2 year to overcome these initial political difficulties. We are aware of the fact that our political consolidation would not have been possible without the generous and timely aid of the United States, which carried us through our great crisis after Geneva. Since Geneva, United States aid to Vietnam has averaged some $250 million a year. We in Vietnam believe that no American taxpayer need regret these expenditures, and that this investment has been wisely made. Let me strike a balance sheet and show you what your aid has produced.

It has saved us from the disaster of an inflation that would have wrecked our crippled economy. And it has enabled us to build up an army of 10 divisions, one of the best in Asia according to competent professional observers. As a consequence we successfully held two free elections, proclaimed our country a republic, and promulgated a constitution that gave us our first National Assembly. Vietnam is now one of the most stable countries in all of Asia.

With the phase of political consolidation completed, we were at last in a position to turn our attention to our economies and social problems.

In the field of agriculture we have already made long strides. Our program of land reform is being judiciously carried out. We have already transferred a good deal of land to landless farmers. It is the conviction of my government that the individual farmer must own the land he cultivates. With this program we meet the false claims of land reform by the Communists. We give the farmers land, and we do it without the inhuman techniques of compulsion and confiscation.

We are steadily increasing the surface of our cultivable land, by regaining rice fields that had been abandoned, by opening up the Plains des Joncs for cultivation, and by winning for agriculture the vast undeveloped territories of our richer regions. This work, which is being done largely by the refugees from the north, will bring Vietnam back on the world rice market; and mounting exports will reduce our present national deficit. We are also beginning to tap the wealth of our forests, to increase our livestock, and to revive our old handicrafts and village industries. Our money is stabilized, and our policy in regard to prices has proven to be sound.

In increasing our rice crop and developing other products of the land such as rubber, coffee, and tea, we pursue a twofold aim. Our growing agricultural wealth will also stimulate the growth of the industries which we believe to be suitable for our country, necessary for our economy, and indispensable for the preservation of our independence.

Our own means, however, are quite insufficient to give us a good start. We can make little progress in industrialization without the development of our hydraulic resources, the improvement of our roads and railroads, the creation of a modern system of communications, and the training of business executives, technicians, and qualified workers. For this we again need help, both international and American. Some we have already received, as for instance from the group of United Nations experts headed by Professor Goodrich, and in particular from the Michigan State University team under Professor Fishel, who have been working with our own experts for several years. I want here to pay tribute to the outstanding work of the experts and technicians sent us by your Government under the ICA program. The USOM in Vietnam under the direction of Mr. Leland Barrows has been a persistently constructive force working closely with us in the achievement of mutually beneficial economic objectives. We hope soon to set up a group of long-term advisers for our Government, perhaps with the help of one of your foundations interested in the problems of economic development of Asia. And we also hope that we can get the advice of some of your management consulting firms.

Our country needs industries. It is a result of colonialism, that we are merely a producer of raw materials, and forced to import all finished goods. Economic survival requires that we break this colonial pattern. We do not aim at self-sufficiency, nor do we plan to build major capital goods industries in the near future. For the present, we plan on a gradual industrialization program consistent with our needs and capacities. Our present major industrial undertaking will be the development of our unused but excellent hydroelectric potential and we hope to do this as a joint undertaking between Government capital, foreign private advisers, and private companies on the basis of open bidding. Otherwise our program of industrialization is a modest one, adapted to our resources and needs. We aim at producing some textiles, sugar, cement, paper, glass, and plastics. Together with some other plants producing goods for daily use, this would, for the time being, be the core of our industrialization plan.

If you ask me whether our aim is a directed economy or a completely laissez faire doctrine, whether it is capitalist or Socialist, I have but one answer: such preoccupations are to us purely theoretical. The policy of our Government is based on present, practical needs, and not guided by theoretical speculations. Our principal guide is that we seek to solve our economic problems with the best means on hand.

We are convinced that an important method to enable us to meet our problems can come from overseas investors who seek opportunities in Vietnam. That is why in March of this year my Government issued a policy directive under which all foreign firms can justly operate. The Vietnamese Government guarantees foreign investors against nationalization or against expropriation without due compensation. We grant any new foreign investor 3 years' exemption from real-estate taxation, as well as free registration of incorporation. New agricultural investments are exempted from land tax until the enterprise shall have harvested its first crop. Industrial, commercial, and agricultural enterprises will receive 100 percent remission of income taxes for their first year of operation, 25 percent for the second and third years, and 25 percent on reinvested income. Imported capital goods is exempted from income duties. Or if foreign exchange is requested from the Government, import duties will be reduced by 50 percent. Foreign personnel will be afforded opportunities to repatriate family savings, bonuses, and other payments. Repatriation of capital will be permitted within 5 years of the initiation of the enterprise at an annual rate of 20 percent. Additional advantages beyond those presently allowed for repatriation of profits will be granted according to the importance of the enterprise for our economy, and the currency involved. But in no case do any of these regulations remain rigid but can be changed whenever attractive opportunities arise for the economy of Vietnam and the potential investor.

Let me say here and now that my Government and the Vietnamese people do not share the hostility toward the West which is so much the vogue in Asia today. We regard the United States, in particular, as our friend. Perhaps the most tangible test of this is our attitude toward private business, especially American business. We recognize the crucial role which private enterprise has historically played in raising the living standards of all people. Further, and possibly in contrast to other Asian nations, we do not regard American private investment as a threat to our national integrity. On the contrary, we welcome it as a necessary and cooperative factor, in the development of free Vietnam, and we will do everything within our means to create a hospitable climate for American investors who wish to cooperate in strengthening the economy of Vietnam.

Far from attempting to build a rigid frame for our economy, the system at which we aim will be an open one, capable of adaptation to changing needs.

It was the discipline, the determination, and the working capacity of our people which carried our Republic through its first few difficult years. These same qualities, we hope, will also enable us to solve our economic problems. We must show to the other Asian peoples that the economic progress they desire can be brought about by democratic means. To succeed in this will be as important for the whole free world as it is for ourselves.

The Graham Boys

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks in the RECORD, it is with considerable pride that I call attention to the success and rather outstanding achievement of two young men from my home town, Herman Graham, Jr., 22, and Tom Graham, 19.

I take this time to call attention to the Graham boys because I have known their father, Herman, and these two boys when they first persuaded their dad to get them a pony. Their interest in horses continued, as you would have noted had you attended the harness races during the past weeks at the popular and beautiful Washington Rosecroft Racetrack. The Graham boys, along with their father, have been in the racing business only about 6 years, and have made such remarkable progress, by winning so many firsts, seconds, and thirds in the Rosecroft harness races, that they became the talk of all of their competitors, and most of the fans.

To me, this is quite an accomplishment for two young men who handle their own racing stable and do their own driving. They have come a long way in a new business in a few years, and you need not be surprised if harness-racing enthusiasts find them among the top men in the racing business for the next quarter of a century.

I had the pleasure of having Herman, Jr., with me for lunch in the House of Representatives dining room last Saturday, the closing day of the races at Rosecroft. At the time he told me that his brother Tom had taken most of their stock to Detroit for the harness meet there, and later they had a number of their horses entered in the great Illinois State Fair races. They are optimistic about future success with their highly bred, well-trained horses in the fast competition they will meet in those races and others to come.

After winning 9 firsts, 9 seconds, and 4 thirds, just to give the fans something to remember, on last Saturday night Herman, Jr., finished up in fine form with Hal's Peg E upsetting the supposedly favorite, and carrying the Graham boys' banner to victory in their closing entry at Rosecroft.

Naturally, I am proud of their parents, my close personal friends from my home town, and of these hard working young people who are making a business success of their chosen profession.

Here is what the Washington Daily News says about the Graham boys' racing here at Rosecroft:

[From the Washington Daily News of May 11, 1957]

Not since the famed Insco invasion from the Midwest has the Maryland harness pic-

ture been knocked out of kilter the way the Graham clan has been doing it.

This pair of youngsters, Tom and Herman, Jr., hail from Salem, Ill., and they should be run out of town for showing concern as to whether their stock would be ready for Rosecroft.

Thursday night their Sea Rover, with 19-year-old Herman, Jr., driving, won in a romp in 2:04.4. Not only is this the fastest time of the meeting, but Herman looked like he was just out for the breeze.

They started with Goose Win opening night, Hal's Peg E Wednesday night, and Sea Rover Thursday in the win column. In between, they managed to sandwich Secret Brook in close for a second. All of the horses have paid off in oil-well figures.

And speaking of oil wells, Herman Graham, Sr., is in the business of selling oil-well pumping machines to the companies that are working in the fields. We asked Herman, Jr., why he and brother Tom hadn't turned their talents to oil and he said, "Actually, there isn't much to do once things get pumping. So as a hobby and a means of building up the breeding program, we are in the harness game."

If you think the horses they brought to Rosecroft are good, wait until you see Herman's eyes light up when he mentions Jochobed.

This is the foundation mare that Graham family is hoping can produce a top classic pacer or trotter. Three of her offsprings on the female side have won over $500,000.

"Last year at Lexington we sold her colt, by Rodney Scott, for $8,200 to Curley Smart," said Herman. They have every reason to be proud of the grand producer. She is 23 years old and has been blind since she was 3.

Papa Graham was a late arriver at Rosecroft but he was a beaming owner and proud of the boys when they won that trophy Thursday night.

What U. N. Needs Most: Peacemaking by All

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include an article from the New York Times of December 9, 1956, by Clifford R. Johnson, 106 Campus Road, Staten Island, New York City, entitled "What U. N. Needs Most: Peacemaking by All."

The article follows:

WHAT U. N. NEEDS MOST: PEACEMAKING BY ALL—PRAYER PLUS BALLOTS EQUAL PEACE—U. N. CHARTER REVISION FORMULA

Both the recent Bulganin disarmament statement of November 17 and the October letter asking for a suspension of H-bomb testing, give President Eisenhower a really wonderful opportunity for testing Soviet sincerity with the following very practical new approach. Will the Russian rulers agree to give their peoples the opportunity to vote for peace or war by referendum before taking military action beyond their borders if the United States agrees to do the same? This can be called testing of public opinion or peacemaking by all instead of the few.

This basic idea was developed to some extent in a letter sent to President Eisenhower and Premier Bulganin by this writer. Although it was dated March 26, 1956, it is just as timely as ever in view of current Mideast problems. Heads of state and all U. N. delegates or policymakers and all voting citizens are implored to give it their most careful consideration. The letter reads as follows:

DEAR MR. PRESIDENT AND MR. PRIME MINISTER: The unusual depth of sincerity in behalf of world peace as expressed by both of you during the past year inspires and persuades me that the time has come to send this communication.

I am writing to you as the author of an atomic-age peace proposal which has been deservingly described as the political formula for constructing the spiritual equivalent of the H-bomb for preventing wars of aggression.

Needless to say, I have taken full cognizance of your views, as expressed in the published account of your exchange of letters, starting September 19, 1955, to March 1, 1956.

Your comments upon the issues discussed make a lot of sense to me.

But let us be quite frank. Both countries are getting nowhere. There is very definitely a need for a new approach. This letter has the answer, if you will forgive me for being so confident.

As you both well know, the fear of sudden and surprise attack is the root of the tensions and armament race now gripping both nations. The reason for this fear, and you must be profoundly aware of it, is the simple fact that at the present time a comparatively few men in both countries have an influential voice in making the decision for peace or war. Peacemaking by the few is as outdated and unworkable in this atomic age as would be bows and arrows in a struggle against nuclear weapons. Peacemaking by all is the amazingly simple answer. Its proof rests on the following statement. That the common people of all countries are definitely opposed to war, is universally recognized and acknowledged. Hence, it follows very logically if they had something to say about it there would be no global wars.

Peacemaking by all would be on the road to becoming an effective reality if both the United States and the U. S. S. R. would sign an agreement for the adoption of the following proposal:

I. Each country would allow all its qualified voters to participate in a national referendum or plebiscite to decide the issue of starting armed aggression against any nation.

II. No referendum to be held if the nation is attacked by armed invasion or if the United Nations asks each member nation to supply its quota of men for a police action.

III. This agreement would only go into effect when provisions I and II would be incorporated into the written constitution of both countries and the United Nations Charter.

Such a political formula (or its equivalent) for registering accurately public opinion is the atomic age answer for preventing world war III.

It is almost impossible to imagine a majority of the voters of either the United States or the U. S. S. R. voting in favor of attacking the other, in view of their record of historic friendship. After this system has been in use for sometime there will be such a great sense of confidence developed that it will be relatively simply to work out the problems of disarmament. The "problem of the prohibition of atomic weapons" would evaporate.

And could there be any better warning system devised than a nation debating and then voting on a question of commiting armed aggression?

Very obviously my proposal would effectively correct or neutralize the limitations of your ground inspection and aerial photography plans. Leaving the warmaking power in the hands of a few men who secretly make the decisions is the real cause of the fear of sudden and surprise attack. This universal practice needs to be replaced with the referendum process as soon as possible so that the common people can enjoy the maximum benefits of the atomic age.

It is so appropriate to recall that both East and West have spoken a lot about the subject of free elections and peace-loving states.

The constitutions of both countries are exactly alike when it comes to ignoring the electoral process with respect to a declaration of war based on popular will. And to capture the will of the majority is of course the heart of my proposal. The world would benefit enormously from example of both countries in extending and strengthening the electoral process which is the basis of so many problems, including elections in Germany. My proposal could be applied to Germany and so remove the threat of German militarism.

My proposal would of course abolish or neutralize the effects of the indispensable leader type of government which so largely caused World War II.

Peacemaking by all represents rule by the majority which is the most precious principle of good government. Bad government produces today's tensions. It is as simple as that.

The reason peaceful coexistence is so shaky at present is because it rests on such a small base (peacemaking by the few). Peacemaking by all represents the very largest base for building the most endurable structure of peaceful coexistence. It is an accepted engineering principle that the bigger the base, the more stable the structure.

My proposal could be made a part of your proposed friendship treaty (or any other tension reducing agreement) as a starter and later it could be incorporated as an amendment in the U. N. Charter by using it as a definition for a peace-loving state.

Such an amendment would transform the U. N. into an effective atomic-age organization which would eliminate the need for all the existing little U. N.'s on both sides. You are both in agreement as to the need for a stronger U. N. A treaty is always in danger of becoming "a scrap of paper" unless it is written into a nation's constitution. If both countries adopt my proposal, its acceptance by the U. N. would almost be automatic.

I am in full agreement with both of you when you speak about the need for "deeds and not just words" as the best prerequisite for establishing a basis for peace. This all boils down to the need for honesty. My proposal would enable a maximum of honesty on the part of all people to be effectively utilized to prevent war.

It is sheer folly to think that either country would be willing to really weaken its position in any way with respect to the other under existing conditions.

Here is where my proposal could break the log jam. Can you just imagine the effect on public opinion in bothe countries if you would make a simultaneous appeal to start the ball rolling with respect to the principle embodied in my proposal? Such a daring display of honestry of intentions would be an unsurpassable expression of dynamic deeds at the very top levels of both Governments. Such an appeal would immediately receive the enthusiastic support of peace-loving peoples throughout the world because they would clearly realize that their desire for peace could be effectively harnessed for the first time in history.

No two other persons in the world today can do so much with such little effort to help establish the right conditions for a sound and lasting peace.

I humbly and prayerfully ask both of you to peruse this letter so that the understanding of all peoples may be effectively used to prevent wars of aggression and thus estab-

lish the best political climate for a workable disarmament in our time and so speed the day when your children's grandchildren or generations yet unborn will no longer be required to study the art of war.

With sincere best wishes, yours for peacemaking by all,

CLIFFORD R. JOHNSON.

The above letter refers to the need for an amendment to the U. N. Charter for a definition of the phrase "peace-loving state" based on the peacemaking-by-all principle. This has been specifically developed in a U. N. Charter-revision resolution introduced on several occasions in the Congress of the United States and now known as House Concurrent Resolution 118 by Congressman ROY WIER. It reads in part as follows:

U. N. CHARTER-REVISION BILL

"*Resolved by the House of Representatives (the Senate concurring)*, That the Congress of the United States favors the adoption of the following definition of the phrase 'peace-loving state' as used in article 4 of the United Nations Charter:

"SECTION 1. A peace-loving state is hereby defined as any nation which gives its people the right to vote in a referendum for peace or war, except in the case of direct invasion and except for the use of joint military power by this organization.

"SEC. 2. It is further the sense of the Congress that any member nation of the United Nations which does not comply with this definition, taking the necessary political action within 5 years after its adoption by the United Nations, shall be automatically dropped from membership in the United Nations.

"SEC. 3. The Congress requests the President to instruct our chief delegate to the United Nations to take all steps possible to effect the purpose of this resolution."

Let no other nation feel that it is a matter of etiquette to wait for United States congressional action on this proposal. What a glorious opportunity for the small nations or the so-called neutral U. N. members to study and officially initiate action as soon as possible on this charter-revision proposal. And under no stretch of the imagination should said action be considered interference in the internal affairs of the United States.

Problems of Farmers

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, June 6, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "MANSFIELD Says It's Time That Benson Recognized Small Farmers' Dilemma," and an editorial entitled "MANSFIELD Points to Benson's Conflicting Statements," which appeared in the May 31 and June 1, 1957, issues of the Great Falls (Mont.) Tribune.

The editors of the Tribune share the concern of my distinguished colleague and myself over the Eisenhower-Benson farm policy.

They conclude that—

There is serious question whether the farmers or the country can afford many more of Benson's kind of forward steps.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Great Falls Tribune of May 31, 1957]

MANSFIELD SAYS IT'S TIME THAT BENSON RECOGNIZED SMALL FARMERS' DILEMMA

Charging the economic welfare of the farmers has been "tossed back and forth like a football," Senator MIKE MANSFIELD said Thursday it is time Secretary Benson recognized the dilemma faced by the small farmer and did something about it beside viewing the situation "through rose-tinted glasses."

MANSFIELD issued the statement Thursday prior to returning to Washington, D. C. He arrived Wednesday to deliver the commencement address at the College of Great Falls graduation ceremonies and was conferred an honorary degree.

Continuing, MANSFIELD said facts and figures indicate "we have a Secretary of Agriculture and a department under his jurisdiction who tell completely different stories."

"Farm prices are 15 percent below the level prevailing when President Eisenhower took office. Farm surpluses are nearly three times as large as they were in January, 1953. The Federal Government spent more on agriculture in the first 4 years of the Eisenhower administration than in the preceding 20 years.

"In February, Secretary Benson indicated that organized labor was to blame for this situation when he said, 'When there is * * * strong demand for industrial products and a tight labor market, "soft" settlements of wage disputes are all too frequently made * * * These increased costs are passed forward to consumers in the form of higher prices, and backward to producers of many raw materials, especially farm products, in the form of lower returns.'

"However, the facts show that the farm family income dropped by $3½ billion between 1952 and 1956, but none of this drop is accounted for by increases in farm production expenses. These expenses were $300 million less in 1956 than in 1952.

"The Secretary of Agriculture has indicated on a number of occasions that farm surpluses were under control. This is what the departmental figures show: Commodity Credit Corporation losses between 1933 and 1953 were $1.1 billion. CCC losses between July 1, 1953, and January 31, 1957, were $2.9 billion. The total CCC inventory on January 1, 1953, was $1.09 billion. CCC total inventory in February on February 28, 1957, was $5.7 billion.

"The CCC has three times as much corn on hand now as when Secretary Benson took office: 266,711,000 bushels in January 1953, and 967,122,000 bushels in February 1957.

"There were 127,779,000 bushels of wheat in CCC storage in January 1953. In February of this year, there were 798,918,000 bushels of wheat on hand.

"Secretary Benson and I agree that 'The family farm has long held an important place in the economic and social life of our country.' We do disagree about their present status. The secretary says that their relative position has not changed. I disagree; the family farm is disappearing from the American scene. Between 1952 and 1956, the total number of farms in the United States decreased by 460,000. The farm population dropped by over 2,000,000.

"During this 4-year period the farm debt rose $3.3 billion and the farm foreclosure rate doubled. Since 1952, the farm credit interest rates rose 108 percent over the 1947-1949 level.

"In regard to the Department of Agriculture's budget, the secretary says: 'We don't want to increase our department by any number of thousands. We only want to have the people who need to carry out the programs for which we have responsibility.' The department's modest employment increase has amounted to 16,258 persons since 1953 and the budget has risen over $2 billion since 1954."

[From the Great Falls Tribune of June 1, 1957]

MANSFIELD POINTS TO BENSON'S CONFLICTING STATEMENTS

Before returning to Washington Thursday from his speaking engagement in Montana, Senator MIKE MANSFIELD made some pertinent remarks by the dilemma faced by the small farmer. He charges that in the more than 4 years of the Eisenhower-Benson farm administration the economic welfare of the farmers has been "tossed back and forth like a football." He thinks it is time Secretary of Agriculture Benson did something about the situation besides "viewing it through rose-tinted glasses."

MANSFIELD says we have a Secretary of Agriculture and a Department under his jurisdiction who tell completely different stories. He points out Department statistics show farm prices are now 15 percent below the level prevailing when President Eisenhower took office and farm surpluses are nearly three times as large as they were in January 1953.

In February Secretary Benson indicated that organized labor was to blame for the squeeze of the farmer between higher costs and lower market prices. But Department of Agriculture statistics show that between 1952 and 1956 the family farm income in this country dropped by $3½ billion. But none of this drop is accounted for by increases in farm expenses. These expenses were $300 million less in 1956 than in 1952.

About a week ago Secretary Benson said in a U. S. News & World Report interview that we "must quit trying to legislate scarcity." But he adds that farmers have a right to expect Government help "in this period of transition."

In the same interview, Benson reports the total agricultural budget submitted for the coming fiscal year exceeds $5 billion. And he points out that this is an amount equal to nearly half the total net income of all the farmers in the nation. He concedes, however, that "much of this huge budget does not go to the farmer at all."

He says also, "it is becoming increasingly clear that our present complicated legal formulas governing acreage allotments and price controls have failed in their principal purpose—to maintain an adequate farm income."

That series of statements could be supplemented by a lot of others from Secretary Benson. But they all add up to the most expensive Federal farm program we ever had and results distinctly on the deficit side.

Benson says his program was developed after calling on more than 500 people to participate in a study of farm programs.

It can be added that Mr. Benson was pretty choosey about what part of their recommendations he would accept.

Now he says the program is a failure and adds: "It is time for Congress to consider another forward step in farm legislation."

We will agree that it is time to consider forward step but there is serious question whether the farmers or the country can afford many more of Benson's kind of forward steps.

Republican Platform and the Budget

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 6, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Republicans Should Read Plat-

form," from the May 29, 1957, issue of the Metropolitan Herald of Atlanta, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REPUBLICANS SHOULD READ PLATFORM

If the Eisenhower administration leaders would only reread the 1956 Republican platform, they might understand why the President's budget is under so much justifiable fire from taxpayers and thus from Congressmen and Senators.

"We will faithfully preserve the sound financial management which has reduced the annual spending $14 billion below the budgets planned by our Democratic predecessors." Yet, the budget proposed by the President is the highest peacetime budget in history.

"We will ever fight the demoralizing influence of inflation as a national way of life. We are proud to have fulfilled our 1952 pledge to halt the skyrocketing cost of living." According to the Government's own figures the cost of living continues to skyrocket. Costs of materials vital to the operation of small businesses continue to mount.

"We pledge further reductions in Government spending as recommended in the Hoover Commission Report, without weakening the support of a superior defense program or depreciating the quality of essential services of Government to our people." The cost of Government continues to rise and so does Federal employment.

"Insofar as consistent with a balanced budget, we pledge to work toward these additional objectives:

"Further reductions in taxes with particular consideration for low and middle-income families.

"Initiation of a sound policy of tax reductions which will encourage small independent businessmen to modernize and progress."

The Republican administration is in trouble because it has not followed its own platform. The failure to reduce the public debt substantially when tax collections are at an all-time high. The continued highest peace-time rate of spending make this impossible. The fact that the average American, despite record employment, is having to struggle to make ends meet leaves little support in this group for the President's budget. The farmers' income has dropped so much that there is little support in this group for continued high spending.

Small-business men, the backbone of this Nation, are having a difficult time keeping their doors open and these independent citizens know the danger of continued high Government spending in relation to their own problems.

Congress is determined to reduce the budget because the people of the United States are demanding this cut.

What Is Ike's Idea of GOP?

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 6, 1957

Mr. HUMPHREY. Mr. President, the associate editor of the Park Region Echo, Mr. J. H. Ulvan, has written a thoughtful and interesting editorial entitled "What Is Ike's Idea of GOP?" Now this editorial is good reading for everybody and it is must reading for every Republican. In fact, Democrats too will find it helpful and educational.

Mr. Ulvan is known in Minnesota as one who does not let partisan prejudices dominate his thinking on problems. He speaks and writes with clarity and objectivity.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD. I commend it to the attention of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Park Region Echo, Alexandria, Minn., of May 23, 1957]

WHAT IS IKE'S IDEA OF GOP?

With the battle of the budget still going on in force in Congress and the two sides pushing for all they are worth, the struggle simmers down to the honest fact that President Dwight D. Eisenhower has suffered a serious setback in his following. His political popularity is the lowest it has been since he took office, though his personal popularity may still be high. In politics Mr. Eisenhower has lost the support of more than half of his Republican lawmaker friends because of the powerful debate on the $71.8 billion budget.

This debate has gone so far that it should have made the President wonder whether he should be a Republican at all. Our readers might recall that before Mr. Eisenhower ever thought of running for the office of President he did not exactly know whether he was a Republican or a Democrat. He was undecided for at least a couple of years before he wanted to state his opinion and this even led some Democrats to go to him with the idea of having him run on the Democratic Party ticket. These days when the GOP leaders have practically abandoned Mr. Eisenhower we just wonder if Ike does not get to thinking that he should never have been a Republican.

If Mr. Eisenhower had ever had the idea that he could revamp the GOP he must have gotten to know by this time that such a thing cannot be accomplished. He has stated in the past 2 years that he was going to liberalize the GOP and in his 1956 campaign he stated on occasions that he was to make the GOP a party of "modern Republicanism." With the known fact that Mr. Eisenhower cannot run for reelection it is apparent that his friendship with the leading Republicans does not mean much now after he won the election. It must be taken to mean that when Mr. Eisenhower was a general in the Army he did not get well versed in politics, at least not American party politics.

The President has made a fight for the budget and he merits praise for what he is doing. Little argument can be put up in an honest-to-goodness opposition on the different phases of the budget. The down-to-earth truth is that the conservatives want low taxes and that regardless of the consequences. This encounter has led to a situation that parallels the struggle President Franklin D. Roosevelt had with the Congress regarding the issue of increased membership in the United States Supreme Court. President Harry Truman had some spats with Congress, but it never got down to being as serious as the fight on the budget today. The GOP has created a dilemma of which the outcome is very uncertain as of now.

As an illustration showing how some GOP groups have changed their position in this present situation in Congress we want to quote the Fergus Falls Daily Journal, a publication that has been stanch GOP through its lifetime. Now the Journal editor charges that Mr. Eisenhower is inconsistent when he is demanding Federal aid for schools. The assertion is that Ike has always opposed the idea of extending Federal services to the public, and then states that Ike has asked $2 billion for Federal aid for schools. The fact is that Ike has not asked for that much. His request has been for $1,350,000,000 for a period of 4 years. Moreover, the President has in general supported measures that embraced the country's welfare. He had stated he was against Government operation of private business but that cannot be construed that this includes our public schools.

An analysis by a Washington periodical shows that the Democrats have supported the President in the congressional session more consistently than the GOP. Statistics show that the Republicans have opposed the President 52 percent on important issues while the Democrats have opposed him only 36 percent on the same issues. On rollcall votes the GOP has supported Ike 44 percent of the time while the Democrats have a support mark of 57 percent. When the opposition to Mr. Eisenhower's proposal is considered from what it was in the previous Congress, it has more than doubled. The overall GOP opposition then was at only 22 percent. In the present Congress the opposition has increased to the overall percentage of 52.

The present opposition to Mr. Eisenhower stems from the very strong propaganda put on by the National Association of Manufacturers and the United States Chamber of Commerce. The National Taxpayers Association, which has active units in every State, has joined actively with the two above-mentioned groups, so the country has been flooded with propaganda literature. And it is easy to stir up support when it gets down to the subject of taxation. No one wants to pay taxes and hence the big reaction of the present budget.

The amount of reduction that can be made is a small fraction of the total proposed budget. At the most, the full amount of the cuts would be less than $3 billion. That is only a cut of 5 percent of the budget as asked by the President. Of course, the idea behind the GOP opposition is the fact that the Republicans have been highly critical of the Democrats for the past many years about their big budget. Promises for substantial reductions have been made since 1952 but little of these have materialized. Now with the 1958 campaign coming on a cut would be a GOP need.

It cannot be denied that the Democrats in Congress have been playing politics. Politically it is to their advantage that the GOP is quarreling in itself. For the Democrats to support cuts will be added votes for the next election. However, there are Democrats who support Ike, as the national safety cannot be endangered.

The Communist Menace—Report by General Wedemeyer

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, June 6, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast by Dean Clarence E. Manion over the Mutual Broadcasting System on May 26,

1957, in which he interrogated Gen. Albert Wedemeyer. The subject of the broadcast was A Disillusioned Patriot Speak His Mind.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

A DISILLUSIONED PATRIOT SPEAKS HIS MIND

DEAN MANION. Lt. Gen. Albert Wedemeyer, now retired, is one of the most widely experienced military men now living. He has served this country with great distinction in all parts of the world. During World War II, he was commander of the United States forces in China where he was also Chief of Staff for Generalissimo Chiang Kai-shek. In 1947 at the request of President Truman, he made an on-the-spot survey of conditions in China and Korea. To the great misfortune of this country, his report was deliberately suppressed. General Wedemeyer has made a careful professional diagnosis of the Communist menace—he knows what it is and he is here tonight to tell us what America should do about it. It is my pleasure now to make way for a new, unsuppressed Wedemeyer report:

General WEDEMEYER. Thank you, Dean Manion. I am grateful for the opportunity of explaining to my fellow Americans why I believe the United States should withdraw recognition from the Soviet Union and its satellites.

May I emphasize that the thoughts I express are my own, and that I accept full responsibility for them.

During the past several years I have traveled considerably throughout this great land, talking to business and professional men, to farmers and to laborers, in fact, to men and women in all walks of life.

Ten years ago, if I had suggested that we expel all Communists, and that we break off diplomatic relations with the Soviet Union, most of my countrymen would either have greeted such a proposal with indifference, or they would have violently disagreed with it.

May I explain why this was true? World War II had just ended and, through the efforts of allied propagandists, the Soviet Union was a popular ally. Her armies unquestionably had made an important contribution to our hard-earned military victory.

Further, Americans were fed up with war. We wanted to return to our families, our jobs, and our friends. Anyone who would help us to achieve those goals could win our support. Also many of the world leaders praised Stalin. Harry Truman himself told us that Uncle Joe was a jovial fellow. We were given reassuring bits of evidence confirming the so-called equitable and peaceful agreements reached at Teheran, Yalta, and Potsdam.

"Anyway," we asked, "why should we bother about the Chinese, the Greeks, the Italians? If they want to be Communists, that is their business."

Yes, that was America back in 1946, 1947, and 1948. There was little or no interest in the portentous events occurring in other parts of the world. We were equally naive or apathetic with regard to Communist activities on our own doorstep.

Responsible Government leaders poohpoohed the idea of Communist infiltration into the Government, even when there was no longer room for reasonable doubt. Mr. Truman referred jokingly to "red herrings."

However, there were some farseeing Americans, who had long realized, that communism was as great a threat to our security and liberty, as nazism, fascism, or the military jingoism of Japan. In spite of the insults and diatribes by certain elements of the press and radio, these courageous Americans carried on their campaign to collect facts concerning Communist infiltration and subversion.

They were finally able to present irrefutable evidence involving acts of espionage and sabotage in the United States by foreign agents and individual American traitors, some of whom were in key positions in our Government.

But a great change has taken place in our country since that unfortunate period. Today, when it is suggested that we expel all Communists, and that we break off diplomatic relations with the Soviet Union and its satellites, there is enthusiastic response across the length and breadth of the land, except perhaps in official Washington.

As is often the case when the facts about a situation are available to the American people, their intuitions and judgments are sound. They are usually far in advance of their Government leaders in recognizing dangerous developments, and in recommending the positive steps that should be taken to cope realistically with them.

SOVIETS FAIL TO MEET REQUIREMENTS

What does our own State Department consider as the generally accepted criteria or qualifications that a foreign government must meet before it is recognized as a legitimate government? And how does the Soviet Union measure up to these tests for recognition?

First, a government must have effective control over the territory of that particular country. The Soviet Government certainly has effective control over its territory. Everyone is familiar with the ruthless and barbaric methods of Communist control.

Second, according to our State Department, a country must have sovereign independence. Not a single state under Soviet control, or within the Soviet orbit, could possibly meet this requirement.

Third, the government must be truly representative in character, that is, the people must determine how and by whom they will be governed. It is common knowledge, that the people behind the Iron Curtain have no voice whatsoever in their government.

Fourth, the government must honor its foreign commitments and treaties and must adhere to a well-established standard of decency in the treatment of foreign nationals within its borders. Here we find an undeniable record of Soviet atrocities, broken agreements, treaty violations, sabotage, kidnappings, brain washing, and every conceivable act of terrorism.

Although the Soviet Union unquestionably fails to meet the prescribed tests of our State Department, yet, there still are proponents of continued diplomatic relations with the Red governments.

They argue, that we must maintain diplomatic representatives in the capitals of the countries behind the Iron Curtain in order to obtain information. They refer to foreign capitals as the windows through which our diplomats may observe developments and thus transmit vital intelligence back to Washington. But, it simply does not work out that way, at least not in the Soviet Union or in any Communist capital.

In all Communist countries the representatives of western nations, and especially our own, are constantly hounded by secret police, subjected to indignities and humiliations, and harassed by restrictive regulations. They are watched wherever they may go. Everything they see and hear is carefully censored.

My fellow Americans, why continue this farcial exchange of diplomatic amenities? These Communist governments do not legally represent their own people, for they seized and now maintain themselves in power by murder, lies, intimidation and secret police.

If we broke off diplomatic relations with them, the people they have enslaved would be overjoyed and resistance movements would gain confidence and momentum.

Further, we would be rid of thousands of Communist spies, saboteurs, and propagandists, operating under the cloak of respectability in Soviet Embassies, consulates, and undercover rendezvous in the various parts of our country.

Like many of you, I supported the Republican Party in 1952 and again in 1956. I heartily approved of the Republican pledge to place America's interest first in the international field and, further, to cope with communism, both at home and abroad, realistically and courageously. Here is a direct quote from the Republican platform:

"To repudiate the futile, negative, and immoral policy of containment; to make liberty into a beacon light of hope; to repudiate all commitments contained in secret understanding, such as Yalta, which aided Communist enslavement; to make it clear on the highest authority of the President and the Congress, that the United States seeeks the genuine liberty of these captive peoples."

I like that statement. It might very well have been written by a tried and true patriot of yesteryear—for example, a Patrick Henry or a Thomas Paine. Apparently millions of other Americans liked that statement too, for they enthusiastically gave the Republican candidates a mandate to carry out their program. We sensed a return to a type of leadership in the Washington, Lincoln, Cleveland, and Teddy Roosevelt pattern—a dynamic leadership based on courage and realism.

FOUR YEARS OF NONFULFILLMENT

Like many other American voters I have waited patiently for more than 4 years for the fulfillment of those campaign pledges. While it is not my purpose to single out individuals for criticism, or indulge in acrimonious discussions, I do intend to use every legitimate and honorable means of urging those steps, which I believe to be, not necessarily in the interest of a particular leader or political party, not in the interest of a lobby or pressure group, but in the best interest of our country.

We all recognize that the job of President of the United States is probably the toughest one in the world. We are aware of the pressures of professional lobbyists with their selfish interests. Also a newly installed administration must continually cope with subtle resistance by firmly entrench bureaucrats.

Whatever the cause, we are still immersed in deficit spending—trying to buy votes at home, and friends abroad. More than 4 years have passed and still our Republican leaders do not seem inclined or able to make the basic changes in the New Deal philosophy, which the American voters strongly repudiated at the polls.

If you and I really believe that diplomatic relations should be broken off with the Soviet Union and its satellites, is it not apparent that we must carry out a grassroots campaign? Let the impetus come from every crossroad, village, farm, city, and State.

I can imagine no more appropriate place to launch a fight for true Americanism than right here in the heartland of our Nation. May I suggest that everyone within range of my voice should read the recent Indiana State Concurrent Resolution No. 1, which boldly prolaims admiration of the current Hungarians' fight for liberty. It is to the credit of every citizen in the State of Indiana, that the resolution was passed unanimously by the Indiana State Legislature and then signed by Governor Handley on March 7.

Not only are Americans worried about the international situation, but they are gravely concerned about exorbitant taxes, deficit spending, and astronomical budgets. In varying degrees these problems are caused by our foreign policies, particularly with regard to communism.

I feel confident that sizable economies could be effected if we would break off diplomatic relations with all red regimes; repudiate all agreements made with Commu-

nist governments since 1933 and adjust realistically our program of economic and military assistance to other countries, that are directly or indirectly strengthening Communist nations.

Every move on the international chessboard should be made from here on out with a view to conserving our national resources, both human and material, while preserving American ideas and ideals of justice, dignity of man, and decency in all human relationships.

Dean MANION. Thank you, General Wedemeyer. We are happy that the Indiana Legislature agrees with your recommendations and we hope the Congress may be inspired to do likewise.

Retirement of Farmers

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Rush of Farmers To Retire Studied," which appeared in the May 14, 1957 issue of the New York Times.

It is stated in this article that—

Self-employed farmers are retiring about four times as fast as the Social Security Administration estimated when the 1954 Old Age and Survivors Insurance amendment covering this group became law.

It is also noted that Mr. Benton J. Stong of my staff 2 years ago more accurately forecast the rate of farmer retirement during his research on my bill to permit farmers to substitute their earnings in years between 1950 and 1954 for their low earnings in 1955 and 1956 in calculating old-age and survivors insurance benefits.

The distinguished senior Senator from Oklahoma [Mr. KERR] and my distinguished colleague, the Senator from Montana [Mr. MANSFIELD] joined me in the introduction of this bill, S. 670, which is before the Senate Finance Committee. A companion bill has been introduced in the other House by my distinguished colleagues from Montana, Representative LEE METCALF and Representative LEROY ANDERSON.

Our proposed legislation would put farmers on par with other groups previously covered by social security, who can pick out their better income years for retirement purposes.

It would prevent injustice and hardship to many farm couples, now reaching retirement age, who because of drought, Benson, and other disasters have had considerably less than $4,200 income during the 2 years upon which their retirement must be based under present law.

I commend a study of our proposal as embodied in S. 670 to my colleagues, particularly the members of the Senate Finance Committee. Favorable action on this proposed legislation would, in my opinion, correct a serious injustice to our senior farm citizens.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUSH OF FARMERS TO RETIRE STUDIED—CLAIMS FOR SOCIAL SECURITY ARE FOUR TIMES GREATER THAN OFFICIALS ESTIMATED IN 1954

WASHINGTON, May 12.—Self-employed farmers are retiring about four times as fast as the Social Security Administration estimated when the 1954 old age and survivors insurance amendment covering this group became law.

The claims started rolling in during April 1956, when the farmers could first qualify under the 1954 amendment by showing net earnings of $400 for 1955. During 1956, the claims filed totaled 160,000.

In 1956 another amendment was enacted by Congress. It broadened coverage to include the city farm owners who supervise their sharecroppers and the crew leaders in charge of the traveling fruit and vegetable pickers. A few of those newly covered started drawing benefits in April 1957.

This year 400,000 claims have been filed by farmers ready to retire or widows of the recently qualified asking survivors benefits for themselves and their children under 18 years of age.

OFF-THE-CUFF CONCLUSIONS

Officials of the Social Security Administration and the Department of Agriculture said today that they were unable to account for the large number of applications. However they offered these off-the-cuff conclusions:

Many of the self-employed farmers probably had wage-credits piled up previously in some other employment.

Large numbers of farmers are far past the retirement age and have waited only long enough to be covered to retire.

Distribution of 7,500,000 social security information leaflets to every rural mail box and star route box in the land through the cooperation of Treasury, Post Office, and Health, Education, and Welfare Departments made every self-employed farmer aware of his possible benefits.

The old folks are willing to pass the farms on to sons and daughters if some spending cash is assured them.

On Capitol Hill, however, a researcher was found who had a memorandum to prove that in 1955 he had predicted a possible onrush even greater than has occurred.

BASIS OF ESTIMATE

Benton Stong, brother of the late Phil Stong, author of State Fair, foresaw that at least 900,000 farmers could retire in 1957. He based this on the 1954 farm census that showed 786,000 farmers 65 or older at that time, and also farmers coming into the 65-year group at the rate of about 100,000 a year.

Mr. Stong, who is Iowa born, noted that this 1954 census further showed that 26 percent of farmers making $1,000 or less a year were in the age group of 65 or older, whereas only 11 percent of farmers making $3,000 or more had reached 65. On the basis of these figures he correctly predicted that self-employed farmers would be retiring in numbers as soon as they were assured social security benefits.

Mr. Stong's researches were for Senator JAMES E. MURRAY, Democrat, of Montana, who has introduced a bill that would permit farmers to substitute their earnings for any year since 1950 for either 1955 or 1956 or both in calculating social-security benefits.

Senator ROBERT S. KERR, Democrat, of Oklahoma, also has introduced such a bill.

Mr. Stong said that there was little incentive for a farmer to work if he secured only $600 a year. The social-security payment for himself and wife would be $45 a month or $540 a year. Or if he were making $1,200 a year or $100 a month, he would still get $8.50 a month for himself and wife by retiring.

Two Great Frenchmen

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. WILEY. Mr. President, on September 6 there will be issued by the Post Office Department a commemorative stamp to mark the 200th anniversary of the birth of one of the great men of Europe and in the history of the United States—the Marquis de Lafayette.

Here is a hero rightly revered by the two longtime allies—the sister republics of France and the United States.

I was interested to read in the Monday, May 13, 1957, issue of the Milwaukee Journal a description of the dramatic life of this gallant nobleman who served so immeasurably the cause of the American Revolution.

It is well indeed that this country does him honor.

We were all reminded, however, by a recent article in the same paper that there is another great son of France whom we must also not forget, Father Jacques Marquette.

The article described how Mr. Robert Valeur, the first counselor of the French Embassy, rightly pointed out to a group of students from Milwaukee's Marquette University High School that it is well indeed for all of us to recall the great contributions of this almost legendary priest-explorer. Father Marquette's name is inextricably related with the history of my State, as well as this Nation as a whole.

He is, of course, one of the two distinguished sons of my State who is honored by a statue in a corridor of the Capitol very close to where I am speaking now. The other Wisconsin statue is, of course, that of "Fighting Bob" La Follette.

I might recall, too, in connection with Father Marquette and General Lafayette, that other great explorer Louis Joliet, who discovered the Mississippi River at Prairie du Chien, Wis., on June 17, 1673.

When the Marquette University High School students were here they laid a floral wreath at the base of Father Marquette's statue, and they presented a plaque to Mr. Valeur, as the representative of the French Government.

The plaque noted that this gift to Laon, France, birthplace of Father Marquette, was from the pupils, faculty, friends, and alumni of the Milwaukee school in its centennial year, "in grati-

tude for the inspiration and leadership provided by Laon's illustrious son."

I was happy to participate in that ceremony.

I recall this event now, in particular, because France is once more in an hour of great trial—she is in the process of forming a new government to replace that of Premier Guy Mollet. And looming in the background of the parliamentary problem is the dark cloud of continued strife in Algeria—a conflict which is bleeding France seriously, a conflict which aroused the conscience of mankind most recently in the shocking slaughter of innocent Algerian men, women, and children by extremist nationalist forces.

In this hour when our friends in the land which gave the world the slogan "Liberty, equality, and fraternity" are so hard pressed at home and abroad, it is especially well for us to recall our debt to France. It is well to recall, as well, all of the other contributions which Frenchmen in all walks of life—in the arts, in science, in industry, in politics, in jurisprudence, in philosophy, and in countless other fields—have made to mankind.

It is well for us to show toward France the understanding, the sympathy, the good will which was symbolized by Lafayette's own contribution to our cause when we were so hard pressed.

I ask unanimous consent that the text of the Milwaukee Journal article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FIGHTING FRENCHMAN OF 1776—LAFAYETTE'S 200TH BIRTHDAY RECALLS GALLANT NOBLEMAN'S DRAMATIC LIFE, INCLUDING VITAL ROLE IN AMERICA'S FREEDOM BATTLE

(By Walter Monfried)

"Lafayette, we are here." These words were spoken at the Lafayette grave in Paris on July 4, 1917. Two months earlier the United States had declared itself on the side of France in World War I. The statement was made by one Col. C. E. Stanton of the American Army, not by General Pershing, as is generally believed.

From the 1750's when young George Washington was fighting French invaders in the Ohio Valley, to the 1950's, when the Suez issue has stirred bitterness among nations, America and France have had their differences. But the differences are always resolved in the spirit of "Lafayette, we are here."

This year is the 200th anniversary of the birth of that citizen of two republics. The first of many ceremonies has just been held in Wilmington, Del., where the du Pont-Winterthur museum displayed Lafayette items. Although the actual birth date is September 17, the official Lafayette Week of France will be observed June 28 to July 4, when it is hoped many American visitors will take part. All of France is being decorated this spring with red, white, and blue posters showing the gallant marquis on a white horse.

The mutual affection of Lafayette and America constitutes one of the great love stores of history. But the why of it is equally intriguing. Here was a boy, born to immense wealth, of a family of ancient nobility. At 16 he was an orphan and a millionaire, a colonel in an exclusive regiment of dragoons, the husband of a 14-year-old girl of equally lofty lineage. Why should this lad have been willing to sacrifice family, fortune, and life itself to endure the hardships of warfare in a raw new world? And for such a concept as "liberty," a word hardly known in his blueblooded circles?

First of all, he was a born fighter, instinctively a good soldier, fearless, overly bold.

"I love the trade of war passionately; I consider myself born to play that game," he declared as a young general. And, in the trade of war, the attack was his favorite action. Time and again General Washington and the older officers were compelled to restrain the young Frenchman sternly when he proposed to carry the battle against superior numbers in better positions. Indeed, in his first battle, at the Brandywine River in Pennsylvania, Lafayette was wounded by a musketball in the leg when he slipped away from his corps of guards and charged into the midst of the victorious foe.

HE WAS GILBERT TO HIS FRIENDS

The marquis was much stronger in the heart than in the head. A veteran of several revolutions, he never quite realized that other men could be false. When he was past 60, he was instrumental in placing on the French throne a supposedly well-meaning and honorable duke, Louis-Philippe, of the Orleans dynasty. Lafayette was instructed, and he fully intended, to get from the new king written concessions for constitutional government and other democratic reforms. But Lafayette was so charmed by the royal personage that he forgot his mission—and Louis-Philippe turned out to be a renegade to republicanism.

Marie Joseph Paul Yves Roch Gilbert du Motier Lafayette was the marquis' full name. He was Gilbert to his family and friends. When he was 18, serving with a garrison in Lorraine, he first heard about the rebellion in America. He received the news from the duke of Gloucester, a brother of King George III of England. The duke, a dinner guest of the French officers, asserted that he disagreed with his brother and hoped the colonists would win.

Lafayette already hated the English for having taken Canada from the French. By aiding the American colonies, he could injure England. After the colonies declared their independence in 1776, the youth resigned from the French Army, secretly bought a small ship and sailed to America. American diplomats had promised him the rank of major general—at 19—when he demonstrated the wealth he could contribute. He kept his word, spending hundreds of thousands of dollars to help the American cause. At one point in the war, at Baltimore, he noticed that his 2,000 men were in rags. He immediately bought complete attire for each of them.

WASHINGTON LOVED HIM AS SON

When he first reached the Capital, Philadelphia, Congress rebuffed him. American leaders had become irked by European fortune hunters swarming over the land. Shrewd old Ben Franklin interceded for the youth. Lafayette was warmly welcomed when he said that he would serve without pay. He received his commission and was introduced to General Washington. A lifelong friendship began immediately. Washington loved the boy as a son. The boy at last had found a father.

After a year of spirited service in several battles, Lafayette returned to France on leave. He received a hero's reception and persuaded the government to grant military, naval, and financial aid to the Americans.

In 1780 he returned to America. Lafayette by his own admission, had an actor's craving for adulation. One of his letters to Washington contained these words: "I well know that you, my dear general, will get me the one thing for which I thirst: Glory."

Washington accommodated the lad. Major General Lafayette served steadily in the field through the 3 remaining years of the war. He led the all-important army which bottled up the forces of the British at Yorktown. His record in the American struggle for freedom is remarkable. He chose to shiver through the terrible winter at Valley Forge with Washington's ragged troops. It was his lot to be one of the officers who sentenced Major Andre to be hanged as a spy after Benedict Arnold's treason was revealed.

Having helped the new Nation in its revolution, Lafayette returned home in time for the bloody French revolution which swept the Bourbons from the throne and set up Napoleon as Emperor.

TRIED TO CALM THE WHIRLWIND

Nobleman though he was, Lafayette was worshipped by the masses for his American exploits. In the early years of the chaotic French uprising, he became the most powerful man of the realm. The mistrusted King Louis XVI and his queen, Marie Antoinette, were in his charge. Both hated him. In Lafayette's youthful days at court, Marie Antoinette had snickered at his clumsy dancing, but now she laughted at him no more.

"Better to perish than be saved by Lafayette," she muttered—and perish she did, on the guillotine.

Between the remorseless factions of blood thirsty radicals and reactionary aristocrats, Lafayette tried to steer a course of democratic liberalism. He pleaded for jury trials, religious tolerance, abolition of titles, and representative government.

"He worked with a passionate energy that seemed to take him everywhere at once and with controlled patience that calmed myriad storms," writes biographer David Loth. "People clamored around him, asking for orders, pleading to enlist, begging favors. Overnight the national guard grew to 200,000 men. This was an unprecedented force: the great battles of the century never had involved a single command so large."

But, in 1790, Lafayette refused to continue in supreme command, which would have given him a dictatorship. He would not sacrifice liberty for order.

Lafayette could not calm the whirlwind of revolution. The fanatics—Marat, Mirabeau, Danton, Robespierre—gained control and declared war on monarchial Austria. Lafayette was placed in charge of 1 of the 3 armies on the frontier.

Then he received a curious order to return to Paris. He surmised that the guillotine might be his destination, and he fled to Belgium in the hope of escaping to America. But, in Belgium, he was captured by German forces; they hated him as a revolutionary.

A LIMPING, BALD VETERAN

For 5 years he was held in German and Austrian prisons, despite the pleadings of George Washington for his release. At length, Napoleon Bonaparte attained continental power and ordered freedom for the marquis. Lafayette, however, never sided with the dictatorial emperor, and it was Lafayette, after Napoleon's defeat at Waterloo, who demanded and secured the abdication of the great conqueror.

In the several governments that France endured thereafter, Lafayette generally was active on the liberal side.

In 1824, the limping, bald veteran of many struggles attained the crowning glory of his career. President Monroe invited him to visit the United States as guest of the Nation. He visited all 24 States. He was astonished by steamboats, Sunday blue laws, and the Bunker Hill Monument. He, in turn, astonished many Americans by shaking hands with Negroes and urging that slavery be ended.

"For more than a year," says historian Frank Monaghan, "his triumphal tour provoked demonstrations of frenzied enthusiasm without precedent or parallel in American history. This was one of the happiest years of his life, for he had never lost his one great foible, as Jefferson had described

it, 'a canine appetite for popularity and fame'."

Lafayette, who had lost his fortune in the French upheavals, received from grateful America $200,000 and 23,000 acres in Florida. Within a few years, he gave all of it to needy friends.

At 77 Lafayette succumbed to pneumonia. He was buried, at his request, beside his wife. She had asked that she be buried amid the hundreds of headless bodies of guillotine victims at Picpus Cemetery. A mound of earth from Bunker Hill was placed over his grave.

Markets: The Golden Key to Opportunity

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Markets: The Golden Key to Opportunity," delivered by Assistant Secretary of Agriculture Earl L. Butz at the June dairy month celebration, Barre, Vt., on May 28, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MARKETS: THE GOLDEN KEY TO OPPORTUNITY

(Address by Earl L. Butz, Assistant Secretary of Agriculture, United States Department of Agriculture, Washington, D. C., at the June Dairy Month celebration, Barre, Vt., May 28, 1957)

We who work in agriculture face a challenge unparalleled in world history. Ours is a land of plenty. Yet that very same abundance often gives rise to surpluses which burden markets, depress prices, and otherwise trouble our economic life. This condition is most serious in agriculture, where we have not yet learned how to keep farm output flowing into constructive use as rapidly as it flows from our farms.

Too much of our national thinking has been directed toward curtailment of output, and too little toward expansion of markets.

During the last 2 or 3 decades, Government program has been piled upon Government program until farmers themselves are understandably confused by the crazy-quilt pattern of governmental assistance to agriculture. Farmers are told by Government what to plant or not to plant, what to market or not to market, and otherwise how to run their business. The maze of controls and regulations which accompany these assistance programs have become increasingly irritating. More and more farmers are wondering about the price they have to pay for all of this kind of governmental assistance.

In the meantime, the problem of surplus remains unsolved. Still confronting us is the challenge of abundance which can and must be met. We will be able to meet it only if we are willing to face the problem realistically.

The American dairy industry has taken some important steps in developing the kind of teamwork that can provide the answer to the problem of its own surpluses. Dairy farmers and others in the industry have increasingly been merchandising their products and moving them into human consumption. A great and fundamental lesson in farm economics is being taught through this demonstration. Effective pricing and aggressive merchandising, teamed together, can move more and more dairy products into human stomachs rather than into Government warehouses.

This great industrywide effort to promote and merchandise dairy products is now continuous throughout the year. June Dairy Month is symbolic of the dairy industry's teamwork in meeting the challenge of abundance.

It is a real pleasure to join with you in inaugurating your teamwork project for June Dairy Month. In this project you have a common goal—to put dairying in the limelight, to remind everyone of the importance of the dairy industry to community health and to the economic well-being of the community. Your united effort demonstrates the many avenues by which the dairy industry moves forward. Here you have represented the producers' interest, the distributors' interest, and the public interest. But for the moment, you are all concerned with a promotion program for dairy products.

VERMONT LEADS THE NATION

Nowhere in the United States is dairying more important than it is to the people of Vermont. There are other States where gross cash receipts from dairy products are greater, but Vermont leads the country in cash receipts per person. The importance of dairying in this area is illustrated by the fact that there are more cows than people in Vermont. And, according to census and United States Department of Agriculture reports, the number of cows relative to people is increasing. In 1950, the number of cows and heifer calves on farms exceeded the number of people in Vermont by 36,000. In 1956 there were 452,000 cows and heifers on Vermont farms, 82,000 more than the number of people in the State.

The demonstration of community do-it-yourself activity illustrated by this event, is typical of the independence and self-reliance of the rugged New Englander. It is this kind of activity which holds the golden key to opportunity for industry growth and individual freedom of action.

We take pride in the fact that the dairy enterprise is still a free enterprise in the sense that it is unhampered by quotas and limitations on output that stifle the producers of some restricted commodities.

This is a day of science and technology in agriculture. It is a time of far-reaching change in both production and marketing.

During the past decade, dairymen have had an opportunity to take advantage of many improvements in the technology of milk production. Many of these advances can be utilized most efficiently with increased output per farm unit. More capital is needed to purchase the latest laborsaving devices. For a profitable investment such equipment must be used to capacity, rather than half full. The opportunity for individual decision permits each dairyman to make the choice best for him. He is not limited to a milk output quota or restricted to a certain number of cows. In that sense the dairy enterprise is a free enterprise.

But the dairy enterprise is not "free" in terms of its price-supported programs. During the 7½-year period ended December 1956, net expenditures by the Federal Government for price support purchase of dairy products totaled $1.4 billion. Indications are that this year alone price support purchases of dairy products will approximate 4 billion pounds of milk one way or another. The cost of the dairy price-support program for the current marketing year which began April 1 will be in the neighborhood of $315 million.

With expenditures of this magnitude by Government, we must expect the public to have a keen interest in what the industry is doing to help itself, and whether the cost is worthwhile. Each mail delivery to Washington brings suggestions for increasing or reducing Government assistance to the dairy industry. But coupled with the suggestions for more help from Government often come recommendations for control of the industry. They would impose limits on production or marketing similar to controls now applicable to other price-supported commodities. With such controls, the power to make decisions would increasingly be transferred from the individual dairy farmer to the Government.

Consider the impact of a freeze being placed on output of milk per farm. Where would we be today if a limit on dairy farm output had been imposed 5 years ago? Vermont dairymen selling milk on the Boston market delivered in March this year an average of 110 pounds more milk per day per producer than they sold in March 1952. The gross milk check per producer was $619 this March, more than $100 greater than the average check in March 1952. Vermont dairy farmers achieved that increased gross income in spite of the fact that they received about 1 cent per quart less this year than in 1952.

PRODUCTION EFFICIENCY IS UP ONE-FOURTH

Increased efficiency of labor on dairy farms is the key to the greater farm productivity. The Department of Agriculture's continuing study of farm costs and returns on sample northeast dairy farms shows production per hour of man labor increased one-fourth during the 4-year period, 1952–55. In 4 years' time, efficiency of labor increased so that a farm worker could accomplish in an 8-hour day what it took him 10 hours to do in 1952. Stated another way, each worker was able to produce about one-fourth more milk.

Increased production of milk per cow has been an important factor in bringing about the higher rate of labor productivity on dairy farms. Annual average milk production per milk cow in the United States has risen 1,000 pounds in a decade.

This increased productivity of labor on dairy farms has been accompanied by some increase in hourly returns for labor on dairy farms, but increase in returns has not kept pace with increased productivity. Retail prices have stayed relatively constant since 1952. The increased costs of marketing have offset to some degree the benefits of more efficient production.

Much of the increased marketing cost is due to higher wage rates paid in marketing channels that have not been compensated for by increased labor productivity. Some increase has occurred in productivity of labor in the marketing of dairy products, but recent increases in unit output of labor in handling milk have been greatly outdistanced by increased efficiency of production.

From 1952 to 1955, Department of Agriculture studies show hourly earnings in dairy products industries in the United States rose 15 percent, and labor costs of fluid milk handlers rose 7 percent per unit of product. During the same period hourly earnings of farm operator and family labor on northeast dairy farms rose 23 percent, but the increased labor productivity on these farms reduced the labor cost per unit of output nearly 2 percent.

Dairy farmers have set a pace that challenges the marketing segment of the industry. It is an inspiring experience to see that challenge taken up as you here have done. There is no point in calling the race off just because dairy farm production has taken a spurt not equaled by marketing. The marketing process hasn't reached its finish line—there is plenty of room for increased sales and for marketing efficiency.

There is a growing market for the dairy industry of the United States in the bumper crop of babies arriving each year and the longer life span that we can anticipate today. The population of the United States is increasing at the rate of 3 million persons each year. This alone provides an additional out-

let for 2 billion pounds of milk each year at present per capita rates of consumption.

THE CONSUMPTION POTENTIAL IS GREAT

There is no good reason why the dairy industry must reconcile itself to present levels of consumption per capita. Look at the levels of consumption in other countries. Consumption per person in the United States of all dairy products in 1955 was less than half the level of consumption in Ireland and Finland. The United States ranked 15 among 17 reporting countries. By major dairy products, the United States ranked 8th in fluid milk consumption per person, 15th in butter consumption, and 11th in cheese consumption. We hold only two first ranks. These are in per capita consumption of evaporated and dried milk, both relatively small items when compared with the three major products.

These figures refute the notion that we have reached some maximum of appetite for dairy products. The lag in consumption can't be due to income. We are the most prosperous country in the world and we are reaching new peaks of personal income each year.

The conditions for merchandising are excellent. The difficulty is that conditions are excellent for marketing just about everything today. When the housewife goes to the supermarket today she is not only attracted by hundreds of presliced, prepackaged, precooked, and precleaned items of produce, all ready for the dinner table, she can also purchase there the tablecloth, cooking pots and dishes for serving the meal. In that same supermarket she can also buy flowers for the table, drug supplies, and a new pair of hose.

To compete with all this array, either at the store or delivered to the home, takes continuous selling. There is no reason for dairy products to lose popularity to a better product or to a changing fashion fancy. Merchandising dairy products must keep the consumer convinced that "Dairy products are better products" and that dairy products do in fact consitute a "good buy."

YOUR PROGRAM IS GETTING RESULTS

Progress is being made in merchandising dairy products. Here in New England your stepped up promotional efforts appear to be paying off in increased consumption. Whole milk sales in 1956 to consumers in the five Massachusetts marketing areas where Federal milk orders operate, were 2.6 percent above sales in these areas in 1955. The estimated increase in the population of the Commonwealth of Massachusetts was less than 1 percent from July 1, 1955 to July 1, 1956. This indicates that sales per person are increasing in these areas where Vermont dairymen market a large share of their milk. Whole milk sales in the first quarter of 1957 showed another increase in these areas of 2.6 percent over the first quarter of 1956.

The sales promotion programs in these areas appear to be getting results. Some of the increase in whole milk sales can be attributed to the special milk program, but even its use has required some promotion effort. School and welfare authorities have to know the program is available and how to use it.

Nationwide, sales of dairy products are not showing the increases we would like to see. Last year per capita consumption of all dairy products, on a milk equivalent basis, rose only one pound from the previous year. But we can be encouraged by the fact that we have seen an end to the downturn in dairy products consumption which plagued the industry for a number of years.

The one-pound gain in per capita consumption of dairy products last year was due to increased disposals of Government-owned stocks and the special milk program. Commercial disposition per capita dropped slightly below the 1955 level. The commercial market for dairy products has held relatively constant over the past 4 years on a per capita basis, varying only from 677 to 679 pounds per person annually. But prior to 1953 it had been dropping steadily since 1950 for an accumulated loss in 1953 of 7 percent from the 1950 figure. Last year, although per capita consumption of all dairy products rose one pound from the 1955 level, commercial sales dropped two pounds per person from the 1955 figure. The difference was made up from domestic distribution of Government held stocks of dairy products and the expanded special milk program.

YOUR COMPETITORS ARE ON THE BALL

The industry has pulled itself out of a nosedive, but will it be content to coast along on a level plane? We may be sure that merchandisers of other products are not going to coast. Milk producers are not ready to coast. They want to keep expanding production.

It is time now for full teamwork among producers, processors, distributors and Government to push hard for a decided upturn in commercial sales of dairy products. This is a job for aggressive merchandising. But it won't be accomplished with salesmanship alone. We must make gradual but realistic price adjustments as production and marketing efficiencies permit. Dairy products must offer consumers the best buy for their dollar in order to hold their share of the consumers' dollar.

This is a program for the industry. Salesmanship is a job for private enterprise. Government can help through research and aids to marketing, like Market News, Plentiful Foods activities, and the regulation of marketing practices such as through the Federal milk order program. Government can also lend assistance to encourage private enterprise. But it should never take over the lead role. It must always remain the junior member of the partnership.

This job of selling dairy products to consumers, with a goal of further increasing per capita consumption, is no easy task. There is a long period of apathy to overcome. The long crutch of a Government guaranteed market has tended to soften selling efforts. Moreover, we are living in a highly competitive economy. New products and new marketing methods are with us each day.

It will take cooperation from all segments of the dairy industry to bring about a real upturn in per capita consumption. The combined strength and ingenuity represented in this great industry must be equal to the task.

By pulling together as you are doing in this June dairy month promotion program, continued teamwork will make possible the kind of progress we need. This sort of teamwork is our golden key to opportunity.

The Primrose Path

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. ALGER. Mr. Speaker, the drift of our Government over many years toward centralization and socialism is of continuing concern to many American citizens. No finer expression of the American way as opposed to this alien foreign philosophy of socialism can be found, to my knowledge, than the following statement by Mr. W. G. Vollmer, president of the Texas & Pacific Railway Co. of Dallas, Tex., entitled, "The Primrose Path." Under unanimous consent I am including it in the CONGRESSIONAL RECORD for the benefit of those colleagues and American citizens who have not read it and who may benefit from it:

THE PRIMROSE PATH

(By W. G. Vollmer)

The concept of national economic planning for the people's welfare had its inception in the twenties, long before World War II or the Korean conflict. Since that time it has gained steadily in strength, in scope, and in adherents.

In the turbulent and tortuous history of nations the principle of economic planning is nothing new. It is the very keystone of communism, just as it was of nazism and fascism.

When any government takes over the peacetime planning of the economic affairs of its people it becomes also the high executioner of individual freedom and opportunity.

In the drafting of the Constitution our Founding Fathers must have recognized the inherent evil of national economic planning for they made no provision for such Government activities. As a matter of fact, many of them fled their native countries to escape the serfdom which such planning imposed.

In times of peace no economic plan of the Federal Government is worth the paper it is written on unless it is supported with the power of execution. And the power of execution carries with it the power to control individual action and to destroy individual freedom.

PLANNED ECONOMY

A planned economy by a central government means precisely what the word "planned" implies.

It means that the Federal Government assumes the right of exercising control over certain phases of the economic affairs of the people. Governmental officials and bureaucrats decide what they conceive to be good for the people and then issue orders telling them what they can and cannot do.

Our farm program is a case in point. The once rugged and independent farmers have surrendered a considerable measure of their freedom of action upon the altar of artificial security disguised as a fair return for their products.

The farmers now plant whatever crops the Government decides upon. And they also market their products in a manner carefully prescribed and rigidly administered by the Government.

The farm program is but one segment of our national economy which has given way to national planning. Numerous programs directly influence in various ways the supply and the price of food and clothing, while controls of one form or another are exercised over employment and wages.

IN TIMES OF PEACE

In times of peace if we accept the principle that the Federal Government possesses the right to plan any segment of our economic welfare, then we must be prepared to relinquish the right to a segment of our individual freedom.

We cannot have both. Any disposition to temporize or compromise the principles of freedom merely strengthens socialistic planning.

Every real American has within his heart a sincere desire to see everyone properly fed and clothed, educated, and sheltered, employed at good wages, secure in his job, in his health, and in his old age.

There is a wide difference of opinion, however, as to how all of these things can be obtained. Some people look to the Government to provide them, which means they expect the Government to produce an economic miracle.

It cannot be done that way. The Government itself produces nothing. It is the people who produce the goods and services that make life richer, more comfortable, and more enjoyable.

The only way to provide more things for more people is for the people themselves to produce more. The solution thus rests with the people, not the Government.

DISTRIBUTING INCOME

In times of peace the national planners of our Nation have supported and advocated the principle that the Government, when vested with the power to distribute income and productivity, can bring about an improvement in the material welfare of all the people. This is economic nonsense, for the more the Government provides, the more it impoverishes the people through increased taxation.

It is the belief of those who still subscribe to our constitutional democracy, and thus often are accused of being reactionaries, that it is the responsibility and the right of the individual to produce according to his capacity and to consume or dispose of what he produces according to his own judgment, provided he respects the similar rights of others.

The Constitution does not say that the Federal Government, acting in the capacity of an economic planner, shall promote the welfare of one person at the expense of another.

Nor does the Constitution provide that the Federal Government has the power to capture through taxation a portion of a person's income and then distribute it, in the form of grants-in-aid, to others.

A government which promotes and practices in times of peace, through taxation and national economic planning, the distribution of the Nation's income and productivity ceases to be a defender of equality and justice and of the rights and property of the people. It becomes, instead, a government dedicated to taking the earnings of one person and giving it to another without any regard to the desires or wishes of the earner.

SPECIAL PRIVILEGES

Those who contend that the Government of the United States owes a living to any citizen, or group of citizens, or that it should provide special privileges and benefits to various communities, are contributing to the destruction of freedom of action and of opportunity.

Those who contend that Federal economic planning is superior to that of individual planning are advocating the supremacy of the state over man.

Those who contend that the Government should engage in national economic planning are advocates of a share-the-wealth principle. This principle is predicated upon the false assumption that private saving is a sign of greed, and that the accumulation of wealth is a sign of selfishness. As these are sacred rights, the Government should never use its power in times of peace to seize the fruits of one person's labor and distribute them among those whom the Government deems worthy of its benevolence and its bounties.

Those who contend that the Federal Government should provide man's material welfare overlook the vital fact that the only security any person can have lies within himself.

Unless man is free to act as an individual * * * free to be productive in his own behalf * * * free to determine what part of his production he will consume and how much he will save * * * and free to protect his savings and his property, he will have neither freedom nor security.

GOODS AND SERVICES

It should be repeated over and over again that the Federal Government cannot provide the people either with goods or services, or with real security.

The Government cannot make people rich. But it can make the rich poor by taxing away their substance and by stifling their initiative and their incentive to work, to produce, and to save.

The only thing the Government can distribute evenly is poverty and enslavement. These things are achieved through excessive taxation and regimentation, both of which are the principal tools of all economic planners.

It is worth recalling what the great Greek writer, Plutarch, who lived nearly 1900 years ago, had to say about benevolent governments. He made this observation:

"The real destroyer of the liberties of the people is he who spreads among them bounties, donations and benefits."

All economic planners should heed that great truth before the principles of our constitutional democracy have been weakened and made important. The people of the Nation also should heed it.

BY THEIR VOTE

By their voice and by their vote, the people should insist that our Federal Government cease the distribution of bounties, donations and benefits. And the people themselves should cease demanding such costly gratuities.

The people should remind themselves and their public servants that the demands upon the Government for aid and assistance encourage and strengthen the hands of the planners. And that these demands constantly add to the cost of living.

It is indeed a strange phenomenon of reasoning upon the part of businessmen and others, when they literally demand that their own money be used by the Members of Congress to bribe them with bounties and benefits disguised as Federal aids and grants.

It is alarming when you realize that the average Member of Congress oftentimes is judged by the amount of so-called Federal money he obtains for community and regional projects rather than for his ability to contribute to the welfare of the Nation.

Encouraged by the disciples of national economic planning and by the apostles of government bounties, the people are turning more and more from the principles of self-reliance to that of dependence upon the Government. They are being led along a primrose path to a mirage of easy money and easy living. But what this primrose path actually leads to is an ever-increasing measure of taxation, regimentation and controls.

DEMANDS FOR MORE

In short, a great many people, through the pressue of their demands, are contributing to the establishment of a state of national socialism which will be presided over by a government vested with the power to tax, to distribute, and to control.

Even though we talk volubly against Federal aid and assistance, it does not appear that the people either despise or resist it.

There has been no real opposition to the numerous inland waterway projects throughout the Nation which annually eat up millions of dollars of the taxpayers' money.

There has been little public opposition to the Government's housing program.

There has been little opposition to the millions of dollars spent annually by the Government to subsidize in one form or another commercial airlines, trucks, buses, and inland water carriers.

IMPORTANT QUESTIONS

It is time we ask ourselves a few soul-searching questions.

Are we as a people turning away from our constitutional democracy toward national socialism, disguised as benevolent economic planning?

Are we as a people turning our backs upon our system of free, competitive enterprise, a system which enables us today, with only 6 percent of the world's population, to produce industrially more than all of the rest in the world combined?

Some of us may deny this, but our actions belie our words. The mute record of our deeds stands as convincing evidence against our protests of innocence.

Socialistic economic planning can be effectively promoted by constantly increasing the number of people on the public payroll, as well as by deceiving the people into believing that the Government is better able to provide the basic needs of life than are the people themselves.

Under our free competitive enterprise system we have amassed the greatest productive power the world ever has known. No planned economy even remotely approaches what we have achieved under our constitutional democracy of freedom of action and opportunity.

We should solemnly pledge ourselves to support and promote this constitutional form of government handed down to us by our Founding Fathers.

HELPFUL SUGGESTIONS

Here are a few suggestions which I think will be helpful in preserving our freedom:

1. We should start matching our words and deeds if we are sincere about preserving our free, competitive enterprise system.
2. We should resist the temptation to demand and accept Federal funds for local and regional projects.
3. We should stop demanding more Government services and benefits.
4. We should oppose socialistic schemes disguised as Government aids, no matter how attractive they may be.
5. We should depend upon our own resources to provide local and community needs rather than upon the Federal Government.
6. We should recognize that the bounties and benefits received from the Federal Government come out of our personal incomes, and that the Government is simply being generous with our money.
7. We should assign ourselves the task of telling our associates and employees that the greatest volume of goods and services for the greatest number has come from our own free, competitive enterprise system.
8. We should tell our friends, neighbors, and fellow workers that a planned economy is a socialistic economy, and that it destroys freedom of action and opportunity.
9. We should support economy in Government, even if it affects pet projects in our own community.
10. We should recognize that there is no primrose path to easy money or to a more abundant life.

Retirement of Frank E. Andrews, Regional Engineer, United States Bureau of Public Roads

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, June 6, 1957

Mr. NEUBERGER. Mr. President, faithful career Government employees have played a vital part in the development of our Nation, and particularly of the American West. Such a person is

Frank E. Andrews, who retired on June 1 as regional engineer of the United States Bureau of Public Roads in my home city of Portland, Oreg.

I had an opportunity to see some of Mr. Andrews' able and skillful work at close hand when he was in charge of civilian construction on the great Alcan Highway project during World War II, and I was stationed at Whitehorse, in the Yukon Territory, as aide-de-camp to Gen. James A. O'Connor, of the United States Army Corps of Engineers.

In tribute to Mr. Andrews upon his retirement, an excellent summary of his career appeared in the Oregonian of June 1, 1957.

I join in congratulations to Frank E. Andrews and his wife, Naomi, and ask unanimous consent that the Oregonian article be printed in full in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROADS POST VACATED—ANDREWS RETIRES AS UNITED STATES ENGINEER

Forty-three years of highway construction was laid aside Friday night when Frank E. Andrews, 70, retired from the position of regional engineer of the United States Bureau of Public Roads in Portland.

But for Andrews, it may not be the end of his highway work. He is seriously considering an overseas position where he would be able to pack in 2 more years of highway building in southeast Asia.

Meanwhile, he expects to catch up on home gardening, golf, and visiting with his daughter and grandchildren in Cincinnati, Ohio.

Andrews joined the Bureau of Public Roads in April 1919, shortly after he was discharged from the World War I Army. He was born in Deming, N. Mex., May 16, 1887, was educated in Colton, Calif., at Stanford University and University of Oregon extension department. His first engineering was for a railroad in New Mexico and his first roadbuilding was in San Bernardino County, Calif.

FIRST JOB PAID WELL

Andrews' initial assignment with the Bureau of Public Roads was as resident engineer on the construction of the Mt. Hood Loop Highway, where no road existed and travel had been by foot or horseback.

His first highway job paid off well. He met Naomi C. Faubion, daughter of a pioneer family, and married her.

Then came assignments in Montana, and back to Portland, and finally to Alaska and the Yukon country where he was in charge of location and construction of the westerly 850 miles of the Alcan Highway during World War II. This big job brought him a staff of 600 engineers and assistants, and the engineers had to match wits with the seething tundra, which alternately froze and thawed, causing no end of trouble for the roadbuilders.

Andrews returned to Portland in 1943 as principal assistant to W. H. Lynch, division engineer, and when Lynch retired in 1953, Andrews succeeded him, later becoming regional engineer with authority over Federal highway building in Oregon, Washington, Idaho, Montana, and Alaska. Alaska was taken away from him January 1, 1957, when a new regional office was created for the Territory.

ANDREWS NOTES PROGRESS

During his many years in the bureau, Andrews recalled, he has helped plan and build many units of the Oregon coast, Pacific, Columbia River, North and South Santiam Highways in Oregon, others in Washington, Idaho, and Montana.

"When I compare the modern freeway with its control of access and other safety and travel ease characteristics with the highways of even the 1930's, I realize just how far the science of highway engineering and the construction equipment techniques have come," he said. "It has been most gratifying to have had a role in that progress."

Andrews announced his successor in Portland will be Baird M. French, now the district engineer at Phoenix, Ariz., who is expected to arrive here about July 1 to assume the position, with offices in the Morgan building.

Mr. and Mrs. Andrews reside at 2641 NE. 44th Avenue.

Dumping of the Soil Bunk

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. HUMPHREY. Mr. President, one of our leading weekly newspapers in Minnesota is the Triumph-Monterey Progress. Its editors, Phyllis and Gordon Spielman, have a keen insight into the needs of our agricultural economy. I call to the attention of Senators a recent editorial entitled "Dumping of the Soil Bunk." This editorial should be read with care and study. The editor has put the finger on the central weakness of the soil bank, namely the manner in which it has been administered. It is time for the United States Senate to make a full scale investigation into the operation of the soil bank.

This program can be of help to agriculture. America needs an expanded soil conservation program. Such a program need not be a heavy burden on the taxpayers. It can be reasonable in cost and effective in purposes.

It is with deep regret that one must note that the soil bank as presently administered is a cause of concern and doubt in the minds of Members of Congress as well as farmers themselves.

I pay tribute to Mr. and Mrs. Spielman for this fine editorial. Again from out in the country in rural Minnesota comes the kind of clear thinking and high level and understandable conclusions that this Congress needs.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DUMPING OF THE SOIL BUNK

When the House of Representatives dumped the soil-bank program, it was more a reaction against Agriculture Secretary Ezra Taft Benson's administration of the soil bank, rather than either an attempt to cut the budget or opposition to the soil-bank principle.

Under Benson's misadministration of the United States Department of Agriculture, the program became known as the "soil bunk" and was used for every purpose but for which it was intended—to cut down surpluses. It must be remembered that Benson initially opposed the soil-bank idea when it was advocated by farm-belt Congressmen, then pulled a switch in time for the 1956 election campaign.

Under Benson, the program became a substitute for hail and flood insurance, and a political catchall intended to snare votes from farmers who were beginning to desert Ike.

As either a conservation practice or an attempt to cut surpluses, the soil bank as operated by Benson was a complete flop. There were far fewer acres left uncultivated under the soil bank than under the old ACP, and the cost was three times as high. In addition to this, charges of a windfall are somewhat justified in that a number of huge corporation-type farms benefited most. For example, the 11 largest recipents of soil-bank checks received a total of nearly half a million dollars.

All these abuses, however, do not mean that a soil bank properly administered would not be a good thing, both to protect the farmland, and to cut surpluses.

What is needed, first of all is a new Secretary of Agriculture sympathetic to the needs of the farmers. Then a fair price-support program is urgent. Allotments should be based on tillable acres, not on the ridiculous historical experience that is now used. With proper supports and a realistic allotment basis, participation in a soil-bank program would be feasible for nearly all farmers.

Tight Money

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, June 6, 1957

Mr. MARTIN of Pennsylvania. Mr. President, there is now much discussion throughout the Nation concerning what is called tight money. The discussion even relates to the credit of the United States. This is a subject which should have the very careful and deep consideration of all Americans.

A very good article on this question, entitled "Officials Deride Treasury Crisis," written by Edwin L. Dale, Jr., was published in the New York Times of June 2, 1957. I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFFICIALS DERIDE TREASURY CRISIS—THEY CONCEDE PROBLEMS IN REFINANCING THE DEBT IN A TIGHT MARKET—UNITED STATES CREDIT STILL GOOD—DRAWBACK IS THAT FREQUENT BORROWING FROM BANKS ENLARGES MONEY SUPPLY

(By Edwin L. Dale, Jr.)

WASHINGTON, June 1.—Top officials of the Treasury are more amused than annoyed by recent reports of a "crisis" in Government finances. They insist—and produce evidence to prove it—that there is nothing, like a crisis.

But they concede that conditions in the money market are creating problems in managing the national debt—problems that have not been mentioned in most of the crisis articles.

The financing problem is of particular interest now because of the impending change in the top leadership of the Treasury

Secretary George M. Humphrey has resigned, to be replaced by Robert B. Anderson.

SELF-IMPOSED SQUEEZE

The Treasury's problems, to the extent that they exist, arise from the self-same tight money policy of the Federal Reserve System that the Tresury under Mr. Humphrey has always supported. Counting the allegations that have been made, difficulties are of these kinds:

A problem of raising enough cash to run the Government. The charge of crisis here is based mainly on a recent financing operation in which holders of more than one-fourth, or $1,200,000,000, of a maturing issue demanded cash rather than a replacement issue in exchange, even though the replacement issue carried exceptionally high interest rates. This drained the Treasury's cash balance.

In the terms stated, this is not a problem at all. The Treasury can always borrow all the cash it needs. A few weeks after the heavy—and pretty much expected—attrition mentioned above, the Treasury easily raised $1,500,000,000 in new cash. Bids for the issue were more than double the amount the Treasury wanted to raise.

The problem of paying ever-higher interest rates, with a resulting higher budget expenditure for interest on the national debt.

PRICE ACCEPTED

This is a fact but, as Mr. Humphrey and his Under Secretary, Randolph Burgess, saw it, is not properly described as a serious problem. They have made it plain all along that they are perfectly willing to pay the price, in the form of higher interest rates, for a policy of credit restraint that they deem essential to keep inflationary pressure from running away.

Because only about one-fourth of the debt matures each year and must be refinanced, the effect of higher interest rates on the budget has not been as dramatic as might be expected. Nonetheless, over President Eisenhower's entire term, the rise in rates has added almost $500 million to the annual cost of carrying the debt, or about 8 percent. The rest of the increase has come about because the size of the debt has grown a little.

A setback in the Treasury's effort to stretch out the debt into longer-term issues, with a consequent increase in the frequency of trips to the money market, again due to tight-money conditions.

This is both a fact and a problem, but it is not considered a matter of great seriousness. In brief, Mr. Humphrey and Mr. Burgess do not have quite the same enthusiasm today for stretching the debt as they had when they took office. They feel that they had overlooked somewhat the great need of the Nation's money mechanism for an adequate supply of short-term Treasury securities.

They are not happy, however, about increasing the frequency of their financing operations, because these operations tend to upset somewhat the efforts of the Federal Reserve to keep an even degree of tension in the money market.

The problem of where the money is being borrowed—from the banking system or from nonbank investors.

Here, at last, comes the true problem as they see it. Other things being equal, Treasury borrowing from banks tends to be inflationary because it fosters "creation" of new money. And the Treasury has been forced to turn to the banks more than it would have liked.

The reason is the impact of the present level of interest rates on some almost forgotten securities, called F and G bonds, that were sold during World War II.

At the present level of interest rates on other types of investment, holders of these bonds have been cashing them in to invest their money at a better yield. The resulting cash drain on the Treasury, augmenting the aforementioned attrition and several other factors, has forced the Treasury to sell short-term securities to the banks to raise cash.

The situation has not been as bad as it might have been. For various technical reasons, the Nation's money supply has not increased by as much as the Treasury's operations might have indicated. None the less, this Treasury operation has more or less forced the Federal Reserve to pump up the lending capacity of the banks somewhat more than it would have liked.

Thus to some extent, the recent Treasury debt management operations have worked at cross purposes with the Federal Reserve's effort to curb an inflation that is now the greatest single economic preoccupation of the Government.

Secretary of the Treasury George M. Humphrey

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial which recently appeared in the Mount Vernon (Ohio) News, relative to our fellow Ohioan, our able Secretary of the Treasury George Humphrey.

This editorial, expresses the views of the people it is my honor to represent. At least, I am sure, it represents the views of those who know George Humphrey or are familiar with his record.

We, in Ohio, are very proud of George Humphrey, Mrs. Humphrey, and the entire family. They have done much to bring praise and glory to our State. Their record in public life, and their unselfishness, will go down in the history of our Nation as one which exemplifies the spirit of willingness to help their fellow man and further the principles that have made our country great:

LEAVES FINE RECORD

President Eisenhower is not only losing an able Secretary of the Treasury in the resignation of George M. Humphrey, of Ohio—the effective date of which has not been determined.

He is also losing a valued adviser and a close personal friend.

That Humphrey was an able Secretary of the Treasury there can be no question. Some have said he is one of the best the country ever had.

In addition to his Treasury duties, Humphrey has been one of the most influential advisers to the President, and the two, with their wives, have been on intimate social relations.

Humphrey was a member of the original Eisenhower Cabinet.

He gave up an income of some $300,000 a year to take the Government position at $22,500 a year as he considered Mr. Eisenhower's policies a call to public service.

He resigned from offices in the M. A. Hanna Co., Pittsburgh Consolidated Coal Co., National Steel Corp., Industrial Rayon Corp., and Iron Ore of Canada and as director of a number of other corporations to do what he could to help steer the Eisenhower policies to a successful conclusion.

Thus every day he served in the Cabinet he did so at tremendous personal financial disadvantage. There was never any indication, however, that he regretted he had cut loose from his great industrial holdings and had turned his talents to a career in Government.

Humphrey can be replaced as Secretary of the Treasury—no man is indispensable; if that were true the world would have gone to pot long ago.

But he set such high standards of conduct in public office that his shoes will be hard to fill.

In going out, however, he has the satisfaction of knowing he is leaving such a fine record behind him; one which others in Government might well emulate to the benefit of themselves, the Government and the people.

Address by Hon. James A. Farley, 11th Annual Varsity-SJ Dinner, Long Island Division of St. John's University, Jamaica, N. Y., May 29, 1957

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I include the following address given by the Honorable James A. Farley at the 11th annual varsity-SJ dinner of St. John's University on May 29, 1957.

I agree with Mr. Farley that greater active participation in sports by the youth of our country would not only be beneficial to health, but would help in the development of qualities which make for good citizenship:

I am honored to have a part in the 11th annual varsity-SJ dinner, honoring the athletes who have represented St. John's in baseball, basketball, bowling, cross-country, golf, rifle, tennis and track. As I look about me I am moved to wonder. Most of what I see here was accomplished in my lifetime. When St. John's University was founded in 1870 its total assets consisted of a small farmhouse, 40 students and a faculty of 5 Vincentian fathers, whose assets were courage and vision rather than capital. But courage and vision paid off in the field of learning just as they have on the field of play. Today St. John's enrollment is more than 8,000 men and women. The university is an integral part of a community which counts upon the wisdom and genius of its graduates to further its business, industry and culture.

Tonight we are honoring more than twice the total of the 40 students of 1870 as knights of good sportsmanship. Each of these men played his game for all there was in it. Each learned to obey the rules of his game. Each was dedicated to loyalty—loyalty to his school, loyalty to his team and loyalty to his coaches. Each learned the joy of victory—the satisfaction of a task well done. Finally, each learned the hardest lesson of all—to be a good loser—to accept defeat without excuses and without criticism, but with the high resolve to do better the next time.

While this night belongs primarily to each of you who contested so proudly and so well

under the red and white of your alma mater, it is not your accomplishment alone. While no one would detract from the solemn pride that is yours for having striven so valiantly on various fields yet, I am sure, each of you recognizes the debt you owe to your good parents and to your coaches and teachers, all of whom have joined in preparing you for the best use of your lives so as to attain and to help others to attain the sublime end, under God, for which man was created.

As I stand before you I am moved to humility. It was not my good fortune to attend college. Life has brought me many honors, including some 18 honorary degrees. I would gladly exchange them all for one such letter as you men are receiving tonight and for one degree such as you are all earning by your pleasant and profitable attendance in the many classrooms of this now extensive institution.

While I was not privileged to strive for any alma mater, I feel I can understand your joys and woes because sports were and still are one of my great loves. Although time has long since relegated me to the spectator class, I have always fancied myself as something of a ballplayer. I started at an age when my fingers were scarcely able to grasp the ball. I enjoyed the usual succession of neighborhood and schoolboy nines. Later, when I was grown, I made the team—the Alphas, which represented Grassy Point, N. Y. You will not find the team or its first baseman in the record books, although one of my proudest possessions is a fading newspaper, which carries the banner sports headline, "Farley's double clears the bases."

In those days I considered myself quite a performer. Looking back now, I must confess, I am not so sure. I was paid the astronomical sum of $5 a game in days when $2 or $3 was the customary rate. Now, I am not so sure I was worth it. I was tall and could do a fair job of covering the bag. I was a fair hitter and, because of my size, could give the ball a ride when I connected. But I wasn't very fast and I hated to slide. Because of my height, the fans nicknamed me "Stretch"—that was long before people generally learned my name is Jim.

Ah, well, I am not here to sigh over doubtful glories of my playing days. He also serves who stands and cheers. Unhappily, we have too many persons in the stands and too few on the field of play. Rooters are not confined largely to persons, like myself, limited to such participation by the inexorable course of time, but by those who elect to so limit their participation through lacking confidence in their own worth or, even worse, be refusing to try. To judge by the amount of space devoted to sports in our newspapers, one would imagine we were the greatest Nation of athletes in the world. One would think that we were the greatest Nation of participants in outdoor sports in the world. The cold fact is that most of us get our exercise by reading the sport pages and that comparatively few of us turn out even to stand and cheer, let alone play.

Some of us are not very good sports when it comes to cheering. A fan who couldn't catch an easy pop fly roars his abuse at a fielder who muffs a vicious grounder. A spectator, who couldn't punch his way out of a wet paper bag, will scream "yellow" at a game fighter trying his best to drive weary muscles against a superior opponent. This unsportsmanlike conduct is unfortunately not confined to those who follow professional athletes. It is found on our college campuses. Many students will not support a team that is not winning, when perhaps the one thing that the team needs is the confidence of the school. Many students will knock a coach who is doing his best to build a team into shape during a short season.

It is most unhappy that so many in our colleges confine their participation in sports to buying tickets and to rooting. God has given most of our youth bodies sufficiently strong or capable of being developed to the strength demanded by competition. What is needed is the development of perseverance which will train bodies to their best efforts. Minds must be trained in the spirit of fair play, which is the moral essential of a truly great athlete. If the Nation strives to develop young bodies and train young minds in perseverance there is little reason why most of our young should not be athletes.

They cannot all be great athletes, but it is important that they learn to play the game not only for themselves but for their country. Millions of dollars are spent by our colleges each year on college athletics, yet only a small fraction of all college students take any active part in athetics. We all remember, I am sure, the musing of Thomas Gray, the great poet, on the fact that the graves in the quiet country churchyard might hide some mute inglorious Milton or some Cromwell guiltless of his country's blood. Who can tell how many Walter Johnsons, Jim Thorpes, or Red Granges have by their own election hid the glories that might have been theirs and their colleges by not choosing or by not daring to try?

In these days of international trial, play is not only one of man's greatest privileges, but one of his most important rights. It is part of man's right to pursue happiness. In all earnestness I call for infusion in all of our schools of the spirit of play in all our students. I call for taking students out of the bleachers and putting them on the field of play. This will not only enable them better to play the game of life but it may enable us better to survive as a nation.

I need not remind you that today we are engaged in a great struggle between the forces of freedom and the forces of totalitarianism. In that struggle between good and evil everything has been mobilized, even sport. Play has become an ideological weapon as well as a conditioner. You have all doubtless been shocked, as I have been, by the statistics on the proportion of American youths rejected as unfit for military service. I am confident that if these youths had elected to contest on the playing fields the proportion of the rejected would be much lower. There is still time to improve our proportion of physically fit young men, if we can but persuade them to play the game and not merely look on. It is not essential that we become a nation of professional athletes but vital that we become a nation of as nearly physically fit men and women as play can make us.

Sports became a weapon in the fateful contest between East and West in the last Olympics. The games are over and we lost. It is easy enough to say we won most of the important events and lost because the unofficial point system took into account events in which we did not offer competition. In Soviet Russia all talents in all sports were recruited and trained most intensively. There was totalitarian mobilization of muscles so that the Soviets might proclaim their way of life superior in play as well as in politics. Against this systematic mobilization, we offered our traditional heritage of individual enterprise. Where we contested we were, for the most part, superior, but we did not offer competition in fields which might have helped empty our bleachers and bring to light new American energies.

There is no need for explanation, excuses, or criticism. The 1956 olympics are over and done with. The 1960 olympics are on their way. At the next olympics nothing on earth should stop us, if we can get all our youth into the games. All we need do is to recognize the importance of getting into the game. Once in, we can handle ourselves with dignity and skill. There is no doubt now of the good in athletics. Certainly then, every student should be accorded every opportunity to get all the good he can out of athletics since they are so intertwined with the survival of our way of life.

In our contests on the field of play we have learned never to underestimate the strength of a foe. Today we are locked in a deadly struggle with an enemy who does not play the game by any rules except to win by fair means or foul. This enemy has extended its territory and influence by gorging on free peoples and free territory. This does not mean that we should abandon traditions of fair play in which we have been steeped for generations. We must not and we will not stoop to deceit and trickery, no matter how great the pressures put upon us by a godless enemy. As long as we have the saving graces of morality and dedication to God we will play the game by the rules of decency and so long as we cleave to the rigid letter of the rules we can be confident we will win. Those who debase the rules debase themselves and put off victory.

In our contest with a terrible enemy our strongest supports are liberty and freedom. In a darkened world it is more difficult to keep alive liberty than it was in the days of our Founding Fathers. The strains of our time are being exerted upon liberty and freedom. We need not despair of keeping them so long as both are rooted in faith, which you are being taught here and in fair play which you have learned here. So long as we stand rooted in faith, so long as we fight the good fight fairly, so long shall we endure free. And by faith and fair play we will triumph in the conflict with darkness to bring freedom and liberty and justice to all nations and to all men.

Address by Hon. Leverett Saltonstall, of Massachusetts, Before Graduating Marine Lieutenants of the Basic School at Quantico, Va.

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. WILSON of California. Mr. Speaker, on May 11, the distinguished senior Senator from Massachusetts, LEVERETT SALTONSTALL, addressed the graduating Marine lieutenants of the basic school at Quantico, Va. Because he is the ranking minority member of the Armed Services Committee of the Senate, his opinions regarding our Defense Establishment are particularly worthy of note. Unanimous consent is requested to insert at this point in the RECORD excerpts from his speech of May 11:

In our new role of world leadership among the free nations, the United States cannot follow the easy road of expediency but must always follow the sometimes hard road of keeping to our word.

We helped to establish the United Nations and we are firmly and irrevocably committed to abide by its charter. Sometimes we find ourselves confronted with the bitter choice of keeping our promises under that charter and taking actions which appear in the short run to be against our friends.

Such was the case in Hungary and again in Egypt. Here the leaders of our country had to make trying decisions but in each case the decision was that we should keep our word. Future generations will determine

whether the courses we followed were right or wrong but it is my firm conviction that it is never wrong to stand by solmn promises. This applies to a nation as well as an individual. We want to live up to our word as we have in the past, and this is even more important to us now as leaders of the free nations of the world so that we can inspire the confidence of others in us.

We must also make other important decisions. We must remain strong and powerful in our armed services and in our economy. We must make the determinations as to just what our force levels should be and how much of our national productivity should be expended for our national defense. We must continue to develop new weapons for defense and retaliation and we must maintain and most modern military doctrines. Overall, we must be alert and imaginative as well as realistic and practical.

Marine Corps officers must be prepared to be first-line diplomats as well as frontline soldiers.

They must demonstrate to the world the high integrity and good character of American citizens. The time has passed when our military officers can consider their qualifications complete when they attain technical and military proficiency. Today our officers all over the world represent symbols of the American way of life. On you rests the great responsibility of demonstrating to people in foreign lands wherever you may be the qualities of Americanism and the traditions of our heritage of which we are so justly proud.

You have reason to be proud of your corps and of the school from which you have today graduated. These schools at Quantico have had the distinction in modern military history of being among the outstanding doctrinal leaders in new military concepts. After the disastrous defeat of the British amphibious landing force at Gallipoli in the First World War, military strategists discarded the amphibious attack. The Marine Corps nonetheless persisted in its beliefs in a balanced fleet and through the bleak thirties developed the successful amphibious doctrine which was ultimately responsible for our victory in the Pacific during World War II.

Your own commander after the Second World War inspired the development of another new concept—the vertical envelopment, an amphibious assault tailored to an atomic era. Gen. Merrill B. Twining has been imaginative and vigorous in his development of new military concepts for our Navy and Marine Corps. He has indeed recognized the unique function of the marines when in a Navy Day address he said, "The United States Fleet, in the form it exists today, is just such a force (versatile, highly mobile force in being), and is tailored to the exact requirements. Its flexibility enables it to meet nearly any situation. An occupation, a brush fire war, a nonatomic war in a Communist controlled satellite area, or a major assault on the enemy's homeland—all these require varying degrees of military force, nicely graduated to fill the gap between scattering leaflets and dropping hydrogen bombs."

The Marine Corps, unique among military organizations as an integrated, coordinated military team, is an important part of our Nation's balanced military defense concept.

The Marine Corps has throughout its history and does today represent a mobile force in readiness. We hope that we will not have to use our forces. We do not start wars. But if they start one, we have mobile fleet marine forces which are always ready.

The United States Marine Corps has traditionally stood as a symbol to the world of American determination to resist aggression and tyranny, whether by Barbary pirates on the shores of Tripoli or Communists in Korea.

You can be proud of this tradition. You can be proud to be marines.

New Playlands in the South

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. SIKES. Mr. Speaker, I am glad to have printed in the CONGRESSIONAL RECORD the excellent article by Mr. C. E. Wright, which appeared in a recent issue of the New York Times under the heading "New Playlands in the South," which refers to the Jim Woodruff Dam and surrounding areas located at the confluence of the Chattahoochee and Flint Rivers.

Mr. Wright's article follows:

NEW PLAYLANDS IN THE SOUTH—TRI-STATE SPORTS AREAS WILL BE DEVELOPED NEAR DAM SITE

(By C. E. Wright)

CHATTAHOOCHEE, FLA.—The $64 million Jim Woodruff Dam here at the confluence of the Chattahoochee and Flint Rivers, one of the largest, south of Tennessee, is something of a sightseer's objective. In coming years it is likely to become a major tourist attraction in these parts, for large recreational areas adjoining the dam and its big reservoir are to be opened to the public.

The new mile-long structure is right on the Georgia-Florida boundary line, northwest of Tallahassee and about 22 miles from the southwest tip of Alabama. Recreational areas will be established in all three States. The reservoir, which extends into Georgia for about 24 miles up the Chattahoochee and 29 miles up the Flint River, provides a new water area of 37,000 acres and a shoreline of 243 miles.

Plans have been made for coordinated and comprehensive development of the damsite area to include access roads, parking spaces and boat-launching ramps, while State, county, and municipal agencies are developing park areas for such recreational activities as fishing, boating, and bathing.

THE RIVERS

The Chattahoochee rises in the foothills of the Appalachian Mountains in northwest Georgia, passes within 12 miles of Atlanta and for a part of its length forms the border between Georgia and Alabama. The Flint River also rises in Georgia not far from Atlanta.

The Apalachicola River, formed at the confluence of the Chattahoochee and Flint Rivers, is a picturesque stream running south from here to the Gulf of Mexico near the little city of Apalachicola, where most of the Florida oysters are harvested.

Other dams scheduled for completion by 1962 will provide navigation of the Chattahoochee as far north as Columbus, Ga. Eventually, perhaps, a channel will extend almost to the limits of Atlanta, making that city an inland port with water egress to the Gulf of Mexico via the Chattahoochee and the Apalachicola Rivers. At the moment, however, this is just a dream for the future.

For the present, boating enthusiasts can use portions of the Chattahoochee and Flint Rivers as well as the reservoir and can navigate the Apalachicola River to the gulf. Passage around the Jim Woodruff Dam is provided by a 450-foot long, 82-foot-wide navigation lock with a 33-foot lift.

The Army's Corps of Engineers, which has been at work on the dam for 10 years, is providing the major portion of the recreational developments in the damsite area. State and municipal parks and privately developed areas will provide a large number of recreational spots. The Army engineers have already created 16 boat-landing and launching sites. Two Florida State parks have been designated in Jackson County, on the west side of the reservoir, while Georgia has set aside an area northeast of Chattahoochee on Spring Creek near the Decatur-Seminole County line.

MUNICIPAL PARK

Chattahoochee itself is developing a municipal park on the east shore of the reservoir near the dam. This will include a yacht basin, parking area, picnic area, a sandy beach, and bathing facilities. Sneads, a town in Jackson County, Fla., is also planning a municipal park. In Georgia, a city park and boat landing have been developed at Bainbridge, while Seminole County in that State has plans for a recreation area at Fish Pond Drain, about 20 miles south of Donalsonville, Ga. Decatur County, Ga., has designated two areas for public use.

Altogether, the areas now licensed or planned for public use comprise about 3,000 acres, of which 1,250 are being developed by State agencies, 1,300 by county agencies, and 450 by municipalities. Combined public access and operational use is proposed for 20 strategically situated areas along the reservoir shoreline. These vary in size from 20 to 50 acres.

Eight or ten concession sites are planned at suitable points around the reservoir to provide fishing tackle, bait, rental boats, rental motors, gasoline, light refreshments, and other recreational services. Eventually there will be overnight accommodations and restaurant facilities. Three concession sites were recently leased to commercial concerns for development as boat docks.

When the project was started, the Federal Government acquired 66,000 acres of land for the dam and reservoir, but Congress required that land acquisition be later reviewed so that private owners could reacquire some of the land they gave up. As a result, a number of sites are being returned to private owners. Some of this property will undoubtedly be developed as sites for motels, restaurants and private residences.

For navigation purposes on the reservoir and rivers, main navigation channels have been marked by posts, to be replaced later by permanent buoys. A station for the United States Coast Guard, which will supervise navigation, is being set up at the east end of the dam. As there have already been a number of drownings at the dam site, fishermen and boat operators will be cautioned against the danger of sudden squalls, which can stir up the shallow reservoir into exceptionally rough water, and also to guard against submerged hazards such as logs and stumps and to make certain their boats are in good condition.

PIVOTAL POINT

Chattahoochee, the pivotal point of this new recreational area, is a city of less than 10,000 population situated on U. S. 90, 42 miles northwest of Tallahassee. Gadsden County of which Chattahoochee is one of the principal cities, is almost entirely surrounded by water. The Apalachicola River runs along its west border, the Ochlockonee River forms the east boundary and Lake Talquin lies along the south border.

This area of Florida is much more typical of the Old South than the Florida with which most tourists are familiar. It is more largely agricultural than industrial, and it is not a tourist center. But the completion of the Jim Woodruff dam and reservoir seems likely to change that. Tourists with boating and fishing inclinations are expected to flock to this area within the coming months. Boatmen will find long navigable stretches, including about 100 miles of the Apalachicola River with a 9-foot channel, in addition to the reservoir and sections of the Chattahoochee and Flint Rivers, to explore.

Citation to Former President Herbert Hoover

EXTENSION OF REMARKS
OF
HON. S. WALTER STAUFFER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. STAUFFER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by the President in conjunction with his presentation of a citation to former President Herbert Hoover for distinguished civilian service to the citizens of the United States at the luncheon given by the Citizens Committee for the Hoover Report at the Shoreham Hotel, Washington, D. C., February 4, 1957:

THE WHITE HOUSE.

President Hoover, Mr. Chairman, and my friends, you see, there was some excuse for my question addressed to the chairman because I had been assigned a very specific and succinct part of this program. But I did feel I wanted to express a few personal sentiments with which I hope most of you can agree.

First, my purpose was to pay a great tribute—as great a tribute as I am capable of delivering—to the youthfulness of our guest of honor, Mr. Hoover.

Someone said that any man is young who retains his optimism. And optimism, I believe, is a capacity for looking toward the future with hope and enthusiasm.

Now our guest of honor has shown his optimism twice. He has headed great commissions determined to deliver to us better service in the Government that we must maintain, and at less cost to ourselves. He remains optimistic, or he would not have devoted so many years of his life to this work.

And in his case, I think, there would be a great deal of excuse—at least at times I feel so—for an opposite conclusion.

He spent many years in public service, and I know something of some of the frustrations and difficulties he had during at least 4 years of that service.

He knows what it means to attempt to install new methods, new procedures, in a great hierarchy, in a great bureaucracy.

Now, I would not have any of you think that your public servants in the civil service and in other areas are not good people. Indeed they are. Some of them are extraordinarily intelligent and capable. But they are a very large group that has been accustomed to operate according to certain procedures—certain methods. We do it ourselves, in our daily lives. We become creatures of habit.

I won't venture to remark about the ladies. But I would bet any man here puts the same foot into his trousers first every morning.

In all our daily lives you can find that we fall into habits. Take the one of eating. How many people are in this room, I wonder, whose doctors have not asked them to keep their weight down, but who go on indulging themselves?

The same way in government. We become used to these procedures and practices, and they involve these millions of people. I declare, if you could provide for the Government, through the Bureau of the Budget, a new accounting system, with the utmost expedition and efficiency, it would certainly take you many months before you could reach the last echelon of government. And why not? They will plead: Why, we have blank forms printed for the next 3 years. We will have to retrain our clerks. They have every good reason in the world for not doing this hastily.

Our guest of honor has never lost his enthusiasm for better government through all this kind of thing.

I merely wanted to point out, this is an unusual kind of enthusiasm and leadership, from which all of us benefit.

And may I say that every one of the recommendations submitted by the people—by the leaders of the Hoover Commission, have been the subject of earnest study. They have been monitored within the Government by one of our noted businessmen, Mr. Meyer Kestnbaum, in order to get every one of them implemented as rapidly as possible. I am very sorry to admit that that speed has not been sufficient and all we could ask. But it is progress, and it will continue. That I promise this body, which has worked so hard to bring it about.

And now after that, the real purpose of my coming to this platform to speak: I have been privileged to prepare—to get ready for Mr. Hoover a short citation which I shall now read:

CITATION TO FORMER PRESIDENT HERBERT HOOVER FROM PRESIDENT DWIGHT D. EISENHOWER

To Herbert Hoover, statesman and citizen, honored in every field of human endeavor: Science, business, government, education, art, charity, I address the Nation's recognition of a crowning achievement.

To a searching examination of the executive branch of the Government, you have freely applied unparalleled knowledge. Inspired by your concern for the whole truth, disciplined by your unremitting insistence on accuracy, united by your respect for majority opinion, your Commissions have wrought incalculable good.

Through your efforts, ours will be a stronger country. In so adding strength to the American Republic, you have added strength to the free world.

We are grateful.

DWIGHT D. EISENHOWER.

FEBRUARY 4, 1957.

Mr. HOOVER. Mr. President, fellow members of this Citizens Committee, I have only to express my deep emotion and appreciation for the extraordinary honor which the President has just conferred upon me. And I also want to express to him the appreciation which you have for the constant support that he has given to the work of this body of citizens.

And I have the idea that when he has finished this term, he will certainly merit even a greater tribute than that which has come to me.

For he will have, I hope, a successor of an appreciation of a great national man.

Thank you.

The All-American Family for Florida

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. MATTHEWS. Mr. Speaker, in the Eighth Congressional District of Florida there is a family of whom I am very proud. I refer to Mr. and Mrs. Stacey Quincey, of Route 1, Trenton, Fla., and their 3 children, James, 21; Horace, 16; and Kathy, 5. I am certainly not alone in my high opinion of this outstanding family, because the Quinceys have recently been named All-American Florida Family, and then tied for third place in the nationwide All-American Family Search. Stacey Quincey is the kind of farmer who is the backbone of my congressional district. He raises corn, peanuts, and watermelons. He and Mrs. Quincey are hard-working, Christian people who typify the finest in American citizenship, and they have raised their children in the same traditions and ideals which they possess.

The oldest child, James, recently left the University of Florida for one semester in order to discharge his duties as a national vice president of the Future Farmers of America. James has achieved national recognition through his FFA work, and is one of the finest, most personable young men that I know. His younger brother, Horace, is coming along in the same path and is already a leader at Trenton High School. The little girl, Kathy, like her mother, is beginning to contribute to the family those priceless feminine qualities and touches which make American family life so meaningful and gracious. I have been well acquainted with this wonderful family for a number of years, and I am sure my pride and happiness almost equaled theirs when the good tidings of their selection became known. As we all know, the family is the foundation unit of our American democracy and is the place where our boys and girls receive the love, training, and encouragement which enables them to grow and progress into fine American citizens. The Quincey family is representative of all the attractive families who can be found on the farms and in the small towns of my district and throughout rural America. They were chosen by a national selection board composed of editors of the Book of Knowledge and members of the national staff of the Boys' Clubs of America, conductors of the All-American Family Search, together with members of the national advisory committee of civic and service leaders and educators from each State. I feel humbly grateful to have people like this living in my district whom I can represent in the National Government. It is with a great deal of pride and pleasure that I can call this family to your attention.

National Park Service Fails To Develop Mount Rainier

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an editorial appearing in the May 25 issue of the Tacoma News Tribune. It expresses the sentiment of most of the people in the State of Washington.

The editorial follows:

WHO CAN BLAME HIM?

Who can blame our touring Charles B. Welch for being "wroth" with the National Parks Service for its failure to develop Mount Rainier?

How could any red-blooded Washingtonian ride in a funicular rail car up the slope of a mountain half the size of ours and not boil, even at that high altitude, at the way our own Government has disregarded the wishes of our citizens?

As Mr. Welch wrote from Lucerne, "the stupid American bureaucracy that controls our national parks ought to study the Swiss example and profit thereby."

Maybe that particular bureaucracy will be forced to profit from comparisons and advice. The Interior Subcommittee of the Senate Appropriations Committee, in passing appropriations for the Interior Department, directed the Department to forget about moving Mount Rainier Park headquarters from Longmire to Barnes Flat, and to plan something feasible for overnight accommodations high on the mountain.

You know, anything the Swiss can do we can do better. But we'd better start proving it pretty soon. We could build a hotel high on Mount Rainier about which the Swiss would be glad to write home. It is time, as the Washington State Hotel Association also pointed out just the other day, that the National Parks Service reconsiders its policy for Mount Rainier.

Statement of Hon. John E. Fogarty, Member of Congress, Second District of Rhode Island, Before the Committee on Interstate and Foreign Commerce of the United States House of Representatives, on Proposed Amendments to the Natural Gas Act, June 4, 1957

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Committee on Interstate and Foreign Commerce of the House of Representatives on proposed amendments to the Natural Gas Act, June 4, 1957:

Mr. Chairman, I appreciate the opportunity of testifying on H. R. 6790 and related bills which have received the earnest consideration of your committee for the past several weeks. While I do not regard myself as an expert on the matter of natural gas, I have followed these hearings with a great deal of interest and wish to commend you and the other members of the committee for the attention which you have given the views of both proponents and opponents of the basic legislation.

As Congressman from the Second District of Rhode Island, I represent thousands of consumers of natural gas who are totally dependent on a source of supply located in areas of the country far removed from them. These people have been appropriately termed "captive consumers" of natural gas. They have no freedom of choice between competitors in this all-important commodity, hence they have no protection against unreasonable price increases in the cost of the basic commodity. This lack of a free market in an item so essential to their everyday needs is a compelling reason for me to view with some alarm the consistent efforts of the profitable and highly organized oil-gas industry to free itself from the regulation intended by the Natural Gas Act of 1938. I say the oil-gas industry for the reason that natural gas as a byproduct of oil exploration is principally controlled by the same small group of powerful oil companies which recently rocked the consuming public from coast ot coast with their post-Suez petroleum-product increases. The basic purpose of Federal regulation under the Natural Gas Act is and should be the advancement of the public interest by balancing the self-interest of the owners of producing gas wells with the interest of the more than 21 million American families who have come to depend upon gas for family and household needs. Since the Phillips decision in 1954, however, the Federal Power Commission has scarcely been given the opportunity to carry out this public-interest purpose, and yet this proposed legislation would make that task impossible for the simple reason that it is weighted in favor of the producers.

I am sure you are surfeited with statistics after these many weeks of hearings and I do not propose to burden the record further on that score. Moreover you have had presented to you a careful section-by-section analysis of this bill by both proponents and opponents. For my part, I propose to state my objections in a nontechnical, simple fashion. After a careful examination of H. R. 6790, I am compelled to the conclusion that there has been no demonstrated need for this legislation. I have been unable to learn of one single natural gas producer who has suffered from the appropriate regulation which the Federal Power Commission is authorized to administer under the present provisions of the Natural Gas Act. Financial statistics available on the pages of any of our newspapers have told us during recent months that the oil-gas industry is enjoying its period of highest prosperity. For them the recent 1-cent per gallon price increase in fuel oil and gasoline added to these rising profits and based on a 9-million-barrel-per-day consumption of petroleum products in the United States, it meant more than $1 billion a year out of the pockets of American consumers. Rising costs of natural gas would take additional tolls from the consuming public and add them to the rich profits already enjoyed by an industry which we favor with special tax treatment designed to offset the special risks which are inherent in their operations.

In his veto message of February 1956 returning H. R. 6645, President Eisenhower pointed out the need for any new legislation to include specific language protecting consumers "in their right to fair prices." Mr. Chairman, I am unable to find any such language contained in H. R. 6790. I believe with the President that consumers do have a "right to fair prices" of natural gas and I further believe that the only way to protect that right is through Federal regulation by the Federal Power Commission over prices charged for natural gas delivered to interstate pipeline companies. This bill, in my opinion, would only impede and hamper that needed regulation.

I have been much impressed with the provisions of H. R. 6813, a bill sponsored by Mr. MACDONALD, which in effect steers the middle course on this general subject of regulation of sales of natural gas in interstate commerce. As I understand it, enactment of this bill would remove from Federal regulation approximately 96 percent of the producers who make sales to interstate pipeline companies. However, it would leave subject to regulation those large producers who sell in excess of 90 percent of all the natural gas which is the subject of sale in interstate commerce. After hearing so much about the plight of the small independent gas producer, but never really seeing one who came before any of our committees to tell his story, I would imagine that this proposal would be welcomed by the vast majority of the members of the oil-gas industry. I am reliably advised, however, that to date there has been little enthusiasm shown by the industry itself in support of the Macdonald bill. If this is correct, it only confirms my belief that there has been no demonstrated need for any legislation whatever. But if we must have legislation designed to relieve natural gas producers from threatened Federal regulation, I intend to give serious consideration to full support of this enlightened proposal.

In conclusion, therefore, I respectfully submit that H. R. 6790 is not designed to serve the public interest in that it contains no assurance that consumers of natural gas will be protected in their right to fair prices, but on the other hand, will weight the scales heavily in favor of a monopoly industry which needs to be regulated in this phase of its activity.

Tax Writeoff Favoritism and Special Privileges to Private Utilities Condemned

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. EVINS. Mr. Speaker, under unanimous consent, I include the following article, commenting upon the Senate report of Senator HARRY F. BYRD, on rapid tax writeoff certificates, in the Appendix of the RECORD:

TAX WRITEOFF FAVORITISM

Just about everybody agreed that political favoritism had gone too far when the Eisenhower administration granted a fast tax writeoff privilege to the Idaho Power Co.

The original purpose of the wartime legislation, allowing a rapid writeoff tax depreciation, was to expedite production essential to national defense.

In the opinion of Senator HARRY F. BYRD, of Virginia, under present peacetime conditions, such special privilege can be justified only in exceptional and rare cases. Otherwise, as Senator BYRD points out, "There is danger of creating unfair competition, overexpansion and damage to small business."

Senator BYRD is leading the fight for repeal of the 6-year-old statute since the Eisenhower administration has so flagrantly permitted widespread abuses of the law.

Even Treasury Secretary Humphrey, shocked at the growing loss to the Treasury, points out that there is no logical end to such a program.

To the Washington Post, quite aside from the substantial loss to the United States Treasury, "the evil of this program is that it cannot possibly be applied equitably and invites an unending series of pressures from various industries for tickets on the gravy train."

Most recent to join that gravy train was the Idaho Power Co., which not only substantiates the need for repeal of the legislation, but makes a hollow mockery of the Eisenhower partnership policy concerning the Nation's natural resources.

Over and over again, the Eisenhower administration has emphasized that its partnership policy means that the private com-

pany would foot the bill, without cost to the taxpayers. In the caseo f Hells Canyon, the Eisenhower-influenced Federal Power Commission licensed the Idaho Power Co. to build three inferior dams instead of the one high dam at Hells Canyon, at a substantial waste of power benefits. The FPC insisted that the private dams would be built without expense to the American people and the Idaho Power Co. asserted that it would carry out the project without 1 cent of cost to the taxpayers of the United States..

But the 5-year tax exemption granted to the Idaho Power Co. adds up to at least $30 million for the private utility at the expense of the American people.

Americans Should Keep Their Eyes on the Main Struggle Which Is Not Between the Executive and the Congress, but Between a Free World and Communist Enslavement or Destruction

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

RED MENACE OVERSHADOWS IKE-CONGRESS FRACAS

(By Edgar Ansel Mowrer)

Most Americans profess love of peace but like a good fight, particularly when it is in an area which we understand.

This accounts, I think, for the current dramatization by newsmen of the perennial struggle between President and Congress and for the public's intense interest—particularly when that struggle is enlivened by such incidents as Senator MORSE's moral comparison of Dwight D. Eisenhower to Dave Beck.

So let us hope that—like the world series which it resembles—the President-Congress battle will be with us for centuries.

It will, I think, provided we do not allow it to take our attention off today's life-and-death struggle with Soviet Russia.

It is this struggle which is keeping taxes high. It is this struggle which is keeping under arms a couple of million Americans most of whom would gladly do something else.

It is this struggle which has brought the United States into a position where we can be 50 percent destroyed by a Soviet sneak attack at any time and, if we survive, have the satisfaction of knowing—if it is a satisfaction—that we have destroyed 75 percent of the U. S. S. R. With such stakes this struggle might seem far more fascinating than the intergovernmental shindig. But that is not the case.

PREFER MOVIES

Many more Americans worry about what Senator MORSE called the President than about what Comrade Khrushchev called Secretary of State Dulles, even though the first has no particular importance and the second could betoken anything from peace to war.

The chief reason, I think, is we are used to, and understand, the internal dogfight. We do not entirely understand nor have we sincerely accepted the worldwide struggle of freedom versus communism. Because we do not entirely understand or accept, except temporarily if we must, we feel we might as well forget Khrushchev and go to the movies.

This, however, is exactly what our President cannot do. If we are to escape catastrophe, he must do the escaping. Therefore, whether we citizens like it or not, he insists upon considerable cash for foreign military and economic aid.

And he has come to believe peace is essential and some sort of disarmament agreement with the U. S. S. R. may be possible. Others may argue that disarmament on the present basis is undesirable—it would not only leave the Russians in control of all the peoples and territories they have criminally occupied since 1939 but lead to further gains on their part, since they predominate in conventional weapons able to prevail in local snatches.

President Eisenhower has reached another opinion. He definitely wants disarmament, and is ready to accept the risks. As he told his press conference:

"It seems to me that the more any intelligent man thinks about the possibilities of war today, the more he should understand you have got to work on this business of disarmament. * * * I think our first concern should be making certain that we are not ourselves being recalcitrant, we are not being picayunish about the thing. We ought to have an open mind and make it possible for others, if they are reasonable, logical men, to meet us halfway so we can make these disarmament agreements."

POPULAR LINE

Politically, this is a popular line. It will also please most of our foreign allies. For who wants to bear the burden of armaments that can safely be reduced by agreement?

On the other hand, suppose Admiral Radford is right and that all agreements, self-enforcing or not, with totally perfidious Communists are dangerous? The alternative is to set one's political sights high and make no concessions or no agreements with the Kremlin until it agrees to get out of East Europe, if it takes 40 years.

But the President—as periodically reported in these columns ever since the Geneva Summit Conference of 1955—has decided that the risks of carefully regulated disarmament are less than those of trying to win the cold war. He is in control of the ship and has chosen his course. Not even Congress can make him change it unless it refuses to ratify some sort of disarmament agreement, which seems unlikely.

The role of the good citizen is therefore, it seems to me, to support the President's efforts even if disagreeing with them, and hope for the best, as long as the Russians let us.

Greetings From the President

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, as a high point in the course of the 44th annual convention of the National Rivers and Harbors Congress, the President of the United States sent a short letter of greetings to the convention. The letter was personally brought by the Honorable Jack Z. Anderson, of the White House staff, and personally read by him to the convention. It is certainly timely, and was well received by the hundreds of delegates who crowded the main dining room of the Mayflower Hotel for this occasion.

The letter follows:

THE WHITE HOUSE,
Washington, May 16, 1957.

The Honorable OVERTON BROOKS,
Member of Congress, President, National Rivers and Harbors Congress,
Washington, D. C.

DEAR OVERTON: It is a pleasure to send greetings to the members of the National Rivers and Harbors Congress assembled in their 44th national convention.

The importance of your objectives cannot be overestimated. With the continuing growth of our country, every effort must be directed toward the wise use and orderly development of the Nation's water resources. And, as each year passes, it becomes more apparent that sound programs can be assured only through broad participation by the public on every level of interest, Federal, State and regional, local communities and private individuals. All of these must be coordinated through comprehensive long-range planning and the acceptance of just financial responsibility.

The recent floods following the drought in the Southwestern States are a forceful illustration of the need to avoid inadequate, piecemeal, single-phase planning of our water resources.

Progress is being made on actions recommended by the report of the Cabinet Advisory Committee on Water Resources Policy which I sent to the Congress last year. That report contained a working arrangement within which all the levels of Government, and other public and private interests, could join in developing our water resources. With your support and the united efforts of all groups working together in this vital matter, I am sure we can achieve a sound and equitable water-resources program for the good of our land now and for all future generations.

Sincerely,

DWIGHT D. EISENHOWER.

Three Billion Dollars Lost to United States Treasury Through Fast Tax Writeoff Grants

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. EVINS. Mr. Speaker, under the unanimous consent of my colleagues, I have asked that the following Associated Press story which appeared in the Nashville Tennessean on Saturday, June 1, last, be included in the Appendix of the RECORD:

DAM WRITEOFF COST PUT AT $83 MILLION—FEDERAL POWER COMMISSION ACCOUNTANT SAYS POWER COMPANY CAN GAIN $339 MILLION IN DEDUCTION

WASHINGTON.—The chief accountant for the Federal Power Commission testified yesterday the Federal Treasury could lose as much as $83,595,827 through a fast tax write-off granted the Idaho Power Co.

Russell C. Rainwater also testified that the benefits to the company from the certificates could total $339,144,000.

Rainwater and other FPC officials appeared before a Senate antitrust subcommittee investigating the case.

The Office of Defense Mobilization gave Idaho Power certificates totaling $65 million on two dams in the Hells Canyon region of

the Snake River between Idaho and Oregon. This represented 60 to 65 percent of the total cost of the dams.

CAN DEDUCT FROM TAXES

Under the fast writeoff system the company can deduct from its taxes the cost of the project, up to the amount allowed by the certificate, in 5 years instead of the normal 20 to 50 years.

This results in payment of a much smaller tax than normal in the first 5 years, but in above-normal levies over the remainder of the depreciation period. In the end, in theory, the company pays the same amount of taxes, assuming that rates do not change.

Rainwater said his Treasury loss estimate was based on money the Government would have to borrow to make up for the delay in tax payments under the rapid amortization procedure.

As to the $339 million estimated for Idaho Power, he explained this was based on an assumption the company would make a 6 percent return over a 50-year period on the tax benefit. Critics have described this benefit as an interest-free loan.

aRinwater's Treasury loss estimate was higher than any the subcommittee had previously received. Secretary of the Interior Fred A. Seaton testified 2 days ago he believed such figures were exaggerated. He said he thought the loss would be $17 million.

HUMPHREY SAYS $3 BILLION

Secretary of the Treasury George M. Humphrey has told the Senate Finance Committee the cumulative Treasury loss because of all fast writeoffs granted since 1951 would be $3 billion.

Jerome K. Kuykendall, FPC Chairman, testified that his agency, in granting licenses to Idaho Power to build three dams in the Hells Canyon region, based its decision on an expectation the company would use conventional financing without any tax benefits.

He said he and other members of the Commission had not expected allowance of the writeoff and the first he knew of it was when he read it in the paper.

Re H. R. 7249, To Enforce the Duty of Support in the District of Columbia

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. MULTER. Mr. Speaker, the District Committee has reported for action by the House H. R. 7249, a bill to improve and extend, through reciprocal legislation, the enforcement of duties of support in the District of Columbia.

Every State in the Union has similar legislation. It is high time that the District of Columbia added similar provisions to its statutory law.

I take pride in the fact that Mrs. Grace Clyde Seaman, an assistant district attorney for Kings County, was a pioneer in this field of legislation, and is entitled to much of the credit for bringing about the enactment of uniform laws throughout the country.

I am pleased to direct the attention of our colleagues to the following letter on this subject, written to me by the Honorable Edward S. Silver, district attorney of Kings County, on April 30, 1957, in support of the principle of this legislation. His letter is as follows:

DEAR CONGRESSMAN MULTER: I am calling to your attention a matter pending in the committee for the affairs of the District of Columbia, you being a member of such committee. The bill being considered concerns the reciprocal support law to compel support for children and dependents across State lines, which originated in our office in 1949 and has subsequently been passed by every State and five Territories and possessions. The only jurisdiction lacking this much needed legislation is the District of Columbia. In our office there are cases where wives and children are receiving public assistance in Brooklyn and the father is in the District of Columbia, sometimes employed by the Federal Government, resulting in creating in the District of Columbia a haven for runaway husbands.

On December 17, 1956, the United States Supreme Court upheld the constitutionality of the reciprocal procedure in *Landes* v. *Landes* (352 U. S. 948, 1 L. ed. 241 (1956)).

You will be interested in knowing that the procedure has been very successful in obtaining support for abandoned dependents and as a result has decreased the burden of support by the Federal, State, and city relief agencies. The Department of Health, Education, and Welfare, Washington, D. C., in answer to our inquiry, has informed us that the approximate payments for 1955 to families receiving aid to dependent children in which the father was not in the home because of divorce, separation, or desertion, or because he was not married to the mother, amounted to from $375 million to $380 million and the State's share of the payment was about 45 percent of the total.

In New York State, the uniform support of dependents law has been amended to include support for illegitimate children under certain circumstances, needy parents, and needy grandchildren.

You will be interested in knowing how successful the reciprocal support law has been financially.

In New York City, the domestic relations court statistics are as follows:

These figures begin with the operation of the law on April 1, 1950:

Apr. 1, 1950, to Dec. 31, 1950	$8,843.49
1951	83,836.58
1952	219,044.26
1953	473,468.62
1954	747,346.56
1955	1,198,937.76
1956	1,597,335.24

Returns from every jurisdiction are incomplete but the trend can be shown from the following:

California: Total collection since mid-1952 in excess of $2.5 million for Los Angeles County.

Connecticut: Collections for 1956, $550,894.

Massachusetts: In 1956, collections amounted to $318,407.

Michigan: In 1955, collections were $505,000 for Wayne County only.

New York: In 1956, $320,034 was collected in Erie County.

Ohio: In 1955, $291,522 was collected in Cuyahoga County.

Puerto Rico: In 1956, total collections amounted to $260,168.

Texas: In 11½ months of 1956, $132,500 was collected in Dallas County.

We are informed by the Council of State Governments that the original difficulty in your committee in drafting the bill was due to the question of what court would have jurisdiction. However, since this question has been determined, there appears to be no reason for delay in proceeding and I am writing to you to do what you possibly can to expedite this much needed legislation.

With kind regards, I am,

Sincerely,

EDWARD S. SILVER,
District Attorney.

In addition, I would like to submit, for the consideration of our colleagues, the following suggestions for improvement of the bill, which have been prepared by Mrs. Seaman and which unfortunately reached me too late for inclusion in the record before the District Committee. Mrs. Seaman's memorandum is as follows:

RE BILL H. R. 7249, HOUSE OF REPRESENTATIVES, DATED MAY 6, 1957, TO IMPROVE AND EXTEND, THROUGH RECIPROVAL LEGISLATION, THE ENFORCEMENT OF DUTIES OF SUPPORT IN THE DISTRICT OF COLUMBIA

This bill is in addition to two former bills, namely, H. R. 5334, dated February 26, 1957, and H. R. 5965, dated March 13, 1957. Bill H. R. 7249 is preferable; however, I suggest some changes, as follows:

Section 2 (f), page 2, line 23: Omit "in need of and." The word "need," if narrowly construed, could limit the remedy to persons on relief or likely to become public charges and would eliminate the great number of cases where the wife is employed, although at a small salary.

(g), page 3, line 1: I suggest that "plaintiff" be changed to "petitioner."

(h), line 6: Change "defendant" to "respondent" and carry these changes through the balance of the bill.

You will note that section 3, line 10, specifically states "the civil remedies herein provided * * *". Therefore, in view of the civil nature of the act, it would seem that "petitioner" and "respondent" would be more appropriate.

Section 8, page 5: I believe this section should be drastically changed by omitting, on line 10, "Corporation Counsel of the District of Columbia" and substituting "court". Also, by inserting after "threatened" on line 12, the words "or that petitioner's means are such that fees for private counsel would create a hardship, liberally construed, upon petitioner."

Line 13: Omit "his duty" and substitute "the duty of the Corporation Counsel."

As it now stands, section 8 gives to the Corporation Counsel the jurisdiction of determining what petitioner he will represent. This would seem to be the function of the court, which also determines whether or not fees are to be paid.

Section 11: This section is objectionable in that it covers two extremes, namely, those persons who are on home relief or about to become public charges on the one hand, and persons who are able to pay for private counsel on the other. The majority of complaints we have heard come from wives who are struggling on a small salary to support children. The salaries run from about $35 a week to tops of $60 a week. Some of these working wives depend on their parents to care for the children, and others must pay persons to supervise the children while they work. These wives are walking a financial precipice. If the children become sick and it is necessary to lose time from work, they become unemployed and are liable to become public charges. The help that can be obtained through the reciprocal support laws can create a firmer foundation for the family and not only keep them off relief rolls, but create a more secure atmosphere in the home and eliminate some of the causes of juvenile delinquency.

Section 9, page 5, line 20: This section is good and I think superior to section 12 of the R. E. S. Act, in that it permits the complaint

to be made by "any person or agency as next friend of the minor, regardless of whether such person or agency has been appointed guardian of such minor." The R. E. S. Act limits the complaint to "a person having legal custody of the minor without appointment as a guardian ad litem." I have in mind such agencies as Boys Town, Nebr., to whom I have written to ascertain if the reciprocal support law has been helpful to them. I have not as yet received an answer.

Section 10, page 6: I suggest that this section be continued as in section 13 of the R. E. S. Act, as follows:

"If the name and address of such court is unknown and the responding State has an information agency comparable to that established in the initiating State, it shall cause such copies to be transmitted to the State information agency or other proper official of the responding State, with a request that it forward them to the proper court, and that the court of the responding State acknowledge their receipt to the court in the initiating State."

Eventually, this addition might not be necessary when all courts are properly acquainted with procedures in responding States. But from the fact that our office, although we are not petitioner's representative in New York City, receives papers from other States, sometimes improperly addressed, and we in turn must notify the sender of the papers as well as forward them to the domestic relations court in Brooklyn, we believe that the suggested addition is warranted at this time in order to establish a more efficient procedure.

Section 11, page 6, line 23: Insert after "is" the word "in." Eliminate "or a political subdivision or agency thereof."

The court should direct waiver of payment of such fees and costs whenever the plaintiff is in a State having similar provisions. Furthermore, I do not believe that children should be penalized and deprived of the benefits of this bill simply because their States do not have such a provision. It should be noted that in the latter cases, if the dependents become public charges the Federal Government will have to supply the largest proportion of relief payments. Moreover, if a pauper's affidavit is supplied, why should it be discretionary with the court to say whether or not court costs should be paid? (Line 17.)

Line 24: Strike out "nothing in this section shall be construed to deprive the court of its discretion to assess costs and fees."

While no one can object to the payment of court costs and fees if the petitioner is a person of financial affluence, I have yet to find such cases. The people we are dealing with comprise two classes: those on relief or about to become public charges and those where the wife is employed, and although she might earn $60 a week or even more, cannot possibly pay counsel fees or court costs when it is considered that her earnings must provide food, clothing, and shelter for herself and the children and pay medical expenses, and also provide supervision for the children while she is employed.

Section 14, page 8, the following changes are suggested:

Line 4: Omit "refer" and substitute "notify."

Line 5: Insert after "or" the word "refer."

Line 5: After "appropriate," eliminate the balance of the sentence and substitute "set a time and place for a hearing and proceed to have respondent appear before the court without delay either by service upon him of a summons or by obtaining the body of the respondent by appropriate process as provided in section 12 herein."

Section 20, page 10, line 11: Add "or (c) when the child is the issue of a bigamous marriage."

Section 26, page 11, line 19: It is noted that without an appropriation for the expense involved in carrying out the act it will be ineffective.

I assume that the age of the child and the basic duties of support will be found for the District of Columbia in their 1956 act establishing a domestic relations branch in the municipal court.

I suggest that the bill include provisions for depositions and interrogatories as in the New York Uniform Support of Dependents Law (McKinney's Unconsolidated Laws—Domestic Relations—Section 2116—Procedure).

I believe this provision should be included so that if the respondent claims upon a hearing that he has a home for the wife and children but she refuses to live with him in the respondent's State, the court should have the power to send such depositions and interrogatories to the court in the initiating State to find out whether there might not be a valid reason for such refusal. Perhaps the omission of this section in the R. E. S. Act has been the reason why reports have come to us from our family court that all a man has to do in a responding State is to say that he has a home and the wife refuses to live with him and the court thereupon dismisses the petition. We can realize that there may be valid reasons why the wife's refusal can be justified.

Further Unification—A Tragic Error

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. COLE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include a column by Hanson W. Baldwin from The New York Times of May 31, 1957. Much of Mr. Baldwin's column concerns statements recently made on this floor by the esteemed chairman of the House Armed Services Committee, Mr. VINSON.

As Members of this body well know, Mr. VINSON has been involved with the problems of national defense for more than 40 years. His long experience and his vantage point for observation of defense problems during that long period justifies the high degree of respect in which his opinions are held.

The article follows:

THE DEFENSE BUDGET—AN ANALYSIS OF POSSIBLE EFFECTS OF CUTS ON RESEARCH PROJECTS AND MANPOWER

(By Hanson W. Baldwin)

The heavy cuts in the defense budget by the House of Representatives, if sustained by the Senate, may curtail some research and development projects and force some reduction in numbers of men in uniform.

The House budget debate ended Wednesday with the passage of an appropriation bill for $33,562,725,000. This was $2,565,275,000 less than the President originally had requested. The debate was highlighted by a forceful speech by Representative CARL VINSON, chairman of the House Armed Services Committee, opposing the merger of the armed services and denying the existence of wasteful duplication in the Pentagon.

Mr. VINSON was one of several who attempted to estimate the results of the reductions. Under them the Army, he said, would have to reduce its strength by 15,000 men during the next fiscal year, starting July 1. It had been scheduled to maintain an average strength of 997,000 men; the reduced appropriations may mean the loss of manpower equivalent to about one division.

Other Representatives stressed that a cut in the Army's research and development budget would mean, in effect, $35 million less next year, and that this cut would inevitably affect the Army's attempt to develop an antimissile system.

Several Members stressed the austere nature of the funds provided for transport aircraft and emphasized the limited amount of airlift available for the Army.

PLANES AND SHIPS AFFECTED

President Eisenhower and some supporters in the House also declared that the cuts would hurt the development and procurement of planes and missiles. Flying hours of the Air Force would be reduced and the Navy would lose one ship in its modernization and conversion program.

The House cuts, however, are still tentative, the Senate may well restore some of them. Moreover, it cannot be said, and none of the speakers asserted, that the Nation's security has been really imperiled by the reductions.

By fair the most important highlight of the debate was Mr. VINSON's speech against elimination of the separate services or substitution of a single Chief of Staff for the present Joint Chiefs of Staff system.

In defense matters Mr. VINSON's voice is one of the most influential in Congress. His outspoken criticism of merger in the Pentagon is certain to have effect.

SEES A BASIC DIFFERENCE

"We will hear for years to come," Mr. VINSON said, "many well-meaning persons strongly advance the argument that billions in potential savings can be effected through a complete merger of our armed services. Should we ever be so foolish as to succumb to this illusion we have jeopardized the security of this Nation to such an extent that our continuation as a free Nation would be extremely doubtful.

"There is a basic difference," he continued, "between the unification of our armed services as contemplated by the National Security Act (the organization now in existence) and merger as recommended by those who believe that the savings of dollars possible in merger are far more important than the functions of the separate services. I do not believe for one moment that the merger of our armed services would save the taxpayer one thin dime. If anything, I am sure that merger might well bring about added costs. Were we to merge our four services under one single staff system; were we to adopt one uniform—we would be creating a military monstrosity that would be an open invitation to disaster.

"I do not question for a moment," Mr. VINSON continued, "that there is duplication of effort, but it is a competitive type of duplication that assures this nation military supremacy in the quality of its weapons. Controlled competition, instead of being wasteful, is vitally necessary.

"It would be possible, though fatally injurious, to eliminate missile competition between the services."

REPORTS GREAT STRIDES

Mr. VINSON said that, contrary to publicized statements, joint and coordinated procurement, purchasing and management systems had produced "great strides in unification," that there was no "extensive duplication of buying by the military services" and that there was neither organizational magic nor savings in centralization.

No "military command system has ever been devised," he said, "that is equivalent to our present Joint Chiefs of Staff system.

"When the day arrives," he concluded, "that we have a super staff, or a single staff, or a single uniform, or a merger of the four services, we will have destroyed not only the morale of the armed services, not only the wisdom of the joint staff made up of representatives from all four services, but we will also be placing our dependence upon an assumption that four separate missions, involving the technicalities, the complexities and the skills of these four services, can be merged into one at a time when it is even difficult for each of the separate services to maintain the skills necessary in their particular fields. I trust that the nation will never make the fatal error of merging our armed forces, or of even adopting something approaching merger."

Who Partitioned Korea?

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article which I prepared for the June issue of the National Republic on a topic which has been quite controversial since Korea was partitioned.

The article follows:

WHO PARTITIONED KOREA?

(By Hon. LAWRENCE H. SMITH, United States Representative from Wisconsin)

Who partitioned Korea at the 38th parallel, and why? Thus far we do not know who made the decision, or exactly when. But history does reveal clearly that the partition led ultimately to the Korean war, in which the United States suffered 154,000 battle casualties between June 1950 and July 1953.

New light on the epochal partition decision comes to us in a recent book by Elizabeth Churchill Brown, a well-known New York journalist and wife of Constantine Brown, foreign editor of the Washington Star. The book is styled the Enemy at His Back.

The foreword by Senator WILLIAM F. KNOWLAND, of California, presents the theme of the work in these challenging words: "We must recognise that in dealing with the Kremlin, the road to appeasement is not the road to peace. It is only surrender on the installment plan."

Mrs. Brown's book is rich in new historical documentation on Yalta, Potsdam, Warm Springs, Los Alamos, and Hiroshima.

The partition of Korea was not, so far as we know at this point, a part of the Yalta agreement. On the other hand, Mrs. Brown explains that the partition at the historic 38th parallel came about in this way (p. xvii):

"Shortly after V–J Day a round-robin telephone conversation took place between the War Department and the White House. One of the participants in this unusual conference told me that those in the Pentagon did not know to whom they were talking in the White House—and that it was the White House parties who ordered the partition of Korea at the now infamous 38th parallel."

This shocking vignette of raw history suggests the quality and fiber of many of our pivotal postwar decisions in Washington, touching foreign relations, under President Truman and Secretary of State James F. Byrnes.

"After a study of the map of China it is easy to realize that, without Russian control of the areas demanded and obtained in the Yalta agreement, China would not have been lost to the Reds. And without Red control of China and the partition of Korea, the Korean war would never have happened."

In 1954 the Senate Internal Security Subcommittee, under the direction of Chairman WILLIAM E. JENNER, of Indiana, held extended hearings on the Korean war. In those hearings Gen. James A. Van Fleet and Gen. Mark Clark, among others, voiced the conclusion that unknown and unidentified men in our State Department forbade a decisive military victory in Korea north of the 38th parallel. Later in his book, From the Danube to the Yalu, General Clark wrote: "I could not help wondering and worrying whether we were faced with open enemies across the conference table and hidden enemies who sat with us in our most secret councils."

Woman's intuition guided Mrs. Brown to her scholarly labors in historical reconstruction, sometime after the death of President Roosevelt, on April 12, 1945.

"I determined to discover what influences in high places had perhaps inspired the decisions made by our leaders, and also to check our policies with those of the Communists, as set forth in their own publications. The similarity of these policies and the Communist aims was startling."

Through the Senate and House hearings on oCmmunist subversion and infiltration, Mrs. Brown learned of the Kremlin's plans and program for Europe and Asia after the war.

"So it was that I learned how Soviet Russia had placed her agents in high places in our Government—agents who not only stole top secrets, but, most important of all, influenced the policy makers of this Nation. Agents, in key Government posts, I learned, also worked hand in hand with agents whose job it was to influence and condition the public mind in order that public opinion would accept the policies as they were made."

From President Roosevelt's Yalta Conference, in February 1945, to President Truman's Potsdam Conference, in July 1945, Washington was mostly free-wheeling. Between March 1 and Mr. Roosevelt's death on April 12, nobody was really tending the store. President Truman took over his new post without having experienced any continuing contact with the great issues of world affairs.

"During the time he was Vice President," Mrs. Brown notes, "he had never been invited to go to an international conference, nor even to the important conferences in Washington. He was completely uneducated in high-powered international politics."

White House Secretary Jonathan Daniels records that at Potsdam, "from the beginning Truman liked Stalin."

In a quiet moment President Truman had remarked: "Stalin is as near like Tom Pendergast as any man I know" (p. 146).

General Dwight Eisenhower, Supreme Allied Commander in Europe, journeyed to Amsterdam early in July 1945 to confer with President Truman, then en route to Potsdam. General Eisenhower emphatically warned Mr. Truman against soliciting Russian participation in the war against Japan. He urged that the war in the Pacific be ended before Russia could get in. But at Amsterdam, General Eisenhower did not know that at Yalta (in February) Roosevelt had accepted Stalin's pledge to put Russia into the Pacific war 3 months after VE-day. This made Russia's entry into the war on August 8 a certainty. However, President Truman did not know at Amsterdam that Russia already was pledged to enter the Pacific war.

On July 26, near the end of the Potsdam Conference (and 2 full weeks after the first test explosion of the atomic bomb at Alamogordo on July 16) Secretary Forrestal noted in his diaries that Secretary Byrnes said he was "anxious to get the Japanese affair over before the Russians got in" (p. 143).

At the end of the Potsdam Conference on August 1, General Eisenhower again remarked to President Truman that he hoped he had not made any concessions to get the Russians in. At the same time, Secretary Forrestal noted in his diary that "50 divisions could not have kept them out."

Secretary Byrnes paid glowing tribute to his personal advisers at Potsdam, Ben Cohen, who had been a guiding influence in State Department decisions since the early days of the Roosevelt administration in 1933; H. Freeman Matthews, and Charles E. Bohlen, of the State Department's Policy Planning Staff.

"A new Secretary of State could not have asked for a finer trio of advisers," Byrnes noted late in his book.

Admirals King, Leahy, and Nimitz assured Mr. Truman before Potsdam that Japan was crushed, as Eisenhower insisted later at Amsterdam. But the Foreign Economic Administration and the Office of War Information, where Owen Lattimore was in charge of the Far Eastern Branch, insisted Russia must come into the Pacific war. Gen. George Marshall agreed, arguing that Russia's declaration of war against Japan at the proper time "would save millions of American lives" (p. 148).

Russia's determination to get into the Pacific war was dictated by the Kremlin's demand for continued lend-lease shipments after VE-day, in May. Stalin estimated he needed 3 million tons more of lend-lease to supply his armies for the war against Japan. "By the time of Potsdam, the Russians were sufficiently equipped and stockpiled to be a major power in the Pacific—and they still weren't in the Pacific war," Mrs. Brown notes.

General MacArthur told in the Senate hearings (1951) of orders from Washington in May 1945 withdrawing 100 of his transport ships from the Luzon battle to transport Russian lend-lease supplies to Vladivostok. He protested bitterly that withdrawal of these ships would jeopardize the entire Philippine campaign. But Washington's orders stood. The ships were withdrawn from MacArthur's supply lines to carry lend-lease to Russia—the very supplies and equipment which later enabled Russia to take over China and North Korea (p. 156).

Japan had been suing for peace since October 1944, and had announced to Stalin on July 18, 1945, that Prince Konoye would visit Moscow for conversations looking to peace arrangements. This information was not conveyed to President Truman by Stalin until near the end of the Potsdam Conference. On July 28, Stalin remarked casually to Truman that he had received a request from Japan to mediate. On that very day, he added (the 28th of July), he had received a second proposal from Tokyo—too vague to permit of an affirmative answer. But between July 18, the day of the first formal Japanese peace advance to Moscow, and July 28, the date Truman was informed of the peace feelers, the Potsdam Conference had decided to drop the first atomic bomb on Hiroshima early in August (p. 159).

The bomb was dropped August 6. Russia declared war on Japan August 8. The second bomb fell on Nagasaki August 9. And on August 10 Japan sued for peace on the Potsdam terms.

Russia, in the war for 2 whole days, now was a major factor in all the Pacific settlements. All the rich territorial awards to Russia, as initialed at Yalta in February 1945, now were due for payment.

Jonathan Daniels recorded some time later that President Truman had observed at Potsdam: "I got the impression that Stalin would stand by his agreements. * * *"

When the Japanese armistice did come, Russia was assigned the task of receiving the surrender in all of northern China and all North Korea, above the 38th parallel, the partition line drawn by an unnamed somebody in the White House in May.

Mrs. Brown concludes this amazing jigsaw with the arresting observation: "But at Yalta and again at Potsdam someone was calling the plays and giving the signals, and it is tempting to guess it was Stalin himself. Who on our team was interpreting the signals and putting them into effect?"

If woman's intuition is the vast power for good that so many claim, perhaps we should all dig around a bit for the answer to the lady's question.

The Case of a Strong Military Reserve

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, last week the House passed the defense appropriation bill for 1958. I had more than a passing interest in one of the provisions of the bill—providing funds for the Army Reserve.

The committee had recommended $197 million for this purpose, as contrasted to the Department's request for $207 million. However, the committee later offered a floor amendment providing that $10 million of the unobligated balance of the appropriation "Reserve personnel, Army, 1957" would remain available until 1958 and should be merged with the appropriation for the Army Reserve in the Appropriation Act of 1958.

I was pleased to support this amendment and it passed with a minimum of debate, because over a period of years the Congress has sought to build a strong Reserve force and at no time has the Congress failed to provide funds toward this objective.

Following discussions I had on the floor regarding the Reserve obligation, I found that some Members believed that the Army had summarily lowered the Reserve obligation in order to make some of its Reserve programs more attractive. Although it might not have been intended, the committee report seemed to lend credence to this belief.

I think I should set the record straight on this matter and, for those who may not be fully informed, I will try to briefly explain the total military obligation assumed by every young man upon entering military service, together with the resulting ready and standby obligations.

I believe I can best make myself understood if I go back to the enactment of the Armed Forces Reserve Act of 1952. This act provided, for the first time, new categories of reserves. It established the Ready, Standby and Retired Reserves, and all members of the reserve components now must be in one of these categories.

The Universal Military Training and Service Act had previously provided for a total 8 year military obligation for all persons, below age 26, who were inducted, enlisted or appointed in the armed forces.

Therefore, it can be said that whereas the Universal Military Training and Service Act established the military obligation and provided for the active duty phase, the Armed Forces Reserve Act made provisions for the performance of duties in the Reserve after the reservist had been released from active service and while he remained in the Reserve components.

The Armed Forces Reserve Act provided that persons, upon release from active duty, would become members of the Ready Reserve for the balance of their military obligation, unless they elected to participate in accredited reserve training for a period which when added to the time spent in active service totaled five years, and if so they could request transfer to the Standby Reserve for the balance of their military obligation.

Perhaps an example would best serve to illustrate how the obligation could be "worked off" under the provisions of the Armed Forces Reserve Act. If a man was inducted for 2 years he was obligated to remain in the Ready Reserve for an additional 6 years, unless he chose to participate in Reserve training for 3 years. If he did this he could request transfer to the Standby Reserve at the end of 5 years—2 years on active duty plus 3 years active participation in the Reserve—for the remaining 3 years of his total military obligation.

By the same method a person having served 4 years on active duty need only serve 1 year participating with the Ready Reserve before he became eligible to transfer to the Standby Reserve for the remaining 3 years of his total military obligation.

Keeping in mind that the Universal Military Training and Service Act established the total military obligation for each youth at 8 years, it is important that we take special note of one provision of the Armed Forces Reserve Act. I have reference to section 269 (3) (2) of title 10, United States Code, which provides that the Secretary of the military service concerned, with the approval of the Secretary of Defense, may provide for a shorter period of Ready Reserve service for satisfactory participation in an accredited Reserve program.

Now, this simply means that whereas the total military obligation is set by law, and cannot be raised or lowered except by amendment to the law, the Ready Reserve obligation, within the total obligation, may be shortened or lengthened by the Secretary of the military service concerned, with the approval of the Secretary of Defense.

In 1955 the Congress enacted the Reserve Forces Act. This law changed the military Reserve programs in two respects, which are pertinent to this discussion. For the first time it provided two military obligations, the length of each depending on the age of the person when entering military service and the type of program in which he volunteers to serve. Thus, a person under the age of 18½ enlisting in the 6-month training program receives a total 8-year military obligation and, on the other hand, all persons over that age, regardless of the type of program entered, receive a 6-year obligation.

The 6 months training program was first instituted by this act. Prior to this a 2-year enlistment, or induction for 2 years, have been the shortest period of active duty service—disregarding 1-year enlistments authorized by the Selective Service Act of 1948 and implemented for only a short period.

Under the 6 months training program a person under 18½ years of age may enlist for a period of 8 years, 6 months of which will be spent on active duty for training with the remainder of the military obligation spent in the Ready Reserve where active participation is required.

In January of this year the Department of the Army administratively revised its reserve program by reducing the Ready Reserve obligation of the 6 months training volunteer from 7½ years to 3 years, with the remaining 4½ years to be spent in the Standby Reserve. In addition, the 6 months training program was opened to those persons between 18½ and 26 years of age with the Ready Reserve obligation set at 5½ years, which is the remainder of the total military obligation for all youths above 18½.

Mr. Speaker, I have taken this time to explain the background of the total military obligation and its relation to the Ready and Standby obligations because I felt it was necessary that incorrect impressions not be left in the minds of some of the Members.

There may be some differences of opinion on the necessity or advisability of providing a 6 months training program for youths 18½ years of age and over. To my way of thinking the Army has made a wise decision to open this program up for these young men. Today we find the manpower pool growing larger and larger. Statistics will show that many more young men are coming of military age with each year that passes. Since the draft calls are low we cannot escape the inevitable result that many young men will be able to evade the draft if a suitable program is not found in which they will volunteer.

To be sure, we are hopeful that more and more young men below the age of 18½ will volunteer for the 6 months' training program, and for that reason we recommended lowering the Ready Reserve obligation to 3 years in order to encourage them to complete their active military service at an early age, when it would least disrupt their personal lives. However, I felt that the 6 months' training program should also be made available to young men over the age of 18½, not to the exclusion of the draft but in a limited program so that those persons not needed in active service can be made available to the Reserve components, after a period of active duty training.

I have studied and worked with Reserve legislation during the entire 22

world and bringing sense out of confusion.

full truth of the possibilities of the Ter-

is because a great deal of the money spent

years of my service in the Congress and until this year I have never known the time when the Reserves have had so many volunteers. This is the day which we have been waiting for and working toward. Now that the ball is rolling I hope that it can never be said that the Congress impeded its forward progress.

Remarks by Dr. Lewis Webster Jones, President of Rutgers, the State University, in His Charge to the Graduates at the 191st Anniversary Commencement on June 5, Rutgers Stadium

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

REMARKS BY DR. LEWIS WEBSTER JONES, PRESIDENT OF RUTGERS, THE STATE UNIVERSITY, IN HIS CHARGE TO THE GRADUATES AT THE 191ST ANNIVERSARY COMMENCEMENT ON JUNE 5, RUTGERS STADIUM

We are assembled here to honor you, the members of the class of 1957 at this the 191st anniversary commencement of Rutgers, the State universtiy. As your teachers, parents, friends, and fellow citizens we join together to congratulate you on your achievement, and to wish you well.

For everyone here, this particular ceremony has a very special personal interest; and as citizens of the United States, we are also thankfully conscious that you, and the thousands of other qualified young people graduating from our colleges and universities throughout this country, are collectively an invaluable national asset.

This is a particularly cheerful occasion, because the immediate outlook seems to be rosy. There are plenty of jobs, and we are not at war. As a veteran of commencement exercises covering some 30 troubled years, I assure you that you are fortunate. The prospects of solving your personal economic problems are unusually favorable.

You are quite naturally preoccupied with your own personal and family affairs. But whether you can look forward to secure lives as happy consumers and prospective pensioners, leaving politics to somebody else, is extremely doubtful. The world is cooking up some serious problems which will inevitably affect you closely, and with which you will be obliged to concern yourselves.

I am sure you all recognize that citizenship is not a specialty. Every American must make political judgments. Politicians are brokers of ideas and emotions, dealers, and bargainers for power. They cannot formulate and carry through constructive policies unless they have the backing of an intelligent and informed electorate.

This is one reason why, from the beginnings of our national history, we have set a high value on education. It is why you, as men and women privileged by your educational opportunities, owe your country a duty as serious and responsible citizens.

I propose to talk briefly about two aspects of national policy which are certain to impinge upon your personal lives, and demand your attention. One is education. The other is foreign policy. In both, we are faltering badly.

In this richest of all countries, in this most productive of all periods, we are not providing the necessary resources to educate our children. Schools are disastrously overcrowded and understaffed, teachers underpaid. The doors of educational opportunity are rapidly closing. We face a drastic shortage of college facilities, teachers, and research staffs. And we are cutting educational budgets right and left, while we paralyze our magnificent highways with solid blocks of larger, longer, lower, and more expensive cars.

You will come up against the educational problem very soon, as your younger brothers and sisters try to get into college, or as your own children reach school age. I hope and believe that you will do something about it. Don't blame the politicians, but give your elected representatives the courage and incentive to fight for the educational advances the country so sorely needs.

One of the most inspiring tenets of American democracy has been that every individual should have the opportunity to develop to his fullest capacity. Are we abandoning this ideal?

If so, I believe our period of greatness as a Nation will be ended. Moreover, mere literacy and commonsense are not enough even for national survival. Let me quote a warning issued by Alfred North Whitehead, as long ago as 1916; it strikes an even more ominous note in 1957:

"In the conditions of modern life the rule is absolute: the race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea can move back the finger of fate. Today we maintain ourselves. Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated."

The second crucial area in which we are faltering is foreign policy. Foreign policy is not something we can do without, or leave to specialists. It is a necessary extension of our domestic goals. We want freedom of enterprise, continuing economic advance, continuing prosperity, peace. But we can't achieve any of these in isolation. We must concern ourselves with the rest of the world. Our system, indeed our whole way of life, is being challenged. In order to have what we want in domestic affairs, we must evolve and carry out an intelligent and far-seeing foreign policy, adapted to the realities of the contemporary world.

But this is our weakest point. During the 19th century, when conditions were simpler, the British did very well as world leaders by a policy often described as "muddling through." We are certainly muddling; but are we muddling through? Madison Avenue techniques of winning friends and influencing people don't seem to be conspicuously successful exports. Even our closest friends and allies view us with suspicion and alarm born of uncertainty as to our purposes.

Why is it that, after a popular world figure has been elected as President of the United States by an overwhelming majority, he finds himself without effective backing even from his own party? Why is it that our Secretaries of State, whether they be Republicans or Democrats, seem to be favorite targets for bitter criticism from all sides?

I suppose the reason is that we Americans are suddenly precipitated into a key role in world problems which are new, bewildering, and threatening. We wish we could ignore them and get on with our own business, but they are an aspect of world revolution, and are inescapable, either for us or for the rest of the world.

The revolutionary force which is altering our relations with other countries is the rapid spread of technology, and with it of the material aspirations which have been so characteristically American.

One sees astonishing contrasts in the underdeveloped areas now rising into independent national status: earth-moving machines from Detroit being watched by Buddhist monks, surrounded by mud huts, illiterate people, wooden plows. People living under unimaginably primitive sanitary arrangements demand streptomycin, and are aggrieved when it is not immediately available or if they think it costs too much. There is a worldwide and urgent desire for material improvements, and this is one of the strongest revolutionary forces the world has ever felt.

This could be our great opportunity. The point 4 program, and the economic- and technical-aid programs which have followed it, seem to me to be inspired and statesmanlike political inventions, worthy of our best American traditions. These policies are also essential to our own self-interest. Only by helping the underdeveloped countries help themselves, and achieve national independence based on a reasonably satisfying level of health and prosperity under democratic governments, can we hope to build a lasting peace.

But if we are to work out and carry out a long-range constructive foreign policy, we shall have to think more seriously, and with greater unity, about our own values. American technology is spreading rapidly, with a momentum of its own. New areas are adopting the surface phenomena of western material culture at a breath-taking pace. But in the process, they are often destroying their own traditional values, and substituting—what? No one can foretell what may happen politically in Africa, India, China, and other regions as the technical revolution proceeds.

Certainly we have not been able to convince the rest of the world that there are any strong and valid moral convictions underlying our obvious technical supremacy. We are faltering here too, and seem to lack conviction.

This is not a weakness confined to America. It afflicts the whole western world, including, I believe, Russia. Our 19th century moral capital seems to be used up. Nineteenth century formulations of political theories—capitalism, socialism, communism and so on—are, I suspect, obsolete or inappropriate. We simply have no political or philosophical ideas capable of interpreting the contemporary chaos, and of rallying support behind long-range, peace-promoting policies among the great variety of peoples who are our new neighbors.

These, I believe, are some of the most important problems which will inevitably occupy you in the years to come. They lie just below the surface of our present nervous prosperity, and are likely to disturb its tranquillity.

Tranquillity and leisure sound most attractive; but are they really appropriate and challenging ideals? Your generation is often accused of being preoccupied with security, lacking in protest or the spirit of adventure. I doubt this very much. Students are no more complacent that they ever were. If they are not making as much noise as some of their elders did about their views, it is probably because they share with those same elders a sense of bewilderment: What should be done about a world situation which, overtly prosperous, is felt to be full of insecurity and menace?

I think I can promise you that your world won't bore you with its tranquillity. But there are creative forces at work under all the confusion. I hope you will take hold of these. Among them are industry, research, education, and scholarship. Let me remind you that scholarship, least valued in the market place, is capable of transforming the

of fact and a matter of record, I have long favored statehood for the Territory and

those in the States, and taking out the Ten

world and bringing sense out of confusion. We need it in history, politics, philosophy, and the humanities as well as in science. Indeed, the overriding need of our times is understanding, and the moral conviction based on understanding. We may be in for a time of austerity, and austerity has at least the advantage that it is a powerful stimulus to thought.

You will come up against both the crucial problems I have singled out, education and foreign policy, in your own experience. You will have to take them seriously, and personally. Your own children will have totally inadequate schooling, unless you yourselves take action. And the United States may lose its prosperity, if not its very existence, unless you and all of us take an intelligent and farsighted interest in our foreign policy.

I rejoice with you in being graduated during a prosperous period, and wish you happiness and success in your jobs and your personal lives. Let us also rejoice on living in a world of rapid change and bewildering potentiality, in which crucial problems of citizenship demand your creative attention. Your lives may not remain as tranquil as you could wish, but they will not be dull.

This is an exciting and fascinating as well as a dangerous period. What is at stake is the whole destiny of man.

I charge you, as educated men and women, to accept your full moral and civic responsibility and ally yourselves with those constructive forces which may yet transform our marvellously productive technical culture into a humanly productive worldwide civilization.

Statehood For Alaska

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith the text of an advertisement printed in the June 4 edition of the Washington Daily News over the signature of the Daily Alaska Empire, a newspaper published in Juneau, Alaska.

Publication of this advertisement as an open letter to me adds one more chapter in the long drawn out controversy over statehood for Alaska. I have asked publication in the RECORD for the reason all of us in Congress are highly interested in the Alaska problem. The statehood bill has been reported out of committee and I assume it will soon come to the floor.

The Empire advertisement levels some specific charges at me and some general charges at the Congress.

In reading this open letter and my answer into the RECORD, it is for the purpose of clarifying the atmosphere. The text charges me with the reversal of position on statehood for Alaska and on a suggested 20-year income-tax moratorium for the Territory. This is not true.

In the long story of the battle for admission of Alaska I have been in favor of statehood. However, I have asked to probe every possible angle to get the full truth of the possibilities of the Territory and the desires of the citizens.

The open letter signed by the Daily Alaska Empire follows:

Congressman A. L. MILLER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MILLER: Monday we printed your complete reversal to your earlier statements.

The reversal stated you would not vote for a 20-year tax moratorium for Alaska.

In your statements of a few weeks ago which we published on page 1 of the Daily Alaska Empire, you informed us you didn't believe the allegation made in Congress that all people of Alaska were for immediate statehood. Therefore, you were going to ask that a poll be made which would express the wishes of the Alaskan people.

Earlier you suggested that it was possible to have a 20-year tax moratorium so industry could grow. You also stated that if statehood was granted to Alaska, undoubtedly the 15,000 Federal employees in Alaska would lose their 25-percent, tax-free bonus, now given all Federal employees because of the high cost of living.

Every constitutional authority points out that under statehood no Federal employee or member of the armed services can receive this 25-percent bonus.

It was you who started this whole investigation. You reported back to all newspapers in Alaska and all radio stations in Alaska that the people in Alaska were more than 2½ to 1 against statehood at this time. Now, you come along and try to blast the hopes of these honest Alaskan people, repudiating the findings of your own survey which came from more than 50 towns in Alaska.

None of this is to question your honesty or your integrity. We believe all Senators and Congressmen are by far the highest type of citizens that we have in the United States. At the same time, we realize a few will play politics for what is called political expediency.

For the information of all Members of Congress, the people of Alaska were never given a right to vote except on a loaded question. All of us are for statehood. But, the real questions are: When do we want statehood; How much will it cost; When can we afford it; and Under what conditions? These questions have never been presented to the 50,000 taxpayers in Alaska.

We now pay the United States Treasury $44,500,000 according to a statement to Congress by Hon. Fred Seaton, Secretary of the Interior. This places Alaska 42d on a per capita basis of average income against the other States. But with the cost of living here, 25 to 60 percent above the other States, the average income of the people in Alaska would actually be below the sharecroppers of Georgia, South Carolina, and Mississisippi.

During 1956 the United States Department of Commerce reports that Alaska received or spent an approximate $500 million divided as follows: $8 million from farming; $34 million from forest products; $78 million from fish; $24 million from mining. Eight million dollars of this amount was merely sand and gravel. But the big figure was Federal spending of $355 million. This gives you some idea that an area over twice the size of Texas and more than one-fifth the size of the United States, doesn't have any substantial income except Government spending. This $355 million did not include all of the Government doles and subsidies for Alaska.

Actually, over half the people of Alaska are connected directly or indirectly with the Armed Forces. They are here for about 3 years. Previous to the second war, only 40,000 people lived in Alaska other than the natives. The reason I separate the natives is because a great deal of the money spent in Alaska is on basis of assistance to the natives. Aside from this, some of our most outstanding and distinguished citizens in Alaska are Indian and Eskimo people.

Congress is not only going to vote on what is good for Alaska but they are going to vote on what is good for the United States.

Figures show that the Federal spending in Alaska is actually $10 against $1 paid to the Federal Government by the taxpayers of Alaska.

The 48 States are subsidizing Alaska on a basis of $10 to $1.

Our suggestion to the Congressmen and Senators is that they approach this problem on a realistic basis—what is good for the United States is good for Alaska.

The suggestion is that Alaska's economy be changed from a Federal subsidized economy of a 10-to-1 deficit basis to an economy which will attract the development of the natural resources of Alaska. Then Alaska will help support the Treasury of the United States rather than deplete it, as is now the case.

The people of Alaska are not looking for something for nothing. They realize immediate statehood will eliminate $30 million cost-of-living bonus from the Federal employees and members of the armed services.

A per capita cost of government basis for Alaska under statehood shows that the States of Washington or Oregon, using their cost of government figures, would cost the taxpayers of Alaska $60 million additional to operate as a State. This would break 90 percent of the people of Alaska.

A 20-year tax moratorium would merely be a means to the end. Industry could be built, and at the earliest possible moment Alaska would become a State. With industry built up, this 10-to-1 deficit spending for Alaska out of the pockets of the other States would come to an end, with the development of our natural resources.

We would then pay into the Treasury of the United States a probable $400 million a year rather than $44½ million. The people of Alaska do not want to do anything less than share equal responsibility to the greatest Government in the world. We consider paying taxes a privilege.

All Western States were built on grants or subsidies. All railroads were built on subsidies, the airlines, steampship lines; in fact, all of the big airplane manufacturers not only were built on subsidies and grants, but continue to look to the Government for subsidies and grants. We in Alaska merely want to approach this problem from a realistic basis.

The most outstanding men in Congress continue to stand up and be counted in that it would be possible to develop Alaska's natural resources and develop industry on the basis of a 20-year-tax moratorium.

This letter is intended also for these honorable gentlemen of Congress who stood fast and voted against immediate statehood, the Honorable JAMES A. HALEY, the Honorable JOHN R. PILLION, the Honorable WALTER ROGERS, the Honorable J. T. RUTHERFORD, the Honorable GEORGE A. SHUFORD, and the Honorable J. ERNEST WHARTON.

We want to call your attention to the recent action of the Alaska Department of the American Legion, which last week in territorial convention at Skagway eliminated the word immediate from an official resolution urging statehood for Alaska.

Most Congressmen and Senators realize that of the 33 strategic metals necessary to national defense and security of our Nation, all but 3 are in abundance in Alaska. But they cannot be developed because of the 25 to 60 percent higher cost to do business in Alaska than in any other area of the United States. For example: The largest metropolitan newspaper to come to Alaska

Need for Import Quotas

The House Ways and Means Committee will start hearings on the Lanham bill No. 2815, in about 2 weeks. This bill would put

mittee received testimony on 41 applications for approval of projects, of which it recommended for endorsement 16, estimated

is the Seattle Post Intelligencer. It costs $1.71 a week to buy the Post Intelligencer in Juneau. Farther north and west, the price is even higher, more than $2 per week. This gives you a thumbnail idea of costs and why only $16 million in minerals were mined in Alaska last year.

The defense of our Nation depends on an abundance of these strategic metals. One of the most necessary metals used for guided missiles and aircraft is titanium. This we have in abundance, also cobalt, nickel, and many other metals. These are in short supply elsewhere and are awaiting a realistic approach so they can be profitably mined.

A tax moratorium is merely a means of allowing private industry to come in and develop this country rather than having the Congressmen and Senators appropriating $10 of Federal money to spend in Alaska against receiving $1 back.

We are sure the voters in Nebraska are interested in a realistic correction of this Republican spending or Democratic spending, whichever you want to call it.

You charge that the Democrats in Congress are the ones who are delaying statehood. We wonder if both the Democrats and Republicans in Congress who are delaying statehood are not the real heroes who are actually trying to work this problem out on a realistic basis of what is good for not only Alaska but what is good for the other 48 States.

Actually, the records show in Congress that most of the Republicans and Demacrats are opposed to statehood at this time. Some have suggested that an election be held on an honest basis, not on a loaded question, so the true feelings of the Alaskan people can be expressed.

Let us assure you, your survey or poll of the Alaskan people, you admitted, showed that over two and a half to one were opposed to statehood at this time. This represents the real feelings of all people in Alaska, and an election will verify it.

Your survey has at least opened the eyes of the Alaskan people. So, you have certainly contributed a great deal to this cause of truth, honesty, and integrity. In no way will your attempt to scuttle the will of the people, keep these Alaskan voters from being heard if given the opportunity to express themselves on immediate statehood for Alaska.

We challenge any one to come forward with a survey showing what statehood will cost. These facts have been kept from the public by a small group of greedy politicians who have been afraid to let the people know the truth.

The hearing in Congress about statehood should look into the money paid the Tennessee plan members without authority of law.

With sincere thanks and aprpeciation to you.

THE DAILY ALASKA EMPIRE.

My reply to the publisher of the Alaska Empire follows:

JUNE 6, 1957.

Mr. WILLIAM PRESCOTT ALLEN,
Daily Alaska Empire,
Juneau, Alaska.

DEAR MR. ALLEN: This is in reply to the open letter you published as an advertisement in the June 4 edition of the Washington Daily News.

I would like to take sharp exception to some of the statements embodied in the open letter. You charge, among other things, that I reversed my stand on statehood for Alaska; that I reversed my stand on a 20 year income tax moratorium for Alaska; that I am scuttling the will of the people, and that my actions have been a matter of political expedience.

Please permit me to take up these charges one by one.

In Alaska, I have been called both a friend and foe of statehood. As a matter of fact and a matter of record, I have long favored statehood for the Territory and since my first visit there have had a strong personal interest in the welfare of your people.

During the most recent committee hearings on the subject, I endeavored to make my position crystal clear. I said I continued to favor statehood and would probably again support such legislation but that I wanted to learn more of the thinking of the people at the grassroots. I said I would endeavor to find, through a variety of efforts, if the people of Alaska are ready. I believe I have found the answer.

My desire was to be completely fair with the people of Alaska, both those for immediate statehood and those against. I pointed both to the attractions of statehood and the hardships of statehood. I pointed out the high cost of living in Alaska might discourage new population and new industry. I pointed out that the extra pay for Federal employees would probably be forfeited. I pointed out special grants which are given to Territories would be lost to the new State, as Alaska then would be on an equal footing with the rest of the States. I also pointed to certain advantages of statehood.

The early testimony at the hearings seemed too conclusive, too pat. I could not conceive that practically all the people of Alaska were demanding statehood. It did not seem reasonable. In the case of my own State of Nebraska, there was bitter controversy over statehood in the middle of the past century and when an election was held, the margin in favor of statehood was very small, in fact, it was an even 100 votes.

Therefore it seemed to me there might be a question of loaded testimony. I conducted an unofficial poll, without expense to the Government and made possible by the fine newspapers and radio stations of Alaska. As you know, I asked this question, "Do you favor immediate statehood for Alaska?"

I received 1,916 replies to that question, with no duplication so far as I know. Many Alaskans wrote interesting and informative letters explaining why they were for or against immediate statehood. There were 522 votes in favor, 1,394 against. I conducted this poll to obtain information. At no time did I ever say the results of the poll would govern my vote.

Although opponents of immediate statehood led by a substantial margin, the poll was only one of several elements taken into consideration in determining the way I would vote. No unofficial poll can be accurately conclusive and, as you know, this poll did not cover all of Alaska.

In addition, there was some argument up there against the poll. It was both praised and condemned. Some called it political; some called it malicious. It was neither. It was a simple effort to learn the thinking of the people of Alaska and I deeply appreciate the replies, the fine letters, the sound reasoning, and the great public service rendered by the newspapers and radio stations.

I repeat, the poll was only one of the factors. One of the considerations was the reasoning of people in the United States. Each year I send out a questionnaire to my home State of Nebraska, covering some of the vital problems of the day. This year I asked my constituents, as 1 of 10 questions, if they favored Alaska statehood. The latest tabulation shows 80.7 percent in favor.

Another factor, of course, was the evidence presented in the hearings and my own study of Alaskan history and ambitions. Another vital factor was the approval of some of the amendments I suggested, including doubling the acreage originally planned for the new State, bringing it up to 182 million acres; repeal of the Jones Act on foreign shipping so Alaska ports would be treated the same as those in the States, and taking out the Tennessee plan of election of officials which I feel is unconstitutional. These changes made a better bill, adding more potential for Alaska to grow and prosper.

The move for an overall vote in Alaska on the specific statehood question was defeated much to my regret. After taking into consideration all the various factors, I became convinced the Territory is ready to become a valuable member of the team of States.

In your letter you state the records show in Congress that most of the Republicans and Democrats are opposed to statehood at this time. Since no vote has been taken during this session, I am at a loss to know on what factors you base this conclusion. Personally I will wait until the ballots are counted.

Your second charge deals with a so-called reversal of stand on a 20-year income tax moratorium. I was a bit amazed when I began to receive scores of letters asking the moratorium, many saying they understood I approved such legislation. I am sure some of you folks in Alaska jumped to conclusions not based on fact. I have never endorsed an income-tax moratorium. I have many times called the plan not feasible.

I have said time after time that I will gladly consider any plan of action for Alaska. I was and am willing to listen to any suggestions for any Territory or for any State, but the fact I will listen does not mean I will endorse or vote for any plan suggested. I have said that I was willing to listen to any arguments for a plan to give tax advantages that might induce new industry and business to come to Alaska. I further suggested if the proponents of such plans were interested, they should write to their Delegate in the Congress, Mr. BARTLETT, but I repeat my earlier statement, "I could no more vote for an income-tax moratorium for Alaska than I could for one for my home State of Nebraska."

Now the charge of political expediency. It is far from the truth. I get no votes in Alaska. Mine come from the good people of the Fourth District of Nebraska. While statehood for Alaska is a matter of interest in my State, it is not a matter of controversy. The issue will gain no votes, lose no votes, for me in Nebraska. My activities in connection with Alaska are solely as a Member of the Congress of the United States, with a desire to serve the States and Territories to the best of my ability.

The Empire charges me with scuttling the will of the people. The charge is not true. Neither you, sir, nor any man on the face of the earth knows the will of the Alaskan people as of this moment. Neither my poll nor the last plebiscite nor the Tennessee plan election gave a a true and complete picture of the will of the people as a whole. Each represented a small segment of the total potential vote.

Apparently you would be governed by the result of my poll. I am appreciative of that. You charge the Tennessee plan election to be illegal. That is a matter for your people to care for in the Territory.

I want to assure you that I gave the hearings on statehood a great deal of time and study. That study was not confined to the hearings but extended many, many hours beyond. From my study I reached my conclusion.

Under separate cover I am forwarding to you a copy of the hearings on Alaska statehood. I believe you will find my trend of thought clearly outlined, with no endorsement of an income-tax moratorium.

I have always looked upon Alaska as a great Territory which could become a great State. I believe it will.

Sincerely yours,

A. L. MILLER,
Member of Congress,
Fourth District, Nebraska.

Need for Import Quotas

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. BAILEY. Mr. Speaker, under leave to revise and extend my remarks, I include a letter to the editor of the Clarksburg (W. Va.) News, in behalf of the Lanham bill, imposing import quotas.

I commend this letter to the attention of my colleagues. It forcefully points up the problems faced by many industries resulting from the administration of our foreign trade policies. To the men and women working in these plants, the loss of a livelihood is a very real, concrete issue, far closer to home than any ephemeral advantage which might be gained elsewhere.

I might also point out that whenever and wherever there are created conditions described in this letter, there exists a pocket of depression. These pockets should not be kissed off. A so-called pocket in and of itself may not be necessarily alarming; but we must not allow these pockets to increase in number.

If we have a tailor cut too many pockets, we may wind up with not enough cloth to hold the jacket together.

The letter, published in the News of May 30, follows:

GLASSWORKERS ASK CITIZEN HELP IN FIGHT FOR IMPORT QUOTAS

(EDITOR'S NOTE.—The following letter was received by the News with a request that it be published in an attempt to rouse citizens to action on the plight of the domestic glass industry.)

DEAR MR. EDITOR: My fellow workers and I are greatly concerned about the importation of glass to this country because of what it may do to our jobs.

Our warehouse is full of glass and our sister plant the Adamston Flat Glass is, with the exception of a small crew, shut down for a lack of orders. Prospects for improvement in the glass industry are very dim at this time.

Other manufacturers of window and plate glass are also affected by the importation of glass. Hundreds of men have been laid off in Ohio, Pennsylvania, Oklahoma, and Arkansas.

You can readily see why we are so concerned. The importation of glass has risen from 53,000 boxes in 1950 to over 4 million boxes in 1956. This 4 million boxes is more than the combined production of Rolland, Adamston Flat, Fort Smith Glass, and the Blackfort Glass Co. in Indiana.

At one time the pottery business was fluorishing in West Virginia. There were plants in Mannington, Grafton, Paden City, and Clarksburg. Now, due to the reciprocal trade agreements, only one plant is operating in Clarksburg, and that to a limited extent.

My fellow workers and I are a little reluctant to trade our jobs for foreign good will. Are we to be sold down the river like our fellow workers in the pottery industry to save the world from communism? I hope not.

There is something the people in Clarksburg and Harrison County can do to help us save our jobs. After all, what would Clarksburg be like without our glass factories?

The House Ways and Means Committee will start hearings on the Lanham bill No. 2815, in about 2 weeks. This bill would put a quota on the importation of glass into this country, and do much to save our jobs.

The people of Clarksburg could do much to help us and help themselves by writing to members of the Ways and Means Committee urging them to act favorable on the Lanham bill. They should tell them what glass means to us here in Clarksburg and how our city depends on glass for its very existence.

I wonder if our chamber of commerce and other civic organizations are mindful of what is slowly happening to our glass industries. They could be of help too.

There are 25 Congressmen on the Ways and Means Committee. I am listing some of them in the hope that some of your readers may write to them.

The address is: The Ways and Means Committee, House of Representatives, Washington 25, D. C.

The names of the members are: JERE COOPER (Indiana), WILBUR C. MILLS (Arkansas), HERMAN P. EBERHARTER (Pennsylvania), HALE BOGGS (Louisiana), NOBLE J. GREGORY (Kentucky), AIME J. FORAND (Rhode Island), CECIL R. KING (California), THOMAS J. O'BRIEN (Illinois), EUGENE J. KEOGH (New York), BURR P. HARRISON (Virginia), FRANK M. KARSTEN (Missouri).

We glassworkers at the Rolland Glass Co. will be grateful if you publish this letter.

Sincerely,

CARL LEJEUNE.

National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present a report which I, as President of the National Rivers and Harbors Congress, made to the 44th annual convention held in the Mayflower Hotel, Washington, D. C., on May 18, 1957. It is as follows:

REPORT OF THE PRESIDENT, REPRESENTATIVE OVERTON BROOKS, OF LOUISIANA, TO THE 44TH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS AT THE MAYFLOWER HOTEL, WASHINGTON, D. C., MAY 18, 1957

Ladies and gentlemen of the convention, it again becomes my duty to make a report concerning the activities of the Congress during the year since we last met on May 10–12, 1956, for our 43d national convention. I am happy to report that we have had another fine year marked by progress in every direction toward our goals.

Our 43d annual convention achieved a new high in enthusiasm for conservation of water resources. An outstanding event in the organization's long history of accomplishment, the gathering attracted 358 official delegates from 43 States, Hawaii, Puerto Rico, the District of Columbia, and one foreign country (Colombia, South America). In addition, there were several hundred others in attendance, guests, visitors, and representatives of the press and radio. Again Louisiana led the States in number of delegates, with 41; North Carolina was second with 30; while Ohio and Texas were tied for third place with 22 each.

The projects committee's all-day hearings opened the convention on May 10. The committee received testimony on 41 applications for approval of projects, of which it recommended for endorsement 16, estimated to cost $242,416,998. The committee put 10 projects in class II, meritorious; 6 in class III, expeditious report requested on authorized survey; 7 in class IV, survey recommended; and 2 in class V, not classified.

The resolutions committee, composed of one delegate from each State, dealt with a wide range of subjects as outlined in the agenda for the convention; gave careful consideration to each proposal; made many suggestions; and reached agreement on the committee's report which was further amended from the floor of the convention and adopted unanimously; thereby constituting the policy and program of the Congress for the ensuing year.

One other committee report attracted widespread attention, the report of the Special Committee on the Panama Canal, which devoted 2 years of intensive study to the problem and unanimously recommended construction of a sea level canal.

During the last year we have noted with growing uneasiness certain disquieting developments regarding the Panama Canal Zone. The backwash of the Suez crisis of last year has begun to lap at the shorelines of the Western Hemisphere. There has been a succession of significant events. We hear reports that elements in Panama are beginning to suggest that we share our sovereignty over the Canal Zone with them—despite the exclusive sovereignty granted the United States in perpetuity under the 1903 Treaty with Panama. Simultaneously, Soviet shortwave stations are beaming programs to Central America, demanding that the United States withdraw from the Canal Zone. And, more recently, we hear suggestions by a few misguided Americans urging us to turn over operation of the canal to the United Nations. The idea is that we would thus dramatize our good faith of last year, at the height of the Suez crisis when we suggested that all the world's key waterways be internationalized.

In the light of such developments, your president issued a statement through the National Rivers and Harbors Congress on April 28, warning that "we will have trouble in our own backyard if we fail to exercise the most skilled diplomacy." The NRHC has had a traditional and almost godfatherly interest in the Panama Canal project since its inception.

The United States has no territorial ambitions. At the same time, it has no intention of turning over one of its main assets to the United Nations in exchange for a mere pat on the back. I trust we have not become that softheaded.

Passage by the House of Representatives on May 22, 1956, of the civil works appropriations bill for 1957 was a fitting climax for our 43d national convention. The bill as reported by the House Appropriations Committee on May 21 carried a total of $787,453,000, a cut of only $26,000 in the budget estimates for the Army's civil functions (river and harbor improvement, flood control, shore protection, multipurpose projects, etc.) as contrasted with the reduction of nearly $60 million the committee recommended in these appropriations in the previous year.

When the bill was taken up on the House floor the next day, the chairman of the committee referred to the effort made the preceding year when Vice Chairman Simpson and I called a meeting of our colleagues to discuss the very drastic cuts made by the committee in the budget estimates, and said, in part: "Here we have a bill giving something to everybody. And I voted for it. A year ago we thought we had a very reasonable bill. * * * But the boys held a little caucus over it in the caucus room in the Old House Building. Both sides of the aisle got

together and they agreed * * * and they came over here and ran over us like a bunch of wild steers. You knew, 2 or 3 experiences are enough. So I am going to 'jine 'em'—I am going to vote with them today."

Whereupon the House added $460,000 for 2 projects and took out $25,000 for 1, rejected a motion to recommit the bill, and sent it to the Senate. On May 28, 1956, accompanied by Representative PAUL G. ROGERS, of Florida, resolutions committee chairman at our 43d convention, and the executive vice president, William H. Webb, I appeared before the Public Works Appropriations Subcommittee of the Senate. The bill as finally approved carried a total of $856,727,000, an increase of $38,226,000 over the amount recommended by the budget and $65,969,000 more than was allowed by the House of Representatives.

The bill's total of $635,012,500 for the Army engineers' public-works program was the second largest amount ever made available for a single year, being exceeded only by $4,739,690 in the 1950 fiscal year. Construction of 235 individual projects and planning of 98 were provided $446,387,500 and $9,562,000, respectively, these projects being located in 46 States, Alaska, Hawaii, the District of Columbia, and the Virgin Islands. They included 121 continuing projects and 114 new starts and resumptions.

Representative Rogers, Mr. Webb, and I made our second appearance before the full Committee on Public Works of the House of Representatives and presented our resolutions and projects committee's reports. On July 7, 1956, that committee reported favorably an omnibus flood control and rivers and harbors bill authorizing $80,604,000 for 29 navigation and 7 beach-erosion projects, and $1,263,267,000 for flood control and multiple-purpose projects in 21 river basins throughout the United States and in Alaska. Subsequently, the bill was passed by the Senate after the Public Works Committee of that body had added numerous projects, but it met with a veto by President Eisenhower because it included projects which had not been through all the processes of engineering reports and studies as now prescribed by law.

On June 27, 1956, both House and Senate agreed to a conference report on the bill to strengthen and extend the Water Pollution Control Act and authorize grants of $50 million per year to States, municipalities, etc., for the construction of sewage-treatment works, and the bill was approved by the President on July 9.

Also, on July 5, 1956, the Senate agreed to the House amendments to the bill authorizing $10 million per year for small flood-control projects and increasing to $400,000 the limitation for any individual project, and on July 11 President Eisenhower signed it into law.

Fourteen national directors attended the board meeting immediately after adjournment of our 43d national convention; reelected all national officers; authorized the president to appoint an executive committee of not less than 5 members, in addition to the budget committee; agreed to meet semiannually; and pledged cooperation with the national officers to increase the membership of the congress and thereby its effectiveness.

Efforts by the national headquarters office to increase the number of active, contributing Members of the Congress have continued throughout the year with marked success. Also, during the latter part of last summer and early fall, our treasurer, William G. Zetzmann, of New Orleans, organized a membership campaign in that city by selecting a small membership committee and corresponding with a number of firms, corporations, organizations, and individuals who it was believed would be interested in affiliating with the Congress and sharing in its work. Mr. Zetzmann will report to you a little later on this morning's program on this fine job which he and his associates in New Orleans did, and as you listen to him, I hope every one here will give consideration to doing a similar job in his own city and community. Only by this means can we expect to enlarge our membership and thereby equip ourselves with the necessary sinews to do the job that more and more is expected of our organization.

Today we detect a marked improvement in the public's attitude toward water development programs. The public seems more favorably disposed toward appropriations and authorizations for flood control and harbor projects.

Formerly, efforts were made to ridicule them out of Congress by using such terms as "pork barrel," "log-rolling," and "boondoggling." It tried to make the public believe that it was somehow wasteful and prodigal to spend money for flood prevention projects. Floods were frequently shrugged off as natural catastrophes. Somehow, it was supposed to be a divine virtue to endure them stoically. Of course, this was a comfortable and contented philosophy as long as the weather remained normal and favorable—and polite.

Within our lifetime it has taken about a half a dozen major catastrophes to bring those who were brain-washed back to their senses. There was the great Mississippi River flood of 1928; the Ohio River floods of 1936 and 1937; and more recently floods in California, the Connecticut Valley and in the Southwest. In addition, there was a series of vicious hurricanes that harassed the eastern seaboard and Gulf of Mexico areas.

Prodded by these catastrophes, we have made a sound beginning on a nationwide flood control program during the last two decades. Today, more than 400 flood control projects have been placed in full or partial operation. We have now accumulated sufficient statistics and experience with these projects to prove beyond a reasonable doubt that they have already justified their existence many times over.

The House Public Works Committee last month published a staff study showing the amount of damages estimated to have been prevented by existing projects. You should have a copy of that report: Costs and Benefits of the Flood Control Program. One table, based on figures supplied by the United States Army engineers, gives flood prevention figures for the 391 Federal projects in full or partial operation as of June 30, 1954. Over an average operational period of 11 years these 391 structures saved $7.3 billion. This is already twice the total amount spent for their construction. Assuming an economic life of 50 years, these projects will ultimately provide annual benefits of more than 3 times the annual charge for everything—amortization, interest, maintenance, and operation. These dollar-and-cent benefits do not take into account all the lives that otherwise would have been lost. Nor do they reflect such secondary satisfactions as wearing dry shoes, having dry basements, and keeping the mud off the living room carpet.

The National Rivers and Harbors Congress has just compiled similar figures showing flood savings during the past 12 months. In that period, the Nation has experienced floods in five areas: The lower Mississippi; the Ohio River Valley of Kentucky, Tennessee, Virginia, and West Virginia; the Tennessee River Valley; the Pacific Northwest; and more recently in the Texas-Louisiana area. Our survey, based on official figures, shows that existing Federal projects have prevented damages of from $230 to $280 million during the last year. (In my judgment, these figures are on the conservative side.) These savings represent more than one-third of the $635 million requested in the pending budget for projects all over the country during the next fiscal year.

Congressional committees are now holding hearings on flood control and harbor bills. Many of you have made appearances. In the light of proven savings, as shown by the figures I have just cited, we can make an affirmative presentation. The Nation's water development program has entered the payoff period. We should take advantage of this fact by emphasizing all the more the benefits that are accruing each year through the prevention of floods.

With this sort of approach I am confident that we will find due consideration given to our case on Capitol Hill. In its commendable efforts to economize, I do not believe that Congress will penalize the flood and harbor program, because the program is now making such an impressive showing of tangible savings. These demonstrated savings represent economy in the true and wisest sense of the word.

At our last year's convention it developed that there was considerable interest in the study programs which are underway in various Government agencies dealing with the conservation, development, and use of our national water and land resources. Consequently, in an effort to assemble the data concerning these programs I addressed a questionnaire comprising 18 topics to the heads of 39 Federal agencies concerned with various phases of water and soil resource development and control. The more important replies when received were included in an extension of my remarks in the CONGRESSIONAL RECORD, and widespread distribution was given to this report.

The questionnaire, which was answered by 40 Federal agencies, revealed how many facets of the water problem have interested the Government. Research and experimental programs are going on in the fields of hurricane and tornado reporting, artificial rainmaking, conversion of salt water, long-range weather forecasting, nuclear fallout, industrial water supply and the reuse of water, stream pollution, atomic power as a new source of energy, atomic-propelled merchant ships, weather observations in the Arctic and Antarctic, and the declining water level.

Many of these programs are in the laboratory or pilot plant stage, but sufficient funds should be appropriated to continue and expand them. They are already contributing much toward the success of the older Federal water programs—flood control and harbor improvement, power development, and irrigation and reclamation. There is no way of telling when one of these obscure experimental programs will produce some revolutionary result that will alter our whole approach toward the important water problem.

On June 30, 1956, a simultaneous meeting of the Executive and Budget Committees was held in Washington, attended by all of the members. The Budget Committee approved a budget for the year ending June 30, 1957, which was ratified by the Executive Committee, based on anticipated income of approximately $30,000. This was approximately the gross receipts for the calendar year 1956, which has heretofore been the fiscal year of the Congress, so we see that we still have to increase our efforts to reach the goal of $50,000 fixed by our board of directors as our annual budget.

On March 28 of this year a dinner meeting was held in the National Press Club in Washington, to which were invited the officers, directors, and members of the Rivers and Harbors Committee of the Washington Board of Trade. This meeting was attended by about 40 persons and indicated a very real and definite interest in our program on the part of the business people in the Nation's Capital. Following this meeting, Mr. Graydon F. Smart, of Shreveport, La., at my request, spent a week calling upon prospective members in the District of Columbia,

and the indications are that our membership roster will be increased by a goodly number of local firms and corporations. Eventually we hope to expand this membership campaign to other areas throughout the United States, with the assistance and cooperation of our national and regional directors and State vice presidents.

A liberal platform plank on river and harbor development was submitted to the resolutions committees of the Democratic and Republican National Conventions; in the latter case, by the splendid cooperation of the Honorable Herbert G. West of the Inland Empire Waterways Association, who journeyed to San Francisco at his own expense and presented our proposed platform plank in person to the public works subcommittee of the Republican National Convention's resolutions committee. Both platforms adopted by the national conventions of the major political parties last August, and the campaign pledges subsequently made, promised vigorous action on this program. The year 1957, therefore, it has been said, should be "the year of fulfillment" in our long campaign for adequate control of the destructive floodwaters, and the conservation and development of our water and land resources.

This year, I have appointed two special committees to deal with particular phases of water resource development, and to give us the benefit of their views and recommendations as to the best method to pursue to reach our goals. I refer to the Committee on Irrigation and Reclamation, under the chairmanship of Representative A. L. MILLER, of Nebraska; and the Committee on Water Conservation and Pollution Abatement, chaired by Representative JOHN A. BLATNIK, of Minnesota. I am sure we shall all look forward with keen anticipation to the reports of these two committees this afternoon.

And now, in closing this report on the activities of our Congress during the past year, may I express my gratitude to the many hundreds of individuals who have cooperated with us in advancing our program, not the least of whom have been the members of our advisory committees for the respective States and congressional districts. These outstanding citizens, devoted to the public welfare, have all been recommended by their Senators and Congressmen as being able, ready, and willing to work with us, and we have been most fortunate to have had their assistance in carrying on our activities. We shall look forward to a continuance of their efforts, and in return, we pledge the best endeavors of our national headquarters office, as well as our regional and State offices, to carrying forward this great program for the sound and orderly development of our national water and land resources.

Taxation of Cooperatives

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. ROOSEVELT. Mr. Speaker, the pressure against cooperatives and in favor of the taxation of cooperatives has led to a further rather interesting exchange which I believe will do much to clear away the confusion which often arises from accusations which, for one reason or another, remain unanswered.

Therefore, as requested by Mr. Leonard J. Calhoun, I am inserting in the RECORD his letter and the reply thereto submitted by Mr. Jerry Voorhis, executive director of the Cooperative League of the United States of America:

PUBLIC INFORMATION COMMITTEE
OF THE COTTON INDUSTRIES,
Washington, D. C., April 29, 1957.

Hon. JAMES ROOSEVELT,
The House of Representatives,
Washington, D. C.

DEAR SIR: In a letter from Mr. Jerry Voorhis dated April 8, which you inserted in the CONGRESSIONAL RECORD of April 18, he makes a series of statements respecting taxation of cooperatives and concludes by stating:

"Maybe you have some questions to ask us. If so, feel free to do so. We will gladly give you all the facts in as much detail as you desire about the tax status of cooperative business."

His key statement is:

"Revenue Act amendments passed in 1951 finished the job of putting co-ops and profit corporations on essentially the same tax basis. The point these letters to Congress attacking cooperatives don't make is that co-ops return to customers according to their purchases what the corporations can accumulate as profits."

You may wish to ask Mr. Voorhis to explain the income-tax treatment of co-ops on earnings actually kept by the co-op and merely allocated to members. An example is afforded by a letter of advice in our possession which states:

"This is to inform you that $100.98 has been allocated to you from the net savings of the association for the year ending June 30, 1954. The allocated reserves, like the capital stock, provide the funds which pay for the bricks and mortar, trucks, and equipment, that make possible the operation of the business. Since the allocated reserves are invested in such facilities, it is not expected that they will be paid to our members in cash within the foreseeable future. We have been advised by our lawyers that under the existing circumstances, according to a tax court decision, the amount specified above as your allocated reserves will not be taxable to you at this time."

This, obviously, is not a situation where the co-op (to quote from Mr. Voorhis) "returns to customers * * * what the corporations can accumulate."

Instead, it is a situation where the patron has received nothing but a letter which the courts properly have held is not income, yet the co-op keeps the earnings referred to in the letter tax free.

You may also wish to ask him whether his conclusions that co-ops and ordinary corporations are "on essentially the same tax basis" under the 1951 law, which makes deductible to co-ops covered thereby:

"(A) Amounts paid as dividends on * * * capital stock; and

"(B) Amounts allocated during the taxable year to patrons * * *(whether paid in cash * * * certificates, or letters of advice, or in some other manner that discloses to each patron the dollar amount allocated to him."

Is Mr. Voorhis willing for co-ops to be put on essentially the same tax basis as ordinary corporations? Is he willing to have co-ops taxed when, like other corporations they issue capital stock and pay dividends on this stock? Is he willing to give them special tax treatment only to the extent they actually distribute current earnings on a patronage basis?

If you would secure and publish in the CONGRESSIONAL RECORD Mr. Voorhis' answers to these questions it might go a long way toward clarifying the co-op tax issue.

I should appreciate very much your own views as to limiting special tax treatment to rebates actually paid customers.

Very sincerely,

LEONARD J. CALHOUN.

THE COOPERATIVE LEAGUE
OF THE U. S. A.,
Chicago, Ill., May 20, 1957.

Hon. JAMES ROOSEVELT,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: You have been kind enough to pass on to me a copy of the letter from Mr. Leonard J. Calhoun, of the Public Information Committee of the Cotton Industries. Mr. Calhoun's letter is directed as much to me as it is to you and therefore perhaps some comment on my part is in order.

I would assume that Mr. Calhoun would not advocate that a corporation should be subject to income tax on money which is invested in its capital stock. Corporations have access to the capital markets of the country where they are able to sell their capital stock. Cooperatives do not. Cooperatives must raise their basic capital from their members, most of whom are people of no great financial resources. The onetime cooperatives have a real chance to secure investment is at the time they pay their patronage refunds to their patrons. Cooperative patrons in many instances agree to an investment of their own money, which they receive in patronage refunds, in capital stock or some other form of ownership in the facilities of their cooperative. It is true this investment is somewhat different in form, but it is not at all different in substance from what happens when a person buys stock in a corporation. Any reasonable concept of tax equity would have to hold that the cooperative should no more be taxed on investment in its stock than should a corporation.

It has been the belief of cooperative leaders in general ever since the 1951 Revenue Act was passed that cooperative patrons were taxable on patronage refunds received by them in whatever form paid at the time of payment provided that those refunds affected the business income of those patrons.

When Mr. Calhoun says that the patron has received nothing but a letter and that the courts have properly held that this is not income, this is a matter of opinion, certainly. It is my strong suspicion that the real reason that Mr. Calhoun argues as he does against noncash patronage refunds is because, for obvious reasons, he and his organization would much prefer that all patronage refunds be paid in cash in order that cooperatives might be starved for investment money and thus rendered unable to keep up with their competitors in improvement of facilities and services.

The question may well be asked, however, whether a farmer, for example, is better off to receive a hundred dollars in cash than he is to receive a hundred-dollar ownership interest in a fertilizer plant which can assure him of high-quality, open-formula fertilizer throughout his entire lifetime at cost to him.

Mr. Calhoun's next point refers to the fact that certain agricultural cooperatives, which are strictly regulated by the law as to their methods of operation, whose rate of dividend payments on capital stock is limited by law, and which are required to pay patronage refunds to nonmembers as well as to members are not at present double taxed on dividend payments to stockholders. This is all that remains of the longstanding policy of Congress to encourage farmers to attack directly their problems and the problems of American agriculture by forming cooperatives for that purpose rather than relying on governmental programs. Opinion among

cooperatives is divided as to the question of a continuance of this particular provision. Some believe it is wholly justified as a means of encouraging the cooperative method of solving farmers' problems and is preferable to other methods. Others believe that this provision is of little value and that it should be changed. Except for this particular group of agricultural cooperatives, cooperatives are now on essentially the same tax basis as ordinary corporations.

Certainly, we are willing to have co-ops taxed like other corporations and to the extent that other corporations are taxed. But I would point out again in this connection that no corporation is taxed on patronage refunds paid out by it and that so far as investment in their capital stock is concerned no corporation is taxed on such investment, and neither should cooperatives be.

In answer to Mr. Calhoun's question, we certainly are willing to say that only when a co-op distributes into the ownership of patrons the current net margins on a patronage basis should there be any excludability for tax purposes. This, however, is exactly what the present situation is, and it is the reason why I said in my former letter to you that Revenue Act amendments passed in 1951 finished the job of putting cooperatives and profit corporations on essentially the same tax basis.

Sincerely yours,

JERRY VOORHIS,
Executive Director.

Dedication of the New Eberhard Faber Pencil Co. Plant at Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. FLOOD. Mr. Speaker, I rise to call attention briefly to a subject that is constantly in the thinking of all Members of the Congress.

My reference is broadly to the industrial development of our respective States and, in turn, to their respective areas.

A gracious Heaven has richly endowed this land of ours with endless bounty. There is within our borders an abundance of natural resources for satisfying all of man's ever-growing wants. These blessings have attracted to us from less-favored lands the most vigorous and most enterprising, who have here found the opportunities they needed to achieve fulfillment and complete personal dignity.

Adapting their natural talents and skills to the new land, they have been largely instrumental in building an awe-inspiring American industry, to which no goal seems impossible and most goals seem relatively simpl..

We cannot yet be too proud. We have built only with what a benevolent God has given us, and much remains to be built before maximum opportunity is available to all.

But we can take pride in this: That in those areas where Nature has withheld some of her favor, we have not been frustrated by a lack of natural resources. The Nation has forged a great and efficient system of distribution which has freed many industries from the paralyzing necessity of proximity to its sources of supply. Industry has thus become more flexible and can give more attention to other factors.

The abundance of these advantages offered by the Commonwealth of Pennsylvania is pointed up by a symbolic event that will occur there on Wednesday, June 19, 1957. On that day, on a mountaintop overlooking the city of Wilkes-Barre, one of the Nation's oldest yet most enterprising industries is dedicating its new factory. For both that industry, the Eberhard Faber Pencil Co., and for the area, the event opens also a new era.

It is no paradox that the Nation's oldest manufacturer of quality writing instruments is the creator of the world's newest and most advanced facility for such manufacture.

The spirit of enterprise and progress is a young spirit and is kept always green by an unflagging faith in the future of this Nation. For 108 years this spirit has been kept brightly burnished by the descendants of the first Eberhard Faber. They have always chosen as their associates men of like vision and youthful spirit.

Nor is it strange that they selected the Wilkes-Barre area for their principal factory and world headquarters. In this area repose the skills and the talents which Eberhard Faber requires above all else to sustain its enterprise and to broaden further its world markets.

From ships that have crossed oceans, from remote forests, and from farflung mines come the raw materials that are blended and welded by men into the writing tools they must have for the earliest expression of their ideas and for the communication of these ideas to others. Indeed, graphite, which men use to lubricate their wonderful machines, is here enclosed within a simple pencil to serve an even more important purpose, that of lubricating the flow of thought from man to man, from nation to nation.

From Wilkes-Barre, which now becomes truly the pencil capital of the world, these basic implements will move speedily out on glistening rails, over white concrete highways, and along the fast-flowing streams of the air above, to all corners of the globe.

For here, all these efficient means of communication are at hand.

It should be instructive to all other parts of this Nation which can accommodate industry, and which require it to sustain and develop the standard of living of their citizens, that the massive decision to relocate in Wilkes-Barre did not occur to Eberhard Faber spontaneously.

It was enterprise and zeal and abundant faith and local pride of a very practical kind that led to the decision. Working together, the Wilkes-Barre Chamber of Commerce, the Wilkes-Barre Industrial Fund, and the Committee of One Hundred, later given unstinting aid by the Pennsylvania Industrial Development Commission, took the initiative.

For Eberhard Faber, the removal means not only an opportunity to acquire newer and more modern production facilities. It means also new room for future growth. To the locality mainly affected, it means more jobs, better jobs, the use of its people at their highest skills, and thus greater prosperity and happiness.

There is another lesson here for industry-starved areas of our country. In their desperate efforts to attract industries, local sponsors sometimes lose sight of the stability of an industry in prospect. It must be sound in structure and in management, however small it may also be. Its primary advantage to the area must be that it will create employment, but this employment should bring solid and lasting benefits to those who take it.

The character of management should therefore be weighed carefully, lest a new industry bring with it more chaos than benefit.

In the arrival of the Eberhard Faber Pencil Co., the Wilkes-Barre area has taken a clear, long step forward in its progress. In making the move, the community-conscious Eberhard Faber people have shown American industry that no business is limited by rigid frontiers.

They have shown that expansion and progress are up to men, and that men of sagacity and vision can effectively control their own destinies, subject only to the will of their Creator.

Indeed, American communities and American industry can learn much from this happy wedding of Eberhard Faber and Wilkes-Barre. From this union will come gladness to the community, to industry, and to the Nation itself.

Tax Subsidies to the Private Utility Companies

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. EVINS. Mr. Speaker, several days ago I addressed the House on the subject of the TVA and in the course of my remarks I mentioned the tax amortization certificates private utilities had received and the tax relief and subsidy they have thereby enjoyed. Several members have spoken to me concerning the need for additional information on the subsidies enjoyed by private utilities in their States. Having obtained a list of subsidy certificates, interest free loans and other benefits to private electric companies, I ask unanimous consent to have reproduced these tables of grants and favoritism in the appendix of the RECORD.

These tables were obtained from the Power Facts Handbook prepared by Paul Nelson and Clay Cockran and published by the National Rural Electric Cooperative Association. The following comments may increase the value of those tables.

A tax certificate permits the recipient to amortize his capital investment in 5 years instead of the much longer period

provided by conventional practice. The actual life of power projects is normally considered to range from 25 to 50 years. On a $2 million powerplant construction—with a 50-percent or $1 million tax certificate grant—the company would be permitted to depreciate $200,000 a year instead of $20,000 each year under normal procedure. Assuming that the company was already in the 52-percent bracket—as most of them would be—the tax saving, as compared to what it would have had to pay if it had followed the 50-year depreciation pattern, would amount to $93,600 per year. Over the 5-year period the total saving would be $468,000. So that during the 5 years the company enjoyed rapid amortization it would pay a total of $468,000 less in taxes than under normal depreciation procedures—the private utility company also would have the benefit of using the funds represented by the tax saving and therefore the total tax relief amounts to an interest-free loan from the Government.

The first of the following tables presents the picture for the 48 States; the second for most major power companies in the United States. The first column gives the amount of tax certificates obtained, the second the amount of tax relief these certificates have or will yield or, to put it another way, the interest-free loan they have thereby received; and the final table gives the total subsidy from these grants.

I certainly agree with Senator BYRD who said in a report on these rapid amortization scandals that they clearly and obviously represent a subsidy to the private utilities—a subsidy that should be discontinued.

It is easy to see how these beneficiaries of clear and measurable dollar and cents subsidies can spend millions of dollars in magazine and newspaper advertisements trying to give the impression that public-power projects like the TVA, Bonneville Power Administration, the REA co-ops, and others, enjoy what the private electric companies call subsidies—they should know. I might point out also that the next time we see one of these propaganda ads asking "Where do your taxes go?" that these tables will provide one very clear and incontrovertible answer—to subsidies, in the form of fast tax writeoffs, interest-free loans, and favoritism to the private utilities.

The tables follow:

TABLE I.—*Estimated value of accelerated depreciation certificates, interest-free loans, and other subsidy benefits to private electric companies from June 9, 1951, through July 11, 1956*

[Application under the electric power goal was suspended on Dec. 3, 1953, reopened in April 1955 and closed again on Jan. 1, 1956]

Senator Martin Speaks on Flood Control

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present an address delivered by the Honorable EDWARD MARTIN, United States Senator from Pennsylvania, before the fifth annual convention of the National Rivers and Harbors Congress held in Washington, D. C., on Friday, May 17, 1957:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE 44TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS AT WASHINGTON, D. C., FRIDAY MORNING, MAY 17, 1957

Mr. Chairman and my fellow Americans, I am highly honored by your invitation to address this important meeting.

Your organization is outstanding in its devotion to a great and patriotic purpose. With each passing year the objectives to which you are dedicated grow increasingly important.

The economic well-being of our country, the expansion of our industrial production, the growth of our commerce, the prosperity of our people and the defensive strength of our Nation are becoming more and more dependent upon the development of our water resources.

This covers a broad area and I cannot praise too highly the distinguished public service which your organization has contributed in the national interest.

The subject assigned to me for discussion today is the River and Harbor Flood Control Act of 1957. But first I would like to make some observations of a more general nature relative to the situation in our country today.

We are in a period when spending by Government has become a matter of deep concern to a large part of our population. Never before in my experience has the average American been more seriously alarmed over the high cost of government and the heavy burden of taxes.

In every section of the country there has developed a demand for economy, for reduced spending and for lower taxes.

That, my fellow Americans, is a good sign. It reflects a growing and more widespread interest in the affairs of government. It is good for the United States when more and more people question the wisdom and the safety of expenditures that take one-third of the earnings of everyone who works for a living. That applies to the taxes imposed by the three levels of government—Federal, State, and local.

It is good for the United States when the people see cause for worry in a budget which is 17 percent greater than the combined spending of 32 other countries, including all the important nations of the world except Russia.

Those of you who are familiar with my record in public life know that I have always been on the side of economy in government. I can say, without meaning to be boastful, that I have always fought against waste and extravagance at all levels of government. I have always believed that the sound principles of business efficiency and economy should be applied to the conduct of governmental affairs.

As a member of the Senate Public Works Committee and as a former chairman of that committee, I can tell you that sound business principles, taking into account all the economic and engineering factors, have been applied to every navigation project and every flood-control project that has come before us for authorization.

We have looked upon these projects as investments in the future of the United States—investments that have paid big dividends in the past and will continue to do so in the future.

Every American is a stockholder in our ocean ports and in our great inland waterways. Year by year they pay generous dividends by providing low cost water transportation for commerce and industry, bringing prosperity to countless cities and towns, building up great centers of production and expanding opportunities for gainful employment for our working men and women.

Therefore we are on solid ground when we maintain that a constructive national pro-

gram that expands the usefulness of our rivers and harbors and brings real and lasting benefits to our country can never be called a waste of public funds.

On the contrary, such expenditures are sound, prudent investments in a great national asset, contributing in a large measure to our economy in peacetime and to our defensive strength in time of national emergency.

In the same way the flood-control program undertaken by the Federal Government has more than justified its cost. In the prevention of property damage it is paying off at the rate of more than $3 for every $1 invested. And that does not include the saving of lives and the security established for homes and farms in areas formerly endangered by destructive floods.

One of the most beneficial developments in connection with flood control has been the increasing emphasis on related purposes, such as hydroelectric power, conservation of water for municipal, agricultural, and industrial uses, the abatement of stream pollution, recreation and sanitary facilities.

As you are well aware, the River and Harbor-Flood Control Act of 1957 is before Congress today because the bill passed by the 84th Congress was vetoed by the President.

The President did not minimize the importance of the legislation. In his veto message, he said—and I quote:

"I believe the periodic enactment of river and harbor and flood-control legislation is an important step in the formulation of a sound Federal program for the wise development of the Nation's water resources."

In his message, the President referred to 28 projects involving about $530 million to which the Budget Bureau had found reason to object.

The bill in its present form, as approved by the Senate Public Works Committee without a dissenting vote, is essentially the same bill that was passed by the 84th Congress. Most of the projects to which exception has been taken have been reviewed on the basis of recommendations submitted to Congress by the Corps of Engineers. As stated in the report on the bill, it includes those projects which the committee considered fully justified for authorization at the present time.

A substantial majority in the Senate agreed with that view and passed the bill by a vote of 42 to 22, after rejecting two proposed amendments. One amendment sought to give the President authority to postpone $375 million of its total authorization. The other would have recommitted the bill with instructions to reduce the authorizations by not less than $350 million.

This is a good bill. It should be enacted into law without delay in order to expedite the beginning of work on urgently needed projects. But I am unable to tell you whether the Budget Bureau experts will give their approval.

That brings up a matter which should be given serious thought and careful attention. It has to do with a fundamental principle of our system of government which places exclusive control of the Federal purse within the jurisdiction of the legislative branch.

Many are wondering whether the executive branch, in the exercise of those functions assigned to the Bureau of the Budget, should be permitted to override the will of Congress.

Let me give you one example in which I am very much interested because it has great strategic importance from the standpoint of the national economy and national defense. I refer to the project for deepening the channel in the upper Delaware River. This was authorized by Congress in 1954 after thorough debate. The authorization calls for a 40-foot channel depth from Philadelphia to Trenton but the Bureau of the Budget continues to define the improvement as an "interim 35-foot channel," even though it has been clearly established that a substantial saving could be achieved by completing the improvement to 40 feet in one operation.

I hope the day will never come when Congress will weaken its legislative responsibility by surrendering any part of its powers granted by the Constitution, to the Budget Bureau or any other agency of the executive branch.

You men here know that after authorization it is necessary to go before the Appropriations Committee for funds with which to carry out the approved project. This gives an opportunity for further congressional study, so that each proposal, no matter how meritorious, is placed under strict scrutiny in relation to the whole national picture. I maintain that is a proper and exclusive legislative function and that the decisions of the Budget Bureau should never be considered as binding on the Congress of the United States.

The national program for the improvement of our rivers and harbors has been a Federal responsibility since the beginning of our Nation. As early as 1827 President John Adams in his message to Congress, referring to appropriations for waterway and other internal improvements said they may be considered, and I quote, "as treasures laid from the contributions of the present age for the benefit of posterity."

In more recent times Herbert Hoover, then Secretary of Commerce, speaking in 1927 about prudence in expenditures for the modernization of the Mississippi River system said, and I quote:

"Upon this point, we can do no better than quote the most successful statesman in economy in our national history—President Coolidge—who in his message to Congress said in referring to these very projects:

" 'Expenditure of this character is compatible with economy. It is in the nature of capital investment.' "

Again, at Louisville, on October 29, 1929, upon completion of the Ohio River project, President Hoover said:

"As a general and broad policy I favor modernizing every part of our waterways which will show economic justification in aid of our farmers and industries. * * *

"A nation makes no loss by devotion of some of its current income to the improvement of its estate. That is an obligation we owe to our children and our grandchildren. I do not measure the future of America in terms of our lifetime. God had truly blessed us with great resources. It is our duty to make them available to our people."

The Late Honorable Robert Crosser

SPEECH
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. ROONEY. Mr. Speaker, I was deeply saddened this morning to learn of the passing of our former colleague and my good friend, the Honorable Robert Crosser, of Ohio.

Bob Crosser became a Member of this House on March 4, 1913, and served for 38 years as a Representative from the city of Cleveland, Ohio. Except for a short interval he served continuously until the time of his retirement in 1954. His was a long and distinguished career. He served as a member of the Interstate and Commerce Committee since the 69th Congress and as chairman of this great committee in the 81st and 82d Congresses. He was well known for his leadership in the enactment of the Railroad Retirement Act, the Railroad Unemployment Insurance Act, and many improvements in them from time to time. He was affectionally known as "Bob" to the rail workers and millions of other workingmen and women in this country for whom he fought through his long and brilliant career.

It was my privilege to have known Bob Crosser since I first came to Congress in June 1944, and I always found him to be a kind and conscientious legislator whose chief interest was the welfare of the people of his district, his State and his adopted Nation.

His achievements are legend and all the more noteworthy when we remember the fact that for many years he suffered from a physical ailment that would have caused many another person to abandon or curtail their activities. However, his spirit and determination never diminished in his fight to carry on for his fellow man.

I have lost a good friend. I join my colleagues in extending deepest sympathy to the members of his family in their bereavement.

Massachusetts Family To "Storm" Annapolis

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, the following article gives a brief description of splendid midshipman Roger H. Rotondi, one of my West Point appointees. The fact that special privileges have been granted proves his worth. He belongs to a fine family and his lovely fiance, Jean Polke, belongs to a fine family. Jean's father has held fine State positions and he held the very important position as Administractor of Public Roads here in Washington. I am very proud of my appointee and feel sure he will make a fine naval officer:

[From the Boston Traveler of May 31, 1957]

MASSACHUSETTS FAMILY TO "STORM" ANNAPOLIS

A king-sized Winchester family will practically take over the United States Naval Academy at Annapolis next Friday.

They'll be on hand—14 strong—to cheer at the graduation of Midshipman Roger H. Rotondi.

Roger has also asked his girl friend, Jean Volpe, of Winchester, and her parents, which will boost the section to 17.

Jean is the daughter of John A. Volpe, former State public works commissioner and Federal highway administrator.

Roger is the third oldest child of Mr. and Mrs. Eugene B. Rotondi, of 224 Forest Street.

"This is the chance of a lifetime for me," says his father, a general contractor. "I

haven't been to the Academy since Roger entered."

Jean Volpe and three Rotondi girls will leave tomorrow morning.

"Jean wants to be there for a hop tomorrow night," Rotondi said.

Roger and Miss Volpe plan to become formally engaged during June week which opens tomorrow. They hope to be married after he has completed a tour of sea duty.

NAVY CUT SOME REDTAPE

The remainder of the Rotondi family will drive down in separate groups throughout next week.

"The Navy had to cut some redtape to let us go," the father says.

Navy regulations limit each midshipman graduate to seven tickets. It took special permission from the Academy's commandant to squeeze the Rotondi and Volpe families aboard.

"The graduation will be an especially big day for Roger's mother," Rotondi said.

"He saved her life once. She needed a blood transfusion—he was the only member of the family with the right type blood. I'll always remember him baring his arm for the transfusion tube."

The Rotondi children are Eugene Jr., 25; Mary, 24; Earl, 20; Albert, 19; Janet, 16; Gloria, 14; George, 12; Samuel, 11; Claudia, 9; Anna, 7; and Charles and Dianne, 4.

Midshipman Rotondi will graduate in the upper third of his class.

"He loves the sea and wants to stay in the Navy," his father says.

Roger has been assigned to duty aboard the destroyer *Purdy*, out of Newport, R. I.

He is a graduate of Winchester High School and attended Tufts University for a year.

There Is an Issue, but This Isn't It

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call to the attention of my colleagues, a recent editorial in the Harrisburg (Pa.) Patriot-News, under the caption "There Is an Issue, but This Isn't It."

The editorial deals largely with the situation in the State of Pennsylvania with particular reference to some of the arguments being used by the chamber of commerce and other opponents to the proposal that the Federal Government lend aid to assist States and local schools in building much-needed classrooms.

The editorial follows:

THERE IS AN ISSUE, BUT THIS ISN'T IT

Some articulate Pennsylvania politicians and statewide organizations are putting the blast on the proposal of President Eisenhower and the Republican and Democratic Parties for Federal aid to build schools and overcome an emergency shortage of classrooms.

They have a variety of reasons. One of them is that as one of the richer States Pennsylvania would pay more in taxes than it would get back in Federal subsidies.

Of all the reasons advanced against Federal school-building aid, this one strikes us as the least valid.

Certainly it is true that Pennsylvania as one of the wealthier States, would pay more proportionately than one of the poorer States.

If this is wrong on Federal aid to education, isn't it wrong every place and on every level of government?

If this argument is valid, the Commonwealth of Pennsylvania is dead-wrong in the way it has subsidized public schools all these years. The Commonwealth uses a formula based at least in part upon need and ability to pay. Under this formula, a poor school district gets more than a rich one.

For that matter, where all State subsidies and services are concerned, everything must be wrong. The wealthy areas of Pennsylvania long have been paying far more proportionately in taxes than the medium well-heeled or poor areas.

That's true, too, right on the municipal level. The rich wards wind up paying more taxes in any city than the poor wards.

That's true, too, in the relationship of the States to the Federal Government all along—for such things as paying for the national defense and any other program the Federal Government carries on.

There is only one valid question where Federal aid for education is concerned: Can the States and local governments build the needed classrooms, overcoming a shortage that built up in a major depression and two wars, and equally important can they build them fast enough so that this generation of schoolchildren will not suffer?

We don't think they can. That's why we are for the President's proposal.

We favor his proposal over the one offered by the Democrats, because it is based on a needs formula and would not be a subsidy distributed on the basis of a simple head count.

We are willing to accept the compromise that has been worked out between the two plans because we want to see the classrooms built right now when they are needed.

We believe, as the President set forth in presenting his Federal-aid program, that the Federal Government must do for the States and local communities what they cannot do for themselves.

We believe that the politicians and the organizations who argue in opposition by deploring that Pennsylvania as one of the wealthier States would be paying for some of the classrooms in some of the poorer States, are raising the old cry:

"There's not enough in it for me!"

We would suggest that the opponents of Federal aid for schools stick to the real issue. "There's not enough in it for me!" is neither an acceptable nor a worthy argument to raise in this controversy.

In Support of a Department of Peace

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. OSTERTAG. Mr. Speaker, I am gratified to announce that my bill, H. R. 4298, to create a Department of Peace in our National Government has recently won the endorsement of the South Wisconsin Synod of the Evangelical and Reformed Church.

Under leave to extend my remarks, I include in the RECORD the following resolution:

The South Wisconsin Synod of the Evangelical and Reformed Church, comprising 77 congregations, in regular session at West Bend, Wis., heartily endorses bill H. R. 4298, introduced in the National Congress by HAROLD C. OSTERTAG, of New York, creating a Department of Peace and a Secretary of Peace with Cabinet rank, under whom there is to be consolidated the International Cooperation Administration (ICA), the United States Educational Exchange Program, and the United States Information Agency, whose sole function shall be the advancement of peace and good will among men.

What Americans Don't Know About Russia

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the current issue of McCall's magazine, entitled "What Americans Don't Know About Russia," written by Harrison Salisbury, specialist on Soviet affairs for the New York Times, as well as a copy of House Joint Resolution 193, 84th Congress, which I introduced:

[From McCall's of June 1957]

WHAT AMERICANS DON'T KNOW ABOUT RUSSIA

(By Harrison Salisbury)

What is the capital of Russia? Thirty out of one hundred Americans don't know. What proportion of Russians are Communists? Only 1 in 20 midwesterners can give you even a rough estimate. Who runs Russia? Seven out of ten American women can't say. Two out of three of these women would turn down a free trip to Russia.

American men and women who don't know whether Russia produces more or less steel than the United States, who don't know whether Russia is bigger or smaller than the United States, who can't name three countries behind the Iron Curtain, confidently declare that we need not fear war with Russia—or insist that the Russians do not support their own government.

We Americans do not realize how big Russia really is. We can't name a Russian author or composer. We assume free love is encouraged by the Soviets.

These facts emerge as the result of a nationwide survey made by McCall's among varying age groups with different educational backgrounds. It reveals what we really know about Russia and what we think of the Soviet menace. It gives a clue as to how well we are equipped to understand the greatest issue of the 20th century—the struggle between freedom and totalitarianism. The survey, furthermore, affords dramatic backing to President Eisenhower's proposal that our schools teach the facts about communism, so that young Americans can discriminate between our way of life and that of Russia.

How well equipped are we to judge the seriousness of the Soviet threat if our information about Russia is wrong?

What decisions about our future relations with Russia are we prepared to make if many of us do not know whether the United States recognizes the U. S. S. R., whether Russia is a member of the United Nations, whether there are churches in Russia, whether there is a difference between the words "Russian" and "Communist" or whether automobiles and locomotives are manufactured in the Soviet Union?

We asked these questions:

Do you think American children should be taught the facts about communism in school? Yes, 70 percent; no, 27 percent.

Among college graduates, support for such instruction runs better than 6 to 1. As one elderly Indiana man said: "All different type of government should be taught so that children would learn that democracy is best." One of his neighbors, a woman, concurred, "* * * provided that someone teaches who understands communism."

What percent of the Russian people belong to the Communist Party?

In a population of a little more than 200 million, the Communist Party at last count had about 7,200,000 members—or approximately 3 percent. A third of those polled thought about half the Russian people were members; more than a quarter thought everybody belonged. Only 8 percent said membership was 5 percent or less.

Probably most Americans would agree with the sentiments of a young California woman who observed: "I don't know how many there are, but it's far too many." One of those who knew the correct answer pointed out that only when we know how a tiny minority of Communists rule a vast majority of Russians can we begin to understand the importance of Communist Party discipline and control—and gage how much effort it might take to shift Soviet sentiment from the side of communism to democracy.

About how long has Russia been a Communist country?

Ten years, 2 percent; 20 years, 11 percent; 25 years, 13 percent; 30 years, 25 percent; 40 years, 40 percent.

Five percent thought Russia had been Communist for more than 40 years, and a few people said this had the form of Russian Government always. Actually, this year the Soviet Government celebrates its 40th anniversary.

What is the capital of Russia?

Moscow, 71 percent; Stalingrad, 5 percent; Leningrad, 4 percent.

One out of 5 college graduates missed the correct answer. Moscow. Of those who had not been to high school, 46 percent did not know. Among the cities they guessed were Warsaw, St. Petersburg, Petrograd, and 1 person said Budapest.

Give the name of the first Russian composer that comes to your mind.

Tchaikovsky, 16 percent; Rimski-Korsakov, 4 percent; Shostakovich, 2 percent; Rachmaninoff, 2 percent.

More than 7 out of 10 frankly admitted they didn't know any, and several named composers who were not Russian at all. The percentage of don't knows ran above 90 among grade-school graduates.

Does the government own all industry in Russia?

The answer to the question is "Yes," but nearly half of us are not aware of this. One-third of those asked thought that the Russian government owned most industry; and 2 percent answered "none at all."

Can you name a Russian author?

Tolstoi, 18 percent; Lenin, 4 percent; Dostoevski, 2 percent; Marx, 2 percent; Stalin, 1 percent; Chekhov, 1 percent.

Those who "don't remember any" run to 68 percent, and that figure would be over 70 percent if it is noted that Lenin, Stalin, and Marx (a German) were primarily political personalities.

If the situation were reversed—if we were told that 7 out of 10 Russians could name neither an American composer nor an American author—we might conclude that Russians were very poorly educated.

Who is head of the Russian government? An acceptable answer would be either Khrushchev or Bulganin. More than half of those polled simply said they didn't know; in the South and Midwest the "don't knows" totaled two-thirds. Only 1 out of 4 grade-graduates would hazard a guess. A Brooklyn woman said (with considerable accuracy), "A group of men." And a Pennsylvanian thoughtfully remarked, "That's open to question."

Is Russia larger or smaller than the United States?

Russia larger, 80 percent; United States larger, 8 percent; both about the same, 9 percent.

Among grade-school graduates, a third believe the United States is larger than the U. S. S. R. or the same size, and 1 in 4 southerners and midwesterners think the same thing. The fact, of course, is that Russia's land area is roughly equal to a sixth of the world's surface—almost three times the size of the continental United States.

Are there any free public schools in Russia? Yes, 39 percent; no, 50 percent.

"They have schools for the chosen," said a woman from Kansas. The truth is that Russia has universal free public education, and American leaders, as well as the Russians themselves, believe that education (their kind, at least) is a main source of their strength.

DIVORCE, ABORTION, AND FREE LOVE

Is it easy to get a divorce or an abortion in Russia? Half of us think it is easy, and half of us think it is hard. A majority of northeasterners say it is easy; a majority of southerners say it's hard. "They want babies," said a Kansas woman. And an Indiana housewife said, "They are trying to populate the earth." Actually, during the early days of the Revolution, getting a divorce or an abortion was no problem. But this has not been true for many years.

Is free love encouraged by the Russian Government? In every part of the country, this picturesque fiction (which was never true) is still believed. Only in the West did less than half answer this question "yes." The fact is that the Communist Party line is vigorously moral. One of the most provocative answers to this question came from the Midwest: "Do they believe in love at all?"

Are there any Christian churches in Russia? Two out of five Americans say no, and in the Midwest and South a majority believe there are no churches at all in Russia. "The church as we know it has been wiped out," said an Alabama woman. A Kansas man said there still were churches, "but the government doesn't know it." Actually, about half of Soviet citizens worship in churches of their choice.

Are the Russian people in favor of their system? Yes, 28 percent; don't know, 4 percent; no, 68 percent.

Probably the most nearly right answer to this question was given by a women in Nebraska: "Who is to know?"

Does the United States recognize Russia? Yes, 90 percent; no, 7 percent.

We have had diplomatic relations with the U. S. S. R. for 24 years.

Is Russia a member of the U. N.? Yes, 88 percent; no, 9 percent.

Despite Russian vetoes, Russian walkouts, 1 in 4 grammar-school graduates is unaware that the U. S. S. R. has been a member of the U. N. for 10 years.

Should we have fought on the side of Russia or Germany in World War II? Russia, 54 percent; Germany, 10 percent; neither, 31 percent.

A Midwesterner's comment on this: "We did the right thing. It was the devil or the deep blue sea."

Is Russia preparing to attack us within 2 years? Yes, 32 percent; no, 63 percent.

Confidence on this question is less in the Midwest, is greater among those with a college education. Many who were interviewed agreed with a Westerner who said: "It's coming some time. I don't know when."

Does Russia fear we will attack her? Yes, 29 percent; no, 68 percent.

The remarkable feature of this answer, and the one before it, is the small proportion of people interviewed who admitted they didn't know—5 percent on the question of Russia's preparing to attack us; 3 percent on the question of their fear of attack by us. "No one fears the United States," commented an Indiana man.

If Russia attacked France or Britain, should the United States fight? Yes, 62 percent; no, 34 percent.

"It's a matter of self-preservation," said a Bostonian.

Name three countries behind the Iron Curtain.

Two-thirds of those questioned named Hungary, almost that many mentioned Poland, and a third said Czechoslovakia. Few could suggest any other countries, and some listed nations which do not properly belong in the category, such as Austria, Western Germany and Yugoslavia. A surprising 11 percent could not remember any.

Should the United States give military aid to countries revolting against Russia? Yes, 51 percent; no, 44 percent.

The majority in favor disappeared in the West, in medium-sized and larger cities, among age groups over 35, and among college graduates. Aid to countries revolting against Russia was favored most strongly by young people.

A Kansas man said: "A small amount is O. K., but we never know where to stop." And a Rhode Islander observed that aid to the satellites "would mean war."

Do you think the American democratic system and the Russian Communist system can ever exist together peacefully in this world? Yes, 29 percent; no, 69 percent.

On this, as on many other questions, women were more skeptical than men. College graduates were more optimistic than those with less schooling. And northeasterners are much less pessimistic than midwesterners.

Since Stalin's death, would you say that relations between the United States and Russia have improved, gotten worse, or are about the same? Improved, 25 percent; gotten worse, 17 percent; about the same, 57 percent.

Those who thought the situation had improved were largely young people, university graduates, and big-city residents. But many more concurred with a midwesterner, who said: "It's gone both ways. For a while it was better, but now it's worse."

Should the United States and Russia settle their problems directly or through the U. N.? Directly with each other, 23 percent; through the U. N., 75 percent.

Strongest backing for the U. N. method came from the supposedly isolationist Central States.

Which of these is the biggest obstacle to friendship between the United States and U. S. S. R.? Communist way of life, 37 percent; Russian determination to overthrow capitalism, 27 percent; competition for world power, 18 percent; inability of Russians to understand United States intentions, 12 percent; subversive plots by United States Communists, 3 percent; difficulty of Russian language, 1 percent; some gave more than one answer.

These statements were submitted to the people who were polled, and they were asked to tell whether they were true or false:

1. Russia has more coal than the United States.

2. Russian oil production is rising faster than ours.

3. Russia makes as much steel as the United States of America.

4. Russia makes her own automobiles and locomotives.

All of these are true except the third, about steel production. But a majority of

us believe that we have more coal than Russia and that our oil production is rising faster. A large minority (one-third of those polled in the South) does not know that Russia manufactures automobiles and locomotives. Almost a quarter of us believe that Russia makes as much steel as we do (actual production is about 40 percent of the United States total).

What sort of people do we think the Russians are?

Those questioned were given two lists of character traits—one good and one bad—and were asked to check those which applied to the Russians. Leading the list of good traits were: ability to endure great hardship, ability at sports, capacity for sacrifice, scientific genius, patriotism, artistic talent, warmth, and hospitality.

Bad traits in the order of choice were: brutality, atheism, unpredictability, insistence on having their own way, overwhelming ambitions, and treacherousness.

Hardly any one said the Russians had no good characteristics. A frequent comment about the bad list ran something like this: None applies to the people, but all apply to the Government. Or, as a Warwick, Ga., man said: "I can't truthfully answer, as we do not know too much about the people. Most of our knowledge is of the Government heads.

HOW THE M'CALL'S SURVEY WAS MADE

A representative cross section of 500 men and 500 women was personally interviewed in a sample designed to parallel the distribution of the population of the country by sex, geographic area, education, and city size. The method of polling was worked out by A. S. Bennett-Cy Chaikin, Inc., 65 East 55th Street, New York, N. Y., and that company made the poll.

House Joint Resolution 193, 84th Congress

Joint resolution to provide for a Commission to make available information as to the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic communism

Resolved, etc.—

ESTABLISHMENT OF THE COMMISSION

Section 1. (a) There is hereby established a Commission to be known as the Commission to make available information as to the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic communism (in this joint resolution referred to as the "Commission").

(b) The Commission shall be composed of 11 members as follows:

(1) Two Members from the Senate of the United States, appointed by the President of the Senate;

(2) Two Members from the House of Representatives, appointed by the Speaker of the House;

(3) Three members appointed by the President from among individuals each of whom is a member of the Standing Committee on American Citizenship of the American Bar Association, and who have been nominated by the Board of Governors of the American Bar Association;

(4) Three members appointed by the President from among individuals each of whom is a member of the Association of American Colleges or the American Council of Education, and who have been nominated by the respective governing boards of those organizations;

(5) One member appointed by the President from private life, to be Chairman of the Commission.

(c) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

DUTIES OF THE COMMISSION

SEC. 2. The Commission—

(1) Shall make a study of the testimony relating to the theories and practices of atheistic communism which, since the end of World War II, has been taken under oath by the Internal Security Subcommittee of the Judiciary Committee of the Senate, the House Committee on Un-American Activities, the House Select Committee To Conduct an Investigation of the Facts, Evidence, and Circumstances of the Katyn Forest Massacre, the House Select Committee To Investigate Communist Aggression and the Forced Incorporation of the Baltic States into the U. S. S. R., and by any other standing committee of the Senate or House of Representatives, and by any agency in the executive branch of the United States Government; and on the basis of its study, shall prepare material for a book, incorporating only testimony taken under oath by the committees and agencies referred to above, selections as to give the fullest possible information as to the theories and practices of atheistic communism; and

(2) Shall prepare suggested curriculums of studies, suitable for us in the teaching of courses in schools, colleges, and universities, which will make clear the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic communism, and for this purpose it shall be the duty of the Commission to review all pertinent data available to it.

QUORUM

SEC. 3. Six members of the Commission shall constitute a quorum.

COMPENSATION OF MEMBERS OF THE COMMISSION

SEC. 4. (a) Members of Congress who are members of the Commission shall serve without compensation in addition to that received for their services as Members of Congress; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(b) The members from private life shall receive $50 per diem when engaged in the actual performance of duties vested in the Commission, plus reimbursement for travel, subsistence and other necessary expenses incurred by them in the performance of such duties.

STAFF OF THE COMMISSION

SEC. 5. The Commission shall have power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of the civil-service laws and the Classification Act of 1949, as amended.

EXPENSES OF THE COMMISSION

SEC. 6. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, so much as may be necessary to carry out the provisions of this joint resolution.

AVAILABILITY OF RECORDS AND DATA

SEC. 7. To the extent necessary in order to enable the Commission to carry out the purposes of this joint resolution, the Commission shall be permitted to have access to the records and data of committees and agencies referred to in section 2.

APPLICABILITY OF CERTAIN LAWS

SEC. 8. Service of an individual as a member of the Commission or employment of an individual by the Commission as an attorney or expert in any business or professional field, on a part-time or full-time basis, with or without compensation, shall not be considered as service or employment bringing such individual within the provisions of sections 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes. (5 U. S. C. 99.)

REPORT

SEC. 9. Upon completion of its work, but not later than December 31, 1955, the Commission shall submit to the President a report containing the textbook and curriculums of studies referred to in section 2. Not later than March 1, 1956, the President shall submit the Commission's report to the Congress, together with such comments and recommendations as he deems advisable.

TERMINATION OF COMMISSION

SEC. 10. The Commission shall cease to exist on the 30th day following the date on which the President submits the Commission's report to the Congress.

Powerful Partner

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD at this point an editorial from the Northwest Farm News, a twice-monthly publication edited and published by Harry J. Allyn at Bellingham, Wash.

This publication is an independent farm publication which for 40 years has been presenting the news of agricultural problems and developments to the Northwest. This paper has consistently fought for a better farm program, full and adequate development of power and other resources that will benefit the entire Pacific Northwest area.

The editorial taken from this publication indicates the revolution that is transforming the power situation in the Northwest from a political battleground to a cooperative effort by representatives of many different generating groups. I believe this editorial points out emphatically that the real progress that has been made in the development of hydroelectric power in the Northwest has been made through the efforts of men who have thought beyond today to the needs of tomorrow and who have quietly and diligently worked to get power on the line.

Text of the editorial is as follows:

GIVE US BIG MEN

Newspapers recently commented widely upon evident approval of people of the Puget Sound-Cascade region with the partnership approach to solution of the electric power question when it leads to cooperation in place of strife and destructive rivalry between private and public power forces. These comments were based on two surveys of public opinion which were made this spring for Puget Power & Light.

Puget's president, Frank McLaughlin, was apparently concerned due to results of the last election when Washington voters went heavily for Eisenhower who advocated partnership, but also elected the strongest supporters of exclusive public power.

Had Puget failed in trying to be a good partner?

Had the best possible service which McLaughlin wanted Puget to give been found wanting?

And there was now another element—the new gas supply coming to the region. Was there going to be a switch away from electricity to gas?

How did people feel?

McLaughlin had to know. Hence two separate surveys, such as all large industries employ professional opinion-testing agencies to make for them from time to time in order to determine how good or how badly they are doing.

If the surveys could be relied on, power had almost nothing to do with the way people voted in the areas where Puget operates, either as a partner with public utility districts in planning future power developments, or as a faithful supplier of ample power at low rates.

Among several thousand questioned in the first survey, only two out of a hundred mentioned power at all. This included the whole Puget Sound and Columbia River-Wenatchee region.

In the second survey which took in Puget's more limited customer area, 9 out of 10 said Puget was doing an outstanding job of service to the public. Seven out of ten thought Puget and Boeing were doing the best jobs of all industries in the area.

MAN OF BIG PURPOSE

What is being said here is not meant to indicate a defense of private power companies. Rather, it is meant to be a tribute to a great industrial leader who is also an even greater leader in public service and devotion to the longtime interests of the region he wants to continue serving.

Frank McLaughlin was a big man when he counted up the loss of part of the territory he had planned to serve and then immediately set about gathering support for the utmost he could do for the part that was left. He proved to be a still bigger man when he turned to the utility districts which had taken over part of his service empire and said: "Let us work together."

"Let us work together, Puget Power alongside with you, for the best we can all give and do for the region as a whole. We can be partners in providing for the future power needs of the Puget Sound-Cascade area. Let us counsel together for the greatest good we can all help bring to pass. Let the goal be an assured supply to our region of all the power that can be used at the lowest cost our combined planning can provide."

It doesn't need a survey to indicate that Puget Power under the McLaughlin leadership has been a helpful partner to the municipal and county utility districts that became the other partners in the Puget Sound Utilities Council. McLaughlin is helping some of them to build dams which they, not Puget, will own. Puget will be repaid with a share in the power.

FULFILLMENT MAIN GOAL

When one of the districts won Columbia power generation at Rock Island away from Puget ownership, McLaughlin helped to arrange for expansion of generation there and remained to manage it for them, Puget getting only part of the power.

So does bigness of mind and heart beget confidence and like bigness in others. There had to be big men, too, in the municipal and district leadership.

McLaughlin believes that enduring public confidence is something that is earned by trying to understand the needs of people and trying to provide the best means of meeting them. "We in America live in a free choice society," he points out, "and a business rightly prospers only by the bestowed confidence of the people."

"A corporation like Puget Power," he says, "should be a responsible part of the human community—at all times a good citizen and a good neighbor—keeping the public informed about its business in such a way as to enable full understanding of its policies and objectives."

Here is a dynamic leader with much accomplished behind him. Yet, no longer young, he embraces the challenge of still more to be accomplished.

Farm leaders are confronted with problems that often seem almost insurmountable. Only a few short years ago, it looked to many as if Puget Power & Light could not possibly survive, in spite of all that McLaughlin could do. But he did not give up. He found a way, looking to the greatest good for the greatest number that he could help bring to pass.

The Contribution of Weekly Newspapers to Rural Communities

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. BREEDING. Mr. Speaker, millions of Americans in rural communities, in addition to receiving a daily metropolitan newspaper, find in their weekly newspaper a true source of local pride and information. The editor of the weekly newspaper and of farm publications is a respected member of community life. He has the recognized responsibility to use his considered judgment in interpreting both national, State, and local news to his subscribers. In a sense, he presents the conscience of the community.

At this time, I should like to pay tribute to this venerable form of newspaper tradition, which, in essence, constituted the very basis on which our present worldwide system of mass communications media is founded; in particular, I should like to recognize and commend the 68 weekly newspapers of the Fifth Congressional District of the State of Kansas: Anthony Republican, Argonia Argosy, Bushton News, Jacksonian, Conway Springs Star, Clark County Clipper, Belle Plaine News, Caldwell Messenger, Claflin Clarion, Cunningham Clipper, Attica Independent, Bucklin Banner, Chase Index, Western Star, Dighton Herald, Elghart Tri-State News, Ellinwood Leader, Hardtner Press, Haviland Journal, Hutchinson Record, Jetmore Republican, Kingman Journal, Rush County News, Lewis Press, Macksville Enterprise, Mineola Record, Mulvane News, Fowler News, Harper Advocate, Hoisington Dispatch, Johnson Pioneer, Kinsley Mercury, Lakin Independent, Meade-Globe Press, Montezuma Press, Ness County News, Great Bend Herald-Press, Kiowa County Signal, Haven Journal, Hugoton-Hermes, Leader-Courier, Kiowa News, Leoti Standard, Little River Monitor, Barber County Index, Mullinville News, Nickerson Argosy, Oxford Register, St. John News, South Haven New Era, Sterling Kansas Bulletin, Syracuse Journal, Ulysses News, Plains Journal, Protection Post, Sawyer News, Spearville News, Sublette Monitor, Greeley County Republican, Pretty Prairie Times, St. John Capital, News Chronicle, Stafford Courier, Sylvia Press, Turon Press, Wellington Monitor-Press, High Plains Journal, the Central Kansas Farm Journal.

On several occasions I have had the pleasure of inserting in the CONGRESSIONAL RECORD editorials from various weekly newspapers in my district. Today I would again like to insert several excellent well-informed weekly editorials which have come to my attention. I compliment their style, associate myself with their content, and ask, Mr. Speaker, that at this time they be incorporated in the RECORD.

From the April 3 issue of the Wellington Monitor Press:

WASHINGTON SNAPSHOTS—KEEP WRITING URGED

Demands from the voters for trimming the $71.8 billion budget—looking toward a tax cut—continue to pour in both to Congress and to the White House.

Members of Congress say the volume of mail is unprecedented—that it is generally spontaneous—that it reveals a surprising depth of feeling on the part of voters.

Already this demand for economy in government has borne fruit—the House of Representatives has made some cuts in appropriation bills.

OPPORTUNITY TO CUT

A new appropriation bill will appear either in the House or Senate each week; so there will be opportunity for additional cuts.

Economy leaders' advice to voters is: Keep writing the White House and Members of Congress urging reduction of the budget.

Meanwhile, President Eisenhower and Budget Director Brundage say they will seek to save money.

While defending his budget as a reflection of desires of the people, Mr. Eisenhower ordered an investigation to determine whether the rate of spending can be slowed down.

From the May 30, 1957, issue of the Mullinville News:

THE FARMER AND HIS HIRED MAN

Farmers who hire agricultural labor in 1957 should be aware of two changes in the social-security law which affect both the farmer and the hired man. First, the tax rate has increased from 2 to 2¼ percent of cash wages paid to be deducted from the employee's wages, and the employer's share is also increased so that he will owe 4½ percent instead of 4 percent as in previous years. The total tax is now 4½ percent instead of 4 percent.

Second, the hired man's wages are covered, if they amount to (a) $150 or more from one employer during the calendar year regardless of the length of time worked; or (b) if the man worked for the same employer on 20 or more different days his wages are subject to social-security tax regardless of the amount of wages.

For example, if a high-school boy worked on a farm on 20 or more days but earned only $140 his wages would be covered because he worked on 20 different days. On the other hand, if a man worked less than 20 days and earned $145 his wages would not be covered because he did not work for the one employer 20 days and his wages did not amount to $150. This is effective on wages beginning on January 1, 1957.

From the May 30, 1957, issue of the Rush County News:

HERE WE GO AGAIN

Watch out for another summit conference. The global scene-shifters, at home and abroad, are peparing for it. Russia

frankly wants it, as Premier Bulganin revealed in a Soviet-Mongolian friendship speech in the Kremlin. That means every trick and every pressure will be used to include Red China.

President Eisenhower sees the Russians growing more serious in their attitude toward disarmament. Secretary of State Dulles suggested that we might begin the President's aerial inspection plan by flying over Siberia while the Reds fly over Alaska and northern Canada. Since such a plan would render our three radar warning lines in the north completely useless, we presume Mr. Dulles would have the Russians cross their hearts they won't drop any bombs without letting us know in advance.

There would be plenty to talk about, such as atoms for everybody at United States expense, trade with Red China, whether to fill in the Suez Canal, perhaps even the Korean truce. And as Bulganin says, "• • • experience has shown that such contacts are useful." Furthermore, since Geneva, we know to whom.

MAKES YOU THE JUDGE

We feel no compulsion to review Alger Hiss' book, In the Court of Public Opinion, beyond observing that its author emerged from the Federal Country Club at Lewisburg, Pa., with the standard attitude of the hardened convict—utter, complete innocence.

More newsworthy is the tempest among the booksellers stirred up by patriot Lyle Munson. He runs a service called the Bookmailer, which is sending a free copy of Whittaker Chambers' Witness to each buyer of the Hiss book ($5), and pays the postage on both. This, he says, is to provide a balanced court of public opinion. But it has also caused book dealers to demand free copies of Witness from Hiss' publisher, Alfred Knopf.

Only Munson, Box 101, Murray Hill Station, New York, N. Y., is this much of a hero.

From the Ulysses News published May 30, 1957:

SCANNING THE NEWS

President Eisenhower, according to word from the White House, got his dander up, and decided to make a fight to preserve his budget of $78.1 billion, the biggest budget in the country's history. The President, at the start of his campaign found himself in an almost untenable position. Even his chief of the Government's fiscal policy, Secretary Humphrey, has declared the budget could be cut considerably, and should be. When Members of the Congress, in a spirit of cooperation, sent a formal request to the President asking him wherein cuts could be made in the budget without endangering security or the President's programs, Mr. Eisenhower, rather superciliously sent back word that was not his job, but the job of the Congress. Had the President then and there, sent back a second budget message, saying that at the time the budget was presented at the beginning of this Congress, it appeared the money would be needed, but that after some consideration, he believed it could be cut, and had pointed out where, there is every likelihood the Congress would have gone along with him.

Now, with his program of legislation endangered, he found it too late to compromise and considered an all-out fight to retain his budget requests. Even his friends of the business community, members of the United States Chamber of Commerce, and the National Association of Manufacturers are demanding huge chunks be sliced out of the budget. But even these demands do not get at the real fat which could help the taxpayers. They cite cuts in foreign aid, farm supports, social services, aid to education, even school lunches. But the chamber of commerce and the manufacturers have not mentioned such fiscal matters as the hard-money policy of tight credit and high interest which added $1.2 billion to the budget for national debt interest; nor the 27½ percent oil depletion tax allowance which costs the United States Treasury some $750 million a year; nor the billions in rapid tax writeoffs in 5 years instead of 20; nor the lease-purchase program which is costing the Government about double to own public buildings than it did when the Government built them itself on bid contracts; nor the policy of letting private industry do jobs which the Government has been doing itself.

Under this policy the Government has been divesting itself of many services which it has been doing itself for years, and turning these jobs over to private industry. When Government officials complained it cost them more money, Mr. Brundage ruled: "The decision to continue or discontinue an activity as being in the public interest should not depend primarily upon whether the product or service can be produced cheaper by the Government. As a general guide our policy is that apparent cost or savings should not be the deciding factor where adequate competition exists."

Of course it's anybody's guess, but the best informed people in Washington predict the budget will wind up with a cut of up to $4 billion, even though it might be that some of the top fighters might be hurt, like for instance, Secretary Charles Wilson, who says all this hue and cry for budget cuts by his friends, "Gives me a pain."

From the May 30, 1957, issue of the Nickerson Argosy:

The Bureau of the Budget is an important adjunct of the executive department of the Government today. As originally set up, the Bureau was intended by the Congress to assist the legislative department to keep track of the expenditures of the various departments by holding them in line under the law setting up the budget system.

As it works out, however, how the Budget Bureau operates largely depends upon who is running the department, and as it is being operated today, there are reasons to suspect that the various departments are being shown how much they can spend under the appropriations of Congress, rather than how much they can save the taxpayers.

A case in point is the Atomic Energy Commission. This important agency has spent some $15 billion dollars of the taxpayers' money in the development of atomic weapons, and is now at the head of the civilian and peaceful development of atomic energy for industry, medicine, and agriculture. The Chairman of the Commission, Adm. Lewis L. Strauss, is, to say the least, a man of strong convictions. Many call him arbitrary. He wears two hats, in that he is at once the chairman of a regulative and licensing agency of the Government, and at the same time, official adviser to the President on atomic energy. Since the weapons divisions of this agency is under direct command of the President and the Department of Defense, it cannot operate in the traditional manner as an independent agency of the Government engaged in civilian licensing and regulation, such as the Federal Communications Commission.

Chairman CLARENCE CANNON, of the House Appropriations Committee, says that in almost every expenditure it has made in the civilian applications of atomic energy the Commission has violated the Atomic Energy Act of 1954 and the intent of Congress. Speaking on this point Chairman CANNON said:

"The Commission's method of defeating the statutory direction has been to arbitrarily divide the various atomic electric power programs into two fiscal categories." With the approval of the Budget Bureau, the Commission sets up part of its electric power programs as "operating expense" which under the act does not have to be specifically authorized by the Joint Committee on Atomic Energy. The rest of the same project it sets up under plant acquisition and construction, which must be authorized by the committee.

"The result has been," Chairman CANNON said, "that for fiscal years 1956, 1957, and 1958 the amount appropriated and requested for the civilian power reactor program totals $236.8 million, of which only $40 million was authorized under authorizing legislation reported out by the Joint Committee and approved by the Congress. Thus it is readily seen that less than 20 percent of this program was authorized and more than 80 percent of this indivisible program was not specifically authorized."

CANNON pointed out that although the Atomic Energy Act contains a specific "no subsidy clause," on the construction of one reactor alone, the Commission in bonus prices for plutonium, waivers of fuel costs and other services had contracted with the private company to pay the company cash subsidies of $58,050,000.

In addition, Mr. Speaker, I have had the extreme pleasure of having had printed an article penned by myself in one of Kansas' finest pictorial periodicals, the Dodge City Pictorial, edited and published by Mr. Rolland Jacquart. With your permission, Mr. Speaker, I now express my commendation and appreciation to Mr. Jacquart, and submit the article referred to above for incorporation in the RECORD:

OUR HOME

Southwest Kansas has been my home for nearly 29 years. Mrs. Breeding and I moved to Rolla, Kans., with our two sons, Charles and Ralph, in August 1928. Southwest Kansas was a new country then and great portions of it were still in grass. It wasn't long after we started farming and ranching that we discovered the great productivity of this land. It seemed that the soil had everything in it that a plant desired and as long as we received plenty of rainfall we could grow abundant crops. Then the bad years of the thirties struck us, and everyone knows what that did to our country.

Many of us had the determination to stick it out, knowing the richness of the soil and that if rainfall ever came the land would again be productive. Along with many of our neighbors, Mrs. Breeding and I and our two sons weathered out the bad times in Morton County. We did everything possible to earn a few dollars in order to provide for our bare necessities. At that time we owned no portion of any acres in western Kansas. It seemed at times that it would be impossible for us to stay another year. However, the years rolled on, and beginning in 1939 and until 1949, the rains came and the snows came and our country was like a garden spot of the world. It was the reward for many long years of drought and suffering for those of us who had persevered. When the country came back we were there to come back with it because of our faith in this land—the country was good to us.

Now this country is again faced with a sad picture—drought, hard times, tight money, acreage controls of wheat and below-parity prices. The future doesn't appear too bright. Rainfall will correct a lot of these problems and the ever-increasing population of our Nation will certainly help. My advice to the younger people living in southwestern Kansas today is to stick it out somehow because eventually, as it has done before again and again, the country will come back. The land will return to its former abundance and your efforts will not be in vain. Many people say to me, "Why doesn't the Government take over the land, put it

all back to grass, and force the people to leave." They don't seem to realize that this country, where we have raised our children and grandchildren and built our churches and our schools and our community life is a part of us. Indeed, to many of us this is the greatest spot in all the world, and we have no intention whatsoever of leaving it now or at anytime in the future.

I am fully aware of the fact that wheat and milo and livestock are our principal sources of income, and we will do everything we possibly can to help improve conditions and the general welfare of our High Plains area.

Irrigation now coming into this great area has all the possibilities of making this country the most productive of all. We are presently doing some research on a program to bring the water in from the Great Lakes or from the many rivers in Canada down through the High Plains area. This water will irrigate perhaps 20 million acres. At present many areas are getting underground water but eventually that may play out, so let's do some tall thinking. It may cost $10 billion to complete this program. In years to come we may need more food. It is something to think about. Southwestern Kansas will never be far away from us because that is our home and the people who live there are our finest friends.

Life Is Now "Worthwhile" for Truman

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. CARNAHAN. Mr. Speaker, I felt a thrill when I heard on the radio Wednesday morning that Mr. and Mrs. Clifton Daniel had a son and that Harry and Bess were both doing fine. The trip from Kansas City to New York by the grandparents was no great surprise. While being a grandfather has gotten to be regular routine with me, I am always glad to welcome newcomers to the club. I know of no one more deserving of being a grandfather than President Truman.

I believe you will enjoy what Andrew Tully has to say in the Thursday, June 6, issue of the Washington Daily News even though you may not agree with all he says:

LIFE IS NOW "WORTHWHILE" FOR TRUMAN
(By Andrew Tully)

With the headlines screaming warnings against fallout and cigaret smoking, it is a lot more pleasant today to think about a politician named Harry Truman who finally made it.

Though it, of course, is Mr. Truman's first grandson, for a man who has been merely President of the United States it must be quite a thrill. Anyway, that's what the man told a bunch of reporters once who were sitting around chinning with him in Kansas City.

"What I want to be now is a grandfather," Mr. Truman said. "That will make me feel my life has been worthwhile."

Coming from a gent who ran some big things like the Marshall plan and the Berlin airlift, such a statement would seem unnecessarily—even showily—humble. But above all, Harry Truman is a plain man and he was speaking sincerely, in that capacity. He is the kind of guy who just naturally gets a big kick out of playing grandpa.

Aside from the fact this new baby has a couple of classy parents in Clifton and Margaret Truman, he is lucky to have a grandpa like Harry Truman. There is a lot of honest ruggedness in Grandpa Truman and a good helping horse sense, plus an assortment of other qualities which always have made him an appealing figure even when he seemed so confounded wrongheaded.

One of these qualities is a fierce loyalty to family and friends, which too often is considered unfashionable in modern circles. If young Buster Daniel inherits only this from Grandpa Truman he will have a big head start in life. For folks instinctively respect loyalty, even in somebody they disagree with, and if they feel you don't have it they're apt to be suspicious of your dealings with them.

Harry Truman never gave much of a hoot what people said about him because he figured he was a fair target. But when a music critic lambasted Margaret's singing, he wrote the critic a smoking letter in Margaret's defense. It doesn't matter much whether the critic was right; the appealing thing was that a busy President reacted with such honest normalcy.

Similarly, Harry Truman always was grateful whenever anybody said anything nice about his little girl in print. He'd sit down and write a thank-you note, because in his book you are supposed to acknowledge such things even if you are President of the United States.

It probably won't be long before the young Daniel sprout climbs up on grandpa's knee to quiz him about life. This should be a rewarding experience because Harry Truman is full of ideas about life and he is always ready to expound them.

Perhaps young Daniel should take grandpa's political speeches with a grain of salt, but if he is wise he will listen when Harry Truman dwells on mankind's duty to mankind. For on informal occasions the Truman philosophy can be pretty inspiring.

Clif and Margaret Daniel will be wise to let the youngster absorb as much of this kind of thinking as he can manage, but they must not overlook another duty. With a grandpa like Harry Truman to defend, that kid had better be taught how to handle his dukes.

Wilbur D. Mills

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. TRIMBLE. Mr. Speaker, one of the outstanding men of the Congress is our colleague from Arkansas, WILBUR MILLS. We of the Arkansas delegation are proud of him and are grateful for the many things which he has done for us through the years. He is always going about doing good.

Lately an honor has come to him which adds to our pride and adds also to his imposing record of service. On June 1, the University of Arkansas conferred upon him its honorary degree of doctor of laws, an honor well deserved.

At the same time, he delivered the commencement address to the graduating class. Those who heard that address tell me it was enthusiastically received by everyone and was an inspiration to the young graduates. I am delighted to insert that address in the RECORD as part of my remarks.

The address follows:

COMMENCEMENT ADDRESS BY WILBUR D. MILLS, UNIVERSITY OF ARKANSAS, JUNE 1, 1957

Friends, I am deeply grateful for having been invited to participate in these exercises today. The American calendar is crowded with observances, but academic commencement ceremonies, I think, best express the continual beginning which is the basic ingredient of life. It is epitomized in the graduating class, the instrument for transmitting our cultural heritage to the future, enriched and strengthened. To be asked to assume an active role on this occasion, therefore, is indeed a privilege of which I always shall be proud.

I have alluded to our curtural heritage. It is, of course, a concept of tremendous dimensions, but I want to offer some brief remarks about just a few of its aspects which events in recent years have cast into critical focus.

This Nation has achieved its greatness through the spirit of its people. It is a spirit of the quest, the seeking out of opportunities and challenges. Opportunities and challenges do not exist as objective conditions of life anywhere in the world. They are created, sometimes out of of material circumstances, sometimes out of spiritual and cultural demands by a people for whom challenge and opportunity are synonymous descriptions of a basic attitude toward their surroundings. It is the spirit of a people who are vigorous and vital, who live instead of merely exist their allotted time. It is the spirit which makes progress possible and inevitable.

It is, however, a spirit which must be carefully nurtured. Paradoxically, the more effective this spirit in providing the Nation with material and cultural riches, the greater the threat to its perpetuation. Self-satisfaction may replace self-confidence, contentment may replace venturesomeness, smugness over past achievements may replace the drive for further accomplishments. The community may grow fat and lazy, short of wind, and hard of artery. Organic weakness, when finally recognized, may lead to fear which either paralyzes or panics and, in any case, hastens breakdown. The therapy required to restore good health may become increasingly rigorous, and may, therefore, be too long postponed. The spirit may expire and with it the greatness it had produced.

Are we now so threatened? In material terms, the progress which both reflects and depends upon our striving has in recent years been impressive indeed. Since the end of World War II, our annual production of goods and services to meet material demands has increased by well over $100 billion, in real terms. Over the period, gross additions to our private capital stock amount to the fabulous total of $591 billion, in 1956 prices. Similarly measured, we have consumed almost $2½ trillion of goods and services while our Governments—Federal, State, and local—have added $350 billion in products.

As reflections of our material achievements there are other measures which may be even more impressive. The physical aspects of our daily lives have drastically changed in recent years. Our foods are grown, processed, and delivered into our hands with the use of machines, techniques, and processes which did not exist when those receiving their diplomas here today first began their schooling. Our clothes have changed similarly. Our automobiles would have been regarded as designers' and engineers' fancies less than half a generation ago. Our homes, offices, factories, and stores are built and equipped along mar-

kedly different lines from a few years ago. We accept with equanimity the production of complicated commodities without the immediate agency of human hands. Man today can cross this continent in 3½ hours and we can be sure that tomorrow he will do it in 2½ hours. We are soon to explore space as confidently as 20 years ago we explored the stratosphere. Our progress with things is rushing us headlong into transforming the very face of the world.

There are grounds, therefore, for confidence that in its materialistic manifestations, the quest for challenge and opportunity is receiving abundant encouragement. Indeed, according to some evidence the very process of seeking new ways to satisfy wants is, in itself, becoming an automatic or a built-in feature of our economic lyife.

There is, however, another side of the question—whether we may have as much confidence in our advancement as human beings. Our world is full of pessimists—those who believe that every silver lining must have its cloud. They are loud and long in their assertions that our concern with and achievements in advancing our material well-being in fact are escape outlets for energies which, had we not become intellectually and culturally timorous, we would apply in improving human beings instead of machines. They contend that we devote ourselves to the superficial lest we be faced with the realization that we are early 20th century people fast becoming antediluvian in a 21st century physical environment.

I would not minimize the importance of our material achievements. I have no faith in the romantic notion that truth and beauty can be cultivated in surroundings of economic retrogression. Nor would I suggest that our spiritual and intellectual resources are so limited that we cannot find and meet challenges for improving simultaneously our cultural and material circumstances.

Our native State affords a magnificent illustration of this contention. We are, I believe, experiencing a great drive forward in many fields of human endeavor. Between 1950 and 1955, for example, wage and salary disbursements to Arkansas employees in farming have increased almost 8 percent, in contrast with the national average which experienced a decline. Wage and salary payments in Arkansas in mining and manufacturing have increased at a faster rate since 1950 than the average for the economy as a whole. Total civilian income arising from production in mining and manufacturing also increased more rapidly in Arkansas than in the Nation as a whole.

This university has taken an active role in the State's advance. It has assumed leadership in exploring and making known our regional attractions. It has brought under fresh and careful scrutiny the strength and weaknesses in our political, social, and economic institutions, and pointed the way to better fitting them to the demands of our people.

It has led a renaissance in our arts and sciences. Its own programs for meeting the educational requirements of our youth have grown and developed at a rate and in a manner that has served to focus increasing attention on the impressive potentialities of our community.

Recent experience in Arkansas, therefore, demonstrates that balanced growth in material, cultural, and intellectual resources is feasible and eminently desirable.

Looking at the broader community of the Nation as a whole, however, the scene is not so encouraging. We have learned to wage the ultimate in war, but we apparently have not been able to find the boldness and daring needed to achieve a meaningful peace. We thrash over the problems of sharing our material progress with the underdeveloped nations of the world, but when these problems, in one small part of the world, become really difficult we seek to resolve them not with insight, nor with understanding, nor with new concepts, but with dollars. We observe fundamental changes occurring in the structure of our economy and instead of finding in this situation a challenge and an opportunity to achieve real progress, too often we cloak our minds in dogmatic assertions that this price support program is superior to that one. Too often we react to movements for profound changes in life by engaging in the "Yes; you will"—"No; I won't" disputation of small boys.

I think we must, therefore, be concerned with evidence of an increasing hesitancy to explore the universe of ideas. I do not know its source. It has been suggested that the war years, following hard on a decade of depression, so whetted our appetites for things that we have been compelled to devote an unduly large proportion of our resources to the satisfaction of such wants. It is also claimed that we have been made fearful of intellectual innovation by the unhappy consequences in Eastern Europe and in China of its radical extremes. Some argue that intellectual and cultural inertia are the consequences of prolonged prosperity, draw dismal comparisons with prior eras from antiquity up through the 1920's, and conclude that catastrophe is required to reinvigorate our spirit.

It is impossible to evaluate such explanations. But regardless of the extent to which we have allowed our progress in the humanities to lag behind our technological achievements and regardless of the causes, the means for overcoming this deficit are here before us today. They are this great educational enterprise and its products. It is up to them and similar institutions throughout the Nation to refocus the attention of us all on the really great opportunity of our time—the orientation of man and his society to circumstances of growing material abundance. They must renew our intellectual capital stock. They must restore the dwindling eminence of achievements in the arts and in pure science. They must prove anew the worth and great rewards in striving for new ideas and fresh concepts about man's proper relationship to his fellows and to his physical and cultural environment.

The applied sciences and technologies have compressed space and time and shown us, in physical terms, a single world community. It now remains for other intellectual disciplines to show us how man may realize the advantages of one world.

This, I believe, is the proper outlet for our restless spirit. Whether we exploit it adequately, I think, will have much to do with whether our greatness as a national community is perpetuated and extended or whether future generations know us as a race of tinkerers and gadgeteers.

I have emphasized the desirability of progress and change. In doing so, I do not intend thereby to dismiss the established and the old. Our inheritance can hardly be discarded without our becoming impoverished. It is the foundation upon which we must build. But we must continually examine this foundation to be sure it is properly reinforced so it may be preserved for the future.

I have set out, I know, the notion of restiveness and of striving as a way of life that is inherently good and indeed necessary. Yet, all of us appreciate that ultimately we are seeking tranquillity. The paradox is more seeming than real. As we recognize the sources and consequences of our striving, this understanding provides us the strength and confidence upon which peace—both within and external to ourselves—truly rests. We must be careful to avoid confusing resignation, indifference, or fatigue with tranquillity. We cannot accept tranquilizers as a substitute.

I have expressed my hope that this generation, whom we honor here today, will improve our perspective and extend our horizons. We give into their charge our quest for challenge and opportunity upon which our future depends. We ask them to improve the balance in our cultural, intellectual, spiritual, and material achievements. Finally, we convey to them our very best wishes—that they will live all the years of their lives.

Thank you.

Civil Rights Must Lead in More Than One Direction

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. CHELF. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I would like to include a very fine editorial of June 5, 1957, that appeared in that outstanding, progressive, and liberal newspaper, the Louisville Courier Journal, on the subject of so-called civil rights now being debated before the House of Representatives. It is for the reasons stated in this editorial, plus my own knowledge of the many bad features of this bill, that I shall oppose it as I did the rule on yesterday.

The editorial follows:

CIVIL RIGHTS MUST LEAD IN MORE THAN ONE DIRECTION

Southerners in the Senate won a notable victory in their battle against President Eisenhower's civil-rights program. After 4 months of skillful filibuster in committee, delaying a showdown until so late in the session as to make compromise or inaction inevitable, the Senate Judiciary Committee approved an amendment that would grant a jury trial to persons charged with violating Federal court injunctions forbidding interference with the right to vote.

It is a victory not so much for the South, however, as for the general idea that creating new powers for the Justice Department without preserving the safeguard of trial by jury could create a centralized tyranny endangering the civil rights of every American. And it was on this ground, eloquently argued by North Carolina's Senator ERVIN, a former member of his State's supreme court, that the Southern minority on the Judiciary Committee was able to win the somewhat reluctant suport of some non-Southerners in both parties.

The new powers sought by Attorney General Brownell had a commendable aim—protection of the Southern Negro's right to vote. And there is considerable truth in his argument that Southern juries in many cases would be unlikely to convict a person charged with violating court orders in voting or other civil-rights cases.

But the commendable aim scarcely justifies the proposed means, whereby a considerable increase in Federal power over State or local governments, centered in the key ruling of a single judge, would not be checkmated by the right to jury trial. And though Mr. Brownell contends that the jury-trial amendment would permit "practical nullification" of the proposed civil-rights legislation, he overlooks several important factors.

One is that the Attorney General would still be empowered to intervene in a suspected case of civil-rights violation and get a Federal injunction against it—and that even in the South jurors from Federal panels tend to be both more representative and more respectful of Federal judicial processes. Another is that the approved legislation still provides for creation of a bipartisan commission to look into allegations that citizens are deprived of voting rights or subjected to "unwarranted economic pressures by reason of their sex, color, race, religion, or national origin"—and for creation of a new section in the Justice Department to follow up such complaints.

There is, too, Mr. Brownell's own admission that, distasteful as he finds it to be, the Attorney General can undertake unduly harsh criminal prosecutions against respected local officials guilty of circumscribing the Negro's right to vote. He was arguing that "no amount of criminal punishment" after an election "can rectify the harm" done while it is being held—but a few instances of such vigorous or unduly harsh prosecutions might prove a healthy discouragement to future denials of rights.

Far better to rely on this seldom-used power, surely, even if no additional civil-right legislation is ever passed (and none of much significance has been enacted since 1875) than to accept Mr. Brownell's basic argument. That argument, it seems to us, is that democratic processes are not always to be trusted, hence, in order to insure more democracy for some should sometimes be circumvented by the Government itself.

Edgar Allen Poe: A Real Fine Guy

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a deserved editorial tribute to one of the finest newspapermen I have ever been privileged to know. The editorial which follows was written by Mr. Gene Wirth, of the Jackson (Miss.) Clarion-Ledger, and appeared recently in that paper, and I am confident that all who know Ed Poe will give full and unqualified endorsement to Mr. Wirth's observations:

EDGAR ALLEN POE: A REAL FINE GUY

Measured by the yardstick of professional ability, character, loyalty, unselfishness, and genuineness, Edgar Allen Poe stands second to no man.

What more could be said?

Ed Poe, since 1947 Washington correspondent for the New Orleans Times-Picayune, occupied a similar position in Jackson for 10 years. To know Ed Poe is to love him, and many, many are the friends that he has in Jackson and Mississippi.

In recent days two much-deserved honors have come his way.

First, he was chosen president of the Washington Chapter of Sigma Delta Chi, a professional journalism fraternity.

Then, 3 days later, Ed Poe was elected to membership in the Gridiron Club, one of the highest honors that can come to a Washington correspondent. Membership in the Gridiron Club is confined to 50 active members.

He is also a member of the National Press Club and the Overseas Writers Club.

During World War II Ed Poe was detached from the Jackson bureau and sent to the Pacific area. He was aboard the battleship *Missouri* when Japan formally surrendered, and was one of the first foreigners to visit Hiroshima after the first atomic bomb was dropped.

Ed and his lovely wife, Frances, have two sons, Edgar, Jr., a student at the University of Alabama, and Thomas, who attends Wakefield High School in Virginia.

Paul Wooton, veteran Washington correspondent with whom Poe is associated, writes:

"Poe is from the Maryland family that produced Edgar Allan Poe. Because of the relationship, Edgar Poe's mother gave her son the name of "Allen," which was misspelled on the birth certificate.

"If Poe had his way, his middle name never would be used. He fears someone would suspect that he is trading on a famous name. This writer, however, never loses an opportunity to use the full name to which Poe has every right both legally and from the fact that he comes from the same family as did the famous poet."

Fifteen-Acre Wheat Farmer

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. BREEDING. Mr. Speaker, in the interests of the wheat producers of the Fifth District of Kansas I am today introducing legislation to repeal the wheat marketing quota provisions of the Agricultural Adjustment Act of 1938, as it affects the 15-acre wheat farmer and the 200-bushel exemption: paragraph (7) of Public Law 74, 77th Congress—United States Code, title 7, section 1340 (7)—and section 335 (d) of the Agricultural Adjustment Act of 1938, as amended—United States Code, title 7, section 1335 (d)—effective beginning with the 1958 crop of wheat.

To anyone familiar with the critical situation facing the areas dependent on a wheat economy it would be apparent that the number of 15-acre wheat farmers is spreading in ever-increasing numbers over the commercial and noncommercial wheat-producing areas of our country. It is my sincere belief that unless there is some adequate controls placed, and soon, to prevent the 15-acre wheat growers from increasing in numbers they will cause untold economic hardship in many areas.

Protection must be provided the one-crop producers of our Nation's agriculture, especially when there is proven evidence that the area is unable to support itself with any other crop.

My district, which is one of the larger commercial wheat producing districts of the United States, would be pleased to find new means of supporting our economy. We would like to have new industries in southwestern Kansas. Thoughtful people in my State are hard at work on these matters.

As further evidence of our efforts to help ourselves the Kansas Legislature recently passed the Kansas Wheat Act providing a seven-man Kansas Wheat Commission. The Kansas Wheat Commission will collect a levy of 2 mills per bushel for the purpose of conducting a campaign for development, education and publicity for uses of wheat and the finding of new markets for wheat and wheat products.

We have been hard hit with drought. While the recent rains will be of untold help to this year's crops we will still be faced with the unrestricted competition of the 15-acre wheat farmer.

The Department of Agriculture recently furnished me a figure of 1,026,424 15-acre wheat farmers in the commercial wheat-growing areas of the United States. Add to this the unknown number of 15-acre wheat farmers in the noncommercial wheatgrowing States and you will see the staggering numbers of wheat farmers producing in competition with the highly controlled commercial wheat farmer.

As rapidly as the 15-acre wheat farmers are increasing in number it will be only a short time before total domestic consumption needs will be supplied by the wheat produced on the 15-acre farms. With our present modern methods of production and marketing, together with the fact that every State in the Union does grow wheat, it presents an evergrowing threat to the economy of my district, limited as it is to a wheat producing country by the nature of its geographical location and climatic conditions.

Battle of the Budget Healthy

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial in the Lincoln County (Oreg.) Leader by Mr. Elmer Price:

BATTLE OF THE BUDGET HEALTHY

Personally we're a bit glad to see some effort being made to trim down the huge Eisenhower annual budget, even if the efforts are a bit on the feeble side.

At least it is bringing to the surface the deep concern of a lot of Americans over the constantly rising costs of government. And in doing so, it may serve notice on the President as well as our legislators that people want some brakes applied to governmental spending.

All kinds of propagandists are making the rounds now—most of them close to the administration's official family—who are describing efforts at trimming the budget as "butchering" it, and predicting dire results in the national as well as the world scene if a single penny is eliminated.

We doubt this, for most Government spending is full of "fat" and in most cases could take drastic cuts without actually endangering the service rendered. The Hoover Commission recommendations which this

administration and others as well, have studiously avoided accepting, points the way to millions in "painless" savings.

But government which has for so long so easily wrangled more and more money out of the populace and has so expanded its bureaus and activities, faces any possibility of trimming its sails with little gracefulness.

This goes for all government, whether headed by free spending Democrats, or (as it is turning out) more free-spending Republicans, both nationally and in the State. You can't blame them, really: "Easy come, easy go."

Only the plaintive yips of a lot of little Joe Doaks who must pay the bills, rising in a swelling tide across the Nation, can eventually change it.

We hope these Joes keep yelling, just as they're doing now. It will serve notice on our legislators to settle down to the job of sifting the grain from the chaff in public spending. There has been far, far too little time spent sifting in recent years.

The Eisenhower-Benson Farm Program Is Not Very Popular With This Farmer

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, as the pocketbooks of the farmers in my district grow thinner and thinner under the Eisenhower-Benson farm program, the farmers are becoming more and more articulate about their problems. They are a long-suffering lot of wonderful people, but when they are pushed beyond their patience, they really have something to say.

I request permission to insert one of these letters. This one is from a good farmer, Mr. Ralph Leines of Bejou, Minn. He is, to say the least, disturbed about the administration's treatment of the family farmer, and expresses, clearly and to the point, his opinions about the farmer's situation under the Eisenhower-Benson program.

BEJOU, MINN., *May 30, 1957.*

Hon. COYA KNUTSON,
Congressman, Ninth District of Minnesota, Washington, D. C.

DEAR COYA: When the H. R. 12 bill was pending adoption in Congress, we, the members of the Farmers Union, supported it to the limit, unfortunately, however, it was vetoed by—would be President—Eisenhower and as a substitute they handed us the present soil-bank fantacy, we reluctantly accepted it as a feeble means, with anticipation of future improvements, and not as an end to all farm programs.

Now they tell us, "You wanted a soil bank, now you have it," and how.

We did not anticipate a billion-dollar program turned loose to an incompetent Secretary without conscientious management, reasoning, and foresight.

We did not visualize a billion dollars of taxpayers' money heedlessly poured into a hog trough so the biggest hog could get the lion's share in complete disregard for beneficial effects to agriculture or to our national economy.

There must be an elusion from this program cleverly designed as a wedge to sever friendly relations between the farmers and city workers in an unscrupulous attempt to gain big city votes for the Republican cause, and to gain grandiosment for Benson.

We could not be so naive as to expect the city worker to sanction a program which allows a farmer to soil-bank his farm and go to the city to compete with labor for jobs while the city worker is taxed to pay the cost of this fantastic idea.

Any man endowed with the faculty of common intelligence can see what is taking place. Thousands of overcropped acres no longer fit to produce a cost-plus crop is soil-banked, and greater emphasis on remaining acres will produce more than ever before.

Financiers buy out hard-pressed family farmers and soil-bank their land. In a few years' time the taxpayer pays for these farms, and the farmer's family is tossed jobless upon the sympathy of society, depending on a small relief handout for survival. If this is democracy, what does it offer to this depressed family that communism can't outbid?

May I kindly suggest that we move our heavy artillery into position before the rainy season. We must do something, and pronto. Let's kill this soil-bank idea before it kills us. Don't give the Secretary of Agriculture this $1 billion program to play Santa Claus with.

Please let it be understood that this is my opinion, which is not supreme and therefore, apt to be erronious. If my opinion does not synchronize with your opinion, please do not hesitate to express contrary views which will be regarded as friendly communication between fellow Democrats.

Very respectfully yours,

RALPH LEINES.

An Open Letter to Congress Re H. R. 4813: Site for National Cultural Center

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include the following Open Letter to Congress which appeared in the Evening Star under date of June 4, 1957:

AN OPEN LETTER TO CONGRESS RE H. R. 4813: SITE FOR NATIONAL CULTURAL CENTER

GENTLEMEN: At a time when—

1. You are trying to cut dollars off of the budget;

2. The tax rolls of the District are shrinking;

3. The District of Columbia needs funds for its schools, its public-welfare program, its hospital program for the needy.

You are being asked to pass H. R. 4813 authorizing the so-called 26-acre Foggy Bottom area to be acquired by the Government and used as a site for the National Cultural Center at a probable cost of from $15 million to $20 million to the taxpayers (based upon actual sales in the area), with the loss to the District of Columbia of over 20 acres of tax-producing real estate, resulting in delay and tremendously increased cost of the Inner Loop Throughway which might have to be tunnelled under the Cultural Center, resulting in the loss of important private developments in this area.

Although the Cultural Center could, with less practical complications, be placed on ground already owned or in the process of being acquired by the Government under the urban renewal program, such as the 300-acre National Training School site or the Southwest Redevelopment Area, at a minimum cost to the taxpayers, and with no such loss to the District of Columbia.

This is not an attempt to sabotage the Cultural Center. We can still have the Center, and quicker, on one of several available Government-owned sites. We urge that because of this tremendous cost, H. R. 4813 be defeated, and that thereafter, a Government-owned tract be designated as the site for the Cultural Center.

Sincerely yours,

American Federation of State, County, and Municipal Employees, Local No. 10, AFL–CIO; Building Owners and Managers Association of Metropolitan Washington; Foggy Bottom Taxpayers' Protective Association; Home Builders' Association of Metropolitan Washington; Peoples Life Insurance Co., Washington, D. C.; Washington Taxpayers' Association; Foggy Bottom Citizens' Protective Association; Building Owners and Managers Association; Small Property Owners' Association.

We call your attention to the following resolution of the Washington Board of Trade: "The above statement is in line with the policy of the Washington Board of Trade and we endorse your position."

NOTE.—Your attention is invited to similar views expressed at the congressional hearing on February 8, by Costello Post No. 15, American Legion, and the Northeast Council of Citizens Associations, and also a telegram from Mr. George A. Garrett, president of the Federal City Council, to the Auditorium Commission, which was made a part of the record at the congressional hearing and which announced opposition to the Foggy Bottom site, pointing out that the Federal City Council's executive committee had voted unanimously to again bring to their attention "what we consider to be an ideal site in the Southwest redevelopment area designed as a cultural center and planned for auditorium use."

The Star-Spangled Banner

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House, I include with these remarks the following excerpts from a speech to be delivered by Prof. Bernard Joseph Rubenstein on behalf of County Commander John Borchardt of the American Legion, Kings County, at State convention of Grand Court of Foresters. The speech follows:

THE STAR-SPANGLED BANNER

(Excerpts from speech by Brooklyn Law School Prof. Bernard Rubenstein, on behalf of American Legion Kings County Commander John Borchardt, at State convention of Grand Court of Foresters.)

The first Stars and Stripes, adopted June 14, 1777, had the 13 stars arranged in a circle, signifying a union without end as well as the equality of the States. There were 15 stars and stripes from 1795 to 1818, with some flags of 5 staggered rows of stars; while other flags had 5 unstaggered rows of stars. The flag with the staggered rows flew over Fort McHenry during the bombardment of the night of September 13–14, 1814, which

inspired Key's immortal national anthem, the Star-Spangled Banner. What could be more blood-tingling words than, "And the rockets' red glare, the bombs bursting in air, gave proof through the night that our flag was still there." In 1818, the stripes were once more 13 and more stars were added. The stripes have been 13 ever since. There are 7 red stripes and but 6 white stripes so that the flag can be seen at a distance with the outside stripes red. Since 1818, as more stars were added the arrangement of the stars was thereby ordered rearranged. Ancient flags' stars represented dominion, but the act of June 14, 1777, specifically said the stars represent a new constellation, signaling to mankind the birth of the first Nation on earth dedicated to personal and religious liberty, where its people may enjoy life, liberty, and the pursuit of happiness. The blue is for loyalty; the white is for liberty; the red is for courage. In this connection, the first stanza of A Toast to the Flag, by George B. Harper, is most stirring, "Here's to the red of it, there's not a thread of it, in all the spread of it, from foot to head, but heroes bled for it, faced steel and lead for it, slept with the dead for it, bathing it red." The proportions of the flag are fixed by Executive order, October 29, 1912. The display and use of the flag is governed by the act of December 22, 1942 (see World Almanac, etc.). The term "Old Glory" came into being in 1831, see below. In January, 1861, while still at peace, Treasury Secretary Dix ordered the Treasury office in New Orleans to take possession of a revenue cutter, and said, "if any man attempts to haul down the American flag, shoot him on the spot." At the Centennial Exhibition at Philadelphia, in 1876, the up to then obscure painter Archibald M. Willard exhibited his new canvas, The Spirit of '76, of the famous two drummers and a fifer followed by troops carrying the American flag which did not come into being until the following year of 1777. Nevertheless, it was a magnificent work. Likewise, the legend of Betsy Ross, of Philadelhpia, has been doubted by historians. Every schoolboy remembers Whittier's Barbara Frietchie, "Shoot, if you must, this old gray head, but spare your country's flag, she said."

Flag Day was established by President Wilson in 1916, as a day of renewal and reminder, the emblem of our unity, our power, our thought, and purpose as a Nation.

President Coolidge on the 150th anniversary of Flag Day pointed out that the flag is the symbol of our country's ideals.

When famous New York social worker Jacob Riis went back to his land of birth, Denmark, to see his mother, he came down with a deadly fever and the only thing he claimed that rallied him was the sight of a ship sailing by with the American flag.

One of the most thrilling stories ever told is in the American Legion Reader of June 1950, by Kenneth Forée, on The Flag That Wouldn't Stay Down, recounting the true story of a Dallas boy, buck sergeant Otto Charles Erler of Company I, 3d Battalion, 4th Marines, who secreted an American flag all through his most harrowing experiences as a prisoner of war after being captured at Corregidor.

The American Legion, from its lowliest member like the speaker (Brooklyn Post 500) to its highest officers, has always shown the greatest respect for Flag Day because it believes such respect serves to instil the proper spirit of Americanism.

The great orator, Edward Everett, said of our flag, "May virtue, freedom, and peace forever follow where it leads the way."

Some say our Declaration of Independence is the heart of our Nation; the Constitution the backbone; and the flag the soul.

In the words of O. W. Holmes, "It is the banner of the free, the starry flower of liberty."

Judicial Selection and Tenure, an Address by Hon. William P. Rogers

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. HILLINGS. Mr. Speaker, the Deputy Attorney General, Hon. William P. Rogers, delivered a most interesting and important address at the Mountain and Plain regional meeting of the American Bar Association in Denver, Colo., May 10, 1957.

As Mr. Rogers has pointed out, the American Bar Association reported recently that its relationship with the Department of Justice has never been better. This is an indication of the excellent and efficient manner in which the Department of Justice is being administered.

I hope all Members of the House will have an opportunity to read Mr. Roger's discussion of judicial selection and tenure.

The address follows:

I appreciate very much your kind invitation to participate in this regional meeting of the American Bar Association. It provides an opportunity to renew old acquaintances and to talk over first hand a number of matters of mutual interest. It was suggested that I discuss Judicial Selection and Tenure today and I am happy to accede to this suggestion.

As you may recall, the Judiciary Act of 1789 provided for a total of 19 Federal judges, distributed as follows: The Chief Justice of the United States, 5 Associate Justices for the Supreme Court and 13 district judges, one for each district. No provision was made for circuit judges for the 3 circuit courts since they were to be composed of 2 Supreme Court Justices and 1 district judge, any 1 of whom would constitute a quorum. In 1802, Senator Breckenridge said: "The time will never arrive when America will stand in need of 38 Federal judges." Numerically, at least, the problem of judicial selection can hardly be said to have posed a serious problem at that time.

Obviously, when the President was called upon to make so few judicial appointments, there was no necessity for establishing any regular procedure for making recommendations concerning appointments. The problem was to find men willing to serve in view of the meager salary and the arduous requirement of riding circuit.

Such points of reference as there are disclose that President Washington sought counsel from members of the Cabinet generally. We know, however, that in 1793, Randolph, the first Attorney General, had been asked to prepare a list of candidates for the bench. He reported that one possible candidate "had no just pretensions to eminence;" another "was of indifferent elocution and his knowledge of the law scarcely placed him on the roll of fame;" one "was a good country court lawyer"; one "was clear in all respects save that he might have some connection with the land companies"; and another "was a valuable man of universal esteem and a much approved practitioner." Randolph cautioned President Washington not to appoint incompetent men stating: "If such an idea gains grounds, the State judiciaries will inevitably make a stand against the Federal bench."

For a time, the Department of State was given the function of making recommendations to the President concerning all appointments. However, in 1853, at the instance of Attorney General Cushing, this function, insofar as it related to judges and law officers, was transferred to the Department of Justice where it has since remained. Even so, Attorney General Bates complained in 1863 that the Secretary of the Treasury had been instrumental in making appointments to many judicial vacancies "without any reference to legal and judicial qualifications."

The making of recommendations for judicial appointments is not now, nor has it ever been, an easy task. There is an immense amount of work involved in the process of appraising possible appointees and in preparing the Attorney General's recommendation to the President. As Attorney General Wickersham said: "My function, in connection with the filling of judicial appointments is quasi-judicial in itself, and I must consider all the candidates without any commitment to any one of them." Mr. Brownell, at the very outset of his tenure as Attorney General, established a procedure, which he has followed consistently. It is designed to insure the selection of judges of the highest integrity and professional attainment.

Whenever a vacancy exists many individuals and groups, including United States Senators, submit recommendations in support of various lawyers for appointment to the vacancy. These recommendations and endorsements are all gratefully received, acknowledged and given careful consideration. At the same time the Department, through bar groups and governmental sources, initiates its own study in order to secure the best available person for the office.

Sometimes, persons wishing to become judges, make known their interest in person. Not long ago, a lawyer approached me on this subject and I asked him why a man with such a large and successful practice with so many substantial clients and retainers would want to give all that up. He thought a moment, and then said, "To be perfectly frank, I'm tired." This applicant got a high mark for frankness—but he flunked his "attitude" test.

For the most part, however, there is widespread recognition of the fact that the duties of a Federal judge today are difficult, time consuming and burdensome.

When the list of qualified persons is complete, the process of recommending one who appears to merit appointment begins. This process is conducted by the Department of Justice under standards which President Eisenhower has affirmed and reaffirmed at his press conferences.

First, and most important, the candidate must be an outstanding lawyer and leader in the community from which he comes. Both his personal and professional reputation must be beyond reproach.

Second, the age and the health of the candidate must be considered. This policy is designed to provide the bench with men of vigor who are physically capable of carrying the heavy burdens now imposed on Federal judges.

Third, whenever a vacancy occurs in a circuit court or in the Supreme Court, the President has expressed his desire that outstanding judges should be carefully considered. While prior judicial experience is not essential and it is possible to argue that prior judicial experience may be of little or no value on the Supreme Court of the United States, I believe all appellate courts benefit if some of its members, at least, bring an understanding of the problems of a trial judge to the conference table.

Finally, President Eisenhower has stated that in connection with judicial appointments he places considerable weight on "the

recognition of the American Bar Association."

On February 16, 1957, the standing committee on Federal judiciary of the American Bar Association reported that "Your committee's relationship with the Department of Justice has never been better," and that the "working arrangement * * * is excellent." The Department has "welcomed suggestions from the committee," and has "granted the requests of the chairman for personal conferences whenever they have been requested."

At the request of the President, Supreme Court appointments are now referred to the American Bar Association for its recommendation. The report referred to this as a "precedent shattering step forward of the utmost significance."

When a name is initially agreed upon, it is submitted to the Federal Bureau of Investigation for a full-field investigation covering the person's entire personal and professional life. At that time the name is also submitted to the Judicial Selection Committee of the American Bar Association which makes a thorough inquiry into his professional attainments and judicial competence.

The results of these two investigations, together with all the other information which has come to the attention of the Department of Justice, are then carefully weighed, following which the Attorney General makes his recommendation to the President. This recommendation, which the Attorney General discusses with the President, contains a complete factual summary of the candidate's background and qualifications for the President's consideration. Quite frequently, President Eisenhower will talk personally with the candidate before submitting a nomination to the Senate.

There are, at present, 335 lifetime judgeships in the Federal Judiciary. This total is made up of 9 Justices of the Supreme Court, 68 circuit court judges, 239 district court judges, 5 judges of the Court of Claims, 9 judges in the Customs Court in New York, and 5 judges in the Court of Customs and Patent Appeals.

In addition, pending legislation, which the Judicial Conference of the United States and the Department of Justice among others, are strongly endorsing, would create 39 new district judgeships and 3 new circuit judgeships for a total of 374 judgeships.

During the 83d and 84th Congresses (covering the 4 years of the first Eisenhower administration) 101 lifetime judicial appointments were made. There were 2 Supreme Court appointments, 23 appointments as circuit judges, 71 district judges, 1 judge of the Court of Claims, 2 judges to the Customs Court and 2 judges to the Court of Customs and Patent Appeals. Eight additional appointments have been made thus far during the first session of the 85th Congress: 2 additional Supreme Court Justices, 1 circuit judge, 4 district judges, and 1 judge of the Customs Court.

In 1953 over 80 percent of the Federal judges had been appointed during Democratic administrations. At the present time 61 percent of the judges were appointed during Democratic administrations.

Historically, and I suppose it will be true prospectively, each administration appoints principally from its own party. That, in practice, has not proven to be a serious weakness in the system of selections of Federal judges. The reason that the Federal court system has worked well is that Federal judges put aside all political consideration once they assume judicial duties.

Be that as it may, it would seem desirable as a matter of national policy to prevent a gross imbalance from occurring. Probably no fixed formula is practicable. However, I believe the public interest would be well served if the two major parties gave consideration to arranging some appropriate safeguard to prevent a gross imbalance from occurring in the Federal courts regardless of how long either party might be in office. It is my personal opinion that an 80–20 ratio is at least an undesirable imbalance.

The Constitution provides that judicial appointments shall be made "by and with the advice and consent of the Senate." This means that the nominee must be confirmed by majority vote of the Senate. A tradition has developed over the years that if a nominee is not acceptable to the Senators of the State of residence, by senatorial courtesy the Senate will decline to consent to the appointment. Thus, the practice has grown up of seeking the advice of the interested Senators at an early stage of the selection process.

Many not fully informed as to how this procedure works assume that this practice results in the selection of persons who may be politically acceptable but professionally unqualified. This is not true. The Senators, too, are concerned in seeing that the best qualified candidates be selected because they share in the responsibility if the person selected turns out to be incompetent or unsuitable. Our experience on the whole has been that the Senators' main concern is that the man selected from his State have outstanding qualifications and be beyond reproach from every standpoint.

The Department's function—and sole function—is to make recommendations. But even being involved to a small degree in this function is enlightening. I am reminded of the story of the schoolteacher who asked her class if anyone knew who Socrates was. A small child raised his hand, and on being called on said:

"Socrates was an old Greek who went around giving advice and got himself poisoned for it."

A word about judicial tenure. The Constitution provides that "the judges, both of the Supreme and inferior courts, shall hold their offices during good behavior. * * *" This provision was adopted by the Constitutional Convention unanimously and for reasons most eloquently expressed in the Federalist:

"The standard of good behavior, for the continuance in office of the judicial magistracy, is certainly one of the most valuable of the modern improvements in the practice of government. * * * It is the best expedient which can be devised in any government, to secure a steady, upright, and impartial administration of the laws. That inflexible and uniform adherence to the rights of the Constitution and of individuals, which we perceive to be indispensable in the courts of justice, can certainly not be expected from judges who hold their offices by a temporary commission. Periodical appointments, however regulated, or by whomsoever made, would, in some way or other, be fatal to their necessary independence."

The high esteem in which the judicial branch of our Government is now held proves the wisdom of the Founding Fathers in providing life tenure for Federal judges. The two major occasions when, for political reasons, attempts were made to undermine this constitutional provision only served to strengthen and add further justification to it.

Wholly in keeping with this concept, the Judicial Conference of the United States and the Department of Justice have recommended to Congress several legislative proposals concerning senior judges.

H. R. 3818, which passed the House on March 19 and is presently pending in the Senate Judiciary Committee, would amend section 371 (b) of title 28, United States Code, to designate a judge who takes advantage of the retirement provisions a "senior judge" rather than a "retired judge," and to provide a "roster of senior judges" who are willing and able to undertake special judicial duties upon assignment by the chief justice. This would mitigate the present feeling of many judges that by retiring they mark themselves as useless and no longer fit for public service even on a limited basis. It would create a status whereby mature, experienced, and respected senior judges may serve with distinction and perform selective but important public service in their judicial capacity.

H. R. 3391, as introduced in the House, where it is presently pending, would provide that a chief judge of a Federal circuit or of a Federal district court shall relinquish his administrative duties upon reaching the age of 70. This proposal gives recognition to the established fact that the daily administrative problems of the courts are difficult and exhausting and that senior judges should not be called upon to handle them in addition to normal duties.

H. R. 110, which passed the House on March 21, would provide that if a judge is eligible to retire and fails to do so, upon a certification of disability by the members of the appropriate judicial council, the President may appoint with Senate consent an additional temporary judge if he finds it necessary for the efficient dispatch of business.

It should be emphasized that none of the above proposals affect tenure. They merely take cognizance of the fact that judges are human, and that as they grow older, the law should take this factor into account either in the form of reduced duties or enlarged temporary judicial manpower.

We are fortunate to live in a nation which appreciates the precious values of law and order. We know that, in large part, these can be secured only as our courts are removed as far as possible from the passion of the moment, from politics, from partisanship, from prejudice, from personal or sectional interest of any kind whatever. Public confidence in the soundness of court decisions and in their integrity is the foundation of authority. Equal justice under law is preserved and strengthened as we approach the problems of judicial selection and tenure with these principles foremost in our minds.

Eisenhower Administration Doctors at National Institutes of Health Touchy on H-Bomb Petition

---

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 5, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by Drew Pearson entitled Government Scientists and H-Bomb, which appeared in the Belleville (Ill.) News Democrat on June 3, 1957.

GOVERNMENT SCIENTISTS AND H-BOMB

Government scientists who tried to circulate a petition against continued H-bomb tests suddenly found their constitutional right of free petition yanked from under them at the National Institutes of Health last week.

About half of the scientists and medical experts at the Health Institutes, a Government agency at Bethesda, Md., had signed the petition when suddenly Dr. Francis Arnold, a dentist working with the Institute of Dental Research, seized it. He refused to

return the petition on the ground that it was being circulated on Government property and on Government time.

This aroused a terrific backstage furore at the Health Institutes, where many scientists have seen how strontium 90 in H-bomb fallout increases leukemia and other forms of cancer. Many doctors also felt strongly regarding the Eisenhower position taken last fall against Adlai Stevenson's proposal to ban H-bomb tests, if Russia would agree.

Dr. Arnold was not available for comment. However, Dr. James A. Shannon, director of the National Health Institutes, confirmed the fact that the petition had been confiscated by Dr. Arnold and that it had not been returned. He said he had supported Dr. Arnold's confiscation of the petition because Government agencies should not be allowed to circulate a political petition.

Asked whether scientists lose the power of engaging in politics merely because they worked for the Government, Dr. Shannon retreated somewhat. He said he was in a delicate position, but that he would return the petition to the scientists if they agreed to circulate it only in their homes and not on Government property.

Dr. Shannon did not mention the Eisenhower-Stevenson debate last fall regarding the banning of H-bomb tests.

Address by Senator John F. Kennedy Honoring the Honorable Herbert Hoover

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. BOLAND. Mr. Speaker, one of the great misconceptions about the second Hoover Commission is that it undertook its studies with preconceived notions to curtail Government services to many citizens. I would like to call to the attention of my colleagues that Senator JOHN F. KENNEDY, of Massachusetts, who is well know to the Members of this body in which he served from 1947 to 1953, refuted misconceptions about Hoover Commission recommendations in his remarks given at a dinner honoring former President Hoover on February 4, 1957, during the third national reorganization conference, sponsored by the Citizens Committee for the Hoover Report, at the Hotel Shoreham here in Washington. Senator KENNEDY is well qualified to speak on this subject, for he was chairman of the Senate Subcommittee on Reorganization during the 84th Congress and he conducted many hearings on Hoover Commission legislative proposals.

Under leave to extend my remarks in the RECORD, I ask that Senator KENNEDY's speech honoring former President Hoover be included. It follows:

ADDRESS BY SENATOR JOHN F. KENNEDY, HONORING THE HONORABLE HERBERT HOOVER

I deem it a great privilege to be here tonight, not only because of my esteem for the guest of honor, but also because of my sense of gratitude for your invitation. Senators are not always asked to participate in ceremonies lauding economy and budget reductions. On the contrary, some schoolboys believe the Constitution gives the House the power to originate taxes and the Senate the right to originate spending. And Will Rogers always said that "It is not the initial cost of a Senator we have to look out for, it's the upkeep. He may be the deciding vote on an appropriation bill that will cost us more than 100 high-priced men."

One way in which we in public life can assist you who labor long and without notice in the cause of governmental economy and efficiency is to help clear up misconceptions in the public mind which impede your work. There are three popular misconceptions about the work of the second Hoover Commission which I would like to mention tonight.

First is the mistaken belief held by a few cynics that the greatest benefit given the Commission by former President Hoover was the use of his name and reputation. But anyone who makes this assertion doesn't know Herbert Hoover very well. He is totally unlike Senator John Sherman of Ohio over half a century ago, who was famous for two laws, the Sherman silver-purchase law and the Sherman antitrust law, although a contemporary Senator observed, "The first was adopted against his protest, the other he introduced by request. I doubt very much whether he ever read it, or, if he did, whether he ever understood it."

No. Herbert Hoover does not propose measures he has not read, nor approve those he does not understand. At the age of 81, when most men are firmly fixed to their rocking chairs, he accepted without hesitation the challenge offered by President Eisenhower to undertake once again an examination of the executive branch of the Government. And I have it from an unusually reliable source that he was a working chairman, probably the "workingest" chairman any commission or committee ever had. His prodigious efforts were reflected in the preparation of every draft and report, in the harmonizing of men with conflicting attitudes, and in the acceptance of their findings by the public, the Congress and the Administration. The name of Herbert Hoover has truly become synonomous with efficiency and economy in government and I am privileged to join with those gathered here tonight to pay tribute and thanks to you, President Hoover, for your notable achievements in the improvement of the operation of our Government.

Secondly, I want to mention a misconception which has resulted from the adverse comments of some pressure groups and politicians—and some of my best friends are politicians—and that is the notion that the Second Hoover Commission was a biased, reactionary group which reached preconceived conclusions in a slanted, controversial report that would deny services to millions of Americans. This position is best refuted by the facts. During the 84th Congress, a Democratic Congress, it was my privilege to act as chairman of the Senate Reorganization Subcommittee, to conduct hearings on many Hoover Commission legislative proposals and to participate in the Senate's discussion of them. Of the 59 measures relating to the second Hoover commission's recommendations which were referred to the Senate Committee on Government Operations, 36 were favorably acted upon by our subcommittee. After consolidations and approval by the full Committee on Government Operations, 16 bills, incorporating the objectives of these 36 bills on which the subcommittee had acted, passed the Senate, all by unanimous vote; and of those 16, 13 are already law.

Still another Hoover Commission measure I was privileged to cosponsor, with Senator LISTER HILL, far from being a step backward, established our Nation's first great medical library. Still another measure expanded, not reduced, funds for basic research in medicine and other fields. Whatever differences President Hoover and I may have politically or otherwise, this will never prevent us from working together in the interests of better government.

Third and finally is the misconception that must discourage you the most—the notion that since the Hoover Commission has completed its work the job is over. What happened to all those budget savings, taxpayers are going to be asking in a few months. But the job is far from complete, despite the gratifying progress which I reported to you. The legislative process in a democracy is a slow process, and it always will be. For as Winston Churchill once said: "Democracy is the worst form of government—except all those other forms that have been tried from time to time."

However slowly, there is every sign that we will continue to move ahead. A major piece of unfinished business is the bill which passed the Senate unanimously last year, and which provides that our national budgets be based on the actual expenditures to be incurred by the Federal departments and agencies during the budget year, the cost-type budget. This bill is important not only in terms of the savings it will bring, but even more significantly, I believe, in terms of developing greater cost consciousness on the part of all citizens, employees of the Government and otherwise.

If all of us, in the Congress, in the citizens' organizations and in the general public, can share but a small part of President Hoover's unselfish dedication to this task, regardless of critics and pressure groups and political considerations, then continued progress and achievement are ours. We may say of him whom we honor tonight as Edmund Burke said of Charles James FOX:

"He has put to hazard his ease, his security, his interest, his power, even his * * * popularity. * * * He is traduced and abused. * * * He may live long, he may do much. But here is the summit. He never can exceed what he does this day."

Funds Needed for Arab Refugees

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. MULTER. Mr. Speaker, one of the most pressing problems in the Middle East today is that of the resettlement of the Arab refugees. In this connection, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of June 6, 1957:

FUNDS NEEDED FOR ARAB REFUGEES

There are more than 900,000 Arab refugees from Israel who are currently being cared for by the United Nations Relief and Works Agency for Palestine Refugees. Many of them are in the Gaza strip, but there are more in Jordan, Syria, and Lebanon. Their presence in these countries constitutes one of the biggest and toughest problems in the Middle East. Until there is a permanent solution as to their future, there can be no permanent political settlement in that area. But in the meantime they must be fed, housed, and given medical care.

Mr. Henry R. Labouisse, the American director of the United Nations Relief and Works Agency, arrives here today on a trip to Washington, Ottawa, London, and other western European capitals, to buttress his plea for U. N. funds for carrying out his agency's work. This consists of two programs; direct relief, and rehabilitation;

the latter comprising efforts to help the refugees to become self-supporting. Because of lack of funds part of the rehabilitation program has had to be suspended. Plans for building four new vocational training centers have been put into cold storage. No new applicants for small grants, which would permit artisans and small farmers to set themselves up in business, are being accepted.

For the present fiscal year, which ends June 30, the United States contributed $17.5 million toward the relief program. Great Britain has already pledged a contribution of $4.4 million for the next 12 months for relief, plus an additional $1 million for the rehabilitation program. Corresponding allotments from other western nations are expected. The American contribution toward this program is part of the mutual security appropriation, on which hearings have just begun in the House and Senate. These funds should certainly be voted, not only with a view to maintaining peace in the troubled Middle East but also to alleviate the lot of some 900,000 persons who have no jobs, no permanent homes, no prospects for the future until a general political settlement is reached.

In the meantime the U. N. has taken over responsibility for their welfare. If its agency has to curtail its operations the results might well be tragic and jeopardize the entire position of the free world in that region. The greater the number of refugees who can be resettled and become self-sufficient the fewer the number who will have to be considered when a settlement is finally negotiated, and the smaller the drain on the U. N. budget. This is one part of the mutual-security program which should be enacted with the least possible delay, since the U. N. funds may well run out shortly after July 1.

Baccalaureate Address to the Class of 1957, United States Naval Academy, by Vice Adm. James L. Holloway, Jr.

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the baccalaureate address of the distinguished Chief of Naval Personnel, Vice Adm. James L. Holloway, to the graduating class of the United States Naval Academy on Sunday, June 2, 1957.

Mr. Speaker, this is the first time such an address has been delivered by a layman. Usually, a distinguished member of the clergy performs this important undertaking. However, Admiral Holloway is recognized as the foremost leader in the field of naval officers preparedness. The famous NROTC program was created by his genius. It is now a part of 52 colleges and universities throughout the land.

He is a past Superintendent of the Naval Academy. He now directs the destinies of the whole worldwide naval personnel program. His words of wisdom are most fitting to the Naval Academy graduate. His great service to his Nation in time of peace and war qualify him for this delightful and sacred task.

Future generations, as well as contemporary Americans, should partake of his counsel. Accordingly, Mr. Speaker, the CONGRESSIONAL RECORD is the place for his address.

The address follows:

REMARKS OF VICE ADM. JAMES L. HOLLOWAY, JR., UNITED STATES NAVY, CHIEF OF NAVAL PERSONNEL, FOR THE BACCALAUREATE ADDRESS TO THE CLASS OF 1957, UNITED STATES NAVAL ACADEMY, ANNAPOLIS, MD., JUNE 2, 1957

Admiral Smedberg, class of 1957, distinguished guests, and midshipmen of the Brigade, it is an honor and a challenge to be asked to speak to you young gentlemen on the eve of your graduation. It is a challenge to say something significant, something helpful, and perhaps even something you may hold memorable of a most important time in your careers. And as I face you, my heart warms with the memory of our last meeting, Class of '57, just before last Christmas in Mahan Hall.

At first thought, it may seem strange that a naval officer—a sailorman—is delivering the baccalaureate. The occasion is usually reserved for our respected and devoted clergy. But upon reflection, it may not be so strange after all—it can possibly be at once pertinent and significant.

When I talked to you last December, you may remember I remarked that the naval profession, and the profession of arms, is very close to that of the clergy. Like theirs, a career in the Navy is one of service to God, to country, and to our fellowmen. It is a life of self-discipline, self-denial, and self-sacrifice. It is a life of devotion to a worthy and lasting cause: the preservation of peace and God's way on earth.

I repeat what I told you then: your service as an officer in the Armed Forces of our country is essential to the well-being, to the integrity, yes, to the ultimate existence of our country, and our way of life. I know of no more enriching or rewarding career for a young man to advance through than that.

Men of the sea are traditionally close to nature, to the wonders of God's earth and His universe. In his ship, the sailor rides the swelling storm: he sees the massive seas, he sees calm waters. He watches the star-strewn skies; he rises to many dawns to calculate his ship's position using the faint lights of the stars whose precise movements across the vastness of time and in the immensity of our outer space are predictable and measurable to a microsecond.

The sailor—the soldier—the airman—all see God in all His power and all His handiwork; and he comes to know that such a universe did not just happen, but is under the guidance of a Supreme Being.

And in the fulfillment of his life's mission, the naval officer cannot but be moved by the words in that lovely prayer for the Navy which so reflect the beauteous golden age of our language—

"That they might be a safeguard unto the United States of America, and a security for such as pass on seas upon their lawful occasions."

As never before, our Navy is a guarantee for freedom and an instrument for deterring war so that free men everywhere may serve their God in peace and quiet.

The officer corps is responsible for the wel-being and the moral guidance of the young men who are entrusted to our care. The average age of our bluejackets is only 23. Thousands of them are still in their teens and away from the influence of home, school, and church for the first time of their lives. Each year, some hundred thousand complete their naval service and return home.

It is your responsibility to set the example of good conduct, of reverence and loyalty, of faith and confidence, in your commissioned careers.

In all this, faith is our sure foundation.

Faith is the essence of our lives. We all have faith in God and in His supreme direction. We must have—yes—we must, from day to day—practice faith—not only as a tenet of our religion, but as a militant, willful, overriding force in our career at arms.

And in the practice of this militant faith in our noble cloth, by no means the least important is the affirmative, the positive, the enthusiastic. A willing heart is golden.

Nothing is more disruptive than the complainer, the grumbler, the condemner of some vague, carelessly conceived "they." Remember the old saying in the Navy—we are they.

Not that we should be blind to error—rather, when we think wrongs or errors exist—gather facts, and marshal objective measures through responsible channels. And here too, in so doing, let us pray for a due amount of modesty and humility—so becoming to all of us regardless of age—but particularly appropriate and helpful as wisdom and judgment commence initially to accrue to us.

Have faith in our service, our institutions, our leadership. There is no finer form of loyalty than a subtle, yet nevertheless outward manifestation of faith in our seniors who precede us.

The good destroyer captain, the disciplined and steady man at the diving controls in the submarine, the jet pilot in flight formation following his leader, all practice faith in its purest form in everything they do, every order they obey, every direction they give. Make this faith, this confidence and loyalty, a part of your day-to-day life, as you would in battle.

We have all observed how effectively the competent, yes, that is essential too, and the enthusiastic and sanguine leader, brings his people to play far over their heads, and has a taut yet happy ship, or troop, or squadron.

When you graduate next Friday, you receive not 1, but 2 commissions, the visible, palpable commission of your rank, and a second, but invisible commission, as a servant of God and country. This beautiful thought shines forth in the famous window you know so well in the chapel where a new ensign reads his first commission. In the background, the Stars and Stripes lifts on a swelling breeze; opposite is the white-garbed figure of Christ, in a beautiful gesture, lifting His right hand as if to delegate mission and responsibility to the young officer in the foreground.

Your graduation from Annapolis represents many things. It has a deeper significance than the mere act of graduation and the commencement, or I should say, for most of you, the continuation of a career begun some 4 years ago when you were appointed a Midshipman, United States Navy, a historic and purposeful rank. It means the degree of bachelor of science. It means the beginning of fascinating new duties, of ever-broadening responsibilities in interesting places, and participation in parlous and history-making events. It means the farflung deployment, in our country's service, of a group of men who never again will be able to completely assemble. But to all, it means the acceptance of these commissions of high service to God and country.

For those of you who are to continue in the Navy, I admit, as a sailorman of 1918 graduation vintage, to some envy. I can think of no more thrilling time in which to graduate. The Navy is alive with opportunities, with challenge, with interest, with future. You will join, and contribute to, the greatest revolution in the history of naval development.

It is not far afield to say that the class of 1957 has a rendezvous with history in the making.

The years ahead are bright with promise—promise in spectacular developments—with promise in opportunity for enterprise and initiative—with promise in dedication and devotion in facing and overcoming hardships that strengthen us.

You are to live in a dangerous and turbulent period of history. Your lives will be charged with the continuing struggle for freedom and peace, during a long period of tension, and in a time when readiness, eternal viligance, and strength are the free world's best protection.

And as with all men who venture and accomplish, your future will include a share of trouble, sorrow and adversity. These, too, are an inseparable part of the fabric of the future.

Your future in the Navy, and in the other services to which some of you go, is in your own hands. You will shape your own career. You will determine whether or not you have a useful, productive, and happy service life. As sure as life goes on, your contributions will be a measure of your competence, your energy, your integrity, and your faith.

You leave Annapolis with at least 3 of the 4 basic ingredients for happiness and success.

First of all, you have time—not too much, but sufficient, with hard work, to meet the innumerable challenges that are yours; time to better the conditions about you; time to do your part to preserve the peace and security of our country.

Second, you have unlimited opportunity. Never in the history of the Navy have there been so many. Never has seapower been so important to this great Republic.

Third, you have knowledge. Each of you is completing 4 exacting years which leave upon you the indelible mark of an Annapolis graduate. Your diploma is evidence of indoctrination in a way of life of profound moral and spiritual connotations, and of the deep-rooted and proven education in which you have successfully attained, within these gray walls on the Severn.

But these three ingredients—time, opportunity, and education—important though they oe, are of small value unless you have the fourth—faith. Faith in God—faith in your calling and your cloth—faith in your seniors, your juniors, your coordinates—this is a most important ingredient in the life of any naval officer. These are the foundation of a successful career. And likewise, these are essentials to a useful and rewarding life.

Now I know that faith is not something which one can pick up and carry out of Bancroft Hall, or from this new fieldhouse like a book or a diploma. It is not something that can be suddenly conjured to reality. If faith is not a part of your life already, leave room for it. Faith will grow from within—slowly, perhaps haltingly, and with struggle.

In my youth there was a time when lack of faith was fashionable. But two world wars and many smaller ones have proved its supreme value to me and to many other sailors.

To have faith, or not to have it, is the transcendent, the eternal decision that comes in every age to every person. It will also be yours.

But like Emerson, you will come to say, "All I have seen teaches me to trust the Creator for all I have not seen." And like Lincoln referring to the Bible, "Take all of this Book upon reason that you can, and the balance upon faith, and you will live and die a better man."

Faith will strengthen you in times of peril and decision. Unless a man has faith, trouble and tribulation can leave him bitter, frustrated, and adrift. With faith, your life will be meaningful, happy, and productive. Faith will enrich your life. It will bring you prepared, to the moments of great decision.

This was Robert Browning's meaning in Rabbi Ben Ezra when he wrote:

"Then, welcome each rebuff
That turns earth's smoothness rough,
Each sting that bids nor sit nor stand but go!
Be our joys three parts pain!
Strive, and hold cheap the strain;
Learn, nor account the pang; dare, never grudge the throe!"

To John Bunyan, tribulation was the blindness of his daughter and his long confinement in prison. He spent 12 years in Bedford jail writing his masterpiece Pilgrim's Progress, which has the greatest translation into foreign languages of any book in the world except the Bible. Milton's chastening was his blindness.

These and many other examples prove that with faith, great works are accomplished.

As you leave Annapolis, take with your three ingredients this all important one of faith: Faith in your brothers in arms and yourself, faith in your service, your country and its future, and faith in God.

George Santayana wrote, and one of his greatest lectures at Harvard consisted solely of repeating:

"O world, thou choosest not the better part.
It is not wisdom to be only wise,
And on the inward vision close the eyes;
But it is wisdom to believe the heart.
Columbus found a world, and had no chart
Save one that faith deciphered in the skies;
To trust the soul's invincible surmise
Was all his science and his only art.
Our knowledge is the torch of smoky pine
That lights the pathway but one step ahead
Across a void of mystery and dread.
Bid, then, the tender light of faith to shine
By which alone the mortal heart is led
Until the thinking of the thought divine."

My dear young friends, may you go forward from Annapolis in this faith.

Thank you very much.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

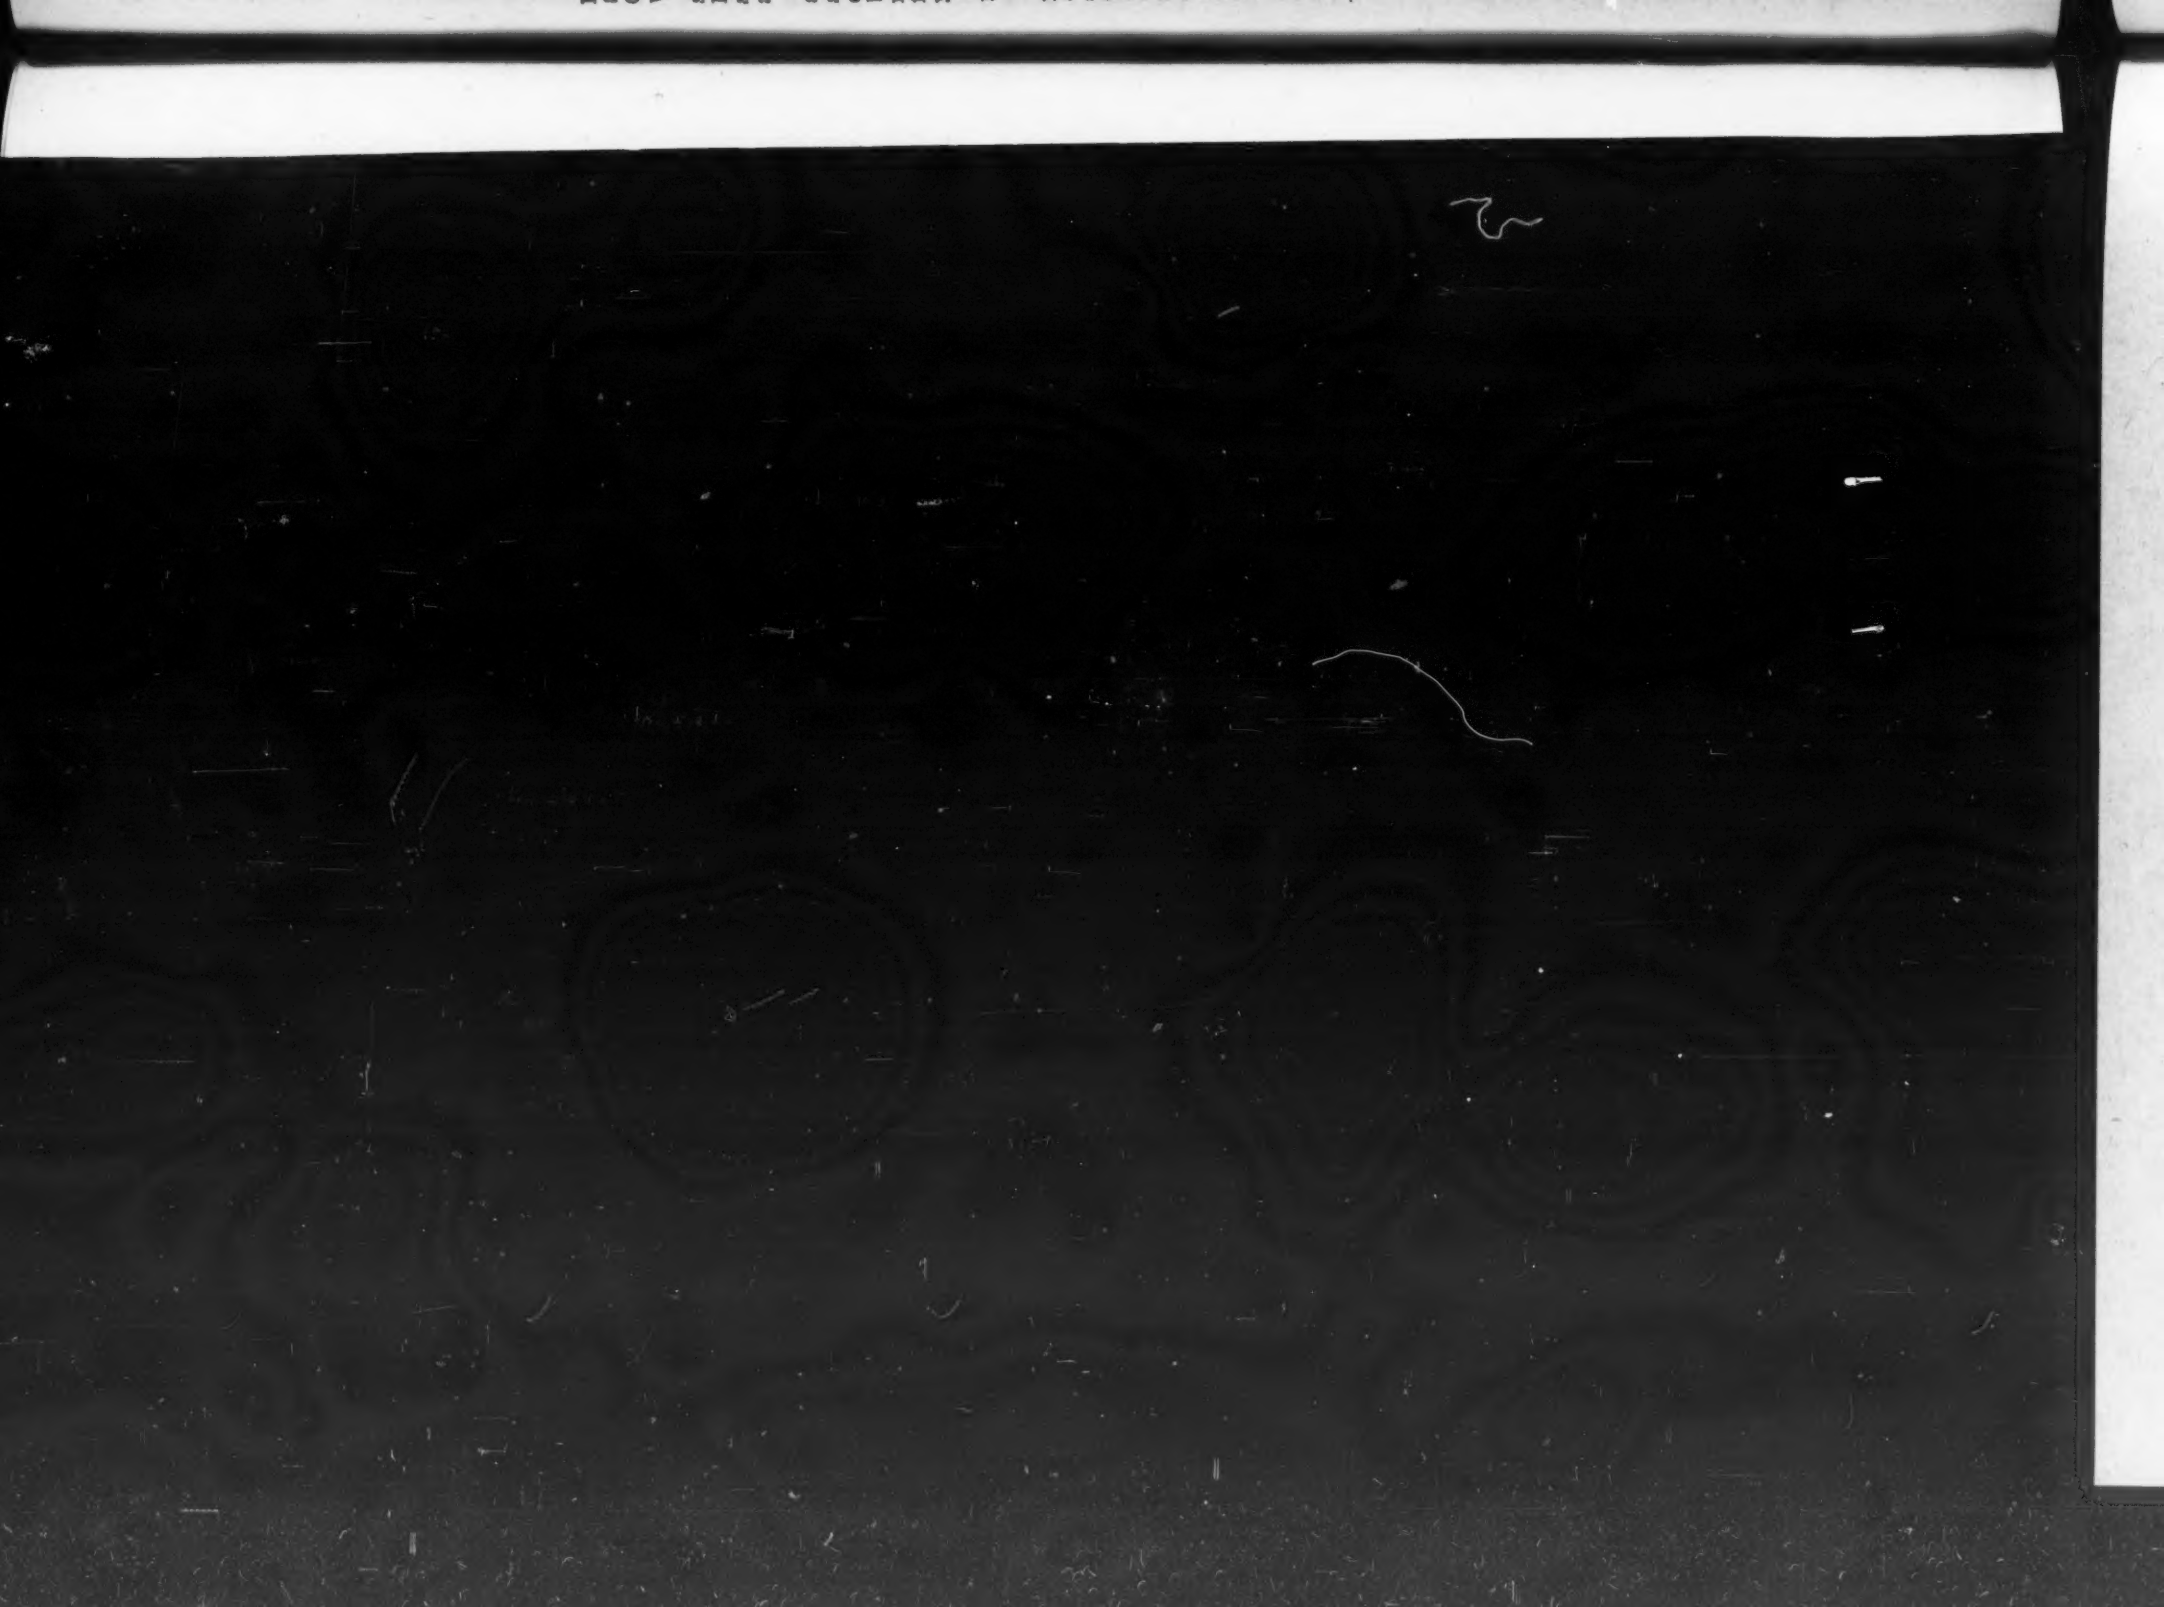
PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).



Appendix

Gen. George C. Marshall

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. FULTON. Mr. Speaker, we in Pennsylvania are proud of our United States statesman, soldier, and friend, Gen. George C. Marshall, and his good wife and helpmate, Mrs. Marshall.

As a Congressman from western Pennsylvania, it a pleasure to claim General Marshall as a famous world citizen who spent his early youth among our hills and valleys of western Pennsylvania.

We salute General and Mrs. Marshall and wish them well on the 10th anniversary of the Marshall plan that has succeeded beyond our best hopes, and has been a keystone in the security and progress of all nations and peoples of the free world. We are deeply grateful to you.

[From the New York Times of June 6, 1957]

MARSHALL IS HONORED ON 10TH ANNIVERSARY OF AID PLAN

WASHINGTON, June 5.—President Eisenhower joined in tribute today to his old chief, General of the Army George C. Marshall. In a ceremony at Blair-Lee House, General Marshall was honored on the 10th anniversary of the address that set forth the Marshall plan for assisting war-torn Europe. Sir Harold Caccia, British Ambassador, gave General Marshall a silver medal struck by the Organization for European Economic Cooperation. Herve Alphand, French Ambassador, gave him a tapestry in the name of the French people, and presented a clock to Mrs. Marshall. The President went to Blair-Lee House after his morning news conference. He shook hands with General Marshall and his wife and discussed the weather as they posed for photographs. The Marshalls had driven 40 miles in the rain from Leesburg, Va., where they live in retirement.

READ DURING CEREMONY

The President departed after the pictures, leaving a letter of tribute. It was read in the ceremony by Wiley T. Buchanan, State Department Chief of Protocol.

The letter declared that the address by General Marshall, then Secretary of State, had prevented economic and political chaos in Western Europe.

"That this tragedy was averted is due in large measure to the bold and imaginative undertaking which you proposed and which rightfully bears your name," the President wrote.

At Harvard's commencement exercises 10 years ago, General Marshall said the United States would aid those European countries that were ready to make a common effort to rebuild their economies.

Out of this proposal came a $12-billion-aid program lasting 3½ years, which was credited with having restored economic health to free Europe.

The 17-member Organization for European Economic Cooperation was formed in 1948 to put the Marshall plan into effect, and still functions.

Peter Thorneycroft of Britain, chairman of the Organization's council, said the 1947 speech gave sudden hope and encouragement to the peoples of Europe.

Sir Harold told the general:

"You made it clear that, if the nations of Europe got together and worked together for their own salvation, American aid would be forthcoming. Your inspired speech was destined to set in train an unforseeably rapid recovery in Europe."

Ambassador Alphand observed that without the Marshall plan, the OEEC and Europe's coal and steel community "would not have been born."

"Without your plan," he told the general, "there would have been no hope for a united Europe, a common market * * * or a free trade area."

General Marshall, who is 76 years old, received the tributes standing erect, arms at his side, as a soldier at attention.

"I came here today in a very real humility to receive this expression of your appreciation for the attitude of the American people toward Europe at the close of World War II," he said.

"I think what happened—and it is very much reflected by what has just been said—served as an example for the succeeding years when we were still troubled by the evil corrosion that was on us and continues on us today."

He voiced confidence that the Western World "in the end will triumph."

The medal bears the inscription, "Salus Europae: Pax terra marique parta." This means "The salvation of Europe: Peace by land and sea."

Later, at the German Embassy, General Marshall received a tribute from Dr. Hans Bluecher, deputy to Chancellor Konrad Adenauer.

Every German realizes "how much vision and courage were needed to make the great United States see in a united Europe one of the necessary elements of the building of a progressive world," Dr. Bluecher said.

COMMON EFFORT HAILED

LONDON, June 5.—Peter Thorneycroft, Chancellor of the Exchequer, paid tribute tonight to General Marshall and the late Ernest Bevin, Laborite Foreign Secretary, in a broadcast commemorating the anniversary of the Marshall plan.

General Marshall's words inspired the European countries with new hope, he said, "This struck an answering chord in a great British Foreign Secretary, Ernest Bevin. Europe was brought together in a common effort which is still going on today."

DENMARK IN TRIBUTE

COPENHAGEN, DENMARK, June 5.—The anniversary of the Marshall plan was commemorated in Denmark in a radio speech tonight by Jens Otto Krag, Minister of Foreign Economy.

He recalled that Denmark received $355 million from the plan's inception until the summer of 1953, when she told the United States she did not expect further aid.

ITALY IS GRATEFUL

ROME, June 5.—Giuseppi Pella, Foreign Minister, voiced Italy's gratitude to the United States today for its Marshall plan help.

Without it, he said, post-war reconstruction would have been slower and more difficult. Europe and America have a long road to go together, he declared.

[From the Washington Post of June 6, 1957]

MARSHALL PLAN APPRAISAL 50 YEARS' WORK IN 10

(By Ferdinand Kuhn)

PARIS, June 5.—If you remind a European that it has been 10 years since Gen. George C. Marshall made his famous speech at Harvard he is apt to say, "Good God—is it only 10 years?"

The changes in Europe since June 1947 have been of the kind that would normally have taken 50 years. To anyone who saw Western Europe in that tragic spring and who revisits it today it is a different world.

German civilians were grubbing in fields for food and fuel while the general was speaking at Cambridge.

The French and Italians were living on emergency food shipments from the United States. The British were staggering through an economic crisis that was harder in some ways than the war years themselves for there seemed to be no victory in sight, no light at the end of the tunnel.

The four horsemen whom Marshall called hunger, poverty, desperation, and chaos were riding high through Europe and wherever they rode, except perhaps in Britain and Scandinavia, communism was rising to take advantage of the people's misery.

ONLY A MEMORY

Today all this is only an evil memory. Western Europe's industries last year produced 74 percent more than before the war. Its farms grew 30 percent more, its exports shot up to 84 percent more, and its internal trade was almost twice as much in quantity.

There no longer is such a thing as the Western European economic problem. It has become a series of problems of individual countries coping not with poverty but with prosperity. Most of the so-called Marshall plan countries have shortages of labor; all the industrialized countries at least are putting more into development plans for the future than their present economies could sustain.

Without the spark of General Marshall's speech and without the $13 billion America pumped in during the first 4 years Europeans could not have achieved their astounding recovery of today—and they know it.

OTHER PART OF STORY

But trade and economics are only part of the story. When Marshall spoke at Harvard he did not use a single statistic. Instead he pictured the situation in human terms and went on to propose a revolutionary procedure for curing it. This was his suggestion that Europeans themselves get together to determine what they could do for themselves and what they would need from the outside. Western European governments picked up the ball and ran with it—and they are still running with it 10 years later.

Their first response resulted in the creation of the Organization for European Economic Cooperation in which officials were not French, German, Italian or Dutch but European. The United States had hoped for more: it hoped that an integrated

Europe would be built into the work of rebuilding the continent. Yet the impetus of 1947 did not die, and since the ending of the original Marshall plan in 1952 Western Europe has sprouted a whole flower garden of supranational organizations in special fields. The Coal and Steel Community, for example, leaped over frontiers and reshaped the heavy industries of 6 countries as if they were 1. NATO in the military field, and soon Euratom in the atomic and the common market in the field of trade—all these are steps in the course which Marshall and his helpers charted 10 years ago.

ANOTHER CONTRIBUTION

The plan that grew out of Marshall's speech contributed one other idea that should be remembered today. This was the novel use of counterpart funds—that is, provision that every country getting grants from the United States should put up equivalent amount in its own currency for its own uses. Economists may frown at some results of these vast accumulations of local currencies. Some countries like France and Italy used them to speed their reconstruction from war. Britain used counterpart sterling to reduce its national debt. In retrospect, what matters now is not so much the uses of these billions of lire, francs, marks, but the fact that Europeans raised these sums themselves and so took a major share in their own recovery.

MISTAKES WERE MADE

Mistakes, of course, were made in the Marshall plan, and Europe will pay heavily for them. You can hear Germans and Italians say today that too much was poured in at the top, with the result that big industries are bigger and politically more powerful than in Nazi and Fascist days.

In addition Marshall planners made a basic error of treating underdeveloped Turkey and Greece in much the same way they handled industrialized societies of the Atlantic coast. These countries would be better off today if there had been greater emphasis on agriculture.

COMPARE IT WITH 1931

But few Europeans today will throw stones at the Marshall plan or its architects, beginning with the general himself. We now are 12 years from the end of World War II. One measure of how far Europe has come is a comparison with its condition 12 years after the World War I armistice—say, at beginning of 1931. At that time the Nazis were on the march throughout Germany, Fascists were firmly in control of Italy, Britain and France were struggling with worldwide economic depression. All Europe had begun the stampede to the shelter of protective tariffs and other devices of self-sufficiency that proved to be no shelter at all.

Not one European country, no even Italy, for all of Mussolini's bombast, had any faith in its future. Today every Marshall plan country believes in itself in spite of the tragic division of the Continent and the shadow of atomic war.

[From the Washington Post of June 6, 1957]

FREE EUROPE HONORS MARSHALL ON 10TH BIRTHDAY OF HIS PLAN

(By Jean White)

A soldier-statesman-gentleman came up from his Leesburg, Va., country home and retirement yesterday to receive the thanks of the free world.

Gen. George Catlett Marshall, who made a speech heard around the world 10 years ago yesterday to give hope to war-shattered Europe, was honored both here and in Western Europe.

Despite a streaming downpour, President Eisenhower made an unscheduled trip across Pennsylvania Avenue to Blair-Lee House to join in the tribute to Marshall on the 10th anniversary of his Harvard University speech launching the Marshall self-help plan for European recovery.

At the simple ceremonies at Blair-Lee House, General Marshall received a silver medal struck in his honor by the 17-nation Organization for European Economic Cooperation, the agency born with the Marshall plan. Around the figure of the Goddess of Peace burning arms, the face of the medal bears a Latin inscription meaning: "Salvation of Europe—peace on land and sea."

Mr. Eisenhower went to Blair-Lee House by auto immediately after his news conference and shook hands warmly with the man who was his World War II boss as Army Chief of Staff.

As he walked into the drawing room with Mr. and Mrs. Marshall, the President's eye was caught by a portrait of Marshall, as the 5-star general, near the fireplace.

"Oh, in uniform," the President said to the Marshalls. "Now I've never seen that before," and he pulled out his brown-rimmed spectacles for a closer look at the portrait by Thomas E. Stephens.

Then, like two country squires, the President and General Marshall discussed weather in their parts of the country.

After asking about the weather down in Leesburg, Mr. Eisenhower observed: "I've been looking for some rain. I hope we are getting some at Gettysburg."

Before returning to the White House, the President turned to General Marshall to say he had wanted to come back to salute his "old Chief."

He left the more formal words in a letter of praise to be read by Wiley T. Buchanan, Jr., State Department Chief of Protocol. In his letter, Mr. Eisenhower praised General Marshall for the "bold and imaginative undertaking" that helped avert tragedy when "the fate of all Western civilization hung in the balance."

General Marshall, a distinguished figure at 76, stood with an old soldier's stiff erectness during the brief ceremony.

He wore a dark blue suit with the sporting touch of a tattersall checked vest.

He received the tributes "in very real humility."

"I was fortunate to be in the position to represent the attitude of the American people at this fateful moment of chaos in the world," he said in his quiet voice.

"I think what happened," the general went on to observe, "and it is very much reflected by what has just been said, might possibly set an example for the succeeding years when we are still troubled by the evil corrosion that was upon us and continues today."

Sir Harold Caccia, British Ambassador to the United States, presented the silver medal to General Marshall for the OEEC.

Marshall's name, he said, will go down in history not only as a great military leader and the architect of European economic recovery, but also as the founder of European economic cooperation.

French Ambassador Herve Alphand gave the Marshalls a tapestry and antique clock purchased with money raised by popular subscription in France.

"After 10 years," Alphand said in a deeply felt tribute, "we don't forget * * *," and he went on to list the Marshall plan's part in restoring economic vigor, stopping communism, and breaking the way for the European Coal and Steel Community, Euraton, a common market and free-trade area.

Overseas many of Europe's leading statesmen issued tributes to Marshall as he was honored here. Two plaques were unveiled in his honor at OEEC headquarters in Paris.

From Blair House, General Marshall went to the German Embassy for another tribute.

Then the former Army Chief of Staff, Secretary of State, and Secretary of Defense—the soldier-statesman-gentleman—headed back for his Leesburg home and retirement after a rare visit to the Nation's Capital.

A Single Chief of Staff

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1957

Mr. RUTHERFORD. Mr. Speaker, I feel compelled to express some thoughts which are the result of my deep concern at this time. A reader of the press will note that in recent weeks there has been a resurgence of the long-extant movement to foist upon our country a supreme general staff ruled over by a single chief of staff in complete dominance and control of our military forces, policy, and organization.

A glance at congressional history reveals that this proposal has been pushed with vigor and force many times in the past 75 years. Congress, in committee and as a whole, has repeatedly and in great detail examined the philosophy and functioning of this method of military control, developed by and adopted from the Prussian system. The purported advantages have been aired and investigated and it has been concluded by our predecessors, in each and every instance, that advantages did not exist. As a matter of fact, the conclusion has been that monumental disadvantages and dangers would exist if a supreme general staff-single chief of staff was authorized. This repeated rejection by Congress of the system that led the Prussian-German people to disastrous defeat twice within 30 years is an example of the astuteness and soundness of our congressional-legislative process. I have no fear that examination of this present proposal under objective conditions will once again result in its complete and unqualified rejection.

There is one area of this matter that I believe deserves special mention in the light of today's thinking and current conditions. The shield behind which the present sponsors and advocates of this single chief of staff scheme advance is the shield of economy. This, incidentally, indicates the clever manner in which this proposition is being promoted. All of us are vitally and sincerely interested in the question of Government expenditures and economy. Adoption of this system, from a military and national policy standpoint, would be inviting; yes, almost assuring, a debilitation of our military power and effectiveness. Leaving that aside for the moment, however, I would like to examine the economy claim we read so much about these days.

Our best yardstick, it would seem, to measure organizational efficiency is found in the business-industrial systems of our country. These organizations are continually subjected to the test of practical application and if they fail they disappear. Competition provides the test. Our industrial and business leaders of today are agreed that the greatest efficiency is developed by a decentralized organization. The more successful business enterprises have found that decentralization increases efficiency and econ-

omy, and thus builds a stronger and sounder organization. Whereas 50 years ago the single industrial emperor dominated the business scene, this strong man has today virtually disappeared—the victim of progress and efficient organization.

To adopt a single Chief of Staff—completely unified military organization would be to follow a path of retrogression and to saddle ourselves with a system proven to be uneconomical, as well as inefficient. True, we are dealing with military, not business, organization. But every indication is that it would be just as uneconomical in its military application as in business. This was pointed out by Secretary of Defense Wilson, as quoted in the New York Times of May 17, where it was stated:

> Secretary Wilson said he had been trying to "overcome the handicap of bigness" for 20 years as president of General Motors. He said neither money nor paperwork would be saved by putting the services "all together in one big pot."

The handicap of bigness that Secretary Wilson mentioned as a great problem at General Motors would be dwarfed by the handicap imposed by merging the services into one gigantic combine. Suppose you take the assets of General Motors, American Telephone & Telegraph, United States Steel, Standard Oil Company of the United States, Du Pont, and General Electric as a starter for comparison. Add to them the assets of more than 30 of the other leading corporations of the country. The resulting combination in business size, and complexity, would be less than half of the aggregate if the 3 military departments' assets were lumped into one pot. Any man who seriously claimed that it would be good business management to merge some 40 of the largest business concerns of the country into one gigantic firm would be a candidate for mental examination.

Furthermore, no matter how economical, the security and safety of the United States, as well as its traditional constitutional civilian control of the military, would prevent adoption of the supreme general staff-single chief of staff concept.

In addition to the searching congressional inquiry in this field, the question was the subject of much attention by the Hoover Commission. This organization, dedicated without question to efficiency and economy, rejected on all counts the supreme general staff organization.

The present organization, the Joint Chiefs of Staff, provides us with the safest and surest method of advising on and carrying out our national policy. The victory of our Nation in two World Wars, when contrasted with the utter failure of the German supreme high command is ample evidence of the efficiency of this type system.

The JCS organization has been repeatedly examined in Congress and in each instance determined to be the best and soundest organizational form available. The Hoover Commission Task Force Committee on National Security concluded that there should be no change in our organization of military direction.

In dealing with this, the Task Force Report of the Hoover Commission concluded:

> There has been much loose criticism of the war efforts of the Joint Chiefs of Staff as constituting command by committee; yet there can be no doubt whatsoever that in the field of grand strategy a meeting of several minds is far safer—and in the end more sound—than the dictates of one. The responsibilities for strategic planning and the conduct of war are soundly placed by the National Security Act upon the shoulders of the Joint Chiefs of Staff, who, in turn, are under the authority, and subject to the control of, the President and the Secretary of Defense. There should be no change in this concept.

The fallacious cloak of economy and efficiency once again has been wrapped around the single chief-of-staff idea in an effort to make it more acceptable to the people of the United States. Regardless of what form it takes or what cover it has, this concept can spell naught else but trouble and disaster for the United States. It would not be a panacea, it would be an anathema—on our way of life and our constitutional form of government. I would not cry "Wolf" or "Beware of the man on horseback." But any man worth his salt and placed in the position of Chief of the Supreme General Staff, or whatever it might be denominated, would naturally and automatically acquire powers far beyond those envisaged by the Constitution. This era of total war would make this system intolerable to everyone in our country, however he may be engaged, without practical exception, for its impact would be felt and borne by all.

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. WILLIAM L. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. DAWSON of Utah. Mr. Speaker, I wish to take just a moment or two to comment on the results of the meeting of the House Interior and Insular Affairs Committee of Tuesday, May 28. At that time the full committee considered the bill which would admit Alaska into the Union. The Subcommittee on Territories and Insular Affairs had, a short time prior to the aforesaid meeting, voted out the statehood bill, after having conducted hearings and having considered innumerable amendments since the legislation was first taken up on March 11, at the 1st session of the 85th Congress.

Of the amendments that were adopted by the subcommittee, four principal amendments were considered separately by the full committee for adoption or rejection. First of all, an amendment providing that an election be held in Alaska to determine whether the duly qualified electors wished to have their Territory become a State, before it could legally become such even though Congress had favorably passed the legislation, was rejected by the committee. I felt that the people of Alaska had expressed their wishes on this matter previously; directly, in a referendum on the question in 1948, and indirectly, by approving the proposed Alaskan constitution drafted at a 75-day session commencing on November 8, at a constitutional convention formed pursuant to a law enacted by the 1955 territorial legislature. It is interesting to note that the Governor-designate of Alaska, Mike Stepovich, of Fairbanks, Alaska, indicated by telegram to the Interior Committee that while he would accede to the wishes of the Congress on this matter, he felt, as I have stated, that the foregoing was an indication of the feelings of the Alaskan people on this subject plus the further fact that a further referendum would be an unnecessary expense.

The second amendment considered by the committee was a proposal which would have delayed for 5 years after Alaska finally became a State, the transfer of jurisdiction over the fish and wildlife resources to the new State. This amendment, which was rejected by a 17–14 vote, means that the bill as it now stands, if enacted into law, would transfer these resources from the control of the United States Fish and Wildlife Service to the new State of Alaska. What this will mean to Alaska can be shown by simply referring to the 1956 Annual Report of the Governor of Alaska, where, on page 1, it is stated:

> Alaska's economic condition was generally good and did not change materially during the year. Total production from Alaska's natural resources totaled $131 million. Of this, $69.7 million was from the fisheries.

The third and fourth amendments, which were also considered separately by the committee, included a proposal by Delegate BARTLETT, of Alaska, to substitute language so as to require any Federal agency to obtain congressional approval before taking over 5,000 acres or more of public land for its use during the first 5 years of statehood, and a proposal for retention in the Federal Maritime Board of its exclusive jurisdiction over common carriers engaged in transportation by water between any ports in the new State of Alaska, and between any port in Alaska and other ports in the United States, its Territories, or possessions. While a somewhat similar bill to the substitute language proposed by Delegate BARTLETT, in respect to the maximum amount of public-land withdrawals without congressional approval is pending before the House Interior Committee, the proposal to substitute was also rejected by the full committee as was the final amendment.

The full committee then adopted the rest of the amendments contained in the bill before it and proceeded to vote out the statehood bill by a vote of 24 to 6. As a firm believer in statehood for Alaska and Hawaii, I was happy to see that 11 of the 13 Republicans who voted on the bill and 13 of the 17 Democrats, voted in favor of the legislation. It is this kind of bipartisan proceeding that will be necessary for the passage of this statehood legislation. I sincerely hope that it will

be demonstrated when the House of Representatives votes on this important measure.

North Pole Discovery Remains in Doubt

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. PILLION. Mr. Speaker, Dr. Frederick A. Cook devoted many years of his life to the exploration of the Arctic and Antarctic regions. He enjoyed a brilliant career in this field.

His claim to have reached the North Pole on or about April 21, 1908, aroused worldwide controversy. There remains considerable doubt as to whether Dr. Frederick A. Cook or Adm. Robert E. Peary was the first person to reach the North Pole.

I am inserting an article from the Buffalo Evening News, of May 1, 1957, in which Dr. Silvio Zavatti, an Italian expert, states his confidence in the claims of Dr. Cook and urges a restudy of the claims made by both Dr. Cook and Admiral Peary concerning the discovery of the North Pole.

The article follows:

COOK'S CLAIM OF FINDING POLE WINS GEOGRAPHER'S SUPPORT—ITALIAN EXPERT URGES SCIENTISTS TO RESTUDY BUFFALO EXPLORER'S ADVENTURE 49 YEARS AGO

The long-disputed claim of the late Dr. Frederick A. Cook that he was the first man to reach the North Pole is receiving powerful support from a well-known Italian geographer.

Writing in the Journal of the Italian Geographical Society, Dr. Silvio Zavatti, director of Italy's Polar Institute, declared without reservation that Dr. Cook should be acknowledged as the discoverer of the Pole.

Dr. Cook, a resident of the area in the 1930's and the father of Mrs. Helene Cook Vetter, 12 Oakwood Drive, Harris Hill, devoted the last years of his life to stressing his claim to having been the first man to reach the North Pole and the first man to reach the top of Mount McKinley in Alaska, highest peak on the North American Continent.

EXPLORER IS BURIED IN BUFFALO

He died in 1940 and is buried in Buffalo. Once denounced as the perpetrator of one of history's greatest hoaxes, Dr. Cook was a national hero briefly in 1909, after he returned from the Arctic with the claim that he reached the pole April 21, 1908. Five short days after he announced his discovery, Adm. Robert E. Peary announced to the world that he had reached the northern cap of the world April 6, 1909.

A committee of scientists, named to evaluate the rival claims, finally rejected Dr. Cook's account and accepted Admiral Peary as the North Pole's discoverer. Dr. Cook dropped from public sight, but he never gave up the battle for recognition.

Noting that this month marks the 49th anniversary of Dr. Cook's reported discovery, Dr. Zavatti is urging geographic societies to renew studies of the records.

More than 50 leading explorers and scientists have attested to the creditability of Dr. Cook's reports and the book about reaching the North Pole with two Eskimo companions.

An important aspect of the North Pole controversy is Dr. Cook's disputed claim that he climbed to the top of Mt. McKinley in 1906.

It is considered an important aspect because it would shed light on Dr. Cook's credibility—and because it may be more easy to prove or disprove than his claim that he reached the Pole.

CONQUERED GLACIER IN 8 DAYS

Mrs. Vetter said a new expedition may attempt the climb this year over the same route that Dr. Cook says he took. That is the route that Bradford Washburn, director of Boston's Museum of Science, says is impossible because of impassable crevasses.

Dr. Cook said he ascended the mountain by the Ruth Glacier route in 8 days. The record time up the mountain on the conventional route is 21 days.

A four-man expedition led by Walter Gonnason, Seattle explorer, tried to make the climb up the 20,300-foot mountain by the Ruth Glacier route last summer, but had to turn back at the 11,500-foot level because of bad weather.

Mrs. Vetter is sure that another expedition will make the Ruth Glacier climb eventually and prove her father's account, thus strengthening his claim to the discovery of the North Pole.

Global Indigestion

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. MOORE. Mr. Speaker, during the past 2 weeks, we have had vividly called to our attention several cases involving American servicemen charged with crimes while serving in the United States Armed Forces on the soil of some foreign nation. The facts in these cases have varied as well as the locale, but the basic issue is the same: What is being done to protect the constitutional rights of our men in service?"

In view of what has happened in Formosa, Japan, and now in Greece, I believe it is high time Congress take a very searching look at our farflung bases throughout the world, and ask ourselves whether the price we are paying in dollars, and more important, in the lifeblood and constitutional rights of our young men in uniform, is worth what we are getting in return.

The following excellent editorial from the Wheeling Intelligencer for May 28, 1957, asks a very pointed question which has been uppermost in many of our minds, "Are our global defenses and alliances really built on sand?"

GLOBAL INDIGESTION

It is to be hoped all the fanfare over steps taken by Chiang Kai-shek to appease us and put down anti-American demonstrations in Formosa will not divert American minds from the real question raised by this violent incident—

Why does anti-American sentiment exist?

It is not a question confined to Formosa. It is almost global in application. It can be asked of any country where we have troops stationed; of any people with whom we have mutual defense arrangements or who are associated with us in any way in our foreign aid program.

It is not of particular importance to us that Chiang has discharged a number of military and police officials for taking less than prompt and vigorous action to stop last week's riots. It is not important that several hundred rioters have been arrested or that the "profound regrets" of the Nationalist Government have been expressed to the United States.

What is important is why the uprisings occurred. Nobody will believe that of itself the clearing of an American soldier in an American military court for the killing of an alleged "peeping Tom" Chinaman was responsible for all the violence. It was simply the match which set off the powder keg which had been spoiling to explode.

Why is this so? Surely Chiang and his Nationalists are no bargain from our point of view. Formosa is an embarrassment rather than an asset. Keeping Kai-shek and his cause and his followers alive not only has cost us heavily in material outlay, but even more heavily in world prestige. Practically every other country has deserted the cause of Nationalist China. Why, then, are these people so resentful? Don't they want to be "saved"?

Growing tension in Japan furnishes additional evidence of ill feeling toward us on the part of people we have tried to help and from whom we had come to expect at least friendship. Controversy over the case of an American soldier accused of manslaughter in the death of a Japanese woman killed on a rifle range is an evidence of this. Japanese authorities insist they have jurisdiction to try the man. The United States Far East Command, after agreeing originally to this procedure, has withdrawn the order under Defense Department instructions pending further investigation.

The incident is not important enough of itself to explain all of this uproar. There had to be a backlog of bad feeling behind it to produce such a reaction.

And so it is throughout the farflung scope of our mutual defense setup. The British, the closest of all our allies, have been critical and cool of late. It is becoming pretty clear that only necessity ties them to us. The French never have been very enthusiastic, although our support of them has earned us suspicion, and in the Middle East where we have offered to go to the defense of any people invaded by a Communist offensive, there is a disposition to look at the proposition with a fishy eye.

There must be some deep-seated reason for all of this which cannot be explained away by the assertion that it is the result of Communist propaganda. It is something more basic than that, something we should find out about before we build too many hopes on the sort of defenses we have set up around the world. Maybe, if a showdown came, we would discover that we have built on sand in many quarters.

Want No Trade With Red China

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a letter received from constituents in Racine, Wis., who are opposed to any relaxation of trade policies with Red China. This appears to be the preponderant sentiment in my district on this subject.

The letter follows:

JUNE 3, 1957.

The Honorable LAWRENCE H. SMITH,
United States House of Representatives,
Washington, D. C.

DEAR SIR: We sincerely trust this one letter bearing our names will be as effective as many separate letters.

Recently the newspapers have been full of news concerning Britain relaxing her control in trading with Red China. It is a known fact that the United States has "loaned" Britain billions of dollars since the Second World War. This money has come from the little man, the taxpayer. In recent months Britain has cut the taxes of her people, while the taxes of the citizens of the United States are continuing to rise. It is also a known fact that Britain has been unsatisfied with the amount of money we have given her. The opening of her doors to Red China's trade appears to be a slap in the face, so to speak, to the American people in spite of what we have done for this nation.

This giveaway program on the part of the United States and the attitude of the recipients appears to be getting out of hand, and as our Representative in Washington, we would like you to know our feelings in this matter.

Yours very truly,

Harry C. Pierce, Harold Seberg, Varting Gregorian, George Piotrowski, Michael Gajdos, Richard Nelson, Edward Beth, Harold B. Olson, Jr., Richard Giese, Charles A. Nixa, Robert D. Powers, Lester Kiefer, Ralph Diedrich, Allyn J. Sorensen, Dick Krause, Victor P. Bruno, Arnold Bertelson, Clarence Carbonneau, Theodore Ricchio, Sam L. Fiorito, Edward Felbab, William H. Copeland, Richard D. Maurer, Richard Lonegan, Joseph Basak.

More Proof of Foreign-Aid Waste

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call the attention of the House to an editorial, published in the May 31 issue of the Richmond Times-Dispatch, under the title "More Proof of Foreign-Aid Waste."

No Member of the House has more admiration than I for the painstaking investigations and the clear and logical conclusions which have marked the work, here in the House, of the Honorable PORTER HARDY, JR., Representative of the Second Virginia District. The reports of the subcommittees of which he is chairman, both in the Committee on Government Operations and the Committee on Armed Services, are uniformly excellent.

Representative HARDY'S most recent contribution to the cause of more economical and efficient Government is contained in the report of the International Operations Subcommittee of the Committee on Government Operations. The attached editorial is a fine indication of the value of his report:

MORE PROOF OF FOREIGN-AID WASTE

Further convincing evidence, if any were needed, of the waste and extravagance in the Federal Government's mutual security program, is contained in the just released report of the International Operations Subcommittee of the Committee on Government Operations.

Representative PORTER HARDY, JR., of the Second Virginia District, is chairman of this subcommittee, which offers devastating facts concerning mutual security, without a dissenting vote from any of the eight members, chosen from both parties.

Glaring weaknesses in this program were pointed out by the General Accounting Office in 1954, and nothing whatever was done about its proposals, the report declares. GAO received a brief acknowledgment back in 1954, but there was no response when the same Office last January pointed out to the International Cooperation Administration, nonmilitary side of mutual security, that the principal deficiencies mentioned more than 2 years before had not been corrected.

Mr. HARDY'S committee also found as follows:

The program offers all kinds of opportunities for juggling funds; there is inadequate planning; there is often no assurance that the participating country wants the money or will provide any part of the total cost; reasons for wanting the money are not given in adequate detail by ICA; there is an average difference of 30 percent between the amounts illustratively proposed by ICA for individual country programs and the amounts actually expended; accurate data are lacking as to stockpile funds or the pipeline of unshipped commodities; funds to be needed for specific programs are reserved for contingencies; ICA consistently asks for and receives more money than it has ever been able to use in the year for which requested, the result being that there has been the hasty, last-minute obligation of unused funds, which precludes their return to the Treasury, and so on.

In the face of such a record, the Eisenhower administration is pressing for the nearly $4 billion which it claims is the minimum that must be appropriated for mutual security, lest the Nation be endangered.

Yet the Hardy subcommittee finds the most colossal inefficiency and waste in this very program, even more than was found by a recent Senate subcommittee.

The recommendations of the Hardy subcommittee afford insight into the sort of slaphappy financing that has been going on for years in Washington in the area of foreign aid.

Technical Assistance Is No Crash Program

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, we will soon have for consideration another so-called foreign aid bill. There is one phase of that program which, in my opinion, has considerable merit and I refer to technical assistance. This program was designed originally to serve much as our agricultural extension program has served the American farmer, only this principle would be applied to nations who desired assistance in the field of agriculture, health, and sanitation.

Mr. Speaker, as the program has developed over the years, technical assistance, as originally planned, has been losing its character and has become involved as part of a huge giveaway and is now mostly economic assistance.

The administrators of this program have too often considered technical assistance as a crash program, one designed to bring quick and everlasting results, something akin to the spectacular.

In 1953 it was my privilege to have been a member of a subcommittee of the House Foreign Affairs Committee which was authorized to visit the Middle East and check on the Arab refugee problem and also other programs that had been set up in that part of the world.

During our visit to Egypt and specifically Cairo the chief of the ICA mission at that time was anxious to show what had been done under his direction and he arranged a trip outside of Cairo for our inspection. In the automobile in which I was riding was the chief of the mission and an Egyptian who had several degrees from American universities and who had returned to his homeland to serve his people. On the way out the Egyptian and the American were discussing phases of the work and the progress being made at that time. I listened attentively while these two gentlemen talked and finally the chief of the mission turned to me and he said, "Congressman, you have been very quiet. We have been doing all the talking." My reply was that I had come to look and to listen but then I said, "However, I do have a question. Your conversation has been most interesting. My question is: 'How long do you think it will take to achieve its objectives?' "

Before the American could answer, the Egyptian replied quite promptly and vigorously, "Oh, it'll take about 200 years."

My American friend and the chief of mission was flabbergasted. He turned to the Egyptian and said, "Oh, Doctor, you don't mean that." The doctor replied, "Well, it'll take at least 100 years."

We are not fooling our foreign friends—they are realists. It is time that we quit trying to fool the American taxpayers.

Mr. Speaker, I relate this experience solely for the purpose of pointing out that a technical assistance program, if organized as originally conceived, is a long, long time project. It can never be related to the so-called crash programs.

Trial By Jury

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. POFF. Mr. Speaker, under leave to extend my remarks, I quote herewith an editorial which appeared in the June 4, 1957, issue of the Roanoke World-News concerning the jury trial amendment to the civil-rights bill:

TRIAL BY JURY STILL A SACRED RIGHT

The 7–3 vote by which the Senate Judiciary Committee managed to write a jury trial amendment into the controversial civil rights bill of the Eisenhower administration is a heartening development.

It is an indication of growing fears that the Federal court system is overstepping its constitutional authority not only in interpreting but in rewriting basic laws.

It marks an apparent realization by responsible people outside the South that ours would not be the only section whose fundamental rights would be infringed by denying the guaranties of the sixth amendment.

There never should have been necessity for acknowledging the right of trial by jury while writing Federal legislation. Until now this has been taken as a guaranty to be respected by Congress, the administrative branch of Government, and the judiciary alike.

The punitive zeal of some judges of the lower echelon in enforcing the Supreme Court's school integration decision of May 17, 1954, has led them far afield and to dangerous lengths. This was especially true when a district judge at Clinton, Tenn., assumed an unlimited authority which denied both freedom of assembly and of speech.

This would have been bad enough, violative as it was of rights Americans had taken for granted since 1787. But this judge has gone so far as to imprison citizens for contempt of court and deny them trial by jury. Only aroused public opinion and criticism in Congress later compelled jury trials to be granted.

Attorney General Brownell and sponsors of this legislation from both Republican and Democratic (northern wing) parties have contended jury trial must be cast aside under circumstances because southern juries would not convict.

Yet the sixth amendment clearly states that in case of criminal prosecutions, defendants shall have the right of trial by jury from a panel drawn from their own State and district.

Government by injunction could become a fearsome thing, equally as punitive and denying of basic rights as any evil measure conceived in reconstruction days. It should be clear that once courts were allowed to assume such authority in enforcing injunctions dealing with voting privileges, this tyranny could be extended to an unlimited degree. It would be only a short step back to 1740 and the imprisonment of John Peter Zenger for daring to criticise the king's court. We had supposed this issue to haye been settled for over 200 years.

If the full Senate is wise, indeed, if the House is wise, they will sustain the Judiciary Committee in upholding the right of trial by jury and not try to repeal the sixth amendment by indirection. The Bill of Rights is not a one-way document.

Europe From A to Izzard

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. ROGERS of Texas. Mr. Speaker, the editor and publisher of the Amarillo (Tex.) Daily News, Mr. Wes Izzard, is currently on a grand junket in Europe concurrent with his attendance at Rotary International. Mr. Izzard's highly readable daily column From A to Izzard, continues daily and provides some of the finest reporting to come from the Continent since his last trip there.

I have, on several previous occasions, inserted examples of his vibrant journalism in the RECORD for the enlightenment of this body. Of particular note is his report from Bern, Switzerland, which appeared in the May 29 edition of the Amarillo Daily News, which I insert herein. Mr. Izzard's clairvoyance in the determination of government's function at the lowest possible strata is, I believe, a provocative treatise and I take pleasure in commending it to my colleagues:

EUROPE FROM A TO IZZARD

(By Wez Izzard)

GOVERNMENT OF AND BY THE PEOPLE

BERN, SWITZERLAND.—In the middle of Europe, surrounded by confused and frightened nations, stands little Switzerland, a monument to commonsense, and a stronghold of free enterprise and states rights.

For nearly 400 years the Swiss have known peace. For nearly 400 years they have minded their own business and taken care of themselves.

For generations diplomats have come to Switzerland to hold their conferences and write their treaties. It seems strange that none of them has taken the trouble to look about him and say, "Maybe we can learn from the Swiss."

Switzerland stands as a living refutation of most of mankind's misconceptions about men and nations.

Foremost among these modern misconceptions is the idea that both national and personal security depend on a strong central government.

But the Swiss, who have not been attacked for 400 years, and among whom there is practically no poverty, have no strong Federal Government. Switzerland is probably the world's greatest champion of states rights.

The Swiss do not elect their President. The Federal Parliament names a Federal Council of seven members, each representing a major department of Government. These men hold their jobs for life, unless removed by popular recall. The presidency rotates among them, each holding the job a year at a time.

This year the President is Hans Streuli, a grandfatherly old gentleman whose regular job on the council is that of finance and customs director.

The Federal Council is responsible to the Parliament and to the people, themselves. A referendum may be called on any drastic proposal offered by the council.

Recently the council proposed an elaborate civil-defense program for the nation. But there were murmurings from the forks of the glaciers, and a referendum was called. The plan was soundly voted down. Unnecessary and too expensive.

The Federal capital is Bern, a charming mixture of medieval and modern, with its quaint fountain statues in the middle of the streets. Its population is 165,000. The blocks of arcade-covered downtown sidewalks are a relic of the Middle Ages, but now provide modern window shopping protected from the sun and rain.

There are 22 cantons, or states. These have no governors, but are run by popularly-elected cantonal councils, which are the heart of Swiss Government.

Each canton is divided into bezirkes, corresponding to our counties. And at a still lower level are the 3,107 free communes, or organized communities.

Most of the governing is done at the communal and cantonal levels. Nothing is left to the Federal Government except those things which cannot possibly be done by the individual, the community, or the canton.

In short, the Swiss Constitution is precisely like ours in respect to state's rights. The difference is, the Swiss practice it; we don't.

It is unthinkable that the Swiss Federal Council should suggest to a canton how to run its schools or how to handle its welfare problems.

Education is strictly a cantonal and communal matter. There is not even a ministry of education in the Federal Government.

The same goes for welfare. Each commune has its own welfare program. If any Swiss should find himself destitute or in distress, he needs only to return to the town of which he is a native, and he will be cared for, and cared for well. There is no welfare and pension program on the federal level.

Why can't the United States do it this way? The argument runs that we are too diverse a people to permit such things to be handled only at the local level.

But what of the Swiss?

There are four distinct areas in Switzerland, each with its own customs and language. The German-speaking Swiss comprise 71 percent of the population; the French, 21 percent; the Italians, 6 percent. And less than 1 percent, down in the southeast corner, will speak the old Romansch language.

The Swiss are split religiously, too. According to Government figures, Switzerland is 58 percent Protestant and 41 percent Catholic.

They are divided into mountain people and city people; farmers and industrial workers.

In fact, there is no country in the world in which 5 million people, jammed together in 16,000 square miles of mountain and valley, have such a diversity of background and interests.

Yet the Swiss are unified. They don't live as one big, happy family, it is true. The German Swiss don't particularly care for the Italian Swiss, and the mountain people aren't overly fond of the factory workers. But they don't fight over it. Over the centuries they have developed a unity of commonsense and a quiet but intense sort of patriotism.

Another misconception of mankind is that a country without natural resources must forever be poor.

Yet Switzerland, with all its mountains, has no natural resources—unless you count scenery and waterpower. It has no coal, no oil, no metals.

Moreover, Switzerland has no seacoast—no port through which these resources can be imported directly.

But the Swiss, through sheer hard work and ingenuity, have built a dynamic economy in which there is no great wealth, but no great poverty, either.

Switzerland's No. 1 industry is not tourism, nor cheese, nor watches. It is heavy machinery.

Although the country has not a single passenger automobile factory, it makes many of Europe's finest buses. Also it turns out steam engines and turbines, diesel engines, railway rolling stock, and electrical equipment.

Tourism accounts for only 9 percent of the national income, and the Swiss is perhaps the one person in Europe who gives full value received for every tourist penny spent.

There is a misconception that Switzerland sits out all of Europe's wars in order to profit from them. This is not true. War in Europe hurts the Swiss economy badly. The people have suffered economically, along with the rest. But they don't complain, and they don't come to Washington with hat in hand.

They stay out of war because that has been their national policy since the 12th century.

There are several reasons why they are able to stay out of war. First, they have consistently refused to take part in the between-war squabbling among nations. They stay apart, and don't care whether the rest of the world likes it or not.

Second, they are blessed with a mountainous terrain that even the most modern army would find difficult to take and hold.

And, third, every able-bodied Swiss from 19 to 60 is in the army.

The military training of a Swiss soldier is spread out over a lifetime. Everybody is in the active reserve, and is assigned to a unit of some kind. Every Swiss keeps his gun, his uniform, and sometimes his horse or jeep, at home, ready for instant mobilization.

The traveler in Switzerland is sure to see troops moving from place to place, or on maneuvers. But he will not see the heavy gun batteries concealed in the mountains; the hydroelectric plant buried 6,000 feet under solid rock, and hidden fortifications in the passes.

Switzerland is ready, but does not expect war.

The real ruler of Switzerland is not the politician in the big stone building overlooking the Aar River in Bern.

It is the old man with the pipe who works his tiny field in the daytime, and sits outside his tidy little home in the evening, mulling things over. He may not be clever and quick, but he knows what he wants and he doesn't care what anybody else thinks about it. And when he talks, the politicians listen.

Never has a nation made so much of so little; and it's strange that the rest of the world has taken so little note.

Here is the world's last best hope of free enterprise and states rights. If only other men and other nations would pause in their headlong flight toward socialism and look in on this stronghold of commonsense we call Switzerland.

The CBS Broadcast by Khrushchev

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Columbia Broadcasting System relative to the CBS broadcast by Khrushchev:

COLUMBIA BROADCASTING SYSTEM, INC.,
New York, N. Y., May 27, 1957.

Mr. WILLIAM J. GILL,
National Commander, Catholic War Veterans of the United States of America, Washington, D. C.

DEAR MR. GILL: I have carefully considered the views which you have expressed in your wire to me of May 23 in which you urge that we cancel our plans to carry an interview of Khrushchev by two American correspondents on our Face the Nation program, Sunday, June 2.

You based your objection to the proposed broadcast on the ground that Khrushchev is not a free agent and that the Russians intend that the broadcast serve only as Communist propaganda. I cannot quarrel with this. I am sure, as you are, that Khrushchev intends to utilize the occasion for propagandistic purposes.

You and I disagree, however, on whether it is improper for television and radio, as vital parts of the free press, to schedule such a program. After the most careful consideration we came to the conclusion that our role as a part of the American free press fully justified scheduling the program. We based this conclusion on a number of considerations which I would like to review with you.

First, it is well to emphasize the exact nature of the program. We went forward with the program only after assuring ourselves that it would be conducted in all substantial respects as a part of, and like, our regular Face the Nation series. Specifically this means that we are going forward with the program, and will broadcast it, only if there is fulfillment of the Russian commitment that the questioning by the two American correspondent interviewers of our own choice will be free and unrehearsed. We are not submitting questions in advance, and the correspondents are to be free to pursue the questions as they see fit.

I believe that this procedure gives us assurance that the program will be conducted as an electronic version of a press interview, serving not as a one-way street but rather as a two-way street.

Second, I would call to your attention that interviews of Russian leaders, in which answers were given by the Russians to questions put by American newsmen, have long been comprehensively covered by the American press in circumstances which have given rise to no serious criticism. For example, an editorial in the New York Herald Tribune on December 28, 1952, notes the fact that as of that date "14 times since the war, Premier Stalin has answered questions written to him by newspapermen, or has expressed himself in interviews with prominent Americans." Recently, on May 11, 1957, the New York Times devoted a half page to a 2-hour interview by Turner Catledge, of the New York Times, with Khrushchev on May 10. In February 1955, William Randolph Hearst, Jr., interviewed Bulganin, Khrushchev, Zhukov, and Molotov in individual sessions, and extensive stories, including the questions and answers, were published in the New York Journal-American and other Hearst newspapers in articles written by Kingsbury Smith, European general manager, International News Service.

Other interviews in the last few years included that by Kingsbury Smith of Malenkov in the New York Times, January 1, 1954, and Marshall MacDuffie of Khrushchev in November 1954, carried in the New York Post on February 6, 1955. In addition, newspapers have frequently submitted questions to Soviet leaders which have been answered in writing and published in newspapers. Thus, James Reston, of the New York Times, submitted four written questions to Stalin, the answers to which were published in the Times on December 25, 1952. Answers to questions submitted by Hanson Baldwin, of the New York Times to Marshal Zhukov were published in the Times on August 7, 1956. On January 1, 1955, newspapers, including the Times, printed a reply by Premier Malenkov to six questions put by C. E. Shutt, chief of the Washington bureau of Telenews, a subsidiary of Hearst Metrotone News.

These are only some of the examples of full American newspaper coverage of answers by Russian leaders to questions put by Americans. And it may be noted that in a number of these cases, the interviews were far more restricted than that proposed for Face the Nation, since in those interviews the questions have been required to be put in writing.

There is, accordingly, quite overwhelming precedent for our projected program. But there is in addition a most important added element which justifies our proposed program. Print mediums such as newspapers are of course unable to reproduce the full flavor of the interview and the character of the interviewee. Television, on the other hand, provides to the American people a vivid, direct, and accurate firsthand impression of the person interviewed. Americans on next Sunday will have an opportunity for the first time to see for themselves the face and manner of a Russian leader as he deals with the free and unrehearsed questions put to him by American correspondents on behalf of the American public.

In such circumstances, I for one do not fear the consequences to American security or to the minds of our American citizens. It is one of the glories of our high American standards of civilization that with the knowledge which a free press gives and with the free interchange of ideas, the American people can be depended upon to reject propaganda which would destroy the American system. The benefits of American education, of the American press and of active, alert, and patriotic groups such as yours, provide, I am convinced, the best bulwark against American susceptibility to whatever subversion might be sought to be imposed upon Americans.

With this kind of confidence in Americans and their ability to reject the false which I am sure you and I share deeply, I think that the advantages to American knowledge which our proposed program will bring far outweigh the dangers. I do not think that Americans are best protected against the dangers of totalitarian philosophy by ignoring that philosophy or by pretending that it is not there. The greatest bulwark is knowledge. And I believe strongly that affording the American people an opportunity to see the face of communism and the face of a Communist leader at first hand will provide Americans with that fuller knowledge and understanding which strengthen Americans' faith in our own system.

I have, in short, too much faith in the strength of our own institutions and the wise discrimination of our own people to believe that exposing Americans to a firsthand view of American correspondents' free questioning of Khrushchev will do America damage. The people will know better than ever what communism is. They will take what Khrushchev says for what it is worth. And this is the strength of a free press of which CBS radio and CBS television are a part, and the strength of the American system.

In these circumstances, I hope that you will share our conviction that our proposed program is in the public interest because it will strengthen, not weaken, American knowledge and American institutions.

With all good wishes.

Sincerely yours,

FRANK STANTON.

Who Is in Charge Down There?

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Triumph, Monterey, Minn., Progress by Editor Spielman:

WHO IS IN CHARGE DOWN THERE?

President Eisenhower's defense of his record $71.8 billion budget would be more con-

vincing if it were not for the fact that the rest of his team seems to be running the other way. Not only do Members of Congress feel that a budget cut is necessary, but each and every time that President Eisenhower has opened his mouth in favor of the largest peacetime budget in history, a member of the President's own Cabinet sounds off in opposition.

It would appear that the administration is playing a game designed only to confuse the American people by coming out both for and against the budget at the same time.

For example, in the President's budget message on January 16, President Eisenhower stated, "It is a carefully balanced budget. I consider it well adapted to the needs of the present and the future."

The very next day, Treasury Secretary George Humphrey denounced the budget saying, "There are a lot of places in this budget that can be cut." He predicted that if "this upward trend in spending isn't stopped, the result will be a depression that will curl your hair."

A week later, Ike vigorously defended the budget by telling a White House press conference, "As long as the American people demand, and, in my opinion, deserve the kind of services that this budget provides, we have to spend this kind of money."

The very next day, on January 24, however, he was not so sure and stated that Congress has the duty to cut the budget "if it can find places to wield the economy ax." And on February 10, Senate Republican leader WILLIAM KNOWLAND said, "I think there will be some cuts made."

On March 2, Commerce Secretary Weeks thought that if "Congress wants to start cutting, it could cut $50 million out of the budget." By the next day, Percival Brundage, Director of the Budget, was so confused he repudiated the budget saying, "This is the President's budget, not mine."

A few days later on March 6, the President was not sure either and told the press, the "Government should, to the ultimate of its ability, cut back. Now, there may be here and there some program that doesn't occur to my mind right now, that might be abandoned."

But, on March 8, Ike was again sure that "practically all the projects called for are necessary for the public welfare."

This didn't satisfy Treasury Under Secretary W. Randolph Burgess who on March 11, told the American Bankers Association, "After all explanations, the budget is still too big for the future best good of this country."

By March 20, Commerce Secretary Weeks backed down from his suggested budget cut of $50 million and told the House Appropriations Subcommittee that he wanted "to leave it—the entire budget—in the bill."

Then on April 3, Treasury Under Secretary Burgess made a statement that the budget "should be cut by two to three billion dollars." On the same day President Eisenhower issued a statement that he saw "no chance for a substantial cut such as $2 billion."

The very next day, Treasury Secretary Humphrey was no longer for cutting the budget and was upset because some cutting was done in his department. He urged the Senate to restore "an $8,205,000 reduction made by the House in Treasury funds."

On that same day Under Secretary Burgess also had a change of heart and said it was "a false alarm to say there was any difference between President Eisenhower" and himself on the budget.

Then only last Sunday, President Eisenhower's top assistant, Sherman Adams, told a television audience that a budget cut of one to two billion dollars "would not interfere with the quality of Government services."

Tax Writeoff Certificates

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ULLMAN. Mr. Speaker, the shocking details concerning the issuance of rapid tax writeoff certificates to the Idaho Power Co. is only now unfolding as a result of the meritorious investigation being conducted by the Kefauver Subcommittee on Antitrust and Monopoly. Two recent news dispatches concerning disclosures by administration officials involved in the issuance of these certificates are, I believe, of great importance and, I feel, will be of interest to my colleagues.

The first of these dispatches is from the June 1 issue of the Washington Post. It points out the extent of the actual cost to the taxpayers of these certificates, as well as the estimated cash benefits to the stockholders of the Idaho Power Co.

The second article appeared in the New York Times issue of May 28, and contains excerpts from a letter written by the Secretary of Interior, Fred A. Seaton, to Arthur S. Flemming, former Director of the Office of Defense Mobilization. Mr. Seaton's letter is indeed an important document and I think it highly peculiar that Mr. Gordon Gray, present Director of the Office of Defense Mobilization, should have completely ignored it.

Under leave to extend my remarks, I am including these two articles:

[From the Washington Post of June 1, 1957]

IDAHO WRITEOFF COST IS PUT AT $83 MILLION

(By Richard L. Lyons)

A Federal Power Commission official said yesterday the fast tax writeoff granted Idaho Power Co. on two Hells Canyon dams will cost the Government $83.5 million and give the utility a $339 million benefit.

These figures were given the Senate Antimonopoly Subcommittee by the FPC's chief accountant, Russell C. Rainwater. The subcommittee is looking into the monopoly effects of fast tax writeoffs. It is concentrating on Idaho Power which is also part of the public-private power Hells Canyon fight.

The fast tax writeoff is a wartime construction incentive which has lingered on. It permits a company to write off all or part of its construction costs in 5 years instead of the longer normal period—50 years in the case of Idaho Power's dams. This means a tax deferral during the first 5 years.

Rainwater said the $83.5 million cost is what the Government must pay in interest to borrow money to make up for the tax postponement granted Idaho Power.

Companies receiving fast tax writeoffs pay higher than normal taxes after 5 years, because there is less than normal depreciation to take. Theoretically, in the end the company would pay the same amount of taxes as under normal depreciation unless rates change. Critics of the program say it doesn't work that way; that the Government never catches up.

Rainwater's Government cost figure was the highest given yet. Secretary of Interior Fred A. Seaton, who opposed the fast writeoff to Idaho Power on grounds that it wasn't needed for financing, had placed the cost to the Government at $17 million. Secretary of the Treasury George M. Humphrey has said the entire writeoff program will cost the Government $3 billion.

Rainwater figured the $339-million benefit to Idaho Power this way: Fast depreciation will save it $30 million in taxes during the first 5 years. Invested at 6 percent compound interest, this would build up to $339 million over the 50-year life of the dams, he said.

When the FPC granted Idaho Power a license to build the dams in August 1955, it stated that there would be no cost to the Government. FPC Chairman Jerome K. Kuykendall conceded yesterday that this language was not correct in light of the fast tax writeoff granted by the Office of Defense Mobilization 6 weeks ago.

Kuykendall said the FPC assumed in 1955 that the project would be financed conventionally with normal depreciation.

Congress has killed several bills to make Hells Canyon a public-power project. But its backers have brought another public power bill onto the Senate floor and hope the storm blown up by Idaho Power's fast tax writeoff will give them enough votes to pass it.

Kuykendall said he learned of Idaho Power's fast tax writeoff from the newspapers. It was released the day after FPC had approved an Idaho Power application to issue $40 million in promissory notes to help finance the project.

Senator ESTES KEFAUVER, Democrat, of Tennessee, Antimonopoly Subcommittee chairman, said the writeoff would help market the notes and suggested that the timing of ODM's tax order was too close for coincidence. KEFAUVER said Idaho Power officials knew of the ODM tax decision, which was made a week or so before its public release, before FPC approved its borrowing. He wondered why ODM or Idaho Power hadn't told FPC about it.

[From the New York Times of May 28, 1957]

SEATON OPPOSED DAM WRITEOFFS—ODM IGNORED HIS VIEWS ON TAX AMORTIZATION FOR HELLS CANYON PROJECTS

WASHINGTON, May 27.—A Senate subcommittee was informed today that Fred A. Seaton, the Secretary of the Interior, had recommended denial of a $65 million rapid tax writeoff for the Idaho Power Co. The tax privilege was granted to Idaho Power last month for 2 of 3 dams it will build in the Hells Canyon area.

The staff of the Senate Antitrust and Monopoly Subcommittee was supplied with a copy of Mr. Seaton's letter to Arthur S. Flemming, former Director of the Office of Defense Mobilization. The letter was dated March 11.

Meanwhile, the Supreme Court refused today for the second time to review Federal Power Commission licensing of the three dams.

The granting of the rapid tax amortization has been criticized in Congress. The subcommittee is considering legislation that would limit such benefits to industrial-expansion directly connected with defense.

Gordon Gray, the present ODM Director, was confronted with Mr. Seaton's letter when he testified before the subcommittee today.

GRAY DEFENDS DECISION

Mr. Gray, who took office before the writeoff privileges were announced, conceded that he had ignored Mr. Seaton's recommendations. But he insisted that the Seaton letter constituted an expression of opinion and had not dealt with whether the company had complied with regulations for obtaining the certificates.

He testified that Idaho Power had met all the requirements for getting the certificates.

The tax writeoff privilege permits a company to write off against income taxes all or

part of a project's cost in 5 years, instead of the normal 20 years or more.

Mr. Seaton opposed the issuance of the certificates because, he said, the Federal Power Commission had licensed the hydroelectric dams on the basis that their construction would be without expense to the Federal Government.

The Secretary contended that the granting of the certificates would require the Government to pay interest on money that it would have to borrow because of decreased tax revenues during the amortization period.

CITES FPC TESTIMONY

Mr. Seaton also wrote that in his view testimony before the FPC "appears to establish clearly the company made its case before the FPC on the basis that it would not need accelerated tax amortization in order to justify granting the license to the company."

An Interior Department spokesman said the arguments that Mr. Seaton had advanced were fundamentally beyond the established criteria upon which ODM based its issuance of certificates.

He said the Secretary had no legal authority in the matter, beyond making a recommendation "bearing on the discretion which the Director of ODM has."

The certificates for Idaho Power, announced last month, covered 65 percent of the estimated cost of more than $67 million for the Brownlee Dam and 60 percent for Oxbow Dam, estimated to cost $36 million. A third dam is to be built at Hells Canyon.

"Little Bill" Phillips, of Wilkes-Barre, Begins Twenty-eighth Year in Broadcasting

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on "Little Bill" Phillips, widely known radio personality, which appeared in the Wilkes-Barre Sunday Independent of May 26, 1957:

PHILLIPS IN RADIO 28 YEARS IS LOCAL "DEAN OF VOICES"

William "Little Bill" Phillips, whose afternoon show on WBAX Radio is a household word in many homes, this week starts his 28th year on the airways to retain the local title of "Dean of Voices."

It was May 15, 1930, that he got a tryout at WBRE Radio announcing a studio presentation of Georgie and His Virginians, one of the valley's favorite dance bands of that period.

Now one of radio's ranking personalities and disc jockeys—and known nationwide in the trade—"Little Bill" has left the sports announcing arena, but the record books in local radio, show among his firsts, a broadcast of a local baseball game, radio coverage of a high-school football game (Coughlin-Larksville) and a basketball game—Forty Fort High School varsity versus Forty Fort High School alumni.

His interviews with the greats of the entertainment world number into the hundreds, but they include such memorable names as Rudy Valee, Ted Lewis, Mills Brothers, Amos 'n Andy, Morton Downey, Joe Penner, Kate Smith, Husk O'Hare, and on and on.

During the floods of 1936 that swept this area, Phillips did two coast-to-coast broadcasts that won him an award and praise from radio men in 44 States and Canada.

When the late Billy Waters, young Forty Fort High School gridder was fatally injured in a game, a "Give a Dime" show was broadcast by Phillips and the proceeds were turned over to his family.

For 7 years he staged an annual program for the Salvation Army.

He also planned and originated the first local news program from the old Evening News. He also broadcast many world championship fights by using the news ticker at the Evening News. In those days the big sports events were not broadcast direct.

Covered high-school championship games as far back as 1934 and did a play by play in 1936 when Newport Township won the State title at Zembo Mosque, Harrisburg.

QUIT SPORTS IN 1951

Gave up sports in 1951 to start his present Bill Phillips Show, which has featured many present-day stars, such as Perry Como, Patti Page, Ray Anthony, Ralph Flanagan, Jerry Vale, Fred Waring, Russ Morgan, Julius LaRosa, Charley Applewhite, Dorothy Collins, Jaye P. Morgan, Hugo Winterhalter, The Five Keys, Vaughn Monroe, and Julia Meade.

In December 1952 he scored a radio public service first by raising $20,000 for Betty Petroski, of Luzerne, who was seriously injured in a truck accident in conjunction with preparations for a school play. The late John Stenger turned over the full facilities of WBAX for this 21-hour marathon, and all of the station personnel and many outside volunteers assisted without compensation.

Originator of the slogan, "The Valley With a Heart," Phillips won much popularity with his Sunshine Club that tells of the doings of the valley's shutins.

NAMES THREE LITTLE GIRLS

In closing his broadcast each day, Little Bill would say, "So long" to three little girls. Listeners have been curious about the identity of these girls.

Little Bill says they are Lee Ann, a 7-year-old girl who was born blind; Freckle Face, a polio victim; and Linda, one of the Nation's worst cerebral-palsy cases.

Widely known for his support of fundraising drives for needy cases, Phillips was asked if he could estimate how much he had raised in 28 years. Modestly, he explained, "I never kept a running total." But station attachés estimate that contributions received by programs have totaled more than $50,000.

Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues a letter from a constituent of mine, dated June 5.

Mrs. Meharg is a widow; a former schoolteacher; and now a businesswoman. She is very active in the Pionette Business and Professional Women's Club in Lakeland, Fla.

It is most gratifying to me to find another citizen of these United States who is getting fed up with this overly centralized Government. Despite the fact that she has had many trials and tribulations in her own life, as we all do, she has maintained a strong interest in the workings of our Government. She has seen our Government become octopus-like in its far-reaching expansion. She is cognizant of the facts, and it pleases me that she is a watchdog of democracy.

Mrs. Meharg is not the first constituent to write me on this subject, but the able manner in which she so frankly expresses what millions of Americans are feeling today is certainly worthy of recognition; therefore, I call upon my colleagues to please take note of this letter, and I ask permission at this time to include it in the RECORD.

The letter follows:

LAKELAND, FLA.

Hon. JAMES A. HALEY,
House Office Building,
Washington, D. C.

DEAR MR. HALEY: Since hearing the President's appeal to the Nation over radio and television in behalf of his budget, it would seem from reports in the press that some Senators and Representatives are weakening in their stand that it is too high.

Just in case you would like to know what one of your constitutents is thinking on the subject, I am still of the same opinion as when I answered your questionnaire in the local newspaper; that is, I feel that the budget is too high, there are funds set up in it for projects that are absolutely unnecessary, and I, and thousands like me, are not asking for special services furnished by the Federal Government. For my part, I'd be very happy if the Federal Government would forget all about me and just let me alone.

I am tired of working every day to pay income taxes to be thrown indiscriminately around the world furnishing the so-called services for people who do not deserve them, not having worked for them. I heartily agree with J. Bracken Lee that it is unconstitutional to tax the American public to take care of people in countries not making any efforts to obtain these services themselves.

As far as our foreign policy is concerned, we have not had one in the United States worthy of the name of a policy since President Monroe promulgated the Monroe Doctrine. And of all the idiotic "isms" foisted on the American taxpayer in the past 40 years, the Marshall plan, in my opinion, is the worst.

Yours very truly,

ELLEN H. MEHARG.

A Growing Club, But Don't Join It

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. COAD. Mr. Speaker, an editorial appearing in the Fort Dodge Messenger on June 4, 1957, bears reading by the entire membership of the Congress. This editorial offers some prudent thoughts concerning the rush of activity in the grind of life. In this editorial is mentioned a club which it seems that all too many of the American people are prone to join.

The editorial follows:

A GROWING CLUB—BUT DON'T JOIN IT

All too many people are joining the type of club described in a recent State department of health news release. As the release states, it's a popular club * * * an easy club to crash, easy to get in and * * * guaranteed to take you out of this world.

The initiation fee isn't high but prolonged membership is very expensive. In fact, it sometimes takes years to pay and costs your life.

This particular club is called the coronary club and members are persons who:

1. Put their jobs first; personal considerations second.

2. Go to the office evenings, Saturdays, Sundays and holidays.

3. Take their briefcases home evenings when they don't work late. This provides opportunity to review completely all the troubles and worries of the day.

4. Never say "No" to a request—always "Yes."

5. Accept all invitations to meetings, banquets, committees, etc.

6. Do not eat a restful relaxing meal. Always plan a conference for the lunch hour.

7. Believe hunting and fishing are a waste of time and money. Golf, bowling, pool, billiards, cards, and gardening are also a waste of time.

8. Think it is a poor policy to take all the vacation time that is provided for them.

9. Never delegate responsibility to others—carry the entire load at all times.

10. When traveling is their job work all day and drive all night to make appointments the next morning.

"If you want to make lots of money, have heart trouble, suffer, die young, and leave the money to someone else to enjoy, follow the coronary club members' formula * * * you will," the department of health statement observes.

"Any further questions you may have concerning membership should be referred to your doctor. There's no use trying to contact old members * * * they can't tell you anything * * * they're dead."

Government Guaranty of Private Loans to Certain Air Carriers

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. HARRIS. Mr. Speaker, at the request of the Civil Aeronautics Board I have today introduced a bill to provide for Government guaranty of private loans to certain air carriers for purchase of aircraft and equipment, and for other purposes. The following is a statement by the Civil Aeronautics Board of the purpose and need for the proposed legislation:

The local service carriers and the carriers operating wholly within the Territories of Alaska and Hawaii, it is estimated, are currently subsidized to the extent of approximately $30 million per annum. The most careful consideration should therefore be given to any development which might have the effect of reducing that obligation. A serious deterrent to improvement in the financial position of the local service carriers and the carriers operating wholly within the Territories of Alaska and Hawaii has been the relatively high cost of operating types of aircraft which have been available for the short-haul type of service for which these carriers are certificated.

New aircraft are being developed, which it is believed, will be much more economical and efficient. However, the cost of acquiring such new aircraft will be so great as in all probability to render the aircraft unavailable to the typical local service and short-haul carrier, on reasonable terms, without governmental assistance of some kind. It is believed that legislation should be enacted which will permit the Government, under appropriate conditions, to assist these air carriers in acquiring new equipment by guaranteeing private loans negotiated by the carriers for the purchase of such aircraft.

A Bill To Prohibit Certain Practices Regarding Passenger Ticket Sales and Reservations

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. HARRIS. Mr. Speaker, at the request of the Civil Aeronautics Board I have today introduced a bill to amend the Civil Aeronautics Act of 1938, as amended, so as to prohibit certain practices regarding passenger ticket sales and reservations. The following is a statement by the Civil Aeronautics Board of the purpose and need for the proposed legislation:

The purpose of the proposed amendment is to protect the right of the public to purchase airline tickets at the lawful tariff rates and to prevent the purchase of tickets by brokers or other persons with the intent of selling the tickets to travelers at a premium.

Section 403 (b) of the Civil Aeronautics Act prohibits carriers from charging more or less than the effective tariff rate. This provision is supplemented by section 902 (d) specifically penalizing ticket agents as well as carriers, or the personnel or representatives thereof, for rebating or charging less. There is no parallel penalty against ticket agents or persons other than carriers for scalping—charging more. To deter scalping effectively, passage of such a penalty provision is necessary.

The practice of ticket scalping, so called, has grown to such an extent as to constitute a substantial burden on the orderly development of interstate air transportation. The adverse effects of the practice are particularly evident on the most heavily traveled routes, such as that between New York and Miami. However, with the increasing demand for air transportation throughtout the country, it may be expected that these practices will increase, to the expense and annoyance of the traveling public, unless effective measures are taken to put a stop to them.

A common pattern of ticket scalping, as revealed by investigations conducted by the Board's Office of Compliance, is for an individual to make ticket reservations in anticipation of heavy travel demand. As it is required that the prospective passengers' names be given, the tickets are reserved in fictitious names. Upon being approached for assistance in obtaining travel accommodations by a bona fide prospective passenger, the individual picks up one of the tickets he has received, and delivers it to the prospective passenger, charging a substantial premium or gratuity, commonly ranging from $5 to $50. The purchaser is advised, of course, that he must travel under the fictitious name which appears on the ticket. The individuals engaging in these ticket-selling practices are frequently hotel employees and others similarly situated to come in frequent contact with travelers.

Certain travel agencies themselves may knowingly issue tickets to persons with names other than those in which the space was previously reserved, not necessarily to extract a premium price from the purchaser, but to get the commissions paid them by carriers for the ticket sales. The space reservations may actually have been made in fictitious names or may have been made for people later deciding not to buy the space reserved.

It is also essential that the above amendment be supplemented by a prohibition against purposely making reservations in fictitious names or selling tickets not bearing the name of that prospective passenger for whom such sale is made. This prohibition, coupled with a penalty, would further deter scalping schemes at inception and prevent a few unscrupulous individuals from monopolizing unsold space which should always be available through any legitimate agency or the carrier to those seeking accommodations.

There would seem to be no doubt that the recommended provisions would go far to prevent scalping and the usurpation of space which causes an undue burden on an anxious public seeking to obtain air-travel accommodations. Federal legislation is needed to provide an effective remedy for a general situation which cannot be adequately corrected by the carriers, by local enforcement of such State statutes or ordinances as are in effect, or by the Board under its present authority.

The Story of the Month

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. ROOSEVELT. Mr. Speaker, our colleague from Pennsylvania, the Honorable ELMER J. HOLLAND, recently wrote a newsletter which, in part, covers a subject which is all too little understood by many people. I am sure that it will be of great interest to many Members. Therefore, with the permission of Congressman HOLLAND, I am inserting it in the RECORD.

The newsletter follows:

THE STORY OF THE MONTH—WAGES, PROFITS, PRICES

Everyone who buys food and clothes—and a few of the luxuries—knows that it costs more to live today.

Why? There are several reasons, but the one we always hear about, the one that gets the greatest blame, is that wages are too high. It is because of them that prices are so high. This is not true.

The main reason for higher prices is that most of the big companies after granting a wage hike, increase the price of their goods many times more than the amount of the wage increase.

Look at United States Steel. In 1956 steelworkers gained wage and fringe benefits of approximately 20 cents an hour plus a later cost-of-living adjustment of 3 cents an hour.

These gains cost the steel corporation about $94 million—even if there had been no increase in output per man-hour (which reduces cost of production).

What happened? Steel prices were raised $8.50 a ton last year, and another $4 a ton this year. This totals to an increase of $12.50 a ton in cost of steel and brought in $340 million a year more for United States Steel. That new income amounts to 3½ times the $94 million allowed in wage and fringe benefits.

The steel price increase was passed on to all of us as purchasers of steel. They were felt in higher prices for food, which was canned; for automobiles; for transportation, for just about everything we buy as steel is used in every business and industry.

The industry could have absorbed those wage and fringe benefit costs and still have reported enormous profits. But prices were raised and the unions were blamed because they secured better wages for steelworkers. As a result of the price hike, United States Steel will get $246 million more in gross profits, and they will get an extra $118 million in net profits after taxes, even after paying higher wages and better fringe benefits.

Net profits after taxes for first 3 months in 1955, 1956, and 1957

1955	$72, 652, 000
1956	104, 160, 945
1957	115, 478, 109

The more wages paid and better fringe benefits provided means higher profits because the steel companies increase steel prices far more than enough to cover the cost of the higher wages and benefits.

Look at Ford and General Motors, the giants of the auto industry. They said in 1955 and 1956 prices would be higher on cars because they were forced to pay more wages. The gains in wages and benefits came to 20 cents an hour. However, in 1955—before prices were raised, but after the wage increase—General Motors' profit, after taxes, was $1.41 for each man-hour for 400,000 employees. Ford's profit after taxes was $1.47 per man-hour.

You can see then, it is not the wages and fringe benefits that the big corporations pay that cause prices to go up. The true cause is the fact that the companies jump their prices far more than enough to meet the cost of wage and fringe benefits.

City Man: The Farmers' Friend

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gwen Gibson which appeared in the New York Daily News of June 6, 1957, with reference to our distinguished colleague, Representative VICTOR L. ANFUSO, of Brooklyn, who is to be commended for the fine job he is doing as chairman of the Consumers Study Subcommittee of the House Committee on Agriculture:

CAPITAL CIRCUS
(By Gwen Gibson)

WASHINGTON, June 5.—Representative VICTOR L. ANFUSO was born in Italy, reared in New York, and—by his own admission—doesn't know beans about American rural life. Yet he currently is masterminding a unique and extensive probe into the Nation's most pressing agricultural headache—the high cost of farm products.

If ANFUSO's plan works out, his special investigation may well go down as the flashiest—if not the longest—single study of farm price problems in House history.

GROUP STARTED QUIETLY, NOW SEEKS PUBLICITY

The active New York Democrat was picked this spring to head a newly created, seven-man watchdog group, known technically as the Consumers Study Committee of the House Committee on Agriculture.

His group proceeded quietly at first, gathering preliminary data on the current spread between farmers' income and the retail cost of food.

Now the committee is getting set to branch out in a frank effort to milk its investigation for all the publicity it's worth.

BETTER SERVICE TO PUBLIC IS AIM

"No normal politician minds grabbing a bit on the public limelight," ANFUSO admitted with a grin, "but we also figure that we can render a better public service if housewives, farmers, and middlemen in the food business get interested in our work."

ANFUSO's group is out, basically to determine how the cost of getting food from the farm to city families can be cut back. There's nothing new in this subject matter. But ANFUSO's approach is novel.

The committee currently is busy sending out questionnaires to a nationwide sampling of farmers, seeking data on their dealings with food brokers.

EVEN TRADING STAMPS WILL BE SCRUTINIZED

With this background, it plans public sessions to question leading figures in the food-brokerage field. Then it will investigate business habits of food buyers, processors, transporters, and retailers. Even the trading-stamp industry will come in for scrutiny. And the ultimate expert witnesses will be a group of typical American housewives.

ANFUSO will set public hearings on this phase later this month, and he hopes to continue the sessions throughout the current session of Congress. After Congress adjourns he plans to put his show on the road.

"We tentatively plan to hold public hearings in New York City in late September," he said. "After that, out tentative schedule is upstate New York, Florida, Georgia, California, and possibly some Farm Belt States."

PANEL TECHNIQUE TO DRAMATIZE SHOW

ANFUSO has a plan for dramatizing his out-of-town hearings by turning them into something of a panel show. Instead of quizzing 1 witness at a time—normal House committee procedure—he plans to put up to 8 witnesses on the stand simultaneously.

"We visualize a semicircle of witnesses," he explained, "starting with a farmer on the left, followed by a broker, manufacturer, distributor, transporter, and finally a housewife."

ANFUSO insists he has no preconceived notions of what caused farm income to decline 14 percent over the past 10 years, while the cost of food to the average city family shot up by better than $500 a year.

But his probe will deal at length with questions like these:

1. Has there been collusion between food buyers and brokers to corner markets on certain farm products?

2. Has packaging and promotion of food products exploded into exaggerated importance?

3. Are trading stamps adding unnecessarily to the retail cost of basic staples?

HIS POINT OF VIEW DECLARED DIFFERENT

Chairman HAROLD D. COOLEY, of the agriculture group, said he appointed ANFUSO as chairman of the Special Consumer Study Subcommittee basically because the New York Congressman approaches the farm problem from a different point of view than Farm Belt committeemen.

ANFUSO is a cigar-smoking criminal lawyer who was elected to the 80th Congress. He has some flowerpots on a window sill of his Brooklyn home and that, he admits, is as close as he has ever been to the soil.

He could have got on the important House Foreign Affairs Committee through seniority last session, but plugged for the agriculture post because, he insists, he felt the farm price program should be approached from the city consumer's standpoint.

NEW LIGHT THROWN ON FARM FOOD COST

"I thought when I appointed him he could help develop an understanding between the housewife and the farmer and his committee seems to be doing that," said COOLEY.

ANFUSO hasn't produced any new facts so far. But his committee's preliminary probe put farm food costs in a new light. For example, the committee's first study points out that there is only 3 cents worth of farm-produced corn in a package of corn flakes that costs the housewife 23 cents.

A can of tomatoes, according to the Aufuso group, costs the city family an average of 15 cents but has only 2.3 cents worth of tomatoes in it.

"Something's got to give," ANFUSO insists, "and the only answer is to find ways of cutting marketing costs."

Tristate Anti-Air-Pollution Anthracite Conference

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Mr. Arthur A. Schmidt, managing director, Anthracite Information Bureau in New York City, as well as excerpts from papers submitted at the conference held at Elmira, N. Y.:

ANTHRACITE INFORMATION BUREAU,
New York, N. Y., May 29, 1957.

The Honorable DANIEL J. FLOOD,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR DAN: For your consideration, I am enclosing excerpts from some of the papers at the tristate anti-air-pollution anthracite conference, which was held in Elmira, N. Y., with the thought that you may wish to consider them for insertion into the CONGRESSIONAL RECORD. This conference brought together leading experts in air pollution control from Government agencies and municipalities in the Northeastern States. The meeting emphasized anthracite's role in combating air pollution by providing safe, clean, economical, and modern automatic heat for large buildings and schools.

Because of the growing menace of polluted air, and the need for increased economy and smokelessness in operating Federal, State, and municipal buildings, we felt that excerpts from these papers, if read into the CONGRESSIONAL RECORD, would broadcast information that would be extremely valuable to many communities, particularly municipalities and school

boards in the Eastern United States now engaged in extensive school-building programs.

I am therefore enclosing parts of three of the papers read at the conference. The first, Administrative Problems in Air Pollution Control, is by Austin C. Daley, now director, division of minimum housing standards, Providence, R. I., and formerly chief air pollution control engineer of that city.

The second, Problems of Modern School Design, is by John Hunter, Jr., of the architectural firm of Hunter, Campbell & Rea, Altoona, Pa., whose firm has designed more than 500 school buildings.

The third, Design Problems in Commercial Fuel Utilization, is by Ray E. Roushey, of Roushey & Smith, consulting engineers, Wilkes-Barre, Pa. Mr. Smith's firm has been active in design work for many different types of large commercial heating units.

You would probably be glad to know that we received the greatest help and cooperation from the United States Department of Commerce and the United States Bureau of Mines in planning and conducting the conference. There were about 200 in attendance, and everyone was most favorably impressed.

Sincerely,

ARTHUR A. SCHMIDT.

EXCERPTS FROM TALK BY AUSTIN C. DALEY

Since anthracite is our only smokeless primary solid fuel, we will stress its value in this talk. Coke, which is also smokeless, is disappearing rapidly in the Northeast. Therefore, we will concentrate on that wonderful solid fuel from eastern Pennsylvania; and wonderful it really is to anyone trying to clean the air in a city. A stack fed from anthracite boilers will never cause trouble for an air-pollution engineer. It just can't, no matter how poorly it is fired; so it is easy to see why the air-pollution-control staff in Providence loves anthracite.

We have talked with many control officials from cities who agree with us on the merits of our hand-firing law, but they hesitate to attempt its passage. This is where sales engineering comes into the picture. The citizenry of the community must be sold on the importance of this step and they must be persuaded to battle for their rights to breathe clean, fresh air. And fight they must if they are to win over the selfish-interest group which will muster great strength, hidden and overt, to defeat the cause of clean air.

We are only scratching the surface on this enormous problem of air pollution. Research findings from medical men may yet show, with complete finality, that foul air has been injuring and even killing an alarming proportion of our people. This should increase the importance of anthracite's role in keeping our air clean.

For too many years we have been considering anthracite as a fuel of the past. With the growing threat of contaminated air in our cities and the role your fuel can play in abating it, anthracite should rightfully be considered as a fuel of the future.

EXCERPTS FROM JOHN HUNTER, JR.'S, SPEECH

Let me suggest that I feel very strongly that the whole problem of heating as related to good planning and design for any building, which includes schools, and where heating is required, should be approached open-mindedly by the architect. The matter of heat distribution and air-conditioning systems should be as mechanically simple as possible, yet sufficient in serviceability. Of course, they are required to meet established standards of performance and must be installed in accordance with code regulations as directed by the State in which the project is located.

The search for a completely desirable and satisfactory fuel should be through a cooperative effort on the part of the school board members, school administrator, architect, heating engineer, fuel suppliers, and utilities—public or private. The point of final collection of information should be in the office of the architect, by whom a full report of the studies, including recommendations, should be made to the client. * * * There are two main areas for study, (1) the type and amount of heating equipment and space required to house it and the associated costs, and (2) the cost of operation and maintenance, annual depreciation allowance, annual interest charges, and amortization cost. * * *

In the research studies, it is sometimes difficult for the school board members to accept the findings, especially when they deviate from pure preference and local industry interest. Nevertheless, the board must make the choice finally because it is the owner.

Considerable assistance from two sources in solving the problems of modern school design as related to heating and air conditioning, should be flowing to the offices of architects and design engineers constantly. These natural sources are (1) the fuel industries, and (2) the manufacturers and distributors of all items that comprise a heating and ventilating system. * * * More specifically, let me say that fuel suppliers should keep the architects informed about the fuels available, the best and latest type of equipment required to obtain maximum use results, and research findings. Likewise, equipment distributors should bring the favorable findings of experimenters to the attention of architects. The architect should then exercise his prerogative by conferring with the board of education about the initial and long-term advantages of each fuel.

Now, finally, let me indicate several advantages of anthracite fuel which obtain generally in this area.

1. Cost: Anthracite is a strong competitor in the fuel industry.

2. Supply: There appears to be a firm guaranty through the Anthracite Industry Council that the supply will not fail.

3. Storage: Advantage can be taken of low spring prices by safely storing a full year's supply.

4. Safety: Anthracite can be stored indoors without risk of explosion or spontaneous combustion.

5. Cleanliness: Anthracite is consumed by complete combustion. Thus, there is practically no smoke, no air pollution, and no resultant deposit on neighboring properties.

EXCERPT FROM RAY ROUSHEY'S TALK

Anthracite fuel is low in volatile and high in carbon; it burns with a steady, even heat for most efficient results. This, more than all other considerations, makes anthracite fuel most desirable for use in modern, well-designed buildings. * * *

A well-designed anthracite fuel-burning system will operate at 70 percent to 75 percent overall thermal efficiency, and this can be maintained with automatic combustion control with only slight maintenance and periodic inspection.

The fact that anthracite fuel is low in volatile makes it the safest and most economical fuel. * * *

In recent years the manufacturer of anthracite equipment has been cognizant of the need for proper commercial-size equipment and nearly all modern adaptations to recognized principles have been developed in the last 5 or 6 years.

Historical, Legal, and Political Aspects on Western Poland

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. MADDEN. Mr. Speaker, in the CONGRESSIONAL RECORD of May 16, 1957, page 6346, we find a lengthy and, to some extent, a one-sided discourse on the situation created by the Potsdam Declaration of the Allied Powers in August 1945, when certain territories east of the Oder-Neisse Rivers were placed under Polish administration.

The article delved into many aspects of this problem—historical, demographic, and economic.

In a quarterly review, Poland and Germany, we find the following article by a well-known Polish journalist, Boleslaw Krzeminski, on this subject:

THE POTSDAM DECISIONS AND THE WESTERN FRONTIERS OF POLAND

Political circles as well as the press in Western countries voice more often the opinion that the present western boundary of Poland on the Oder and Neisse is a constructive element of the European structure and should be recognized as final by the free countries, contrary to the revisionist tendencies which in the first postwar years found considerable support also outside Germany.

In the first place, it has become apparent that the territories encompassed by the new border have for Poland an economic and demographic value incomparably greater than that they were ever likely to acquire if they remained parts of Germany. At one time the opinion was accepted that without these territories Germany would face economic catastrophe and would not be able in any case to give meployment to the millions of refugees and immigrants from the East. At present anybody can see that the influx of these people, far from being a liability, is an asset for the German Federal Republic. It has supplied manpower, filled the gaps brought about by war, and rendered possible the remarkable development of West German industry. German economists expect that in a very few years, and in spite of the presence in West Germany of these workers from the East, there will be a shortage of manpower and the need will arise to admit further reserves from abroad. There is no doubt that the progressive integration of the refugees and exiles into the life of the Federal Republic is approaching a favorable end. The problem of food for the country has also been happily solved as far as can be seen from figures relating to consumption and balance of payments.

SETTLED BY POLES

On the other hand, the areas lying between the Oder-Neisse line and the Polish-German frontier of 1939 have been almost completely settled by a Polish population, which numbers more than 7 million, of which 1 million is composed of natives of these lands, while the number of Germans has dwindled to a few scores of thousands and continues to diminish in consequence of voluntary emigration.

Poland has devoted an enormous effort to the reconstruction of the economy of these territories sorely tried by war and the ensu-

ing Soviet transfers and plundering. Polish cultural life has also flourished there to a remarkable degree.

COMPELLING REASON

Some important British press organs have recently pointed out that there is a very compelling reason for a rapid recognition of the new Polish western frontier by the Western powers and Germany: the fact that Soviet Russia up till now appears as the only powerful guarantor of this frontier and the sole opponent of German revisionist trends, and frequently has recourse to this argument to make the Poles feel their dependence upon her. The recognition of the Oder-Neisse frontier by the Western powers would deprive Russia of this trump card and bring Poland a step nearer to complete independence.

The history of the last 10 years shows that there was much to justify the decisions of the Western powers in 1944–45 concerning the delimitation of Poland and Germany, although as much cannot be said of other awards made at the expense of Poland, and although it was not yet possible at the time to foresee the course of events.

The problem of the Polish German frontier was raised for the first time at Teheran in 1943, during a conference otherwise ominous for Poland. Poland's right to territorial gains was stated, although no details were given. But on October 13, 1944, about a year later during a conference at the Kremlin in which Mr. Churchill, Mr. Eden (as they then were), Stalin, Molotov, Mr. Mikolajczyk (then Polish Premier) and Mr. Harriman as American observer took part, Mr. Eden recapitulated thus the decisions of the conference concerning the Polish-German frontier: "It has been said at Teheran that the new Polish frontier in the west would go as far to the Oder as the Poles would wish." Both Mr. Churchill and Mr. Molotov confirmed this statement.

BRITISH STAND

Somewhat later the attitude of the British Government in this question was more accurately defined in a letter from Sir Alexander Cadogan, at that time Permanent Under Secretary of State at the Foreign Office, to the Polish Minister of Foreign Affairs. Here we read as follows: "The Prime Minister, after consultation with the Cabinet, has now directed me to give you the following replies: you asked in the first place whether even in the event of the United States Government finding itself unable to agree to the changes in the western frontier of Poland foreshadowed in the recent conversation in Moscow, His Majesty's Government would still advocate these changes at the peace settlement. The answer of His Majesty's Government to this question is in the affirmative.

"Secondly you inquired whether His Majesty's Government were definitely in favor of advancing the Polish frontier up to the line of the Oder, to include the port of Stettin. The answer is that His Majesty's Government consider that Poland should have the right to extend her territory to this extent."

Shortly afterwards, on November 17, 1914, President Roosevelt wrote to Mr. Mikolajczyk and gave his support to the point of view of the British and Polish Governments on this question. Here it was said:

"In regards to the future frontiers of Poland, if mutual agreement on this subject including the proposed compensation for Poland from Germany is reached between the Polish, Soviet, and British Government, this Government would offer no objections."

AMERICAN POSITION

As to the transfer of population. President Roosevelt made the following declaration to Mr. Mikolajczyk: "If the Polish Government and people desire, in connection with the new frontiers of the Polish State, to bring about the transfer to and from the territory of Poland of national minorities, the United States Government will raise no objections and, as far as practicable, will facilitate such transfer."

A similar declaration concerning the frontiers and the transfer of population was made by the Secretary of State, Mr. Stettinius, on November 18, 1944.

The line taken by the British Prime Minister, Mr. Churchill, when addressing the House of Commons, on the 15th of December of that year, was even stronger. Speaking of the broadening of Poland's frontiers to the west and north, he said:

"That is what is proposed—the total expulsion of the Germans from the area acquired by Poland in the west and north. For expulsion is the method which, so far as we have been able to see, will be the most satisfactory and lasting. There will be no mixture of population to cause endless trouble, as has been the case in Alsace-Lorraine. A clean sweep will be made."

As can be seen from these documents and texts, the two leading Western Powers declared themselves in favor of a new Polish frontier and of the transfer of the German population from the areas ceded to Poland, long before the Potsdam Conference. This deserves special notice because at a later time, a tendency became perceptible in a part of the press to gloss or pass over this important fact.

POTSDAM DECLARATION

After the final collapse of Germany the Potsdam Conference took place. The decisions promulgated by it were only a repetition and confirmation of earlier ones, yet their consequences were specially important as what was needed now were not plans for the future but the direct carrying out of decisions already taken.

The record of the conference reads as follows:

"The three heads of government agree that, pending the final determination of Poland's western frontier, the former German territories east of a line running from the Baltic Sea immediately west of Swinemunde and thence along the Oder River to the confluence of the western Neisse and along the western Neisse to the Czechoslovak frontier, including that portion of East Prussia not placed under the administration of the Union of Soviet Socialist Republics, in accordance with the understanding reached at this conference and including the area of former Free City of Danzig, shall be under the administration of the Polish State and for such purposes should not be considered as part of the Soviet Zone of Germany."

The record further contains the ruling that "the final delimitation of the western frontier of Poland should await the peace settlement." The stipulations concerning the transfer of the German population are specially important and read as follows:

"The conference reached the following agreement on the removal of Germans from Poland, Czechoslovakia, and Hungary:

"The three governments, having considered the question in all its aspects, recognize that the transfer to Germany of German populations, or elements thereof, remaining in Poland, Czechoslovakia, and Hungary will have to be undertaken. They agree that any transfers that take place should be carried out in an orderly and humane manner."

CONTROLLED TRANSFER

In this way the three principal powers, the United States, Great Britain, and the Soviet Union took upon themselves full responsibility for the transfer of the German population and only informed the interested states of their decision. Proceeding to carry out the terms of the Potsdam protocol, the Allied Control Commission laid down the conditions for the transfer and the number of persons to be transferred to the three zones of occupation, American, British and Soviet. This agrement was signed on the 20th of November 1945. The Commission calculated that at the time there were within the Polish boundaries about 3,500,000 Germans. This figure did not only concern German residents in the former territory of Poland as far as the Curzon line (they numbered 700,000 persons before the war) but also the Germans who, at the time the agreement was signed, were in the territories handed over to Poland. In 1939 the German population there amounted to some 7,500,000 besides a local Polish population of about 1 million persons.

It must be realized, however, that only a minority of the former population of these districts remained there, a great number of Germans fled west in the last stages of the war, many were transported into the depths of Russia, many fell in the war or perished in other circumstances. For all these reasons the appraisal of the Control Commission can be regarded as approximately correct.

The transfer of this population began on a large scale in February 1946 and was finished, in the main, by the end of the year. The void thus created was gradually filled by incoming Poles and the rapidity of the subsequent resettlement of these lands, the rehabilitation and the restoration of agriculture astonished foreign observers.

At times the Potsdam Conference has been invoked in certain quarters to prove that the final delimitation of Poland in the west must needs await a formal peace treaty. Expectations of territorial readjustments are based on this argument. But the course of events described above shows the utter unreality of such an interpretation of the Potsdam clauses. The Potsdam stipulations were, as we have shown, only the repetition and confirmation of decisions take in fact 2 years earlier. Therefore the stipulation concerning the final delimitation of the western frontier of Poland can only be understood as relating to the details of fixing the frontier line in the field, but not to a fundamental change of this line. Binding decisions were already in being when the Potsdam Conference assembled, and, more important still, the transfer of population had been carried out by virtue of a much more important Potsdam decision. No responsible statesman can wish to reverse the existing state of things. On the contrary, its final confirmation and acknowledgment will be beneficial not only for Poland, but for Europe and the world.

Army Fires Jupiter 1,500 Miles

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. FLOOD. Mr. Speaker, under leave to revise and extend my remarks, and with particular reference to sentiments expressed by myself, the gentleman from Michigan [Mr. FORD], and the gentleman from Montana [Mr. ANDERSON] in the CONGRESSIONAL RECORD of May 29, 1957, on pages 7092 to 7094, I insert following my remarks in the RECORD an item from the Aviation Daily of Wednesday, June 5, 1957, on page 236, noting that after 2 failures earlier this year the Army succeeded in firing a Jupiter IRBM missile

to 1,500 miles, whereas the Air Force's Thor IRBM has failed on all 3 tries:

ARMY FIRES JUPITER 1,500 MILES

After 2 failures earlier this year, the Army succeeded last week in firing a Jupiter mid-range ballistic missile to the limit of its designed range, or approximately 1,500 miles. The instrumented vehicle attained an altitude of approximately 250 to 300 miles.

Trouble with the first two Jupiter test vehicles apparently stemmed from sloshing fuel. Both exploded prior to scheduled burnout. The third Jupiter incorporated a set of fuel-tank baffles provided by the Air Force. These were designed to hold fuel slosh to a minimum without interrupting fuel flow.

The Army also took steps to eliminate two other potential weak spots in the third Jupiter. It removed a gust-sensing indicator mounted on a forward probe and installed a heat-blanket shield at the base of the missile to prevent eddies of exhaust flame from burning out the control wiring.

The Jupiter carried instrumentation in place of the warhead it would normally carry in operational use. It was controlled by a preprogramed autopilot which held its attitude during flight to the programed course. Later vehicles will be equipped with a full-fledged guidance system which will include computing as well as sensing elements.

The Air Force's Thor IRBM has been fired twice this year and has failed both times. On the first occasion, the vehicle rose a couple of feet from its launching pad, then fell back and burned. The vehicle was deliberately detonated on its second try because it appeared to be straying from its course. A third try was scheduled last month, but the missile burned up a few minutes before launching when the propellants caught fire.

Graham Calls It Sinful To Hate Man's Color

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. DIGGS. Mr. Speaker, under unanimous consent, I offer for inclusion in the RECORD a New York Times report of Evangelist Billy Graham's comments upon hate based on a man's color. Although there are those who would use false interpretation of biblical scripture to achieve their own ends, the comments which Mr. Graham has made are the teachings of our Christian heritage, supported by today's scientific knowledge:

GRAHAM CALLS IT SINFUL TO HATE MAN'S COLOR

NEW YORK, June 6.—A man who looks down on another human being because of his color, Evengelist Billy Graham says, is sinning against God.

"The heart of all men is the same in God's sight, despite the shape of their physique or the color of the skin," he told a crowd of 18,000 at Madison Square Garden last night.

He said God spurns the "prejudice and bigotry that I fear many often have even in the churches today."

Taking his sermon text from John iv: 1–29, in which Jesus defies the racial hostility between Jews and Samaritans by teaching a Samaritan woman at Jacob's well, Mr. Graham said:

"Jesus had no national animosities. * * * Jesus had no racial prejudice. * * * Jesus had no bigotry. * * * Whether a person walked different or talked different or had a different color of skin."

The evangelist said "God looks on the heart," not the physical characteristics; "God made of one blood all nations."

Mr. Graham touched on the subject only briefly, but it is one which he has mentioned repeatedly throughout his New York crusade, usually with a few quick but pointed references.

In one sermon he said he knew of many Christians who "sit down and sing 'Oh, how I love Jesus,' and hate a man because of his color."

"It's an abomination of God," Mr. Graham added. "It's taking the name of God in vain."

He said at another meeting, "I know of hundreds who hate others without cause, and use as an excuse the color of skin. And it's not confined to one section of the United States, but all over the world."

"God," he says, "does not judge by your color, by your social status, or your standing on Wall Street."

Mr. Graham said last night that accepting Christ transforms you and changes your attitude "toward God, toward yourself, and toward your neighbor."

Immigration Controls Spell National Security

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the National Republic, June 1957, issue:

IMMIGRATION CONTROLS SPELL NATIONAL SECURITY

(By Hon. FRANCIS E. WALTER, of Pennsylvania, chairman, Committee on Un-American Activities, Subcommittee on Immigration, U. S. House of Representatives)

Another richly financed and highly organized campaign against the basic principles of our American immigration policy is now in full force. This campaign strikes not alone at our immigration policy, but endangers both the national security and sound cultural development of our country.

The number and type of immigrants coming into the United States has been a matter of Federal concern for more than a century. Throughout all our history immigration laws have been based on the premise that one of the first functions of sovereignty is control of both quality and quantity of prospective new citizens. The only yardstick in arriving at this determination has been the interest and welfare of the American people. Under international law, the right of every nation to control rigidly its immigration flow is recognized universally.

Immigrants coming into the United States are entering into the bloodstream of the Nation. It is like an injection into the bloodstream of an individual. It can be beneficial to him, increasing his strength and vitality. But, if the injection is one of improper quality or improper quantity—it could be fatal.

A comprehensive picture of our current problems cannot be presented without an outline of the historical background of American immigration.

From the first settlement of the North American colonies to the end of the Revolutionary War in 1783, immigration to the New World was regulated, not by the colonists but by the governments of Europe. The interest of the European ruler was enhanced by the size of the population of his domain. The more abundant the labor force, the greater his power, and the more gold accumulated in the royal coffers. Consequently, all European rules tried to prevent the exodus of their subjects, the peons, who were already attracted by the magnificence of the wide open land and the opportunities beckoning from across the seas.

The new settlers on this side of the Atlantic deliberately encouraged immigration. Here, more people meant more producers, more consumers, and more wealth to be extracted from the newly acquired soil and—last but not least—more people on the Indian frontiers meant increased safety of life and property.

It is estimated that in 1640, the population of the North American colonies numbered 25,000 and by 1700, had risen to 200,000. It took another 50 years to bring the population figure to the first million.

When the Articles of Confederation were adopted in 1777, the population of the 13 colonies was well over 3 million, and the first census taken in 1790 put it at 4 million. About two-thirds of the white population were of English, Scotch, and Welsh origin; about one-third were Dutch, French, German, Scandinavian, Spanish, and Portuguese.

Except for a short-lived restrictive period created by the alien and sedition law of 1798, immigration flowed into the United States unfettered by any legislation. The vast growth of the new American economy, its progression to the limitless frontiers of the West, and the ready acceptance of the newcomer by the thriving communities—already established—exerted an increasing attraction on poverty-stricken Europeans in the countries devastated by the Napoleonic wars. Recurring famines and the great industrial revolution resulted in increased population pressures and caused a gradual relaxation of the restrictive attitude of the European rulers, who suddenly reversed themselves and began to encourage emigration.

As a consequence, the first official record of arriving immigrants, established in 1820, indicated that the population of the United States had jumped to almost 10 million persons.

By that time public opinion in both Europe and America became aroused by reports of appalling conditions on vessels carrying immigrants on the transatlantic journey. Thousands were crowded in steerage space, where many died of hunger, thirst, and disease. In 1819, a law was enacted in the United States limiting the number of passengers a ship could carry, and prescribing the minimum amount of water and food to be aboard. The master of every ship reaching our shores was called upon to report the number of passengers and their personal data, such as age, sex, occupation, and country of origin. Thus originated our first immigration statistics.

The first legislative enactment which may be considered as relating to the quality of immigrants was passed in 1863. It prohibited Americans from carrying on the trade in Chinese coolies. Later laws, still qualitative in nature, established rules for the exclusion of immoral persons, paupers, and criminals.

A tremendous influx of Chinese immigrants after the discovery of gold in California prompted the enactment of the first Chinese

exclusion law, in 1882. That trend of legislation continued, as witnessed by the enactment, in 1885, of a restrictive immigration measure aimed at prohibiting the importation of cheap labor from abroad.

A few years later, in 1891, Congress excluded insane persons, persons likely to become public charges, felons, feebleminded persons, polygamists, and persons convicted of crimes involving moral turpitude.

The ethnic pattern of our immigration began to change in the last two decades of the 19th century. About 1890, there appeared for the first time an appreciable number of immigrants from eastern and southern Europe. They came from the Balkans, Italy, and from Russia, where the czarist persecution of Jews began to drive out refugees in ever-increasing numbers.

These changes in the immigration pattern continued until after World War I. In the decade of 1871–80, almost 74 percent of our immigrants came from northern and western Europe, and only 7 percent from southern and eastern Europe. But, in the decade of 1900–10, only 22 percent came from northern and western Europe, while immigrants originating in southern and eastern Europe contributed about 71 percent.

It was about that time that the Congress turned its attention from qualitative restrictions to quantitative restrictions. The first law establishing a ceiling on the number of immigrants—a quota—was enacted in 1921. The second quota law was passed in 1924 and remained in effect with very little change until the enactment of the present law in 1952.

The 1924 act established the much discussed national-origins system, allocating to every national group a fixed proportion of immigrants based on that national group's proportion to the total population of the United States as of 1920. The purpose was to expand the population in orderly fashion from year to year, with roughly the same proportion of each immigrant strain as prevailed in 1920.

The 1952 law was not a step lightly taken. In final form the Walter-McCarran Act represented a comprehensive codification and modernization of some 148 immigration and naturalization statutes then on our books. The congressional study group which produced this codification had been at work on the problem since 1947. Scores of hardship inequities were ironed out of the old hodgepodge of piecemeal legislation, as enacted during the preceding century.

All countries of the globe were granted immigration quotas without discrimination, under a formula equally applicable to all areas, regardless of the color of the skin or the shape of the eyes of their inhabitants.

At the same time, the new law made it infinitely easier to rid this country of foreign-born subversives, criminals, racketeers, narcotic peddlers, professional gamblers, and aliens who had originally entered illegally.

These, in brief, are the major features of the law so many fellow-traveler groups have been trying for 5 years to uproot and destroy. Few measures in all our national history have afforded the United States so much protection against criminal and subversive elements at so little cost.

Nor may it be said that the law was passed by parliamentary sleight of hand. The bill passed the House on April 25, 1952, by a vote of 206 to 68. The Senate passed it by a voice vote on May 22. President Truman vetoed the measure on June 25. But on June 26 the House repassed it 278–113, and on June 27 the Senate overrode the veto 57–26. The act became effective December 24, 1952. Any measure enacted over a Presidential veto must command overwhelming national support.

The House Committee on Un-American Activities disclosed in its 1956 annual report that the Communist Party has created or sponsored no less than 180 different fellow-traveler organizations in the United States, having as their principle purpose the repeal or destruction of the Walter-McCarran Act.

One of these organizations, styled the American Committee for Protection of Foreign Born, has been formally branded as completely dominated by the Communist Party. It is also described as the oldest creation of the Communist Party still active in the United States. The committee report added: "The American Committee for Protection of Foreign Born, while dealt with here as a single organization, is in fact a complex of organizations at times numbering more than 300."

Three central policies of the law are under attack from this and other leftist groups. The international campaign for repeal seeks first to destroy the national-origins principle. Second, the repeal movement seeks to admit an estimated 1 million new immigrants a year instead of the average of 225,000 annually under the prevailing system. Third, the Communist-front section of the repeal movement seeks to strike out of the law every provision for screening immigrants for subversive activities or advocacy of revolutionary tactics in their native lands.

History demonstrates clearly that there have been but few native Americans in the top ranks of the United States Communist Party. World-wrecking communism in America is purely an import. Without effective immigration controls, communism easily might gain a free hand in America.

No country in the world has received desirable immigrants more hospitably than the United States. Since World War II we have extended the hand of welcome to some 1 million permanent immigrants, including recently many Hungarian refugees from Communist terror.

In addition, we have welcomed in temporary residence some 200,000 students from 127 countries, many of these under direct grants from the United States Treasury.

No American ever should allow himself to be chagrined that our immigration policies are in any way wanting in considerations of humanity and Christian decency.

The sole purpose of our immigration controls has been to exclude undesirable criminal, revolutionary, and anarchistic elements from the national bloodstream.

Since the war, this country has taken one-third of all the displaced persons resettled throughout the world. We have but 6 percent of the world's land area, but we have taken more than 33 percent of Europe's refugees.

The world's population is growing infinitely faster than jobs and food supply. Human fertility is heading for what the census experts call a "population explosion." Japan today has 88 million people crowded into an area the size of Montana. Try to imagine, if you will, half of the United States population living in Montana.

Communist China has more people than she can count—somewhere in the neighborhood of 600 million.

Here in the United States, our own population growth currently adds a new city of Chicago to our total every year. New jobs are needed to keep pace.

It is not difficult to demonstrate statistically that our current population increase is entirely out of proportion to our rate of new capital accumulation. We have not yet begun to expand our production facilities, housing, schools, and highways to accommodate our own foreseeable population increase. Unless we do expand new capital plant steadily in step with population growth, every American citizen faces the prospect of a lower standard of living somewhere in the not too distant future. Sound public policy would appear to dictate, therefore, that population increase should be held rigidly in line with our traditional American conceptions of living standards, education, and opportunity. In this equation our first consideration should be for the welfare of the American people.

Larger immigration quotas by the United States could never hope to solve the world's population problem. But careless handling of this explosive situation easily might undermine American prosperity and security for many generations.

No land in the world shows higher regard than the United States for the rights and privileges of immigrant minorities. But this noble tradition does not mean that the American people are ready to turn the country over completely to alien domination.

American citizenship for immigrants never has been a right granted by our Constitution. It always has been a high privilege, to be earned and retained by earnest support of our inspiring American traditions of freedom under law.

Only thus may we hope to grow in national strength and moral stature.

"The importance of foreigners into a country that has as many inhabitants as the present employments and provisions for subsistance will bear, will be in the end no increase of people, unless the newcomers have more industry and frugality than the natives, and then they will provide more subsistance, and increase in the country; but they will gradually eat the natives out. Nor is it necessary to bring in foreigners to fill up any vacancy which will soon be filled by natural generation." (Benjamin Franklin.)

How To Solve the Segregation Problem—The White Baby Plan

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD an editorial by Harry L. Golden appearing in a recent issue of the Carolina Israelite.

Mr. Gordon's humorous yet pointed remarks illustrate clearly the ludicrous conclusions which can be reached by founding arguments on the false premise of racial superiority.

The article follows:

HOW TO SOLVE THE SEGREGATION PROBLEM—THE WHITE BABY PLAN

The vertical Negro plan is actually being implemented to some extent in Atlanta, Ga. The Negroes buy their bus and railroad tickets and proceed immediately to the platform where they are free to walk up and down unsegregated. The waiting rooms with all the concessions and beverage coin boxes, etc., are empty.

Now this new white baby plan offers another possible solution.

Here is an actual case history of the "white baby plan to end racial segregation." Some months ago there was a revival of the Lawrence Olivier movie, Hamlet, and several Negro schoolteachers were anxious to see it. One Saturday afternoon they asked some white friends to loan them two of their little children, a 3-year-old girl and a 6-year-old boy, and, holding these white children by the hands, they obtained tickets from the

movie-house cashier without a moment's hesitation. They were in like Flynn.

This would also solve the baby-sitting problem for thousands and thousands of white working mothers. There can be a mutual exchange of references, then the people can sort of pool their children at a central point in each neighborhood, and every time a Negro wants to go to the movies all she need do is pick up a white child and go.

Eventually the Negro community can set up a factory and manufacture white babies made of plastic, and when they want to go to the opera or to a concert all they need do is carry that plastic doll in their arms. The dolls, of course, should all have blond curls and blue eyes, which would go even further; it would give the Negro woman and her husband priority over the whites for the very best seats in the house.

Uniform Admission to the Federal Bar, H. R. 818

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. MULTER. Mr. Speaker, on May 31, 1957, I inserted at page A4215 my remarks in support of my bill, H. R. 818. In those remarks I referred to a rule of the First Circuit Court of Appeals of the United States as being quite restrictive. Since July 1, 1953, however, the rule of that court, instead of being restrictive, is one of the most liberal in the country.

I am indebted to the Honorable Roger A. Stinchfield, clerk of that court, for calling attention to my error.

I am pleased to set forth in full his letter and the enclosures he refers to. They are as follows:

UNITED STATES COURT OF APPEALS
FOR THE FIRST CIRCUIT,
Boston, Mass., June 3, 1957.

Re H. R. 818 and your remarks in CONGRESSIONAL RECORD, May 31, 1957, volume 103, No. 93, Appendix page A4215

Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMEN MULTER: The fifth paragraph of your remarks (top of third column on page A4215) singled out this court of appeals for the first circuit for criticism as having an alleged requirement for admission that "the attorney must have been previously admitted to practice in some other United States appellate court." In so doing, you continued the erroneous and wholly baseless charge against this court by Hugh Williamson in the American Bar Association Journal, 1956, volume 42, page 721.

Enclosed is a copy of the rule of this court concerning admission of attorneys, showing that we do not have the requirement as alleged.

On October 1, 1956, I wrote to Mr. Gregory, editor of the American Bar Association Journal, pointing out the groundless charge and seeking retraction. To date, I have seen nothing in the bar journal about correcting this gross misstatement. For your information, I enclose a copy of my letter to the editor of the bar journal.

Incidentally, you will note from the second page of the enclosed letter that our requirements for admission are much more lenient than those of the Supreme Court of the United States.

Respectfully,
ROGER A. STINCHFIELD, *Clerk.*

RULES OF THE UNITED STATES COURT OF APPEALS FOR THE FIRST CIRCUIT, EFFECTIVE JULY 1, 1953

7. ATTORNEYS AND COUNSELORS

1. Admission: Any attorney or counselor who has been admitted to practice in the Supreme Court of the United States, any other United States court of appeals, any United States district court, or the highest appellate court of any State, Commonwealth, or Territory, and whose private and professional character is good, may be admitted to practice in this court upon oral motion of a member of the bar of this court. Motions for admission may be made at the opening of any daily session of the court.

2. Oath: Upon being admitted, each applicant shall take and subscribe the following oath or affirmation, viz: , do solemnly swear (or affirm) that I will demean myself, as an attorney and counselor of this court, uprightly, and according to law; and that I will support the Constitution of the United States.

3. Suspension or disbarment: When it is shown to the court that any member of its bar has been suspended or disbarred from practice in any other court or has been guilty of conduct unbecoming a member of the bar of this court, he shall forthwith be suspended from practice before this court, and notice thereof shall be mailed to him, and, unless he shows good cause to the contrary within such time as the court shall prescribe, he shall be further suspended or disbarred from practice before this court.

UNITED STATES COURT OF APPEALS
FOR THE FIRST CIRCUIT,
Boston, Mass., October 1, 1956.

Hon. TAPPAN GREGORY,
Editor in Chief, American Bar Association Journal, Chicago, Ill.

DEAR MR. GREGORY: Mr. Williamson's article entitled "Disparate Rules of Admission in Federal Courts," in the August 1956 issue of the American Bar Association Journal, has just been called to my attention.

First, he commends the United States courts of appeals in seven circuits for requiring "only the acreditation for admittance to the Supreme Court of the United States." He refers to these circuits as "open land."

Then he attacks three circuits as maintaining "moats and lower battlements" against admission of attorneys and directs his initial and most lethal charge against the first circuit as requiring that "the attorney must have been previously admitted to practice in some other United States appellate court."

Rule 7 of the rules of the first circuit reads in part as follows: "Any attorney or counsellor who has been admitted to practice in the Supreme Court of the United States, any United States court of appeals, any United States district court, or the highest appellate court of any State, Commonwealth or Territory, * * * may be admitted to practice in this court." This rule has been in effect since the revision of July 1, 1953. For several decades prior thereto, rule 7 in all of the revisions contained, among the alternative bar accreditations, the words "or any United States district court." There is no excuse for the error of Mr. Williamson in representing that the rules of the first circuit require that an attorney must have been previously admitted to practice in some other United States appellate court. This groundless accusation should be retracted.

Mr. Williamson represents that the courts of appeals for seven circuits require only the accreditation necessary for admittance to the Supreme Court of the United States, and he refers to the rules of that Court as being lenient. Since our admission requirements are so extremely liberal, I am constrained to observe that, although Mr. Williamson's "accredited legal traveler may journey with ease into the highest court in the land," such traveler may journey with even greater ease into the Court of Appeals for the First Circuit. We do not require that the applicant have been a member of the qualifying bar for any period, whereas paragraph 1 of rule 5 of the Supreme Court requires such membership for 3 years past; we do not require a certificate or a personal statement endorsed by 2 members of the bar, whereas paragraph 2 of rule 5 of the Supreme Court does; and we charge no fee at all for admission, whereas rule 52 (f) of the Supreme Court requires a fee of $25, and several courts of appeals make a charge therefor. The foregoing comments are intended to show by comparison that the requirements of the first circuit are even more liberal than those of the Supreme Court of the United States; and these comments are made with full appreciation of the worthiness of the requirements for admission to the bar of the Supreme Court of the United States as set forth in its rules 5 and 52 (f).

Finally, carelessness in research is evidence in the fourth paragraph of Mr. Williamson's article. There he refers to the requirements for admission to the bar of the Supreme Court and he cites "United States Supreme Court rules 2 and 3." Under the former rules of that Court, rule 2 covered admission requirements; and rule 3 concerned law clerks and secretaries. Actually, the requirements for admission are contained in rule 5 in the revised rules of that Court which have been in effect for more than 2 years.

Sincerely yours,
ROGER A. STINCHFIELD, *Clerk.*

There Is No Substitute for Ocean Transport in the Movement of Masses of Men or Material

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. TOLLEFSON. Mr. Speaker, an excellent speech on the role of the American Merchant Marine during peacetime or war was made before the Portland Propeller Club and the Portland Chamber of Commerce on May 20 by Mr. Alex Purdon, executive director, Committee of American Steamship Lines. Mr. Purdon's speech is a most timely one which should be read with interest by many Members of Congress. Under leave to extend my remarks in the RECORD I include it herewith.

The address follows:

ADDRESS OF ALEXANDER PURDON, EXECUTIVE DIRECTOR, COMMITTEE OF AMERICAN STEAMSHIP LINES, BEFORE THE PORTLAND PROPELLER CLUB AND THE PORTLAND CHAMBER OF COMMERCE, PORTLAND, OREG., MAY 20, 1957

I am honored by your invitation to address this joint luncheon meeting of the

Propeller Club and the chamber of commerce. It is a fitting combination. Too many of the audiences listening to Maritime Day addresses this week will be composed entirely of Propeller Club members. That isn't the way the Propeller Club wants it and that isn't the way it should be.

The business interests in every port city, indeed, the entire community, should join with the Propeller Clubs in acknowledging the contribution of the maritime industry to the economy of their cities and the areas they serve. This meeting demonstrates that Portland appreciates what too many other communities fail to recognize.

The statistics, furnished by the Port of Portland Commission and the chamber of commerce, convince me that this is a thriving and striving city. You thrive on the constant increase in your waterborne commerce but you strive to improve your position as one of the major seaports in this country. You are the largest port in the Pacific Northwest and the third on the Pacific Coast. Soon, I hope you will improve your national standing and edge up at least one notch. You will like being in 12th place much better than in unlucky 13th.

Statistics tell only part of the story, and behind your record of growth is another story—so frequently forgotten—of those who first had the vision and the courage to foresee the possibilities of a great deepwater port 110 miles from the ocean. This Maritime Day celebration should honor not only the port that built the city but the men who built the port. We should honor, too, those who are planning and building now for an even greater port with expanding facilities for an expanding future.

Among the projects in your blueprint for the future is a channel of greater width and depth. This is an endeavor which should be supported by everyone.

Just as you seek greater width and depth in your channel to the sea, so those of us who work at the national level seek greater width and depth in public understanding and support of America's need for a strong American merchant marine.

And just as you must expand your local facilities to match the expanding future of the great Pacific Northwest, so must the American merchant marine expand and improve to meet the challenge and opportunity of a changing world.

Let me speak first of the American merchant marine and its defense role. This is not because I place its defense mission ahead of its commercial contributions, but merely because later on I would like to make a point which this order helps to emphasize.

The development of new weapons—new technologies of waging war—inevitably raises questions about our need for ships in this jet-atomic era. It is only prudent to re-evaluate conventional concepts; but it is not prudent to assume that because Great Britain was forced to reshape her defenses around an atomic pattern, the United States is no longer dependent on the seas, or that surface ships will soon be museum pieces.

More than ever, we should realize the importance of sea communications to the free world. The tonnage of material moving by sea increases year after year.

We have had a very dramatic lesson in recent months. The struggle for Suez highlighted the strategic value of this narrow waterway and the critical importance of ocean shipping to the free nations. Our dependence on ships for prosperity and security is apparently not diminished in this atomic age.

In a recent address, the Secretary of the Navy reported on conclusions reached as a result of studies of ocean and air transportation. Let me quote these conclusions in full:

1. "The sealanes still have no rival for carrying the bulk of the millions of tons of the world's imports and exports. Ocean shipping alone can handle large tonnages per unit and extremely heavy and oversize items."

2. "The United States is no longer self-sufficient in raw materials. Almost one-half of the entire mineral production of the free world is today consumed by the United States industrial machine."

3. "More than ever before the United States has become the workshop and arsenal of the world."

4. "During the last fiscal year less than 1 percent of all cargo transported overseas was airlifted—more than 99 percent went by sea."

5. "Airlift will not be used to any large extent for civil imports and exports. The sealanes will continue to be America's lifelines."

6. "An improved surface transport system can provide a system to meet mobility requirements equally as effective as an air system, and at one-twentieth of the cost of air."

7. "The Navy must continue to guard the lifelines of America and protect the shipping that is vital to the support of our joint war plan and to our civil economy."

Nothing here is intended to minimize the specific and vital contribution of aviation to our economy and our defenses, or to claim more for ocean shipping than the facts warrant. What this study proves is that measured by standards of cost, efficiency, or even time, there is no substitute for ocean transport in the movement of masses of men or material. Aviation, both civil and military, is making giant strides forward, but it is a long way from displacing ocean shipping. Even in the passenger field, where the competition is keenest, steamships offer a distinctive service to peacetime travelers and a trooplift capacity in war which cannot be matched. Insofar as cargo is concerned, aviation is complementary and valuable for speedy delivery, but it is not yet competitive in quantity movements. The relationship of pay load to fuel consumption is a severe limitation. Every ton of material delivered by air to an overseas destination requires at least a ton of aviation fuel delivered by sea to enable the airplane to fly back home. Every ton of material moved by air to Korea required 4 tons of fuel delivered by sea. To paraphrase a famous military maxim—"It can get there fustest but not with the mostest."

I have gone to some lengths to place shipping in proper perspective in this jet-atomic age. Yet, I do not mean to underestimate the possibilities of this wondrous and fearsome development.

At the same time, I hope we will not underestimate the strategic importance of the vast ocean spaces.

Russia is not making that mistake. When she was short of everything else, she still devoted large quantities of manpower and material to naval building. The Soviets already have 500 submarines in commission and they are building at a rapid rate. In this great offensive, submarine fleet, they see the means of denying the freedom of the seas to the free nations. In addition, their newspaper, Izvestia, last week announced plans to build two atomic surface ships.

Vice Admiral Brown of the Sixth Fleet says, "If the lifelines of the Atlantic are cut, it is not a question of how long the Sixth Fleet can stay in the Mediterranean; it is a question of how long this oceanic confederation we call the free world can survive."

What he said about our Atlantic lifelines applies equally to the far reaches of the Pacific where a thin line of democracy—an outer rim of remote and isolated bastions of freedom—stands between us and communism.

The Russians are realists. They would not seek to command the seas if command of the seas was not important.

Scientific advance will not spell oblivion for shipping, for we intend to advance with science. Ocean shipping will move forward with the times and our Nation's increasing needs in peace or war.

For either purpose, America has a voracious appetite and one which will increasingly tax our transport resources. From 1929 to 1955, our total production more than doubled. During the next 20 years, it will double again. Our transportation capability must likewise expand. We cannot afford hardening of our transportation arteries.

Fundamentally, our greatest strength and our greatest security is in our ability to produce. Our agricultural and industrial muscles will do more to mold our destiny than all the guided missiles we or the Soviets can muster.

We can be stalemated in the race for atomic supremacy, but not in our ability to produce. We stand on the threshold of an era of abundance, but as the National Planning Association recently pointed out, this can only materialize "if raw material resources and energy supplies are available to satisfy the needs of industry; if labor can meet the requirements of modern technology for greater skills and greater knowledge; if the fruits of pure and applied research can provide the basis for further technological advances; if management continues to venture into new fields of endeavor and to expand productive capacity for tomorrow's market; and last but not least, if purchasing power and demand are encouraged to rise in accord with the rising capacity to produce and consume."

We can increase our output of manufactured goods by from 3 to 4 percent per worker per year. With 7 percent of the world's population on 2 percent of the world's surface, we consume nearly half of all the raw materials produced on the earth. But we are no longer self-sufficient in raw materials. We are dependent on foreign sources and this is the Anchilles' heel of our industrial supremacy. We must insure our access to the raw material resources of the world by controlling sufficient ocean shipping under own own flag so that we cannot be cut off entirely. We must also have assurance of access to the markets of the world.

This is most apparent today in farm products. We have an accumulated stock and a continuing production of farm products greater than even our growing population can absorb. We must sell that surplus abroad. This is easy to do when ours is the only true abundance. But it is not so easy when production increases as it has lately in other countries.

We have demonstrated that we can achieve miracles in production. The threat to our promised age of abundance is in the distribution of it. If we can distribute what we produce we can push to new heights of prosperity.

So we need materials and markets—and to assure access to both we need a merchant marine, under our own flag, big enough to service the growing needs of a growing nation.

We have a good merchant fleet today—the best in our peacetime history. It, too, stands on the threshold of challenge and opportunity as the partner of industry and agriculture in promoting our products and meeting our material requirements.

But, as a recent report prepared by a joint Marad-Navy planning group pointed out, the American Merchant Marine has some serious qualitative and quantitative deficiencies.

Although our fleet is currently active and carrying cargo at the rate of 216 million tons per annum—giving employment to about 70,000 seamen—90,000 shoreside workers—and sustaining 65,000 jobs in shipyards, it is carrying only 23.3 percent of our own com-

merce, and that percentage is falling. Included in that, incidentally, is the cargo required to be carried on American ships under the 50–50 law. This indicates that American importers and exporters must be persuaded to emulate the nationals of other countries and voluntarily patronize their own ships in larger measure. Perhaps no country in the world is so dependent on the earnings from its merchant marine as Norway, yet a recent issue of the Norwegian Shipping News says:

"Some people have concluded that it is unfair for other nations to maintain a merchant fleet with the help of substantial building and operating subsidies. But this line of reasoning ignores one important fact. That is, that among all nations today, only the United States can maintain the size merchant navy needed to meet foreseeable demands."

This statement from a friendly competitor is more sensible and objective than those sometimes made by misguided American economists who suggest that we eliminate the need for maritime subsidies by eliminating American shipping entirely.

The "foreseeable circumstances" referred to in the Norwegian article are not only circumstances affecting the United States. The article really points out that the whole world needs a strong American merchant marine.

Our hope to have a merchant fleet under our own flag, capable of carrying half of our own foreign trade, is a modest goal which recognizes the contribution to world commerce made by other maritime nations. But it is based on the inescapable conclusion that when the chips are down we must place our reliance on our own ships.

I don't see how anyone in his right mind could expect the United States to bet the future of its commerce and security on the kind of international maritime mercenary I heard described recently. This is an actual case—a citizen of one nation who became a naturalized citizen of another nation formed a Swiss corporation to purchase a French-built ship in order to operate her under the Liberian flag with a German license and an oriental unlicensed crew.

The investment we make in the form of operating or construction subsidies to maintain an American-flag merchant marine in our foreign trade is a sound investment which returns us substantial dividends.

As the economies of our war-worn allies and former enemies are restored and expanded, they become our competitors in the market places of the world. I appreciate that foreign ships will carry cargo wherever and whenever they can earn a profit, but I realize, too, that when they can carry their own national products in preference to ours it would only be commonsense to expect them to do so.

We don't need a merchant marine to give employment to seamen, or to support ship chandlers, or marine insurance companies, or any other of the many businesses which service or supply this industry; but we do need a merchant marine to service and supply the foreign trade of the United States.

The subsidies we pay to maintain the merchant marine in peacetime are not subsidies to shipping so much as they are support for our foreign trade. And the size of the Government contribution has to be measured against our growing volume of foreign trade and the contributions which our industry makes to the total economy. For example, it has been estimated that the maritime industry contributes over $5 billion dollars to the economy each year.

Another economic fact that is frequently ignored is the substantial and direct return to the United States. Since the war, the net cost of operating aid to America's steamship lines has been just under $500 million. But $422 million dollars of taxes was paid to the Government by these lines and their seagoing and shoreside personnel. This is roughly 5 percent of the Government's contribution to keep the American-flag ships on the high seas. If we add to the tax income the direct savings to American shippers from stabilized freight rates, the return to the Nation would probably be millions of dollars in excess of the outlay.

The cost to the United States for maintaining a merchant marine is undoubtedly less than the dollar value of the commercial benefits we receive.

The time has come when we have to think of benefit as well as cost, and in constructive terms respecting the kind of merchant marine we need.

Just the other day I saw that the Air Force decided to abandon a project on which it had already spent $70 million. I don't think that is necessarily bad, because a great deal of valuable information probably came out of the program; but I can imagine the reaction if somebody in the Maritime Administration spent that much money on a project and then abandoned it.

We are thinking in pretty big terms ourselves these days, but I assure you that both the Maritime Administration and the industry, while planning to rejuvenate and improve our merchant fleet, are being pretty careful to insure the wisest possible investment of both private and public funds.

The contract steamship lines, operating 303 privately owned dry-cargo and passenger ships on the essential trade routes, are required to replace their ships as they reach retirement age, 20 years. Their replacement programs will form the hard core of the entire industry's program and will cost not less than $3 billion over the next 10 to 15 years.

Already your city has felt some benefit from this program in the construction of the steamship *Mariposa* and the steamship *Monterey*. I share your hope that these great ships will be the forerunners of other additions to our fleet built in the Northwest to serve the Nation.

The west coast companies in my group—American President Lines, American Mail Line, Oceanic Steamship Co., Pacific Far East Line, Pacific Transport Line—are all great names on the Pacific. All of them have improved their existing fleets, and all have programs for further improvements and replacements. Included in these is the plan of American President Lines to build a great new superliner. Such a ship would bring prestige to the American flag on the Pacific comparable to the glory and renown we get on the Atlantic from the steamship *United States*.

The ships our companies are building, and will build, should give this country an active dry-cargo merchant fleet second to none.

The ships we now operate are growing older, but they are still the best maintained and most efficient units in today's fleet. These will be traded in to the United States Government as they are replaced by more modern ships, and will themselves replace the aging and obsolete Libertys in our national-defense reserve fleet. In this manner, both our active and reserve fleets will be upgraded by an orderly replacement program designed to eliminate the bugaboo of block obsolescence.

This program will also result in long-term economies and should increase shipyard efficiency through stabilized operations. It will encourage progress in research and improved design.

The future of our merchant marine is bright with promise. I have not said much about the possibilities of atomic propulsion, but it is thrilling to realize that a year or two from now we will celebrate an event surpassing the sailing of the *Savannah*. What a thrill it will be to celebrate, as we will, the sailing of a modern *Savannah*—the first atomic-powered merchant ship.

Thomas Jefferson once said that agriculture, manufacture, commerce, and navigation are the four pillars of our prosperity. More recently, Admiral Burke called ocean traffic the "lifeblood of civilization."

These are noble sentiments, but in this world of tension and turmoil the words of President Wilson are even more significant. He said, "Ships are the only shuttles which can weave the delicate fabric of sympathy, confidence, and mutual dependence among nations."

This is the challenge and the opportunity.

"If the Nation Is in Such Bad Condition—"

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mrs. SULLIVAN. Mr. Speaker, I have signed the discharge petition to bring before the House the bill to raise the pay for our postal employees, and was one of the first to sign this petition. I believe wholeheartedly in the purposes of the legislation to raise postal pay, and I have so informed the postal employees of my district who have written to me.

At the same time, I have felt it important to point out to them in all frankness that getting this legislation enacted is not going to be easy. I cited the current economy wave, which occasionally seems to get out of hand as when the effort was made to cut essential programs of health research and food and drug inspection, and so on. I also cited the fact that anything which is not in the President's budget is having particularly hard sledding in the Congress, and of course we all know the administration has seen little merit in the desperate need of the postal workers for a pay increase.

After sending such a letter of explanation to one of the postal workers in my district, I received a most interesting and compelling follow-up letter from him which I think deserves to be brought to the attention of the entire Congress. As a matter of fact, in his letter he specifically asks that I state on the floor of the House the substance of what he has written to me.

This is a dollars-and-cents outline of what it means to try to support a family of 7 on a postal salary of $3,785 per year. It is an angry letter in many respects, but it touches some very sensitive nerves in our body politic and for that reason, Mr. Speaker, I am herewith submitting it for the attention of the House and the Senate, as follows:

ST. LOUIS, MO., *May 23, 1957.*

Mrs. JOHN B. SULLIVAN,
United States Congress,
Washington, D. C.

DEAR MRS. SULLIVAN: I received your reply with regard to postal pay increase legislation. You stated that in its present mood, Congress seems determined to cut the President's budget in every way possible.

I would like to state here and now that the sentiment of people I know, both in and out of the postal service, is that, if our Gov-

ernment cannot afford to pay its public servants a living wage, then it cannot afford to give away one penny to foreign countries. As you are and always have been a great supporter of Federal servants, I ask you respectfully to state on the floor of the House that if we can afford 50 diamond-studded Cadillacs for King Saud, our financial situation is not in such bad shape as to deprive postal workers of a badly needed and deserved raise. It might help to remind the Congress that postal workers are, incidentally, Americans. I further defy any Member of Congress to support a family of 7, as I have been trying to do, on $3,785 per year. I am forced to make loans to pay my taxes which is the only reason I am in debt. I have not bought anything as my neighbors are doing who work in private industry.

I have now found that I cannot even afford to get sick. I can no longer afford to remain in Blue Cross. There is one more place left for me to cut our family budget and that is to drop our life insurance which is costing us $11.87 per month.

I wish to further inform you that not one penny of our money is used for unnecessary items, such as liquor, which incidentally I noticed Congress provided to the State Department for wild binges and entertainment, an additional $500,000. Can you imagine, our fate being decided over a champagne glass?

As an example of how the cost of living has gone up, I cite the price of Pet milk which our baby must have. Six months ago, Pet milk sold at 3 cans for 37 cents at all Kroger stores. Today the price is 3 cans for 44 cents. This is the case with all foodstuffs. Imagine, just in the above example, about an 18 percent increase in cost in an item which my baby must have. We cannot economize here. I go to work with 2 potted meat or cheese sandwiches and 14 cents for 2 cups of coffee. I ask those in Congress who oppose a pay increase for postal workers to eat the same for lunch each day for 1 month. As for meat, our family eats hamburger four times each week, in one way or another. Steak is an unknown luxury. Sunday is our big treat. We have chicken or commercial grade chuck roast.

All of the above problems and many more plague our everyday lives. However, if the Congress feels that the Nation is in such bad condition, we, as Americans, will do without a pay increase but feel that every penny of foreign giveaway must also stop in the interest of internal economic security.

I wish to thank you for your kind and considerate support in our behalf.

With kindest regards, I remain

Respectfully,

——— ———.

The Unpopularity of Foreign Aid

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. BOSCH. Mr. Speaker, as the date approaches for consideration by the House of Representatives of the so-called mutual security bill, I believe that careful thought and study should be given to the manner in which these funds are spent. Every day we learn of new waste on projects which are absolutely ridiculous—it seems incredible that supposedly intelligent people can even dream up some of them.

Under leave to extend my remarks, I include a column of George E. Sokolsky which appeared in today's Washington Post and Times Herald which points up a few instances of the waste of American taxpayers' money under the guise of "foreign aid":

THESE DAYS

(By George E. Sokolsky)

THE UNPOPULARITY OF FOREIGN AID

It cannot be said that foreign aid is unpopular in the United States because Americans are not a generous people. It can be said that foreign aid grows increasingly unpopular because too much of it is being wasted and there are no results in such a tangible form that the people can understand what is being done.

For instance, this countr has given plenty of foreign aid to Great Britain and the relations of the two countries have not been worse since 1812, except for a short period during the Civil War. True, the British Government has to face its own internal problem which is not to be thrown out of office because of the awful mess of Suez which Britons believe John Foster Dulles made for them; on the other hand, the British policy of selling obviously strategic materials to the Red Chinese and the Red Koreans and the Tibetans can only lead to a collapse of relations between the United States and Great Britain. The Taipei riots were not accidental and they were timed for international relations.

Whatever is done in any field requires intelligence and apparently that is where we have been weak. Our operators are just not smart. For instance, that one the Reader's Digest tells about is not unusual enough. Our Government built a $128,000 cowbarn in Lebanon to demonstrate to average farmers living on $100 or less a year, the equipment they should provide for themselves in order to get ahead. The dopes. The Levantine farmers who looked at that barn must have wondered what kind of a faker built the impossible.

And if the truth must be told, how many American farmers own a $128,000 cowbarn? Up in my part of Massachusetts, I can only think of one farmer who would have the money to build such a thing for the cows. Most of my neighbors just call in a couple of fellows who know how to put a hammer on a nail and before long, there is a barn. What do cows need—mink carpets?

This goes on all over the world without rhyme or reason. What American foreign aid is really trying to do now, apparently, is to bring the whole of mankind to the very highest mechanical proficiency of the United States at one jump. It was believed, at one time, that if Harold Stassen were relieved of association with foreign aid, there might be an improvement, but there has been no improvement under John Hollister, who before he took on this work was most vehement in denouncing the spenders. In fact, he was a member of the Herbert Hoover group of moneysavers, but since he has settled on the Potomac there is no evidence that he is any longer interested in saving the American taxpayers' money.

The Reader's Digest quotes an ICA man—the giveaway agency—as follows:

"After all, this is the air age. We'll give the Afghans an airline and an agency like our Civil Aeronautics Administration to regulate air traffic. American technicians will have to stay there to run the show, of course; we'll have no teach the nation to read and write before it can begin to produce technicians to replace ours."

At first I thought this was a joke because about 96 percent of the Afghans cannot read or write and most are nomads or simple farmers. It was like the old phrase: "Come the revolution you'll eat strawberries mit sweet cream—and like it." So this is the size of the job this bureaucrat would like to undertake at the expense of the American taxpayer. Of course, this means that large numbers of Americans will live in Afghanistan, converting dollars into local currencies, which is a grand way to live and to save money.

Why return to the drab life of the United States where the women do their own housework, which despite all the mechanized devices that seem so good in the advertisements are such a problem afterward? No. It is better abroad, where a native woman will look after a child and babysitting is not such a complicated family affair.

Policing the Giants

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. MULTER. Mr. Speaker, I wish to direct the attention of our colleagues to the following editorial which appeared in the Washington Post of June 6, 1957, and which is most enlightening:

POLICING THE GIANTS

The Supreme Court has struck a necessary blow for free, private enterprise in the Du Pont-General Motors case. It has, in effect, brought the full force of the antitrust laws to bear upon a neglected facet of American industrial interrelationships—the vertical tieup between two or more corporations. It is well established that mergers of competing industries, through stock acquisition, may in some circumstances constitute an unlawful monopoly or restraint upon commerce. Congress in 1950 acted to make it clear that a stock relationship between a supplier and a customer corporation may also be unlawful under the Clayton Act of 1914. All that the Supreme Court has done is to affirm that this was, indeed, the intent of Congress, and to apply the law in the Du Pont case, ordering a lower court to fashion an appropriate remedy for Du Pont's large holdings in G. M.

The need for the Government to move into this area of customer-supplier relationships seems self-evident from the facts in this case. As a result of stock purchases and splits over the past 40 years, E. I. du Pont de Nemours & Co. owns some 23 percent of the stock of General Motors Corp. Over the years it was clear that Du Pont executives expected this investment to result in General Motors purchase of Du Pont products. In 1946 Du Pont did supply 52 percent of General Motors fabrics and 67 percent of its finishes for auto bodies. In 1947 the percentages were 38 and 68.

The Supreme Court majority opinion paid due respect to the wisdom of Du Pont's business judgment in attaining this profitable arrangement, but properly noted that this "cannot obscure the fact, plainly revealed by the record, that Du Pont purposedly employed its stock to pry open the General Motors market to entrench itself as the primary supplier of General Motors requirements for automotive finishes and fabrics." It might have been better if the Court had refrained from expressing so conclusive judgment on Du Pont's purposes, which may well have varied in emphasis and detail over 40 years of evolving management policy. It is the result that counts, not the intent, as the Court elsewhere noted.

In any case, this kind of arrangement obviously tends to give the stockowning supplier of a customer firm an advantage over other potential suppliers—and whether it actually did the Du Pont-General Motors case again is irrelevant. The purpose of the Clayton Act, as the Court reaffirms, is to prevent restraint of trade in situations where restraints are likely to develop. In the long run, the vigorous policing of American industrial giants to keep them as free of control by each other as they wish to be from Government control is the best safeguard of the private enterprise system. Unchecked monopoly would lead in only one direction: toward State control and, perhaps, State ownership.

The dissent of Justices Burton and Frankfurter is not persuasive. They argue that only the initial result of a vertical stock purchase may be considered—not what develops later, a construction that obviously deals more with appearances than with the substantive evil. They also contend that the Clayton Act, before its amendment in 1950, did not cover vertical mergers or stock purchases; but the majority effectively refute this point in citations of the act's congressional history. The dissenting justices observe that, in this respect, the Clayton Act "has been a sleeping giant all along." What they seem not to recognize is that other giants have been very much awake and that the Government cannot send a boy to deal with them.

A Sound Analysis of the Trial by Jury Controversy in the Civil Rights Bill Debate

---

EXTENSION OF REMARKS
OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mrs. DWYER. Mr. Speaker, for several days now I have sat in this Chamber listening to long debate over a proposal to include in the civil-rights bill a provision to require jury trials in civil contempt actions growing out of civil-rights violations.

Personally, as I stated earlier today from the floor of the House, I am against such a provision, or any other provision which will make ineffective the provisions of this long overdue legislation.

However, I believe it might be well for all of us to read the views of a qualified observer on this controversy in which we are engaged. I, therefore, am inserting into the records of this session, an article written by Mr. Arthur Sylvester, chief of the Washington bureau of the Newark (N. J.) Evening News. This article, which appeared on page 1 of the Newark Evening News of June 6, is the soundest analysis of the jury trial issue I have had the privilege to read. The article follows:

DIXIE BLOC FORGETFUL—CIVIL RIGHTS ARGUMENT VARIES FROM COURT RULES IN SOUTH

(By Arthur Sylvester)

WASHINGTON.—Southern Senators and Representatives opposed to civil rights are trying to write into Federal legislation a jury trial provision long since rejected by the high courts of every Southern State.

Senator SAM J. ERVIN, JR., Democrat, of North Carolina, leader of the move to amend President Eisenhower's civil rights legislation by guaranteeing a jury trial to persons cited for contempt in civil rights cases, has himself as a member of the North Carolina Supreme Court, participated in cases upholding contempt proceedings in which the accused had been denied trial before a jury.

But in the last-ditch effort to nullify the civil rights legislation ERVIN asserts that the Eisenhower administration by bypassing jury trials in civil rights contempt cases is resorting to a new procedure. ERVIN claims it violates constitutional rights, denies the rights of the States and threatens to rob State and local officials of basic and invaluable safeguards.

Yet the court of appeals of Georgia, upheld by the State supreme court, said long ago that "to try a case of contempt without the intervention of a jury violates no constitutional provision." This rule of law has been followed and upheld by the highest courts of Alabama, Arkansas, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia.

SIGNED MANIFESTO

But with few exceptions the Senators and Representatives from these States recently signed what they called a southern manifesto against the provision of the civil rights bill which would permit Federal courts to punish without jury trial those who had violated injunctions against interference with voting rights.

The manifesto overlooks the fact that the Supreme Court of Tennessee has rejected the jury-trial argument in one case as follows:

"The general rule is that a constitutional guaranty of a jury trial does not apply to proceedings to punish for contempt of court whether in a court of law, a court of equity, a court having criminal jurisdiction, or other court." In the same opinion the court heid:

"The power to punish summarily by process of attachment, for contempt, has been coequal with the existence of courts. Hasty thinkers, proceeding on false notions of liberty, have sometimes maintained that this power is but little in harmony with the liberal institutions of England and America."

AUTHORITY NEEDED

"But on the contrary, it is obvious that wherever laws govern, and not the bayonets of the executive power, the courts must be armed with this summary authority in order to attain the ends of their institutions. To courts of chancery (equity) it is indispensable."

An analysis of the unanimity of southern high courts in opposition to the bogus jury issue being raised by Dixie civil-rights opponents is being circulated by the office of Senator CLIFFORD P. CASE, Republican, of New Jersey, and other leaders in the battle for Eisenhower's civil-rights bill.

It was being released as the House moved today into the first day of debate on civil-rights legislation. It came after President Eisenhower quoted the late William Howard Taft, President and Chief Justice of the Supreme Court, at his news conference yesterday as upholding in 1908 the power of courts to punish for contempt without a jury trial.

The laws and court decisions of the Southern States are unanimous in denying to Senator ERVIN and his cohorts any precedent in the legal history of their States for the theory they are trying to write into the civil-rights bill. The rule in all those States is that a person charged with contempt of court does not have a constitutional or statutory right to a trial by jury.

WELL ESTABLISHED

In some Dixie States, like Florida, the power of the court to act in contempt cases without a jury is so well established there are no reported cases raising the issue. Indeed, in addition to defending the right of courts to punish without a jury, several Southern States have extended the power of contempt to administrative agencies. Thus in Senator ERVIN's State of North Carolina the contempt power is granted to referees, commissioners, clerks of court, county boards of commissioners, utility commissioners, and industrial commissioners. Other Dixie States have indicated in similar fashion their acceptance of the use of the contempt power in effectuating compliance with orders and decrees necessary for orderly government.

Currently State and local officials who administer voting laws in a discriminatory fashion may be prosecuted on criminal charges and consequently have the right of trial by jury. The record shows though, particularly in the South, that criminal prosecutions after voting rights have been denied aren't effective in protecting a citizen's right to vote. Election day has long since passed by the time the trial comes up.

In view of this experience the administration legislation would empower the Attorney General to bring civil suits in Federal court for preventive relief of the victims of discriminatory voting practices before or when an election takes place. Thus, the courts could decide if the law was being administered impartially in line with constitutional guaranties and if not to issue a desist order against any official acting or threatening to act illegally.

Attorney General Brownell, Senator CASE, and others point out the traditional way of enforcing court orders is through the power of contempt. In that event, they stress judges rather than juries pass on contempt charges since the issue at stake is enforcement of the court's orders or protection of its dignity. The person punished for contempt has the right of appeal all the way to the Supreme Court.

In 1890 the United States Supreme Court stated "it has always been one of the attributes—one of the powers necessarily incident to a court of justice—that it should have this power (the contempt power) of vindicating its dignity, of enforcing its orders, of protecting itself from insult without the necessity of calling upon a jury to assist it in the exercise of this power."

But Senator ERVIN and his Dixie cohorts would interpose a jury to uphold, or not uphold, the enforcement of a court's orders against a local official in contempt for failing to obey the court. Experience in the South in trying to protect Negro rights of life and property, much less voting rights, by jury trial has led to administration belief that the jury amendment is not intended as its proponents declare, to uphold the rights of accused officials, but to thwart the enforcement of civil rights for Negroes.

Attorney General Brownell has pointed out Congress has empowered courts to handle contempt actions without jury trial arising from injunctions to enforce the Atomic Energy Act, the Fair Labor Standards Act, the Interstate Commerce Commission laws, and findings by the National Labor Relations Board, the Securities and Exchange Commission, and other agencies.

ADMINISTRATION'S CASE

Brownell has noted that civil remedies as opposed to criminal ones are used. The administration argues that Senator ERVIN and his group have failed to draw the distinction between traditional jury trials in courts of law and procedures in courts of equity, which do not call for jury trials.

In the Clayton Act of 1914 Congress made an exception to the rule that contempt charges are passed on by judges rather than juries. The right of trial by jury was extended to criminal contempt cases arising under the act where the alleged offense would also constitute a crime under Federal or

local law. However, Congress expressly exempted contempt cases arising out of disobedience to court order in suits brought by the United States.

Senator ERVIN and his Dixie group, in convincing some northerners to go along with their maneuver, point to congressional action in the Norris-LaGuardia Act of 1932. In the case Congress provided for jury trials in contempt proceedings arising from the law. It was this very language that the southerners induced the Senate Judiciary Committee, Tuesday, to write into the administration bill as an amendment.

CONGRESS CONVINCED

However in 1932 Congress was convinced that violent actions committed by workers during court enjoined strikes were being improperly punished as contempt whereas the strikers, should have been charged with crimes and tried before juries. To put a stop to what it believed an evasion of the right to jury trial by judges biased against labor, Congress provided for jury trials in such contempt cases.

The Republican 80th Congress virtually nullified this provision when it came to write the Taft-Hartley Labor Act. In addition, Senator ERVIN and his followers are finding it difficult to equate the acts of violence committed during a strike to the deliberate acts of discrimination by those southern local officials intent on denying Negroes voting rights.

H. R. 6328, To Provide an Additional Remedy for Persons Having a Claim Against the United States Arising Out of Contracts Relating to Certain Vessels

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. MULTER. Mr. Speaker, on March 25, 1957, I introduced H. R. 6328, for the purpose of clarifying the jurisdiction of the United States district courts and the United States Court of Claims in connection with the handling of claims against the United States arising out of contracts of the United States for repair, completion, or alteration of or addition to any type of vessel.

HISTORY OF PROBLEM

As recently as 1951, our Government took the position that claims against the United States arising out of a contract for the repair of a public vessel could not be brought under the Suits in Admiralty Act; and that position was sustained by the courts. *Eastern S. S. Lines* v. *United States* (187 F. 2d 956 (C. A. 1), 125 C. Cls. 422, 128 C. Cls. 775). Again, in the case of *Hadden* v. *United States* (132 C. Cls. 529), where suit was brought in the United States Court of Claims in connection with a contract for ship repairs, removals, replacements, renewals, additions, alterations, separations, and reconversions, the Government did not object to the jurisdiction of the court. Once more, in the case of the *Yankee Comett S. S. Corp.* v. *Brewer Drydock Corp.* (37 F. Supp. 512 (E. D. N. Y.)), the court held that an action for damages for repudiation of a contract to repair a vessel was not a maritime cause of action.

Nevertheless, in two suits now pending in the United States Court of Claims, to wit, *Anco Steel Construction Corp., et al.* v. *The United States*, No. 462–56, and *Continental Casualty Company* v. *The United States*, No. 63–57, the Government has taken the position that since they are based upon claims arising out of ship repair contracts, the United States Court of Claims does not have jurisdiction, such jurisdiction being exclusively in the United States district court under the Suits in Admiralty Act. A similar position was advanced and maintained in the Second Circuit Court of Appeals, in *Sword Line, Inc.*, v. *United States* (228 F. 2d 344), where a suit on a contract for the charter of a ship was held maritime in nature, and, therefore, the admiralty courts were held to have exclusive jurisdiction. Certiorari was granted in that case, and the Second Circuit Court was affirmed by the Supreme Court in a per curiam opinion. In the case of *Smith-Johnson Steamship Corp.* v. *The United States*, the United States Court of Claims—decided July 12, 1956—took the position that the Sword Line decision compelled it to hold that contracts involving the possession or operation of vessels are maritime causes of actions and that the Suits in Admiralty Act furnishes the exclusive remedy against the United States.

THE ISSUE

There is a 2-year statute of limitation which applies to actions brought under the Suits in Admiralty Act, and a 6-year statute of limitations for suits brought under the Tucker Act. The issue is whether suits on ship-repair contracts should be limited by the 2-year statute.

ARGUMENT

Claims arising out of contracts for the repair of vessels "can be no more deemed cases of admiralty and maritime jurisdiction than cases of common-law jurisdiction." Volume 3, Story's Commentary on the Constitution, 1833, section 1666, note, fifth edition, 1891, quoted with approval in *Taylor* v. *Carryl* (61 U. S. (20 How.) 583, 598), and in volume 1, Benedict on Admiralty, sixth edition, 1940, pages 25–26, 266. Contracts for the repair or alteration of vessels are quite similar to contracts for the repair or alteration of buildings. The same legal principles should apply. Moreover, there is nothing more maritime about the repair or alteration of a vessel than the construction of it. Since the construction of vessels is considered not maritime in nature, there is no logic in considering the repair or alteration of a vessel maritime in character.

However, assuming arguendo that there is some maritime aspect in a contract for the repair or alteration, and so forth, of a vessel, this does not mean that the jurisdiction of determining issues arising from such contracts should be exclusively within the Courts of Admiralty. Government contracts for the repair, alteration, and so forth, of vessels have the same "disputes" clause that is found in other types of Government supply and construction contracts. Such a "disputes" clause requires a contractor to appeal to an administrative board within 30 days after the contracting officer makes his findings of fact. In ship-repair contracts, in addition to the direct claims of the contractor, there are claims of subcontractors which must be asserted by the contractor for the benefit of the subcontractors. The situation is sometimes further complicated by the claims of banks or finance companies as assignees of the proceeds of the contract, their rights being derived under the provisions of the Assignment of Claims Act. Still other complications are posed when a surety company is involved as a result of a default and a reprocurement. In many, many cases the resulting situations cannot be resolved within 2 years. The Government's position that suit in such cases must be instituted within 2 years, within the limitations of the Suits in Admiralty Act, would preclude orderly exhaustion of administrative procedures; would compel resort to the courts in numerous cases where administrative disposition of the disputes is not only possible but desirable; and would impose substantial unnecessary burdens on the courts.

I hope that my bill will be set for early hearing by the Judiciary Committee and that it will be favorably reported.

Final Report on 22d Amendment Survey

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. UDALL. Mr. Speaker, my survey of scholarly opinion on the 22d amendment has been completed. Last March, with the cooperation of the American Historical Society and the American Political Science Association, I undertook a cross-section survey of opinion on this important question by directing 37 letters to leading historians and political scientists in all parts of the United States. I am pleased to report that 28 of those whose opinions were solicited have replied, and each individual reply has been placed in the CONGRESSIONAL RECORD.

In the near future I will present a summary of the views of these American scholars, and it is my hope that their responses can be collected under one cover.

I present today the two final replies which I have received. First, the statement of Dr. Thomas Barclay, who has just retired as professor emeritus of the political science department of Stanford University, and who opposes repeal of the 22d amendment. The second reply was written by Dr. Maurice Klain, of the department of political science of Western Reserve University. Dr. Klain favors repeal. The replies of these two scholars follow:

STANFORD UNIVERSITY,
Stanford, Calif., May 13, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR MR. UDALL: In reply to your request for my opinion concerning the repeal of the 22d amendment to the Federal Constitution,

as proposed by you in House Joint Resolution 152, 85th Congress, 1st session, I take leave to submit the following reply.

I do not favor the repeal of the amendment. My reasons, briefly, are these:

1. The experience under the operation of the 22d amendment has not been of sufficient length to supply conclusive evidence of either the necessity or the desirability of repealing it.

2. The political power of the presidential office is so extensive that its occupant monopolizes the place of leadership in the party in power. This may be as it should be or must be. However, this power has been used to secure a third term nomination, or at least to prevent rival candidates from making an effective preconvention contest. A President can create or utilize emergencies in order to maintain that it is necessary to keep himself and his party in power.

3. It is true, of course, that a President who by constitutional mandate is limited to 2 terms must face during the last 2 years of his administration a waning of his influence over Congress and elsewhere. If he were permitted to seek a third or fourth or fifth term, he would face the same difficulty at a later time.

4. In respect to the enactment of important domestic programs, recent administrations have been most effective during the first 2 or 3 years of the first term. It is doubtful that a third or fourth term would materially affect this situation. The energy and momentum of the first 2 years could hardly be continued for 10 or 12 years.

5. The physical strain of the office and its continuous and pervasive responsibilities constitute burdens which few men can withstand beyond a period of 8 years, if indeed for that long.

6. The assertion that the people should be permitted to retain in office for more than 2 terms a President seems singularly inconvincing. Constitutional restrictions on governmental power, and most statutory law, prevent people from doing what they might wish to do. The 2-term limitation constitutes an effective check on prolonged power and should, in my opinion, be retained.

Sincerely yours,

THOMAS S. BARCLAY,
Professor of Political Science.

WESTERN RESERVE UNIVERSITY,
Cleveland, Ohio, May 13, 1957.

Hon. STEWART L. UDALL,
Congressman from Arizona, House Office Building, Washington, D. C.

DEAR CONGRESSMAN UDALL: I have been following with considerable interest your efforts to alert the country to the hazards of the 22d amendment. In my judgment you deserve the strongest encouragement and commendation. For you are, it seems to me, working to restore the rights of the people and the powers of the President.

* * * * * *

My own partisan bias, which I made no attempt to conceal, has nothing to do with the validity of the argument or the reality of the dangers. In any event, the 22d amendment plays no favorites. It was passed to rebuke a great Democrat. Now it torments a great Republican.

My apprehensions are shared by a substantial and significant part of the Nation's political scientists. "I agree with your main points," declares Dr. F. W. Coker, former president of the American Political Science Association and professor emeritus of Yale University. Dr. Coker, the dean of all living students of the American political tradition, characterized the analysis as an "informed, cogent argument. * * * I'm going to pass it around."

Another former president of the American Political Science Association, Dr. William Anderson of the University of Minnesota, one of the chief authorities on our constitutional system, considers the argument "a very perceptive analysis [which] should prove to be very useful." Dr. V. O. Key, of Harvard, the next president of the association and the author of several distinguished studies of American politics, notes that Mr. Eisenhower, who disapproves of the 22d amendment, tends to underestimate its effect upon his own position. "I see * * * that the general has become aware of the problem posed in your Reporter article," Professor Key observes. "You are probably nearer right than he. * * *"

"I agree with you 100 percent," declares Dr. David Fellman, of the University of Wisconsin, editor of the Midwest Journal of Political Science and former president of the Midwest Conference of Political Scientists. "I am in complete sympathy with the point of view which you express," writes Dr. Glendon A. Schubert, of Michigan State University, whose authoritative work on The Presidency in the Courts, was recently published. Another leading student of the presidency, Dr. Clinton Rossiter, of Cornell University, remarks: "I had arrived at just about the same conclusions independently, and I was glad to have your support."

This sampling of comments make clear, I think, that among political scientists there is considerable foreboding about the 22d amendment. There is an awareness not only that the amendment curtails the democratic rights of the people but also that it impairs the leadership of the President and, indeed, the effectiveness of our Government. There is a realization that the weakness of the Executive has in other countries stultified, discredited, even destroyed democratic government.

Very truly yours,

MAURICE KLAIN,
Department of Political Science.

Resolution Adopted by the Automobile Manufacturers Association Against Advertising or Publicizing Speed

---

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. REES of Kansas. Mr. Speaker, I call the attention of the Members of the House to a resolution recently adopted by the Automobile Manufacturers Association recommending that all members of the association who manufacture passenger cars not advertise or publicize their cars in any way that suggests speed.

This is a significant and an important step. It is a step in the right direction. It has been generally understood that automobile manufacturers and dealers have advertised the high speed of their cars. They now recommend that members of their companies engaged in the manufacture of passenger cars and station wagons not participate in any contest, competitive event or test of passenger cars involving or suggesting racing or speed. Furthermore, they have agreed they will not in their advertising publicize or suggest the high speed of their automobiles.

Mr. Speaker, this is in line with statements I have heretofore made concerning the high speed of automobiles as one that causes great destruction of human life.

The toll of traffic dead and maimed in 1956 is a grisly reminder that wild driving and breakneck speeds have turned our highways into the most vicious killers in history. Last year's record of 40,200 deaths and nearly 1½ million injured is most tragic. The National Safety Council has declared the situation a national emergency.

The murderous accidents are the ones on the open road, where high speeds have come to prevail. This by no means is confined to the main highway. Death and destruction have grown apace on secondary roads, where too many drivers go hurtling through the countryside without regard to life or property, lulled by the false impression they are the only ones on the road.

The Nation averaged 56.6 traffic fatalities for 100,000 population in 1955. The 22 States west of the Mississippi averaged 73.1. Twelve of these, in the plains and mountain area, averaged 89.5. The average in the 6 most sparsely populated states was over 100. Great stretches of open highway encourage excessive speeds in the States with the worst averages.

A copy of the resolution adopted by the Automobile Manufacturers Association follows:

Whereas the Automobile Manufacturers Association and the members of this board of directors share the public interest in increasing the safety of highway travel; and

Whereas the manufacturers of automobiles have directed their efforts for many years toward developing and maintaining the performance characteristics of vehicles at levels consistent with highway conditions and the requirements of the using public, utilizing research and testing facilities, laboratories and engineering proving grounds to conduct tests under controlled and scientific conditions and standards, and can best serve the public by continuing these efforts; and

Whereas the Automobile Manufacturers Association believes that the automobile manufacturers should encourage owners and drivers to evaluate passenger cars in terms of useful power and ability to provide safe, reliable, and comfortable transportation, rather than in terms of capacity for speed:

Now, therefore, this board unanimously recommends to the member companies engaged in the manufacture and sale of passenger cars and station wagons that they—

1. Not participate or engage in any public contest, competitive event or test of passenger cars involving or suggesting racing or speed, including acceleration tests, or encourage or assist employees, dealers, or others, or furnish financial, engineering, manufacturing, advertising or public relations assistance, or supply "pace cars" or "official cars," in connection with any such contest, event, or test, directly or indirectly;

2. Not participate or engage in, or encourage or assist employees, dealers, or others to engage in, the advertising or publicizing of (a) any race or speed contest, test, or competitive event involving or suggesting speed, whether public or private, involving passenger cars, or the results thereof; or (b) the actual or comparative capabilities of passenger cars for speed, or the specific engine size, torque, horsepower, or ability to accelerate or perform, in any context that suggests speed.
